Much of Hong Kong's dramatic progress today is attributable to refugees. Shanghai capitalists brought their money, and sometimes their equipment, to Hong Kong. When the Communists took power in China, some textile-mill owners had ordered new machines, which were waiting in Hong Kong for shipment onward to China. They promptly canceled the shipping orders and set up new factories in Hong Kong.

From other strata of Chinese society came technical knowledge, initiative, industry—and cheap labor. All this has combined to make Hong Kong, a place with no natural resources of its own, an Asian boom town.

One of the Hong Kong government's most widely lauded achievements is its housing program. With the initial influx from China, thousands of refugees set up squatter areas on hillsides or vacant land. Some squatter areas remain. But over the years, especially after the great fire of 1954, the government has resettled more than 1 million persons in apartment blocks of its own building. These, particularly in the hurried early stages, were not elegant. The principal concern was to throw up simple buildings providing minimum facilities for the maximum number of people in need.

These allowed only 24 square feet per adult. But this is being expanded to 27 square feet per person, and eventually to 35 square feet. By 1973, the government hopes to have housed 2.4 million persons in government blocks, or housing built with government money.

NO UNEMPLOYMENT PROBLEM

Tremendous problems remain. Blocks already built are overcrowded. Outside the government resettlement estates, overcrowding in slums and tenements is even worse. Some 300,000 people live in areas where there is less than 10 square feet per person. Schools are working double shifts yet nearly 100,000 children of school age do not have places.

But there is no serious unemployment problem in Hong Kong. And while there may be poverty, there is also some kind of work for everybody. Most refugees lean heavily on family or friends already here, and it is those without these connections that often encounter the most hardship.

A number of relief organizations take up such cases. One of the major ones is the American-financed International Rescue Committee, Inc., which helps find jobs and runs half a dozen day nurseries for refugees. Prominent in the nursery work is Mrs. Edwin Martin, wife of the American Consul General in Hong Kong, herself an expert on child care.

A CRISIS THERE IS NOT

The United Nations Refugee Committee has a modest Hong Kong program, while the U.S. State Department has a refugee-assistance program here providing $500,000 in aid this year, plus a similar amount in foodstuffs for distribution to the needy in Hong Kong.

For China's refugees funneling into Hong Kong there is thus obvious hardship, upheaval, and anguish. But a combination of British pragmatism and Chinese vitality and initiative has reduced the problem to manageable proportions. A problem there is, but a crisis there is not.

A RELUCTANT FAREWELL TO TIBET

(NOTE.—Tibetan refugees who fled to India have had to adapt to a new climate and a new society, leaving their nomadic past for an unknown future.)

(By Ernest Weatherall)

NEW DELHI.—The borders of Tibet are sealed now. Only a trickle of refugees finds its way through the passes of the Himalayas into India during the summer months. The Communist Chinese have decided they need the Tibetans for their labor force.

When the Chinese Communist Army invaded Tibet in 1950 to reestablish China's suzerainty over the area, Peking began a brutal colonization and subjugation of the country.

By 1959, the Chinese had decided to eliminate any remaining political influence of the Dalai Lama and the lamaseries. Thus began the largest influx of refugees into the subcontinent since its partition between India and Pakistan.

The Dalai Lama fled to India that year. And thousands of Tibetan refugees followed

him. Between 1959 and the outbreak of hostilities with China in 1962, these refugees were not welcomed by the Indian Government. During that period Jawaharlal Nehru had fostered the policy of "Hindi-Chini Bhai-Bhai" (Indians and Chinese are brothers) with Peking. Mr. Nehru had recognized China's claim over Tibet, and the arrival of the Dalai Lama and Tibetan refugees in India caused embarrassment in New Delhi.

But there were also economic reasons. India had still not absorbed the several million Hindu refugees who streamed over the borders from Pakistan in 1947. Even today, many of these refugees live in squalid slums and shacks or even sleep in the streets.

FINANCIAL AID FROM ABROAD

While India provided a sanctuary for the Dalai Lama and the Tibetan refugees, financial help for these gentle people came from other countries.

A considerable amount of aid came from the American Emergency Committee for Tibetan refugees. Other large contributions came from such voluntary agencies as the Red Cross and the Church World Service. Later, when the illusory friendship with Communist China evaporated, the Government of India began to put the Tibetan refugees to work on constructing roads along the border with China.

But it was the determination to survive that kept the Tibetan refugees going. After reaching India they worked on odd jobs, then later on the grueling border-road projects during the summer. In the winter they sold jewelry or knit pullover sweaters to make money.

It was reluctantly recognized by the Dalai Lama that it would be a long time, if ever, before the refugees would be able to return to their homeland. It was decided by the spiritual leader to set up programs that would make the Tibetan refugees self-sufficient and help them integrate into the life of India.

Today there are about 56,000 Tibetan refugees in India. With the help of the Indian Government, many have been resettled in different areas of the country. The Tibetan Industrial Rehabilitation Society has found employment for refugees in wool mills, tea estates, and in factories.

SELF-HELP CENTERS SPROUT

Self-help centers have also been set up around the country. One is a few miles from Darjeeling in West Bengal. This site is considered sacred by the Tibetans, since the Dalai Lama lived there during another Chinese invasion of Tibet in 1910.

The refugees are taught various handicrafts, such as carpet weaving, wood carving, and making Tibetan-style bags, boots, and shoes. These are sold to help pay for running the center. After learning various skills, refugees leave the center and set themselves up in business.

This facility takes care of not only working adults but also orphans and the aged. A nursery school has been set up to care for the youngsters while their parents are working.

Education has been given top priority in the program to rehabilitate Tibetan refugees. The Tibet Schools Society runs residential schools for some 7,000 children. All are in the cool hill stations, Darjeeling, Dalhousie, Kalimpong, Simla, and Mussoorie.

At Mussoorie are some 14,000 children who have lost their parents. They are being educated by the Save the Children Federation. A foster parent is provided for every 25 children. An important part of the curriculum is devoted to Tibetan studies, and lamas are on the faculty to provide religious training.

INDUSTRIAL ADAPTATION PUSHED

One of the most difficult projects is being carried out by the Tibetan Industrial Rehabilitation Society. Its mission is to break the Tibetan's traditional isolation so he can cope with the realities of industrial life.

The projects of the society include a fiberglass factory, a limestone quarry, a lime plant, a woolen mill, and a tea estate. Many of the workers have been recruited from the border-road projects. However, they have become so used to seasonal labor on the roads they have had a difficult time settling down in a factory job.

Many Tibetans, who have traditionally lived in the mountains, tending yak and sheep, have found it almost impossible to adapt to the disciplines of an industrial society.

Most Tibetan refugees can adapt themselves to difficult conditions in India. Some have cleared dense tropical forests to establish agricultural settlements. Until reaching India, they never saw farm machinery. Now farmers in Mundegod in Mysore state use tractors donated by a private manufacturer.

A tractor maintenance and repair shop at the farm is being run by a young Tibetan, trained in mechanics at one of the refugee centers.

The agriculture settlements in Mysore have produced enough crops to sustain the 12,000 refugees who live there. In addition, the Tibetans also cultivate cash crops such as cotton.

RELIGIOUS INFLUENCE FIRM

The rehabillatiton program has brought up some questions: If these programs succeed, and they appear to be doing so, will it weaken the influence of religion on the life of the Tibetans Will they want to settle down in India and forget their homeland?

So far this has not happened. Religion is firmly entrenched in all strata of Tibetan society in India. In fact, the Dalai Lama indicated that the Tibetans would keep the flame of religion burning, even if it were extinguished in Tibet by the Communists.

In Ladakh, Tibetan Buddhist leaders have complained that the Kashmir government is finding excuses to evacuate the refugees. Other harassments include a refusal by the government to permit the Tibetans to build a place of prayer on the Srinagar Road.

As for putting roots down in India, the Tibetans seem more than willing to integrate themselves into Indian life. But they are still regarded as "foreigners" by New Delhi. Each time a Tibetan moves from one locality to another, he has to register with the police.

Because they are considered foreigners, the Tibetan refugees are not given the same legal protection as are Indians. In some cases, the refugees have suffered in their legal dealings with Indians.

Despite indications that the refugees may spend a lifetime in exile in India, the Dalai Lama said, "All my people who have escaped still want to return some day to Tibet."

SOUTH VIETNAM'S REFUGEES: AID "TOO LITTLE, TOO LATE"?

(NOTE.—There are 1.3 million refugees in South Vietnam. The government appropriates one-third of 1 percent of the national budget to helping them. But, concerned officials point out, there is still no concept of their long-term rehabilitation into a structured society. This problem, they say, has not yet been faced.)

(By Elizabeth Pond)

SAIGON.—The refugee program in Vietnam is at the critical point where it is, or should be, moving from emergency relief to long-term rehabilitation. But at the moment it appears headed for a "too little, too late" rating.

This is not to denigrate either the Herculean relief effort that has been made so far or the dedicated few on both the Vietnamese and the American sides who have labored to feed and shelter the millions of refugees the Vietnam war has created.

Officials point out with some pride that this is the first time in history that wide-scale care for war-created refugees has been instituted while the war was still in process.

Even so, the refugee problems are staggering in that they have a low-priority rating when pitted against continuing military operations, intensified peace negotiations, and political skirmishing in Saigon. Also they may well create the conditions all over again for a new Communist insurgency.

LEADERS DEPLETED

Any war is disruptive. A civil war is especially brutal. A guerrilla civil war reinforced by massive artillery and air power may be the most cruel of all (short of some nuclear holocaust). And a war that has raged intermittently for a quarter of a century defies comprehension in its results.

Apart from the dead, this war has bled the country of several generations of leaders, displaced up to a third of the population, rent the social fabric, destroyed villages and placed villagers in urban slums and worsening health conditions.

In all it has produced at least 4 million refugees, 300,000 physically disabled, 20,000 to 50,000 prostitutes, more than 90,000 orphans, and no one knows just how many juvenile delinquents and predelinquents.

One sees the evidence daily—the dirty homeless shoeshine boy in Saigon, the apathetic old man in a refugee camp with nothing to do, the widow in her 20's who has lost both legs and whose two children are in hospitals with wounds.

COMMUNIST ZONE FLED

But the situation now is vastly improved over two years ago or even a year ago, as a brief chronology shows.

The first wave of refugees in the post-French period was the 900,000 northerners (primarily Roman Catholics) who left the Communist north after the division of Vietnam in 1954. They built new villages in the south and were for the most part successfully resettled within three years.

The next wave came when the National Liberation Front (NLF) began its guerrilla war in the early '60's. By mid-1965 the numbers of new refugees, the majority of whom were fleeing NLF terror, had reached some 300,000.

These, however, were not so fortunate as the earlier refugees. They did not have the political glamour of the anti-Communist northerners, nor were they Catholics coming to a hospitable Catholic regime. They were instead an unwelcome burden to a government that had no tradition of social welfare or public services, that was paper thin in administrators, that was only beginning to restablize itself after the 1963 assassination of President Ngo Dinh Diem, and was fighting for its life on the battlefield.

The refugees were ignored as well by the Americans, who were fully occupied with the military side of introducing combat troops to Vietnam.

In late 1965 a minimal stopgap program of aid to refugees at last was begun. In early 1966 a special Commissariat for Refugees was established by the South Vietnamese Government.

In the beginning of 1967 the big U.S. military sweeps such as "Cedar Falls" and "Junction City" were inaugurated in III Corps, with villagers forced to move from their homes as large NLF-controlled areas were cleared and turned into free-fire zones.

More serious quantitatively was the explosion of bitter large unit warfare in the Demilitarized Zone (DMZ) area. As U.S. and South Vietnamese troops sought to meet the threat of main-force North Vietnamese units with frontal assaults, new refugees were created at a rate of 10,000 and 20,000 per week. One operation cleared 10,000 villagers out of a battle area within four days.

I Corps quickly became the critical area for refugees. In a matter of months half a million people or 20 percent of the area's 2.5 million were refugees—not cumulatively, but simultaneously. Some were forcibly moved against their will by U.S. soldiers, some fled the cross fire or especially American

bombing and free-fire zones of their own volition.

OFFICIALS NOT NOTIFIED

Frequently, for reasons of military security, refugee officials were not notified in advance when a clearing operation was planned and could not prepare for the sudden influx. More than once a responsible American official was first informed of incoming refugees by radio from the helicopter transporting the refugees.

Arguments over the military efficacy of such operations go on ad infinitum. One school argues that this massive relocation deprived the NLF of porters, rice growers, and recruits, as was finally proved in late 1968.

Another school argues that the shifts as conducted were simply irrelevant to the main objective of counterinsurgence: security for the population.

Whether the relocation was necessary or not from a military point, it did take place, and took place with a speed and under conditions that made it impossible to care for the refugees adequately.

In refugee camps there were repeated acute water shortages; some near starvation; widespread malnutrition; extended breakdowns of distribution either through sheer lack of cadres or through division of goods and money; overcrowding; hazardous sanitary and health conditions; an absence of schooling for 90 percent of the I Corps refugee children a frequent absence of farmland, jobs, job opportunities, and vocational training for adults. Above all, there was a lack of security, as Viet Cong attacks on the camps amply illustrated.

Furthermore, despite real concern in the Refugee Commissariat, Saigon—and province chiefs—tended to view the refugees with suspicion as Viet Cong sympathizers, which many of them were.

PRESSURE ON CHIEFS

Then a combination of things happened. On the Vietnamese side the Commissioner for Refugees put pressure on the I Corps province chiefs to support the program. Refugee officials were allotted more gas for transportation. Mobile distribution teams began to fill the wide gaps left by inadequate local cadres.

On the American side, the 1967–69 Kennedy subcommittee hearings spotlighted the plight of the refugees and brought considerable pressure on the Johnson administration to step up American effort.

The vast American logistical system was then geared up to service the refugee program, and Americans began exercising more control over relief commodities in provincial warehouses, so reducing illegal diversion of supplies.

Then any progress in meeting the needs of the refugees was shattered during February, 1968, with the countryside Tet offensive of the NLF and the North Vietnamese Army (NVA).

In this and the subsequent May and August offensives almost a million more people were made homeless, whether from the NLF–NVA attacks or from the heavy counterfire of allied bombing and artillery in the cities. The planned refugee program, itself an emergency operation, had to be subordinated to even more of a crash program.

SWEEPS HALTED

But Tet also brought an end to the wide-scale creation of refugees by allied military operations. Multidivisional sweeps were halted as American troops were pulled in to defend the cities. And this effect was reinforced by the tactical preferences of the new U.S. commander in Vietnam, Gen. Creighton W. Abrams. The order went out to avoid creating more refugees by military operations, and with some exceptions this principle has been adhered to since.

By fall of 1968 the allies had begun a counteroffensive into the countryside, in the three-month accelerated Pacification Campaign. With the NLF stripping the countryside of guerrillas and political cadres to serve main-force units, the allied push met less resistance than anticipated and succeeded dramatically in its aim of widening the area of government "presence."

Thus the stage was set by the beginning of 1969 to get on with the return to villages or permanent resettling of the longer-term refugees that had always been the intended goal of the refugee program.

The bulk of the 1968 refugees, many of whom remained in their home areas and were employed but simply needed help in rebuilding their homes, were on their feet again. And widening government "control" in the countryside (or at least lessening NLF control) opened the way for older refugees to move back to their villages.

SUCCESSES REPORTED

This program now is in operation. But it has its drawbacks: The majority of the 215,000 who have returned to their villages or were resettled permanently in 1969 are still 1968 refugees, not the earlier ones. And the refugees themselves are reluctant to move back in many cases, as they are not persuaded that security exists.

Because of this some observers fear that the program may turn into yet another massive forced relocation, though there is no evidence of this so far.

But the resettlement program has successes, too. Along the coast of I Corps, new fishing cooperatives are beginning to work well. In the Mekong Delta villagers have begun drifting back from open fields to the wooded canals and roadsides they had left years before because of continuous infiltration by NLF snipers and subsequent allied bombing and artillery strikes.

The ambitious Pacification Campaign for this year calls for reducing the present 1.3 million unresettled refugees (the unofficial number runs somewhat higher) to one million by this fall. Refugee officials hope to bring it down even lower, to 600,000.

Meanwhile, conditions at the temporary camps are being improved. U.S. funds devoted to refugee programs in the narrow sense are considered adequate now by officials. More than 40 percent of refugee children are reported in school.

TOLERABLE CONDITIONS

The well-known Cam Lo camp south of the DMZ has a new irrigation system that should make the surrounding land arable for the first time in the two years refugees have lived there. U.S. Army and Marine medics have supplemented the less than 150 civilian doctors serving the countryside.

Yet serious problems remain. Insecurity is the worst, especially in the three southern provinces of I Corps, where the poorly defended refugee hamlets have come under repeated NLF attacks by both direct and indirect fire this year. Disease and high infant mortality have been reported in individual camps.

Seventy percent of the camps (and 90 percent of those in I Corps) are still rated deficient by refugee officials in terms of overcrowding, water, jobs, classrooms, clinics, and/or security.

But there have not been epidemics, nor has there been starvation. Rudimentary living conditions at least are on the whole much more tolerable now than they were in 1967.

Vietnam is fortunate. It is a fertile land, rich in natural resources—except in the inland mountains—and 90 percent of the population lives in the delta and coastal plain.

People do not starve when they are neglected. And Vietnam is fortunate in the resilience and ingenuity of its people, who have maintained their identify and cohesion over a millennia of sporadic wars.

The future remains an ominous question mark, however.

What happens when a family—and tradition—oriented society is torn from its roots on the scale that has occurred in Vietnam? What happens to children who have been removed from the discipline of fathers, village society, and quiet lives as buffalo herdboys to the urban slum world of theft and prostitution?

How does a nation rebuild after so much death and anguish?

URGENCY VOICED

Getting beyond charity to "social reform" and "real planning" was what the Health, Social Welfare, and Relief Minister, Dr. Tran Lu Y, called for in an interview.

His deputy for social welfare, Dr. Ton That Niem, said the same thing in different words. Until now refugee and welfare programs have just been "conditioned by the war," he commented. There has not yet emerged any program of prevention or development. Yet "the poverty of people" is what the Communists feed on.

An American official summed up the need as the rebuilding of a social infrastructure to replace that shattered by the war, one that would encourage development and yet not violate traditional local customs, and practices.

All officials spoke with urgency. All agreed that the problem had not even been faced yet.

In part this is a question of money. The social welfare branch of the ministry had its proposed budget sliced in half this year—down to 430 million piasters ($3.6 million), or one-third of 1 percent of the South Vietnamese national budget.

DRASTIC CUTS IN PROGRAM

This has meant severe reductions not only in relief programs, such as orphan assistance, but also drastic cuts in planned community and day-care centers that were to have been the core of long-term community development.

This affects many more people than just refugees and ex-refugees, while the impact on those once dispossessed is likely to be proportionably greater.

But beyond money is the deeper question of concept—and a program to implement that concept. The U.S. has accepted and is discharging a responsibility for emergency help to refugees.

It has not yet, at least as evidenced in the total refugee and social welfare program, accepted a responsibility to promote long-term rehabilitation of these people into a restructured society. Nor has the South Vietnamese Government done so. Meanwhile, the NLF is waiting in the wings.

CUBAN REFUGEE: "I AM BOTH HAPPY AND SAD"

(NOTE.—Twice a day, five days a week, a flight arrives at Miami from Cuba. It is part of an arrangement unique in the annals of refugee history. Since the flights started, about 165,000 exiles have come to the United States—and the flow continues.)

(By James Nelson Goodsell)

MIAMI.—It is 12:20 p.m. on a sunny afternoon in Miami. A propeller craft belonging to Airlift International has just taxied up to a hanger area on the far side of Miami's busy International Airport away from the main terminal building.

As the door to the plane swings open, 90 men, women, and children step out into the bright sun and are moved quickly into waiting buses. The group, the second today, are Cuban refugees who have chosen exile from their homeland rather than to continue living in Cuba.

Twice a day, five days a week, since December of 1965, this steady trickle of refugees has been making the trip from Varadero airport northeast of Havana to Miami. Ever since the airlift began, approximately 165,000 Cubans have arrived in Miami under a program officially approved by both the Cuban and United States governments.

It is a unique arrangement in the annals

of refugees. Seldom, if ever, has there been a program for refugees which in a way has the blessing of both the country the refugees are leaving and the one to which they are going.

A FIRST FOR UNITED STATES

Moreover, the program is unique for the United States because this nation has never before been a country of first asylum for refugees. Those who have come to the U.S. in the past have for the most part passed through one or more intermediate nations.

The 90 Cubans who landed on this bright, sunny afternoon represented virtually every part of the island nation which lies only a scant 90 miles across the Florida Straits from the U.S.

They left their homeland, without any real assurance of ever seeing it again, for a number of reasons. Some frankly did not like the social and economic climate in Communist Cuba. Others, without much ideological bent, wanted to join relatives who preceded them to the United States. Still others found it a good way to start anew, having very little to leave behind in their homeland.

FAMILIES REUNITED

All of those who came today, however, have some relatives or family connections here which makes it possible to have their names placed on the United States list of Cubans who may enter through this official airlift corridor.

Among the group just landed here are 12 separate families—some with both parents and between one and four children. There are half a dozen elderly persons aboard the flight, going to join younger members of their families already in exile.

There are several men and several women traveling alone—in one case, a father is coming to join his wife and two children who preceded him, in another, a woman is joining a husband already here. One single girl, with an aunt and uncle living in a Northern state, has left her parents and a brother and sister behind in Cuba, with little expectation that they will follow.

It is a typical group—the sort that United States immigration, customs, health, and resettlement officials meet day in and day out.

ROADBLOCKS CRASHED

Not all Cubans who flee their island come out with the official airlift. Last January, in an incident which has yet to be fully explained, a large group of refugees fled by crashing a truck through Cuban and North American roadblocks at the Guantánamo Naval Base in southeastern Cuba. Still others attempt to slip across the Florida Straits in tiny boats, some of whom make it.

And other refugees go out through established commercial airline runs to Mexico City and Madrid. But this is only a small trickle, based on twice-a-week flights to Mexico and once-a-week to Spain—and then only on space available basis.

The bulk of refugees now comes out via the air ferry.

But refugees have been coming out of Cuba ever since Fidel Castro came to power, toppling the dictatorship of Fulgencio Batista in January, 1959. The first to leave were some of the officials and supporters of the Batista government. Although their exact number is not known, several thousand Batista supporters appear to have fled the island in an exodus quite similar to those which take place in Latin America whenever a dictatorship is overthrown.

THREE PERIODS OF FLIGHT

Throughout 1959 and 1960, additional thousands left, some temporarily, some permanently. Among this group were many of Cuba's wealthiest families who were worried about the revolution under way on the island under Dr. Castro. There is no tally of the number of Cubans who left in this period to enter the United States, although U.S. refugee officials here suggest it would run into several thousand.

Those same officials have records, however, for the period from February, 1961, onward.

They cite three distinct periods in the saga of the Cuban refugee and in the United States refugee program, which was begun in February, 1961:

Using commercial flights for the most part, 153,534 Cubans were registered with refugee officials in Miami between Feb. 1, 1961, and late October, 1962, at the time of the missile crisis which cut off commercial flights.

Using small boats and occasionally coming through another country, 29,962 Cubans were registered in the three years between the missile crisis and Dec. 1, 1965.

Using the airlift for the most part, 165,000 Cubans have come out in the 3½ years since Cuba and the United States signed a memorandum of understanding permitting those Cubans who wanted to leave the island to do so if their names were approved by both governments.

ASSISTED 300,000 REFUGEES

To process and speed the arriving refugees, the United States set up a reception and resettlement service. With a director in Washington and main facilities here, the United States Cuban Refugee Program to date has assisted in one way or another more than 300,000 Cubans. The minute a planeload lands at the Miami airport, officials from the Cuban Refugee Center here begin a detailed processing which takes surprisingly little time.

Persons aboard the 12:20 p.m. plane will be through much of the processing as early as 3 p.m. This includes a short speech of welcome, baggage inspection, immigration check, health examination, personal interviews, clothing distribution, and resettlement interviews with one of four agencies which officially take over once government formalities are finished.

Along the way, the new arrivals will be given a box lunch of sandwiches, cake, and some candy—also Cuban-type coffee.

For many of the refugees, language is an immediate problem—and virtually all those connected with the program speak fluent Spanish, some of them refugees themselves.

WHERE THEY GO

An effort is made to get the new arrivals to locations where members of their own families live—and to do it as quickly as possible.

Room and board facilities for the new arrivals are available in a converted United States Army officers billet at the Miami airport. But most new arrivals use the facilities for only a few hours, if that.

Although the greatest number of Cubans have chosen to remain in the Miami area, a significant number have gone to every state and the District of Columbia.

In order of numbers of refugees, the six states with the largest Cuban refugee population are: New York with 61,317; New Jersey with 37,804; California with 26,440; Illinois with 15,975; Florida outside the Miami area with 7,856; and Massachusetts with 6,370. Some 18,500 also fly direct to Puerto Rico.

According to refugee officials here, the refugees are making a substantial contribution to the communities in which they have resettled. While many had skills in Cuba which could be used in the United States, others had to develop new skills. A number of state and local agencies are cooperating with the refugee program in administering training and retraining programs for the newcomers.

There are problems, of course, for the bulk of the refugees have never before traveled far and are suddenly thrown into an alien environment. The cost of living in the United States is a major problem.

In addition, despite the official assurances that there are very few refugees who want to return to a Cuba under Dr. Castro, there does indeed seem to be quite a number of Cubans even in the Miami area who are willing to express some doubts about having left, even if at the time they left they thought they were doing the right thing.

Interviews with a random sample of members of Miami's Cuban community suggest that the majority want to see the overthrow of the Castro government, wish that the United States would do something about making this possible, but wonder whether there is much that Washington can do—short of invasion.

Many of those interviewed would like to see numerous Castro reforms retained in a post-Castro Cuba.

"He's done a good deal for my island," an elderly Cuban refugee said, even though she and her children and grandchildren have all left the island. "I would go back, I suppose, but I am not sure my grandchildren will. They're now Americans."

Her reaction, expressed by others in different ways, was typical.

SOME STAY BEHIND

There are, of course, many refugees who live for the day they can return and for an end to the Castro government.

"He's the worst thing that ever happened to my country," said a middle-aged man who was in the clothing business in Havana before coming to Miami and now works as a dishwasher in a restaurant. "No one likes him in Cuba, just no one."

That reaction is also typical, but of a minority of refugees. For although the airlift shows no signs of letting up in the foreseeable future, most of the refugees admit Dr. Castro's support.

In fact, some of the recent arrivals here tell of brothers and sisters, mothers and fathers, and children left behind in Cuba who have no desire to leave the island—indeed who openly support the government. One recent arrival told of a brother who is a member of the Cuban Army and "a loyal Castro supporter."

Thus, families are often split in this evidence of the world refugee problem. It is a situation which has forced the United States Government to pay direct attention to the issue. Last year, something between $60 million and $70 million was spent by the U.S. on the Cuban refugee program. In the upcoming fiscal year, beginning July, the total may well push upward to $80 million.

Although the Cuban episode is a unique one for the United States, estimates here and in Washington suggest that with time, the Cuban refugees will "melt into the pot as other refugees in the past have done," as one official phrased it.

Although many talk now of returning to Cuba, the majority probably will stay in the United States no matter what constitutional, political, and economic changes take place in their homeland.

The majority, after a time, go it alone and require no financial assistance. In fact, among the more than 300,000 Cubans admitted to the United States and registered with the refugee office here, only 18,000 are receiving aid in the form of financial assistance now—and most of these are classified as "unemployable"—the aged, the physically handicapped, and minors.

The vast majority of Cuban refugees are gainfully employed. Here in Miami alone, for example, there are 2,000 businesses run by Cubans in the area. This is out of a total of 120,000 or so Cubans in the Miami area.

LIBERATION FERVOR COOLS

A few years ago, numerous refugee groups aiming at returning to Cuba and overthrowing the Castro government sprang up in and around Miami. Some still exist. Others can, with the crank of a mimeograph machine, go back into business. But the period of de-

termined planning by exiles to unseat Dr. Castro may have subsided. Some of the most active exiles of a few years back now are in business and other activities here.

One leading former activist says that perhaps as many as 10,000 refugees could be gathered to launch an attack on the island, "but the fire is going out of them." Yet another, Manolo Ray, one of the leading members of the exile opposition to the Castro government, suggests the figure might be 50,000.

This group serves as something of an embarrassment to the United States. For although Washington has no relations with Cuba, it does not see any immediate likelihood of a Castro overthrow.

"Conditions may not be too favorable on the island at the moment," says a Washington official, "but the Castro regime has plenty of support and is well entrenched."

The exiles coming out of Cuba, despite the steady stream, do not suggest otherwise. The 90 refugees who got off the plane this afternoon simply wanted out and did not like living under the Castro government—and the air bridge between Varadero and Miami provided the out.

"I am both happy and sad," commented an attractive 24-year-old girl who got off the plane.

Her comment pretty well sums up the refugee story here. It is a bittersweet experience for those going through it.

GET CONCERNED—A WAY TO HELP REFUGEES

(By Bertram B. Johansson)

(NOTE.—The world's refugee population is on the increase each year. Despite the deep concern of many, officials report a need for three "mores": More world awareness; more individual generosity; and more partnership and cooperation between refugee agencies.)

UNITED NATIONS, N.Y.—We were walking through the main lobby of the international arrival building at Kennedy Airport, New York, on our way to meet a planeload of new refugees.

Ruth Tropin, my companion from the Intergovernmental Committee for European Migration (ICEM), pointed over to the escalator area and said:

"It's near there that the refugees usually meet their families. And, do you know, after 20 years in this work, I still can't look at them for very long when families are being reunited, even though they're all so happy."

Today it was a chartered Pan American planeload of more than 160 Cubans flown in from Madrid. There was a cluster of young boys on board (under the age of 15) who were being funneled into this country under the auspices of the International Rescue Committee (IRC) to keep them out of Fidel Castro's army in accordance with their parents' or other relatives' wishes.

Yesterday it was a plane loaded mostly with Czechs. Since the Soviet intervention in Czechoslovakia, one of the side effects has been a marked increase in the flow of refugees from other East European countries where people feel they had better leave now. Polish Jews have been "encouraged" to leave in considerable numbers. Many Romanians are appearing on refugee rolls after tours abroad.

FRIENDS, RELATIVES WAITING

Once today's batch of refugees had finished their paperwork processing with United States immigration and customs men, they began coming into the lobby near the escalators. They peer into the crowds for a sight of a familiar face. Sometimes, especially with the Cubans, there are as many as six or seven relatives or friends waiting for each refugee coming through.

One refugee shows a sudden sign of recognition of a face long unseen, or of the face of a friend he had not expected to be there.

Through the welter of outstretched arms, the hugs, the kisses, the tears, the laughter, one hears the great sighs and sobs of welcome and relief.

You swallow the lump in your own throat, turn away, and leave them to the privacy of their meetings.

One of the refugees tells you later that as they greet one another, they sometimes realize deep down they are easing the pain of having waited for months, or years, of uncertain separation. Now the uncertainty has ended. It feels good to let it go with tears and laughter.

A CUBAN VOICES PRIDE

A Cuban father waiting for his son to come in on this planeload says to me proudly:

"I used to be a lawyer in Havana. Now I am just a busboy in Miami. But I'm more proud than I can say to be a busboy in a free country and to have my son come here."

His smile fades for a moment as he starts to say, "My wife is still in Cuba with the other children, and when I have saved enough money to pay their way I will have them come too . . ."

What he did not say was that an estimated 800,000 Cubans are waiting to leave. That the rate of their departure is about 40,000 per year. And that this could mean a possible 20 years before he sees his whole family again.

Circulating in and out among the refugees as they come off the plane and straggle into the United States immigration area are workers like ICEM's Mrs. Tropin and others from Church World Service, IRC, the United States Catholic Conference, and the United Hebrew Immigrant Aid Service (when East European refugees arrive).

KINDNESS DISPENSED FREELY

Behind the humdrum work of processing the refugees, making sure they are all here, that they go onward to their next destination, which may be Canada, Australia, Miami, Milwaukee, or to friends in New York City, these workers dispense their kindness and compassion selflessly.

They do so so selflessly, in fact, that few people ever know about it, except the refugees themselves. They often write back to express gratitude for a kind word, for someone's lifting their cases off the sometimes confusing baggage belt, or pinning an identification tag on them . . . or just one of many other such first acts of kindness in a new country.

Few could comprehend, for instance, the vast amount of paperwork, international cabling, searching out of visas, challenging of immigration laws, or chartering of planes that goes on before a refugee arrives at his destination.

Miss Tropin pointed to one of the immigration officers and said:

"There's one of the kindest men on earth. One day a refugee got lost out here. He found him wandering around here late at night after all the other refugees had gone on to their next destinations all over the free world. Somehow, this man traced me down to a dinner party I was attending, and between us we got the refugee located with the people he was supposed to be meeting."

WORLD'S CONSCIENCE BATTERED

By a curious reversal, the unselfed work of these voluntary refugee agencies, governmental organizations, and the United Nations High Commissioner for Refugees (UNHCR) is partially muffled by the rush of world events, by concern over Vietnam, violence, poverty, and urban problems. They all push themselves on the world's conscience, and have tended to overshadow some of the refugee facts such as these:

Because of the world's turmoil, there are actually more refugees around the world today than 10 years ago.

As of Jan. 1, this year there was a total of 17,226,915 uprooted refugees as defined by the U.S. Committee for Refugees (USCR). There were 15 million in 1959 which dropped to 13,510,050 in 1962.

This year's figures include the "new" refugees in Vietnam, the Czechs and other East European nationalities, the Cubans, the Biafran-Nigerians, many other Africans, the Tibetans, etc.

No one refugee agency or individual is likely ever to receive due recognition, except the reward of knowing how many thousands, even millions, of people they have helped. Nor could a series of articles such as these pay due attention to all of them.

The USCR can supply a copy of World Refugee Report which not only treats some of the current world refugee problems, but gives brief accounts, names, and addresses of most refugee agencies in the United States—governmental, intergovernmental, and private voluntary agencies. (USCR, 20 West 40th Street, New York, N.Y. 10018: $1 per copy.)

HUNGARIAN REVOLT RECALLED

As an official of the International Rescue Committee says:

"The main problem facing the private voluntary refugee agency today is a loss of awareness in the community at large of the importance, the size of the refugee problem, and of the fact that each year seems to produce more refugees, and the concomitant lack of awareness each year by the general public.

"A very simple proof of this is that at the time of the Hungarian events (during 1956), virtually the whole of the United States was ready to help. There was hardly a university or person that didn't know about Hungary and didn't take some action about the 200,000 Hungarians leaving their country under duress.

"For the Czech situation of last year, and it continues, with some 50,000 persons involved, there was not even a fourth of the support. The Czech event passed without making a ripple in the American conscience as far as refugees were concerned. Only a few small colleges, for instance, offered scholarships to Czech students, and only the Ford Foundation injected itself into the Czech student problem here in the United States with funds. This expresses a vacuum of support . . . the change over these 13 years since Hungary.

CHANGES NOTED

A Church World Service official puts it this way:

"After a full generation, people are tired of refugees. With the passing of Eleanor Roosevelt, much of the charisma of United States concern and leadership in the international refugee field seems to have disappeared, in image, if not in fact. I cannot but help note that Sen. Edward Kennedy is probably the most vocal, and almost the only United States spokesman on behalf of the word refugee today. . . ."

While there are still many European and East European refugees to resettle abroad, the focus of the refugee problem is changing radically. For many of the refugee agencies, the refugee of the 1969–70's is quite a different person than the post-World War II product.

He is still disenfranchised. He is still legion in number. He comes, for the most part, from the southern hemisphere, from Africa, Asia, and Latin America. His problem cannot be solved by international migration. He might not even be outside of his tribal or national area.

For economic or political reasons he cannot be repatriated to his home community, and, depending on the accident of his geography, there is a question of whether he can be integrated locally.

This means that new acts of partnership and cooperation between governmental and nongovernmental agencies are becoming more frequent, and that where situations can be "depoliticized" enough, the UNHCR

good offices can come in to help weld such a partnership.

Currently the UNHCR offices are concerned with some 2,450,000 refugees around the world. The major statistics provide an interesting index of their distribution: 660,000 are in Europe; 160,000 is Asia; 940,000 in Africa; 110,000 in Latin America; 45,000 in Australia and New Zealand; and 520,000 in the United States and Canada.

The situation of the 660,000 refugees at present in Europe has been largely resolved, mainly as a result of the High Commissioner's permanent solutions program, the efforts of host governments, and of both results and work flowing out of World Refugee Year (1959/60).

An indication of the wider acceptance of the work of the UNHCR office on the part of some countries at the United Nations occurred here at the UN last December. The reelection of Prince Sadruddin Aga Khan as UN High Commissioner for Refugees took place by acclamation in the General Assembly.

On prior occasions the Soviet Union, East European countries, and third-force nations took some exception to the work of the UNHCR offices. But as UNHCR has demonstrated it can operate nonpolitically, and as world interest in Africa has increased, the support for UNHCR within the UN has become more unanimous.

It is noted that whereas the refugee coming to the United States or Canada or Latin America or Australia or New Zealand is apt to be one with certain skills and incentives that often make him an asset to his country of asylum, the problem in Africa or Asia is different.

REFUGEE COMMUNITIES FORMED

In the latter continents, much training for skills is often necessary, and movements of populations are apt to be on a mass basis. One solution has been to form whole communities for the refugees, as with the Tibetans in India, and in the remarkable community of M'boki in the Central African Republic, where 16,000 refugees from Sudan have been resettled.

At M'boki and also in India, the communities of refugees are integrating and makin a contribution to the country of asylum. In both instances, too, host nations have been exceedingly generous with land and other donations when their own economies could hardly afford it. The generosity of many African nations in this respect is a factor highly appreciated by UNHCR officials involved in coordinating such programs, but not generally by the world community.

In the case of aid to Biafran-Nigerian refugees, a situation in which governments have feared to tread because of the highly sensitive political overtones of the problems, some of the private, religious and nonreligious agencies have stepped in and cooperated with their individual talents and skills to meet many exacerbated food and other problems.

What does it all add up to—this tragic world situation with refugees?

Most observers will tell you that what is needed is more awareness of the problem, more individual generosity, more partnership and cooperation between refugee agencies—although there has been a great deal of the latter because the agencies themselves realize the enormity of the problems.

And, perhaps most of all, a more simple effectual love of man for his brother.

TAX TREATMENT OF STATE AND LOCAL GOVERNMENT BONDS

Mr. KENNEDY. Mr. President, it is becoming increasingly clear that one of the most sensitive areas in the growing movement for tax reform concerns the tax treatment of interest on State and local government bonds. As I have stated on previous occasions, I believe that if we are to succeed in meeting the challenge of the seventies, we must offer new Federal incentives to encourage State and local governments to seek more efficient methods of financing their expanding social programs. A number of major legislative proposals have already been submitted in this area, including the provision of a Federal interest subsidy or the establishment of an urban development bank, and I am hopeful that the coming debate on tax reform in both the House and the Senate will help to clarify the issues involved.

In a recent issue of the journal Tax Policy, Prof. Stanley S. Surrey of the Harvard Law School provides a detailed analysis of the many complex facts and issues in this difficult area. In addition, in an introduction to Professor Surrey's article, the editor of the journal makes several comments that help to place the present controversy in historical perspective.

Mr. President, because of the widespread interest in this problem, I commend Professor Surrey's article to all Members of Congress interested in the cause of tax justice, and I ask unanimous consent that the editor's introduction and the article be printed in the RECORD.

There being no objection, the article and introduction were ordered to be printed in the RECORD, as follows:

EDITOR'S NOTE TO "TAXATION OF STATE AND LOCAL GOVERNMENT OBLIGATIONS"

Because of the current lively interest in tax loopholes and the fact that income tax exemption of the interest on state and local debt constitutes one of the most conspicuous of these loopholes, the editor asked Professor Stanley S. Surrey, formerly Assistant Secretary of the Treasury, to contribute the accompanying article on this subject.

We have invited Mr. Patrick Healy, Executive Director of the National League of Cities to respond to Professor Surrey's article. Mr. Healy's discussion of the issue will appear in the July-August issue of TAX POLICY.

Professor Surrey has explored methods whereby the federal government might compensate state and local governments for the loss of the tax exemption privilege. Mr. Healy will probably stress the importance of this exemption in state and local finance and protection of the sovereignty of the states.

We are grateful to these distinguished contributors for this cooperation. We believe that our readers will find both articles illuminating and of great value.

There is considerable color and historic interest in this half-century controversy as Presidents, secretaries of the Treasury, well-known senators, state and local officials, business groups, tax economists, and others take part in the active drama, while investment houses continue to dangle the tax-exempt plum before the eyes of the wealthy. Through it all, the upper-bracket beneficiaries maintain a discreet and becoming silence.

There is an abundance of well-documented literature on the origin and court decisions relating to this exemption. The legal pros and cons have also been ably presented from time to time, and courageous statisticians have attempted to measure the value of the exemption privilege to the state and local governments, and the amount of revenue loss to the federal government.

Although this exemption stems from the *McCulloch vs. Maryland* decision in 1819, the matter was not of great fiscal concern to the federal government until the ratification of the Sixteenth Amendment in 1913, giving Congress the power to levy an income tax. Moreover, public attention was not focussed on it until World War I forced the personal income tax rate, including surtax, to a top level of 77 percent.

Controversy over the exemption was particularly lively and colorful in the 1920's—perhaps more so than it has been since. Secretary of the Treasury Andrew W. Mellon spearheaded the movement for abolition of tax-exempt securities in the twenties. It had been endorsed by both President Warren G. Harding and President Calvin Coolidge, and by Secretary of Commerce Herbert C. Hoover, later President. Hearings on a proposed amendment giving Congress and the states power to tax the income from government obligations were held by the Ways and Means Committee in 1922 and by the Senate Judiciary Committee in 1923. The Ways and Means Committee recommended the adoption of such an amendment in January, 1924, but the House of Representatives failed to approve the resolution by the necessary two-thirds vote.

Another major effort was made in the thirties, but this time the movement was led by Senator Cordell Hull, later to become Secretary of State. On February 8, 1933, he introduced a Joint Resolution amending the Constitution to allow taxation of income from federal, state, and local securities and of governmental salaries. A similar resolution was introduced in the House by Representative Wright Patman. Secretary of the Treasury Ogden L. Mills approved the resolution, but did not anticipate its success. In 1934 Secretary Henry Morgenthau, Jr., expressed favor for a constitutional amendment.

President Franklin D. Roosevelt preferred a more direct attack upon the problem. In a message of April 25, 1938, he urged that the time had come when Congress should exercise its constitutional power to tax income from whatever source derived, and that private income should not be exempt either from federal or state income tax, as a result of being derived from interest on federal, state, or municipal obligations. He reiterated these views in his tax message of January 30, 1939, and declared:

"A fair and progressive income tax and a huge perpetual reserve of tax-exempt bonds could not exist side by side. . . .

"The tax immunities heretofore accorded to private income derived from government securities or government employment are not inexorable requirements of the Constitution, but are the result of judicial decision.

"I repeat that it is not unreasonable to hope that judicial decision would permit the elimination of these immunities."

The tax immunity of governmental salaries was abolished by the Supreme Court in March, 1939.

On February 20, 1941, the Treasury eliminated the federal tax exemption for all its future securities. In March, 1941, the Bureau of Internal Revenue began a test action against the bondholders of the Port of New York Authority. On January 2, 1944, the Supreme Court refused to review a decision by the United States Circuit Court of Appeals holding the bonds exempt.

The past quarter century has not produced such determined efforts to end this exemption as were evident in the preceding quarter century, although at no time have the rumbles from the two opposing camps completely died out. Now after more than two decades of relative quiescence, the issue is again coming to the fore, but with a difference, for this time there are proposals for a *quid pro quo*, as indicated in Professor Surrey's paper. Another new element in the cur-

rent picture is the increasing difficulty in floating bond issues and the very great need of the state and local governments for capital funds.

In retrospect some of the arguments used by each side appear spurious. For example, state and local debt financing does not appear to have prevented private corporations from obtaining sufficient capital, as was widely claimed during the twenties. Nor does the claim that the federal government would lose more as a result of increased interest costs than it would gain from the taxation of governmental securities appear to have been substantiated.

FEDERAL INCOME TAXATION OF STATE AND LOCAL GOVERNMENT OBLIGATIONS

(By Stanley S. Surrey, Law School of Harvard University)

The subject of the federal income taxation of state and local government obligations is again under serious attention in the Congress. This attention is appropriate and desirable, for this perennial and previously intractable problem is urgently in need of a solution.

At present there are over $120 billion of outstanding state and local tax-exempt obligations, and about $15 billion in new obligations are being issued annually (for about a $10 billion net annual growth). The outstanding issues and the annual new crop of obligations present different problems. These remarks relate primarily to the enormous increase in new issues of these obligations that now looms up before us and the effects of adding this new huge volume of tax-exempt obligations to the present market. The concern and the proposals to meet it can be briefly summarized:

The probable high level of new issues of tax-exempt state and local bonds over the next decade raises very serious problems for state and local governments and for the equity of our federal tax system. This high level can come about under the enormous financing requirements of the vast social programs so vitally necessary to meet our domestic needs.

The basic problem is that piling more and more reliance on the tax-exempt privilege as a way of helping states and localities to meet these financing requirements creates a powerful buyer's market for tax exempts. The state and local governments pricing their bonds on the basis of this exemption as a consequence will get less and less for it—that is, they will have to pay closer to the market rates of interest on taxable bonds—and their financing costs must inexorably rise. At the same time, the buyers would still get the tax exemption with even greater tax savings.

Those who are anxious to preserve the strength of state and local governments in the federal system should give serious thought to these problems.

We should all consider whether *new financing techniques* are available and appropriate to avoid these problems—techniques which at the same time operate to preserve the independence of action on the part of state and local governments in our national system to which the principle of tax exemption has contributed.

PROJECTIONS OF STATE-LOCAL CREDIT DEMANDS

Let us first consider the rate of growth of new state and local issues that looms ahead. The congressional Joint Economic Committee in 1966 made a projection of the likely level of growth of capital needs and thus of state and local bond issues through 1975. The JEC figures themselves suggested that this growth would be in line with the likely growth in gross national product. Since the supply of savings should also grow at about the GNP rate, the general conclusion would be indicated that the marketability of state and local bonds should not change markedly relative to other bonds.

But the JEC report itself emphasized one reservation about this outlook, namely, the heavy reliance placed on commercial bank takings. They recognized that if commercial banks, for example, were attracted more heavily into mortgages (e.g., by the much touted housing boom of the 1970's) there would be problems for state and local governments in floating even a level of state and local issues that was growing in line with GNP.

Another set of qualifications should be added to this forecast of marketability of state and local bonds. The JEC projections basically assumed only the development of current programs. They did not make much allowance for new programs.

The expansion of federal programs that lies ahead is likely to induce even more substantial increases in state and local government borrowing than may have been anticipated in the study. The Congress has already considered a wide range of new federal programs in a variety of areas, such as pollution control and housing. In addition, pressures on the federal budget have recently caused attention to be focused on the potentialities of debt service grants to state and local governments, as are now used in the public housing area, rather than the lump-sum grants that have been more traditional. From a financial viewpoint, these debt service grants would shift the financing of the federal share of local project costs from the taxable market (i.e., away from the federal bonds that provide the funds for the lump-sum grants) to the tax-exempt market to absorb the local bonds that would be issued to finance the project (the debt service grants would help defray the interest and principal on these tax-exempt bonds).

Another factor that may well have been underestimated in the JEC work is the size of replacement needs. For example, much of the physical plant in our urban school system is aged and inadequate to the school needs of urban children. Replacement will be very expensive. These replacement needs alone could cause the annual net increase in state and local bonds to double in the next five to ten years.

In summary, the growth of new programs, especially federally aided ones, an increasing reliance on debt service grants to shift federal debt to state and local debt, and exploding replacement needs could increase the annual net growth in state and local debt from the present $10 billion to as high as $30 billion a year in ten years. *This would represent a rate of growth twice as high as the rate of growth of the savings supply.*

If state and local governments are to sell this enormous increase in tax-exempt bonds, then they will be commanding a larger share of the savings flow. To do so they will have to compete more sharply with other borrowers, such as homeowners and corporations. The question is whether tax exemption is an effective instrument with which to conduct this competition. The experts can readily demonstrate that this exemption is "inefficient" in the sense that state and local governments get less benefit from it in lower interest costs than the federal government gives up in lost tax revenues.[1] Some may say in reply, however, that even conceding this "inefficiency" it can be regarded as the price to be paid for the independence of decision-making that the interest exemption offers in general to state and local governments. But even if this were in turn conceded—and many would say that the price is already too high in terms of the effect on the federal tax system and the wastage involved—we must certainly give serious thought to the question of how this will work out if state and local governments suddenly try to become much heavier borrowers.

THE MARKET FOR TAX-EXEMPT BONDS

To understand the significance of this enormous potential growth in tax-exempt bonds, it is necessary to remember that the institution of tax-exempt interest has an impact not only on federal tax returns but also on bond markets. It does save state and local governments money by reducing interest rates on their bonds, but it does so by narrowing the range of customers for those bonds. It narrows the range to groups that find tax exemption valuable. You do not find exempt pension trusts buying tax-exempt bonds.[2]

The rate on tax exempts is determined, like any other price, by demand and supply. If the supply of tax exempts is limited, they can be sold to the buyers who are most anxious to get them. If more tax exempts are to be sold, the price of those tax exempts will have to fall, i.e., their interest rate must increase. The price fall will be necessary to get existing buyers to take more tax exempts (and thus less of other investments) and to induce new buyers to enter the tax-exempt market.

It is significant that interest of all kinds—taxable and tax-exempt together—is a modest component of the income of upper-income individuals. That income consists mostly of dividends and capital gains, reflecting the fact that the wealth position of these individuals inclines them to the higher risk-higher return features of equity investment (which features are also associated with favorably taxed capital gains and untaxed unrealized appreciation). Inducing these investors into the relatively safe investment of state and local government bonds through tax exemption is in a sense swimming against the tide.

By and large, since the most distinctive feature of these state and local bonds is their tax exemption, the process of selling more bonds must involve widening the market by appealing to taxpayers with lower marginal tax rates than those now acquiring tax-exempt bonds. The appeal must involve the process of selling tax-exempt bonds at rates more closely comparable to those on taxable bonds, so as to make the exempt bonds attractive to those who get less tax advantage from the exemption.

THE INEVITABLE INCREASE IN INTEREST RATES ON TAX EXEMPTS

Higher costs to local governments

It is not possible to say exactly how much tax-exempt bond interest rates would rise with an increase in the relative share of tax exempts in the market. Obviously, it depends for one thing on the levels of general interest rates, which are subject to a great many forces. We can make some progress if we talk about the yield differential between high-grade municipals and high-grade corporate bonds. That differential has hovered around 70 per cent since 1954, i.e., high-grade municipals have in general sold at interest rates about 70 per cent of those on high-grade corporate bonds.

Table 1 presents some estimates of the possible response of the state and local bond rate to future developments. The table covers a range of possibilities respecting the size of state and local borrowing and the role of commercial banks in the market, since they are now the dominant institutional investor in municipal bonds. The future course of that role is of obvious importance—can the banks continue that role, keeping in mind that business loans are their primary function?

Footnotes at end of article.

What happens when they reach the limits of their taxable income, as some are now doing, so that the use of expenses, in fact allocable to tax-exempt issues, against taxable income as now permitted, no longer produces tax savings? [2]

TABLE 1.—SOME PROJECTIONS OF SPREAD BETWEEN STATE AND LOCAL (S. & L.) BOND RATES AND CORPORATE RATES [1]

Rate of growth of State and Local bonds outstanding	Rate on high-grade S. & L. bonds as percentage of corporate rates		Difference in points between high-grade S. & L.'s and corporates		Rate on high-grade S. & L. bonds	
	With S. & L. market favorable [2]	With S. & L. market unfavorable [2]	With S. & L. market favorable [2]	With S. & L. market unfavorable [2]	With S. & L. market favorable [2]	With S. & L. market unfavorable
GNP rate (6 percent) [3]	70	75	1.8	1.5	4.4	4.7
Moderate rate (10 percent)	75	80	1.5	1.2	4.7	5.0
High rate (20 percent)	80	87	1.2	.9	5.0	5.3

[1] Assumes corporate AAA rate at 6.2 percent. The 70 percent relationship used as a base point here reflects the typical relationship of recent years.
[2] The favorable-unfavorable distinction involves the role of commercial banks in this market. Rates will be favorable to State and locals if commercial banks remain a large holder. They will be unfavorable if commercial banks hold a smaller share.
[3] This would be a sharp slowdown for State and local government borrowing.

Table 1 shows that the interest rate increase resulting from a high volume of tax-exempt securities could be put as likely to be about one-half point (keeping in mind that it might come to a full point). At current levels of state and local debt issuance ($15 billion gross) this would mean an increased annual interest cost of around $75 million on one year's issues. This annual cost would of course cumulate if the increase persisted for subsequent new issues. With new issues rising at 10 per cent a year, a persistent increase in the state and local bond interest rate of one-half point would increase the annual cost by about $500–$600 million in seven years. This increased cost, remember, does not include the increased debt service itself, which would be something in addition. The increased cost is just the cost of the interest *rate increase* caused by the increased debt. It is the increase in cost caused by going to the well too often.

This is a substantial burden to put on local property taxpayers.

It should be observed that this discussion is based largely on data as of the end of 1968. It does not reflect the high interest rates prevalent in 1969 under the fiscal and monetary efforts to curb the inflationary aspect of the economy. Municipal financing clearly suffered under those efforts. But the discussion is in terms of what "normally" can be expected in the bond markets and therefore does draw upon the current difficulties.

Higher tax savings to buyers

This is not the full story, however. This process of bidding up the interest rates on tax-exempt bonds means that their benefits will automatically become much larger to those upper-bracket taxpayers who are already buying them and would, of course, continue to do so under such higher interest rates. In addition, the higher interest rates will bring more and more taxpayers into a position where the exemption makes holding state and local bonds attractive even at their lower marginal rates.

Table 2 shows for taxpayers at various effective rate brackets the value of tax exemption for an investment in state and local bonds which yields $100 of exempt interest at current rates. The taxpayer in the 70 per cent tax bracket who earns $100 in exempt interest when the exempt interest rate is 70 per cent of the corporate rate is in effect initially sacrificing $43 of before-tax yield. But he is then rewarded by the larger after-tax benefits. Thus, if he had obtained a taxable bond paying $143 (of which 70 percent is $100), he would have paid a tax of $100 and would net $43. The purchase of a tax-exempt bond instead thus already produces a saving of $57 for every $100 he receives in exempt interest.

TABLE 2.—VALUE OF TAX EXEMPTION FOR VARIOUS TAXPAYER SITUATIONS BEFORE AND AFTER RISE IN EXEMPT BOND RATE RELATIVE TO CORPORATE RATE

Marginal tax rate (percent)	Net advantage of tax exemption on investment yielding $100 when exempt rate relative to corporate rate is—		
	70 percent	80 percent	85 percent
70	$57	$71	$78
60	43	57	64
48	26	40	47
30	0	14	21
20	−14	0	6
15	−22	−3	0

We can now see the increased benefits for taxpayers when the state and local governments go to the well too often. The increased interest cost indicated in Table 1 is an increased payment on bonds that would have been sold anyway to the present buyers. The result, therefore, is an automatic increase in the tax savings enjoyed by the present group of buyers of tax-exempt bonds, which they enjoy because the market discount on the bonds is less than the tax savings the bonds provide. Thus, if the interest rate on exempt bonds rises to 85 per cent of the corporate bond rate, the net saving of $57 for a taxpayer in the 70 per cent bracket will rise to $78—a gain of 37 per cent.

Looking down Table 2 one can see that as the relative interest rate on state and local bonds rises, taxpayers at lower marginal tax rates come into the position where they would be saving more in taxes from the exemption than they would lose on the interest differential; that is, their tax savings (which is the federal government's revenue loss) would be greater than the savings in interest to the state and local governments. If the state and local rate rises to 85 per cent of the corporate bond rate, even a taxpayer whose marginal tax rate is over 15 per cent would find these bonds a good investment.

In summary, the penalties for excessive reliance on the tax-exempt privilege to finance new programs are substantial. These penalties would be visited upon state and local governments through increasing the interest rate on all the bonds they sell, including the basic school and other bonds that they will have to sell anyway. The result occurs because the advantage of the present tax-exempt privilege of state and local bond interest works in a limited market that can be swamped by overuse of the tax exemption.

At the same time the tax savings to present buyers of bonds will rapidly pyramid and new groups of buyers will be drawn to these tax benefits. This expansion of the tax preference will be coming at a time when the patience of many with existing tax preferences is becoming exhausted—as is shown by the rapid and widespread rise in sentiment for tax reforms to counteract the effect of tax preferences that now permit many taxpayers with high annual incomes to pay little or no federal income taxes. While we observed earlier that interest of all kinds is only a modest component of the income of upper-bracket individuals, nevertheless tax-exempt interest ranks second after capital gains taxation—perhaps third if we knew more about the magnitude of accelerated depreciation on buildings—among the factors enabling high-income taxpayers to reduce their effective rates of tax.[4]

The present exemption for interest on state and local bonds has the general effect of a blanket, no strings attached, federal grant-in-aid to the issuing governments. It is achieved by giving tax favoritism to high-bracket individuals with conservative investment instincts, to commercial banks, and in lesser degree to some other financial institutions. The state and local governments clearly desire the general effect to continue. Those interested in the federal tax structure deplore the method of achieving this effect because of both the tax favoritism and the inefficiency or wastage involved in resorting to the technique of favoritism, in that more federal tax revenue is lost than the local governments obtain in aid.

The state and local governments carry no brief as such for the federal tax windfalls and the wastage. Up to now, however, they have not seen any other mechanism which can achieve for them the general effect that the tax exemption produces. But the future heavy financial demands on state and local governments will diminish for them the amount of the grant-in-aid that the tax exemption mechanism produces. The restraint on the scope of the market for their bonds that tax exemption involves will cause their interest rates to rise relative to taxable obligations and thus the amount of the grant-in-aid to lessen. At the same time, the tax favoritism perversely is increased.

The inefficiency inherent in the use of the tax exemption mechanism to achieve the grant-in-aid will thus hurt *all* the governments involved. They now have a common interest in finding a better path to the grant-in-aid. We should, therefore, turn to describing some of the alternatives proposed.

POSSIBLE NEW FINANCING TECHNIQUES

Local taxable bonds

In a talk on June 13, 1968, before the Municipal Forum of New York I described one possible new financing technique—that of local taxable bonds. I gave the example of a local project—it could be an anti-pollution project, an airport, an urban development project, and so on—as to which federal assistance would be provided not through the traditional initial capital grant but through a system of paying part of the debt service of a bond issue by the locality to meet the cost of the project. The federal share of the debt service—as respects both principal and interest—would be paid periodically over the life of that bond. I then indicated that instead of having the local bond a tax-exempt obligation, there could be used a *local taxable obligation* with two attributes: the federal government would fully guarantee the bond and, in addition, would use the tax revenue gained through the taxable status to pay to the local government an interest subsidy that would bring the interest cost to it down to a level lower than, or at least comparable to, the interest rate on a tax-exempt bond. This interest subsidy would be in addition to the share of the annual debt service provided by the federal government under the particular program.

This alternative of a *local taxable bond* could of course be used in connection with any state or local obligation, and need not be limited to a bond issued in connection with a federally aided project.[5] The federal guarantee for the local bond would be

Footnotes at end of article.

relevant to the latter since the project itself would presumably have to conform to the contours of the particular substantive program under which federal aid was granted. Where such a federally aided project was not present, presumably there would be no federal guarantee of the local bond and no federal share of the debt service as such. But there would be a federal subsidy paid to the local government to cover part of the interest cost so as to make the issuance of the taxable bond worthwhile to the local government. The decision to issue a taxable bond would remain with the local government, and it could always if it preferred—which presumably would be a matter of financial calculation—issue a tax-exempt bond. The purpose for which the bond was issued would here be irrelevant, and the federal government would not be concerned with that aspect.

The mechanics of the local taxable issue and the payment of the federal subsidy would have to be explored. Thus, the federal government could pay annually a stipulated amount, agreed on when the bond was to be issued, such amount being a percentage of the interest. The basic authority for such arrangements would be a federal statute, and it could specify the amount of the interest subsidy or provide guidelines for the federal authorities to follow. Another possibility is a procedure under which the bond would carry two coupons, both taxable, but one for interest to be paid by the local government issuer and the other for interest to be paid by the federal government. Where necessary, steps would have to be taken to revise relevant state and local laws to permit the issuance of taxable obligations at market rates.

The marketing of this new kind of obligation—a local *taxable* issue—would of course involve a whole new dimension in state and local financing. I suppose analysts will differ as to the prospects for such a bond, the degree of time needed to gain wide market acceptance, the marketing patterns that would emerge, the effect of such issues on the market for presently taxable bonds, and so on. But it is difficult to see why the combined expertise of the federal government, state and local governments, and the investment banking profession could not evolve processes and procedures for the successful marketing of these issues.

Use of centralized borrowing power

The interest rates that would obtain on local taxable bonds would probably be similar to those of comparable corporate obligations. While there would be no federal guarantee as such (except on bonds connected with federally aided projects where such a guarantee could be worked out), the promise of the federal government to pay part of the interest should help the issue along. But at any event, the interest rates on local taxable bonds—even those guaranteed by the federal government—would be expected to be higher than the rate at which the federal government can borrow. The smallness of some local issues, the novelty of local taxable bonds, and the other marketing problems involved would support this conclusion. Since the federal government would have to pay a part of the interest cost, perhaps on a percentage basis, it would be concerned in seeking paths to reduce that cost. The state and local governments would have an equal interest in that objective. This has led to the suggestion of alternatives under which the federal borrowing power, or some other form of centralized borrowing, could be utilized in ways that would reduce the interest cost for the funds to be obtained from the investing public with respect to these state and local borrowings.

One suggestion, which I discussed in a talk on September 27, 1968, at the Fifth Municipal Conference of the Investment Bankers Association in New Orleans, would utilize a new central institution called an Urban Development Bank. This approach was the subject of exploration in the latter part of 1968, and President Johnson submitted a proposal for such a bank in 1969. The bank would make long-term development loans and provide technical assistance to state and local governments and their agencies to help meet needs for essential public works and community facilities.[6] It would be governed by a board of directors representing federal, state, and local governments and private investors in the bank. Its funds essentially would be raised from taxable debt obligations sold to the public. While the obligations would not be guaranteed by the United States, the bank would be authorized to issue obligations to the Treasury to insure the financial integrity of the bank. Presumably its public obligations would bear a rate reasonably close to the going rate for federal obligations. In turn the bank would make loans to state and local governments to finance capital expenditures for public works and community facilities at an interest rate not less than two-thirds of the rate at which the bank itself was able to borrow funds. The outstanding obligations of the bank could reach over $20 billion in five years.

Thus, as respects its financing aspects, the bank in effect would be purchasing state and local obligations (while technically tax exempt this would be irrelevant since the obligations would be held by the bank, whose income would itself be exempt) and raising the funds to do so in the private market on a centralized taxable basis. The differential in interest rates, i.e., the subsidy to state and local governments, would be met by the federal government through authorized appropriations to the bank. The funds for this subsidy would come in effect from the income tax revenue derived from taxing the obligations issued by the bank. This process would permit a pooling of the various local government obligations, so that any disadvantages under the local taxable bond approach of issue size, of lack of a ready market in which local taxable bonds could be sold and bought, and of the novelty of such bonds, are all eliminated. The state and local governments would participate directly in the management and control of the bank. Use of the bank would be on a voluntary basis, however—any state or local government could still finance projects directly through its own tax-exempt obligations.

This type of bank is one method by which the efficiencies of centralized borrowing and marketing could be achieved, so that the interest cost would be largely comparable to the rate on federal obligations. Another proposal to this end has been suggested by Professors Donald Reeb and Edward F. Renshaw of the State University of New York at Albany.[7] They suggest that the twelve Federal Reserve Banks be authorized to acquire state and local obligations directly, obtaining funds for this purchase by selling some of the federal bonds they now hold. They envisage the banks under this authority as operating in the secondary market and purchasing new issues on a broad basis. As an illustration, they consider a degree of purchase of state and local bonds that would produce a yield differential of 40 per cent in relation to the yield on federal bonds. Assuming the latter rates to be stabilized around 4.5 per cent, about the 1964–1967 average, this would give an average interest cost of 2.7 per cent for state and local bonds as compared with the 3.6 per cent average on high-grade municipals that characterized the 1964–1967 period. Since the Federal Reserve Banks are now paying their surplus earnings to the Treasury, the cost of this subsidy to the state and local governments would be met by the Treasury. But it would in effect be reimbursed by the tax revenues from the taxable federal bonds that would be held by the public in lieu of holding tax-exempt obligations.

Whatever may be the merits of these two approaches to achieving centralized borrowing through taxable issues, with an interest subsidy to the state and local governments, they need not be looked on as alternatives. The bank would be designed to be more than a mechanical financing intermediary, and presumably would also develop technical skills in many phases of community development that would be of assistance to localities. The state and local bond market is large enough to permit various centralized borrowing approaches to operate. Indeed, the widening realization that new financing techniques are needed may well produce further alternatives for consideration.

REMAINING TAX-EXEMPT OBLIGATIONS

The various financing techniques discussed above are all optional in the sense that they do not preclude the continued direct issuance to the public of local tax-exempt obligations. It could well be, therefore, that a significant volume of exempt obligations would continue to be issued. Since the interest rate would be held down under financing techniques, the exempt obligations would be attractive only to higher-bracket investors and to banks, where the rate of tax would still make the lower exempt interest rates advantageous. There would also remain for a considerable period the large volume of presently outstanding obligations. Perhaps the use of subsidized local taxable bonds would make the refinancing of the presently outstanding bonds attractive to local governments where that opportunity was available under their terms.

The suggestion for a "minimum income tax" to lessen the tax reduction effect of tax-exempt interest and other tax preferances[8] is here useful in reducing the tax escape that the continued presence of the exemption would permit. The minimum tax would not, in view of the ability of the state and local governments to use the new financing techniques, affect their ability to obtain funds on new issues. In the case of already outstanding bonds, the reduction in tax benefit would cause some reshuffling of holdings.

Even the minimum tax, however, would leave an advantage to the large volume of outstanding bonds. As time passed those bonds would become relatively more valuable and present holders would receive a windfall gain. This has led in the past to various suggestions that would remove the tax-exempt status on these bonds and provide some compensation to existing holders, such as a credit against tax, to leave them in the same net position as if they had originally bought taxable bonds.[9] A recent suggestion would make the outstanding bonds taxable but with an offer by the federal government to exchange federal bonds at current interest rates for the outstanding local bonds. The holders of the latter while losing a future tax advantage would not suffer a loss of principal.[10] Such approaches as to outstanding bonds of course would also end for the future any option to issue tax-exempt obligations. Also, like the minimum tax, they would involve ultimately a decision by the Supreme Court on the constitutionality of federal income taxation of state and local bond interest. The Department of Justice in 1942 [11] stated with confidence that the step would be constitutional, and certainly nothing has happened in the intervening years to cause lawyers to believe that such a prediction would, to say the least, be any less valid today.

At any event, the congressional focus now is on the large volume of new issues that lie ahead, and a solution for those issues plus the minimum tax approach for the remaining issues would, together with inevitable attri-

Footnotes at end of article.

tion as to outstanding issues, be a very major step forward in meeting the present problems.

CONCLUSION

In conclusion, we may return to the summary at the outset:

The possible high level of new issues of tax-exempt state and local bonds over the next decade—a level required to meet the huge financing requirements of the vast array of needed social programs—raises very serious problems for both state and local governments and the federal government. The price for the state and local governments in the use of tax-exempt bonds on such a greatly increased basis under those programs will be in very sizable increases in their interest costs. The price for the federal government will be in serious inroads on the equity of its tax system.

Those anxious to preserve the strength of state and local governments and the integrity of the federal tax system should seek to develop new financing techniques that avoid such a high price.

New financing techniques have been offered for consideration. One is the use of local taxable bonds placed directly on the market. The second is a pooling of local obligations through centralized borrowing, either through a new financial institution which would raise its funds in the private market on a taxable basis or through Federal Reserve Bank purchases of local obligations. Both approaches permit the local governments to receive an interest subsidy to offset their departure from the use of the tax exemption privilege. Both approaches also permit that independence of state and local government which is now obtained through the tax exemption privilege, but do so without the tax favoritism, inefficiency, and consequent wastage of funds now associated with the historical solution to one of the problems of our federal system.

It is not enough, in thinking about these financing techniques, to say that they possess some rough edges or will take time to perfect. Such an outlook cannot end the inquiry or militate against moving forward with a new approach, for the present tax-exempt approach with its roots in history rather than logic clearly has serious known weaknesses. Nor can state and local governments seriously claim that tax exemption per se is the guarantor of their independence and vitality. That exemption is a way of supplying federal aid—presently amounting to about $1.2 billion annually (at a revenue cost of $1.8 billion)—to those governments through the lower interest rates. The removal of such aid would be a blow. But an even greater blow would be the removal of the $25 billion in grants from the federal government.[12]

The fact that this far greater aid depends on federal legislation has not meant the disappearance of local government. On the contrary, it is generally agreed that the future strength of state and local governments will depend on still larger voluntary grants in a variety of forms from the federal government. Moreover, no one is suggesting that the fiscal aid now obtained by state and local governments through tax exemption be eliminated, and all the new financing techniques seek to provide comparable aid through interest subsidies. Even here in recognition of the desire to maintain as much freedom of decision as possible at the local level—whether in this matter or in other matters where federal aid is involved—the new techniques suggested keep open the option to issue tax-exempt obligations.

Certainly state and local governments presenting claims—claims which are valid and compelling if we intend to solve our problems of urban existence—for generous federal assistance to meet their operating and capital needs should join in seeking modern financing techniques rather than rigidly cling to the inefficiencies, wastages, and tax favoritism implicit in the historical technique of tax exemption.

In sum, there are paths to be explored by those who are willing to face this serious problem in a constructive way. That very exploration can in turn open up still other avenues for consideration. The proper federal role and the proper state and local government role in the necessary federal-state-local partnership required to meet the fast growing credit demand for new public facilities and social projects can thus be structured in the light of our pressing present needs.

For we are at a crucial crossroads. One way, a blind following of the past, could financially weaken state and local governments and thereby weaken the independence of these governments though outwardly preserving the trappings of independence. The other way, utilizing our knowledge of newly developed credit tools and the new financial institutions to operate them, can preserve and advance that independence.

THE SITUATION IN NIGERIA-BIAFRA

Mr. KENNEDY. Mr. President, the situation in Nigeria-Biafra continues to deteriorate, putting the lives of hundreds of thousands on the brink of starvation and death.

But there is new hope today of bringing peace and relief to this troubled area. Some very significant initiatives are being made to pursue these goals.

On Wednesday, United Nations Secretary General U Thant, urgently appealed to the leaders of Nigeria and Biafra to reach agreement on the resumption of the Red Cross airlift into Biafra, which was stopped early in June.

His Holiness, Pope Paul VI is currently in Africa and has expressed the earnest hope of meeting with the representatives of Nigeria and Biafra, to do, as he said, "A bit of good for peace."

I want to take this opportunity to commend the Secretary General and His Holiness for taking these initiatives.

They deserve high tribute from all of us, and we must wish them well as they pursue their goals. In terms of humanitarian responsibilities, I have long believed that the United Nations had a role to play.

In terms of bringing peace to the area, and the reconciliation of the parties to the conflict, I strongly believe that the good offices of his holiness can make an important contribution.

I earnestly appeal to the leaders of Nigeria and Biafra to respond, and I earnestly hope that our own Government, and others—especially those in Africa—will actively support the efforts now being made.

Little of human dignity survives war in our time, but meaningful peace will only be found in the civilized behavior of all toward their fellowman.

Mr. President, I ask unanimous consent to include at this point in the RECORD, recent articles from the Washington Post and the New York Times, pertaining to the Secretary General's appeal and the visit of his holiness to Africa.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post, July 31, 1969]

THANT URGES FOR BIAFRA NEW MERCY FLIGHTS

(By Robert H. Estabrook)

UNITED NATIONS, July 30.—Secretary General U Thant appealed urgently to Nigeria and Biafra today to permit daytime flights to hunger areas by aircraft of the international Committee of the Red Cross.

Although the appeal was nominally made to both sides in the civil war, the effect of this portion of the statement was to bring pressure on Biafra.

Biafran authorities have never permitted daytime flights, ostensibly for fear of air raids. Nigeria presumably would readily agree to daytime flights from its own territory.

By implication, Thant also urged the Nigerian federal government to lift its recent ban on Red Cross operations. Without mentioning former ICRC President August Lindt of Switzerland, whom Nigeria denounced, Thant praised the Red Cross effort which has used supplies contributed by the United Nations Children Fund.

Thant's statement, the strongest he has yet made on humanitarian issues of the Nigerian war, was conspicuously timed to coincide with the visit of Pope Paul VI to Africa. Thant and the Pope, who have mutual esteem, have several times cooperated on peace efforts.

The Secretary General has frequently been criticized for not making a more active ef-

fort to settle the war. But he has contended that he must work with sovereign governments and that the Organization of African Unity has discouraged outside mediation. Only five of the 126 U.N. members have recognized Biafra.

Thant's message was dispatched to the Nigerian government in Lagos, but a U.N. spokesman said Thant was relying on the press to convey it to Biafra.

POPE PAUL ARRIVES IN UGANDA; FIRST PONTIFF TO VISIT AFRICA

(By Jim Hoagland)

KAMPALA, UGANDA, July 31.—Pope Paul VI began the first papal trip to Africa today as he flew here from Rome and warned Africa's 30 million Catholics against altering Church teaching in the name of Africanization.

The Pontiff arrived at Entebbe airport in bright midafternooon sunshine with stiff breezes blowing from Lake Victoria, a few thousand yards from Entebbe.

As he emerged from the jetliner, he donned his broad-brimmed white hat, gathered his scarlet robes in his hands and then walked briskly down the 17 steps of the airport platform.

The 71-year-old Pope was driven from Entebbe to Kampala, the capital of this East African country. He stood in the back of an open black Lincoln Continental convertible and waved to the tens of thousands of Ugandans who lined his route.

They waved banana fronds and palm leaves at the Pontiff and shouted, "Welcome holy father." Many women voiced the traditional high-pitched wail of extreme emotion as they saw the Pope.

Heading a procession of more than 100 cars that carried five African heads of states and many other dignitaries, the Pope was driven to Rubaga Cathedral, on a hillside overlooking Kampala, where he presided at the closing session of the All-African Bishops Conference.

There he read slowly, in heavily accented English, a 25-minute speech intended not only for the 2.8 million Catholics of Uganda but all Catholics of Africa, who make up about 10 per cent of the continent's population.

The speech contained an unexpectedly strong warning that the African Church must not go too rapidly nor too far in seeking to Africanize the clergy or the essential principles of Catholicism.

He admonished the church leaders present to remember the history of the missionaries who brought Christianity to Africa.

"It is a history which still continues, and must continue for a long time to come, even though you Africans are now assuming its direction," the Pope said. "The help of collaborators coming here from other Churches is still necessary to Africa today."

The pontiff then raised "a burning and much discussed question . . . the adaptation of the Gospel and of the Church to African culture. Must the Church be European, Latin, Oriental, or must she be African?"

He answered this question with two points, emphasizing the first: "Your Church must be first of all Catholic.

It "must be entirely founded upon the identical, essential, constitutional patrimony of the self-same teaching of Christ . . . We are not the inventors of our faith, we are its custodians," the Pope said.

AFRICAN CHRISTIANITY

But he then went on to say that the Church favored a certain pluralism "in the outward forms of ritual."

"The liturgical renewal is a living example of this. And in this sense you may, and you must, have an African Christianity," Pope Paul said.

But even then, he continued, there are "the possible dangers of religious pluralism, the danger of making your Christian profession into a kind of local folklore, or into exclusivist racism, or into egoistic tribalism or arbitrary separatism."

These must be avoided in making reforms, he said, so that "you will be capable of bringing to the Catholic Church the precious and original contribution of 'negritude.' "

The 41 bishops, archbishops and cardinals who have been attending the conference here this week welcomed the Pope by pledging their "total solidarity" to him in the current controversies within the Church over dogma.

BISHOPS' STATEMENT

"The present state of contestation in the bosom of the Church appears to us to go beyond the bounds of dialogue and research," the bishops' statement said. "Our real faith cannot be called into question, even if its expression must be adapted to the diverse mentalities of different people."

Pope Paul was greeted immediately on his arrival just 20 miles north of the equator by a colorful display of African culture. As he walked from the airplane to be greeted by Ugandan President Milton A. Obote, troupes of dancers and bands filled the air with music and shouting. About 60 men played six-foot-long rolled cowhide horns.

SMALLER CROWD

A group of 40 male and female dancers clicked hollowed out gourds and danced. The women were dressed in red and blue short skirts and black halters. Another group of men dancers, attired in spotted antelope skins and wearing multicolored plume headdresses, also greeted the Pope.

The throngs of hundreds of thousands that had been predicted to greet the Pope on his entrance to Kampala did not materialize. But those who turned out greeted him with enthusiasm.

Pope Paul began his eighth trip abroad as a reigning pontiff by stepping from a glistening white East African Airways VC–10 that was decorated with the flags of the East African countries of Uganda, Kenya and Tanzania—and a blue, bounding lion.

As the cardinal of Milan, he visited Africa in 1962. He toured Rhodesia, South Africa, the Belgian Congo, Nigeria and Ghana during his three-week trip.

Such a wide-swinging trip would be difficult for him in Africa today. He himself ruled out a trip to Nigeria because of the political implications it would have in the civil war that he has offered to mediate. The Nigerian federal military government has been critical of the relief role played by the Church in Biafra.

AGAINST APARTHEID

And it is unlikely that he would feel comfortable in the white-minority-ruled countries of Rhodesia and South Africa. The pontiff has cast himself as the champion of the poor and the oppressed and has repeatedly spoken against apartheid-like systems.

He has demonstrated a deep concern for black Africa. He issued a message to Africa in 1967 that stressed the equality of all men and called for justice for all. And it was Pope Paul who proclaimed the first black African saints by canonizing the 22 martyrs of Uganda in 1964.

The ritual high point of the Pope's Uganda trip comes Saturday morning when he will consecrate an alter in a still unfinished shrine to the 22 martyrs, who were burned alive for their faith between 1885 and 1887.

MASS AT SHRINE

He will also say mass near the shrine on a small island in the middle of a fishpond Saturday morning.

Although the pontiff announced originally that he would make the trip as a pilgrim, it was rapidly escalated into a major diplomatic venture as well.

Friday he will meet with President Obote and the heads of state of Tanzania, Zambia, Rwanda and Burundi in Uganda's parliament building, where he will speak to the parliament and diplomatic corps. Delegations from other African countries, including Nigeria, will be present.

A three-man delegation from Biafra is also here, in observer status. Speculation that the Pope will attempt to bring the two sides together centers on a four-hour open period Friday afternoon in the pontiff's otherwise tightly jammed schedule.

But the Pope did not mention Nigeria in his brief airport talk or in his major speech at the cathedral. He discussed religion exclusively, and stayed away from politics.

(Reuters reported that Msgr. Giovanni Bennelli, Vatican deputy secretary of state, told newsmen on the flight that the Pope was prepared to stay in Africa a month, if it could help settle the Nigeria-Biafra war.)

[From the New York Times, Aug. 1, 1969]

POPE PAUL, IN UGANDA, BIDS AFRICANS BUILD UP CHURCH

(By Robert C. Doty)

KAMPALA, UGANDA, July 31.—Pope Paul VI flew here today from Rome to tell members of the Roman Catholic hierarchy of Africa that they must become "missionaries to yourselves." "You Africans must now continue upon this continent the building up of the church," he added.

He spoke to members of a Pan-African episcopal symposium in the tall, twin-towered Rubaga Cathedral in this highland city, which welcomed with native dances and the throb of drums the first Roman Pontiff to visit Africa.

His official mission here—his eighth overseas trip since his elevation in 1963—is to consecrate 12 African bishops and dedicate a shrine to 22 African saints martyred between 1885 and 1887.

BIAFRA A MAJOR CONCERN

But the Pontiff himself indicated in brief talks with reporters who accompanied him on the six-hour flight from Rome that his major preoccupation would be an effort to bring Nigerian and Biafran delegations to the point of discussing an end to the year-long civil war.

To a reporter who wished the 71-year-old Pontiff well on his effort in a crowded 52-hour visit here, Pope Paul replied:

"One needs stamina. We hope to meet representatives of Nigeria and Biafra and do a bit of good for peace. We go to learn and to teach."

Later, the most Rev. Giovanni Benelli, titular Archbishop of Tusuro and deputy to the Vatican Secretary of State, told reporters the meeting with the Biafrans and Nigerians probably would take place tomorrow night.

COULD EXTEND VISIT

If there is the slightest opening toward peace, Archbishop Benelli said, he would not rule out a Papal decision to extend the African visit beyond the scheduled departure time of Saturday evening.

In Kampala, however, there was little optimism over the possibility of successful Papal mediation in the present frame of mind of the two delegations here.

Pope Paul plunged into the substance of the problem facing the African church in his first major address to the cardinals, archbishops and bishops ending a three-day symposium here.

Foremost among these is the shortage of native African priests to replace the foreign missionaries who fostered the great Central African growth of Roman Catholicism beginning in 1879 here in Uganda, but who are gradually leaving today.

Through his 26-minute speech, delivered in his hesitant English, the Pontiff stressed the need for greater Africanization of the church here.

He praised again, as he has often in the past, the special quality of deep religious fervor characterizing the African church as something that could act as a leaven on the church as a whole.

At the same time, he warned that the African church must remain in the mainstream of doctrine and discipline and avoid the pitfalls of religious pluralism of exclusivist racism or arbitrary separatism.

If these dangers are avoided, he said, "you will be able to formulate Catholicism in terms congenial to your own culture; you will be capable of bringing to the Catholic church the precious and original contribution of negritude, which she needs particularly in this historic hour.

Referring to the shortage of native clergymen, the Pope said it was an immense task to recruit and train them. The vitality, development and the future of the African church depends on its successful accomplishment, he said.

AGREE TO A FEDERATION

The African hierarchy, in three days of meetings, has agreed to set up a permanent, loose federation of the 28 episcopal conferences of the continent.

Reflecting the attitudes of the civil governments of the newly independent nations they represent, many of the African prelates expressed a wariness of neocolonialism even in the ecclesiastical sphere.

Obviously still in great need of assistance from abroad both in missionary personnel and funds, the African bishops made repeated speeches insisting that this aid should be given without strings that would hinder the course of Africanization of the church.

Under the leadership of Paul Cardinal Zoungrana, the intellectually vigorous Archbishop of Ouagadougou, Upper Volta, who was elected president of the new group, the symposium approved a series of documents on development, on a philosophy of peace in Africa and a special peace appeal to leaders of Nigeria and Biafra.

A fourth document, a declaration of devotion to the Holy See, was read at the Cathedral Ceremony tonight.

The Pope's day began before dawn in a thunderstorm at his summer residence, Castel Gandolfo, in the Alban hills south of Rome. The Pope, as on seven previous voyages abroad, seemed to draw strength and vigor from his contacts with strange faces and places.

An hour and a quarter after his chartered East African Airways jet took off at 7:45 A.M., the Pontiff, wearing a white cassock, shoulder cape and zucchetto, a skull cap, left his private quarters to visit the 53 journalists and photographers traveling with him.

As on previous voyages, Pope Paul gave to each his hand to kiss or shake, depending on individual's religion, a nod and a blessing, while his secretary, Msgr. Pasquale Macchi, passed out commemorative bronze medals of the voyage.

With some of those who knew him before he reached his present rank, the Pope exchanged a few words, including his statement on his hope to contribute to peace in Biafra.

ORGANIZED CRIME

Mr. McCLELLAN. Mr. President, on July 17 and 18, 1969, two articles appeared in the Cleveland Plain Dealer, which are of interest in relation to S. 1861, the Corrupt Organizations Act of 1969, which I introduced along with Senator HRUSKA.

The articles were written by Sanford Watzman, a member of the Plain Dealer's Washington news bureau who specializes in covering crime topics on the national scene. He has an extensive background in crime reporting. In these articles, Mr. Watzman has shown the potential application of S. 1861 to several current specific fact situations where the mob has entered legitimate businesses with great success, success unexplained in the normal business world.

Mr. Watzman has fulfilled the finest traditions of newspaper reporting in these articles. This is the sort of responsible, investigative reporting in the area of organized crime that was recommended by the President's Commission on Law Enforcement and Administration of Justice. I am grateful for the efforts on the part of the Plain Dealer to make known to the general public the threat posed by mobster infiltration of legitimate organizations. It gives all that much more of a sense of urgency to our legislative efforts in this area.

Mr. President, I ask unanimous consent that the text of the articles be printed in the RECORD at the conclusion of these remarks.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Cleveland (Ohio) Plain Dealer, July 18, 1969]

NAME-DROPPING TRICKY IF COSA NOSTRA IS INVOLVED

(By Sanford Watzman)

NEW YORK.—To be successful in the bagel business here, hub of an industry that grosses more than $20 million a year, it helps to brag about your connections in a certain way.

Name-dropping can be a terribly difficult art form where the Cosa Nostra is involved, a fact that was brought out in recent hearings before the New York State Investigation Commission (SIC).

Here is a conversation, as told to SIC, between two men who were competing for a bagel store location in Teaneck, N.J.:

One of the participants, identified as Joseph Pearlman, said, "I think you are in the wrong spot because our guy told us that this location is ours."

The second man, Salvatore Passalaqua also known as Sal Mauro, replied: "Well, I don't know who your guy is but he had better be pretty good because my guy is next to God."

"Well, that's pretty good," Pearlman retorted, "but my guy is God."

There was prolonged fencing, and then Mauro said: "Look, let's stop horsing around. I will give you my guy and you give me yours. My name is Tommy Ryan."

At this point, an associate of Pearlman, whose name was given as Philip (Sonny) Amster, broke in to say: "My guy is Jerry Catena."

Tommy Ryan is the mob nickname of Thomas Eboli, an heir of the late racket czar Vito Genovese. Catena is another leader of the old Genovese "family."

The dispute was settled inside the "family," SIC officials say. Passalaqua got the store.

The bagel industry was one of several shown at the hearings to have been infiltrated by the mob. This is the kind of evidence that the federal government will be seeking if a bill pending in Congress is enacted.

The focus would be not so much on Eboli or Catena as individuals but rather on the flow of Mafia money, which would be intercepted by legal action based on concepts in the antitrust laws.

Where it could be proved that an enterprise was taken over by "a pattern of racketeering activity," the business organization could be dissolved or the mobsters could be ousted from it, forfeiting their holdings.

The bill was drafted by Sens. John L. McClellan, D-Ala., and Roman L. Hruska, R-Neb., with the help of the Nixon administration.

The witness who told about the Teaneck bagel showdown was Raymond Fleishman, an official of the Bagel Bakers Union. Fleishman said he sat in on the discussion.

He explained his role as wanting to bring the two sides together to "see if they could talk out their problems."

There had been trouble between Passalaqua and the union when Passalaqua opened a store in Brooklyn and refused at first to recognize the union. Fleishman said he was hoping to avert further conflict in the industry.

At the Brooklyn place, the witness recalled, he was told by Harold Glantz, whom he named as an associate of Passalaqua, that the store management would prevail over the union because "we are special people."

Fleishman testified: "Glantz told me that he worked for Dominick. I said: 'Who is Dominick?'

"And Mauro (Passalaqua) answered: 'Well, you would like Dominick, he would like you. Maybe you will get together. Maybe you will meet one day.'

"I persisted in asking who was Dominick and the only answer that I got was Dominick is Dominick."

Dominick turned out to be "Fats Dom" Alongi, a lieutenant of Eboli.

Fleishman continued: "Mauro said: 'There is a lot of money around here. We hope to open a lot of shops.' And he indicated to us that there was $10,000 available to us if we were to cooperate with him, plus 5% of the business."

The witness said he spurned this offer, adding that the management capitulated afterward and signed a "standard contract" with the union.

Despite this victory, Fleishman said he was told by another Passalaqua associate, whom he identified as Artie Goldberg: "Ray, my guy is one of the biggest and you would have lost. You'll never know who he is."

But Fleishman said he already knew at the time the "guy" was Tommy Ryan.

He explained that the union had checked with law enforcement authorities because "a number of bakeries were starting to spring up, and they were people who had never been connected with the bagel business, and we started to get talk back that the people were not legitimate."

Another witness, Edward Haimowitz, related how he went to work at the bagel shop in Teaneck but found little to keep him busy. He complained about this to Artie Goldberg.

"I was always asking him," Haimowitz said, "When are we going to really start baking bagels, not just playing around." And he says, "soon, soon as we get the business."

Then Tommy Byan made an appearance in the bakery.

"The first time he came," Haimowitz recounted, "I saw how they bowed down to him and I did not know who he was. They showed him all kinds of . . . respect and so forth.

"So Mr. Goldberg told me who he was. And that he was going to go out and secure them some business."

The witness recalled that on a subsequent occasion he remarked to Passalaqua that Tommy Ryan had called at the store.

Haimowitz said he got this reply: "Don't use the name Tommy Ryan. Use the name Davis, Mr. Davis, whenever you see him."

Passalaqua, in his own testimony at the SIC hearing, said he had known "Fats Dom" Alongi for 25 years. Asked how he met Alongi he replied:

"When I was in the junk business, on

Houston Street. He had the pigeon coop on the roof. . . . I'm a lover of birds, pigeons, and we took an interest talking about birds."

He denied knowing Eboli well or that he had referred to him in the talk about "God" at Teaneck. He denied too that he had tried to seduce the union with a $10,000 offer.

Tommy Ryan took the stand but he refused to answer questions on the grounds that he might incriminate himself. John (Johnny Dio) Dioguardi, another mobster connected by testimony to the bagel business, gave a similar performance.

The acting chairman of SIC, Goodman A. Sarachan, said after the testimony was concluded:

"Does anyone really believe that some large chain supermarkets purchased certain grades of salami and frankfurters, and also bagels, from companies in which Johnny Dio and Tommy Ryan were connected because the chains thought these were superior products?

"It is quite obvious that fear was the motivating factor for the unbelievable occurrences which were revealed at the hearings.

"It was fear which made these people do these things, and it was fear which kept them from reporting various forms of threats and extortion to law enforcement authorities."

Evidence adduced at the hearings was passed on to Federal and State prosecutors. SIC officials said they were looking forward to action by Grand Juries.

[From Cleveland (Ohio) Plain Dealer, July 17, 1969]

MOB IS UNDER FIRE IN KOSHER GAME

(By Sanford Watzman)

NEW YORK.—Meet Johnny Dio (real name: Dioguardi).

You know him as the mobster who made it big in labor, as the suspect some years ago in the acid-blinding of newsman Victor Riesel.

But Dio is also a man of business, specifically—although he is not Jewish nor does he look Jewish—the kosher meat business.

In this huge metropolitan area, where salami is a staple, Dio dominated what is known as the "lower end" of the trade marketing of the cheaper grades of salami, bologna and wieners.

How he moved in and won control was detailed at recent public hearings here conducted by the New York State Investigation Commission (SIC).

SIC officials regard the Dio operation, known as Mizrach Kosher Provisions, as the kind of mob-infiltrated enterprise that could become the target of a new weapon being forged in Washington.

That weapon is a proposed new law under which Cosa Nostra business combines would come under attack from trustbusters in the Justice Department using the same legal tactics that have helped break up industrial monopolies.

With the encouragement of the Nixon administration, Sens. John L. McClellan, D-Ark., and Roman L. Hruska, R-Neb., have introduced a bill to this end.

To hear Dio tell it, he is not a monopolist at all—he's just a schnook struggling to get ahead.

William Cahn, a Long Island district attorney, told SIC:

"I interviewed John Dioguardi in the summer of 1963, shortly after his release from prison (for tax evasion).

"He told me he was a hard-working kosher frankfurter salesman who left his home in Point Lookout every morning at 4 and drove to Sullivan County to sell his products, and that he received $250 a week for these efforts.

"Our investigation disclosed his meteoric rise from a $250-a-week salesman to a reputed $250,000-a-year income from the Kosher meat business.

"This commission is aware of John Dioguardi's close association with powerful leaders in the Teamsters, in particular, James R. Hoffa (now in federal prison).

"A reliable confidential informant advised my office that Dioguardi's success was due to the fact that the supermarket chains accepted his product to insure they would continue to have labor peace.

"This informant advised that the principals of these large chains would refuse to cooperate with our investigation because of the fear of union troubles. This lack of cooperation became a reality and thwarted our investigation.

"Dioguardi's instant success is not the realization of the 'American dream' but a continuation of his successful activities as a labor fixer, extortionist and important member of syndicated organized crime."

One witness at the hearing was a "Mr. A.," who prevailed on SIC not to disclose his real name. "Mr. A" was sales manager of a firm that began to hit the skids after Dio emerged as a "salesman" for the competition.

(Actually, says SIC sources, Dio became the owner of the rival company. Under the McClellan-Hruska Bill, this company could be dissolved by a court order or Dio could be forced to surrender his interest in it, providing certain facts were proved.)

"Mr. A" was asked how many supermarket chains switched from his organization to Dio's. He replied:

"Seven or eight. It wasn't over a particular time. It was over a period of months."

The next witness was Moe Steinman, director of labor relations for a large supermarket chain. Steinman said that he had seen Dio "50 to 75" times over the last three or four years.

But they never conversed about unions; Steinman insisted.

Here are excerpts from the Steinman testimony:

Q. You are not business associates and you are not social friends and you sit down to have dinner together. What do you talk about?

A. Very good question. Just in general speaking of life in general.

Q. Would you talk about how your business was doing?

A. How our chains were doing? He would ask the questions. I said to him, in fact, "Last year was a little better than the year before."

Q. Did he ever tell you how Mizrach was doing?

A. No, he never brought that out.

Q. You seem to give the impression that you never meet Mr. Dio except accidentally you stumble into him. Have you ever made appointments to meet with him for dinner?

A. I said I did. He was at my house once or twice.

Q. Were there any other occasions when you made appointments?

A. I don't recall. I would be lying, you know, if I said no or yes.

Similar testimony was taken from Aaron Freedman, vice president of a chain of 78 stores.

SIC counsel Paul D. Kelly asked:

Q. "Has Mr. Dio ever been to your home?"

A. Yes . . . I got a call that he was in the neighborhood, would I mind if he came over to see me? . . . I found out that he wanted to sell me pins, primarily these types of pins that we give out to our employes after . . . a number of years of service.

Q. Is that the first time that Mr. Dio has ever requested you to purchase something from him?

A. Yes.

Q. He has never mentioned Mizrach Provisions in your presence?

A. No, sir . . .

Q. Have you ever had occasion to ask Mr. Dio for help with respect to labor contracts?

A. No, sir . . .

Q. Were you curious enough at any time to ask Mr. Dio what his connections were with the kosher meat industry?

A. I wasn't that close enough to ask him those questions.

Dio is under a five-year sentence for bankruptcy fraud in connection with the failure of Consumer Kosher Provisions, Inc., a forerunner of Mizrach and the first company in that field to become a vehicle for Dio.

Immediate successor to Consumer Kosher (and also a forerunner of Mizrach) was First National Kosher Provisions. In this firm Dio was neither an officer nor a shareholder of record, although he organized the firm and illegally shifted Consumers' inventory to it.

The racketeer is appealing his sentence.

But whether Dio himself ultimately goes to jail because of his conviction under existing laws is not as important, say federal officials, as the mob's future in the industry.

President Nixon, in his crime message to Congress April 23, explained why an anti-trust-type bill such as the McClellan-Hruska measure was needed.

"The arrest, conviction and imprisonment of a Mafia lieutenant can curtail operations," Nixon said, "but does not put the syndicate out of business.

"As long as the property of organized crime remains, new leaders will step forward to take the place of those we jail."

RESOLUTION ON ORGANIZED CRIME ADOPTED BY NATIONAL ASSOCIATION OF ATTORNEYS GENERAL

Mr. McCLELLAN. Mr. President, the Subcommittee on Criminal Laws and Procedures, which I am privileged to chair, is presently in the process of studying and revising a number of bills dealing primarily with the control of organized crime. We are now obtaining the last comments of the Department of Justice on these proposals, and we hope soon to begin reporting out a comprehensive legislative program in this area. The major bills include:

First. S. 30, which comprehensively revises and strengthens the evidence-gathering process in organized crime cases;

Second. S. 974, which creates within the Department of Justice the position of Assistant Attorney General for Organized Crime;

Third. S. 976, which provides for increased sentences for certain persons who are being sentenced for a felony as part of a continuing criminal activity in concert with one or more persons;

Fourth. S. 1623, which prohibits the investment of certain illegally gained income in any business enterprise affecting interstate or foreign commerce;

Fifth. S. 1624, which would amend the Internal Revenue Code of 1954 and facilitate the collection of wagering taxes;

Sixth. S. 1861, which would prohibit the infiltration of legitimate organizations by racketeers or the proceeds of racketeering activity where interstate or foreign commerce is affected;

Seventh. S. 2022, which would make gambling affecting interstate commerce or operated by corruption a Federal crime; and

Eighth. S. 2122, a general immunity statute.

The subcommittee has been fortunate in having been able to obtain the critical comments and suggestions of a number of distinguished witnesses during three

hearing sessions. Several of their suggestions have been incorporated into tentative markup drafts of the proposals. I stated at the beginning of hearings on these proposals that I was not committed or wedded to the exact language contained in any of them and that I hoped that they could be improved and strengthened. This has certainly been the case. Several of these bills have indeed, in my opinion, been much strengthened as a result of the hearing process.

Hopefully, the enactment of a number of these bills will mark the beginning of a sustained war against the forces of organized crime. These measures, along with several of the titles from last year's omnibus crime bill should give law enforcement some badly needed, and long overdue tools, in their fight against the large criminal cartels. Any effort in this direction, however, must include all levels of law enforcement: Federal, State, and local. I was, therefore, very gratified to learn that the recent annual meeting of the National Association of Attorneys General that organization passed a resolution manifesting its concern in the continuing fight against organized crime.

Mr. President, the public and law-enforcement agencies everywhere are becoming increasingly aware of the many-faceted activities of organized crime and are becoming educated to the fact that organized crime, in one way or another, affects each of us. It will soon be time for the Congress to act to meet its responsibilities, too. The time for effective legislation against organized criminals is imminent. In concluding, I use the same words the President's Crime Commission used to close its chapter on organized crime:

> The extraordinary thing about organized crime is that America has tolerated it for so long.

I ask unanimous consent to have a copy of the Attorneys General resolution inserted in the RECORD immed'ately following my remarks.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

ORGANIZED CRIME

Whereas the members of this Association are directly involved in curbing the efforts of organized crime to expand its income, and its influence and control over legitimate business; and

Whereas this Association recognizes the need for all levels of government, whether local, state or federal, to join together and to cooperate in ferreting out and destroying the sources of income of organized crime; and

Whereas this Association recognizes and appreciates the concerted action underway and planned by the United States Department of Justice in the fight against organized crime;

Now therefore be it resolved that the 63rd Annual Meeting of the National Association of Attorneys General in St. Thomas, Virgin Islands reassert its interest and concern in the continuing fight in the field of organized crime; that we work with all levels of government and all branches of law enforcement in creating a total effort; and

Be it further resolved that the members of this Association, jointly and severally exchange information of desirable legislation to control organized crime, and that the members and the Association offer vigorous support to the efforts of the Department of Justice in their field.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research development test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

Mr. ALLEN. Mr. President, the basic information necessary to a decision on deployment of the Safeguard anti-ballistic-missile system has been before Congress for many months. It is true, of course, that much additional testimony from many sources has since been submitted, most of it in the form of opinion—some of it informed, some ideological and speculative, some simply conjectural, and much of it contradictory.

However, I have been impressed by the fact that arguments pro and con seem to derive not so much from disagreement on hard facts and reasoned opinions as from contrary assumptions and premises to which the facts and opinions are related.

Accordingly, few Senators seem to have been influenced to change their minds on the wisdom of deployment of the ABM. This fact would seem to indicate that the decision before us may hinge not so much on data as on basic assumptions respecting national power, ideology, national intentions, and the ultimate determinate factor of national will in shaping defense policies of our Nation.

As the time approaches for final decision on funding deployment of the ABM, I find myself more persuaded than ever that the risks involved are extremely grave, that the security of the free world is at stake, and that the consequences of inaction could be catastrophic not alone for our Nation but for the free world.

These considerations influenced my original decision. Since then no new facts have been presented and no new arguments have been adduced to alter my original conclusions which, in abbreviated form, are as follows:

In the present contest between two great world powers, all of the idealistic good intentions in the world cannot be substituted for the integrity and therefore the credibility of our deterrent capability.

We believe that our deterrent is today a critical factor in the security of our Nation and of Western Europe, the Middle East and the Far East, and that it is essential to continued confidence in our leadership on the part of uncommitted and undeveloped nations of the world.

I am convinced that an effective ABM Safeguard System is scientifically and technologically feasible; that it can be developed to provide a satisfactory measure of defense of our land-based deterrent; and that the cost is not disproportionate to the defense afforded.

Furthermore, I do not believe that the limited deployment of the ABM will result in escalation of the arms race nor that it should or would impede arms control negotiations with Russia.

In addition to these conclusions, Mr. President, undisputed facts show that Russia has continued from 1962 till now with successive improvements of their ABM System. It must be clear that an effective ABM protection of Russian cities would necessarily diminish our deterrent capability. On the other hand, Russia's deterrent remains unimpaired by reason of continued vulnerability of our cities. To permit Russia to enhance its deterrent by continued vulnerability of our cities and at the same time voluntarily accept vulnerability of our ICBM sites is to invite an unstable world situation which I find unrealistic and dangerously intolerable.

Mr. President, I earnestly hope that the nuclear arms race may be ended. But I have found no reasonable ground to believe that a negotiated agreement with Russia can be reached which would not be to the further advantage of Russia, nor am I aware of any evidence or of any argument that would convince us that unilateral abandonment of a defense of our strategic armament would alone induce the Soviet Union to cease its own efforts to achieve and maintain strategic superiority over us.

In this connection, it is my judgment that the power essential to our survival in today's world is our power of deterrent. Today we have that power. The question is, do we have the will to maintain it?

Mr. President, it is my sincere hope that we will defend our deterrent and protect our national security.

I support ABM.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield for two unanimous-consent requests?

Mr. PROXMIRE. I yield.

ORDER FOR ADJOURNMENT UNTIL MONDAY, AUGUST 4, 1969

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 12 o'clock noon on Monday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

FORTUNE'S EXCELLENT ANALYSIS OF THE AMERICAN MILITARY PROBLEM

Mr. PROXMIRE. Mr. President, for years Fortune magazine has been recognized as a publication that has brought remarkable competence to reporting on American industry.

In their August issue they have done

one of the best jobs I have seen of analyzing the defense spending problem that so concerns all Members of Congress.

This issue is specially pertinent to Congress right now, when we are in the midst of debate on the military procurement authorization bill.

Mr. President, there are two articles in this issue that are so pertinent and informative that I ask unanimous consent that they be printed in the RECORD following my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered. (See exhibits 1 and 2.)

Mr. PROXMIRE. One is entitled: "The Case for Cutting Defense Spending," the other is "Where Military Contracts Go."

In addition, Mr. President, I am going to read in full to the Senate the lead editorial in the August issue of Fortune, entitled: "It's Time To Audit the Defense Department."

As I read this remarkable editorial, keep in mind that this is not the expression of an impulsive critic of the so-called military-industrial complex. Fortune has consistently hailed American industry and understands and deeply respects the reasons for America's industrial excellence.

This is not the expression of an advocate or polemicist for arms control or disarmament, or of a publication that underestimates the very real threat posed by Soviet military power. Indeed, in that connection, I invite Senators to read another article entitled "Military-Industrial Complex, Russian Style" in this same August issue of Fortune.

Here is an editorial from a publication that highly values American security and that fully and intelligently understands why it must meet whatever challenge may develop.

Mr. President, this is the editorial:

IT'S TIME TO AUDIT THE DEFENSE DEPARTMENT

The U.S. is in the grip of a costly, escalating pattern of military expenditure that could well keep rising even after Vietnam. As reported in a special defense section of this issue, evidence multiplies that this expenditure has come to live a life of its own—neither soundly based on our commitments nor, indeed, properly responding to the very real potential of the U.S.S.R. Appropriately, the Nixon Administration has begun a thoroughgoing review of the threats facing the U.S. and the defense structure needed to cope with them. The reassessment is urgently needed.

At staggering cost, the military has repeatedly bought weapons and deployed forces in ways that have added only marginally to national security. Moreover, in the procurement of new weapons, both the military and its corporate suppliers have been guilty of wasteful practices and flagrantly disingenuous cost estimates. "The Case for Cutting Defense Spending" (page 69) suggests that in the aftermath of the Vietnam war the defense budget could immediately be cut by more than 20 percent, to about $62 billion, without compromising either the nation's security or its present commitments.

The Soviet Union, realizing one of its most compelling dreams, has now built a military machine roughly equal in power to that of the U.S. In the absence of arms-limitation agreements, prudence clearly requires that we maintain a strategic force amply capable of countering this adversary, whose military growth rate is so breathtaking. But prudence requires as well that we re-examine a conventional force structure based on obsolete premises. Some of the basic tenets of U.S. defense polcy have been carried over without systematic analysis since the late 1940's, a time when allies were poor and weak and potential enemies were sternly monolithic. The most expensive legacy from the past is the assumption, now quite dubious, that the U.S. needs what is known as a "two-plus capability"—a force structure that can be quickly expanded to fight a major conventional land war in Europe, another in Asia, and a limited war in the Americas, all at the same time. Many analysts believe that we can safely move back toward the "one-plus capability" that prevailed in the 1950's.

THE NARROWING OUTLOOK

For a long time, and particularly since the departure of the Eisenhower Administration, few of the outside checks and balances that constrain other federal agencies have been applied to the military establishment. In most matters, neither the President, his Budget Bureau, nor Congress was disposed to challenge policies agreed to by the armed services and the Secretary of Defense. Today's military leaders have come to senior rank expecting a level of financial support that would have been the envy of generations of predecessors.

To be sure, the Defense Department staff, particularly during Robert McNamara's tenure as Secretary, projected an aura of iron control over the military. Civilians vetoed manned bombers, nuclear carriers, and other projects requested by the services, and closed hundreds of superfluous military facilities. The Secretary boasted annually of deep cuts made in the budget requests of the individual services. While McNamara sometimes interposed his judgment with disappointing and expensive results, much of the civilian auditing surely was to the good. But it is wrong to conclude that a vigilant internal review at the Pentagon constituted ample control over the military. Allowing those responsible for day-to-day operations such a decisive say in their own operational scope and budget level has been no more justifiable at Defense than it would be anywhere else in the government. However competent the civilians who run the Pentagon, their heavy responsibilities and the intense pressures of their jobs inevitably narrow their outlook. As a former Budget Bureau official recalls, "At first, McNamara was a real tough budegt director over the military, but eventually he and his people couldn't be so tough. It got to be *their* systems they were defending and arguing for."

THE COMPLEX "COMPLEX"

In Congress, through the years, a core of knowledgeable legislators have been deeply involved with defense matters, mostly through the Armed Services and Appropriations committees of both houses. Until the last couple of years, these Congressmen were generally in accord with the point of view of the military. On occasion, some of them actively supported the services against the Pentagon civilians when the two groups disagreed, as in the long controversy over the TFX–F–111 fighter-bomber. But they practically never overruled any *concerted* recommendation of the services and the Secretary.

Searching for a villain to account for the long absence of adequate control, a lot of Congressmen and others have lately fastened their attention on the "military-industrial complex." It is true that the interplay between the services and their suppliers generates pressures to maintain high levels of defense spending, almost irrespective of the external threat. The natural desire of military men to have ever more sophisticated and expensive weaponry coincides with the desire of contractors to supply it.

This can lead to excesses; as one former Pentagon official observes, "The contractor's engineers and the government's engineers get all excited and oversell each other." But there is little reason to question the sincerity of either side. The overwhelming majority of both defense-industry executives and military officers hold strongly to a view of the world in which expensive weaponry is essential to security.

TOO MUCH TOO SOON

The problems posed by big weapon systems make some such symbiotic relationship almost imperative. As NASA has learned in the Apollo project, large, technically adventurous undertakings demand the closest kind of interaction between buyer and seller.

Still, procedures at all levels of the decision-making and procurement processes need tightening. Fortunately, the biggest cause of unnecessary defense spending is not (as some congressional critics seem to think) sloppy management or skulduggery in the defense industry; if it were, the problem of cutting spending would be much more diffuse and impervious to solution than it is. Contractors sometimes do misbehave, of course. But they are already heavily policed by the Pentagon and the General Accounting Office. Moreover, under the fixed-price and incentive contracts favored by McNamara, penalties for egregiously bad management have been toughened. Many lax practices can be traced to the military's frequent tendency to emphasize performance and fast delivery of weapons over cost. More stringent budgets could dramatically change that emphasis.

Larger savings can be made by rationalizing the Pentagon's basic procurement practices and philosophies. As Deputy Secretary of Defense David Packard puts it, "We are designing and building weapons that are too complex, and therefore too costly. We further compound the problem by trying to produce hardware before it is fully developed." A panel headed by Gilbert W. Fitzhugh, chairman and chief executive officer of Metropolitan Life, is studying the Pentagon's management machinery, and will report next year. Meanwhile the Defense Department is already introducing a number of promising techniques to discourage the practices Packard has identified. Among them: tying the start of production to the achievement of research and development "milestones," relying more on prototypes of new equipment instead of paper plans, and requiring the services to save money on one project if they add to the costs of another.

THE WILL TO COUNTERVAIL

Welcome as this ferment inside the Pentagon is, it does not change the urgent need for closer outside supervision. The defense establishment of itself can never provide the proper sense of balance between military needs and other priorities. But given the will to do so, the governmental structure as a whole is perfectly capable of countervailing the momentum of any "complex."

There are some promising signs. The new Budget Director, Robert Mayo, has moved to strengthen his bureau's powers over the defense budget. And the Administration's broad review of defense policy should enable the White House to provide more coherent strategic guidance than was offered under Presidents Kennedy and Johnson.

In Congress, skepticism about defense spending is now more pervasive than it has been at any time since the onset of the cold war. The frustrations of Vietnam and accelerating inflation, and the attention drawn to unmet domestic needs by urban disorders, have all contributed to the change. An early sign of the new legislative mood was Senator Richard Russell's successful assault in 1967 on the Navy's proposal to build fast-deployment logistics ships. Russell, the most respected advocate of the mili-

tary on Capitol Hill, argued that FDL ships would increase the tendency of the armed forces to intervene abroad by making them more capable of intervention. Since that vote, Congress has been paying more and more critical attention to other defense questions, ranging from broad matters of strategy, as in the debate over the ABM, to the shortcomings of the weapon-procurement process.

Congressional pressure has already helped kill or sidetrack several major weapon projects, including the Army's Cheyenne helicopter and the Air Force's manned orbiting laboratory, and the Senate again this year turned down FDL ships. Inevitably, as the article on Lockheed Aircraft beginning on page 76 suggests, some of the legislative criticism has been unfair and immoderate. But the desirability of a broad role for Congress as a countervailing force to the defense establishment can no longer be in doubt.

REDEFINING THE NEED TO KNOW

Congress does need to supplement indignation with much better information than it has been getting on military questions. Senator John Stennis' decision to have the staff of his Armed Services Committee monitor the progress of major weapon programs is a step in the right direction. In addition, Congress ought to hold exhaustive hearings each year on the premises and strategy underlying the defense budget. These hearings should regularly test even the most fundamental assumptions about the nature of the external threat, and should critically examine the justifications not only for proposed new programs but also for continuing existing ones.

Furthermore, Congress needs its own permanent staff of systems analysts and others capable of assessing weapon programs and basic strategies. The staff, which should be responsible only to Congress, should file periodic reports, including recommendations for legislative action, and should be available for special assignments. These might include reviewing the Pentagon's contracting decisions on major systems and analyzing the efficiency with which big contracts are carried out. Perhaps some of this work could be done by outside organizations such as the Brookings Institution. Whatever form the new staff takes, it needs to have access on a confidential basis to all Pentagon data, including classified material. At present, legislators are hampered in investigating defense matters, because their security clearance is on a "need to know" basis—with the need determined solely by the Defense Department.

In redefining the goals of the military and its place in the governmental structure and in society, Congress and the Administration have a chance to exert a profoundly constructive influence on the character of American life in the 1970's. They should seize the opportunity.

Mr. President, I would now like to read much more briefly from the article on the case for cutting defense spending. I will read a few excerpts from the extraordinarily fine article written by Mr. Juan Cameron in the current issue of Fortune dated August 1. It is a balanced and thoughtful article and not a blindly critical article at all.

The article reads in part:

"Even if we are successful in eliminating the war in Vietnam," warned Melvin Laird, the Secretary of Defense, last spring, "we are still not going to come up with a drastically reduced defense budget . . . A drastically reduced defense budget will not provide adequate security in the world in which we live." Secretary Laird presides over a U.S. defense budget of $80 billion, up 70 percent from 1961. The likelihood of very much reduction, post-Vietnam, is very small indeed, as most Defense Department civilians and the military chiefs see it.

A growing number of critics, with long experience in the Defense Department and Budget Bureau, dispute this position. They make a strong case that post-Vietnam defense costs can be cut drastically without either damaging the national security or compromising this country's commitments to its allies. Indeed, careful analysis indicates factors other than "adequate security" are forcing up defense costs today.

The defense budget has been driven upward because much of it is based on strategic assumptions that have gone unchallenged since the early post-World War II years, when the enemy and his threat were quite different. The evidence is strong, too, that the force structure and force levels have been put together by the military chiefs in the absence of a clearly stated national security policy laid down by the White House. Furthermore, under the pressures of the Vietnam war, civilian control over military spending has diminished, efficiency has decreased, and a large amount of "gold plating" of the forces has taken place under the guise of meeting the needs of the war. Unless brought under control, these trends can easily drive the defense budget to more than $100 billion within a few years. In fact, the Joint Chiefs for the past three years have requested a budget in excess of $105 billion, and President Nixon, at the end of his campaign, foresaw defense spending, excluding the Vietnam war, rising to $87 billion by 1972.

Fortune believes that a post-Vietnam defense budget of around $61 billion would allow the U.S. to remain the world's No. 1 military power without any major change in its commitments, in its ability to meet military contingencies, or in its basic strategic concepts.

Mr. President, this is a very important observation by Fortune magazine, and I think it is one in which the Senate and the House of Representatives are going to have the most serious and significant debate over the next few years.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. PROXMIRE. I am delighted to yield to the distinguished Senator from Missouri.

Mr. SYMINGTON. Mr. President, I saw those articles in Fortune magazine, but have not had a chance to study them as has the able senior Senator from Wisconsin. I listened with interest to his comments.

In 1950, the budget for the Defense Department, just shortly after the end of the Berlin airlift, at a time when Mr. Stalin was still alive, was some $13,800,000,000 for all three services. A check shows the dollar has been reduced in value since 1950 almost exactly 50 percent. Therefore, assuming that the same relative dangers are present, the budget would be $27,600,000,000. Nevertheless, last year and this year, and I believe several years preceding, it has been somewhere between 75 and 80 billion dollars, depending on the final figures.

Does not the Senator believe that it will be impossible for this country to fulfill the obligations it has to its own people unless the vast size of this military defense budget can be reduced?

Mr. PROXMIRE. I agree wholeheartedly with that. I think that unless the size of the military budget is reduced, no matter what we do in the way of taxes, we will continue to have a serious and increasingly difficult inflationary situation. Unless the military budget is reduced, while we will make an effort in the area of solving our domestic problems, we will be inhibited from doing it. I do not see how we can do it effectively. Certainly, we cannot do it consistent with anything like a sound dollar or control over rising prices.

Mr. SYMINGTON. It is my understanding that the total personal individual annual income tax of the United States is some $63 billion. Therefore, the cost of this military budget is a good many billion dollars more than that total income tax. We had considerable discussion on the floor with respect to the importance or lack of importance of a 10-percent surtax, which, in effect, is a war tax. With all due respect to this additional tax and based on the knowledge the Senator from Wisconsin has—he is one of the ranking members of the Committee on Banking and Currency and has done a most outstanding job as chairman of the Joint Economic Committee—does he think that the effects of this tax will have a major impact on the problem we are discussing this afternoon?

Mr. PROXMIRE. I do not. Once again, the simple logic applies which one of my constituents presented me within my State a week or so ago.

He said:

I don't understand how the federal government can argue that they are going to limit inflation by taking money from my pocket, taking money that I otherwise spend, and spending it themselves. It is true if they would take the money and not spend it or hold down their spending, it might have some anti-inflationary effect. But if they are going to spend money, how does that help us cope with the inflationary problem? How does it limit demand?

He is absolutely right.

Furthermore, I think all kinds of studies have shown that whether we have a balanced budget or not—and we all want that—as we increase our overall spending, even if we increase our taxes, the impact is sure to be inflationary.

This is especially true with military spending, because the spending does not satisfy any economic need. We are not providing more houses, more education, more job training, or meeting any of the economic needs. We are increasing payrolls and demands in military spending. We are not supplying any more goods to meet that demand.

Mr. SYMINGTON. In many cases we are just providing more cash to foreign countries. Is that correct?

Mr. PROXMIRE. Yes, indeed.

Mr. SYMINGTON. At a time when this Government, under the previous administration, was concentrating almost entirely on monetary effort as against fiscal effort to correct the steadily worsening financial problems, such as the continuing imbalance in our balance of payments, some of us, including the distinguished majority leader, felt that it might be wise to reduce at least some of our troops in Europe, troops sent there with understanding they would remain there for a maximum of some 18 months. They have now been there for over a quarter of a century. One of the reasons why we felt

it might be wise to at least partially reduce these troops—especially inasmuch as they were on the soil of the countries in question—was that never once since the agreement that created SHAPE, have any of those countries come anywhere near meeting what they said they would do when NATO was started; whereas, there never has been a year, a month, or day in which the United States has not met in full the commitments it made to those countries.

On this floor as well as in other places, however, the idea we could remove any troops from Europe at this time was viewed with—I think it is fair to say—consternation; and nothing was done.

I would ask the able Senator, a true authority in the financial field, and one who has so demonstrated in the many years he has been in the Senate: Does he not feel now that even fiscal effort to control inflation, along with the monetary effort, is now inadequate; and that what we must face up to if we are going to maintain the integrity of the dollar and stop inflation is in some manner to reduce the expenditures of the Federal Government?

Mr. PROXMIRE. I could not agree with the distinguished Senator from Missouri more enthusiastically. He is absolutely right. It is obvious, how can we use monetary policy further. We have come just about to the limit of that, with a prime rate of 8½ percent, which means an effective rate of over 9 percent because of the amount that must be kept on deposit, and these are the top credit borrowers.

High interest rates are crucifying the homebuilding industry. We had testimony by the head of the homebuilders industry before the Committee on Banking and Currency a few days ago, in which he estimated that we are going to have a genuine depression in homebuilding because of these high interest rates.

We cannot rely, as I have tried to bring out, on tax policy. It seems to me that the only real answer is to cut military spending sharply.

Mr. SYMINGTON. Mr. President, I congratulate the able Senator from Wisconsin for his further effort to bring our Government balance sheet into balance. It is always rewarding to listen to him present such information.

Mr. PROXMIRE. I thank the distinguished Senator.

Mr. President, I wish to emphasize that the most significant debate that is going to take place during the next several years in Congress will be over the size of the military budget, whether it will be, as President Nixon said last November, $87 billion in 1972, or $61 billion or thereabouts, which is the proposed level in Fortune magazine. Our decision is going to have a great effect in this country in terms of our economic stability and how we meet our very pressing domestic problems.

Mr. STENNIS. Mr. President, will the Senator yield to me briefly?

Mr. PROXMIRE. I have only a few more paragraphs, but I am happy to yield to the Senator now if he wishes.

Mr. STENNIS. Mr. President, I shall only be 2 or 3 minutes.

Mr. PROXMIRE. I am happy to yield to the Senator from Mississippi.

Mr. STENNIS. Mr. President, as always, I appreciate the very diligent efforts of the Senator from Wisconsin. He is a great worker and he digs for the facts. He is helpful in anything he goes into, including this matter.

However, I wish to point out to the Senator and others that when it comes to magazine articles or editorial writers in Fortune magazine or any other magazine just making the flat statement that everything is escalating and that it will continue at the end of the war, I do not think those statements are facts at all. I believe it takes someone more knowledgeable than an editorial writer could be unless he made a great study of some of these major matters before being in a position to make an analysis such as that or making a decision on a weapon, and particularly a defensive weapon.

Mr. President, I speak with all deference to the Senator. I think if a man makes a survey such as that, he has to know something about war plans, and he has to know a good deal about strategy, and he must have a board of advisers that could make an analysis of all these matters.

Mr. President, I think you must have economists and financial experts who can analyze what the situation is and others who can analyze that analysis and bring in a report.

With all deference to the writer of the article and the Senator, magazines do have their place for reading, but here we are talking about a decision on a major military weapon.

We are going to reduce this budget, I believe. I have already said that for my part there is $10 billion I want to reduce as soon as the shooting stops, and that is to get the combined military forces back to the same level they were when the war started. That would reduce it, in round numbers, by a million men, which figured at $10,000 a man, would be $10 billion. That is real money and I think it can be done. I asked General Wheeler about that the other day. He gave me substantial figures, speaking more or less off the cuff. He is the Chairman of our Joint Chiefs, as the Senator knows.

Instead of escalating, this matter is going down if I can have anything to do with it and if the Senator from Wisconsin has anything to do with it, and I think we can. But I do not believe we can judge whether we are to vote one way or another on a weapons system at this time based on such speculation as appears in a magazine article.

Mr. PROXMIRE. Mr. President, I should have forewarned the Senator. This article in Fortune magazine assumes the ABM system will go ahead. The implication, although this is not stated, is that Fortune does not object to the ABM deployment now.

They are talking about the overall cost of our military establishment. The Senator is correct. One can never rely on the writer of a magazine article, but only on the facts and statistics that are set forth if they are verified. That is entirely what I am relying on. I do not know the man who wrote the article and I do not know his background but the facts and the statistics which are cited are in my view persuasive.

Mr. STENNIS. I thank the Senator for yielding.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. SYMINGTON. Mr. President, before the distinguished Senator from Mississippi leaves the Chamber, I hope the Senator from Wisconsin will leave in the RECORD the high compliment the article pays the Senator from Mississippi for the fine work he has been doing in this field recently. Unfortunately, he was not in the Chamber when that was brought out.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. DOMINICK. Mr. President, I wish to say again for the purpose of the RECORD that the distinguished Senator from Missouri, in quoting these figures, did not point out that approximately $30 billion a year of our defense budget is connected with the Vietnam situation. Therefore, when one is determining comparative figures between $50 billion–$69 billion—one has to take into account the fact that we have been injected into this war which many of us wish had not happened. Let us put it that way. I think that must be considered in connection with the entire situation.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. SYMINGTON. Mr. President, the able Senator from Colorado knows I respect his opinion in this field and all other fields. If one adds the current cost of the Vietnamese war to the added cost incident to inflation, and we would have a defense budget of $57 billion as against the current figure, which at the beginning of the year was approximately $80 billion.

Mr. DOMINICK. That figure is not quite correct.

Mr. SYMINGTON. Fairly close. I believe the Senator made reference on this in the article to testimony before the committees that even if the war in Vietnam were to stop it would be doubtful if we could make a substantial reduction in the military budget.

Mr. PROXMIRE. Mr. President, I wish to confirm what the Senator has said. First we had the President, Mr. Nixon, who said on November 3 or 4 of last year, that he anticipated that after the war was over the military budget would be $87 billion. Second, he had testimony before the Joint Economic Committee by Mr. Moot, the Comptroller of the Defense Department, who said that in his view he could not see how we could get the budget below $80 billion after the war is over.

That is why I say that this matter is so crucial overall, and not relating to the ABM. I should have made that clear.

Mr. DOMINICK. Mr. President, these statements may be true and I am sure that the statements the Senator quoted

were made. However, after all, the appropriating and authorizing committees will determine the budget. The distinguished Senator from Mississippi has just indicated that he is in favor of cutting our Armed Forces by 1 million men, most of whom have been put in to take care of our problems in Vietnam and elsewhere.

Mr. PROXMIRE. I thank the Senator.

Mr. President, from the article I would like to indicate where they would make cutbacks. Sometimes when we get into specifics there are disagreements.

The article states:

A cutback of the 800,000 military men, as well as the naval ships and Air Force tactical squadrons that have been added since the Vietnam buildup in 1965;

In addition, the elimination of three and a half Army divisions and three tactical air wings now deployed in Europe and Asia;

A paring down of weapon systems of low cost effectiveness, such as tactical nuclear forces and certain Navy carrier units;

Minor adjustments in the strategic nuclear offensive and defensive forces, principally a reduction in the B–52 bomber fleet, and dropping plans for a new intercontinental bomber;

A sharp cut in funds requested by the military for modernization of weapons or improved performance, through management-control devices such as the trade-off concept—i.e., the principle that for each additional dollar spent on procurement, a dollar must be saved elsewhere;

Greater over-all efficiency in the use of manpower, and a crackdown on wasteful procurement of new weapons.

Clearly there is no magic number to answer the question of how much defense is enough, a question as old as war itself. The problem of deciding how much is enough is not unlike that of buying insurance. You don't buy insurance for all conceivable disaster, but only enough to cover possible losses that you cannot afford to take. The threat of potential enemies—the U.S.S.R., Red China, even Cuba—and the strategy chosen to meet these threats play an important part in the design and cost of the military forces. For example, if the country should revert to the defense posture of the Eisenhower years and cut six Army divisions and six tactical air wings, the post-Vietnam budget would be around $54 billion. A post-Vietnam "minimum nuclear-deterrence" budget, which would in addition cut out portions of the nuclear striking force and tactical nuclear force, would cost only $42 billion a year. On the other hand, a "nuclear-superiority" budget, which would keep land, sea, and air forces at their present levels and provide an advanced intercontinental ballistic missile, a new strategic bomber, heavy antiballistic-missile defense, and an expanded fallout-shelter program, would run close to $100 billion.

The U.S. conventional forces in the Far East, other than those fighting in Vietnam, originally were put there on the theory that if trouble started in Europe, China would probably apply a blowtorch to the U.S. in Asia. Despite the Soviet-Chinese rift of recent years, these forces have been kept there on the newer theory that China might make trouble independently of the Russians. But the former State Department specialist disagrees. "Many of us today," he says, "no longer think an overland attack by China is likely in view of the natural barriers and the structure of its armed forces. The country's political policies just don't run that way. If you conclude, as many of us have, that we don't need to meet a Red Chinese ground attack against Southeast Asia with conventional ground forces, and that the probability of Russia attempting to grab Berlin is receding, you could start weakening the two-plus capability."

TRIMMING THE $24-BILLION-A-YEAR NAVY

As regards conventional forces, such challenges to long-held assumptions lead to several conclusions:

The U.S. forces allocated to NATO can be trimmed significantly; with their supporting components they cost today about $14 billion annually and constitute *in themselves* a more powerful fighting force than any in the world except that of the Soviet Union.

Since simultaneous attacks by the U.S.S.R. and China are a remote possibility, the two-plus contingency capability can be reduced somewhat, in the direction of the one-plus capability that existed during the Eisenhower Administration.

The U.S. Navy, which is larger than all the rest of the world's navies, friendly and hostile, put together, can be significantly reduced in size. The fleet is designed to have the capability of fighting an ill-defined mission, called "War at Sea" in defense posture statements. Curiously, the Navy's mission was given much of its present definition during the landlocked crisis of August, 1961, when the Berlin Wall was built. Feeling itself hopelessly outclassed by the Soviet Union on the ground, the U.S. decided to offset this, in part, with an overwhelming naval force, which, in the event of future Soviet land grabs, could quickly assert and capitalize on control of the seas. This reasoning, now used in support of a $24.4-billion-a-year Navy, is highly dubious.

THOSE VULNERABLE TACTICAL NUKES

The Navy's fifteen attack carriers, among the most costly and vulnerable of weapon systems, are also viewed as excessive even by some of Laird's key aides. But again congressional support in the armed-services committees has blocked repeated efforts to reduce this attack carrier force to a more realistic size. One solution long advocated by the office of the Secretary of Defense is to adopt the system, used with Polaris submarines, of rotating crews instead of ships on station. The Navy contends it needs two backup carriers for each carrier on station, but under a crew-rotation system the total number of ships could be reduced with no loss of combat effectiveness. It is highly doubtful, also, that the country still needs all of its enormously expensive and porous continental air defenses against a small Russian long-range bomber force, or that it will need, after Vietnam, all of the Air Force's twenty-three tactical air wings.

Increasingly, too, defense analysts are questioning the role of tactical nuclear weapons. These weapons, which still form the centerpiece of U.S. forces in NATO, no longer provide any military advantage over the Warsaw Pact countries, which now are also armed with them. Though tactical nuclear power has been growing rapidly during the past decade, there is little appreciation by the public of its dangers and its limitations. William Kaufmann of the Massachusetts Institute of Technology has argued, in an unpublished study, that NATO field commanders would quickly lose control of their forces in the devastation that would follow a tactical nuclear fire fight. He cites war games showing that if tactical weapons were employed in Europe to stop a Russian advance on NATO, front-line troop casualties would be 20 percent a day. After a few days of this so-called "limited" nuclear war, civilian casualties would reach 1,700,000 dead and 3,500,000 wounded. In these circumstances the pressures to escalate to general nuclear war would be intense. Kaufmann also notes that tactical nuclear weapons are highly vulnerable to a surprise preemptive strike by an enemy because they are in "soft," exposed locations.

Mr. President, I have two or three other excerpts which I should like to read at this time:

THE HIGH COST OF GOLD PLATE

Regardless of the fact that the cost of Vietnam has declined from $29 billion in 1968 to $25 billion this year, other defense costs are heading upward under pressure from the military chiefs. Instead of becoming available for civilian programs this year, the $4-billion saving in Vietnam costs was channeled into the non-Vietnam segments of the defense budget.

Of course it is true that the Armed Services Committee has cut that by $2 billion. And the Nixon administration has cut it another $1 billion, so that is some saving.

Continuing reading:

Price increases and sharply rising military pay costs are swallowing part of the savings. Inflation has added $1.6 billion to defense costs in the past three years, and may add another $3 billion by 1974. Pay increases, which cost $5.8 billion in the last two years, will add $7.4 billion more by 1974.

Beyond price and wage inflation, however, the military have since 1965 been "gold-plating" their forces—i.e., indulging in additional, and often excessive, increases in capital investment—and this has added billions to the cost of defense. An Army division of, say, 15,000 combat and 30,000 support troops costs $680 million to equip and maintain today as opposed to $550 million four years ago, largely because of the addition of costly helicopters, new small arms, and communication equipment. The $900,000 of avionics in today's F–4 fighter bomber costs 20 percent more than an entire F–100 did in 1961. New destroyers, at $57 million apiece, cost more than three times as much as those built during the Korean war.

Fortune's budget assumes deployment of the controversial Safeguard ballistic-missile defense system, whose costs in 1972 are estimated here at $2 billion annually. Also included in the budget are funds for the Minuteman III and Poseidon missiles, both assumed to be equipped with new MIRV (multiple, independently targeted) warheads. Both missiles are included, even though there is a strong case for relying on Poseidon alone, thereby saving the $400 million a year that Minuteman III will cost by 1972.

After the proposed cuts, the U.S. would still have the most powerful and diversified military force in the world; it would not be returning to a form of isolationism nor would it be in the position of carrying out unilateral disarmament. The analysis indicates that if many of the long outdated assumptions in the defense field are questioned, sharp eyes and sharp pencils, in President Nixon's words, can produce a streamlined defense budget better suited to the realities of the 1970's.

EXHIBIT 1

THE CASE FOR CUTTING DEFENSE SPENDING[1]

(By Jan Cameron)

THE "SHOW-ME" SCHOOL OF CIVILIAN DEFENSE ANALYSTS

The defense policies of the Seventies will be influenced by the advice and expertise of Deputy Secretary of Defense David Packard and Laurence Lynn, Jr., who is on the staff of the National Security Council, head a Nixon defense-strategy review that promises

[1] In the preparation of this article, Fortune has received valuable assistance from William Kaufmann, a former Defense Department consultant now at the Massachusetts Institute of Technology, and Robert Benson, formerly in the controller's office in the Defense Department and now with the Urban Coalition in Washington. However, neither is responsible for, nor necessarily concurs in, the conclusions drawn or all of the specific budget cuts proposed.

to be the most far-ranging reappraisal of policy and force levels ever undertaken by any Administration. Foreign-policy specialist Henry Owen of the Brookings Institution and Carl Kaysen, director of the Institute for Advanced Study in Princeton, are engaged in private defense studies that have already attracted wide attention, inside and outside the federal government. Henry Rowen, president of Rand Corp., and his former associate James R. Schlesinger, now assistant director of the Budget Bureau, have helped develop the analytical tools, in large part derived from corporate management, that are being used widely today within the government to examine military forces, weapons systems, and budgets. Charles L. Schultze, former Director of the Budget and senior fellow at Brookings, is contributing his detailed knowledge of defense and over-all federal budgeting to studies to how to reduce defense costs to realistic levels. Another important contributor to the new ferment is Robert Anthony, former controller of the Defense Department, now professor of management control at Havard Business School.

"Even if we are successful in eliminating the war in Vietnam," warned Melvin Laird, the Secretary of Defense, last spring, "we are still not going to come up with a drastically reduced defense budget. . . . A drastically reduced defense budget will not provide adequate security in the world in which we live." Secretary Laird presides over a U.S. defense budget of $80 billion, up 70 percent from 1961. The likelihood of very much reduction, post-Vietnam, is very small indeed, as most Defense Department civilians and the military chiefs see it.

A growing number of critics, with long experience in the Defense Department and Budget Bureau, dispute this position. They make a strong case that post-Vietnam defense costs can be cut drastically without either damaging the national security or compromising this country's commitments to its allies. Indeed, careful analysis indicates factors other than "adequate security" are forcing up defense costs today.

The defense budget has been driven upward because much of it is based on strategic assumptions that have gone unchallenged since the early post-World War II years, when the enemy and his threat were quite different. The evidence is strong, too, that the force structure and force levels have been put together by the military chiefs in the absence of a clearly stated national security policy laid down by the White House. Furthermore, under the pressures of the Vietnam war, civilian control over military spending has diminished, efficiency has decreased, and a large amount of "gold plating" of the forces has taken place under the guise of meeting the needs of the war. Unless brought under control, these trends can easily drive the defense budget to more than $100 billion within a few years. In fact, the Joint Chiefs for the past three years have requested a budget in excess of $105 billion, and President Nixon, at the end of his campaign, foresaw defense spending, excluding the Vietnam war, rising to $87 billion by 1972.

FORTUNE believes that a post-Vietnam defense budget of around $61 billion would allow the U.S. to remain the world's No. 1 military power without any major change in its commitments, in its ability to meet military contingencies, or in its basic strategic concepts. To reach this level would require, among other things:

A cutback of the 800,000 military men, as well as the naval ships and Air Force tactical squadrons that have been added since the Vietnam buildup in 1965;

In addition, the elimination of three and a half Army divisions and three tactical air wings now deployed in Europe and Asia;

A paring down of weapon systems of low cost effectiveness, such as tactical nuclear forces and certain Navy carrier units;

Minor adjustments in the strategic nuclear offensive and defensive forces, principally a reduction in the B–52 bomber fleet, and dropping plans for a new intercontinental bomber;

A sharp cut in funds requested by the military for modernization of weapons or improved performance, through management-control devices such as the trade-off concept—i.e., the principle that for each additional dollar spent on procurement, a dollar must be saved elsewhere;

Greater over-all efficiency in the use of manpower, and a crackdown on wasteful procurement of new weapons.

Clearly there is no magic number to answer the question of how much defense is enough, a question as old as war itself. The problem of deciding how much is enough is not unlike that of buying insurance. You don't buy insurance for all conceivable disasters, but only enough to cover possible losses that you cannot afford to take. The threat of potential enemies—the U.S.S.R., Red China, even Cuba—and the strategy chosen to meet these threats play an important part in the design and cost of the military forces. For example, if the country should revert to the defense posture of the Eisenhower years and cut six Army divisions and six tactical air wings, the post-Vietnam budget would be around $54 billion. A post-Vietnam "minimum nuclear-deterrence" budget, which would in addition cut out portions of the nuclear striking force and tactical nuclear force, would cost only $42 billion a year. On the other hand, a "nuclear-superiority" budget, which would keep land, sea, and air forces at their present levels and provide an advanced intercontinental ballistic missile, a new strategic bomber, heavy anti-ballistic-missile defense, and an expanded fallout-shelter program, would run close to $100 billion.

THE ORIGINS OF NON-POLICY

The Nixon Administration has already initiated what promises to be the most profound and basic reappraisal ever undertaken of the political-military threat facing the U.S., and of the defense structure needed to cope with it. The first results of this review, being carried on jointly by a National Security Council staff under Laurence Lynn, and the Defense Department under Deputy Secretary David Packard, *should be reflected in next year's defense budget. Meanwhile the Joint Economic Committee, under the lead of Senator William Proxmire of Wisconsin, as well as several informal congressional groups* such as the Members of Congress for Peace Through Law, is conducting its own re-examination of defense policy. These efforts, like private defense studies now under way in the Brookings Institution under Henry Owen, former chairman of the State Department's policy planning council, reflect a widespread feeling that for too long the public and Congress have left such policies unquestioned. The result, in this view, is that defense and its spiraling cost have been largely the handiwork of the Pentagon and a handful of knowledgeable but uncritical Congressmen on the House and Senate Armed Services committees.

Since the early Kennedy years there has been no formal statement of national security policy such as existed in the 1940's under Truman, and later under Eisenhower. Under Eisenhower, for instance, the President and National Security Council formulated each year a document called the Basic National Security Policy on which the force levels and structure were based. Each spring Eisenhower would set a rough defense-budget target, based on this policy and on a percentage of estimated federal revenues for the coming year. The President, in effect, allocated a portion of the budget to the military and then let the military chiefs and Defense Secretary get the most defense they could out of it. Or, as Eisenhower's Defense Secretary Charles E. Wilson used to put it, get a bigger bang for a buck.

President Kennedy scrapped this procedure, including the rather abstract National Security Council policy papers, and turned defense policy and budgeting over to his brilliant, self-confident Defense chief, Robert McNamara. Allocating funds from a predetermined budget ceiling, McNamara said, was no way to go about setting a defense budget; the better approach was to find out what tasks the military had to perform, and then try to accomplish them at the lowest possible cost. One of McNamara's deputy secretaries explained the process in this manner: "We would start with a rough estimate of how much of our resources we would commit to defense. Then we would feed in intelligence appraisals from both the military and CIA on the threat, from which the Joint Chiefs would draw up a force structure and level to meet the threat. Usually the cost would be too high by about 20 percent. Through the summer and fall, the chiefs and the civilians would squeeze this budget down through a series of hard bargaining sessions. When our defense budget got to the President in December he would say the total cost was still too high, and a final cut would be made to meet the White House goals." The end result of this process would appear in the celebrated posture statements of Secretary McNamara, which, in some 200 pages, laid down the national security policy as he saw it in the first chapters, then presented detailed arguments in support of force levels needed to fulfill the policy.

FORCES BY LEGACY

The Nixon Administration believes there were some major flaws in the process. First of all, neither the White House, nor the State Department, nor the Budget Bureau was consulted on the wide range of strategies and force options associated with them except on an informal basis. (The big exception was nuclear weapons on which the White House exercised close control.) One of President Kennedy's and President Johnson's closest national security advisers cannot recall that the question of how many contingencies the nation should be prepared to meet simultaneously ever came to the White House for a decision: "There were no decisions of that kind when I was in the White House. Nor did we ever review the force level. A lot of things were not decided. Five divisions in NATO, two in Korea, were derived from history. We inherited them and no one questioned the premise. After Kennedy, the White House staff was involved much less in the defense budget. Johnson had no interest in strategy unless it related to a decision he had to make at the time. His only strategic contribution was to put a limit on our nuclear forces. He stopped piling nuclear warheads one on top of another."

McNamara, in describing for the first time the defense establishment in terms of its major roles and in funding the Defense structure five years in advance (research and development programs for eight years in advance), provided long-needed tools for analyzing the costs of various missions. But there were curious gaps in his process. McNamara felt it was not his role to challenge basic national commitments. One former aide recalls that whenever the military chiefs asked what kind of national security policy they were designing forces to implement, "I would have to try to piece it together from newspaper articles and government papers." Although the Budget Bureau has forty-six aides assigned to monitoring the defense budget, McNamara acted in effect as his own budget chief. He concentrated his review on the new weapon requests and, budget officials say now, questioned—but felt unable to do battle on Capitol Hill to cut—billions of dollars of ongoing spending on weapons and missions that had outlived their need.

Charles Schultze, Director of the Budget in the Johnson Administration, and now a senior fellow at the Brookings Institution, concedes he deferred too much to McNamara's judgments: "Frankly, when I was in the Budget Bureau, it frequently did not occur to me to ask the kinds of questions about underlying assumptions that I can see so clearly in hindsight needed asking."

The size of the conventional Army, Navy, and Air Force today is based on the need to have the capability of fighting simultaneously a land war in Europe and Asia, plus a minor conflict in this hemisphere. Although this concept dates from 1962, it is difficult today to find an official from either the Nixon or Johnson Administration who can explain when or how this capability became part of U.S. military doctrine, much less whether it is still valid. Like the forces committed to NATO and Korea, it has been part of accepted doctrine. The Nixon review is questioning all of these basic and long-accepted policies.

MINIMUM VERSUS MAXIMUM DETERRENCE

In estimating the nation's defense needs, it is important to distinguish between the strategic nuclear forces, which account for about 40 percent of current military spending, and general-purpose forces, which account for the remainder. At one extreme, the strategic nuclear forces—the ICBM's, the B-52 fleet, the forty-one Polaris submarines, and the continental air defense—can be structured on a so-called minimum deterrence basis, or second-strike capability. Supporters of this concept argue that so long as the U.S. possesses, after a first strike by the U.S.S.R., the ability to inflict a very significant level of damage on the enemy in a second or retaliatory strike, that is all the nuclear deterrence we need. The rough gauge of a credible second-strike capability is power enough to destroy one-quarter of an enemy's population and one-half its industry, thereby effectively eliminating it as a twentieth-century power. This is the general assumption on which the U.S. strategic nuclear forces have been built since 1961.

At the other end of the scale is the doctrine of nuclear dominance in which the U.S. would strive for a clearly preponderant offensive capability, one superior in every way to that of the Soviet Union. In addition, there would be a major-damage limiting capability, through defensive missile strength, to prevent an enemy from inflicting an unacceptable number of fatalities or other damage on the U.S. in a nuclear exchange. At its extreme, nuclear superiority would give the U.S. a so-called first-strike capability—i.e., the ability to destroy so much of the enemy's retaliatory capacity in a surprise attack as to neutralize effectively its second-strike capability. In budget terms, the difference between these two doctrines is estimated at around $27 billion annually.

The general-purpose forces, which account for the remaining 60 percent of the current defense budget, also provide a wide range of budget options. These forces are designed to allow the U.S. to control a land or sea area or deny it to the enemy in a limited war or counterinsurgency situation, as opposed to destroying an enemy's population or industry. The size and deployment of these forces are not so much related to the defense of U.S. territory as they are to the defense of other countries. This is underscored today by the fact that seventeen of the nation's thirty-two and two-thirds active and reserve divisions are stationed in Europe, Korea, and Vietnam; and that nearly half of our 5,000 tactical and attack aircraft in fighting units are based overseas, along with nearly a third of the Navy's 700 general-purpose ships.

These general-purpose forces can be designed, at one extreme, for a fortress America or Western Hemisphere strategy under which the U.S. would maintain sufficient conventional land and sea power to protect the continental U.S. from, say, a Cuban foray, but would not feel it in the national interest to wage a non-nuclear war outside the hemisphere. At the other extreme is a concept of containment under which fifty-two U.S. divisions would be deployed in forward positions from Norway to Japan to prevent the loss of an inch of soil to the Communists. The budget difference in costs between these two strategies would be in the neighborhood of $40 billion annually. The present U.S. policy, which is to have conventional forces capable of meeting two major and one minor contingencies simultaneously—known as the "two-plus contingency capability"—is in a middle position.

PARING THE TWO-PLUS CAPABILITY

The generals and admirals, in arguing for larger standing forces and more sophisticated weapons, both strategic and conventional, warn over and over again that the military threat is great and growing. They cite the growing strategic nuclear power of the Russians and the Red Chinese efforts to develop a nuclear striking force. The buildup of the Soviet Union's submarine fleet, and its growing if still modest naval surface force, plus the prototypes of a new generation of fighter aircraft, are also cited as elements of the rising threat. Military men tend to want to meet enemy forces on a one-to-one basis regardless of great differences between the U.S. and its potential enemies in such elements as firepower and mobility. No President since five-star General Eisenhower has been successful in forcing major reductions in the defense budget over their ceaseless warnings of imminent peril.

Outside the Pentagon, however, many of the country's civilian watchdogs of defense spending take a different view. They concede that ever since the Soviet military weakness was revealed during the Cuban missile crisis in 1962, the U.S.S.R. has been trying to close the gap between its strategic forces and the rapidly growing nuclear power of the U.S. But this does not lead, they believe, to a firm conclusion that the enemy, as the military imply, is striving for a first-strike capability. Nor is there necessarily a relationship between the U.S.R.R.'s nuclear buildup and the need for the U.S. to maintain a conventional force of more than a million men, along with their ships, planes, tanks, and other hardware, in some 400 major bases around the world. A former State Department official intimately connected with national security planning in the Johnson Administration says: "Our commitments and force goals associated with them, both for NATO and the Far East [excluding Vietnam], account for about two-thirds of our defense costs today. These commitments stem from history and not from any clear analysis of whether or not the threat that led to troop deployments in the late 1940's and 1950's is still valid."

U.S. forces are stationed in Europe, this analyst says, as much to maintain a military balance between the West Germans and the other NATO countries as to meet a possible Russian push westward. Even after last year's Russian invasion of Czechoslovakia, the Europeans regard the possibility of a Russian-initiated conventional war against NATO as an American fantasy. In the unlikely event that the U.S.S.R. launched a purely conventional invasion of Western Europe, critics of current Pentagon thinking say, NATO ground forces would be too weak to halt it without resorting to tactical nuclear weapons. In any event, it is the fear of nuclear war, and not the U.S. Seventh Army, that has contained the U.S.S.R. in Europe.

The U.S. conventional forces in the Far East, other than those fighting in Vietnam, originally were put there on the theory that if trouble started in Europe, China would probably apply a blowtorch to the U.S. in Asia. Despite the Soviet-Chinese rift of recent years, these forces have been kept there on the newer theory that China might make trouble independently of the Russians. But the former State Department specialist disagrees. "Many of us today," he says, "no longer think an overland attack by China is likely in view of the natural barriers and the structure of its armed forces. The country's political policies just don't run that way. If you conclude, as many of us have, that we don't need to meet a Red Chinese ground attack against Southeast Asia with conventional ground forces, and that the probability of Russia attempting to grab Berlin is receding, you could start weakening the two-plus capability."

TRIMMING THE $24-BILLION-A-YEAR NAVY

As regards conventional forces, such challenges to long-held assumptions lead to several conclusions:

The U.S. forces allocated to NATO can be trimmed significantly; with their supporting components they cost today about $14 billion annually and constitute *in themselves* a more powerful fighting force than any in the world except that of the Soviet Union.

Since simultaneous attacks by the U.S.S.R. and China are a remote possibility, the two-plus contingency capability can be reduced somewhat, in the direction of the one-plus capability that existed during the Eisenhower Administration.

The U.S. Navy, which is larger than all the rest of the world's navies, friendly and hostile, put together, can be significantly reduced in size. The fleet is designed to have the capability of fighting an ill-defined mission, called "War at Sea" in defense posture statements. Curiously, the Navy's mission was given much of its present definition during the landlocked crisis of August, 1961, when the Berlin Wall was built. Feeling itself hopelessly outclassed by the Soviet Union on the ground, the U.S. decided to offset this, in part, with an overwhelming naval force, which, in the event of future Soviet land grabs, could quickly assert and capitalize on control of the seas. This reasoning, now used in support of a $24.4-billion-a-year Navy, is highly dubious.

Within the Defense Department, talk of such cuts draws angry rejoinders. An assistant to Secretary Laird snaps that those proposing large defense cuts are backing away from the strategy of collective defense that the nation adopted after World War II: "Nobody has the guts to say to hell with collective defense, and to come out and say they prefer reverting to spheres of influence. Instead they hack away at the force level, at new spending for weapons like the ABM and the MIRV, at military assistance and the financing of arms sales to friendly countries." Senator John Sherman Cooper of Kentucky, a soft-spoken Republican with wide experience in foreign affairs, however, does propose a reappraisal of collective defense. "The strategy of containment through collective-security treaties," he says, "does need to be revised—even in Europe where increasingly it will be neither wanted nor needed for much longer. Countries like Thailand, Japan, and the Philippines want our forces at first, but once they have been there a while, nationalism is aroused by their presence. Whatever stability the U.S. has brought to the world has come, not through stationing conventional forces around the world, but through its economic aid and military assistance, and the nuclear umbrella we hold over our allies." Cooper calls for a sharp reduction of troops stationed abroad, and a redrawing of U.S. commitments to cover the two areas he feels are most vital to the U.S.—Europe and Japan.

Even such Senate hawks as John Stennis of Mississippi, chairman of the Senate Armed

Services Committee, are increasingly bothered by the current concept of collective defense—involving, as it does, alliances with over forty governments thousands of miles from the continental U.S. "These commitments," Stennis says, "were no more priced out in terms of money or troops than my grandchildren's baby shoes. I voted for some of these alliances. The theory was that these alliances would boost morale to the point where we would not be called on to deliver. But it has not worked out that way." Instead, Stennis and others point out, the U.S. has wound up as a major supplier of ground forces to Europe and Asia.

Beyond the doubts about current force levels and their deployment, there are compelling arguments that certain weapon systems continue to exist after the rationale for them has disappeared. The eight aging antisubmarine (ASW) carrier task forces, for example, are only marginally effective. As former Secretary of Defense Clark Clifford said in his posture statement last January, this carrier force "is costly to operate in relationship to its effectiveness, particularly against the newer Soviet nuclear-powered submarines." If the Pentagon's civilians had had their way, this force would probably have been shrunk down long ago and the primary ASW role turned over to the nuclear attack submarines and land-based aircraft. But the armed-services committees of Congress have shielded the Navy from cutbacks, on the theory that the expenditure of additional millions on new carriers and aircraft can somehow make these task forces more effective.

THOSE VULNERABLE TACTICAL NUKES

The Navy's fifteen attack carrier's, among the most costly and vulnerable of weapon systems, are also viewed as excessive even by some of Laird's key aides. But again congressional supoprt in the armed-services committees has blocked repeated efforts to reduce this attack carrier force to a more realistic size. One solution long advocated by the office of the Secretary of Defense is to adopt the system, used with Polaris submarines, of rotating crews instead of ships on station. The Navy contends it needs two backup carriers for each carrier on station, but under a crew-rotation system the total number of ships could be reduced with no loss of combat effectiveness. It is highly doubtful, also, that the country still needs all of its enormously expensive and porous continental air defenses against a small Russian long-range bomber force, or that it will need, after Vietnam, all of the Air Force's twenty-three tactical air wings.

Increasingly, too, defense analysts are questioning the role of tactical nuclear weapons. These weapons, which still form the centerpiece of U.S. forces in NATO, no longer provide any military advantage over the Warsaw Pact countries, which now are also armed with them. Though tactical nuclear power has been growing rapidly during the past decade, there is little appreciation by the public of its dangers and its limitations. William Kaufmann of the Massachusetts Institute of Technology has argued, in an unpublished study, that NATO field commanders would quickly lose control of their forces in the devastation that would follow a tactical nuclear fire fight. He cites war games showing that if tactical weapons were employed in Europe to stop a Russian advance on NATO, front-line troop casualties would be 20 percent a day. After a few days of this so-called "limited" nuclear war, civilian casualties would reach 1,700,000 dead and 3,500,000 wounded. In these circumstances the pressures to escalate to general nuclear war would be intense. Kaufmann also notes that tactical nuclear weapons are highly vulnerable to a surprise preemptive strike by an enemy because they are in "soft," exposed locations.

A strong case can be made for turning all tactical nuclear weapons—those in the hands of the U.S. Air Force and Army as well as NATO allies—over to the U.S. strategic forces, which are far less vulnerable to first-strike attacks. The Vietnam experience has suggested that B–52's could be used to carry tactical nuclear weapons in local warfare; if the enemy's anti-aircraft defense were strong, the bombers could deliver highly accurate air-to-ground missiles launched at a safe distance from the target area. Minuteman and Polaris missiles, too, now can be aimed with sufficient accuracy to hit battlefield targets. Kaufmann has estimated that 200 extra Minuteman ICBM's could be added to the strategic force for this secondary mission for about half the cost of the present tactical nuclear forces, saving $1 billion a year.

THE HIGH COST OF GOLD PLATE

Regardless of the fact that the cost of Vietnam has declined from $29 billion in 1968 to $25 billion this year, other defense costs are heading upward under pressure from the military chiefs. Instead of becoming available for civilian programs this year, the $4-billion saving in Vietnam costs was channeled into the non-Vietnam segments of the defense budget. Price increases and sharply rising military pay costs are swallowing part of the savings. Inflation has added $1.6 billion to defense costs in the past three years, and may add another $3 billion by 1974. Pay increases which cost $5.8 billion in the last two years, will add $7.4 billion more by 1974.

Beyond price and wage inflation, however, the military have since 1965 been "gold-plating" their forces—i.e., indulging in additional, and often excessive, increases in capital investment—and this has added billions to the cost of defense. An Army division of, say, 15,000 combat and 30,000 support troops costs $680 million to equip and maintain today as opposed to $550 million four years ago, largely because of the addition of costly helicopters, new small arms, and communication equipment. The $900,000 of avionics in today's F–4 fighter bomber costs 20 percent more than an entire F–100 did in 1961. New destroyers, at $57 million apiece, cost more than three times as much as those built during the Korean war.

Powerful Congressmen in the House Armed Services Committee, led by Chairman Mendel Rivers and ranking Republican Leslie Arends, show little hesitation in authorizing ever fancier and more expensive equipment. Says Arends, who supports the Air Force's request for new manned bombers at $30 million to $40 million each, which were opposed by former Secretary McNamara: "When I see us bombing in Vietnam with fifteen-year-old B–52's whose wings are about to fall off I know we need a follow-up bomber."

Senator Stennis supports the Navy's new nuclear-powered attack carriers, which, with new aircraft and their nuclear escort destroyers, will cost at least $2.4 billion per carrier task force. This means that to put a nuclear-powered attack carrier and its 100 tactical aircraft on station in the Tonkin Gulf, and to provide two backup carriers, requires an investment of about $7 billion, plus operating and maintenance costs of over $700 million annually—far in excess of what land-based aircraft would cost.

The necessity for such costly items as nuclear-powered carriers and escorts has seldom been critically examined by Congress. Inadequate staff on the armed-services committees is one reason for this lack of review. Senator Daniel Ken Inouye of Hawaii, a member of the Armed Services Committee, points out that the committee, handling authorizations that cover close to half of the federal government's budget, has the smallest staff on Capitol Hill.

PRICING OUT A 1965 POSTURE

The point of departure for establishing an appropriate post-Vietnam level of spending is the fiscal 1965 budget, which involved total spending authority of $50.9 billion. This is selected as a base point because 1965 was the last fiscal year before the nation's large-scale involvement in Vietnam got under way and the year in which Secretary McNamara is generally thought to have achieved the greatest management control over the defense establishment. This level of spending allowed the country to support a small war in Vietnam, land a force in the Dominican Republic, create a large second-strike nuclear capability, and expand as well as modernize the general-purpose forces.

By fiscal 1972, the earliest year in which most of the Vietnam costs could be eliminated, cost and wage inflation would raise the cost of maintaining and equipping an equivalent military force to an estimated $67.9 billion. The Pentagon is understood to have decided on another $10.8 billion (in 1972 prices) for procurement of newer and more sophisticated weapons. In sum, unavoidable price and wage increases, plus new weapons and equipment that the military strongly desires, would mean a fiscal 1972 budget of at least $78.7 billion. In all likelihood the spending would be significantly higher than this, since the Pentagon is anxious to retain a large part of the Vietnam augmentation in manpower. Senator Howard Cannon of Nevada, who sits on the Armed Services Committee, says that the Joint Chiefs have told him not to expect reduction of more than one division after Vietnam.

FORTUNE believes there are several areas of readily obtainable savings, which in 1972 would total $17.6 billion. Since military manpower accounts for roughly half of the total defense budget, the first step is to shrink manpower back to, and possibly modestly below, the base-line year of 1965. If the armed forces were to be cut by one million from the present 3,500,000, the savings would exceed $10 billion a year.

The cuts in manpower can be achieved by eliminating the Vietnam military manpower add-on of 800,000 men and by demobilizing three and a half Army divisions, three tactical air wings, and some Navy ships. The major cutbacks would be in Army ground divisions around the world for a generation like the twentieth-century equivalent of the Roman legions. Changing political conditions and the greatly increased capability in airlift (which allows 11,000 combat-equipped troops to be moved from the U.S. to Vietnam in forty-eight hours) argue in support of the manpower reductions. Such reductions, moreover, would lessen the great disparity between the relative defense efforts of the U.S. and its allies. Japan, for example, spends only 1 percent of its gross national product on defense, and the NATO countries 5 percent, while the U.S. spends 9 percent. The U.S. spends nearly as much on the defense of Europe as the rest of its NATO allies combined.

The second area for defense cuts lies in introducing rigid controls over procurement to minimize the "gold-plating" of new weapons, particularly aircraft and naval ships. Deputy Secretary of Defense Packard strongly favors the trade-off concept introduced by McNamara, which in essence says that if you buy more expensive weapons to replace existing ones, in the face of an unchanged threat, they should be more efficient—and hence fewer of them should be needed. As a hypothetical example, assume that in 1962 the Air Force determined it needed 1,000 fighter planes costing $3 million each. Later it comes in with a proposal to buy new planes that will cost, say, $6 million apiece. Under the trade-off concept, the Secretary of Defense might well decide to buy only half as many of the new planes, on the theory that each plane should be twice as effective.

Cost-effectiveness analysis, introduced by Secretary McNamara and perhaps overworked in such cases as the F–111, is still a powerful control system. In McNamara's day it ruled against the proposed 2,000-mph ad-

vanced manned strategic bomber (AMSA). The Nixon Administration hasn't decided whether to go ahead with the AMSA, which is still in the early development phase. The two key questions still to be answered are whether there is a role for the manned bomber that cannot be performed better and more cheaply by missiles today, and, if so, what kind of bomber the U.S. should have. Alain Enthoven, former assistant secretary of defense for systems analysis and now a vice president of Litton Industries, told the Senate Armed Services Committee in April, 1968: "Do we want to pour a lot of our country's resources into a new bomber? . . . I do not think that anyone is proposing that a new bomber would have significantly more range or payload than the B–52 [which] already has all that is needed. Once you can get from here to Russia with an adequate payload, then it is unnecessary to increase the payload or range capability." In the era of surface-to-air missiles, defense analysts say, the AMSA's greater speed is no advantage. If anything, they say, the AMSA, flying at higher altitudes than the B–52, would be more vulnerable to anti-aircraft missiles because it would show up on radar sooner.

The third way to achieve savings would be to apply greater efficiencies in the forces and weapon systems that would survive this pruning process. Deputy Secretary Packard is looking for possible economies in the training practices of the services, which cost over $7 billion a year. A cut in basic training from eight to four weeks for soldiers who will serve short-time hitches in noncombatant specialties could save $50 million a year. Reducing officer rotation by one-fourth, one defense analyst has estimated, would save $360 million annually in transportation and moving expenses. Production inefficiencies, although generally overstated, nevertheless offer substantial chances for reductions.

Fortune's proposed budget of $61.1 billion for fiscal 1972 is not so much a precise arithmetic total as it is a guide to a general level of spending that many informed men think can be readily achieved in the 1970's without impairing the nation's security. Some areas of defense spending such as research and development, communications and intelligence, would not be greatly reduced because tight security places them beyond appraisal. However, former Defense Controller Robert Anthony, for one, believes that improved intelligence-gathering techniques alone would allow cuts of $500 million. Defense research would be kept at its present level. However, such recent projects as studies of Congo witchcraft, malaria in southern Italy, and how Korean women divers withstand cold water belie the Pentagon's claim that any R. and D. cuts would "affect in a material way the security of the U.S."

Fortune's budget assumes deployment of the controversial Safeguard-missile defense system, whose costs in 1972 are estimated here at $2 billion annually. Also, included in the budget are funds for the Minuteman III and Poseidon missiles, both assumed to be equipped with new MIRV (multiple, independently targeted) warheads. Both missiles are included, even though there is a stronge case for relying on Poseidon alone, thereby saving the $400 million a year that Minuteman III will cost by 1972.

The decision to leave these controversial new weapons in the budget is based on the judgment that the U.S.S.R. is pushing ahead with the development of similar weapons, and that the arguments against them, while strong, are not conclusive. A successful outcome of the disarmament talks would, of course, allow cuts in spending on these weapons, while an accelerated buildup in the Soviet nuclear striking force conceivably could boost the post-Vietnam defense budget as high as $73 billion.

After the proposed cuts, the U.S. would still have the most powerful and diversified military force in the world; it would not be returning to a form of isolationism nor would it be in the position of carrying out unilateral disarmament. The analysis indicates that if many of the long outdated assumptions in the defense field are questioned, sharp eyes and sharp pencils, in President Nixon's words, can produce a streamlined defense budget better suited to the realities in the 1970's.

HOW TO CUT THE DEFENSE BUDGET BY $17 BILLION

In estimating a reasonable post-Vietnam military budget, Fortune takes as its starting point the Pentagon's $50.9 billion of spending authority in fiscal 1965, just before defense costs began spiraling upward because of the Southeast Asian conflict. By fiscal 1972, the earliest year in which Vietnam's cost could be largely eliminated, inflation and increases in military pay would boost the cost of maintaining an equivalent military posture by $17 billion, to $67.9 billion, as the table at left shows. However, the procurement of some new and costly weapon systems that the Pentagon has in mind probably would swell the budget further, by at least another $10.8 billion, bringing the total amount likely to be requested to a minimum of $78.7 billion. Without changing its basic strategy or reneging on its commitments to allies, however, the U.S. could safely adopt a "streamlined" 1972 defense budget of only $61.1 billion.

The table shows how the estimated $17.6 billion of cutbacks would affect various defense functions, while the table on the right, based on another kind of budget breakdown, shows how these reductions would affect the actual deployment of manpower and weapons. The reductions in weapon systems are based on savings likely in fiscal 1972, at prices of that year, on both direct and indirect operating costs as well as investment in hardware.

The savings from the elimination of four antisubmarine-warfare carriers, for example, include operating costs of $440 million annually and an investment of $500 million. The $7.5 billion of savings in procurement and other efficiencies includes a variety of items ranging from elimination of the advanced manned strategic bomber ($1.6 billion) and a reduction in annual Navy shipbuilding from $1.5 billion to $300 million, to reducing the modernization allowance for each Army division from $70 million to $30 million and a hold-down in officer rotation overseas (now every 1.3 years), which would save $360 million. Other major savings would come from buying less expensive avionics for aircraft and reducing cost overruns through improved contracting procedures.

DEFENSE BUDGET, BY FUNCTION

[In billions]

	1965 actual	1965 actual in 1972 prices	Likely DOD requests for 1972	Streamlined 1972
Strategic forces	$7.1	$9.3	$12.9	$10.8
General-purpose forces	19.1	24.9	30.0	18.7
Intelligence and communications	4.5	5.9	6.1	5.6
Airlift and sealift	1.4	1.8	2.7	2.2
Guard and reserve forces	2.0	2.6	2.6	2.6
Research and development	4.7	6.1	6.1	5.5
Central supply and maintenance	4.2	5.5	6.5	5.0
Training, medical, etc	5.9	7.7	7.7	6.7
Administration and associated activities	1.2	1.6	1.6	1.5
Support of other nations	1.3	1.7	1.7	1.7
Unfunded retirement	—.5	.8	.8	.8
Total	50.9	67.9	78.7	61.1

PROPOSED CUTS

[In millions]

	Savings in 1972
1. Reduce general-purpose tactical nuclear force	$1,000
2. Eliminate 1½ NATO-oriented divisions	1,125
3. Eliminate 2 Asia-oriented divisions	1,500
4. Eliminate 3 tactical air wings, 2 in NATO, 1 in the United States	1,360
5. Reduce attack aircraft carriers from 15 to 10	2,440
6. Reduce antisubmarine (ASW) carriers from 8 to 4	940
7. Reduce the strategic bomber force from 550 to 275 planes	750
8. Reduce amphibious ships	365
9. Eliminate manned orbiting laboratory (MOL)	600
10. Savings in procurement and more efficient use of manpower	7,520
Total	17,600

EXHIBIT 2

WHERE THE MILITARY CONTRACTS GO

(By William Simon Rukeyser)

Defense Department awards in fiscal 1968 accounted for 81.4 percent of the value of all contracts let by the federal government. With annual purchases by the Pentagon running over $42 billion, defense ranks among the nation's giant industries.

Of course, defense contractors constitute an industry only in the sense that they share a common customer. In other respects there could hardly be a more varied group of companies. Contractors range in size from General Motors down to small machine shops. The military buys bugles and bagels as well as missiles and planes. A number of quite large corporations do most of their business with the military, but some prominent defense contractors are primarily manufacturers of civilian goods. Among the top three defense suppliers in fiscal 1968, General Dynamics and Lockheed received new prime contracts equal to around 84 percent of annual sales, while for General Electric the comparable figure was 18 percent. General Motors' $629,610,000 of prime contracts made it the tenth-largest defense supplier, but those awards were equal to less than 3 percent of the company's total sales.

Some major contractors are not corporations at all but universities or other nonprofit institutions. With $124,100,000 in prime contracts, the Massachusetts Institute of Technology ranked fifty-fourth among defense suppliers last year, ahead of such important makers of military goods as Fairchild Hiller, Colt Industries, and Cessna.

The Pentagon keeps a much closer watch on suppliers' day-to-day activities than most commercial customers do. On contracts of any substantial size, at least one government contracting officer moves into the plant for the duration of the work, and squads of government auditors are on hand all the time. One reason for strict supervision at the plant level is that a lot of defense work is done by private contractors using government property. Last year $6.9 billion of plants and equipment owned by the Defense Department was "in possession" of outside contractors. Olin Mathieson, for instance, runs two enormous "go-co" (for government-owned, com-

pany-operated) ammunition factories in Wisconsin and Indiana. Olin, which does not include the turnover from these plants in its own sales figures, calculates the replacement value of the plants at $500 million.

About half of all the work covered by prime contracts is subsequently farmed out to subcontractors. Often subcontracts go to large corporations that also hold prime contracts. Accordingly, data on prime contracts only partly reveal the actual patterns of defense procurement. But the tabulations, map, and chart on these pages are necessarily based on prime contracts—specifically those awarded in fiscal 1968. Strangely, in view of the high proportion of defense work that trickles down to subcontractors, the Pentagon doesn't collect over-all data on subcontracting. Since 1963 it hasn't even required contractors to tell the department exactly how much of the work *is* subcontracted.

The pattern by States

[Contracts fiscal year 1968]

The big ten:	
California [1]	$6,471,875,000
Texas	4,087,182,000
New York [2]	3,483,730,000
Connecticut [1]	2,355,135,000
Pennsylvania [3]	1,727,314,000
Ohio [2]	1,640,525,000
Massachusetts [1]	1,618,741,000

The pattern by States—Continued

[Contracts fiscal year 1968]

The big ten—continued	
Missouri	$1,356,871,000
New Jersey [2]	1,108,440,000
Indiana [1]	1,107,453,000

[1] More than $200 per capita of prime contracts.
[2] $151 to $200 per capita of prime contracts.
[3] $101 to $150 per capita of prime contracts.

The pattern by companies

[In percent]

The 25 largest contractors	45.5
The second 25	11.5
The third 25	6.5
The fourth 25	3.5
All others	33.0

Suppliers in every one of the fifty states and in more than 80 percent of all congressional districts won Defense Department prime contracts in fiscal 1968. But the geographical distribution was far from even. The top ten states, listed above, garnered approximately 60 percent of the total dollar value. In some less populous states, military procurement has a large economic impact even though the absolute value of contracts received is comparatively slight. For example, Alaska, not shown on the map, won contracts worth $392 per capita, second only to Connecticut's extraordinary $805. (Hawaii, also not shown, ranked in the middle group of states, with $129.) At the other extreme, New York, Pennsylvania, Ohio, and New Jersey, despite their large dollar awards, were not among the top ten states on a per-capita basis.

Large corporations dominate the defense business. A hundred contractors won two-thirds of the dollar value of Pentagon awards in fiscal 1968, and the top twenty-five companies alone accounted for nearly half. Most of these twenty-five companies, listed on the page opposite, were also among the top twenty-five defense contractors a decade earlier, although the corporate form of some has been changed by mergers. The only arrivals on the list since fiscal 1958: Avco, Textron, Litton, Kaiser, Ford, Honeywell, Olin Mathieson, and Ryan. They replace I.B.M., R.C.A., Westinghouse, Republic Aviation, Chrysler, Curtiss-Wright, and Bendix. (The arrivals outnumber the departures by one because McDonnell and Douglas, now merged, were both on the 1958 list.) More than two-thirds of the prime defense contracts awarded in fiscal 1968 had a face value above $1 million, and more than one-third came to more than $10 million. Businesses defined by the government as small won only about 19 percent of the prime-contract dollars.

THE TOP 25 CONTRACTORS

	Headquarters	New prime contracts (fiscal 1968)	Main projects
1. General Dynamics	New York	$2,239,339,000	F-111 fighter bomber, Polaris submarine.
2. Lockheed Aircraft	Burbank, Calif	1,870,197,000	C-141 & C-5A transports, Polaris missile.
3. General Electric	New York	1,488,707,000	Jet engines, electronics.
4. United Aircraft	East Hartford, Conn	1,320,991,000	Jet engines, helicopters.
5. McDonnell Douglas	St. Louis	1,100,837,000	Phantom F-4, Douglas A-4 bomber.
6. American Telephone & Telegraph.	New York	775,927,000	Safeguard missile, antisubmarine projects.
7. Boeing	Seattle	762,141,000	B-52, helicopters, Minuteman.
8. Ling-Temco-Vought	Dallas	758,261,000	A-7 fighter, electronics, Lance missile.
9. North American Rockwell.	El Segundo, Calif	668,641,000	Avionics, submarine electronics.
10. General Motors	Detroit	629,610,000	Gas-turbine aircraft engines, tanks, M-16 rifle.
11. Grumman Aircraft Engineering.	Bethpage, N.Y	629,197,000	Fighter planes.
12. Avco	New York	583,648,000	Aircraft engines and parts.
13. Textron	Providence	$500,747,000	Helicopters.
14. Litton Industries	Beverly Hills	465,691,000	Ships, electronics.
15. Raytheon	Lexington, Mass	451,754,000	Hawk, Sparrow III, SAM-D missiles.
16. Sperry Rand	New York	447,197,000	Computers, electronics for ships and missiles.
17. Martin Marietta	New York	393,454,000	Titan III and other missiles.
18 Kaiser Industries	Oakland, Calif	386,334,000	Jeeps
19. Ford Motor	Dearborn Mich	381,344,000	Trucks, missiles, telecommunications.
20. Honeywell	Minneapolis	351,682,000	Avionics, torpedoes.
21. Olin Mathieson Chemical.	New York	329,415,000	Ammunition.
22. Northrop	Beverly Hills	310,256,000	Communication systems aircraft.
23. Ryan Aeronautical	San Diego	293,158,000	Engines, pilotless aircraft, electronics.
24. Hughes Aircraft	Culver City, Calif	286,109,000	Electronics.
25. Standard Oil (New Jersey).	New York	274,377,000	Gasoline and jet fuel.

ASIAN FEVER

Mr. McGOVERN. Mr. President, it would seem that there is, in addition to the Asian flu, a new fever that sometimes afflicts American Presidents traveling in Asia. Its most striking symptom is a remarkable expansion of rhetoric.

In the past week, our traveling President has made the following observations from Asia:

First, Neil Armstrong and his associates have accomplished a feat exceeded only by God at the creation.

Second, our interminable, inclusive frustrations in the jungles of Vietnam represent "our finest hour."

Third, if Thailand gets into trouble from within or without, we will rush in to open up a second front in Southeast Asia.

Fourth, President Thieu is one of the great statesmen of our age.

It seems clear that whereas the more common Asian flu leaves the patient weak and subdued, the new Asian fever intoxicates its victims with a powerful euphoria that is almost beyond comprehension.

Perhaps until we know more about this new strain of Asian virus, the President would be willing to return to the United States in the quarantine chamber recently used by the astronauts following their return from the moon. This would provide a period of safe observation while medical scientists and national security experts considered whether to isolate the new virus or to encourage its spread over the entire populace.

SENSATIONALISM ON ABM DECRIED

Mr. DOMINICK. Mr. President, I ask unanimous consent to have printed at this point in the RECORD an article from the Washington Star dated July 31, 1969, dealing with the recent efforts by Dr. Sternglass to interject some other thoughts into the ABM.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENSATIONALISM ON ABM DECRIED

(By Judith Randal)

Esquire Magazine, which thrives on controversy, added a new ingredient to the debate over the anti-ballistic missile this week with newspaper advertisements which many leading scientists regard as irresponsible.

Esquire's ad heralded an article on the ABM luridly entitled, "The Death of All Children." It described this as "a summary of research on the matter of nuclear fallout, pulled together for the first time by Ernest J. Sternglass, professor of radiation physics at the University of Pittsburgh."

So important is its article, Esquire said in promotional letters to newspaper editors and reporters, that although it was received after deadline, it was incorporated in the "September" issue (published July 29) as a stop-the-press insert.

Actually the closely printed four-page "Footnote to the ABM Controversy" is a rehash of tired old arguments aired by Sternglass in various forums over the last six years and discredited almost without exception.

To assert that Sternglass' sensational claims against the ABM are unjustified is not to say that a case cannot be made against the system now nearing a vote on Capitol Hill. There are plenty of arguments against the ABM that make sense—social, geopolitical, technological and scientific—but Sternglass' isn't among them.

There is the danger, from the point of view of opponents of the ABM, that Sternglass' overstatement of risks could actually backfire, even perhaps changing a last minute "no" vote to a "yes" vote.

Sternglass' thesis—which he has aired in

testimony before Congress, on television, and in articles in "Science," "The Bulletin of the Atomic Scientists," and a doctors' newspaper called "Medical Tribune"—is that atmospheric testing of nuclear weapons has had a marked and measurable effect on live births in the United States since 1945, when the atomic age began with an explosion near Alamogordo, N.M.

Sternglass claims that nuclear testing has led to "almost one excess death per hundred live births" or a total of "over 440,000 baby deaths" during the nuclear age.

Looking ahead, he has asserted that genetic damage from the detonation of ABM warheads defending against a missile attack "could itself produce sufficient (fallout) in the following few months to seal the biological doom of mankind."

In the Esquire article, he goes even further. "The fact is this," Sternglass writes, "a full-scale ABM system, protecting the United States against a Soviet first strike, could, if succesful, cause the extinction of the human race."

Sternglass says nothing about what may happen if the ABM is unsuccesful, or the possibility that developers of the defense system may be unable to stay ahead of determined builders of an offensive capability.

But, whether by accident or intention, he falls into all sorts of traps as he builds his case against the ABM.

Take the matter of excess infant deaths. Sternglass claims the pre-natal exposure to fallout resulting from the 1945 New Mexico tests quickly led to the maintenance of relatively high fetal and infant deaths in distant states lying along the path of the fallout.

In fact, however, measurements recorded at the time of the tests showed that the explosion injected only a minute amount of fallout into the stratosphere, and that the debris was confined to New Mexico and parts of nearby Kansas and Nebraska—not the states where the decline in infant mortality failed to level off as expected.

In reproductive experiments on mice, cited repeatedly by Sternglass (but not done by him), for instance, large numbers of fetal deaths or damaged offspring resulted from injections of radioactive strontium.

But mice are not men, the dose was enormous by human standards, and injection is not the way strontium 90 enters the body after fallout.

Feeding experiments at doses comparable to those following a nuclear explosion in species closer to man have yielded far less sensational results.

Sternglass blames fallout for such things as the reduced birth weight of babies over the past 30 years, although every mother knows that this has come about through altered pre-natal care methods which deliberately hold down the mother's—and the baby's—weight during pregnancy.

In marshaling his "facts" to show a rise in childhood leukemia, he cites what he says was an alarming increase in one metropolitan area where, owing to population growth, the rate has actually remained stable.

This is the sort of "science" for which Sternglass would flunk a graduate student for trying to palm off in the guise of a research paper.

Fraught as it is with irrelevancy and error, the article can add little of consequence to lucid debate on the ABM, and can only cause confusion and emotionalism in a situation already too confused and emotional for anyone's good.

Mr. DOMINICK. I may say that this article, which I think is very well reasoned, points out that if a research student under Dr. Sternglass had brought up those so-called facts, he would have been flunked, and that Dr. Sternglass' arguments are just about as bad.

SPEECH BY SENATOR PERCY AT MT. SINAI HOSPITAL CORNERSTONE LAYING CEREMONY IN CHICAGO, ILL.

Mr. DOMINICK. Mr. President, my distinguished colleague from Illinois, Senator CHARLES H. PERCY, recently presented an excellent speech at the Mt. Sinai Hospital cornerstone laying ceremony in Chicago, the primary focus of which was upon three major health problems confronting our Nation.

Senator PERCY first explained that the shortage of medical manpower has laid a heavy burden upon our citizens in need of health services. He urged the expansion of medical schools and additional training programs for nurses and technicians.

Second, he described how the lack of proper organization in the medical field often results in waste and duplication of effort. Multi-specialty group practice is one area which he suggests could be expanded to assure continuous treatment for patients having medical problems requiring the care of more than one specialist.

Finally, Senator PERCY believes we must make health for every American a right, not a privilege, and points to the philosophy behind our medicare and medicaid programs. However, even with the existence of these programs, he is still convinced that far too often unequal treatment results solely from unequal income.

As the ranking Republican in the Health Subcommittee, I have read this speech with great interest.

Senator PERCY has pinpointed key problem areas in the health field deserving of the attention of all Senators, and I ask unanimous consent that his remarks be placed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR CHARLES H. PERCY

It is extremely satisfying for me to be here on the occasion of the start of this construction. This cornerstone is part of a building which will serve to ease suffering and prolong life and will be a symbol of man's concern for his fellowman.

It is common concern that brings us here today. All of you, in some way, have set as your goal helping those who have become ill. This is a good time to examine how we best can work together to provide health services to all who need them. I would like to outline some of the problems and attempt to offer some solutions.

Clearly, the major problem we face today is the shortage of trained medical personnel. The dramatic scientific breakthroughs of the past three decades have made it possible for us to do more to help people. The interrelated advances in surgical techniques, antibiotics and immunology as well as numerous new diagnostic and therapeutic instruments have brought us the possibility of curing diseases far beyond the greatest expectations of the pre-World War II physician. Because we can now do more, and because the average citizen is now better informed on health matters, the demand for physician-directed services has increased much more rapidly than the number of physicians.

This expansion of knowledge has placed phenomenal demands on the individual physician. The required information has exceeded the time available for the physician to learn it, and yet the pressure to shorten the medical curriculum continues. Can one person reasonably be expected to be an expert in reading cardiograms as well as skull x-rays? Clearly many physicians feel the only solution appears to be specialization. Perhaps one reason for the shortage of general practitioners is the medical student's knowledge that he couldn't possible know enough to be a competent GP. In fact, only 2 per cent of today's medical school graduates plan to go into general practice.

Since complete, up-to-date medical care requires the services of a group of physicians of different specialties the manpower demand has skyrocketed while the average time required to train a physician has risen to at least 12 years after high school exclusive of military service.

Expansion of medical schools is a necessity. The building we are dedicating today will help the Chicago Medical School expand its entering class, and this is the most efficient way to produce more physicians. It is an important step, but, in addition to expansion, additional medical schools must be built. We must have enough positions so that all qualified applicants can be admitted. It gives one pause to realize that a nation rich enough to send men to the moon is forced to recruit more than 15 per cent of its new physicians from abroad, including many from relatively underdeveloped countries. The shortage of medical school facilities is so great that one out of every two qualified students applying for admission is turned down despite a shortage of 50,000 doctors nationwide—7,000 of them here in Illinois.

But the shortage is not merely in numbers of physicians. Nurses, technicians, and other types of personnel are in critically short supply. All training programs have to be expanded. Further, new professional categories will have to be established to assist in the different medical specialties. Funds are presently available from Federal sources for these programs but responsible individuals in the private sector must provide the initiative and momentum. Centers like Mount Sinai must continue to show the way. This job cannot be left to someone else.

A problem closely related to the manpower shortage is the lack of organization of medical services in this country. Here we have a fifty billion dollar industry that has mushroomed dramatically. With 300,000 practicing physicians we have almost 300,000 independent "corporations," each with its own particular way of doing things. The waste and duplication inherent in this lack of organization would not be a critical problem were it not for the fact that there aren't enough physicians to go around. It is incumbent upon the profession to organize itself in the most efficient manner possible. Multi-specialty group practice with sharing of facilities and ancillary personnel appears to be a more efficient way to use a physician's time. The single physician cannot bring the full range of medical knowledge to bear on all of his patients. He must be considered the entry point into a continuous comprehensive medical system. Although there is no substitute for the vigilance of the interested physician in maintaining the health of his patient, there should be no hesitation on his part to send his patient to another physician whose training is more relevant to the patient's disease.

If we are to meet our present crisis, many experts feel that the profession must encourage the development of substantially more group practice. The team approach to patient care must be taught in the medical schools. But even the multi-specialty group cannot be considered the basic unit of medical care.

Since the person who seeks a physician is really seeking a return to full health, the basic unit of medical organization must be that which can provide a full range of diag-

nostic and treatment services. This would consist of all facilities from the solo physician's office to the teaching hospital. Continuity of care involves everything from taking the pulse to providing radiotherapy, from dispensing aspirin to open-heart surgery. Clearly, multi-specialty groups and community hospitals must be affiliated with a teaching hospital to provide this in-depth service.

A continuous single medical system would permit a more rational distribution of services from the component facilities. With rapidly rising costs, especially for in-hospital care, unnecessary hospitalizations can and should be avoided. Motel and rest-home services are best provided in motels and rest-homes. Hospital admissions for diagnostic procedures are inexcusable with room rates approaching $100 per day. Health insurance policies must be changed to cover comprehensive and not just hospital services. Hospital beds should only be used when no other alternative is open. The hospitals must lead the way in providing ambulatory services efficiently and rapidly. The teaching centers must clarify to students, house staff and attending staff what constitutes the need to be hospitalized. The teaching hospital is the focal point and it should be the organizational center for the provision of truly comprehensive medical care.

Another problem that has been with us for a long time is the existence of a double standard of medical practice. One kind of practice for those who can pay and a separate system for those who cannot pay. The medically indigent have traditionally been considered an asset to a teaching hospital. The physicians can learn by taking care of the poor and, finally, when their training is over they are ready to take care of private patients. The time has come to change our thinking on this subject. The poor are justifiably sensitive about being used as guinea pigs. A teaching institution which permits a double standard within its walls is really an anachronism. There must be a system, one system, with the type of care determined by illness and not by ability to pay. There should be no second-class citizens when it comes to adequate health care.

The Medicaid and Medicare programs are evidence that the American people regard medical care as a basic right, not a privilege only for those who can afford it. With adequate funding and implementation, medical indigence can be a thing of the past.

The shortage of medical personnel has led to particularly acute problems for the poor. There are vast areas in this country where only poor people live. Very few physicians are today starting their practices in low-income neighborhoods and impoverished rural communities. They realize, much like their foreign counterparts from underdeveloped countries who have immigrated here, that they cannot practice good medicine nor even make a decent living working there. In Chicago, most poor people are still forced to travel long distances and wait long hours to see a physician. The largest number go to Cook County Hospital. The other hospital centers, like Mount Sinai are helping to share the load but it is clear that ambulatory services must be brought to the communities. The Martin Luther King Neighborhood Health Center at 3316 West Grenshaw and the Mile Square Health Center at 2049 West Washington are examples of what can be done. More such clinics are needed. These clinics should be affiliated in some way with hospitals that can guarantee beds for those patients requiring hospitalization and where their clinic physician can follow ther progress. Neither ambulatory clinics nor hospitals can operate separately.

Just last month I introduced legislation to provide Federal grants for construction of ambulatory care facilities to be staffed by multi-specialty groups of physicians with admitting privileges at nearby hospitals. I hope that groups of private physicians medical schools, medical societies and hospital centers will be among the project applicants. Here again, Congress can write legislation, but the medical community must take the initiative by planning, recruiting and organizing. Without the cooperation of physicians, administrators and interested citizens we cannot do the job.

The physicians of this city have long recognized that Chicago would be better served by an expansion of outpatient facilities staffed by private physicians and more beds in private hospitals than by building a number of County Hospitals or by continuing to expand our present one. With Medicare, Medicaid and facilities grants these ideas can become reality and the City can serve as an example to other communities. The facility we are dedicating today represents a major step toward the realization of this goal.

I think it is right at this time for the American people to ask their government to reconsider its national priorities. The provision of enough physicians here on earth must assume a position of at least equal status to that of putting a man on the moon. A nation that spends over 3 billion dollars a year to keep farmers from growing crops can certainly afford a system of neighborhood health centers. Perhaps we can even scale down the billions being spent pursuing the elusive goal of security against every conceivable type of external military threat and concentrate on the more concrete goals of providing some measure of security to the individual against the more concrete threats to his health. In fact, I am more concerned in general with the threat from within the country than external threats.

I feel confident that the youth of our nation holds the key. It is they who are clamoring the loudest for a more humane society. In spite of the radical minority, most students feel they have a stake in the present system and they want it to work. It gives me great satisfaction to point out that the medical students of the Chicago area have taken the initiative in bringing some measure of compassion to problems confronting our Nation. On their own initiative last summer they went into the poverty areas of the city to see what they could do, as individuals, to help their fellowman. They have discovered some of the less pleasant realities of our system, but they came out of it determined to go back. The Chicago Student Health Project gave these young people the opportunity to do something to make society better. The fact that they *could* do something and that there were immense problems to be overcome was taken as a challenge not as an invitation to cynicism. Surely these students must be the pride of the profession; they will not be content to let someone else do what has to be done. They are showing all of us the way. I think they are indicative of what is best in their generation and it is something of which we can all be proud.

In summary, we have three primary problems—a shortage of medical manpower, a lack of organization of the medical industry, and inequality in the distribution of medical services to rich and poor. In fact, there are three aspects of the same problem, a long-standing lack of definition of a national health right. It is clear that the problem is too immense for even the combined resources of Federal, State and local governments. We must mobilize the experience and resources of the private sector and capitalize on the enthusiasm of our dedicated youth to build a health care system worthy of America.

That is what this cornerstone dedication ceremony is all about. That is what you have accomplished in the Alliance for Progress to nation-build here at home by helping to build a stronger and healthier people and to light the way for others to follow.

RETIREMENT OF JACK BELL

Mr. BYRD of Virginia. Mr. President, I would like to say a few words about a long-time friend and one who knows the Senate of the United States perhaps as well as any other individual. I refer to Jack Bell, of the Associated Press.

Today, for the first time in 31 years, Jack Bell is not sitting in the press gallery as the chief of the Senate staff for the Associated Press. Mr. Bell retired yesterday, after long service to the news-gathering organization, the Associated Press.

Mr. Bell served as the chief political writer for many years, and since 1940, he has been the chief of the Senate staff for the Associated Press. He first began to cover the Senate in 1938.

I think it is interesting to note that of all the 100 Members of the Senate, only two were serving in this body when Jack Bell came to the Senate press gallery. They are the distinguished senior Senator from Georgia (Mr. RUSSELL) and the distinguished senior Senator from Louisiana (Mr. ELLENDER).

Jack Bell had the confidence, and he has the confidence, of the Members of the Congress in general and the Senate in particular, because all of us as Senators know that we can rely on Jack Bell's integrity.

We know that we can talk with him frankly, and we know that he will not violate our confidence. We know him to be an able, objective, dedicated reporter.

As a Member of the Senate I can speak of my confidence in Jack Bell, but I can also speak of my confidence in Jack Bell as a newspaper editor.

All of my adult life until I came to the Senate had been spent in the newspaper business, and I know that editors all over the United States have great confidence in Jack Bell. When his byline was transmitted over the teletypes, those newspaper offices which received the AP dispatches would give extra credence to those political stories with the Jack Bell byline.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. BYRD of Virginia. I am glad to yield to the Senator from Wisconsin.

Mr. PROXMIRE. I would like to join the distinguished Senator from Virginia in paying tribute to Jack Bell. I had not realized before that he was retiring today——

Mr. BYRD of Virginia. He retired yesterday.

Mr. PROXMIRE. He certainly has been a remarkably fine reporter. Everything the Senator from Virginia has said about him is true. He is responsible, he is thoughtful, he is accurate, and he is very, very careful to be sure he gets all sides of every question.

This is something about our press services that I think has been improving over the years. One of the first things one learns in a school of journalism is how the press service has changed and how it is improving. I think Jack Bell epitomizes the best in journalism—fair and accurate reporting, and at the same time informative reporting.

Jack Bell wrote "The Spendid Misery," one of the finest books on the presidency

that has been written, certainly to my knowledge.

So I am delighted to join the Senator from Virginia in paying tribute to a great reporter. I hope that his retirement will mean that he will continue to cover the Senate and the Capitol, but perhaps in a different way.

Mr. BYRD of Virginia. I thank the Senator. I am glad to concur in the remarks he has made about Jack Bell.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. BYRD of Virginia. I am glad to yield to the Senator from Colorado.

Mr. ALLOTT. I simply want to say that everything I could express about Jack Bell has been expressed by the Senator from Virginia, and I want to join in congratulations to Jack Bell on his retirement.

Yesterday, upon his official retirement, I was happy to attend a reception in his honor. My own acquaintance with Jack Bell goes back to 1947 or 1948. I have always had the feeling about Jack Bell, when he asked me about any situation, that he was inquiring for information and that he had not already made up his mind and was just looking for a word or two from me or anyone else he was interviewing to try to fortify an opinion he had already formed. In this respect, I think he reaches the top of the reporting profession.

Having regarded him as a close friend these many years, I am very happy to hear the words of my good friend from Virginia, because he has not only been a Member of the Senate, but he is the son of a distinguished father who was also in the Senate and who was one of the distinguished and one of the great men of all time in the Senate. Having been in the newspaper business, himself, for many years, he is able to look at Jack Bell's career in a professional way, in a way which probably surpasses that capacity in men who have probably never been in the newspaper business.

So I wish to join in extending best wishes to Jack Bell on his retirement, best wishes on his new column, and best wishes for many successful years to come.

I thank the Senator for yielding to me.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. BYRD of Virginia. I am glad to yield to the Senator from Colorado.

Mr. DOMINICK. Mr. President, I join the distinguished Senator from Virginia and my distinguished colleague from Colorado.

It so happens that Jack Bell was a friend of two of my newspaper friends in Colorado. When I first came to Washington, they were helpful enough to get Jack Bell to meet with us. This happened when I was first elected to the House, about 9 years ago. So I have felt very able to express thoughts and ideas back and forth with him ever since that time.

I agree with the Senator that he is extremely fair. We do not necessarily have to agree with all his articles to believe that. We also feel that we have lost someone of great stability in that field by his retirement.

I know he is going to enjoy his retirement, but I wish he were still here with us.

Mr. BYRD of Virginia. I thank the Senator. I concur in what the Senator has said. Jack Bell is a fine reporter, objective, and able.

I am happy to report to the Senate and to the distinguished Senator from Colorado that Jack Bell will still be in the Press Gallery, because he will be there from time to time representing the Gannett newspapers, a great group of newspapers. The president of the Associated Press is Paul Miller, a very able and perceptive newspaperman. Paul Miller is also president of the Gannett newspapers. Following the rules of the Associated Press, when Jack Bell reached retirement age, he had to leave that organization, but Paul Miller brought him—or is bringing him today—into the Gannett organization; so Jack Bell will still be here with us in the Senate Press Gallery.

In speaking of Jack Bell, I wish to mention also this aspect of news gathering: We have two great news gathering organizations in this Nation, the Associated Press and United Press International. I think it is most important that we have, and continue to have, two such national news gathering organizations.

I happen at one time to have been a member of the board of directors of the Associated Press, so I am a little bit closer to that organization in that respect than I am to the United Press International. But I have great confidence in both the AP and the UPI.

I believe it would be very unwise and undesirable for our country if we had in this Nation only one newsgathering organization of a national and worldwide character. We have two, the Associated Press and United Press International, and I happen to be one of those individuals who feel that, by and large, both of those organizations are doing a splendid job in reporting to the people of this Nation and the people of the world the events which are taking place in Congress, throughout the United States, and throughout the world.

That does not mean that there is not some reporting that is not all it should be. It does not mean there is not some sloppy reporting in various areas of the world, the United States, or the Senate, for that matter.

But by and large, these men, I think, do a remarkable job; and I might say I do not know of any tougher job that any person could have than to sit in the press gallery, day after day, and have to listen to us Senators here on the floor talking as much as we do, for hours at a time.

When we Senators get tired of listening to one another, we can go back to our offices, or go to a committee meeting, or take care of other problems that we need to look after. But those men who sit in the press gallery, particularly the news service representatives, who have to be on duty every minute that the Senate is in session—I say they have a tough job, and I congratulate all of them on the job they are doing.

I say again that in my judgment, Jack Bell has rendered his organization, the Associated Press, a great service over the years. He has been a credit to the newspaper profession through the many years that he has been in it, and I think that he has rendered his Nation a great service through the high caliber and the objectivity of the reporting he has done during the many, many years that he has been a reporter, a political writer, and a Washington correspondent.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. HUGHES. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. HUGHES. Mr. President, whatever else may be said about the current debate over the proposed ABM system, one point is certain.

At no time in our history has a weapons system been so thoroughly studied and discussed in the Congress.

As a newcomer to this body who has not served on any of the committees that consider military budgets, I have listened closely to the arguments pro and con and have learned a great deal from both sides.

I have been impressed by the strong case that has been made on both sides of this key issue and by the sincerity of conviction that has animated both proponents and opponents on this issue.

In this debate over the Safeguard ABM system, Congress, for the first time, in my opinion, has effectively cut through the traditional mystique that has surrounded our military spending and placed every facet of the argument before the public.

I am particularly proud of my colleagues on both sides of this issue, here in the Senate, for performing what I consider to be an outstanding public service in delineating every significant detail of a question which has an all-important bearing on both our defense and foreign policies.

The need for intensive public airing of the issue is reflected in the public opinion polls.

According to a Gallup poll taken in late March, only 69 percent of the people questioned had ever heard of the ABM controversy, and only 40 percent had formed an opinion. Those with an opinion favored the ABM 5 to 3, but the more significant fact was that 60 percent were opinionless.

On Monday of this week, another Gallup poll was released showing that those who profess an opinion now favor the ABM by 4 to 3, but those without an opinion still totaled a disappointing 58 percent.

Despite the fact that the ABM is the most thoroughly discussed proposal for military expenditure in our history, it is clear that we are a long way from total public communication.

I, therefore, believe that the extended debate we have been having on this issue has been urgently needed to inform the public as well as to bring us to the right decision here in Congress.

In more ways than one, the ABM is a key issue in modern history. It marks the end of the blank check era so far as military spending is concerned. From this point on, both Congress and the public, if I am not mistaken, will demand that military budgets be subjected to the same close scrutiny that civilian budgets have long been accorded.

It also marks the growth of a new concern in the United States about our national priorities and the allocation of our resources between military and nonmilitary needs.

There has been a wide variance in the estimates of what the Safeguard system would cost. But whether the cost is $7 billion, $10 billion, $20 billion, or many times these amounts, it still represents a very substantial outlay from the Nation's resources. And Vietnam has taught us, as no previous chapter of history has succeeded in teaching us, that our resources are not unlimited.

There is a growing awareness in the country these days that our national security involves meeting some of the critical domestic problems that threaten us with disintegration here at home, as well as building up the capability to meet possible aggression from abroad.

An expenditure of $7 to $10 billion would not eliminate poverty in the United States, but it would go a very substantial distance toward alleviating it.

But regardless of our critical domestic needs, I am sure there is not a person in this Chamber who would not fully endorse the Safeguard system if he believed it to be necessary, or even desirable, to our national defense.

But on this pivotal point, the case for Safeguard has, in my opinion, failed.

It has been pointed out that the Safeguard would give the President another alternative to choose from beyond releasing the big missiles or simply sweating it out. It would put another button on the console.

But if, in the event of a nuclear first strike against us, the President were to press this button, we need complete assurance that it would work, that it would intercept and destroy the enemy missiles without bringing fatal damage and fallout upon ourselves in so doing.

At this late stage of our debate, we do not, in my opinion, have this assurance.

Scientists have termed the Safeguard's complex of computer and radar systems the most intricate technological system man has yet attempted to create. We have heard a great deal of testimony on both sides about the workability and practicability of both of these systems from weaponry experts. Computer experts say the extremely sophisticated programing is so advanced that its theoretical processes have never been accomplished, let alone tested. In lay language, we are talking about the most celebrated pig-in-the-poke in modern history—on which it is proposed to base our first line of defense against possible thermonuclear attack.

Moreover, if the system should work in the interception and destruction of enemy missiles, we do not know what horrors it would create in the contamination of the atmosphere.

I still contend that our most effective defense from nuclear attack is where it has been from the beginning—in our deterrent capacity.

We have, I am told, efficient detection and warning systems which can give us approximately a half-hour warning of the launching of an enemy missile.

Then we have superior weaponry and it is distributed—as it has been stated so very eloquently here today—in such a way as to be least vulnerable to a first strike—our landbased missiles, our submarine fleet, and our strategic bombers.

The suggestion that an enemy could knock out all of these missiles with a first strike simply does not add up to credibility in my opinion.

Obviously, the Soviets are rapidly building up their nuclear capabilities, but in the words of the report of the Committee on Armed Services itself, it would be "the mid-1970's" before "they will be in a position to threaten the effectiveness of our Minuteman forces." I have not been convinced by the evidence presented in this debate that the Soviets are outstripping us in the development of other strategic weapons, including a sophisticated ABM system.

With all due respect to the able proponents of Safeguard, I simply cannot see it as either necessary or desirable for our defense at this particular time.

In fact, the damage it could do by disturbing the strategic balance between the great powers is extremely alarming to me.

This balance, of course, rests on the mutual understanding between the Soviets and ourselves that each nation has the nuclear capacity to inflict unacceptable damage on the other and that there is, therefore, no percentage in any dream of a first strike by either nation.

The contention by some proponents of the ABM that deployment of the Safeguard would aid us in disarmament negotiations with the Soviets is perhaps to me the most unconvincing argument of all.

It is like saying that escalated imbibing is the best route to sobriety.

The Soviets could interpret our deployment of an ABM system in more ways than one. The notion that they would passively accept Safeguard as a "defensive" system and not react to it is highly unlikely.

It would be just as easy for them to interpret the ABM as the second stage of a planned first strike—a device to stop the retaliating missiles once the holocaust was launched.

However one considers it and rationalizes it, the arms race is a dead-end street, a point of no return.

Inevitably, if we deploy a new weapon system, the Soviets will take measures to catch up.

If we have learned nothing else by this time, we should have learned that each new and more powerful weapon system begets new and more powerful retaliatory weapon systems on the part of our adversaries.

Realistically, the ideal relationship between two nations for constructive peace negotiation is a relationship of comparative equality. The ancient notion that we create an atmosphere for peace by building up an overpowering military capability, far exceeding our nearest rival, simply does not hold water.

As I stated far earlier, it is my conviction that the ABM advocates have not made a case for Safeguard—even on purely technical grounds.

If another nation launched a missile attack against us under any circumstances, it is inconceivable to me that we would rely on his multibillion-dollar pig-in-the-poke and leave the Minuteman like sitting ducks in the silos.

But the importance of the ABM issue goes far beyond the effectiveness or ineffectiveness of Safeguard as a weapon system.

The ABM is of historic importance as a symbol of the military psychology that has had such a dominant and pervasive influence on our culture and economy.

An ever-increasing number of thoughtful Americans believe that the policies this psychology has engendered are no longer relevant or right in terms of contemporary realities.

We are convinced that some of these basic policies have placed our Nation on a collision course—and must be changed.

The ABM is a rallying point for those who believe America must reorder its priorities.

It is, moreover, the first major weapon system that has been placed on the witness stand to face the Nation and to justify its existence, as civilian projects are required to do.

In this Chamber and elsewhere in the United States, dedicated citizens have disagreed over the ABM system year in and year out.

But there is one matter on which I believe we should all be able to agree—the desirability of shedding light on vital policy areas that may mean life or death for the future of our country.

I believe the Senate has kept faith with the people on this point.

We are almost equally divided, as has been indicated in the press.

The very fact that many Senators from the same States oppose each other on the issue, the fact that the population is almost equally divided, and the fact that scientists on both sides on every question arrive at different conclusions certainly make it obvious that we are divided and reach honest conclusions that are different.

Regardless of the debate, as I pointed out at the inception of this speech, the polls indicate that the majority of Americans are still unaware of what we are talking about in the ABM system.

Mr. STENNIS. Mr. President, I shall be quite brief. I say to the Senator from Iowa that other matters detained me. I am sorry I did not get to hear his speech completely. I would have listened to it

carefully. Even though we disagree in conclusions, I know of his application to this question as well as others, and I believe with the best intentions.

I believe that part of the answer to his observation is that, in a way, you have to sort of grow into these weapons systems and get the feel of them, to have a sort of understanding which is not scientific or military. It is just a feeling of balance.

I particularly disagree with him in connection with the effect it might have on the Russians for the United States now to come along and try to perfect, as they are trying to perfect, a purely defensive weapon. I do not believe any trait of human nature is better understood than the natural trait of defending yourself and keeping your powder dry and barricading your arsenal of weapons, whatever they are.

I believe, too, Mr. President, that perhaps the best insurance against either one of these nuclear powers—Russia and the United States—using these weapons is for both to have an effective ABM and that we know what they have, and they know what we have.

I think we can be in an awfully bad fix if we develop any kind of defense of this kind, because it will be known to Russia; and whether they have an intent to fire their ICBM's on us or not, we will have the uncertainty that makes blackmail against us, if they should try, a thousand times more effective.

Mr. President, I shall not detain the Senate long. During the last few weeks I have referred to the general charge that was made here, early in this session, that $23 billion had been spent for missiles, and the next interpretation of that was that it had been wasted. The Senator from Missouri put in the RECORD first a list of those missiles, and he did not charge that it was waste. But within a few days thereafter, another Member of this body picked up the same figures and made an allegation that it was waste, and others have repeated it, not having the full facts before them, and it runs through the line of argument. It ran its course in the press and in the other media of expression, and it keeps running through the line of argument on the bill and on the ABM.

As soon as I could, after we finished drawing up the bill, I made a documented speech on the floor of the Senate on July 2, 1969, which took up every one of the weapons on which it had been alleged that the money spent on them was wasted. This was a well-documented discussion, not prepared in the Pentagon or anywhere else but in my office, with the help of a staff member who knew the research. I think it is well documented that of the $23 billion referred to, $18,886,000,000 went for missiles that took their stand and filled in a gap at critical times of our post-World War II history; and if we had not had them, we would have been defenseless in that field. Of that money, $4.1 billion was for missile systems that were terminated prior to deployment. In all those contracts, there might have been a contract here and there that was wasteful. Those matters creep in. But I was never more certain of anything in my life than I am of the fact that the gross sum of $18.8 billion was not wasted and that it served a useful and a necessary purpose. The sum of $4.1 billion went for experiments, testing, and basic research which was absolutely necessary in that field to find out what could and what could not be done. These things must be charged to profit and loss. It is comparable to the great automobile industry, which developed during the time when there were not Government subsidies and there were not big Government contracts. I think of the hundreds and hundreds of millions of dollars that I know were used in experiments and false starts—what might be called failures. I recall the names of a great many cars that went to the marketplace and still were defective. That is in the nature of things.

I recall reading about Thomas A. Edison and the countless number of failures he had before he perfected the incandescent light, the ordinary light bulb, as we call it now, and how many scientists of his day said it could not be done. Relatively small sums of money were involved but they were large sums of money then, with which people backed him from time to time. He was the one who came through finally with the bulb that has grown into the modern electric light bulb.

With great deference to the distinguished Senator from New Mexico (Mr. MONTOYA), on yesterday, after referring to this $23 billion, he made this statement. I questioned him then; otherwise, I would not mention it in his absence—

> Thus, our past failures to carefully examine and evaluate defense spending have permitted an incredibly large amount of taxpayers' money to be wasted.

He denominated the sum as wasted, and he said it was due to our failure to carefully examine and evaluate defense spending.

With deference, I refer the membership again to the remarks I made on July 2, 1969, beginning at page 18190. In that speech will be found a documentation of all these missiles except the very small ones that cost relatively small amounts of money. I refer to one paragraph. An illustration in that list of what is now called waste is the Polaris I, which was the first Navy missile of our now marvelous weapons system of underwater missiles in the submarines that we have in the seven seas around the world. The price listed as waste on the Polaris I, which was the parent missile, is $1.13 billion.

Mr. President, I have never seen any system or weapon start off with as little promise or any system that required as much faith to keep it going as this one; and I have never seen one wind up with more success or more effectiveness as a weapon as I have seen in Polaris I. It was finally perfected. I remember going to Florida to see it in its infancy when I thought it was virtually without hope. But it moved on and the first missile system, Polaris I, began operating in November 1960. It continued to serve us until October 1965. Then, it was replaced. Was it abandoned? No, it was not abandoned. It was replaced by the next generation of the Polaris.

Mr. President, in order to make this presentation brief, we are moving into Poseidon, which is a tremendous improvement over Polaris I. It is still thought to be the greatest weapon in this field within our arsenal. It is the marvel of the scientific world. Therefore, to say, inferentially or otherwise, that the $1.1 billion representing the initial cost of Polaris, which rendered service for 5 years, is waste, demonstrates a failure to dig deep enough to get the actual facts.

There are other items I shall not go into now. I do wish to mention one other missile, the Corporal missile for the Army. The Army carries its artillery, one might say. The Corporal was a very fine weapon, and it filled a wonderful role. The cost that is alleged to have been wasted was $534 million. That missile was in the line of duty. It was the artillery that was carried by the Army over 11 years.

What happened? It used liquid fuel, which of course was disadvantageous. Liquid fuel was hard to handle, but that was the best we had for 11 years. It was succeeded by another system. It was no longer deployed after that, not because it was useless but because it was succeeded by something more capable and easier to handle, a solid fuel. They gave that new weapon the name of Poseidon.

So with great deference to anyone who lists the Corporal missile as having a cost that was wasted, they did not dig deep enough for the facts, because it was considered to be an essential missile which gave our Army a distinct advantage.

Mr. President, I have made this presentation to help get the facts before the Senate relating to these missiles.

Mr. President, I yield the floor.

ORDER FOR THE RECOGNITION OF SENATOR STENNIS ON MONDAY, AUGUST 4, 1969

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that on Monday next, at the conclusion of the period for the transaction of routine morning business, the able Senator from Mississippi (Mr. STENNIS) be recognized for 40 minutes.

The PRESIDING OFFICER (Mr. STEVENS in the chair). Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT UNTIL MONDAY, AUGUST 4, 1969

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 12 o'clock noon on Monday next.

The motion was agreed to; and (at 3 o'clock and 28 minutes p.m.) the Senate adjourned until Monday, August 4, 1969, at 12 noon.

EXTENSIONS OF REMARKS

EFFORTS OF THE GLASS CONTAINER INDUSTRY IN PROBLEMS OF SOLID WASTE MANAGEMENT

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, August 1, 1969

Mr. RANDOLPH. Mr. President, the Committee on Public Works recently ordered reported to the Senate, S. 7, a major piece of legislation in the control and abatement of water pollution and in enhancing the quality of our environment. As soon as this motion is cleared from the Senate and from conference with the House, the Subcommittee on Air and Water Pollution of the Committee on Public Works will begin work on S. 2005, the Resources Recovery Act of 1969, introduced on April 29 by the distinguished junior Senator from Maine (Mr. MUSKIE) who has given such outstanding leadership in the field of environmental legislation during recent years.

As the title of S. 2005 indicates, the focus of this legislation is on the recovery and reutilization of solid waste materials, not merely on their disposal. As Senator MUSKIE stated in introducing this measure.

If future generations of Americans are to inherit adequate economical supplies of the natural resources, we must move now to find new ways of reusing solid wastes.

In this respect I draw the attention of my colleagues to a publication of the Glass Container Manufacturers Institute, Inc., entitled "The Role of Glass Containers in Solid Waste Disposal." As this article indicates, the glass container industry is thinking creatively and constructively about the problems of solid waste management with respect to this product. I therefore ask unanimous consent that the article be published in its entirety in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ROLE OF GLASS CONTAINERS IN SOLID WASTE DISPOSAL

(By John H. Abrahams, Jr., Manager, Environmental Pollution Control Programs, and Richard L. Cheney, Executive Director, Glass Container Manufacturers Institute, Inc.)

ABSTRACT

There seems to be a contradiction between the aims of the convenience packager, who uses a relatively durable material, and those of the waste processor, but the conflict is reconcilable.

Another problem, equally complex, is the entire cycle of raw material, use, and disposal of these materials. Even "final" disposal of these resources must be approached from a conservation viewpoint to avoid creating more pollution and to preserve our environment.

Thus, glass can be considered a universal packaging material, since it is made from the most abundant of raw materials and, during proper disposal, can be readily reduced to small particles and returned to the soil in virtually its original state, contributing nothing to air, waste, and land pollution. Further, glass can be remelted for use in the manufacture of new containers or as raw material for other industries.

Used as a packaging material, glass is inert, transparent, impermeable, non-porous, sanitary, odorless, and can be multi-colored and multi-shaped. Since it is inert, glass will not leach, rust, rot, mold, putrefy, decompose, or cause disease or noxious gases, as do many of the other packaging materials upon disposal.

In fact, glass has been shown to be of little or no problem in disposal. In a landfill, glass fragments will not contribute to settling problems; in incineration, glass fragments aid in aeration, do not produce gases, and can be reclaimed. In composting, ground glass acts as a soil conditioner if not reclaimed.

The role of packaging is to serve people. If, through laws and regulations, packaging is so modified to facilitate disposal that its efficiency and convenience to the consumer are substantially reduced, then the public is not being served.

On the surface, there is a contradiction between the aims of the convenience packager, which seem to call for a relatively durable material, and those of the waste processor. Fortunately, the conflict is not irreconcilable and research should uncover new approaches and new attitudes which will resolve these problems.

This paper considers glass containers, not only with regard to their disposability, but also the part they play in the overall ecology of our country, which involves the relation of mankind to the natural resources on which his whole way of life depends. There is great danger in discussing disposal or destruction of discarded consumer materials without regard to the whole cycle in which the packaging materials come off the land, and, if not salvaged, return to the land or to the atmosphere. To bring about the greatest good for the greatest number—and, in fact, to preserve life on this planet as we know it today—it is absolutely essential that we approach this subject as *conservationists* and not simply as packagers or waste processors.

Recently, a high government official likened the earth to a space ship circling in its orbit, without recourse to any outer source for provisions, or for the necessities of life. Except for the fact that earth received most of its original energy from the sun, most of our natural resources are not inexhaustible, as once thought. Thus, it is essential that they be conserved through selective productive use and recycling, wherever possible. This is the most important stewardship of our generation. Even "final" disposal must be accomplished in such a manner that it does not create pollution problems. To facilitate disposal at the expense of conservation and the preservation of our environment would, indeed, be to refute this stewardship.

Recognizing this, the glass container industry apparently was the first to set up an industry-wide environmental pollution control program whose primary purpose was to solve problems presented by its products in solid waste disposal. The program, set up by the Glass Container Manufacturers Institute, Inc., in September 1967, also deals with air and water pollution problems of its member manufacturing plants.

Glass—the universal packaging material

People today are talking about an "ultimate" packaging material, referring to its utility and disposibility. Perhaps they should be thinking in terms of an "universal" or "ideal" packaging material and measure existing materials against this ideal. This can be done with regard to glass containers.

Raw materials.—Glass is made from the most abundant of raw materials—silica (ordinary sand), limestone, and soda ash, which are used in roughly the same proportion as they occur in the crust of the earth. Silica, which constitutes 73 percent of a glass container, is the most common substance in the earth's crust. It has been estimated that, at the present rate of use, the supply of these ingredients of glass would last some 3 billion years.

During proper disposal, glass can be readily reduced to small particles and so returns to the soil in virtually its original state, contributing nothing to air, water, or land pollution.

Moreover, these raw materials are well-distributed about the country and exist generally near the surface of the ground. The steps in their processing into containers are much fewer than for almost any other packaging material. Sections of quarries from which these materials have been removed are now being offered to municipalities as good locations for sanitary landfills.

The glass container manufacturing process is an unusually "clean" one, and the effluents from the plants have a very minimal effect on the environment. The basic raw materials are stored in closed hoppers, carefully weighed and mixed, and melted and refined in continuous furnaces. The glass is then fed into machines which automatically form the bottles in molds, after which they undergo controlled cooling and are inspected and packed, ready for use.

Properties.—In service, the properties of glass are such as to make glass a very nearly ideal packaging material from many standpoints. For all practical purposes, it is chemically inert. It is the most universally compatible packaging material, a fact which eliminates the need for compatability testing or the need for modifying ideal formulations of products when they are packaged in glass. It adds nothing to, and takes nothing from, the contents.

Glass is transparent, impermeable to gases and liquids, non-porous, sanitary, odorless, and it may be made in various colors and formed in an infinite variety of shapes and sizes. It can be tightly sealed and resealed, whch is a matter of great importance to products which are used a little at a time.

Glass containers are leak-proof and rigid, and have great vertical strength which permits stacking many tiers high for conservation of warehouse space and for easier handling. Their rigidity and transparency make possible high speed filling and inspection, while the inherent strength of glass enables this type of container to withstand the internal pressures generated by beer and carbonated beverages.

Future of glass in packaging.—Glass is a mature packaging material, time-tested, stable, low cost, and widely available. Even so, the industry is continually improving its products through extensive research. This continuing research is directed toward glass containers which will:

1. Properly contain and protect the contents and, at the same time,
2. Offer increased convenience at low cost,
3. Be lighter and stronger,
4. Be more easily disposable.

One goal is a glass container that will not break when dropped on a tile floor, for example, but when hit hard enough to eventually break, will fall into harmless granules. A university scientist is working on a water soluble glass, which would be protected by a coating inside and out but when broken would dissolve in the atmospheric moisture. Although there are some very serious practical problems to be solved, this and other new and imaginative approaches are encour-

aged by the glass container industry, and it again illustrates the versatility of this material called glass.

Disposal

Many of these same properties which make glass an ideal packaging material also make it suitable, if not ideal, for disposal. From time to time, however, glass has been singled out for criticism as a troublesome factor in solid waste disposal, but a number of facts established through the research activities of the Institute's Environmental Pollution Control Department support its desirable disposal attributes.

The chief dual-property of glass for both use and disposal is its virtually complete chemical inertness. It does not decompose and, thus, will not react with the adjacent land or water to pollute it. Since it is inert, it will not leach, rust, rot, mold, putrefy, nor cause disease or noxious gases. Glass is one of the few, perhaps the only, packaging material which is returned to the soil in nearly its original form. Thus, the cycle is complete since the raw material is removed in granular form and can be returned to the soil in similar form.

In the three generally approved methods of solid waste disposal in present use—sanitary, landfill, incineration and composting—glass, when properly handled, has certain advantages not enjoyed by other packaging materials. Glass, in fact, makes positive contributions to the efficiency of these methods.

Glass in Sanitary Landfill.—Glass is the most friable of all packaging materials and thus articles made of glass are easily reduced in volume. If hit hard and often enough, glass can be reduced to harmless particles the consistency of sand. Therefore, in a properly operated sanitary landfill, glass containers can readily be reduced to small pieces, rather than like other materials, being partially compressed into forms containing undesirable voids which trap liquids and gases, and possibly breeding spots for insects. Thus, a maximum reduction in volume is possible. Obviously, the glass fragments will not contribute to settling and will create a firm foundation for landfill which is later to be used for building purposes.

Glass in Incineration.—Some criticism has been made of the effect of glass containers during incineration. Glass containers, in fact, enhance the operation of incinerators because they do shatter as a result of heat shock in such a way as to aerate the batch. This same general effect can be achieved in part by grinding all the refuse prior to incineration.

Glass and metal containers also have sometimes been cited as undesirable components for incineration because they show up as inert residue which must be hauled away. However, the organic matter "which goes up in smoke" uses huge quantities of oxygen from the air, and puts into the atmosphere tons of corrosive gases which, of course, corrode the metal parts of incinerators, and pollute the atmosphere. Also, recent studies by the U.S. Bureau of Mines indicate that glass fragments in the residue can be reclaimed. Thus, the non-combustible nature of glass and metal containers in the long run may very well be beneficial to our total environment.

Glass in Composting.—In the process of composting, glass reduces quickly to small, harmless granules in a grinder or shredder and thus it becomes compactible without clogging the grinder. In addition, it acts as a soil conditioner in the compost, definitely improving its qualty.

Productive use of discarded products.—In terms of our stewardship of our natural resources, obviously salvage and recycling of waste materials from packaging is the most desirable system of waste disposal. Glass has unusual salvage prospects. For example, some waste container glass can be reused in the manufacture of bottles and in other industries.

The returnable beverage bottle and milk bottle, of course, represent the ideal form of recycling. However, the increasingly high cost of recovery and cleaning and the resistance on the part of retailers and consumers to returning and handling the empties has resulted in the rapid growth of non-returnable containers. Extensive studies by marketing experts show that the consumer, mainly the housewife, likes the convenience of the non-returnable container, and will continue to use them in preference to the returnable container.

Serving the public

The role of packaging is to serve people, just as is the solid waste disposal function. If, through laws and regulations, packaging is so modified to facilitate disposal that its efficiency and convenience to the consumer are substantially reduced, the public is *not* being served. Experience has shown that the disposal people cannot transfer their problems to others, through restricting non-returnable containers, for example, because the consumer then simply discards the returnable containers which, being much heavier, only increase the problem. As Clarence Darrow once said, "Laws should be like clothes. They should be made to fit the people they are meant to serve."

From time to time the possibility of taxing containers according to some arbitrary index of disposal difficulty has been suggested. There are many obvious objections to such a procedure. In the end, of course, the consumer pays the tax, for it necessarily enters the price of the product, and becomes one of the "hidden" taxes. If the effect of such taxes is to discourage the use of glass containers, then, obviously, the result will be contrary to the overall public interest.

The better course is to supply adequate funds from local taxes to the municipal waste disposal departments. Industry generally pays for its own waste disposal, and it is only right that households should do the same. Industry should actively help to convince the public of the growing needs in this area and assist the municipal waste disposal people to obtain the necessary tax dollars to meet these needs.

Frequently, proposals are made that all packages should be made of materials which readily decompose when discarded, on the theory that roadside litter would at least thus gradually disintegrate. This, too, would be a poor solution to the roadside litter problem. Continuing roadside cleanup work would be a *must*. Discarded package remains, cluttering our roadsides, and gradually decomposing, may be more difficult and costly to pick up than present packaging. Moreover, the decomposing material may present a health hazard.

No suitable beverage container material known to the packaging industry today, either in the U.S. or in Europe, has the quality of degradability envisioned by those concerned with the role of packaging in litter. The so-called "degradable" beer container announced last spring in Sweden has been withdrawn from the market because of "insufficiently founded claims regarding degradability." It was said to take two years to "dissolve" and therefore could not be regarded as a valid answer to any part of the litter problem.

The best answer is an approach involving the following:

1. Public education to reduce littering.
2. Enactment and enforcement of more effective anti-litter laws.
3. Periodic roadside cleanup where and when littering does occur.

Much progress has been made through Keep America Beautiful, Inc., and its many local, state and regional cooperating organizations, in anti-litter education. Cooperating states report reduction in roadside cleanup problems and costs. But much more needs to be done and the packaging industry should substantially increase its financial support of KAB and its related local activities.

GCMI's Environment Pollution Control Department is looking at the systems approach to solid waste management on an overall basis. Among other things, municipalities must seriously reappraise segregation of solid waste to facilitate salvage, reuse and recycling of the various waste materials. As part of the packaging industry, GCMI is interested in solving these problems, and is actively studying every possible reuse and secondary use of waste glass. In terms of our stewardship of our natural resources and environment, it is felt that after salvaging, composting should be used as widely as possible.

In summary, the glass container industry is making substantial contributions to the public needs:

For packaging:
Glass is made from abundant, non-critical raw materials.
It is easily processed into low cost containers.
These containers have exceptional qualities which make them ideal for many products.

For disposal:
Glass can be salvaged and recycled or reused.
Glass can be reduced by grinding to become a beneficial ingredient of compost.
Glass is a desirable component of sanitary landfills and does not cause pollution of any sort.
Glass is returned to the soil in almost its original form.

In addition, the industry is actively researching improvement in its products and in ways and means of facilitating recycling productive use and disposal of waste glass.

ACOSCA—A TRIUMPH OF INTERNATIONAL COOPERATION

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the World Reporter, May 1969]

ACOSCA—A TRIUMPH OF INTERNATIONAL COOPERATION

With the formation of the Africa Cooperative Savings and Credit Association (ACOSCA) in September, 1968, what has often been called the "Dark Continent" became noticeably illuminated by the hopes of international cooperation and friendship.

What took seven years and the efforts of countless organizations to accomplish will probably affect the future growth of the African continent credit unions to the end of the century and beyond.

It all began in 1962 when the Saskatchewan League wanted to suitably celebrate its 25th anniversary. On the advice of Norman Riley, who had spent six months teaching about credit unions there, it decided to assist Tanganyika. The League's initial contribution of $14,000 was the beginning of CUNA's first organized program in Tanganyika, now Tanzania. Before that, the World Extension Department had provided whatever assistance it could through the mails and had helped train Africans for credit union work, but there had been no on-the-spot program.

The Michigan League was happy to join in the venture, giving its assistant managing director, Jack Dublin, a leave of absence to

go to Africa. The Saskatchewan League contributed an additional $10,000 and the Michigan League, $60,000 in all, to enable Dublin to carry on his pioneering work. Today, the Tanganyika League is the strongest and most active center of credit unions in Africa because of these efforts.

After this small, but courageous beginning, CUNA continued to work with grassroots leaders in the development of cooperative savings and loan societies. After a while, government bodies took note of these societies, suddenly realizing what impact they could have on development.

Over the years CUNA, working with the Commissioners of Cooperatives of the different countries, cosponsored six international annual conferences in various countries. At these meetings leaders reported on progress, wrestled with their many problems, and tried to work out solutions with the help of knowledgeable national and international agencies.

Although Africans with widely divergent political and religious beliefs participated in these annual conferences, generally a spirit of good will and mutual help prevailed. After six years of working together in this manner, the historic decision was made. CUNA International and the Savings and Credit Union League of Tanganyika were asked to take the lead in convening a meeting to form a new and potentially continent-wide association of African credit union movements.

On September 12, 1968, the Africa Cooperative Savings and Credit Association was actually formed when representatives from 15 African nations met in Nairobi with many organizations observing. Present were leaders from Cameroon, Congo, Ethiopia, Ghana, Kenya, Lesotho, Liberia, Malawi, the island of Mauritius, Nigeria, Sierra Leone, Tanzania, Uganda, Upper Volta, and Zambia. Upper Volta, Sierra Leone and Congo added much to discussions but did not actually vote or sign the constitution and bylaws of ACOSCA.

For the present, political situations in the North and South will make ACOSCA primarily an association of East, South East and West Africa movements, but delegates made it clear that future memberships from other African movements will be joyously welcomed.

Eight member countries were elected to the first board of directors including Cameroon, Lesotho, Nigeria, Ghana, Tanzania, Kenya, Uganda and Mauritius. A ninth member will be added when another nation qualifies through establishment of a national committee, league or other growing organization.

The board then selected an executive committee consisting of Tanzania, chairman; Nigeria, secretary; and Lesotho, treasurer. The new association will have its main headquarters at Nairobi, Kenya, and three regional offices.

CUNA and CRS played a major role in launching ACOSCA, but the dedication and help of myriad other organizations were also essential ingredients of success.

The Credit Union Leagues Serving Saskatchewan and Michigan. Not only did these leagues make possible CUNA's first organized program in Africa, but they have contributed generously ever since. Michigan has given $60,000 to the Africa project and pledged a further $11,000 over a three-year period for the Tanganyika League. The Michigan League has also announced it will match any donations made by other leagues to the Africa Five Year Development Project up to a predetermined amount.

The contributions of the Saskatchewan League have also been commendable. Alongside the pioneering work done by Norman Riley in East Africa, one of its able young credit union leaders, Gary Churchill, spent two years in Ghana, West Africa, from 1963 to 1965. The credit union program he launched in Northern Ghana is very successful today and has had the financial assistance of MISERERER. Saskatchewan can be very proud that the Ghanan credit union movement is still progressing beyond expectations and has merited assistance from several German Foundations; the Central Raiffeisen Bank of Utrecht, Holland; Catholic Relief Services; CAFOD (Catholic Funds Overseas Development of England) and U.S. Peace Corps volunteers.

Catholic Relief Services. Supporting the work of Father J. Van den Dries, probably the most knowledgeable credit union worker in Africa, and his assistant, Father Dugas, would be a sizable contribution in itself. But besides this CRS alo provides one full-time promoter of ACOSCA; one full-time native fieldman for the Cameroons; one full-time native fieldman for Ethiopia; one full-time native fieldman for Ghana; one part-time local leader for Zambia; one part-time local leader for Sierra Leone; and one part-time local leader for Liberia.

Agency for International Development. When the AID contract went into effect in Tanzania in 1965, Jack Dublin stayed on for two more years as CUNA/AID Country Program Director. With this technical assistance, credit union membership has increased by 9,000 and savings tripled to over $1.2 million since 1967.

MISEREOR. The German Catholic relief organization, MISEREOR, has repeatedly made financial contributions to CUNA's overseas programs. Most recently, it donated $7,000 to cover delegate travel expenses to the ACOSCA organization meeting. And earlier, it gave $11,400 so that 29 Africans could attend the Fifth African Conference on the Mobilization of Local Savings.

The Central Raiffeisen Bank of Utrecht, Holland. This national association of Dutch Raiffeisen credit cooperatives is donating $46,200 over the next five years to assist credit union development in Ghana and Uganda as part of its celebration of Raiffeisen's 150th birthday.

Other Leagues. Through the Miles for Millions Project in Alberta, $30,000 has already been made available for African development. In addition, a fieldman for Lesotho is being financed for three years through a $13,500 contribution by the Alberta League. Ontario has been a participant in the Kenya project for over two years, and has now contributed over $18,000. The Ohio Credit Union League is helping the Lagos League by financing a fieldman for that area.

Besides the above agencies, many other organizations are providing an unprecedented amount of financial and technical resources toward continent-wide development in Africa, including the Raiffeisenbanks of Europe, Canadian External Aid, the Peace Corps, several German foundations, the International Cooperative Alliance, the educational institutions of Africa, the Coady International Institute, and United Nations Development Program. Several other organizations have indicated interest in helping in the future.

But despite the vigorous participation of so many respected agencies, ACOSCA still needs much additional help if it is to get off the ground. During the September Nairobi meeting, a Five Year Development Plan Committee surveyed the needs of the countries represented and put together a minimum list of requirements for effective development over the next five years. There is a desperate need for $2.4 million in additional funds over a five-year period to pay the costs of ACOSCA plus technical assistance in three regions. This is actually not a great deal considering that Africa has a population of over 300 million people divided into over 50 countries. But it is a crucial amount which will determine whether this project of hope dwindles or fulfills its promise of continent-wide betterment.

THE 15 YEARS OF PROGRESS—A SMALL BEGINNING

When the World Extension Department came into existence on October 18, 1954, the credit union world was far different from today. For one thing, the organized movement was limited primarily to the United States and Canada. Hemisphere totals listed only 8.9 million credit union members spread out in 19,683 credit unions. Total assets of this movement were only $2.9 billion and loans outstanding were $1.9 billion.

Outside of the United States and Canada, only a handful of countries had credit union-like organizations and many of these could be traced to the influence of the original Raiffeisen and Schulze-Delitzsch Societies of Germany.

Even though membership in CUNA was open to credit unions in the Western Hemisphere, there was still a tremendous need. In its first year of operation, the World Extension Department answered requests for credit union information from some 40 different countries.

Although complete figures for 1968 are not yet available, partial figures still give an impressive idea of the progress made in these fifteen years. Worldwide today, there are over 53,000 credit unions, over 33.3 million members, assets of $16.8 billion and loans outstanding of more than $12.6 billion. Outside of the U.S. there are almost 30,000 operating credit unions. Approximately 13.3 million members belong to these overseas credit unions.

At yearend 1968, region by region, approximate credit union figures were as follows: Canada, 4,700; Mexico, 700; Caribbean, 700; Latin America, 4,400; Europe, 300; Africa, 2,500; Asia, 2,100; Far East, 13,800; and the Pacific, 1,400.

Credit union members can be justly proud of this progress, but in truth, the surface has only been grazed, not even scratched. With over 3.4 billion people in the world today, the 33 million credit union members represent less than 1%. At least 10 times this number is needed to play a truly effective role in world development. Let's take a look at progress—and problems—in the various areas.

Latin America

The Latin American movement is beginning to mature, although there are still many problem areas to be resolved. The government's Extended Risk Guarantee Loan Program has gone into effect for Latin America and approximately $1 million is expected to flow through it.

The Centralization of Funds and Accounting System (COFAC) is now operating in Panama, Colombia and Nicaragua. This system is designed to free sums for large-scale development by establishing effective federation interlending programs. At the same time, local groups are freed from paperwork and can concentrate on the crucially important work of member education and technical assistance.

The highly-successful Directed Agricultural Production Credit Program has now been applied to 34 credit unions in Ecuador, Bolivia and Costa Rica. These credit unions have 8,500 members and $798,000 in savings. Under the DAPC program, credit union members will be able to *permanently* increase their productivity, income and standard of living. For example, in the affected areas of Ecuador, crop production has doubled as a result of DAPC.

The 12 Latin American countries with CUNA/AID contracts continue to make outstanding progress. Savings reached close to $80 for each of the almost 746,000 members, a phenomenal amount considering that the average annual income is less than $100 a year. Loans went up 14% in Latin American countries to over $60 million. Membership too showed healthy growth, increasing over 18% from last year's figure of 630,000.

Yet despite the gratifying progress, there are many real problems in Latin America. Many countries desperately need the passage of credit union laws. In Mexico, a technician could easily work full-time seeking these laws. Other needs can be summarized as managerial training, member education, centralization of funds, seed capital organization and equipment.

In some countries, runaway inflation and devaluation of currency make it hard to justify savings to the impoverished. To combat this, CUNA and LARO are proposing that a Regional Financial Organization be set up to help provide for maintenance of value.

Heightening the problems in Latin America is its mushrooming population. The almost 2.3 million members are insignificant when compared to an estimated almost 257 million population which is growing at the fastest rate of any area. To communicate with as many people as possible, LARO worked full-time to publish manuals, leaflets, quarterly reports and several different publications. Over 1.8 million sheets of paper were processed—pretty good for only one moderately-sized press.

During the last year the CUNA International Foundation was able to give financial assistance to the following countries: Mexico, $6,000; Peru, $3,000; Uruguay, $3,500; and Venezuela, $6,000.

Uruguay and three other countries, Paraguay, Guyana and Surinam, presently represent the most crucial needs. CUNA has been giving them sporadic technical and financial assistance whenever possible, but these incipient movements are in a critical stage of development and could fail without further help.

The Caribbean

Over 700 credit unions are seeking a better way of life for their members in the many islands of the Caribbean Sea. Some of the movements like Jamaica and Trinidad have reached self-sufficiency, but the Eastern Caribbean territories are still in great need of technical assistance.

During 1968, two new regional credit union organizations emerged in this area, the Caribbean Conference of Credit Unions and the Eastern Caribbean Council of Credit Unions. The former is primarily an educational/promotional organization concerned with the annual seminar on credit union development in the region while the latter is a new federation of eight former British Eastern Caribbean territories.

One of the most promising programs in the Caribbean is to have experts from North America make short visits to consult on specific programs. R. A. Monrufet, Baldur R. Johnson and Barney Martin, managing directors from British Columbia, Saskatchewan and Manitoba, respectively, made this short visit to Jamaica during 1968. Canadian External Aid is also considering providing technical assistance in these areas. But to be really effective, several full-time technicians are a necessity because of the difficulty in traveling between islands.

Africa

The formation of the Africa Cooperative Savings and Credit Association is by far the greatest accomplishment of 1968, if not of the last 15 years (see lead article for more details).

From now on, the future of the over 2,000 African credit unions which have grown up in the last 15 years is largely dependent upon the success of ACOSCA. The five-year program formulated by members visualizes a full-time fieldman in each of the 15 countries where credit unions now exist plus a few additional fieldmen in those where there is sufficient interest.

Each one of three proposed regional areas will also need a native African director, backed up by a veteran credit union technician from a developed country. The plan also calls for training centers for African credit union leaders and regional offices with bilingual staff.

Although there is already considerable assistance from AID (in Tanzania), Catholic Relief Service, several leagues and international groups, $2.4 million is still needed in additional funds to make these plans a reality.

The Far East

Another milestone was achieved recently with the Third Asian Regional Credit Union Training Conference. Fifteen countries, twelve international organizations and various socio-economic development agencies from various countries participated to learn how credit unions can augment their other development activities.

Only five Asian countries, the Philippines, Korea, Hong Kong, Japan and China have leagues. As yet, these leagues are too young to stand alone. The Indian movement, which inspired Filene, has still not developed state, regional or national credit union organizations which could greatly speed development.

Many organizations are assisting in this area including SEARSOLIN (South East Asia Rural Social Leadership Institute); the Voluntary Credit Union Training Center in Taiwan; the Cooperative Educational Institute in Korea; the Credit Union Information Center of Sophia University, Japan; the Cooperative Training Institute in Vietnam; and the Social Institute of Indonesia.

Another helpful organization is the Socio-Economic Life in Asia (SELA), a development program operated by Jesuit missionaries backed primarily by the Asia Foundation. The Texas and Michigan Leagues have also helped the Korean and Taiwan Leagues, respectively. During 1968, Korea became the first Asian nation to participate in the CUNA/AID partnership.

But other countries in this region will get their primary help from the oriental regional fieldman who will soon be appointed. Unless other technicians join him, he has a gigantic task ahead of him, trying to serve this needy area which encompasses half the population of the world.

The South Pacific

The South Pacific may be a paradise in climate, but this does not keep poverty from stalking the shores of its many islands.

The 700 Australian credit unions are doing everything possible to help their 700 credit union neighbors, but the Australian movement is still young itself.

It is hampered by the vast distances involved and the slowness it takes to travel from remote island to remote island. One of the biggest hopes for the future is the large number of Peace Corps volunteers scattered throughout these islands. If they could be given direction and assistance by a few technicians, undoubtedly these Peace Corps volunteers could do much for economic development in the area.

In conclusion, the credit union movement has made a valiant beginning in attacking the overwhelming problems of overseas areas. In many areas the effects of mutual help are beginning to be felt, but it will take much more international cooperation and concern in the credit union tradition to win the final victory.

FOUNDATION GIVEN DONATIONS

Contributions to CUNA International Foundation during the last quarter took unusual forms as credit unions and leagues gave serious thought to helping struggling new credit unions overseas.

One of the largest proportionately came from the Oro Cooperative Credit Union, Cagayan de Oro City, the Philippines. Its gift of $50 represented 8% of its gross 1968 income. Mordino R. Cua, credit union president, said the contribution was made "in the spirit of Raiffeisen, Filene, Desjardins, and Bergengren."

It was quite a sacrifice for a small credit union to make, but Cua wrote, "It makes us feel good to give this amount . . . and we shall hope that bigger and wealthier credit unions will see the value of this example for the good of our movement . . . full measure of support means that big credit unions feel it is their obligation to support poor credit unions, by foregoing some of the their dividends, knowing that this can bring about more valuable 'dividends' in terms of human development in areas we cannot even see or hear."

In Ontario, Hepcoe Credit Union again set an example in its league by contributing $2,000 for the third time in three years. Its donation made up approximately two-thirds of the entire $3,052 gift from Ontario.

Hepcoe was only one of nine Ontario credit unions which contributed to the league-sponsored Kenya project during March. Others were: Rochdale CU, $420; CUNA (Hamilton) CU, $200; Fecil (New Toronto) CU, Union Gas Employees of Chatham and Computing Devices Employees of Ottawa, $100 each; Ingersol Machine Steelworkers and Oxford Farmers' Cooperative, Woodstock, $50 each; Schell Employees, Woodstock, $32. Total Contributions from Ontario to Kenya now total $21,000.

Certainly one of the most regular contributors is the Adanac Credit Union Society Limited, Winnipeg. This year's check for $100 was the fourteenth consecutive such donation. Other generous organizations during the last quarter were: Sherwin Williams Employees CU, Illinois, $100; CUM Association (Michigan) $100 for Mexico; E. G. Fritter Memorial Fund, $50; EIML CU (Utah), $25; Tamiami CU (Florida), $100; Minneapolis Federal Employees CU, $100; New Mexico Central CU, $60; Humble Employees CU (Texas), $25; Winnipeg Terminal CU, $92; CU League of Saskatchewan, $300 for Ecuador; Dartmouth (Nova Scotia) Community CU, $100 for Lesotho; and Camera Heights (Mt. Dennis, Ontario) CU, $200. The Massachusetts CUNA Credit Union Association and Michigan League gave $15 and $25 respectively in memoriam for Leo Corcoran.

Contributions were not limited to organizations either. Individual donations were received from W. A. Atkins, Archie Cameron, and Thomas Roby. The smallest donation was received from Quinte Chapter POR Meeting in Ontario. But the $1.74 donation for Kenya will be very meaningful when used in a country where salaries may be as low as 14¢ a day.

FEDERAL AID FOR SCHOOLS IN IMPACTED AREAS

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, August 1, 1969

Mr. BYRD of Virginia. Mr. President, the Norfolk Ledger-Star of July 29 included a thoughtful editorial on the program of Federal aid for schools in impacted areas. The editor of the Ledger-Star is William H. Fitzpatrick.

I ask unanimous consent that the editorial be printed in the Extensions of Remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LESSON FROM IMPACT FUNDS

Federal impact funds for schools will face another stiff test in Congress when the Labor and Health, Education and Welfare Departments' appropriations bill comes up for debate.

In spite of a fund-restoring amendment Congressman Whitehurst is offering in the

House, the test appears potentially tougher this year for two reasons. President Nixon has proposed drastic cutbacks in the program, far greater than the reductions Mr. Johnson unsuccessfully sought; the pressure for meaningful budget trimming to combat inflation is at perhaps its greatest in this 91st Congress.

These two factors are also clues to the disturbing fact that too often the impact fund issue is not discussed on the questions that are pertinent but on other questions entirely. One of these is federal control over spending. An education lobbyist, obviously more interested in other types of school money, said that with impact aid "there is damn little red tape. There's certainly no problem counting the number of kids, multiplying by an amount of money and sending to Washington for your check."

The money can be spent as the school district sees fit. And here it contrasts with what is called "categorical aid," which must be spent for clearly spelled-out purposes such as poor children, library books or the like.

A Minnesota Congressman often identified with education matters takes particular exception to the lack of strings attached to impact money. He says the tendency of his fellow members to vote for impact funds "endangers other, better programs." What he means is that when reductions have to be made the Congressmen are reluctant to trim impact funds and so it is the "categorical aid" that suffers.

But perhaps in spite of the Congressman's doubts, there is a lesson—not a danger—in the impact fund program. For the federal government might go a long way toward eliminating its own red tape, trimming its top-heavy operating costs and generally controlling its spending if more—not less—of its revenue could be channeled into the localities under formulas as clear, logical and simple as that of impact money, which now assists communities on the basis that property tax sources are lost as a result of major federal presence.

CAPTIVE NATIONS WEEK

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. BURKE of Massachusetts. Mr. Speaker, I would like to take this opportunity to call to the attention of my distinguished colleagues the following letters as they appeared in the Boston Herald, Boston Record American, and the Christian Science Monitor in connection with this year's observance of the Captive Nations Week in Boston, Mass.:

[From the Boston Herald Traveler, July 14, 1969]

THE HERALD TRAVELER'S READERS WRITE—ACTION MUST BE TAKEN FOR CAPTIVE NATIONS

To the Herald Traveler Editor:

The week of July 13–20 is the "Captive Nations Week," dedicated to the once free and independent nations of Central and Eastern Europe which are presently ruled by Communist Russia. Moscow's occupation of Czechoslovakia and continuous unrests in Ukraine, Armenia, Latvia, Lithuania, Estonia and other captive countries have attested the foresightedness and importance of the Captive Nations Week Resolution of July 17, 1959. These nations have unequivocally manifested their demands for national freedom and self-determination.

A few observations:

The U.S. cannot accept "status quo" in Central and Eastern Europe as long as captive nations are held by Moscow. We must reject the "Brezhnev Doctrine," which gives Moscow "the right to intervene in socialist countries." In fact, any U.S. negotiation and talks with Moscow must include the status of the captive nations.

Our Congress should finally establish a special committee on captive nations, which will perform a vital task in the formulation of our foreign policy.

The United Nations must investigate Russian Communist aggression in Ukraine, Latvia, Lithuania, Estonia, Armenia, Byelorussia and all captive countries and implement the U.N. Universal Declaration of Human Rights in those countries.

Moscow has expressed "unhappiness" about President Nixon's visit to Romania. This is no surprise! The visit will undoubtedly be heard in Ukraine, Armenia, the Baltic States and other captive countries. It will not bring about miracles, but it will demonstrate to these peoples that the U.S. is concerned with their freedom.

OREST SZCZUDLUK,
Director of Public Relations, Ukrainian Congress Committee of America, Inc., Boston Chapter.

BOSTON.

[From the Boston Herald Traveler, Apr. 21, 1969]

EISENHOWER'S EFFORTS FOR CAPTIVE NATIONS

TO THE HERALD TRAVELER EDITOR:

For captive nations under Russian Communist domination, President Dwight D. Eisenhower will always remain a great promoter of their freedom and national self-determination.

On July 17, 1959, he signed the first Captive Nations Week proclamation, in accordance with the Congressional Captive Nations Week Resolution which designated the third week in July as "Captive Nations Week." The Captive Nations Week Resolution, now Public Law 86–90, charged Communist Russia with the subjugation of 22 countries, such as: Ukraine, Armenia, Latvia, Lithuania, Estonia, Czechoslovakia, Byelorussia, Hungary, and others. It called for support of the just aspirations of the captive nations.

On June 27, 1964, President Eisenhower unveiled a statue in Washington, D.C., in honor of Taras Shevchenko, Ukraine's greatest poet and champion of universal freedom and justice.

In his speech, President Eisenhower encouraged poets in Ukraine, in Eastern Europe, and around the world to embody in their poetry mankind's demand for freedom, self-determination, for national independence, and for liberty for all mankind.

There is substantial evidence that President Eisenhower's speech reached the Ukranian people. It has been reported that during the trials of Ukranian intellectuals in 1965–1967, some were charged with the cirme of possessing copies of President Eisenhower's address at the unveiling of the Shevchenko statue.

The captive nations under Russian Communist domination are aware of our work. Our work on behalf of their national self-determination must be intensified.

OREST SZCZUDLUK.

BOSTON.

[From the Boston (Mass.) Record American, July 19, 1969]

HOUSE NEED CITED

WEST ROXBURY.—This year's "Captive Nations Week" from July 13 to 20, provided immense opportunities for advancing the cause of the captive nations. The United Nations must investigate Russian Communist aggression in Ukraine, Latvia, Lithuania, Estonia, Armenia and other captive countries and implement the United Nations Declaration of Human Rights in those countries. We must dispell the concept that the Soviet Union is a nation and that Russia is the Soviet Union.

The Communist dictators are afraid of the truth. We must use the truth. Recently, Gromyko made an overture to the United States for friendly relations. In any talks with Moscow, our government must include the freedom for all captive nations under Communist domination.

OREST SZCZUDLUK.

[From the Christian Science Monitor, July 16, 1969]

CAPTIVE NATIONS WEEK

To The Christian Science Monitor:

From July 13–19 many Americans observe the 10th anniversary of Captive Nations Week. It was first observed when President Eisenhower issued a proclamation in response to a resolution approved by Congress in 1959.

The majority of the captive nations are in Europe. That the nations within the Soviet Union are captive cannot be disputed. History records when and how Communist Russia conquered Byelorussia, Lithuania, Ukraine, Latvia, Estonia, Georgia, Armenia and several other countries, and then forced them to join the Soviet Union. Moscow also controls several "satellite" nations. It has openly revealed this by its action in Hungary in 1956 and in Czechoslovakia last year. Communist aggression and domination are realities in Asia also.

Freedom and independence have been denied these nations. The Captive Nations Week resolution calls for the restoration of freedom and independence to these nations and thus express a hope held by many Americans.

ALEX D. HARBUZIUK.

ELMHURST, ILL.

ILLUMINATED FLAGS IN MIDLOTHIAN, ILL.

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, August 1, 1969

Mr. DIRKSEN. Mr. President, the village of Midlothian, Ill., recently undertook a patriotic program to have illuminated flags installed throughout the community. I ask unanimous consent that an article published in the Midlothian-Bremen Messenger concerning this program be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MIDLOTHIAN IS CALLED "ALL-AMERICAN" VILLAGE

Midlothian Mayor Harry Raday and the Chamber of Commerce's sparkplug John Horn co-hosted a formal flag-lighting ceremonial dinner on Sunday evening at Cavallini's. Honored guests were those residents and businessmen who have installed illuminated flags in Midlothian, which now lays claim to the title of America's most flag-illuminated village.

Over 20 illuminated flags have been raised in Midlothian, to fly around the clock, floodlighted, in accordance with a new provision to a governmental code, which was discovered by Horn, who installed the first one at his McDonald's Hamburger Restaurant on Crawford Avenue.

Special guest Mr. Earl Fox, president and founder of Fox College, spoke with pride of his former student, John Horn, who, as stu-

dent body president, gave Fox College the flag it has in use today. Mr. Fox congratulated Mayor Raday and Horn for the patriotism displayed by all of Midlothian, calling it "the greatest example of Americanism to be seen today—Midlothian is truly the All-American village." Mr. Fox has an illuminated flag flying day and night atop the college's administration building.

A symbolic lighting of all the flags was held in the darkened banquet room as each guest held a red, white and blue ribbon.

Mrs. Charlotte Slattery, former village trustee, assisted Mr. Horn in arranging the dinner. Among other special guests were Village Board members James Dolan, Robert Hickey, Fred Massat, Oliver Loven and Bob Hansen and their wives, Father Richard, O.S.F., of St. Christopher's parish; Chamber of Commerce president and Mrs. Ed Cebulski and chamber vice president and Mrs. George Eberhardt.

OIL INDUSTRY MUST HAVE ADEQUATE INCENTIVE

HON. CHARLES H. GRIFFIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. GRIFFIN. Mr. Speaker, it is imperative that the United States maintain sufficient oil and gas reserves to insure an adequate supply for defense and domestic needs in the years ahead. Exploration is the only way to identify reserves.

Exploration for oil and gas is a high-risk gamble. Producing wells make news but dry holes—expensive dry holes—fade rapidly from our memory. To attract the capital investment needed for exploratory drilling, it is necessary to provide tax incentives. Income from disappearing capital assets cannot, in fairness, be treated as ordinary income. It was for these and other valid reasons that Congress years ago provided for the depletion allowance.

Congress has recognized that over 100 minerals, in addition to oil and gas, require an allowance for depletion in our tax structure in order that underground resources can profitably be extracted and put to use for our health, safety, and comfort.

In my opinion, this Nation simply cannot afford to remove incentives and fair tax treatment from individuals and industries engaged in development of our mineral resources.

On this subject, Mr. Speaker, I include as a part of my remarks an editorial appearing in the Clarion Ledger, Jackson, Miss., on July 30, 1969. It follows:

OIL INDUSTRY OF STATE, NATION MUST HAVE ADEQUATE INCENTIVE

The nation's oil industry faces a threat in a move by Congress to reduce the oil depletion allowance from 27½ per cent to 20 percent already voted by the House Ways and Means Committee. It is part of a broad tax "reform" measure which eventually will go to the Senate.

Mississippi's rank among major oil-producing states gives us a special interest in this proposed legislation which could have an adverse effect on the petroleum industry.

Spokesmen for the industry have contended over a period of time that the depletion allowance is in the public interest and that as to the rate itself, a good case can be made for increasing rather than lowering it at this time.

Under the federal depletion allowance, an oil well owner is allowed to deduct from his taxable income an amount equal to 27½ percent of the well's gross production value each year, up to a maximum 50 per cent of net income from the well.

It has been estimated that the cut in the allowance would boost government revenues to the tune of some $400 million annually. Industry spokesmen remind Congress that the percentage depletion allowance for 40 years has stood the test of repeated, searching examinations by the national lawmaking body.

The tax credit arrangement has been most helpful in enabling the industry to keep the American people abundantly supplied with petroleum energy vital in modern life.

This country is using oil and gas faster than new reserves are being found, industry officials stress. Because of the high risks and enormous costs involved, there is a continuing decline in the search for new oil fields and, in all probability, the supply and demand gap will widen even further if the proposed cut in depletion allowance is passed into law.

Reduction in the depletion allowance percentage, spokesmen insist, would result in reduced exploration for the new oil and gas reserves our country must find. Far from being a "tax loophole," as some call it, this percentage depletion works in the best interest of the public which depends on petroleum and oil products.

EEOC FILM AVAILABLE

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. CHARLES H. WILSON. Mr. Speaker, the Equal Employment Opportunity Commission recently announced the availability of a motion picture presentation that should be of interest to all Americans.

"Even Chance," a 20-minute black-and-white film explaining the activities of the U.S. Equal Employment Opportunity Commission, is now available for public release, EEOC Chairman William H. Brown III announced.

The film describes the experience of a single black man in his personal encounter with job discrimination, and the efforts of the EEOC to identify and to eliminate the discriminatory employment practice.

His story typifies the many thousands of cases brought to the Commission each year by not only black people, but Spanish Americans, Mexican Americans, American Indians, Puerto Ricans, Eskimos, oriental Americans, members of religious minority groups, and women as well.

Produced in English, the film is aimed at showing the general public how the EEOC, under title VII of the 1964 Civil Rights Act, handles complaints of job discrimination based on race, color, religion, sex and national origin; and how the EEOC promotes affirmative action programs with business and labor unions to achieve equal employment opportunity.

Individuals or groups interested in booking the film are asked to write the U.S. Equal Employment Opportunity Commission, Office of Public Affairs, 1800 G Street NW., Washington, D.C. 20506.

AMERICA'S YOUTH REAP EDUCATION VICTORY

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. MADDEN. Mr. Speaker, the House of Representatives is to be commended for the outstanding work it has accomplished in the last 2 days of debate and amending the 1969 appropriations for our educational institutions throughout the Nation.

Back in the 83d Congress in 1954 the House defeated the first major national education bill involving the sum of $450 million. In those days that sum appeared a gigantic figure as compared with 1969 inflationary values. That bill was defeated by four votes out of approximately 350 on the rollcall. The action of the House at that time was an unforgivable mistake as education was no doubt denied to many millions of our youth in the last 15 years. No one can predict the percentage of discontented and unemployed modern-day youth that have been partaking in riots and disturbances over our Nation in the last few years by reason of being denied proper educational facilities.

The 89th Congress, 4 years ago, made an outstanding step in correcting that mistake, but now we find the 91st Congress is called upon to combat the executive department's program to again curtail our educational facilities.

Yesterday's action of the House is to be commended for increasing the pending appropriation bills and reinstating almost $1 billion more than President Nixon has requested in his education curtailment recommendation.

I hereby incorporate with my remarks an editorial in today's New York Times which commends our great victory of yesterday:

A BOOST FOR EDUCATION

The House took a significant step toward reordering national priorities and extending aid to the hard-pressed states and local communities in an area of critical need when it tentatively appropriated $4.2 billion for Federal education programs—$600 million more than was appropriated last year and $1 billion more than President Nixon requested.

The increases above the Administration's regressive budget include $180 million for slum schools, $131.5 million for vocational education, $110 million for school libraries and equipment and $40 million for student loans. There are also additional funds for the construction of public libraries, education of handicapped children and construction facilities for the mentally retarded. This is no mean achievement for a Congress which has customarily voted, as Senator Mondale recently put it "billions for defense, peanuts for human problems."

Although the billions approved by the House for education are certainly not peanuts, they are still small potatoes compared with the need and with the targets Congress set for itself in adopting the pioneering education legislation of recent years. Even if the Senate goes along fully with the House proposal, Congress will be providing this year only 44 per cent of the funds authorized in various education measures. The President's budget would have furnished 35 per cent of that total.

But in voting these funds, the House could not resist a deep dip into the old pork barrel. In fact, the pork-barrel opportunity was no doubt the main factor in obtaining this new money for valid educational programs.

More than half a billion dollars was earmarked by the House for aid to "impacted areas." Ever since the Korean War, Congress has voted special school handouts for communities in the vicinity of Federal installations. These have been granted on the grounds of hardship, although Federal installations are avidly sought because of the economic benefits they bring to surrounding areas. It is time this unwarranted bonus for an undeserving few was redistributed among the many. The half billion for "impact areas" ought to go to the other programs designed to meet the legitimate educational needs of all children.

THE CONTROL OF TECHNOLOGY

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. DADDARIO. Mr. Speaker, Dr. O. M. Solandt, who is Chairman of the Science Council of Canada, was a guest of the House and the Committee on Science and Astronautics at its ninth annual meeting of the Panel on Science and Technology, which explored the topic of "Applied Science and World Economy."

Dr. Solandt described the utilization of scientific and technical resources in our neighboring country to the north in an interesting paper. He mentioned and stressed the fine cooperation which our two countries have developed. A biologist and doctor from the University of Toronto, his career is long and distinguished, and he holds the U.S. Medal of Freedom.

He has written an editorial for the authoritative magazine Science to discuss the control of technology, and I offer it for the RECORD so that all Members may become familiar with it. It touches on the theme of technology assessment, with which the House Committee on Science and Astronautics has been engaged, and on which we are developing some useful guidelines.

The editorial follows:

THE CONTROL OF TECHNOLOGY

It is often argued that science is morally neutral, neither good nor bad. If science is defined as man's accumulated knowledge about himself and his environment, then this is a defensible point of view. It is then technology or the application of science that raises moral, social, and economic issues. The great debate about the responsibility of scientists for the introduction of nuclear weapons has died down, but we are beginning to see that we are faced by a growing number of decisions about the future use of technology that, in total, may be much more important to mankind than even "the bomb."

The tragedy of thalidomide is probably the most clear-cut recent example of the catastrophic effects that can result from a new application of technology where the preliminary research had not been carried far enough to reveal all the long-term effects. The present furor over DDT and other "hard" insecticides is an example of a more complex case of the same kind. The foreseeable dangers from the introduction of new technology range all the way from the relatively clear-cut cases such as thalidomide, to the more complex problems of the widespread use of supersonic aircraft, and on to the infinitely involved social and economic changes that will result from the widespread use of electronic systems for information management.

Society must so organize itself that a proportion of the very ablest and most imaginative of scientists are continually concerned with trying to foresee the long-term effects of new technology. Our present method of depending on the alertness of individuals to foresee danger and to form pressure groups that try to correct mistakes will not do for the future. A rational institutional framework that will assign a formal responsibility for this critical task to a well-selected, well-organized, and well-financed group of scientists is urgently needed. Clearly, this agency must also have strong representation from the social sciences, including law, and close links with political leaders and with "the man in the street." Its task is too important to be left to scientists alone, but scientists must supply the leadership.

In this problem, as in so many, mankind is steering a precarious course between Scylla and Charybdis. On one hand are the dangers of the uncontrolled exploitation of new technology, and on the other are the dangers of such rigid control that progress will cease. Obviously action must begin in individual nations, but it should quickly become international in scope because so many of the potential problems are worldwide. Fortunately we have made a beginning. Suitable control mechanisms have already been formed or are being considered in many areas, such as food and drugs, where the hazards are clear and obvious. The problem now is to extend the same kind of control to broader problems where long-term dangers are potentially more serious and the task of forecasting is much more difficult.—O. M. SOLANDT, *Chairman, Science Council of Canada, Ottawa*

BRIDGE OF REMAGEN

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. LONG of Maryland. Mr. Speaker, on March 7, 1945, the American Ninth Armored Division made its surprise crossing of the Bridge of Remagen. This was one of the most historic episodes in American military history. It turned the tide of the war in Europe and saved many American lives. The movie "The Bridge at Remagen," for which my eminent colleague, KEN HECHLER gave technical advice and which was based on his outstanding and bestselling historical account of the same name, opened recently in Baltimore. I think it is, therefore, a particularly fitting time to honor those men who took part in the Remagen crossing. I recently asked Baltimore area residents to let me know if they were veterans of this first historic crossing of the Rhine River. Six men responded, and I should like to honor them now by including their names in the CONGRESSIONAL RECORD:

Anthony Astarita, 141 N. Decker Avenue, Baltimore, Md.

John Beaudet, 7 Lakeview Drive, North Linthicum, Md.

Abe Greenberg, 4170 Crestheights Road, Baltimore, Md.

Jacques J. Jackel, 9832 Fox Hill Road, Perry Hall, Md.

Alex M. Leban, 4726 Bonnie Brae Road, Pikesville, Md.

Benjamin Silver, 5037 Queensberry Avenue, Baltimore, Md.

SCIENTIFIC SUB SENDS GREETINGS

HON. G. ELLIOTT HAGAN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. HAGAN. Mr. Speaker, I commend for your attention the following articles from the Savannah, Ga., newspapers regarding the vital involvement of the Grumman Aircraft Engineering Corp., in probing both outer space and "inner space":

[From the Savannah (Ga.) Morning News, July 26, 1969]

SCIENTIFIC SUB SENDS GREETINGS

Drifting at a depth of 700 feet off the coast of Georgia, the research submarine Ben Franklin radioed a message to Chatham Countians Friday praising development of an oceanography program here.

Dr. Jacques Piccard, Swiss scientist who designed the vessel, also sent greetings to employes of the Grumman Aircraft Engineering Corp. here. Grumman and the U.S. Navy are directing the bus-sized sub's mission, to explore 1,200 miles of the Gulf Stream.

Addressing himself to Mayor Curtis Lewis, Dr. Piccard said: "I am aware of your efforts to establish an ocean science center on Skidaway Island in conjunction with the University of Georgia. I wish you and the ocean science center well in your future developments and commend you for your farsightedness in selecting such an exciting and interesting and undeveloped field."

FROM 700 FEET DOWN

Piccard said he was transmitting from 700 feet below the surface of the Atlantic and 157 miles due east of Savannah. The sub began her undersea journey July 14 off West Palm Beach, Fla. and has been drifting at a snail's pace to examine acquatic life and bottom formations.

Five others are aboard the Ben Franklin and her mother ship, the Privateer, is cruising above the sub maintaining sonar contact and assisting in scientific experiments.

During her cruise, the Ben Franklin has reported spotting marine creatures 10 times their normal size, coral heads 2,000 feet down, huge columns of water welling from the bottom of the surface and sudden temperature drops in the surrounding water.

DEEP QUESTIONS

"These are a few of the questions we hope to answer from the abundant photographs the crew is taking," said Al Kuhn, a Grumman engineer in West Palm Beach.

"Are the giant fish really overgrown members of a known species or are they something unknown to science? Are the coral heads remnants from a few million years ago

or does coral grow deeper than we thought? What makes the water well up, and why the temperature changes?"

The submarine is expected to surface about 200 miles southeast of Boston.

[From the Savannah (Ga.) Evening Press, July 28, 1969]

GRUMMAN PRAISED BY CITY COUNCIL

City Council today passed a resolution congratulating Grumman Aircraft Engineering Corp. for scoring a scientific and technological "first" by participating in exploration ventures in outer space and under the sea simultaneously.

On hand for the ceremonies was Fred J. Eckert, manager of Grumman.

The resolution noted that the component vehicles of the "firsts" were the lunar excursion module from which astronauts Armstrong and Aldrin stepped onto the surface of the moon, and the research submarine Ben Franklin now exploring the gulf stream 2,000 feet below the surface of the Atlantic Ocean.

Grumman designed and built LEM for the Apollo space project and sponsored and financed the Ben Franklin under the supervision of famed underwater explorer Jacques Piccard.

The resolution said Grumman has "contributed measurably to the scientific and technological advancement of this nation," and that the City of Savannah "is extremely proud to count the Grumman organization among its many good citizens. . ."

BALANCE OF PAYMENTS

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. GUBSER. Mr. Speaker, frequently, hasty conclusions are drawn about the effect of U.S. Government purchases abroad on our balance of payments. This is the case with the purchase of Pratt & Whitney engines manufactured in Canada. A recent major transaction will illustrate my point.

On July 10, 1969, the Canadian Department of National Defence placed an order for 50 Bell utility tactical transport helicopters (CUH–1N). The amount of the order was $50,200,000, of which about $30 million will go to the Bell Co. in the United States. The remainder is for engines to be built by Pratt & Whitney in Canada from materials of which 50 percent will be American built.

Thus, from a trade balance point of view, the United States is ahead by about $40 million.

Since the original order provides for the purchase of 20 more CUH–1N's, it is more than likely that the total quantity of 70 will be increased in the future.

I do not believe it is illogical to conclude that if the CUH–1N helicopter did not include the Canadian assembled Pratt & Whitney PT–6 engine, the Canadians would not have made this purchase.

So it seems that cooperation between the United States and Canadian Governments is in the best interests of both countries. Understandably, nationalistic pride could cause one to conclude that engines used in military helicopters should be American made, but in this case, as in so many others, there is another side to the issue.

Frequently the national interest and our country's balance of payments are best served by international cooperation.

MAYOR JOSEPH M. BARR OF PITTSBURGH URGES MASS TRANSPORTATION TRUST FUND

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. MOORHEAD. Mr. Speaker, Mayor Joseph M. Barr of Pittsburgh testified this week on behalf of the National League of Cities and the U.S. Conference of Mayors, urging the establishment of a trust fund to get on with the job of providing a balanced transportation system for the Nation.

I am delighted to bring the testimony of the mayor of my city—a recognized expert in urban problems—before the Senate Subcommittee on Housing and Urban Affairs of the Senate Banking and Currency Committee, to the attention of my colleagues at this point in the RECORD.

The testimony follows:

STATEMENT OF MAYOR BARR

I am Joseph M. Barr, Mayor of Pittsburgh, Pennsylvania. My statement is presented on behalf of the National League of Cities and the United States Conference of Mayors representing over 14,600 cities in all 50 States.

I appear today with an urgent appeal for action. It is vital that this Congress act and create a trust fund providing substantial, long term Federal support for public transportation.

Mr. Chairman, the cities of America—large and small—face an unprecedented crisis of traffic circulation which is stifling economic growth and social progress. A new program of tremendous impact is necessary.

In large cities, inadequate public transportation services forces the use of private autos which degrades the quality of urban life with increasing traffic congestion, air pollution and we are losing millions of dollars from our tax rolls as we build more highways and parking lots.

Inadequate public transportation service is becoming a major gap between the people who live in our central cities and the job opportunities which are growing in the suburbs. This leaves the city with the enormous problems of the unemployed and the disadvantaged.

Even in the smaller cities, the inadequacy of public transportation cuts off many people from jobs, shopping, schools, and health care.

We should consider another fact also. The Department of Housing and Urban Development estimates that one-third of our urban population cannot drive automobiles. They are people who are either too young, too old, and/or too poor to provide their own transportation and are totally dependent on mass transit.

In brief, more than ever in our history we need a balanced transportation system in our cities—a system of roads, a system of rapid and mass transit created through governmental leadership and supported by public subsidies. Such a system can only be provided by heavy assistance from the Federal Government.

This Committee created the Urban Mass Transportation Act of 1964 essentially to fund limited improvements and to test and demonstrate various programs of improved transit. The time has come to take advantage of the benefits gained from the numerous demonstration projects. The time has come to provide funds for hardware on a massive scale.

We compliment you, Senator Williams, for your leadership on Senate Bill 1032, which recognizes the need for financial resources, for prompt action and not for continued delays.

Under Secretary of Transportation James Beggs told this Committee last week the Administration expects to submit a proposal for a public transportation program by August 15. I know I join you, Senator Williams, in hoping that the Administration submits legislation calling for a Trust Fund.

Many of the members of the NLC and USCM have told the President and his advisers of the importance we attach to the need for a Trust Fund to finance the public mass transportation program. However, if the Administration does not submit such a proposal, the NLC and USCM would like to join with you and other members of this Committee in seeking passage of S. 1032.

My experience of more than 30 years of public service has shown me that major public works programs demand a commitment of public funds over a long period of time. Only a Trust Fund can provide such a commitment. Without the trust fund financing formula, our great Interstate Highway System could not have been built.

We need these assurances in order to plan our transportation systems to acquire our rights of ways, to engineer systems, to order and to buy equipment. Moreover, we need these long-term assurances of the Federal Government before we can produce the support necessary to develop funds to meet the local share of these undertakings.

Let me amplify on what I mean by a long term Federal commitment. I don't mean legislation which authorizes programs or contracts with the promise that funds will be forthcoming sometime in the future. I mean cash on the barrelhead. I mean the appropriation of funds specifically reserved for mass transit over a period of years so we don't have to sweat out annual appropriations on a stop-and-go basis, which in my experience, produces a waste of time, energy and results.

The National League of Cities, and the U.S. Conference of Mayors, at their respective annual conventions have adopted policy positions urging adoption of a public transportation trust fund.

I ask, Mr. Chairman, that the policy statements of these two groups supporting a public transportation trust fund be included in the record at this point.

Now in addition to requesting a long term commitment of funds through a Trust Fund, let me make another point clear. A public transportation program must include supports for bus systems as well as rail systems. Only 15 to 20 cities in this country will ever develop rail transit systems. Most of the small and medium size cities of this country will need improved bus systems to meet their public transportation needs.

An interview between Federal Highways Administrator Francis Turner and a reporter for Engineers News Record was described in the May 19, 1969 issue of that Journal:

Rail lines require high-density areas and can find economic use only in strip-corridor development, as in Manhattan or Seattle. Most cities have sprawled in a circular or rectangular fashion with spokes or radials leading out from dense population areas at the center to lightly populated areas at the edge. As the wedges between these radials widen, people turn away from mass transit to the private automobile. Here's where the

flexibility of the bus comes in. Big improvements must be made on current bus operations. Bus routes will have to be realigned at about eight-block separations in a grid pattern. Frequency and comfort of service have to be upgraded. This is probably going to require subsidy, Mr. Turner said and I end the quote.

As a representative of the Mayors and City officials in communities across America, we have five suggested changes in S. 1032. I will comment on one of them. All are discussed in a memorandum I am submitting for the record as part of the detailed testimony of our organizations.

The principal change the NLC and USCM would urge in S. 1032 is the increase in the annual level of funding. The testimony of Mr. James Beggs, Under-Secretary of the Department of Transportation before this Committee quoted a study prepared by the Institute of Public Administration. This study indicated a capital requirement for a rapid rail system of 12 billion dollars over the next 10 years.

Dr. William J. Ronal, speaking in behalf of the Institute for Rapid Transit, called for 10 billion dollars in Federal funds in the next decade to help finance a 20 billion dollar need for both rail and bus systems.

We urge this Committee to provide a ten year program calling for 10 billion dollars. The first full year should provide 500 million dollars, the second 750 million dollars. After that, we would be prepared to use one billion dollars a year.

Unless we are prepared to devote this magnitude of public investments in transit systems, we will never resolve the transportation crisis in our cities—large and small.

We will only be kidding the people—setting up elaborate machinery but never supplying the financial energy to get the machinery in operation.

We have seen too many well intentioned Federal programs to aid Urban America die of financial malnutrition. We cannot—and will not—let this happen to mass transportation of this nation's citizens.

MONDALE-FRASER BILL REMOVES INCOME LIMIT RESTRICTION ON SECTION 312 REHABILITATION LOAN PROGRAM

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. FRASER. Mr. Speaker, today I am joining with my colleague in the Senate, WALTER F. MONDALE, in sponsoring legislation to remove a major flaw in the 1968 Housing Act. Our bill repeals the provision in the 1968 act which places income limitations on the use of section 312 rehabilitation loans.

Prior to the passage of the 1968 act, the section 312 program provided that all property owners in rehabilitation and code enforcement areas were eligible to receive 3-percent Government loans for property improvements. Under the 1968 act, these loans are now available only to those property owners whose income is low enough to qualify them for admission to 221(d)(3) housing.

Local housing and redevelopment agencies throughout the country are discovering that these limits will seriously impede the operation of many rehabilitation and code projects that have just begun operation. In the past, the section 312 program has been a key rehabilitation tool in these projects. But the new income limits are so restrictive as to make this program virtually inoperable in many areas.

In my district, the Minneapolis Housing and Redevelopment Authority estimates that approximately 50 percent of the people who had been eligible for the 3-percent loans before the passage of the 1968 act would no longer qualify. Those people disqualified by the new regulations tend to be younger homeowners with incomes in the $8,000 to $10,000 range, which is slightly above the 221(d)(3) limit for an average size family in Minneapolis. These are the people we need most to provide stability in our older residential neighborhoods. But we are actually encouraging them to leave the neighborhood when we tell them that they can no longer obtain the 3-percent loan even though they must comply with the home improvement standards established for the rehabilitation or code enforcement project in their area.

The income limits were written into the Housing Act last year because of the concern over the possible abuse of the section 312 program by property owners with high incomes. It seems to me, however, that if isolated abuses are discovered, administrative action should be taken to deal with these abuses on an individual basis. At least in my district I know that virtually all section 312 loans have gone to middle-income and lower middle-income homeowners. Since the inception of the section 312 program, 3-percent loans have been granted to 424 property owners in Minneapolis. The loan and grant department in the Minneapolis Housing and Redevelopment Authority estimates that close to 90 percent of these people have been owner-occupants with incomes under $15,000 a year.

The Minneapolis experience with the section 312 program provides good documentation, I feel, for the need to repeal the income limits provision.

The bill is reprinted below:

H.R. 13273

A bill to amend section 312 of the Housing Act of 1964 to eliminate the provision which presently limits eligibility for residential rehabilitation loans thereunder to persons whose income is within the limits prescribed for below-market interest rate mortgages insured under section 221(d)(3) of the National Housing Act

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 312(a) of the Housing Act of 1964 is amended by striking out the last sentence.

WHATEVER MUELLER DID, IT WORKED

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. TEAGUE of Texas. Mr. Speaker, a key man in the Apollo program is Dr. George E. Mueller, Associate Administrator of NASA and head of the manned space flight program. Since 1963 Dr. Mueller has worked long and hard to assure the success of the Apollo program and build a base for our future national space effort. An article in the July issue of Today outlines well Dr. Mueller's dedicated participation in our national space program and I commend it to your reading.

The article follows:

WHATEVER MUELLER DID, IT WORKED

In 1963 it was clear that American efforts to land a man on the moon were floundering.

NASA officials could see that the first manned Apollo test would not go aloft on schedule. The space project was having technical problems, but worse, it was having organization trouble, disagreements and sagging morale.

The main mission, a man on the moon by 1970, was in grave danger. James E. Webb and other NASA brass decided a new broom was what they needed.

He persuaded the research and development vice-president of a major West Coast NASA contractor, Space Technology Laboratories of Redondo Beach, to take the assignment.

The new man, George E. Mueller (he pronounces it Miller) justified Webb's confidence. In two years, the Apollo program was back on its timetable.

Mueller's background in research and teaching reached back 23 years before the date of his appointment as director of the space program and associate administrator of NASA, in the early fall of 1963.

Fresh out of Purdue in 1940, he was hired by Bell Telephone's research laboratories in New Jersey, and for six years helped pioneer designs of microwave transmission and receiving equipment. Then he joined the Ohio State University faculty, and spent 12 years there earning a Ph. D. in physics, working on microwave antenna and tube design research, and teaching. He became a full professor in 1952.

In 1958 Space Technology Laboratories, a Thompson Ramo Wooldridge subsidiary, lured him to California to run it electronics laboratories. For the next five years Mueller worked on space projects—guidance, tracking, communications and telemetry for unmanned satellites and space probes, such as the solar orbiter Pioneer V. He also worked on ICBM development. Promoted three times, he was successively director of the "Able" space program (an Air Force missile project), vice-president of space systems management and finally vice president for research and development.

When Webb persuaded him to take the NASA job, he moved his wife, Maude, and two daughters to Washington and began, as he puts it now, "trying to get everybody moving in the same direction."

He built an organization inside the organization, its aim to keep the manned space program's scattered centers (one in Florida, one in Alabama and one in Texas) tuned in and working without conflict, under a tightened central control from Washington.

"What I did was to create an infra-structure," is Mueller's cryptic explanation.

Whatever he did, it worked.

"We hope we will be able to carry out the lunar landing this month," he told a Cape Canaveral Press Club luncheon two weeks before the Apollo 11 launch date. "We may not. But if we do not, we still have the equipment to do it, and it will be done soon."

Mueller talks more these days about what will happen after the Apollo landing, and the others after it for which the equipment has been ordered and partly built. The manned space program as it is now laid out ends abruptly in 1972 at the latest—sooner if some of the equipment is used up ahead of schedule by accident or changed plans.

"We are faced with a series of decisions that must be made in short order if the nation is to continue to have a manned space program," he told the Cape Press Club. "What would be a sensible long-range program?"

He thinks he has the answer—"reusability."

"A Saturn V does not cost much more a pound than a Boeing 707," he argues. "If you threw one of those away every time you used it, there wouldn't be many airlines in business."

What he wants to do is build a space station orbiting the earth and another orbiting the moon, and then have "shuttle" rockets flying back and forth to them. All the "shuttles" would be craft that could be used over and over, unlike the present huge rockets which fall in the ocean, burn up in the atmosphere or are discarded in space, leaving only the relatively tiny spacecraft section to return—and even that is not used again.

Mueller figures it costs more than $100,000 using the Saturn booster-Apollo spacecraft-Lunar Module arrangement, to carry a pound of weight from the earth to the moon and bring it back. With a shuttle and space station setup, he figures the round trip cost per pound will fall to $200.

It would, he confesses, cost about the same amount that it took to develop the present equipment to develop the new kinds he envisions. That means $22 to $23 billion.

Mueller thinks that is "not a wildly outrageous set of numbers," and says if NASA gets it, the new system can be in operation sometime in the 1970s and then there could be hundreds or even thousands of space flights possible for each one we can make now.

A quiet professorial-acting type, Mueller is regarded by his associates as "cool," meaning calculating and hard to rattle.

He used to play handball and tennis, but since joining NASA "my work is my hobby," he says. As a college student and as a young researcher for Bell, he used to read science fiction—Jules Verne, H. G. Wells, Astounding magazine.

Looking back, he thinks that may have lighted the fire of his enthusiasm for space, a subject on which he admits he is a "zealot." The story is not uncommon. A study of NASA executives and engineers; especially those under 50, would be sure to show that a high proportion of them grew up soaked in the science fiction pulp magazines of the 1940s.

LA PLATA MARINE WOUNDED, DIES AFTER LEG AMPUTATION

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. LONG of Maryland. Mr. Speaker, Cpl. Robert S. Shegogue, a fine young man from Maryland, was killed recently in Vietnam. I would like to commend his courage and honor his memory by including the following article in the RECORD:

LA PLATA MARINE WOUNDED, DIES AFTER LEG AMPUTATIONS

Lance Cpl. Robert S. Shegogue, a 19-year-old who had talked for years about joining the Marines, died July 18 in Japan after having both legs amputated because of injuries received in the Vietnam war.

Corporal Shegogue's mother, Mrs. Arthur M. Shegogue, of La Plata, Md., said yesterday her son received "multiple fragmentation wounds" of the legs, arms and face while on a search-and-clear mission June 10 in Quang Nam province.

Both legs were amputated at the Da Nang station hospital, and a second, later operation removed the young marine's right leg to above the knee.

After Corporal Shegogue was transferred to the Army 106th General Hospital in Yokohama, Japan, the remainder of his right leg was amputated to the hip, she said.

Mrs. Shegogue said her son was transferred two weeks ago to Tachikawa Air Force Hospital in Tachikawa, Japan, where he died at 3:20 A.M. July 18. She said she was with him at the time.

Corporal Shegogue signed up for the Marine Corps in April, 1968, and joined the Marines shortly after graduating from La Plata High School the following June. He had been in Vietnam since last January.

Mrs. Shegogue said yesterday that her son "knew I was bitter about the Vietnam war before he went over there" but that he wrote letters home telling her: "I feel we really have to be here. I'm not sorry I came over."

Besides his mother, Corporal Shegogue is survived by his father, Arthur M. Shegogue, three sisters, Patty, Janet and Millie, all of La Plata; two brothers, Greg, of La Plata, and Ralph, of Southbridge, Mass., and his grandparents, Mr. and Mrs. Arthur Murdock, of Portland, Maine, and Mr. and Mrs. Edward Shegogue, of Clinton, Md.

Burial will be in Arlington National Cemetery.

EFFORT TO PROTECT SHOE INDUSTRY

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. O'NEILL of Massachusetts. Mr. Speaker, I would like to have included in the RECORD a resolution memorializing the Congress of the United States to adopt legislation to protect and promote the American shoe industry. In this way, the Massachusetts House of Representatives has addressed itself to an important national problem.

The shoe industry of the United States has been faced with a deluge of low-priced imported footwear. Since 1960 the importation of foreign shoes has increased over 600 percent. Within the last year alone the volume of imported foreign footwear has increased by 27 percent. Even the most conservative estimates concerning the future volume of foreign imports alarmingly augments these disturbing figures. The most conservative predictions indicate that by the year 1975 over 50 percent of the American footwear market will be eliminated by foreign shoes. The continuation of this high influx of foreign shoes has implications which not only adversely affect employment within the footwear industry, but threatens the well-being of the industry itself.

In order for one to more fully appreciate the magnitude of this problem one should be aware that there are presently over 1,100 footwear factories located in over 600 communities throughout the United States. These facilities, primarily located in towns where the industry is the principal means of employment, provide jobs for over 200,000 Americans. Many of these newly trained workers were once unproductive members of the hard-core unemployed. The livelihood of these hard-working Americans is now in jeopardy. In the first half of 1969, for example, seven New England shoe factories have been forced to close down. The American shoe industry and its workers clearly need relief from this existing oppressive and dangerous import situation.

In answer to the urgent demand for action, my good friend and colleague, the distinguished Congressman from Massachusetts, the Honorable JAMES A. BURKE, has performed an outstanding service to the Nation in regard to solving this serious problem. As a result of the efforts of Mr. BURKE, a petition signed by more than two-thirds of the Members of the House of Representatives, has been forwarded to the President of the United States. The document, directly dealing with this problem, requests that the White House take immediate measures to enter into negotiations with the principle footwear supplying nations. The ultimate aim of these talks would be to establish a much-needed system of voluntary import limitations. The recommendations made to the President are part of an effort to return the shoe industry to its position as a healthy functioning member of the economy. It is part of a desire to give both the foreign and American footwear industries a fair share of the ever-expanding American footwear markets.

The resolutions follow:

RESOLUTION MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ADOPT LEGISLATION TO PROTECT AND PROMOTE THE SHOE INDUSTRY

Whereas, Many shoe factories have closed down in the Commonwealth; and

Whereas, The import of low-cost shoes with low-tariff duties has glutted the shoe market to the detriment of the shoe industry and threatens to destroy one of the Commonwealth's most vital industries; therefore be it

Resolved, That the Massachusetts House of Representatives respectfully urges the Congress of the United States to enact such legislation as may be necessary to protect the shoe industry so vital to the economy of the country and to subsidize said industry in areas where it may be necessary so that the industry will not be wiped out in various parts of the country, particularly in the New England area and the Commonwealth; and be it further

Resolved, That the Secretary of the Commonwealth transmit forthwith copies of these resolutions to the President of the United States, to the presiding officer of each branch of the Congress of the United States and to each member thereof from the Commonwealth.

House of Representatives, adopted, July 8, 1969.

WALLACE C. MILLS, *Clerk.*

BUSING PROHIBITED

HON. BILL NICHOLS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. NICHOLS. Mr. Speaker, yesterday, this House wisely prohibited the use of funds for the busing of students to

schools out of their home area. This reaffirms the law we have on the books prohibiting such busing. During the recent presidential campaign, President Nixon said, and I quote:

I oppose any action by the Office of Education that goes beyond a mandate of Congress; a case in point is the busing of students to achieve racial balance in the schools. The law clearly states the desegregation shall not mean the assignment of students to public schools in order to overcome racial balance.

Yet despite his statement and despite the law, President Nixon has allowed his appointed officials in both the Department of Health, Education, and Welfare, and the Justice Department, to condone the busing of students to achieve racial balances.

Mr. Speaker, my people just do not understand how the Federal Government can blatantly violate the provisions of the 1964 Civil Rights Act while at the same time prosecuting individual offenders who violate the same law. My people have written me to ask why and I cannot tell them.

It is not just the white people of my State that are opposed to busing. On February 25th of this year, I placed in the RECORD a number of letters from Negro students, teachers, parents and school trustees who opposed the closing of their very fine St. Clair County training school so that integration might be achieved in that county. These people wanted to retain their own school, their own football team, band, glee club, and their own identity. Yet, come September, their school will be closed.

I sincerely hope that President Nixon, HEW's Secretary Finch, and Attorney General Mitchell will give some consideration to the fact that the House has once again prohibited the use of Federal funds for busing to achieve a racial balance.

At this point, I would like to insert again some of the letters from my Negro constituents who oppose the closing of their school this September.

The letters follow:

PELL CITY, ALA.,
January 30, 1969.

Hon. BILL NICHOLS,
U.S. House of Representatives,
Washington, D.C.

MY DEAR MR. NICHOLS: We, the members of the Trustee Board of the St. Clair County Training School, are deeply concerned with the abolishing of our High School Department. The school presently consists of Grades 1–12, and we would like to maintain these grades. If the High School Department is taken away, there will not be one predominantly all Negro High School in St. Clair County. Our school is accredited by the State Department and one of the few schools in the State of Alabama to be accredited by the Southern Association of Secondary Schools and Colleges.

We, as board members, feel that we have one of the finest schools in our county, district or State, with an excellent curriculum designed to meet the educational and cultural needs of our children. We realize the excellent job that our competent and qualified principal and staff are doing in preparing our children to be worthwhile citizens and to be able to meet the challenge of tomorrow.

The losing of our High School will bring bleakness and despair to the students, teachers, parents and the immediate and surrounding communities.

So, we are faithfully asking you as our representative to render your service and efforts in helping us to maintain the present status of our school.

Thank you for your cooperation.

Very truly yours,

LONNIE DAVIS,
Chairman of Trustee Board.
JAMES CUNNINGHAM,
Board Member.
Rev. JAMES KIRKSEY,
Board Member.

PELL CITY, ALA.
January 30, 1969.

Hon. BILL NICHOLS,
U.S. House of Representatives,
Washington, D.C.

MY DEAR MR. NICHOLS: We, the Parent Teachers Association, and citizens of the Pell City and surrounding communities are deeply concerned with a perplexing situation. We have been informed that in the very near future, our school, the St. Clair County Training School, located in Pell City, which presently consists of Grades 1–12, will become an Elementary and Junior High School. Our school, a modern brick veneer structure, with a competent and an energetic principal and a qualified staff are working faithfully and diligently with our children in trying to meet their educational, social, and cultural needs. It will be very regrettable to us that if the High School Department is taken away, there will not be one predominantly all Negro High School in St. Clair County. We feel that we have one of the finest schools in our county, district, or the State of Alabama. It is accredited by the State Department of Education and the Southern Association of Secondary Schools and Colleges.

We are seeking your help as our Congressman and representative from the State of Alabama and our district to render your service and efforts in helping us to maintain the present status of our school.

Thank you for your cooperation.

Very truly yours,

GEORGIA L. KIRKSEY,
President of P.T.A.
LOUIZA LANE,
Member of Executive Committee.
LIZZIE BORMAN,
Member of Executive Committee.

PELL CITY, ALA.,
February 14, 1969.

Hon. BILL NICHOLS,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. NICHOLS: We, the student body of the St. Clair County Training School, are soliciting your assistance in helping to maintain the present status of our school, Grades 1–12. Many of us who had our beginning at the County Training School would like for it to be the school that we could refer to as "our dear Alma Mater." We, the Elementary, Junior and Senior High School students have anticipated being the potential graduates of this school.

Another one of our basic concerns is that we would like to maintain our high school so there might be one predominantly all Negro school in St. Clair County. We feel that we have an outstanding school, for there are many former students who have pursued higher goals in life and have been very successful. Every effort is being done by our qualified principal and staff in providing knowledge and skills that will help us to become useful and productive members of our society.

The school being accredited by the State Department and one of the few schools accredited by the Southern Association of Secondary Schools and Colleges is a remarkable accomplishment for us. Taking the High School Department away will destroy these accomplishments that we have diligently toiled to obtain.

We are seeking your help as our Congressman to render your service and efforts in helping us to maintain our school.

Very truly yours,

ALICE GAMBLE,
President of Student Council.
PEGGIE FORMAN,
Secretary.
MARGARETTA TINSLEY,
Student Council Adviser.

NATIONAL OCEANIC AND ATMOSPHERIC AGENCY

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. KEITH. Mr. Speaker, today I am cosponsoring with Chairman ALTON LENNON of the Oceanography Subcommittee, a bill which will, if enacted, establish a National Oceanic and Atmospheric Agency. It is my hope that this agency which is being referred to as NOAA will advance our oceanographic efforts to the same degree that NASA has done in advancing our space technology.

If the Apollo flight has done nothing else it has shown us what near-miracles can be achieved by a unified, coordinated agency with clearly defined goals. No one has anything but praise for the way the NASA agency has developed our space capacities. When NASA was founded, the United States was a poor second in space; today we are unquestionably first.

But, there is another frontier besides that of space, and that is the ocean. It is much closer to us, yet we know almost as little about it as we do about space. And this other frontier has infinitely more possibilities of benefiting mankind.

At the present time our governmental oceanographic studies are fragmented and diffused among many different departments. The Department of the Interior, the Department of Transportation, the Departments of the Army, the Navy, the National Science Foundation—all these have agencies that work extensively on, in, and under the sea, and interaction with the atmosphere. Additionally it is the oceans. There is duplication, there is lack of coordination, and most important, there is a lack of impetus, of priority of a common mission.

It is a lack of national direction and purpose that the establishment of NOAA is designed to overcome. To coordinate the efforts of these agencies, this legislation would group them together into one single entity. And to give them direction, it would establish a national advisory committee, composed of top-ranking industry, scientific, and educational representatives, who would advise the NOAA agency.

Exploration of our planet's "inner space"—its oceans and atmosphere—holds promise of greatly benefiting mankind. The ocean's potential for food production, for mining, even for habitation, is enormous, and almost totally untapped. With a coordinated national effort, working in conjunction with the sizable civilian sector in this field, we can begin to exploit this largely untouched resource.

Establishing such a unified agency, of course, is only the beginning. We must continue to increase our commitment to this vitally important endeavor. In spite of a recent rise in interest in oceanography, we have as yet barely broken the surface as far as a truly comprehensive national effort in oceanographic research and development is concerned.

Establishment of such an agency, too, can be a logical first step toward joint efforts in exploring and developing the resources of international waters. Some international efforts have been made in this direction, but much more can and should be done, and I see NOAA as a prime vehicle for participating in such future cooperative efforts.

Establishing NOAA can be a valuable step forward in improving both our national and international coordination in exploring the seas. It is an important beginning, and I am proud to be associated with this legislation.

GEORGIA NEWSPAPERS COMMENT ON APOLLO 11

HON. G. ELLIOTT HAGAN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. HAGAN. Mr. Speaker, much has already been written regarding the now historic moon landing. However, I feel the following editorials from some of the fine newspapers of Georgia's First District should be noted as they express the feelings of our everyday citizen for the greatest technological experience and most important scientific achievement the world has ever known:

[From the Statesboro (Ga.) Bulloch Herald Times, July 24, 1969]

The following is a poem written by Frances Hill Hathaway, a Special Writer for "Today" a daily newspaper published in Brevard County, Florida, which is called the "Birthplace of the Space Age." The poem appeared in the Wednesday 16, 1969 issue of "Today," the day of the launch of Apollo 11 at Cape Kennedy.

"LET IT BEGIN

"I am a Dream.
I was birthed in the minds and souls of men. But a greater force than man seemed to surround by drive to become reality.

"I am a Challenge.
I represent the impossible achieved. I am a shout to the heavens that man craves to know, and is coming to find out.

"I am a Fulfillment.
I am a mighty physical creation, dazzling in my proportions. But I am also in men, often in their courage. I offer proof that man has infinite ability to do what he wills, and that these energies can be a powerful force for good.

"I am Hope.
That in opening the door to a new era all peoples may profit from the benefits that accrue. That as he fulfills a long-felt destiny man may greet this new day in a spirit of cooperation and humility—and unity.

"I am a Prayer.
That by reaching into the unknown and seeking such heights, man may become more mindful of his own perspective. That the Faith which propels him on his farthest journey also brings him nearer to his neighbor.

"I am Tomorrow.
I carry men to walk upon the moon. And things will never be the same again.

"I am Now.
I am an idea whose time has come. And I am eager.

"I am Columbia. I am Eagle. I am Earth.

"I am Apollo 11.
And I am ready.
Let it begin."

[From the Millen (Ga.) News, July 24, 1969]

OUR SPACE ACHIEVEMENTS

Every American should stand a little taller after the successful landing on the moon by the men of Apollo 11. Insofar as we can ascertain this is one of man's greatest achievements and has set a mark that will be hard to excell.

This landing on the moon certainly should convince everyone that we have a lot of "know-how" in America. It has created an image that we are not a static people and just satisfied with the status quo or the affluent society that we have been accused of enjoying.

Millions of words will be written and spoken but we find words are inadequate to express our deep gratitude for being an American and for being able to actually witness such a feat. We shall ever press forward and be prouder still that we are Americans. There is much work to be done but we are well on our way if only our people would just find a quiet spot; take stock of what they have that others haven't and just be a little more appreciative of the freedoms that we enjoy and come to a realization that America is the land of opportunity and challenges. We believe that we Americans will measure up.

We were interested to read the thoughts of Werner von Braun, an eminent man of science whose rockets are taking men to the moon, and we quote:

"Manned space flight is an amazing achievement, but it has opened for us thus far only a tiny door for viewing the awesome reaches of space. Our outlook through this peephole at the vast mysteries of the universe only confirms our belief in the certainty of its creator."

Our prayers are for the safe landing of the "Men on the Moon" on earth, as we go to press.

[From the Screven County (Ga.) Sylvania Telephone, July 25, 1969]

THE EAGLE LANDS

A dispirited and restless America badly needed a boost and over the weekend the scientists, engineers, technicians, and above all the astronauts of the national space program gave us one.

It has been a long time since Americans have been as united in their enthusiasm as they were Sunday, pulling for Neil Armstrong, Buzz Aldrin, and Michael Collins to accomplish what seemed virtually impossible to most laymen—the first landing by men on the moon.

Most of the experts had agreed that the touchdown on the moon was the most dangerous and most critical part of the entire exploit, so a national sigh of relief—or maybe a cry of exultation—went up with Armstrong's words: "Tranquility Base here. The Eagle has landed."

This was the climax of long years of struggle. Back in 1957 the Russians quietly launched the first satellite, while our much-publicized Vanguard blew up on the pad. The Russians were first to put a man in space, first to put a man in orbit, first to orbit the moon with an unmanned satellite—for years it seemed that the United States was not doing well with its space effort.

But the failures added to the determination as well as the technical and scientific know-how of the thousands of men and women in the program. Even the biggest blow of all, the fire which took the lives of three astronauts early in 1967, did not critically hurt the program. A full year spent in checking and re-checking safety provisions probably paid off in the long run and the entire program "rocketed" ahead with a burst of speed that astonished even Dr. Werner von Braun.

A team effort it certainly was. Everyone responsible for solving the fantastic scientific problems and the equally fantastic administrative complexities is due full credit. But we don't believe that the wild acclaim for the three astronauts is unjustified. Men who have the courage to undertake a journey like that one are entitled to the unrestrained admiration of their countrymen and at this stage in our national history a little hero-worship will not hurt us a bit.

America has many problems—slums, pollution, noise, racial strife, student unrest, everything that has dominated our attention in recent years.

These problems are still with us and will be around for years to come. But maybe we can now eradicate the worry and frustration of recent years and face the future with the confidence that a nation which can send men to the moon can solve these problems too.

[From the Dublin (Ga.) Courier-Herald, July 24, 1969]

AFTERMATH OF MOON VISIT

For ages men and women have, poetically at least, sighed for the Moon. Lovers have basked in the golden glow of the earth's satellite, and the acme of something to ask for was the Moon.

Through the ages poets have characterized the Moon in many ways, but the Moon remained a mystic ball that changes its shape with mathematical regularity, brought tides and ebb tides to both sides of the oceans. The influence of the Moon as interpreted by men ran the full gamut of human emotions, depending in large measure on the mood of the observer.

But until last week, the Moon was an unattainable and mysterious body, unknown to men, a night object more than a quarter of a million miles away.

Three Americans, with the aid of thousands of earth-bound associates, are in the process of eliminating much of the mystery of the Moon. Soon the scientists in U.S. laboratories will critically and exhaustively analyze samples of the rocks and dust that were picked up on the Moon. The vast amount of information that has been accumulated by Apollo 10 and Apollo 11 will add to man's ability to understand what has been a mystery since the beginning of man.

Has the Moon lost its romantic associations? It has not, we think, but those associations will be enhanced as men delve into the mysteries that have puzzled mankind.

The soft, golden glow will still fall upon the earth. The rising ball of fire will still come up over the horizon and gradually assume the golden globe that it has for centuries past.

But man has been on the Moon, and rather than detract from the associations emotionally and psychologically that men have had for ages, there will come, and is already here, a new appreciation of man's knowledge of and his ability to learn more of the space and bodies that make up the world beyond his immediate touch.

[From the Garden City (Ga.) Perimeter, July 24, 1969]

GREAT EVENT

A dream came true Sunday night when man set foot on the moon.

It would be safe to say that most men living today have had that dream, and perhaps have secretly wished that it would come in their life time. And it did.

Probably the Moon Walk will rank as the single most important event of our lifetime, if not in the entire history of mankind. It clearly demonstrated man's ability to break the bonds of earth and reach out into the universe.

This tremendous step forward, with all of its excitement and wonder, carries with it some sobering implications too. And these center on the uses to which this magnificent feat will be put. Will it eventually be for the betterment of mankind, or will it lead finally to his own destruction? By his own hand?

There is no doubt in anyone's mind where all this should lead, but the big question is "Will it?" That is one which man can only answer himself.

What once was a wild tale of scientific fantasy, though at times, while watching the telecast of the exploration, there was the feeling that this was some science-fiction movie, or the animation of the Buck Rogers or Flash Gordon comic strips. Then came the realization that this wasn't just another movie, but the real thing.

Never before has mankind watched anything like it. Marco Polo did his exploring alone, and reported back his findings and adventures. The same, too, with Christopher Columbus, Lewis and Clark, Admiral Byrd, and all the other famous explorers and their discoveries. While the world, or part of it, waited, the real work was done, and not known for months, and in some cases years.

While the moon landing came a totally new experience. The entire world was there! And while we will have to wait for outcome of some of the experiments, everyone with access to a television screen saw the real discovery as it occured.

Within minutes—even seconds—this big old tired world, which had been growing smaller with each new discovery, had suddenly shrunk to a small object indeed. And with it, man, himself.

If there is a lesson, or a new objective, as a result of the Apollo XI flight, it is that man must settle his squabbles, end his wars, solve his problems, and get busy in harmony to continue on the path set by this great achievement.

This next item which appeared in the Savannah, Ga., Evening Press is, I think, a most eloquent retort to the critics of our space program.

SORRY ABOUT THAT

A fable:

"I regret to tell you this, Columbus, but we've decided against sending you on that voyage," said Queen Isabella. "It's nice to explore the unknown and discover new lands, and it would be interesting to know if the world is really round, but we've decided to call off the voyage and spend the money on problems here at home."

INTRODUCTION OF FEDERAL INCOME MAINTENANCE ACT

HON. JAMES F. HASTINGS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. HASTINGS. Mr. Speaker, today I am introducing a bill, entitled the "Federal Income Maintenance and Public Assistance Act" which I feel is needed to achieve long-overdue reforms in our public welfare system.

This bill would bring a new concept to our social service responsibilities by creating a uniform formula of payments for welfare recipients throughout the Nation, regardless of the State in which they live.

It would place in the hands of the Federal Government under an income-maintenance program the responsibility for needy persons who are blind, aged, or disabled, set up a standard Federal-State public assistance program for needy individuals and families not otherwise eligible under the income-maintenance program, establish work incentive programs by permitting welfare recepients to retain a part of the money they earn without suffering a reduction in their welfare payments, provide for the withholding of funds for those physically able who refused to work, and attempt to remove some of the causes of our growing welfare rolls by providing a voluntary family planning service.

It would crack down on the disappearing father of children born out of wedlock to guarantee payments for their support through reciprocal agreements between States, relieve the burden of States by increasing to at least 75 percent the Federal Government's participation in programs for the medically indigent and provide by block grants to States a much-needed stimulant for research programs to find ways they can divest themselves of the titanic paper work and repetitive bureaucratic chores with the major goal being to increase efficiency and reduce costs.

Our welfare system has developed vastly different responsibilities since its emergent days of the depression. Like Topsy, it grew and grew to a point where costs have soared beyond the ability of the people to pay.

The States' efforts to carry out their responsibilities in the field of public welfare has been an abject failure. Major reform is needed now to bring order out of the present jungle-like system with its jumble of differing regulations, making it a monstrous complexity totally incomprehensible and justifiably irritating to everyone.

My State of New York has been especially concerned and frustrated with this problem.

This bill has been prepared after long conference with one of the most esteemed members of the legislature of that State, State Senator William E. Adams, Republican of the town of Tonawanda.

He is chairman of the State senate social service committee and joint legislative committee on social services and was named recently by Governor Rockefeller to head up a commission to investigate and revise New York State's social services law.

The Federal Government must be equally sensitive to the need for drastic changes now. I might also mention that New York State earlier this year called on the Federal Government to enact just such a law, noting that in today's society, States are no longer able to control or reduce the causes of rising welfare rolls; nor are they able to adequately finance their systems.

This bill seeks to establish a national criteria, consistent with health and human dignity, below which welfare payments would not be permitted to fall.

Through it, the Federal Government by creating an equitable reimbursement system for all States, would be accepting its national commitment to provide a decent standard of living for all citizens no matter where they reside.

It would also reduce the serious problem—especially critical in our urban areas—created by people migrating from States with low payments to States with high payments.

The minimum living standard would be determined by the Secretary of Health, Education, and Welfare, taking into consideration such factors as regional price levels, age and composition of families, and differences in costs of living between urban and rural areas plus conditions of health such as blindness and disability.

Let me cite just one example of present-day payment disparities according to a report for March 1969 on old age assistance.

A State in the Midwest listed 23,100 recipients on its rolls receiving a total payment of $2.4 million for an average payment of $106.20. Yet a southern State with almost five times as many recipients—114,000—paid out about three times as much or $7 million for an average of $61.95.

I realize that differing conditions such as living cost are factors to be considered, but the variance is obvious.

This bill provides for a simple standardized formula for Federal reimbursement for public assistance. It will promote more equitable benefits for the recipients and a financially fairer social service program for the States without penalizing those States and their people whose systems are now more comprehensive.

I respectfully urge my colleagues, as I know they will, to give this proposal their earnest study to prevent total disaster in our national welfare system.

STERNGLASS SENSATIONALISM CRITICIZED

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. HOSMER. Mr. Speaker, all Members of the Congress received a scare letter from Esquire magazine enclosing a copy of an article it is going to publish authored by one Ernest J. Sternglass who is a college professor. For some time Sternglass has been under severe criticism for sloppy scholarship and for dressing up his theories as if they were facts. The following article appears in today's Washington Star and quite properly takes Sternglass to task for trying first to bend theories into facts and then use the result as an argument in the ABM debate:

SENSATIONALISM ON ABM DECRIED

(By Judith Randal)

Esquire Magazine, which thrives on controversy, added a new ingredient to the debate over the anti-ballistic missile this week with newspaper advertisements which many leading scientists regard as irresponsible.

Esquire's ad heralded an article on the ABM luridly entitled, "The Death of All Children." It described this as "a summary of research on the matter of nuclear fallout, pulled together for the first time by Ernest J. Sternglass, professor of radiation physics at the University of Pittsburgh."

So important is its article, Esquire said in promotional letters to newspaper editors and reporters, that although it was received after deadline, it was incorporated in the "September" issue (published July 29) as a stop-the-press insert.

Actually the closely printed four-page "Footnote to the ABM Controversy" is a rehash of tired old arguments aired by Sternglass in various forums over the last six years and discredited almost without exception.

To assert that Sternglass' sensational claims against the ABM are unjustified is not to say that a case cannot be made against the system now nearing a vote on Capitol Hill. There are plenty of arguments against the ABM that make sense—social, geopolitical, technological and scientific—but Sternglass' isn't among them.

There is the danger, from the point of view of opponents of the ABM, that Sternglass' overstatement of risks could actually backfire, even perhaps changing a last minute "no" vote to a "yes" vote.

Sternglass' thesis—which he has aired in testimony before Congress, on television, and in articles in "Science," "The Bulletin of the Atomic Scientists," and a doctor's newspaper called "Medical Tribune"—is that atmospheric testing of nuclear weapons has had a marked and measurable effect on live births in the United States since 1945, when the atomic age began with an explosion near Alamogordo, N.M.

Sternglass claims that nuclear testing has led to "almost one excess death per hundred live births" or a total of "over 440,000 baby deaths" during the nuclear age.

Looking ahead, he has asserted that genetic damage from the detonation of ABM warheads defending against a missile attack "could itself produce sufficient (fallout) in the following few months to seal the biological doom of mankind."

In the Esquire article, he goes even further. "The fact is this," Sternglass writes, "a full-scale ABM system, protecting the United States against a Soviet first strike, could, if successful, cause the extinction of the human race."

Sternglass says nothing about what may happen if the ABM is unsuccessful, or the possibility that developers of the defense system may be unable to stay ahead of determined builders of an offensive capability.

But, whether by accident or intention, he falls into all sorts of traps as he builds his case against the ABM.

Take the matter of excess infant deaths. Sternglass claims the pre-natal exposure to fallout resulting from the 1945 New Mexico tests quickly led to the maintenance of relatively high fetal and infant deaths in distant states lying along the path of the fallout.

In fact, however, measurements recorded at the time of the tests showed that the explosion injected only a minute amount of fallout into the stratosphere, and that the debris was confined to New Mexico and parts of nearby Kansas and Nebraska—not the states where the decline in infant mortality failed to level off as expected.

In reproductive experiments on mice, cited repeatedly by Sternglass (but not done by him), for instance, large numbers of fetal deaths or damaged offspring resulted from injections of radioactive strontium.

But mice are not men, the dose was enormous by human standards, and injection is not the way strontium 90 enters the body after fallout.

Feeding experiments at doses comparable to those following a nuclear explosion in species closer to man have yielded far less sensational results.

Sternglass blames fallout for such things as the reduced birth weight of babies over the past 30 years, although every mother knows that this has come about through altered pre-natal care methods which deliberately hold down the mother's—and the baby's—weight during pregnancy.

In marshalling his "facts" to show a rise in childhood leukemia, he cites what he says was an alarming increase in one metropolitan area where, owing to population growth, the rate has actually remained stable.

This is the sort of "science" for which Sternglass would flunk a graduate student for trying to palm off in the guise of a research paper.

Fraught as it is with irrelevancy and error, the article can add little of consequence to lucid debate on the ABM, and can only cause confusion and emotionalism in a situation already too confused and emotional for anyone's good.

INDIANA STATE POLICE SUPERINTENDENT ROBERT K. KONKLE DESCRIBES INDIANA TRAFFIC ACCIDENT RESEARCH

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. BRAY. Mr. Speaker, we all know that an ounce of prevention is worth a pound of cure, and in the vitally important field of highway safety this is especially true. The following article, Analogue 1000, which appears in the August 1969 issue of the FBI Law Enforcement Bulletin, by Indiana State Police Superintendent Robert K. Konkle, describes the intensive study undertaken of 1,000 fatal traffic accidents in Indiana, and the recommendations made at the conclusion of the study:

ANALOGUE 1000

(By Robert K. Konkle)

Analogue 1000 is the history of 1,000 fatal traffic accidents that occurred on rural Indiana roads and highways between August 1965 and April 1967 and claimed a total of 1,238 lives. This study was an effort to determine exactly how those accidents happened through a probing, indepth examination of any incidents or factors that might have had some bearing on the causes of the tragedies.

The total motor vehicle accident situation is an enormous and complex problem. Efforts in engineering, public education, and traffic law enforcement to prevent accidents are virtually overwhelmed by the rapid and continuous growth of traffic volume. New roads cannot be built fast enough nor can older routes be repaired or redesigned quickly enough to absorb this growing mass of vehicles.

In the field of education, legislative action to tighten up licensing requirements and improve traffic court systems is painstakingly slow. Driver education programs in schools and among adult groups are generally insufficient. Law enforcement is hampered by lack of manpower. The greatest problem facing police in this regard is that the large number of accidents causes investigators to do little more than report their occurrance rather than conduct thorough investigations.

In July 1965 the Indiana State Police, without benefit of any special grants or financing, launched a study project in hopes that probing accident analyses would provide more and better information on the exact causes of traffic accidents.

The project encompassed 1,000 fatal smashups. The size of the sampling was limited in order to keep research within manageable proportions. State police investigators believed the circumstances surrounding these accidents would substantially reflect similar elements of all traffic accidents.

All investigations were conducted by Indiana State Police troopers who are trained accident investigators. At the time of the study, there were 570 troopers assigned to patrol duties in Indiana's 92 counties.

Troopers were given an outline showing only the minimum information which would be required. Beyond this, they were asked to use initiative and investigative judgment comparable to that required in homicide investigations. Their reports were submitted in narrative form and forwarded to State police headquarters in Indianapolis for tabulation and analysis by Lt. Richard A. Berger of the department's traffic division.

Information from these reports was encoded into an information retrieval system. Data from the system cards were then analyzed and compiled for this report.

Blood or breath specimens were obtained in most cases. Blood samples were checked for any trace of barbiturates, amphetamines, and alcohol. Breath samples were analyzed for blood-alcohol content.

FINDINGS

Analysis of the data compiled produced the following findings:

1. Human consumption of alcoholic beverages is the number one cause of rural traffic deaths in Indiana. In this study 746 persons died as a result of accidents in which a drinking driver was involved.

2. The educational level of a driver affects his chances of becoming involved in a fatal traffic accident.

3. Novice drivers, on the road to gain driving skill by means of experience, accounted for 263 deaths according to trooper investigators and in themselves present a critical problem.

4. Approximately 40 percent of traffic law violations in this study could be considered to have been willfully committed.

5. Drivers in certain vocations are more likely to make driving errors that result in traffic fatalities.

6. If groups of people may be categorized, we concluded that the group causing the greatest portion of our traffic accidents is not likely to be reached by safety campaigns.

7. A history of traffic arrests and minor traffic accidents has little to do with the probability of a particular driver's having a fatal accident. By and large, fatal accidents seem to be chance occurrences.

8. Two percent of highway deaths might possibly be suicides.

ALCOHOL

An analysis of figures showing drivers who were known to have consumed alcoholic beverages prior to their respective accidents revealed that 389 (82 percent) were at fault, 33 (7 percent) were partially at fault, and 52 (11 percent) were not at fault. In addition, 18 percent of all drivers who had been drinking were under Indiana's legal drinking age of 21. This portion of the study also showed that half the total number of drinking drivers had blood-alcohol levels of above 0.16 percent. Indiana's legal limit is 0.15 percent.

DANGEROUS DRUGS

Blood specimens only were analyzed for alcohol, amphetamines, and barbiturates

and, for the most part, were obtained from deceased drivers.

AT FAULT—ALCOHOL—BY AGE

Age	Total	Had been drinking	Percent of total who had been drinking	At fault	Percent at fault and alcohol
Under 16	22	2	9	2	100
16 to 21	311	82	26	68	83
21 to 30	339	132	39	112	85
30 to 45	376	141	37	115	82
46 to 60	263	84	32	63	75
60 to 75	144	26	18	23	88
75 and over	50	7	14	6	86

Although we were unable to fully gage the extent drugs played in this study, we did find that nine drivers had consumed barbiturates and five persons were found to have consumed stimulants prior to being involved in fatal wrecks. Four of these persons had also consumed alcohol in addition to the drugs.

VOCATIONAL FACTORS

It was difficult to categorize groups of drivers by vocation because of the ambiguity of the terminology and the debatable nature of the categories selected.

One example of this is where to classify truckdrivers. We put some in the skilled group, some in the semiskilled, and some in the unskilled category depending on qualifications, type of operation, and previous experience.

Office administrators were considered skilled, while file clerks were generally considered to be semiskilled. The professional group contained those persons engaged in commonly recognized business and technological pursuits. The list below is based on tabulations of known vocational data:

Vocation:	*Percent*
Semiskilled	44
Skilled	16
Students	12
Unskilled labor	11
Housewives	5
Farmers	4
Professional	4
Armed Forces	3
Technological	1

Vocations	Total	Percent of total	Mechanical defects	Had been drinking	Percent who had been drinking
Unemployed	44	3	4	22	50
Retired	81	5	2	15	19
Professional	45	3	3	4	9
Skilled technical	10	1	1	4	40
Skilled other	181	12	14	69	38
Semiskilled	477	32	58	150	31
Unskilled	123	8	43	70	57
Armed Forces	29	2	0	9	31
Farmer	44	3	0	6	14
Housewife	59	4	2	10	17
Student	141	9	22	21	15
Unknown	271	18	55	94	35

WEATHER FACTOR

Weather conditions, according to the project study, were an important factor in the overall accident picture.

When a driver is unable to stop at an icy intersection and crashes into another vehicle, it may be construed that the accident was caused by weather conditions. Yet it may also be said that because of the driver's lack of skill in driving on icy pavement and his lack of experience and good judgment, he slid into the intersection and collided with other traffic.

This situation appears analogous to an ice skater who falls on the ice. Did he fall because it was slippery or did he fall because he was not sufficiently skilled at ice skating?

We concluded that the young, inexperienced driver is more likely to misjudge or exercise poor judgment than the older more experienced driver. For example, if a driver misjudges his speed approaching icy intersections several times without killing himself, he will probably develop reasonable judgment and skill in this particular weather-related situation.

MARGIN FOR ERROR

All of us have observed that driving is deceptively easy and that a margin for error does exist, particularly for those drivers who commit hazardous errors and still manage to avoid accidents. Arrests by our troopers for serious moving violations outnumber the fatal accidents we investigate by nearly 100 to 1. This ratio does not take into account the myriad dangerous driving acts that are not seen by officers on patrol.

How, then, can the less experienced person gain driving skills and good judgment without placing other motorists on the road in danger? We consider this a serious problem, substantiated by the study findings.

For example, drivers in the 16- to 21-year-old group accounted for 21 percent of all drivers in the 1,000 fatal smashups. They also accounted for one-third of all drivers in the "drove too fast for existing conditions" category which was primarily weather oriented. Finally, 60 percent of all those drivers shown "at fault" in this age group committed their driving errors as a result of inexperience.

NAMES CHECKED

All drivers' names were checked through Indiana Bureau of Motor Vehicle files, Indiana State Police accident records, and the National Driver Register (NDR). Out-of-State drivers were checked through the NDR only. The NDR at the time of this report, contained only the names of those drivers who had been convicted of a serious traffic violation, such as leaving the scene, driving while suspended or intoxicated, or reckless homicide.

We were surprised at how few drivers had previous arrest and accident records. We had surmised that a fatal accident was the climax of a history of minor accidents and traffic arrests. The statistics from Analogue 1000 do not effectively substantiate this theory. Paradoxically, the study raises the question of whether or not a history of traffic accidents can be interpreted to mean that the builder of such a record has gained driving experience which has helped improve his driving skills.

TRAFFIC LAW VIOLATIONS

Traffic enforcement and education efforts imply that traffic accidents do not just happen—they are caused. The implication is that errors, or traffic violations, are willfully and flagrantly committed. If not committed out of intent, then they are done out of ignorance of the law or carelessness.

The following chart reflects our findings in this area. Intoxicated persons were presumed to have been willful violators:

Violation causes	Number	Percent
Deliberate	373	41
Carelessness	280	30
Inexperience or attention diverted	264	29
Total law violations	917	

Deliberate violators, for purposes of this report, were defined as those who were speeding, passing on a hill or curve, or committing other acts of recklessness.

Violations committed out of carelessness are changing lanes without looking, failing to signal a turn, making a left turn into the path of oncoming vehicles, and others.

Violations in the last category represent those over which the driver has little or no control. For example, a driver crosses the centerline because, in the first instance, he ran off the roadway and, in trying to get back on the pavement, overcorrected and swerved to the opposite lane into an oncoming vehicle. Also inserted in this category were the drivers inexperienced in driving on icy roads.

Deliberate violations:
Excessive speed.
Passed on hill.
Passed at intersection.
Passed on curve.
Passed without sufficient clearance.
Failed to observe automatic signal.
Failed to observe stop sign.
Followed too closely.
Fled from police.
Improper or no lights.
Unintentional violations:
Drove off roadway.
Failed to signal.
Ran into rear of another vehicle (but not following too closely).
Speed too fast for conditions.
Speed too slow.
Failed to yield the right-of-way at a stop sign.
Failed to yield at private drive.
Failed to yield right-of-way (other).
Drove left of centerline.
Wrong way on one-way road.

Routine accident statistics can be misleading. For example, compilations of accident data in Indiana for 1966 showing "driver errors" were published in part as follows:

Failed to yield right-of-way, 24.4 percent.
Drove left of center, 6.5 percent.

The casual observer notes that a leading cause of accidents is failure to yield the right-of-way and might automatically conclude that all such violations are deliberate and committed out of impatience or other reasons. If failure to yield the right-of-way were generally a conscious and deliberate act, then 24.4 percent of Indiana's motor vehicle accidents in 1966 were either suicides or attempted suicides. This, however, is not the case.

ANALYSIS OF FIGURES

A breakdown of our study figures shows that 209 drivers failed to yield the right-of-way and that 93 of these violations were committed at stop signs, 35 as a result of making a left turn in the path of oncoming traffic, 15 at the end of private driveways, and 66 fell under the category of "failed to yield right-of-way—other."

The analysis of these cases revealed that only 10 of the 93 violations committed at stop signs were deliberate, while eight committed in making left turns were deliberate. Two from a private driveway and six in the "other" category were also done deliberately. A close look at the analysis shows, therefore, that 26, or 12.4 percent, of the drivers in our study who failed to yield the right-of-way committed these violations deliberately. The foregoing example illustrates how routine accident statistics can be misinterpreted.

We note that "drove left of center" accounted for 6.5 percent of all the accidents in Indiana in 1966. Were these conscious acts?

Of those drivers in Analogue 1000 who were on the wrong side of the road at the moment of impact, 90 (27 percent) had no intention of being there. A total of 60 percent committed this violation because they were under the influence of alcohol.

Strict enforcement of traffic laws may prevent the rapid rise of accident rates because deliberate violators are probably deterred by seeing police on patrol and are motivated to pay strict attention to their driving to avoid arrest. It appears doubtful that strict enforcement has any measurable effect on unintentional violators.

SUICIDE

Suicide by way of a traffic "accident" may occur more frequently than we realize. This method of suicide can easily be used to defraud insurance companies if the victim ex-

ercises reasonable guile in his own execution.

Life insurance policies often have double indemnity clauses which make such an "accidental" death more appealing to the would-be suicide in that he or she might be able to leave a substantial amount of money to survivors. And when fraud is the intent, there is obviously no suicide note left behind.

The cases in this category were placed there because of the circumstances existing prior to the death and the fact that other evidence indicated a possibility or probability of suicide.

The number shown in the report therefore is, in reality, a sum of probables rather than proven facts—20 men and eight women, half of whom were under the influence of alcohol at the time of impact.

We believe it is important to recognize that some fatal accidents are suicides and that police investigators should never overlook this possibility.

None of the investigations in the study disclosed evidence of premeditated murder.

MECHANICAL DEFECTS

Mechanical defects, for purposes of this study, included only those defects which in most cases were not the primary cause of the accident. But, had the defect been absent, the accident might not have occurred. This segment of the study therefore is a tabulation of investigative judgments.

MECHANICAL DEFECTS

	Number	Percent
Faulty steering	11	5.3
Faulty brakes	25	12.2
Faulty suspension	5	2.4
Faulty lights	17	8.3
Faulty window glass	6	2.9
Faulty windshield wipers	2	1.0
Faulty exhaust system	6	2.9
Miscellaneous other	13	6.3
Faulty tires	121	58.7

In most cases the officer and a garage mechanic examined the wreckage. We have every reason to presume that all defects contributing to the cause of accidents cannot be found. In some cases disintegration was such that the detection of preexisting defects was impossible.

In our opinion the "faulty tire" category may be misleading. Since 106 faults were termed "excessive tread wear," the question arises what might have been the outcome of the accident had the skidding vehicle been equipped with tires in good condition? We surmise that some accidents might have been less severe with increased braking traction and that perhaps some would have been avoided completely under the assumption that no uncontrollable slide would have occurred in the first place.

Fifteen of the tire faults were so listed because they blew out or lost air before the accident and, in the investigators' opinion, contributed directly to the cause of the accident.

In summary, we believe that mechanical defects pose a real hazard in the total traffic accident picture. Based on that belief, the department strongly endorses mandatory vehicle inspection programs.

CONCLUSION

We are aware that Analogue 1000 is not a scientifically perfect research program. But the findings of an indepth investigation of 1,000 fatal traffic accidents have provided us some valid facts.

We believe the information gained concerning alcohol-related accidents reflects the need for more effective controls on the drinking driver.

In the area of mechanical defects, the figures clearly reveal that the combination of safe drivers operating safe cars can help cut down the accident toll.

In still another area, this study points up the need for establishing some kind of controlled traffic training environment in which young drivers can gain driving experience under all kinds of road and weather conditions without endangering lives.

In the final analysis, traffic safety is not just a police problem. It is a "people problem" in which there are achievements still to be gained from responsibilities yet to be assumed by people who administrate, who enforce, who judge, who teach, and, finally, by people who drive.

We have learned how to project man into outer space and return him safetly to earth. Now, we have got to find a way to keep him alive on our streets and highways.

THE NEED FOR RESTRAINT

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. STEIGER of Wisconsin. Mr. Speaker, the able and distinguished Assistant Attorney General, Jerry Leonard, spoke yesterday before the Council of State Governments meeting in Mobile, Ala.

His statement is an excellent and thoughtful presentation of the need for restraint on the part of the Federal Government in dealing with the problems of disruption and violence on the campus.

These remarks are most appropriate in my judgment and deserve the attention of the Members of the House:

REMARKS BY ASSISTANT ATTORNEY GENERAL JERRIS LEONARD, CIVIL RIGHTS DIVISION, JULY 31, 1969

I am very pleased to be with you today.

We are witnessing an attack on the basic foundations of society. Our American institutions are being assaulted by a barrage of "non-negotiable demands" for reform.

Society must recognize the need for change. We must not be insensitive to demand for change; but, there are those who wish more than a change in our way of life. They wish to destroy us from society. They have no plan; they have no proposals for a new society or a new government; their only promise is the total destruction of the Nation. They are revolutionaries and their cause is anarchism and nihilism.

The institution most easily reached and closest to these agitators is the college campus. The unrest these revolutionaries foment on the campus is challenging every known orderly process of our educational institutions.

One of the great difficulties in dealing with campus unrest is the inability to recognize those students who seek university reform as an end and those revolutionaries who use university reform as a tactic. Unfortunately, the former are too often lumped together with the latter.

Colleges are and have been far from perfect. While advocating and realizing vast change for others, for themselves the status quo has been their watchword. The college professor, tweed suit, pipe in hand, philosophizing about the poor and the masses while demanding intellectual cadence of all he surveys, is the picture of the status quo.

There are legitimate demands for reform which must be recognized, must be met, and require appropriate attention from college faculties and administrators.

We created a technological revolution to conquer the moon. Our accelerated industrialized society must now begin to deal with the effects on our every day life that this new technology has brought.

The colleges must deal with today's space age society and begin to meet the needs of the space age student, and more importantly, those college administrators and faculty who would blame all student unrest solely on the failure of government to "end the war" or "feed the poor" or "right racial injustices" must be exposed for what they are; charlatans and demagogues.

David Lawrence, Editor of *U.S. News and World Report*, in a recent editorial put the situation in proper perspective. Recognizing that some student unrest does result from controversies over public affairs, he concluded:

"It is unfortunate that the educational institutions have not tackled the problem of how to help an individual to get ready for the type of career in which he would be most likely to succeed. Instead, a large number of students are bored with courses of study they do not like. They continue for four years to worry about what their future is going to be.

"Aimlessness, frustration and restlessness are today making many young people receptive to mob psychology, as they yield to incitements by agitators and activists bent on creating disturbances in our country."

Now to a discussion of the methods by which those who demand seek fulfillment of their ends.

We miss the point when we categorically dismiss student demands as just more evidence of Communist activity. To many of these anarchists, the Communist party itself is part of the "establishment" which they seek to tear down. We must avoid the tendency to simplistic analysis of the problem and thus rush to embrace simplistic solutions.

Let me give you an anatomy of a campus disorder based on a composite of actual developments on several campuses:

To start things off, a conference is scheduled, perhaps a "Conference on Black Revolution." Active black militants are invited, both conservative and radical, to lend visibility and credibility to the effort. Conference topics include: black literature, origins of negritude, the role of the church in the black revolution, the necessity for militancy, black students and the white university "establishment," public schools in urban communities, violence and crime and the failure of the black man to obtain his share of America's benefits.

Nothing wrong with discussing these subjects, but unfortunately there are those who seek greater visibility for their cause.

The militants decide it is necessary to resort to active measures: they unsuccessfully try to disrupt a sports event but have much greater success in efforts to march from building to building and interrupt classes—they also receive better publicity doing this.

At this point, in the development of the campus disorder, campus security police, largely inactive so far, notify local police and the sheriff's office, but even with this help they cannot outmaneuver the "hit and run" tactics of the activists; so the national guard is called in and cordons off the campus. This acts as a catalyst and swings many previously "uncommitted" students against the law officers. The militants have succeeded in radicalizing the student body.

Thus a demonstration that first involved 50 students making demands grows to 300 marching on a basketball game and finally gains active support of 5,000 or about 20% of the campus. In the meantime, other radical groups use this situation to gain publicity for their own ends.

In our composite college it turns out that major steps had been taken for black people, such as lowering admission standards; setting up of a black studies program; but the school authorities in a characteristic noblesse

oblige attitude neglected to inform the students and the public of these programs. This failure to communicate is multiplied over and over again: failure to communicate with students, with faculty, with the public. There is a conspicuous lack of dialogue and a conspicuous abundance of polemic. Students who seek information and advice from faculty and administration frequently end up frustrated.

Black students, great numbers of them, have a compelling desire to go back to the ghetto to help their brothers break the cycle of ghetto life. This is a sincere desire; but all too often educators and administrators either don't listen or they engage in intellectual paternalism and can't understand the students' viewpoint. In short—they don't "relate."

Too often, we in a consensus orientated society look for the one man who speaks for the black man or the student or the militant. No one person does, any more than one person speaks for any other racial, ethnic or political group.

We see here the symptoms of a problem manifesting itself in a disaffection of the student toward college curriculum and instruction. He is joined by a large number of students who want colleges to prepare them for space age living.

These students want to know why most freshmen and sophomores are taught by graduate students. Why can't the colleges achieve lower student-teacher ratios so all students may benefit from exposure to professors in the classroom?

The lack of answers to these questions results in a feeling among lower classmen that they are helpless in a monolithic society. Frequently, they vent their frustrations by attacking computer centers where the students think machines control their lives. This monolith syndrome is compounded by the grotesque size of too many campuses; frustration by the competition for grades, which they must obtain for good jobs and entrance into graduate schools. It is disillusioning for the serious student, who seeks knowledge and truth from the college, to see the guardian of knowledge and learning, demand, not improvement of the mind but "publish or perish" as the standard for success; quantity, not quality. Plato and Aristotle would have failed miserably in todays college because they were concerned with the development of men's minds.

So, you see the problem on today's campus is not a simple one and cannot be solved with a simple solution.

The President and the Attorney General have made clear the position of the central government. We are not to be the enforcers of order on the campuses.

It has long been recognized that the local community is best equipped to handle the problems of law and order. Each campus disorder has its own particular character. To enact a national law to cover these differences requires broad language—broad language means different interpretations, in different situations and presents a danger to constitutional guarantees.

It is the responsibility of the academic community to recognize and deal with the problem of campus reform and campus unrest. The American Council on Education has made clear that unless the community solves their problem it will be solved for them.

State and local governments are better equipped to pass laws and enforce existing laws to deal with local problems than is the National Government.

Today, universities across the country are recognizing this responsibility. At Cornell, Wisconsin and Stanford, scenes of major campus disorder, rules are being formulated to control and prevent future outbreaks. State legislators are passing laws regulating the use of sound amplification devices and other mass communication tools of student revolutionaries.

College and university governing bodies are adopting reasonable rules and regulations, they are recognizing that a difference exists between those individuals who wish reform and those who wish destruction.

In a survey of 194 campus disorders involving 577 incidents such as sit-ins, disruptions, walkouts, etc. the university responded 73.9% of the time by calling in the police making arrests, disciplining students.

Every sit-in is not disruptive. Every civil disobedience does not cause destruction. Yet, everytime the law is broken it must be enforced. Thoreau wrote his famous essay from prison and Martin Luther King preached non-violence from his jail cell.

We do not have need of the Federal presence or federal law. There are those who would cut off federal money from these schools. If we carefully examine this approach we see clearly that this is a "massive retaliation" approach. Every one of the top ten schools in this country who receive federal assistance have had campus disorders. These schools are heavily engaged in government research involving hundreds of millions of dollars. The programs and missions of the Atomic Energy Commission, Department of Defense, Department of Health, Education and Welfare and National Aeronautics and Space Administration would be seriously impaired.

Let me emphasize the position of this Administration by quoting part of a letter sent to Congressional leaders by Attorney General Mitchell and HEW Secretary Finch, just a few weeks ago:

"First, forcing institutions to submit or certify that they have developed such policies and plans dealing with campus disorders would imply a Federal standard by which their policies and plans would be judged. The Federal Government must not be placed in the role of enforcer or overseer of rules and regulations for the conduct of students, faculty, and other university employees.

"Second, the administrative independence of colleges and universities is an essential element of the academic freedom which this Nation has always cherished for its institutions of higher education. Responsibility for the orderly maintenance of these institutions should not be preempted by any Federal agency.

"Third, federal legislation already exists which withdraws aid from students who engage in disruptive violent acts at college. To extend this cutoff to institutions would be beyond existing laws and punish the entire academic community which is, after all, the victim, not the instigator, of violence."

This is not to say that the central government does not have an interest in campus disorder. A riot on a campus is no different than a riot any place else. It can result in violations of law, which, if not properly attended to by local jurisdictions, can become a matter of federal concern. Riot instigators who cross state lines; police who over-react and administer summary punishment; rioters who destroy federal property, all run the terrible risk of involvement with the U.S. Government.

But, we must not let a handful of revolutionaries achieve the one goal they are most anxious to attain—the destruction of the university.

At Columbia 3 percent of the students actively participated in disorders; at the University of Chicago 2.8%; at Berkeley 6.9%; at Ohio State .19% and at the University of Illinois 1.51%. These are typical examples.

We must not let this minority succeed. We must work to reform the universities. The universities and the States must work together to develop procedures to deal with the revolutionary radical.

When an individual does not obey the law he is arrested. If he continues to disobey the law he is imprisoned—expelled from the community until he is rehabilitated.

When a student does not obey the rules of the university he must expect to be disciplined. If he continues to disobey the rules he must expect to be expelled from the academic community.

The Council of State Governments must be in the forefront to assist our states in developing plans and enacting laws to deal with the campus problem.

ANTHONY SADOWSKI—POLISH PIONEER

HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. HELSTOSKI. Mr. Speaker, on July 10, I introduced H.R. 12740, legislation authorizing and directing the Postmaster General to issue a special postage stamp in honor of Anthony Sadowski, known as the "Polish Daniel Boone," in commemoration of the 300th anniversary of his birth.

Anthony Sadowski was a Polish frontiersman of Pennsylvania, who had settled and left his mark on what later became Berks County, and more particularly Amity Township which Sadowski helped to found.

Early this year more than 500 people came to old St. Gabriel Cemetery in Douglasville, Pa., and took part in a ceremony to honor someone who had been buried there 233 years ago—Anthony Sadowski.

The people that gathered in that cemetery did so because of Sadowski's ancestral link with Poland where he had been born 300 years ago. They were mostly Polish Americans from the Reading and Philadelphia area and had one common interest, that to revive the spirit of Anthony Sadowski by the unveiling of a monument to his memory.

The man who really brought life to the spirit of Sadowski was Mr. Edward Pinkowski, the chairman of the Sadowski memorial committee, for which he was awarded a certificate of appreciation by the Amity Township 250th Anniversary Committee.

Mr. Speaker, in order that my colleagues may be better informed on the background of Anthony Sadowski, I wish to include, as part of my remarks, the history of Anthony Sadowski written by Edward Pinkowski and which was released in the official publication of the Sadowski memorial committee, issued in connection with the dedication of a Sadowski historical marker at Douglasville, Pa., on September 18, 1966.

The story on this Polish pioneer follows:

ANTHONY SADOWSKI: POLISH PIONEER

(By Edward Pinkowski)

On April 22, 1736, having grown weak, wistful and wise at the age of sixty-seven, Anthony Sadowski died quietly in Amity Township, 50-odd miles up the Schuylkill River from Philadelphia, and his remains were buried, in the presence of his family and a few intimate friends, in the graveyard of St. Gabriel's Church not quite a mile down the river from his home.

Hardly anyone thought of it at the time, but generations later, when descendants tried to trace their lineage back to Anthony

Sadowski, they could not find complete records of their descent. They ran into a maze of conflicting first names, half-truths, errors, and family traditions. Two different branches of the family rarely reached the same conclusion from the information at hand. Their big problem was to hurdle the tendency of the family to assign real facts to later generations—in other words, to telescope generations—and confuse family relationships. Consequently, some descendants don't know that Anthony Sadowski was their first American ancestor.

Indeed there was no similarity in names for anyone to think otherwise. By the beginning of the twentieth century the family name looked as if it had gone through a wild babel of tongues. It was spelled in many ways in early records—Sadoski, Sadusky, Sowdusky, Sadowskij, Zadoroski, Saduscus, Zadosky, Sadusky, and Sandusky, to mention a few of them. The original name was derived from "sad," a Polish word for orchard, or Sadowie, an isolated village not far from Ostrowiec on the Kamienna River, in the Polish province of Kielce. The "d" in the name has a heavy, nasal sound that might make a person not familiar with the Polish language think it had an "n" before it. Thus, the name most used, and the one that survived, was Sandusky. But in no known authentic signature did Anthony Sadowski ever sign his name in this manner.

He signed his name, as shown on his will at Philadelphia and a few letters found in the Pennsylvania State Library at Harrisburg, Antoni Sadowski. As there is no "th" sound in Polish, he wrote his first name exactly as have all others in Poland who have the first name of Anthony. However, he wrote with such sweeping curves to his capitals and flourishes after his name that his signature probably confused copy clerks. The flourishes after his names, both of which ended in i, looked as if the downward sweeping flourish was the tail of a y or a j. Kosciuszko and other Polish figures of the colonial period also used the same writing style. So, though Sadowski carefully dotted each i, when a clerk transcribed his signature into the record books, he ignored the dots, but gave heed to the tails, and made his name in most records "Antony Sadowsky."

Mystery shrouded his noble origin until his great-great-great-great grand daughter, Dorothy Sandusky, whose people were pioneers of Vermilion County, Illinois, went to Poland with her husband, Dr. Joseph Taylor, to round-up Polish refugees who had been displaced by World War I. Dorothy became his assistant. Ignace Jan Paderewski, premier of the reconstituted Polish state, gave them all the aid that was required to do their work. The Taylors were frequently guests in the home of the Polish premier and his wife.

"You know," Dr. Taylor remarked one day at dinner, "my wife is Polish. Her name was originally Sadowski, but now everybody pronounces it Sandusky. Some people think it was Jewish."

"Oh, I know that family," replied Mrs. Paderewski. "They never were Jews."

To show her more of the Sadowski traces in Poland, the wife of the Polish premier provided a carriage and an interpreter for Mrs. Taylor to visit an old Polish castle. The castle floors were made of cobblestones. On the walls hung the family coat or arms known as Nalecz, and near it a fireplace so big that it could roast an ox. The caretaker was named Sadowski.

As she toured the castle, the caretaker told Mrs. Taylor interesting stories about the family that possessed the Nalecz coat of arms. He told her that two sons of Martin Sadowski had left Poland and gone to America at the time of the Swedish invasion. When she pressed him for the names of the two brothers, he told her, "Study the family coat of arms. It will tell you a lot about your ancestors in Poland."

Whether he told her that Nalecz was Anthony Sadowski's coat of arms or whether she gained it from a heraldy book, such, at least, is the explanation that Mrs. Taylor—and, no doubt, many other branches of the Sandusky family—accepted. In their homes in Kentucky, Illinois, Indiana, and Kansas I have seen reproductions of the Nalecz coat of arms. Instead of the name Sadowski on them, they have the name Sandusky.

As far back as heraldry runs, the clan was one of the sturdy and respected families of the minor nobility in Poland. It begins with Thomas Sadowski at Sadowie (Sadowia). From there he was taken in 1452 by Zbigniew Cardinal Olesnicki, the first cardinal Poland ever produced, and given a church assignment in the town of Miechow, twenty miles north of Cracow. Another one with the same family shield, Daniel Sadowski, became Archbishop of Gniezno in west central Poland. Born at Radom, not far from Sadowie and perhaps of the same clan as Anthony Sadowski, was Stanislaus Sadowski, who arrived at Jamestown, Virginia, in 1608 to help Captain John Smith's colony with its lumber production and who left no other traces in America. One tradition says that he was an uncle of Anthony Sadowski.

An old friend and colleague, Arthur L. Waldo, who in "First Poles in America" has described his experience with a rare and now missing book, "Memoirs of a Merchant," written in old Polish script by Zbigniew Stefanski, one of the original Jamestown Poles, sent me the following information on Stanislaus Sadowski:

"We know very little about him. However, I have a strong suspicion that he was the one who became quite notorious in Poland during the final years of the sixteenth century. He was a Calvinist by faith, a traveler and a man of many trades. In 1594 he published a famous brochure against the Jesuit priests of Wilno entitled 'Idolatriae Jesuitorum Vilnensium Oppugnatio.' He was ostracized by the Catholics who appealed to King Sigismund III to put Sadowski to death and burn his brochures.

"He had to leave Poland, went to England and later arrived in Jamestown, giving for obvious reasons now the city of Radom as his place of origin, instead of Ostroleka.

"I would not exclude a possibility that Anthony Sadowski was related to Stanislaus Sadowski of Jamestown fame. . . .

"Stanislaus returned to England in 1609 with Captain John Smith, but eventually returned to Jamestown. He was in Jamestown in 1619 during that first strike on American soil. Then he might have been about 55 years old."

Unless Mrs. Taylor was given a bad steer, Anthony Sadowski came from the clan with the Nalecz coat of arms. His father, Martin Sadowski, kept closer ties to Gostyn, a town in west central Poland, than to Sadowie where the clan apparently originated at least two centuries before. He was a chamberlain of Gostyn in the time of King Wladislaus IV. In 1643 he became a member of Sejm, the Polish parliament, and one of his duties was inspector of the royal estates in the Ukraine. His career in the Sejm was brief. Next he was a castellan of Gostyn and in 1650, while still holding the same position, he erected a wonderful church and convent for the Sisters of St. Clare in Lowicz, a religious center between Warsaw and Lodz. It is said that he served three kings of Poland.

Anthony Sadowski was born during the period of Poland's greatest financial woes. Presumably the year of his birth was 1669. The records of St. Gabriel's show he was sixty-seven when he died. The long war with Russia just before he was born had drained Poland's treasury. The election of John Sobieski as King John III in 1674 gave fresh impetus to correction of evils in the Polish government. Not all members of the Sejm felt the same as the new king. Some of the rich members, satisfied with their lives of ease and luxury, did not know what changes the king's reforms would bring, and they preferred to have things remain as they were. They won.

King John III's efforts to reform the country, however, captured the imagination of many Polish students, including Anthony Sadowski. There is a tradition that as soon as he finished his schooling he followed in his father's footsteps and served two kings. Unquestionably he drew into his blood the burning conviction of King John III that Polish rights, Polish freedom, and Polish soil must be cherished at all costs, even the cost of one's life.

The schools that he attended are unknown. The statement of his great-granddaughter, Mrs. Susan Shanklin, to Rev. John D. Shane in 1854 that Anthony Sadowski was "a great scholar" and could "speak seven different languages" arouse the strong suspicion that he went to a good classical school. Anyone who did go to such a school in Poland learned the Polish, Russian, German, French, Latin and Greek languages, mathematics and the natural sciences. Others said he may have been a priest because he was deeply religious. If he had attended a theological seminary, he could have learned Hebrew rather than Greek or some other language so that he could read the Bible in its original language.

But if the facts about his education are few, there are many questions swirling about his shadowy figure. What, for instance, did he look like?

There is no known portrait of him. One may only assume that he possessed the same physical characteristics as the majority of his male descendants. In over two hundred years almost every Sadowski male has been prodigal of his physical strength and capable of great physical endurance. The photographs available of his fourth and fifth lines of descent and the present descendants, some of whom I have studied carefully, show short, broad skulls, fair complexions, and thick-set bodies. The descendants who trudged into the Kentucky wilderness shortly after the American Revolution to make their homes were considered big, strapping men. Thus it is hard to conceive of the progenitor of the American clan as anything but tall, light-complexioned and strong.

The women of the clan, on the other hand, present a wider range of physical characteristics. The descendants of Anthony Sadowski, through his son and three daughters, who married and left issue, have been numerous, and have, by interstate migration, spread out into all parts of the United States. Some ten generations have been added to the clan and marriages with other groups have produced a polyglot a mixture as any family has in America. One of them was "amused to discover that I myself, in looks and character, am far more Polish than I am Dutch, French, Scotch, English, Irish, or German."

As the clan grew and grew larger, the elderly folks, who sometimes traveled great distances to see their loved ones, perpetuated many traditions of the first of the family to migrate to the new colonies in the wilderness of North America. The youth were often told to remember what they heard because the information about Anthony Sadowski was not in books. Unusual words or phrases stuck in their minds and were passed from one generation to another.

The story of his departure from Poland is one of the most stirring in the annals of American Poles. As I am the sixth one of a chain to learn this story, some explanation of its survival may therefore be in order. Anthony Sadowski's daughter, Ann, told it to her grandson, Amos Miller, and in 1850, ten years before his death, his wife, Mary Dewitt Jayne, gave it to their granddaughter, Mrs. Eliza Brooks Mitchell, and she in turn passed it on October 3, 1901, to Allene Miller, seventh in line of direct descent from Anthony Sadowski. The story was in written form in May, 1966, when Mrs.

Ailene Miller Williams presented it to me at her home in Champaign, Illinois. Some details from Jane Sandusky and Mrs. Taylor were added to the story.

It probably happened at the beginning of the Great Northern War in 1700 when Sweden invaded Polish territory on the Gulf of Riga. Brave, adventurous, loyal subjects of Poland, Anthony Sadowski and his brother quickly left home to take up arms in defense of their country.

Misfortune followed them. Somewhere in the invasion of Riga by the Swedish troops under Marshall Fleming in the spring of 1700, Anthony was captured by a "press-gang" and his brother was killed in a surprise attack on their position. When Anthony refused to enter the service of a group of Swedish soldiers, he was brought before one or two Swedish officers for questioning. He refused to reveal the sites of Polish fortifications, how many men held them, and where the Polish supplies were kept. He guarded such vital information with his life.

To force him to talk, his captors put him upon a rack, an unusual looking wooden framework, tying his ankles to the bottom of the frame and his wrists to a wooden bar at the top. He was questioned again. At the same time the bar was turned in such a way that he felt his joints were being pulled apart. For two days he endured this torture. When he stubbornly refused to reveal any secrets, he was removed half dead to a prison ship in the Gulf of Riga.

On board ship he apparently pretended he was dead. He was left unguarded. His hands and feet, of course, were numb, but he could stare past his guards into the water and estimate the distance to shore. When the ship was nine miles from shore, he got a chance to take off his clothes, tie ten pounds of coin in a sack around his neck, and jump from the ship under the cover of darkness.

The moment he got into the water he was faced with stiffness. He was not sure he could swim to shore. But even as he struggled in the water, he knew he had only postponed the inevitable. The best he could hope for would be a quick death by drowning rather than the long, drawn out torture at the stake. His mouth must have twisted in an ironic grin. It might have been better after all if his captors had tortured him to death.

Instinctively, he swam as the water wet his body. A few minutes of swimming gradually restored the circulation to his arms and legs, which had been tightly bound for two days. He held on desperately as he narrowed the distance between him and shore. He floated whenever he needed to catch his breath, but each stroke took him closer to freedom and he forced himself on. Finally he reached land and limped away into the countryside, sore and bruised, but safe.

Evidently he did not go back home. He would have been shot or hung if recaptured. Some American branches of the family, together with the Sadowski in Poland who talked with Mrs. Taylor in 1919, created confusion by claiming that two brothers came to America. Jacob E. Sandusky; who wrote an account of the family in 1888, was aware of this confusion, and he specifically said that the progenitor of the American clan "was the only one of the name that ever came to America." Not until I met Joan Sandusky, a member of the branch that settled long ago near Danville, Illinois, was I able to clear up this confusion about the two brothers. In her family it was always said that one was killed in battle and the other came to America. Credit Mrs. Taylor, however, for learning that Anthony Sadowski left Poland, leaving family and possessions behind, at the time of the Swedish invasion.

Another puzzle is the question of where he spent two or more years prior to his emigration to the New World. Everybody agrees that he came to this country in the reign of Queen Anne of England (1702–1714) and landed at New York, but no two branches of the family agree on the exact year and whether anyone accompanied him or not. Did he make his way to Holland and come with the Dutch to New York? Or to France and across the Atlantic with some Huguenots? Or was he one of the immigrants brought over from Scotland and England?

As pieces of information were added to the puzzle, the evidence confirmed a tradition that Anthony Sadowski, prior to his emigration to the American colonies, spent a few years in Scotland. The first records that refer to him in America tie him in with William Laing, a Scotch immigrant and a wealthy planter of Freehold, New Jersey. The first record is dated May 21, 1709, when Anthony Sadowski, William Laing, and Richard Clark were witnesses to the will of Benjamin Cook, another planter of Freehold. William Laing died about the same time, and when an inventory of his estate was filed in 1710, it showed that Anthony Sadowski owed him one pound and five shillings, but the debt was paid by the time the estate was settled in 1716. William Laing's brother was master of a school in Cannongate, Edinborough, Scotland, and his cousin was master of a school at Leith, Scotland. It is believed that Anthony Sadowski fell back on his linguistic skill to earn a living and taught a foreign language in one of the private schools in Scotland. But of this no one can be sure, except that the two schoolmasters from Scotland, both named Alex Laing, picked Anthony Sadowski to make a detailed account of William Laing's estate in 1710.

If one studies family records, however, one can find evidence that he was in America much earlier than 1709. His wife, Marya Bordt, or Mary Bird as it was Anglicized, came of Dutch forebears who were located at Mespatch Kills (Newtown), Long Island, as early as 1682. According to records of the Raritan Dutch Reformed Church, she was still not married in 1704 when she was a witness to the baptism of her brother's child. The average age of girls who married then was 14 or 15 years. Presumably she was about that age when she married Anthony Sadowski, who was at least twice her age.

Their daughter, Justina, gave birth to a son, James Warren, named after her husband, on May 3, 1722. If Justina was at least 16 years old at her son's birth, she would have been born not later than 1706. Thus it is reasonable to suppose that Anthony Sadowski and Mary Bird were married between 1704 and 1706, and that he arrived at New Amsterdam, as New York was then known, between 1702, the beginning of Queen Anne's reign, and his marriage to Mary Bird.

Brief and incomplete as it is, this is the background of a Polish pioneer in America. In later life Anthony Sadowski made no speeches and wrote no memoirs reminiscing about his European experiences. His early descendants likewise recorded but little. They carried stories about him in the oral tradition for more than two centuries, and small details, unusual words or phrases like "nine miles from shore," "press-gang," "ten pounds in coin," "put upon the rack," and other things indicate that folklore, if used with facts and figures, can be a valuable tool in writing history. This account of his early life is necessarily a composite of many traditions.

II

Crossing the wide, deep Atlantic Ocean in the early part of the eighteenth century meant more than merely giving up charming castles and gilded uniforms for a rugged land of wild animals and still wilder Indians.

It had not been an easy matter for some aristocrats to leave the luxuries they had always enjoyed in Europe for the harsher life of America.

As his ship approached the island of Manhattan, Anthony Sadowski, gazing out at the quaint, slant-roofed houses and a windmill or two in the low inland hills, thought anxiously of his decision to seek freedom in America. In Poland he would have been a prisoner of war. In America he was a trailblazer. Some friends probably asked him before he got on the sailing ship if he knew the practical obstacles he faced. He had to learn a new language. He had to practice new customs. He had to deal with more different groups of people than he ever did in the Old World.

To his amazement, he found, at the seaport where he landed, that a number of Poles had come there in the previous century and contributed to the growth of New Amsterdam. During the period that Peter Stuyvesant was governor of the Dutch colony, one of his aides was Daniel Litscho (Liczko), a Polish army officer from Koszalin, and Martin Krygier, another Pole, was a burgomaster. In 1659, five years before Stuyvesant ceded the Dutch colony to James, Duke of York, a Polish scholar, Dr. Alexander Curtius (Kurcyusz), arrived and founded in New Amsterdam one of the first institutions of higher learning in America. At the same time Albert Zabriskie, or Albridt Zaborowski as he signed his name, who left Poland because of religious unrest, took an interest in the land along the Passaic River in New Jersey and eventually owned more land than he could walk around in one day.

If Sadowski had met any of his countrymen and knew them any length of time in New Amsterdam, the feeling of being part of America would have come faster to him than it did to the common, run-of-the-mill colonists in the wilderness. Historical researchers, however, have found no proof of this connection; some, in fact, are trying to locate records of a colony of Polish Protestants in New Jersey, supposedly founded by Zabriskie at the beginning of the eighteenth century, to see if Anthony Sadowski might have been among them.

No doubt exists, though that Anthony Sadowski fitted quickly into the ways of colonial New Jersey. Within a decade of his arrival he witnessed a will, prepared an inventory of a man's estate, and had a fair account wtih Captain John Bowne, an old established merchant at Matawan, a village on the south side of Raritan Bay, across from Staten Island. No man could have performed all these things unless he was held in high esteem and showed some intelligence, energy, honesty, and hospitality.

The first records of his presence in America show that he settled, at least for awhile, in Monmouth County, New Jersey, probably Matawan, Freehold, or near one of those places. The area had been inhabited for the most part by Dutch settlers from New York and the western towns of Long Island principally between 1690 and 1720. As the names suggest, Sadowski associated with men who sedately raised families, cultivated the soil, held political offices, traded with Indians, and reverently attended church. While living among the Cooks, the Laings, the Bownes, the Lincolns, the Warrens, and other families, he decided to marry the daughter of a Dutch settler along the Raritan River. One of six children, his wife, Marya Bordt, who was born at Mespath Kills, Long Island, brought another strong pioneer into the Sadowski family.

The prospect of raising a family in New Jersey did not appeal to the newlyweds. Fields barely thirty years cleared of pine trees had not shown as much fertility as new farmers were finding in parts of Pennsylvania and New York. Just as the younger sons of the Dutch farmers of Long Island left their homesteads to make homes for themselves in New Jersey, Anthony Sadowski now led Mary, as Marya shortened her name, to Pennsylvania, which had been inaugurated by William Penn about thirty years before and had since then shown more religious freedom and self-government than any other

colony in America. Since Penn was a Quaker, many Quakers, persecuted in England, came to Pennsylvania, but for the most part they clustered in and near Philadelphia.

To make finer sites available to them, Penn offered land practically for nothing to Rev. Andrew Rudman, head of the Swedish settlers in Philadelphia since his arrival from Gestricia, Sweden, on June 24, 1697, in order to create a new Swedish settlement in a section of the province not already taken up or seated. The Swedish clergyman and his followers selected 10,550 acres of land along the Schuylkill River, site of the present village of Douglassville, and Penn sent David Powel to make the first survey for them on October 21, 1701. The canny Quaker leader expected that the Swedes, whose forebears had first settled on the banks of the Delaware six years before he was born in 1644, would leave Philadelphia and sell their attractive places to his followers. It took him, however, more than four years to issue sixteen patents, and by that time the ardor of some Swedes for a new settlement was gone.

The name of the settlement was subject to change at the whim of any man. Originally, it was Manatawny, named for the creek that ran from the rear of the tract into the Schuylkill at Pottstown. Marcus Hulings, who was of French-Swedish descent, corrupted it to Manathanim, and Rev. Samuel Hesselius, whom he obtained in 1720 to serve as the first rector of St. Gabriel's twisted the name still further and gave it a Swedish ending "ten," thus making it Molatten. Two other ministers who held services in the rude log cabin, Muhlenberg and Murray, who were not familiar with the Swedish language, changed the next to last letter from "e" to "o". Sandwiched between them was another Swedish Lutheran, Rev. John Abraham Lidenius, and he was typical of people of the Swedish tongue who frequently change "l" to "rl" in their speech. Lidenius got mixed up and spelled the name Morlatten. After the congregation broke with the Swedish Lutheran tradition and became Episcopalian in the 1950's, wholesale changes were made in the village name. It was successively known as White Horse, Warrensburg, and Douglassville.

No sooner had the Swedes received their patents from the proprietor of Pennsylvania than they began to divide their grants and sell portions to land speculators and new immigrants. Among them was Anthony Sadowski. On January 21, 1712, he bought 400 acres of land along the river for thirty pounds from Thomas Andrews, a Philadelphia barber-surgeon who speculated in real estate, and Andrews in turn got it in 1706 from Mathias Holstein, a native Philadelphian of Swedish descent who did not care to join the pioneers in the wilderness.

There is no record of the route Anthony Sadowski took from New Jersey to Pennsylvania. However, his descendants, Mrs. Arlene Miller Williams, who made an exhaustive study of all the material she could find on her noble ancestor, produced this theory:

"My personal belief is that Antoni moved westward because he was naturally adventurous, restless, and daring, and could not be contented in the quiet backwaters of Freehold when the great, far-reaching rivers, forests, and mountains of unexplored Pennsylvania urgently called him. To a person of this type the call of an unexplored road is strong. And right thru Freehold went an Indian trace that led from New York to the settlements on the Delaware. That it was used at a very early date is proved, for in 1668 Peter Jagow, a famous Indian trader, obtained a grant to take up land at Mattinekunck, called from him 'Chygoe's Island,' and kept a house there for entertainment of travellers going to the Delaware settlments. Burlington grew up at that place, and the old Indian trace became 'the Burlington Path.' From Jagow's down the Delaware, travel was mostly by canoe.

"We will not be far wrong if we imagine Antoni traveling, then, by the Burlington Path, with a pack horse or two, to Peter Jagow's Inn; and thence perhaps by canoe, while a servant takes the pack horses down streams, over a path, to Philadelphia, where he stays until he has located and bought the land he wants; and then by canoe again up the Schuylkill to his new home."

The land he bought must have seemed to him such as Moses promised the children of Israel. In every direction he could see an almost unlimited supply of oak, hickory, ash and maple trees. He was struck by the natural beauty of its surrounding hills, the majesty of the winding, narrow river, and the fertility of the soil. He found waters springing out of the meadows and hills.

Purchase of the 400 acres throws light on the character of its new owner. For one thing it showed he had good judgment, for the land was admirably suited for small diversified agriculture, dairy herds, and livestock production. It was shaped like an irregular parallelogram. At one end lay the Schuylkill River and a large meadow and at the other end Manatawny Creek and rocky slopes. Between were thick woods at least three miles long, a rambling brook, and a large number of acres suitable for fields and pastures. The two previous owners never touched the land.

At forty-five years of age, Sadowski was undoubtedly charmed as he looked at his land without a sign of anyone else ever having been there. It was his own land, his own part of a new country, a challenge for him and his family to make this untouched part of America into something of their very own, without help, without anything but a few simple tools, their bare hands and a tremendous faith that they could make a little part of the wilderness a wonderful place in which to live.

On a slope rising up from the river he cut down trees and built a rude hut until he could afford to build a bigger house out of local stone on a narrow road which ran parallel with the river across one end of his tract. His coat of arms meant nothing in the democracy of frontier life. The measure of a man was his ability to clear the forests, build a house, and put in crops. Sadowski must have found new thrills like Cincinnatus of old in following the plow, breeding horned cattle, sheep, lambs, and horses, and sending wheat to grist mills down the river. Achievement and recognition came from continuous hard work.

His wife and daughters grew up amid pioneer surroundings and were well acquainted with the hardships of frontier life. They did not have the conveniences that housewives have today. They had to do a lot of things that are now conducted in factories. Weaving, dyeing, tailoring, dressmaking, even the tanning of skins into leather, were ordinary household operations which Mrs. Sadowski and her daughters had to conduct or assist in doing. They also had to make butter, cheese, candles, matches and a hundred other items. Sadowski himself obviously had no time to help them.

By carving a farm out of the wilderness he demonstrated what became a Sadowski family trait. In the future male members of the clan scattered through the American frontier and helped to push its boundaries as far west as they could go and to the borders of Canada. With brave spirits, axes and rifles, they moved from place to place to conquer and subdue the wilderness, build roads, open farms, erect churches and school houses, and found cities. Although the farming tradition was paramount in the early days, later generations bred ministers and teachers, lawyers and judges, bankers and merchants, mechanics, and so on. Most branches of the family supplied soldiers who fought actively at one time or another for their freedom.

Daniel Webster, a celebrated American orator, had pioneers like the Sadowskis in mind when he delivered the following words:

"When tillage begins, other arts follow. The farmers therefore are the founders of human civilization."

In 1712, forty years before Berks County was formed for the most part from the upper sections of Philadelphia and Lancaster counties, Manatawny, Molatten, Morlatton, or whatever name was in usage, looked like an abandoned baby on the frontier line of Pennsylvania. Only a handful of the original Swedish grantees were still around. Life in the area grew more varied after Sadowski joined Mounce Jones, John Justice, Jonas Yocum, Justice Justafson and other settlers on the Swedish tract. Someone dubbed the poorly defined animal and Indian path which ran past Sadowski's homestead the King's Highway. As he used it, he could see the advance of settlement up the Schuylkill.

At least two children of the Swedish pioneers branched out and established homes in their midst. They were Magdalen Rudman, the founder's eldest daughter, who married Andrew Robeson, (1686–1740), and Magdalen Jones, whose father built the first stone house of the settlement in 1716, became the second wife of Marcus Hulings (1687–1757).

By 1718 Sadowski and some of his neighbors on the Swedish tract believed it was time for them to have their own township. They engaged George Boone, an English Quaker, who eventually became the grandfather of Daniel Boone, to survey the boundaries and prepare the application for a new township. They suggested the name Amity for the township because they enjoyed peaceful relations with neighboring Indians.

Soon afterwards the name was approved in the Court of Quarter Sessions at Philadelphia, the township was erected, and a constable and other necessary officers were appointed. However, no records were made of the proceedings. The inhabitants of the township, including Andrew Sadowski, the son of the Polish pioneer, signed another petition in 1744 to renew the act of incorporation.

Next after Amity Township was erected the settlers got a burial ground without asking for it. Andrew Robeson, a highly respected man of Scotch descent, having served as Justice of Peace for many years in Philadelphia County, came to visit his son and daughter-in-law, Mr. and Mrs. Andrew Robeson, and liked the solitude of their farm at Molatten so much that he picked a spot in the corner of a wheat field for his grave. When he died on February 19, 1719, at 66 years of age, his son buried the body on the east bank of the Schuylkill River and erected a tombstone over the grave. Today it is the oldest gravestone in Berks County. It says:

Removed from noise and care
This silent spot I chose,
When death should end my year
To take a sweet repose.

Here in a peaceful place
My ashes must remain,
My Saviour shall me keep
And raise me up again.

Without being guilty of exaggeration a biographer of Anthony Sadowski could say that he took part in the most mysterious beginning of a church in America. If he was not present at the funeral of Judge Robeson, he knew about it because young Andrew Robeson and his wife donated the ground to the settlement for the burial of other bodies and the erection of a church. On March 27, 1720, Marcus Hulings, with whom Sadowski frequently conferred, and "other respectable inhabitants" were sent to Philadelphia for the purpose of finding a clergyman to erect a church and conduct services for their religious well being.

Rev. Samuel Hesselius, assistant rector at Gloria Dei, a lovely small Swedish Lutheran

church on the banks of the Delaware in Philadelphia, accepted their call, and shortly after organized the congregation known as St. Gabriel's. For a year or more, in this tiny outpost of civilization, he christened the newborn, comforted the bereaved, and said the final prayers over the dead. Each member contributed his share to the salary of the rector. Then Rev. Hesselius complained that his hearers were few and unable to support him. He left Molatten, as he called the place, and went to Wilmington, Delaware. St. Gabriel's was then without a regular minister for twelve or thirteen years and without a church until some members built a rude log cabin in 1736.

As members of the congregation died, they were buried near the spot that the elder Robeson selected for himself. No records were kept of the burials until Rev. Gabriel Falck came in 1735 and established an irregular system. It is important to bear this in mind because it seems to me that three children of Anthony and Mary Sadowski died during the period St. Gabriel's was without a rector and only one of them can be spotted in the burial ground by the process of association of tombstones.

The number of children the Polish-Dutch couple had is a question. According to the will that their daughter, Justina Warren, made on October 29, 1731, Justina gave her clothes to "three sisters," none of whom she named, her husband's new hat "to my brother Andrew," and "I give my brother Jacob a great coat."

In his will dated December 29, 1735, Anthony Sadowski mentioned only three children, namely, Andrew, Sofia, and Ann, who was married to Increase Miller, and two grandsons, John and James Warren, whose parents died in the fall of 1731 during a severe epidemic of small-pox. No record gives the name of the fourth sister. As none of the three known sisters bore their mother's Christian name, the elusive sister may or may not have been named Mary.

Whatever her name, what happened to her and Jacob Sadowski? According to Eliza Brooks Mitchell, fifth in line of descent from the progenitor of the clan, one son and one daughter died before Anthony did in 1736. She named two surviving daughters who married and left issue. Ann had 11 children, Andrew seven, Justina two, and the number that Sofia had is unknown.

Anthony's grandson, James Warren, remained in the locality all his life. Upon his death April 7, 1776, he was buried in the churchyard of St. Gabriel's, as was his widow, Hannah, on December 26, 1782.

From the positions of their tombstones it is possible to shed light on the graves of James and Justina Warren, whose deaths were not recorded in St. Gabriel's books, and Anthony Sadowski, whose death in Pennsylvania was unknown to scholars until I discovered it. There are five graves, but only two stones which are still readable, in a family plot. The remains of three tombstones are left in the ground between the graves of James and Hannah Warren. The names of the persons who were buried under them are missing with the tops of the tombstones. However, the quality of the stone in the remaining parts look the same as other tombstones put up in the 1730's in the burial ground. Thus the assumption is that James and Justina Warren are buried next to their first-born child and Anthony Sadowski is buried next to Hannah Warren.

Before preceding further, however, it should be stated that the Sadowski Memorial Committee is appealing for funds to erect a fitting tombstone to Anthony Sadowski on this hallowed spot. If any reader is inclined to pay tribute to this illustrous Polish pioneer, please send your contribution to the committee at the address shown on the inside cover.

To tell, as far as practicable, how he lived, what he acquired in hs lifetime, and how he disposed of his estate is like the task of an archaeologist who must piece together scattered fragments into the object they once formed. According to an inventory of his estate, Sadowski did not believe in luxury and display, but he believed in being well protected and well stocked with livestock. He left a personal estate valued at 565 pounds.

His plantation and 200 acres of land were valued at 200 pounds, and 300 other acres of land 150 pounds. The wheat and rye he had planted at the time of his death was worth thirteen pounds. He left some books, a watch, carpenter and farming tools, two guns, three pistols, four spinning wheels, and hundreds of household and farm items, typical of a well-run frontier compound.

Larger than most of the farms around him, Anthony Sadowski used his farm as much as he could for livestock production. George Boone and Ellis Hugh, who made a detailed account of the property in Amity Township, listed the following livestock:

To horned cattle	£36
To other young cattle	8
To 3 working horses, a mare	12
To 1 horse and a 1-yr. old colt	8
To some mares in the woods	6
To 30 sheep and 18 lambs	10
To swine	2
Total	£82

Another aspect of his household was the attention he paid to a Negro named Joseph and a small white boy named John Marshall. Under the law both were considered articles of personal property. The Negro was valued at 25 pounds and the servant lad ten pounds. Although not mentioned in the will, a servant woman worth four pounds was listed in the inventory. One and half pages were required to list his goods, chattles and credits.

III

For Anthony Sadowski practically half his life was involved in all kind of experiences with the aborigines of the Middle Atlantic and the North Central regions of America. Unlike Cortez and Pizarro, who were fierce enemies of the Indians, Sadowski had nothing but friendly relations with them. In no sense of the term was he an Indian fighter.

Not much is known about his first experiences with them. He met such Indians as Pelopee, Wequehalye, Pecsacohan, Gawakwehon, Shelahon, Lewis the Indian, and Pelowath at John Bowne's trading post at Matawan, New Jersey, and saw that, as far as Bowne was concerned, trading with them was no different than trading with Mordecai Lincoln, Benjamin Van Cleave, John Van Metre, John Warren and other white settlers. Bowne bought furs from the Indians, shipped them overseas, and received in turn the supplies needed by the colonists.

The trade with the Indians for peltries and furs probably fascinated Sadowski more than anything else in the colonies. As he bought more goods from Bowne than his family could possibly use, he probably stepped into this activity as soon as he could. In 1715, three years after he moved to Pennsylvania, his account with Bowne amounted to twenty pounds.

His property in Amity Township was conveniently situated in the beginning to serve as a base of operations. Along the east bank of the Schuylkill River ran an Indian trail, later an important artery of transportation, which extended from Philadelphia to the Indian villages at the forks of the Susquehanna. The upper reaches of the trail were unexplored, and only Indians, a few traders, and wild animals dared to go there.

In those days a trip to the Indian country was an adventure. A traveler had to have courage, endurance and an iron constitution if he hoped to survive. Fortunately his escapade in the Gulf of Riga convinced Sadowski that he was physically fitted for the rigors of journeys into the wilderness. Within a short time he was transformed into a typical Indian trader.

As the Indian chiefs were treated well by William Penn and his successors, Sadowski was able to step into their villages with open arms. He learned the Delaware and Iroquois languages and had an intimate knowledge of Indian habits and customs. His family worried about the difficulties and dangers of these trading expeditions, but he always answered the remonstrances of his wife and children with going again. In the course of these long trips, he blazed new trails and expanded the American fur trade.

Never did his knowledge of these trails and Indians play a more important role than in May, 1728. Some Indians had just forced a number of white families out the Tulpehocken region, a short distance from his home, and created a reign of terror.

Sadowski quickly mounted his horse and galloped off in the direction of Shamokin (now Sunbury), an important Indian village at the forks of the Susquehanna, many miles away. He passed farmers in flight, cornfields and houses burning, panic-stricken women and children running along the trail. He had to deliver a message to the Indian chiefs at Shamokin and could not stop to help the victims.

Before he completed his mission a band of Conoy Indians descended upon Manatawny, as Sadowski and Mounce Jones called their settlement. The strange Indians were halted on May 9, 1728, and asked what they wanted. They refused to give any information. Then four white men killed one of the Indian men and two of their women.

Upon his return home Sadowski was surprised to find Governor Patrick Gordon at Manatawny. The provincial official had come up the river to investigate the skirmish between the Indians and the white settlers and to reassure both sides that "we are all brethren." He ordered twenty men to find the bodies of the three killed Indians and bury them, possibly in St. Gabriel's burial ground.

He also appointed John Pawling, Marcus Hulings, and Mordecai Lincoln, two of whom were Sadowski's close friends, to maintain peace in the neighborhood.

Then he returned to Philadelphia to prepare more peace moves. Sadowski accompanied him and the following day was sent with another message and gifts to the chiefs of the tribes in the disputed territory. Traveling by horses, Sadowski and another Indian interpreter, John Scull, and three assistants, covered more than 100 miles before they reached their first destination.

Within two weeks the party traveled to Shamokin, Tulpehocken, and Conestoga, and delivered messages and gifts to Allummapees, also known as Sasoonan, chief of an Indian tribe that formerly inhabited a place along the Schuylkill, Opekasset, chief of a small Delaware tribe, and Manawkyhikon, a chief of the Minsis. Governor Gordon wanted to meet the sachems at Conestoga, but they realized they did not have enough time to get together with him on May 24. Only two days remained. Nevertheless, the Indian chiefs were pleased with the Governor's soothing words.

Finally, it seems, Sadowski proposed that the two parties meet at Manatawny, and probably offered his home for the purpose, and the Indians put the proposal in their letter to Governor Gordon on May 22. As a result of the friendly contact between the two sides, peace was restored.

Sadowski, however, was disappointed that the provincial council waited two years to pay him seven pounds for two weeks instead of fifteen pounds for more than a month's service. It probably seemed to him that the council had not thought of what would have happened to William Penn's Holy Experiment if it let the Indians alone for two years.

As the Indians moved westward, Sadowski's knowledge of the Alleghenies was extended, and his trading expeditions lasted longer. He came to know the rivers which flowed not toward the Atlantic but toward the Mississippi. No doubt he saw in some places almost nothing of civilization, with practically no food except what he gained with his rifle and no shelter except the bottom of a wagon.

The farther west he traveled, the more resistance he met. The trading post at Shamokin was a mild place compared to the one he and two other traders, John Maddox and John Fisher, had on the Allegheny River, ten miles below the mouth of the Mahoning. It is better known as Kittanning.

In June, 1728, while Maddox was alone at the trading post, a band of drunken, impoverished Indians came in and demanded goods on credit. The shelves were full with 500 pounds of European goods. When Maddox refused to give them credit, they attacked him and forced him to give them one hundred pounds of goods. The goods included five shrouds, twenty shirts, and a half tick.

The traders could hardly afford the loss. It probably hurt Sadowski more than either Maddox or Fisher, for on July 31, 1730, he sold to George Andrews 100 acres of land in the rear of his tract in Amity Township for thirty pounds.

None of them, however, cleared the thieves from their debt. On August 8, 1730, they reminded Governor Gordon that the Indians still had not paid for the goods taken from their store. After writing to Allummapees and Opekasset two old and respected Delaware chiefs at Shamokin, and Mechauquatchugh, an Indian chief on the Allegheny River, the provincial governor dropped the matter.

No more did Sadowski weep over what he had lost. With redskins crossing the mountains in increasing numbers, he followed their trails down the Allegheny, Ohio, and other rivers and continued to trade with them.

Of all the traditions of the Sadowski family, the most widely known was that their ancestor established a trading post on the western shores of Lake Erie and that a large city, a county, a river and a bay in Ohio now bear his name. Little do they care how the name was changed to Sandusky.

Down through the years, as places in New York, Indiana, Illinois, Iowa, Wisconsin, and Texas adopted Sandusky as their name, the origin of the name did not receive the attention it deserved. In 1842, Jacob J. Greene, a resident of Tiffin, Ohio, situated on the Sandusky River, described the name as "more extensively known, perhaps, than any other one in the Union." With a name of such permanent importance, it is baffling that two entirely different versions of its origin still exist.

If Anthony Sadowski gave the Ohio landmarks his name, or even a corrupted form of it, the first thing to do is to find evidence of his connection with them. The year he was robbed, an Indian trader, John Le Tort, with whom Sadowski was well acquainted, planned to take goods and come back with furs from the Miamis who were settled at the west end of Lake Erie. Nothing stood in Sadowski's way. If Le Tort could do it, so could he. As a matter of fact, Madame Montour, who had a sister living among the Miamis, discouraged him from making the same trip as Le Tort planned right away.

As is well known and documented, Sadowski naturally followed the Indians, traded with them wherever he went. He traded with them on the Susquehanna. He traded with them again when they moved to the Allegheny Valley. If he followed the Mahoning, a stream ten miles from where he was robbed in 1728, he had only to cross over the highlands west to Sandusky River and down it to Sandusky Bay.

Greene summarized the family tradition in an article published in the first issue of the American Pioneer in 1842. As he put it, "a Polish trader by the name of Sandusky, or more properly spelt Saduski, established himself near the present site of Lower Sandusky, at the foot of the rapids of the river. His operations in trading for furs and so forth with the Indians, being entirely confined to the river and bay, they soon became known to Europeans as Sanduski's River and Bay." His statements were confirmed in a following issue by a letter from twin brothers, one signing his name "Isaac Sodousky" and the other "Jacob Sandusky."

The brothers mentioned a quarrel between Sadowski and the Indians which caused him to leave the trading post. It may or may not have resulted from the struggle between the French and the British for the trade of the Ohio drainage area. It was about the time that the French first began to stir up Indians against the British. Sadowski was caught in the middle and he was probably forced to take sides. Whatever the cause, he returned home and pledged his allegiance to the British throne in 1735.

Another interesting fact I have discovered is that his daughter, Ann, who married Increase Miller about 1733 and moved to Bedford, New York, was not living at home when Sadowski went to the present site of Sandusky, Ohio, because she never mentioned it to her children and descendants. Her direct descendant, Mrs. Allene Williams, first learned about the family tradition when she read Theodore Roosevelt's book, Winning the West, which stated, without citing any supporting evidence, that Sandusky was of Indian origin. She compared it with other family traditions, studied them carefully, and made many careful observations about the Sadowski family.

"The more I have worked at untangling truth from error in family traditions," she wrote, "the more I became convinced of the following: (a) there is more truth than error in most of them; (b) when minute details are carried down from mouth to mouth for several generations, it is usually because they really were true; (c) the vaguer the tradition, the less reliable it is; (d) the less likely an individual fact is, the greater the chance that its unlikelihood is what impressed it upon the memories of the narrators; (e) it is very common for succeeding generations to increase the closeness of their relationship to famous people; (f) there is a common tendency to drop out some generations entirely; and (g) where two or more generations have the same given name they often become one person in the traditions of their descendants."

Another observation is the number of descendants who said that Andrew Sadowski, who was killed by Indians in Virginia, was one of the first traders on the shores of Lake Erie. Some historians, in fact, think this is an error, but it is not necessarily so. Whether they knew Andrew was Anthony's son or not, Andrew Sadowski was old enough in the 1730's to go with his father as loader, taking the place of Sam Cousins, John Phillips, William Davis, or some other helper that was no longer in his employ. All that came to an end when Anthony Sadowski died in 1736.

The maps available of the Sandusky region are another source of information. In a feature article, "Forgotten Pioneer," The Pittsburgh Press, August 2, 1959, George Swetnum said the name Sandosque appeared "in French maps as early as 1707," but I cannot locate any such map. An English map of 1736 showed only three lakes, Huron, Ontario, and Erie. According to C. A. Hanna, "The name Sadoske was found in 1740," but he does not give the source. The Canadian Archives, Nov. 14, 1747, has this statement: "Nicholas' band was at Sandoske."

Evans' map of the Middle British Colonies in 1755 is the first map I have found on which the name Sandusky appears. On the east side of a nameless river, Evans has written "Fort Sandusky," and on other two Wyandot villages, none of which is named, and a French fort, "Fort Junandot," evidently a corruption of Wandot or a misspelling.

If Sandusky were a Wyandot word, as some authorities say, the two Wyandot villages on Evans' map would have contained the name. None of them do. It is not likely that the fort on the other side of the river from the two Indian villages would have taken an Indian name. It was designed for defense against the French and Indians. The name of the fort is therefore neither French nor Wyandot in origin.

No two authorities agree, if they think Sandusky is an Indian name, on the origin of the name. One gives two words, "sa industee," and the other "sandusti," with neither agreeing on what they mean. The words look as if they were selected out of an Indian dictionary by someone searching for the origin of the name.

A noted historian of American Poles, Miecislaus Haiman, who was the first curator of the Polish Museum of America, said in "Polish Pioneers of Virginia and Kentucky" in 1937 that he thought the Sandusky family changed their name to agree with the name of the Ohio locality.

"Why should they?" asked Mrs. Williams. "After Antoni pioneered there and died, Andrew went down into Virginia; a sister removed to New York State; Andrew's sons migrated to Kentucky. I have examined family bibles, deeds, newspaper obituaries, etc. from widely separated branches of the family, and was greatly interested to note how, from generation to generation, there was a gradual change from Sadowski to Sodowsky, then to Sadowsky, then Sadusky, and finally Sandusky. It seems to me to be a perfectly natural Anglicization of a foreign name. Names are greatly influenced by the way neighbors write and pronounce them. Of course most of the records available to us are not written by the owners of the names, but by clerks, recorders, etc., so they are not of great value in tracing the changes.

"If the clerk was English, it seems to me that "sand" and "dusky" would be more natural English syllables to write instead of "Zad," "Sad," and "dowsky," either if he did not quite catch the name or were unfamiliar with it, whether oral or written.

"In the case of the branch of the family that came at an early date from Kentucky to Illinois, I have been permitted to look at family records, deeds, and early newspaper obituaries, and was interested to observe how the successive generations changed the spelling from Sodowsky through Sadowsky and Sadusky to Sandusky. Therefore, I restate my conclusion that both the name of the family, in its various branches, and of the Ohio region, from pioneer trading post to river, bay, and towns, all changed quite naturally and gradually from the original Polish Sadowski to its most natural Anglicization, Sandusky."

ANTHONY SADOWSKI'S LAST WILL AND TESTAMENT

In the name of God Amen, The Twenty ninth of December in the year of our Lord one thousand seven hundred thirty five, I, Antony Sadowski of Amity in the County of Philadelphia and province of Pensilvania, yeoman, being very weak in body but of perfect minde and memory and knowing that it is appointed for all men a time to die, doe make and ordain this My Last Will and Testament, that is to say, principally and first of all, I give and recomend my soul to God that gave it and for my body I recomend it to the earth to be buried in a Christian like and decent maner at the designation of my Exe'trs, nothing doubting but att the Generall ressurection I shall receve the same again by the mighty power of God. As touching such worldly estate wherewith it pleased

God to bless me in this life I give and dispose of the same in the following manner and form:

Imprise—I doe give and bequeath to my well beloved wife Mary Sadowsky all my Tenaments and Liveings which is two hundred acres of land fronting upon Skullkill dureing her widowhood and in case the said widdow alters her condition, then she shall only have what the law directs to widdows and if she remains a widdow then she must enjoy and posses the said estate during her life and after her decease then my well beloved son Andrew Sadowsky shall injoy and posses the said estate with all the improvements and four horses, two cows, ten sheep, with all the utensils upon the said plantation and the negro man called Joseph and the white boy called John Marchell until he comes to age paying such legacies as I shall appoint.

Item—To my daughter Soffia Sadowsky I give two cows, one mair, ten sheep and best feather bed with all the furniture belonging to the said bed and all things in proportion that my daughter Ann Sadowsky gott when she was maried to Increase Miller.

Item—I order and apoint that there shall be sold three hundred acres of land of the rear of said front in order to pay my just debts and whatever money remains after paying the said debts shall be equally devided between my two daughters, Ann and Soffia, and if the said land be sold before my decease then the said daughters shall have only forty pounds if in case there will be so much after paying my debts. And I doe appoint that after my wife's decease that all the stock and moveables shall be equally devided between the said two daughters.

Item—That the negro man named Joseph shall have twenty five shillings yearly during his servetude if in case he proves to be good and is all one and twenty years of age. After which age he is to have the said money paid yearly.

Item—John Marchel shall have two pounds in money and an ax and a grobing hoe when of age and the said money is to paid by him that posses the said two hundred acres of land.

Item—If in case my son Andrew Sadowsky should die without lawfull heirs that then the said estate shall be equally devided or sold and the one halfe of the said estate or money shall be possesed by my daughter Ann's children and the other halfe to be possesed by my daughter Soffia or her heirs and if in case the said land be possesed by my two daughters that the shall pay to my two gransons James Warren and John Warren twenty pounds to each when of age.

Item—If the said Andrew shall live and have heirs to posses the said land he shall pay to the said James and John Warren five pound to each or when they come to age.

Item—I constitute, appoint and ordain my well beloved wife Mary Sadowsky jointly with Marcus Hullings and Walter Camble of Amity Township whole and sole exec'trs of this My Last Will and Testament with full power to pay all my just debts and demand the same according to law. I doe hereby revoke and disannull all former wills, legacies, pronouncing and confirming this to my Last Will and Testament. In witness whereof I have hereunto set my hand and seal the day and year above written.

In presence of us

ANTONI SADOWSKI
HENRY GIBSON

HENRY GIB son
ANDREW CALDWELL

Philada June 17, 1736. Then personally appear'd Henry Gibson, one of the witnesses to the foregoing will (Andrew Caldwell, the other witness, being removed to distant parts) and upon his oath did declare he saw & heard Anthony Sadowski, the testator above named, sign, seal, publish and declare the same will to be this Last Will & Testament and that at the doing thereof he was of sound mind and memory & understanding to the best of his knowledge & that Andrew Caldwell, the other subscribing witness to ye will did subscribe his name as witness thereto in the presence of this deponent and the sd Testator.

Coram,
PET. EVANS, REG. GEN.

A CALLIGRAPHER LOOKS AT SADOWSKI'S WILL

The will of Anthony Sadowski is a remarkable legal document. His attempt to foresee possible family changes gave him just cause and concern as to the equitable distribution of his estate. His concern over two male servants, a Negro and a white man, also reveals a man well ahead of his time.

My concern is specifically with the handwriting of the will. In retouching the faded characters for suitable reproduction, I became fascinated by the script and noticed upon close study of its structure that it was an excellent specimen of penmanship in colonial America. It can be said that American penmanship of the time was sturdy, readable and less given to frills than those of English writing masters.

The scrivener of Sadowski's will starts off with a fresh and clean hand, but by the time he reaches the second page he is plainly tired and finishes the document in a somewhat hurried style.

Sadowski signed his first name "Antoni" as he did in Poland in a true old Polish manner. The "i" ending of Sadowski is also in the manner of the old Polish script which very often resembles a "y". Actually old Polish names ended in "ij" and in the final flourish this often looked like a "y". Sadowski, however, ended his name with an "i" with a somewhat extended down stroke. The last name is clearly spelled "Sadowski" in the notarized portion of the will on the bottom of the second page.

Of interest, too, are the signatures of the witnesses. Many colonists wrote often with a heavy and labored hand. Such was the case with Henry Gibson, who apparently ran into trouble by having his quill blot the last part of his name. He skipped the blot and wrote, away off, "son." On second thought he signed his name again without further mishap.

It is also apparent that Peter Evans, Register General for the Probate of Wills in the Province of Pennsylvania, considered himself a better penman than the one who prepared the will and just to prove it signed his name and an abbreviation of his title with over eighteen flourishes!—HENRY ARCHACKI.

SPACE FLIGHT IN HISTORY—FICTION AND FACT

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. BRAY. Mr. Speaker, the following four recent newsletters distributed from my office contain a brief history of space flight, in fiction and fact:

HISTORY OF SPACE FLIGHT—I

"Come, my friends,
'Tis not too late to seek a newer world,
To sail beyond the sunset, and the baths
Of all the western stars."
(Alfred, Lord Tennyson—*Ulysses.*)

Just a little over 350 years ago, man's startled eyes first peered into the remote vastness of the universe. Galileo's crude telescope, showing the disks of planets, the moons of Jupiter and the mountains and valleys of the Moon, wrenched the world, and man's knowledge, into a brand-new dimension.

Up until that time, (the first decade of the 17th Century), about the sum total of knowledge of the heavens was limited to knowing that the planets were not like fixed stars (the very name "planet" means "wanderer"); and the Moon was thought to be a world (estimates of its size and distance, made centuries before Christ, were in some cases amazingly close to being exact).

But there was plenty of imagination. If the Moon was another world, why not travel to it? In the 2nd Century A. D., Lucian of Samosata's *True History* had a hero who did just that. Inadvertently, the first time; his ship was picked up by a waterspout in the ocean, west of the Pillars of Hercules (the Straits of Gibraltar) and whisked to the Moon. For the ancients, anything could happen west of this spot. Lucian must have liked the idea, and wrote another book; this time the hero fashioned a pair of wings and flew directly to the Moon, after a takeoff from Mount Olympus.

Oddly enough, after Lucian, space travel was neglected as a literary theme for almost 1500 years. Johannes Kepler, one of the greatest astronomers of all time, wrote his *Somnium* a generation after Galileo's telescope was invented. Kepler's explorer, however, traveled to the Moon by supernatural means. Rather surprising for a scientist? Not at all; Kepler, like almost everyone, believed strongly in magic.

Shortly after publication of *Somnium*, the first English story appeared. Here we begin to get into that mystifying chain of events where fiction precedes fact, without any explanation and in a way that has puzzled many over the centuries. The English Bishop Godwin's *Man in the Moone*, one Domingo Gonsales, only wanted to fly, period. Gonsales hitched his raft to trained swans; the swans (although Gonsales didn't know it) migrated in the direction of the Moon and off they went. Gonsales had no trouble breathing on his 12-day journey, but he found the gravitational pull of the Moon was weaker than that of Earth, and he noticed he lost weight when he left Earth itself. This, remember, was fifty years before Isaac Newton formed the law of gravitation.

In 1640 another English Bishop, Wilkins, wrote *A Discourse Concerning a New World*, a serious treatment of the subject, discussing the physical condition of the Moon and possibility of it having people. According to the Bishop, it was quite likely that a "flying chariot" would get there someday. And, in true British imperial fashion, for that day and age, he spoke hopefully of establishing Moon colonies.

In 1656 Cyrano de Bergerac's *Voyage to the Sun and Moon* appeared. The long-nosed Frenchman, made famous by Rostand's play, not only used rocket propulsion but anticipated the principle of the ramjet. Cyrano's flying machine was a large box, built of convex lenses, that forced sunlight into its interior. The heated air then escaped through a nozzle, providing propulsion.

One of the greatest and most mystifying puzzles of all time appeared with publication of Swift's *Gulliver's Travels*, in 1726. Not a science-fiction story, exactly; yet, in one of the lands Gulliver visited, the local astronomers had discovered Mars had two moons, one which revolved twice as fast as the other. Which is exactly what Mars has; but the fact wasn't confirmed until over 150 years later, in 1877.

Voltaire wrote *Micromegas*, in 1752, about a giant from the solar system of Sirius who came to Earth with a companion from Saturn. It was written mainly as satire, but has a remarkably modern outlook, with man and planets in correct perspective.

By the beginning of the 19th century, space stories ran into trouble. The balloon, invented in 1783, had demonstrated the impossibility of man living unprotected at high altitudes. Suddenly, the Moon and planets became much farther away.

HISTORY OF SPACE FLIGHT—II

"Dreaming dreams no mortal ever dared to dream before." (Edgar Allen Poe, *The Raven.*)

By the second half of the 19th Century, space travel stories were in vogue again. The beginning of the 19th Century had produced many major engineering achievements and along with them came a feeling of confidence that anything was possible. The greatest story-teller of them all, Jules Verne, set the style and tone.

From the Earth to the Moon (a tremendously popular novel when written in 1865 and still in print today) was Verne's way of having a little fun with Americans; he indulged in some innocent sport in needling them for their get-up-and-go attitude. But Verne did base his story on sound scientific laws. He knew escape from the Earth's gravitational field was possible at a high enough speed, so he simply had his space travelers fired rom an enormous gun, in a projectile.

More fiction that became fact: Verne's ship was fitted with rockets, for steering in space. His travelers circumnavigated the Moon, but didn't land on it (just as Apollo 8) and then returned to Earth, landing in the ocean, just as is done today.

He set the spacegun at Tampa, Florida, only one hundred miles from where Cape Kennedy stands, and went one better: having figured the two best locations for a launch site were Florida and Texas, he had the respective state legislatures fighting over which state should have the facilities for the space program! This has a very modern sound to it, indeed.

And, to top it all off, the 1865 fictional flight was directed by the Gun Club of Baltimore. The first U.S. space project, Vanguard, had its hardware built by the Martin Company, between 1955 and 1958—in Baltimore.

Rev. Edward Everett Hale's *The Brick Moon,* which appeared in the Atlantic Monthly in 1869–1870, dealt with artificial satellites. Prediction, again: Hale recommended use of brick for the satellite, as it could withstand heat better. Today, various forms of ceramics are used in heat-resistant components for spacecraft.

In 1901, H. G. Welles wrote what has been called "the finest of all interplanetary romances," *The First Men in the Moon.* Wells was a bit careless with his science. He developed "Cavorite," which was a gravity insulator, and his spaceship, coated with the stuff, took off on its own accord. To steer towards the Moon, the occupants opened a shutter in the Moon's direction.

"Cavorite" defies the fundamental laws of nature, but antigravity itself is no longer thought absurd. It still is, however, and probably will remain for some time, one of those "engineer's dreams" that has not yet been developed.

So much for the writers of fiction, along with their oddly disquieting, appearing-at-random, seemingly-off-hand statements that turn out to be hard, cold fact. It still appears, though, from time to time. During World War II, when the ultra-top-secret Manhattan Project was underway, leading to the development of the atomic bomb, project security officers were horrified to read in one of the leading U.S. science fiction magazines a short story dealing with the use of U–235 for production of atomic energy. A quiet but forceful trip by the FBI to the magazine's offices produced, to the relief of all concerned, the fact that nothing had leaked out of Manhattan Project; an imaginative author was the sole responsibility.

This has been a brief history of fiction; next, we turn to fact.

HISTORY OF SPACE FLIGHT—III

"All men dream, but not equally. Those who dream by night in the dusty recesses of their minds wake in the day to find that it was vanity; but the dreamers of the day are dangerous men, for they may act their dream with open eyes, to make it possible." (T. E. Lawrence, *Seven Pillars of Wisdom.*)

The world is accustomed to Russian boasting about being first with everything imaginable, but it was a Russian, Konstantin Tsiolkovsky who unquestionably was the first to work out the principles of space flight. Born in 1857, the first Soviet Sputnik went into orbit just a few days from the centenary of his birth. His formulae on space flight were published in 1903—the same year the Wright Brothers first flew. In principle, he solved almost all engineering difficulties of space flight, but not until the 1930's was his work known outside the Soviet Union.

In chronological sequence, the second pioneer after our shy Russian schoolteacher was Robert Hutchings Goddard, the American, born in 1882 in Massachusetts. By 1909 he completed work on the theory of multistage rockets and from 1914 on touched, in a series of over two hundred patents, about every aspect of rocket design, propulsion and guidance.

On March 16, 1926—just over fifty-three years ago—Goddard flew the world's first liquid-propelled rocket. Airborne for over two seconds, it reached 40 feet, at 60 m.p.h. In 1929 a larger rocket got up to 90 feet; police switchboards were jammed with phone calls reporting crashing airplanes, and Goddard was told to cease and desist from any more flights around Worcester, where the rocket was launched. This was, in a way, quite fortunate; the publicity caught the eye of "The Lone Eagle," Charles Lindbergh; a word from Lindbergh meant a grant from a private fund of $50,000.

Between 1930 and 1941 Goddard worked at a lab and launch tower at Roswell, New Mexico, not far from White Sands Proving Ground. His rockets got no higher than 9,000 feet, but he knew what he was doing: after he died, Mrs. Goddard and the foundation which had supported him received $1 million from the Department of Defense for use of his patents.

When the Treaty of Versailles was drawn up in 1919, the German Army was prohibited from developing many kinds of weapons, but no one thought of rockets. The Germans gave them considerable thought; Hermann Oberth and Willy Ley had collaborated in forming the German Rocket Society, and not until the first V–1's and V–2's crashed down on England did anyone else know what was up. And not until a sharp-eyed RAF intelligence officer—a woman, incidentally—named Constance Babington-Smith noticed a strange wedge-shaped blob of white on an aerial photograph was anything done about it. The launching sites were hammered into rubble by bombing, and Hitler's "secret weapon" was effectively put out of action. Hitler had never given it much support; he had "dreamed" it wouldn't work.

Oberth was the last of what is described as the three great "classical" writers on astronautics, sharing the distinction with Tsiolkovsky and Goddard, and only he lived to see his dreams come true. The stage was now set for the scene as we know it, and, each in his or her own way, as we share in it. Man is ready for space.

HISTORY OF SPACE FLIGHT—IV

"Saw the heavens fill with commerce,
argosies of magic sails,
Pilots of the purple twilight, dropping down with costly bales;
Heard the heavens fill with shouting, and there rained a ghastly dew,
From the nation's airy navies, grappling in the central blue."
(Alfred, Lord Tennyson—*Locksley Hall.*)

"Costly bales" or "ghastly dew?" We are in the Age of Space, like it or not, and there is no turning our backs on it. To do so would mean leaving the field free and open to other, probably less-friendly powers, who would have no qualms whatsoever about concentrating on the "ghastly dew" aspect, and not for our benefit.

Now, to be sure, there is definitely such a thing as going overboard on space. We must be quite careful not to let our hopes and ambitions outrun our abilities, leading us to incredibly costly programs with little practical use or value.

The prominent historian Robert Conquest, writing in a recent issue of *Encounter* magazine, devoted several paragraphs to the question of "Why?" and "Where?" and "How?" surrounding space flight, and I wish to close this series with Mr. Conquest's observations. For myself, I make no special judgment on them, but I find them interesting and provocative. His remarks follow:

"In fact, arguments that the investment in space would have been better spent on other things are unsound on various grounds. The skilled scientists and technicians would have produced very little more food if they had been diverted to the plough: for it was all merely the investment of a certain amount of metal and a large amount of skilled labour. The argument that scientific research would have been better served by investment in other fields is more respectable.

It can in part be answered by saying that there is no actual shortage of food scientists or laboratories, or of cancer researchers and their equipment; by pointing to the spin-off from space techniques into the main body of industry; and by the actual direct effects on food production, such as that produced by satellite watch on the great fish shoals. Or more basically, that all research is valuable, and some costs more than others. (Apollo's expense cannot, of course, be judged for this trip alone.)

But there is more in it than the direct interest of the particular scientists. In the long run it will all probably be seen less for its immediate "scientific" effects than as a great cultural advance. Such perspectives are often misunderstood, even by skilled scientists. One great astronomer announced the impossibility of heavier-than-air flight at the beginning of the century. Another, 50 years later, said that space flight was impossible. We are only at the beginning of our knowledge, and those who deny the possibility of interstellar flight are speaking to the same brief.

The scientific culture has only been in existence for 300 years. What the next 300 or 3,000 years might bring (providing we do not destroy ourselves) cannot be foreseen. But it will certainly include movement in the wake of Apollo 8 out into the surprises of the universe. In a poem (it still turns up in anthologies) written before the first artificial satellite I said, and would repeat, as putting the point better than I could in prose:

Pure joy of knowledge rides as high as art.
The whole heart cannot keep alive on either.
Wills as of Drake and Shakespeare strike together;
Cultures turn rotten when they part.
True frontiers march with those in the mind's eye:
The white sound rising now to fury
In efflux from the hot venturi
As Earth's close down, gives us the endless sky."

TAX EXEMPTION ON CHARITABLE GIFTS

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. KEITH. Mr. Speaker, one of the issues currently being discussed by the House Ways and Means Committee con-

cerns the tax exempt status of charitable gifts to educational institutions.

Since private schools depend to such a large extent on endowment from private sources for their building and educational programs, the gift from the private donor should be considered more as an important investment than as simply a charity. As we all know after recent heated debate on the floor of the House on educational appropriations, the Federal Government already spends enormous amounts on public education.

Recognizing the place of the private educational institution in this country, I feel that every effort should be made to reduce the obstacles which might inhibit charitable institutions.

Mr. Speaker, knowing the interest of my colleagues in this issue, I would like to include in the RECORD letters from two college presidents who are deeply interested in the future of private education in the Commonwealth and the country:

SMITH COLLEGE,
Northampton, Mass., July 16, 1959.

Hon. HASTINGS KEITH,
House of Representatives,
Washington, D.C.

MY DEAR MR. KEITH: For anyone concerned with the financial good health and future of independent higher education the outcome of the present discussions in the Ways and Means Committee of the Congress concerning increased taxation on long-held, appreciated property is of critical importance. At a college like Smith the income from students has declined over the last decade from almost 80% of total income to less than 60% this year; income from endowment and annual giving must be continually increased to fill the gap. The alumnae and friends of the College are the greatest single source of help, and any fiscal policy which in effect discourages them from making substantial gifts either for endownment or annual operations represents a serious threat to any hopes such colleges may have from remaining financially independent.

Although the proportion of students in independent as compared with public institutions of higher education has been steadily declining in recent years, they still must represent upwards of 30% of the total. Deprived now of direct access to the tax dollar, the independent college has a particularly hard time in an inflationary period. Any fiscal policy which seriously theatens a large, growing, and critical portion of their revenues cannot help but force such institutions to seek to increase their income from state or federal sources to stay in business. And if such colleges and universities go out of business, the students they are now educating will fall entirely on the back of the already hard-pressed public sector.

For the Massachusetts delegation in the Congress, in whose state independent higher education represents one of the most important resources of the Commonwealth as well as the nation, the above arguments have a very special meaning.

Faithfully yours,
THOMAS C. MENDENHALL.

COLLEGE OF THE HOLY CROSS,
Worcester, Mass., July 23, 1969.

Hon. HASTINGS KEITH,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN KEITH: The College of the Holy Cross, a small liberal arts college in Massachusetts, has long been in the first ranks of the better liberal arts colleges in the nation. In order to continue its tradition of training the bright and responsible leaders the country so desperately needs, Holy Cross must seek increased financial support from its alumni and friends. Enactment of the tentative proposals of the House Ways and Means Committee will seriously threaten that support and the very existence of this fine institution.

The reasons are clear. The College's endowment is less than 6 million dollars. Plant funds needed for upkeep and improvement of the College are invaded annually to help meet rising operating expenses which last year were more than 10 million dollars. Since 1962 the net operating loss is $1,250,000, and a $400,000 net loss is projected this year. Tuition increases cannot keep pace with the cost of educating a student; yet, faculty salaries and research equipment and materials must be increased in order to provide for that student the excellent education which he will demand.

The alumni and friends of the College are ready to give us the necessary support. They responded to the 1967–1968 Annual Giving Program with a record of $537,000. During the first ten months of the 1968–1969 campaign, about $700,000 has been raised. Our donors make definite sacrifices through their gifts, because they realize the value of the type of education that Holy Cross offers. Is it unreasonable to expect the Government to share in those gifts?

I strongly urge that the following tax incentives be retained:

(1) the deduction for the fair market value of gifts of appreciated property with no capital gains tax on the appreciation. (Of the $700,000 contributed to Holy Cross Annual Giving so far this year about 30% represent gifts of appreciated property.);

(2) the present laws concerning deferred gifts—life income contracts, charitable remainder trusts, and charitable gifts annuities. (Holy Cross is beneficiary under seven charitable remainder trusts totaling almost $1,000,000, and awaits a charitable gift annuity of $100,000. As our donors become educated in the special benefits of deferred gifts, we expect this area to be our major source of giving.);

(3) no floor on deductibility of charitable gifts. Such a limitation would eliminate many of the gifts which Holy Cross now receives.

While urging the retention of these legitimate tax incentives, I strongly agree that tax abuses should be eliminated. I support the taxing of organizations on income received from debt-financed investments, and the extension of the unrelated business income tax to cover all organizations now exempt. Legitimate incentives, however, must be retained.

Please reconsider the consequences of the tentative proposals. Realizing that our donors and the donors of similar private institutions give because they recognize the vital need for a liberal education. Ask yourself what type of education has produced the leaders of today, and allow us to help produce the leaders of tomorrow. Eliminate tax abuses, but do not destroy the philosophy of concerned giving which the Government has always encouraged. I ask your support.

Sincerely yours,
REV. RAYMOND J. SWORDS, S.J.

"HERE BE DRAGONS"—WASHINGTON POST STYLE

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. BRAY. Mr. Speaker, a writer for the Washington, D.C., Post began his story in the Sunday, July 27, 1969, issue of that paper about Jack Benny's appearance in Indianapolis with the following paragraph:

INDIANAPOLIS, IND.—This is Middlesville, England, Flatland, a true midwestern city with a feeling of prairie and elbow room, where the tall buildings stick up lonesomely against the horizon like grain elevators and even in the heart of Meridian Street there are two-story Victorian houses with lawns, where parking costs 25 cents an hour and the event of the year is an automobile race and the people in the hotel lobbies are slickly urban but the ones out on the sidewalk have thick ears and heavy faces and friendly, unwondering eyes, and what in the world is a 75-year-old millionaire like Jack Benny doing at an open-air theater for a whole week in a place like this?

This was for openers. The rest of the story reeks with the same condescending, patronizing air, faintly but unmistakably insulting. This style of approach in certain pontificating east coast newspapers is not at all unusual. It is generally taken when the writer deals with anything west of the Hudson River. It is almost as if the writer being somewhat secluded in the East, has been out of touch, by chance or by choice, with the rest of the country.

I recall once reading about a cartographer of the Middle Ages who, when finishing his map, was left with a great blank space of unknown territory. Not knowing what to put there, he finally resolved the question by scrawling across the blank portion the phrase "Here Be Dragons."

It seems too many persons write of our own country when their knowledge is equally limited and does not go much beyond that available to Daniel Boone or Lewis and Clark. Afflicted with a rather weird type of provincialism all their own, their maps, too, have a large blank space labeled "Here Be Dragons." So they approach their subject matter accordingly, almost as if they preferred to use bad manners and invective to cover up their own ignorance of the locale of their story.

"Friendly, unwondering eyes." This much is correct; the eyes certainly are friendly. And, if by "unwondering," we mean absence of a hostile attitude toward strangers in their midst, then of course the eyes are "unwondering."

Affection for Jack Benny, one of the truly great and beloved public figures of our time, is not limited to one section of the country. It is just as strong in Indiana, as it is anywhere else.

But the story set me to thinking that probably, really, it is stronger in Indiana than it is in the writer. For affection and manners certainly go hand in hand, and no Hoosier would dream of being so rude to his guest as to use the man's public appearance as a cheap vehicle for venting his spleen on a place, and people.

MARYLAND SERVICEMEN KILLED IN VIETNAM

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. LONG of Maryland. Mr. Speaker, Lt. Col. Martin R. Beck, Pfc. Theodore E. Mangum, and Warrant Officer Stewart B. Goldberg, three fine young men from Maryland, were killed recently in Vietnam. I would like to commend their

courage and honor their memory by including the following article in the RECORD:

THREE SERVICEMEN FROM STATE LISTED KILLED IN VIETNAM

Three Maryland servicemen, a Special Forces lieutenant colonel, an Army warrant officer and a Marine private first class, have been killed in Vietnam, the Department of Defense announced yesterday.

Lt. Col. Martin R. Beck, 43, the husband of Mrs. Nancy L. Beck of Columbia, and Warrant Officer Stewart B. Goldberg, 21, the son of Mr. and Mrs. Albert B. Goldberg, of 3813 Bartwood road, Pikesville, were killed in separate helicopter crashes on July 24 and 25.

Pfc. Theodore E. Mangum, Jr., 18, the husband of Mrs. Christine Mangum, of 14526 New Hampshire avenue, Silver Spring, was killed July 27 near Da Nang while he was on a night patrol.

Colonel Beck, who was born in Baltimore, served with the 5th Special Forces Group. The Pentagon said he was an observer in a helicopter which was hovering close to the ground to fire at a Viet Cong target when a booby trap exploded, causing the helicopter to explode in mid-air.

Warrant Officer Goldberg died of burns on July 26, the day after the helicopter he piloted crashed while on a mission, the Pentagon said. His death was listed by the Defense Department as "not as a result of hostile action."

His parents said yesterday that the Forest Park High School graduate was on his second tour of duty in Vietnam, and had written them that he had already signed up for a third tour.

He attended Baltimore Junior College and joined the Civil Air Patrol, then enlisted in the Army in 1967.

He began his first tour in Vietnam in December, 1967, and flew 25 helicopter missions during his first week in the Far East. A week later he was awarded the Air Medal.

He returned to Baltimore in December, 1968, for a visit, but went back to Vietnam again a month later.

His father said yesterday that the young pilot had planned to return to college after leaving the Army, and study to become an aeronautical engineer.

Besides his parents, Warrant Officer Goldberg is survived by a sister, Miss Linda Goldberg, of Baltimore.

Colonel Beck was a 28-year service veteran who lied about his age to enlist in the Marine Corps after graduating from Forest Park High School in 1941, the Pentagon said.

He saw action in the Pacific islands in World War II, then went back to school after his discharge in 1945 and won an architecture degree from the University of Florida in 1951.

While in college he joined an Army Reserve Officer Training Corps program and received a commission as a second lieutenant.

He joined the Special Forces in 1956, and served in Europe from 1960 to 1968. He returned to the United States for an assignment at Fort Devens, Mass., and went to Vietnam in March of this year.

SON IN AT WEST POINT

He had also served in Korea, the Dominican Republic, and with the Military Assistance Command in Vietnam in 1964.

Colonel Beck had won the Bronze Star, Purple Heart, Combat Infantry Badge, Master Parachutist Badge, Joint Service Commendation Medal, Army Commendation Medal and Vietnam Service Medal.

Besides his wife, he is survived by his parents, Mr. and Mrs. S. E. Beck, of Towson; three children, Mrs. William C. Douglas, of Columbia, Martin R. Beck, Jr., a cadet at the United States Military Academy, and Mark T. Beck, also of Columbia.

He is also survived by two brothers, Howard Beck, of Baltimore, and Edward S. Beck, of Chicago, and a grandson.

Private Mangum graduated from Montgomery Blair High School in Silver Spring last June, and joined the Marine Corps "to get it over with," his wife, said yesterday.

MARRIED WHILE ON LEAVE

"He wanted to go in and get it over with," she said, "so he could plan what he wanted to do with the rest of his life. He wanted to be a Maryland state policeman, or go to college and become an FBI agent."

The young marine returned home last November after finishing boot camp and married his high school sweetheart, the former Christine Heyser.

Then he returned to the Marines for final training and was sent to Vietnam two months later.

Besides his 19-year-old wife, Private Mangum is survived by his parents, Mr. and Mrs. Theodore E. Mangum, Sr., of Beltsville, Md., two sisters, Miss Barbara Mangum and Miss Deborah Mangum; a brother, Thomas Mangum; a stepsister, Mrs. Sheila Moberly, and a stepbrother, William Jones.

SENATE—*Monday, August 4, 1969*

The Senate met at 12 o'clock noon and was called to order by the President pro tempore.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Eternal Father, in whom we live and move and have our being, break in upon us as the dawn of a new day and the sunrise of new hope. While we strive to serve the people and at times we are unsure of the path we should follow, make us always sure of Thee. When the need is great, the work is hard, and the way is dark, shed Thy light upon our pathway that in Thy light we may see light. Make our lives incandescent with the spirit of the One who said "I am the light of the world" and so fulfill in us His commandment, "Let your light so shine before men that they may see your good works and glorify your Father which is in heaven," for it is in His holy name we pray. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Friday, August 1, 1969, be dispensed with.

The PRESIDENT pro tempore. Without objection, it is so ordered.

WAIVER OF CALL OF THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the call of the Legislative Calendar, under rule VIII, be dispensed with.

The PRESIDENT pro tempore. Without objection, it is so ordered.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT UNTIL 11 A.M.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 11 a.m. tomorrow.

The PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR GRAVEL TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that at the conclusion of the prayer, the distinguished Senator from Alaska (Mr. GRAVEL) be recognized for not to exceed 40 minutes.

The PRESIDENT pro tempore. Is that for tomorrow?

Mr. MANSFIELD. Yes; and that would be before the controlled time begins.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations on the Executive Calendar.

The PRESIDENT pro tempore. Without objection, the Senate will go into executive session.

The nominations on the Executive Calendar will be stated.

NATIONAL BUREAU OF STANDARDS

The bill clerk read the nomination of Lewis M. Branscomb, of Colorado, to be Director of the National Bureau of Standards.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

ST. LAWRENCE SEAWAY DEVELOPMENT CORPORATION

The bill clerk proceeded to read sundry nominations to the St. Lawrence Seaway Development Corporation.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The PRESIDENT pro tempore. Without objection, the nominations are confirmed en bloc.

NOMINATIONS PLACED ON THE SECRETARY'S DESK—ENVIRONMENTAL SCIENCE SERVICES ADMINISTRATION AND COAST GUARD

The bill clerk proceeded to read sundry nominations in the Environmental Science Services Administration and the Coast Guard.

The PRESIDENT pro tempore. Without objection, the nominations are confirmed en bloc.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The PRESIDENT pro tempore. Without objection, it is so ordered.

A SUBPENA DUCES TECUM AND RESOLUTION REGARDING DANIEL B. BREWSTER

Mr. MANSFIELD. Mr. President, I submit a subpena duces tecum issued by the District Court for the District of Maryland to Robert A. Brenkworth, financial clerk, U.S. Senate, and I ask that it be read.

The PRESIDENT pro tempore. Does the majority leader wish to have the resolution or the subpena read?

Mr. MANSFIELD. The subpena.

The PRESIDENT pro tempore. The clerk will read the subpena.

The legislative clerk read as follows:

SUBPENA TO TESTIFY BEFORE GRAND JURY

UNITED STATES DISTRICT COURT FOR THE DISTRICT OF MARYLAND

To: Robert A. Brenkworth, Financial Clerk, United States Senate; business, Disbursing Office of the Senate, Rotunda, U.S. Capitol Building, Room S233, Washington, D.C.; residence, 14904 Claude Lane, Silver Spring, Maryland.

You are hereby commanded to appear in the United States District Court for the District of Maryland at 409 Post Office Building, Calvert and Fayette Sts., in the city of Baltimore on the 7th day of August 1969 at 10:00 o'clock A.M. to testify before the Grand Jury and bring with you all records in the custody, control or possession of, or which are the property of, the Disbursement Office of the United States Senate and/or the Financial Clerk of the United States Senate relating in any way, directly or indirectly, to any and all checks cashed by or on behalf of Daniel B. Brewster or Daniel Brewster at or through the Disbursing Office of the United States Senate or by or through the Financial Clerk of the United States Senate including but not limited to all checks, or microfilm copies of checks on which the name "Daniel Brewster" or "Daniel B. Brewster" appears as maker, or payee, or endorser or in any other capacity, and further including any memoranda of such transactions as have been above described in this subpena.

This subpena is issued on application of the United States of America.

Date August 1, 1969.

STEPHEN H. SACHS,
U.S. Attorney;

ALAN I. BARON,
Assistant U.S. Attorney;

PAUL R. SCHLITZ,
Clerk.

By CHARLOTTE MAE WILLIAMS,
Deputy Clerk.

Mr. MANSFIELD. Mr. President, I now submit a resolution for the information of the Senate and ask that it be read by the clerk.

The PRESIDENT pro tempore. The clerk will read the resolution.

The legislative clerk read as follows:

S. RES. 229

Resolution relating to a subpoena duces tecum directed to the Financial Clerk

Whereas a subpoena duces tecum issued on application of the United States of America addressed to and served upon Robert A. Brenkworth, Financial Clerk, United States Senate, directs him to appear in the city of Baltimore, Maryland, before a grand jury impaneled by the United States District Court for the District of Maryland on the seventh day of August, 1969, at 10:00 o'clock antemeridian, and to bring with him certain records in the possession and under the control of the Senate: Therefore be it

Resolved, That by the privileges of the Senate no evidence of a documentary character under the control and in the possession of the Senate can, by the mandate of process of the ordinary courts of justice, be taken from such control or possession but by its permission; be it further

Resolved, That when it appears by the order of the court or of the judge thereof, or of any legal officer charged with the administration of the orders of such court or judge, that documentary evidence in the possession and under the control of the Senate is needful for use in any court of justice, before any judge, legal officer, or grand jury, for the promotion of justice, the Senate will take such order thereon as will promote the ends of justice consistently with the privileges and rights of the Senate; be it further

Resolved, That Robert A. Brenkworth, Financial Clerk of the Senate, be authorized to appear at the place and before the grand jury named in the subpoena duces tecum before mentioned, but shall not take with him any papers or documents on file in his office or under his control or in his possession as Financial Clerk of the Senate; be it further

Resolved, That when said court determines upon the materiality and the relevancy of the records called for in the subpoena duces tecum to the proceeding before the grand jury the said court, through any of its officers or agents, shall have full permission to attend with all proper parties to the proceeding at a place under the orders and control of the Senate, to take at such place copies of such records in possession or control of said Financial Clerk as the court has found to be material and relevant, and to take at such place such evidence of witnesses in respect to such records as the court or other proper officer thereof shall desire, except that (1) the possession of such records by the said Financial Clerk shall not be disturbed and such records shall not be removed from their file or custody under said Financial Clerk, and (2) no minutes or transcripts of any executive session or any evidence of witnesses with respect thereto may be disclosed or copied; be it further

Resolved, That subject to the limitations hereinbefore stated, said Financial Clerk is authorized to supply certified copies of such records as the court has found to be material and relevant to the proceeding before the grand jury; and be it further

Resolved, That a copy of these resolutions be transmitted to the said court as a respectful answer to the subpoena aforementioned.

Mr. MANSFIELD. Mr. President, this resolution is being submitted on behalf of the majority leader and the minority leader in conformity with the custom of the Senate. We ask for its immediate consideration.

The PRESIDENT pro tempore. Without objection, the resolution will be considered by the Senate at this time; and, without objection, the resolution is now before the Senate.

Mr. DIRKSEN. Mr. President, as the distinguished majority leader has pointed out, this is the customary resolution that has always been used by the Senate, and we maintain inviolate the rule that none of these documents can be taken from the possession of the Senate or taken away from here. However, if there is a finding that the evidence involved is material for grand jury and other purposes, and if it is relevant, the disbursing officer does have a Recordak machine, and he can run through and picture whatever checks may be involved so that they can be seen. I presume that, within the four corners of the resolution, probably Xerox copies might well be made and the original documents kept here. But it will satisfy the purposes of justice and is responsive to the subpena duces tecum.

The PRESIDENT pro tempore. The question is on agreeing to the resolution.

The resolution was agreed to.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDENT pro tempore. Without objection, it is so ordered.

CONGESTION AT NATIONAL AIRPORT

Mr. SPONG. Mr. President, when the Civil Aeronautics Board announced it would look into the problem of congestion at National Airport, there were those sanguine enough to think something might come out of it. It was certainly a better prospect than relying on the timid and largely fruitless efforts of the Federal Aviation Administration to put sensible limits on the use of that facility.

Unfortunately, no one fully reckoned with the force of bureaucratic inertia. It has been more than 2 years since the investigation was announced and it still has not gotten off the ground with a formal hearing.

A major factor in this delay has been the FAA, which understandably does not like the idea of another Government body looking into its affairs. Thus, the Department of Transportation asked some time ago for a hold on the investi-

gation while it tried again to find a solution to the problem—this time through the application of its high-density airport traffic rules.

Mr. President, these rules are designed to limit the number of flights at the Nation's busiest airports, including National. However, because National was already under restrictions of this kind, the new rules made no change in the number of flights per hour. It remains what it has been for some time—40 per hour.

When asked about this apparent contradiction at a hearing of the Senate District of Columbia Committee, Mr. Arven Saunders of the FAA conceded the new rules would make little if any change at National either in regard to air carrier operations or number of passengers.

Subsequently, I wrote to Secretary of Transportation Volpe to ask whether I could infer from what was said at that hearing that the Department no longer had reason for delaying the CAB investigation. I have since received a reply in a letter signed by Acting Secretary of Transportation James M. Beggs.

Incredibly, the Department's reply was that it not only would not withdraw its request for a delay in the hearing, but that it intended to ask the CAB to cancel it altogether. I quote from Mr. Beggs' letter:

> For a time we believed that the CAB Washington-Baltimore Airport Investigation should be delayed until we could determine the effect of the High Density Traffic Airport Rule on operations at Washington National Airport. It now appears that the rule and the earlier voluntary quota system have contained congestion at the airport. In any case, the rule provides a mechanism for further reducing operations at the airport, should that action be necessary. Further, the Department believes that the studies discussed in the answer to question 1 may well yield a better mechanism for the planning and operation of the three airports; and that such mechanism might better effect the objectives of the investigation than CAB action. Accordingly, we believe that the Washington-Baltimore Investigation should be discontinued. We plan to so recommend to the CAB Examiner hearing the case.

Mr. President, this assertion by the Department that congestion at the airport has been "contained" comes as a surprise to the residents of this area and the users of the airport. It also comes with no explanation of how it was accomplished—by a rule which admittedly makes no difference in the number of flights or the number of passengers using the airport?

Moreover, the assertion follows an announcement by the FAA that in the month of May more passengers used National Airport than at any time in its history. The total number of passengers served was 928,384 representing an increase of 8.2 percent over May of last year. In 1 month, National served about half the number of passengers which will be handled by Dulles Airport in a year.

Mr. President, since preparation of this speech, I have received later figures which show that passenger traffic at National Airport in June of this year surpassed the record figure of May by more than 5,000. Thus, June of 1969 has become National's busiest month in history. I would predict that this figure, too, will be surpassed, as congestion at National continues to grow. These new figures show that, during this past June—7 years after the completion of Dulles Airport—National served almost 4½ times the number of passengers served by Dulles. During the past fiscal year passenger traffic at National was five times greater than at Dulles.

The reported figures at National are: 942,964 passengers during June and 10,051,906 during the last fiscal year. At Dulles the comparable figures are: 218,241 in June and 2,006,374 during the fiscal year.

Mr. President, these new figures indicate that there has never been a greater need to seek reduction of traffic at National and increased use of Dulles. National Airport will go on being a source of noise, pollution, and congestion for this area unless we take the steps necessary to limit the flights of passengers. I think the facts are clear that this has not been done. Based on the Department of Transportation's letter, I seriously doubt whether the Department ever intends to take action.

The studies referred to in Mr. Beggs' letter concern ways of bringing a regional perspective to the planning and operation of the three airports in this area. How long these studies will go on, and what changes they might bring, we do not know. What we do know is that the Department intends to move ahead with its plans for the improvement and expansion of National Airport, without regard to the findings of these studies or the needs of all three regional airports or, in fact, the best interest of the metropolitan area.

The Department has it within its power now to reduce the congestion at National by diverting flights and passengers to Dulles. Until it gives some assurance that it will do that, the people of this area have no choice but to ask the CAB to use its power of certification to meet the problem.

Accordingly, I have sent a letter to the Chairman of the CAB urging him in the strongest terms to schedule a formal hearing on this question at the earliest possible date. I also intend to bring the matter to the attention of fellow members of the Senate District of Columbia Committee and the Commerce Committee and to recommend additional courses of action.

Mr. President, I ask unanimous consent to have printed in the RECORD a copy of my letter to Secretary Volpe and the Department's reply.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

JUNE 2, 1969.

Hon. JOHN A. VOLPE,
Secretary of Transportation,
Washington, D.C.

DEAR MR. SECRETARY: I am sorry you were unable to attend the hearing at Dulles Airport, but I hope you are feeling better now.

As I indicated to you in my letter of May 16, there are several policy matters affecting the future of National and Dulles Airports which Committee members are anxious to have clarified. It would be most helpful if you would respond to the following questions in a letter which could be made part of the official hearing record.

It is the Department's view that National, Dulles and Friendship Airports constitute a regional airport system and that planning should be done on a regional basis?

Would the Department agree that there should be a study of priorities and cost-benefit values to determine how a given sum of money can best be used in meeting the airport needs of the region before improvements are made at any one airport?

Has such a cost-benefit study been made or does the Department intend to make such a study before recommending major improvements at National Airport?

At the Committee's first hearing, Chairman John Crooker of the Civil Aeronautics Board testified that the Department had requested a delay in formal hearings into the question of congestion at Washington area airports until it could evaluate the effects of its new high density traffic airport rules. However, Mr. Arven Saunders later told the Committee that these new rules would make little if any change at National either in regard to air carrier operations or number of passengers. Can it be inferred from this that the Department no longer has reason for delaying this important investigation?

If the Department has some other reason for asking for a delay in the CAB investigation, would you tell the Committee what that reason is, and when the Department expects to have the matter resolved? Specifically, is this other policy matter the Kling Report on the improvement of National Airport?

What is the Department's view with regard to the early construction of a subway link between Dulles Airport and the main metro system? Would the Department recommend including funds for such an airport line in the subway authorization bill now before the Congress?

Your answers to these questions will greatly assist the Committee in its deliberations.

Sincerely,

WILLIAM B. SPONG, Jr.

THE SECRETARY OF TRANSPORTATION,
Washington, D.C., July 25, 1969.

Hon. WILLIAM B. SPONG., Jr.,
Subcommittee on Business and Commerce of the Committee on the District of Columbia, Washington, D.C.

DEAR SENATOR SPONG: This in further reply to your letter of June 2, 1969. You asked us to respond for the Committee hearing record to six questions on policy matters affecting the future of Washington National and Dulles International Airports which the Committee members wish to have clarified. As requested by the Committee Staff, we have separately responded to the last question in your letter. Our responses to the remaining five questions are as follows:

You ask "Is it the Department's view that National, Dulles and Friendship Airports constitute a regional airport system and that planning should be done on a regional basis?"

We believe that the three major airports in the Washington, D.C.-Baltimore, Maryland area should be viewed as a regional airport system. We also believe that the area would benefit if the three airports could be more efficiently planned and operated on a regional basis, giving full consideration to the comprehensive planning objectives of the metropolitan region. To this end, studies are now underway within the Department to determine how this could be accomplished and efficiently implemented.

You ask "Would the Department agree that there should be a study of priorities and cost-benefit values to determine how a given sum of money can best be used in

meeting the airport needs of the region before improvements are made at any one airport?"

When we complete the studies mentioned in the answer to question 1, we will be in a position to present for Congressional consideration our conclusions and recommendations concerning the planning and operation of the three airports. Since each of the airports is now an indispensable element in our national air transportation system, however, we believe each should be improved and maintained to the extent necessary to ensure operational safety and efficiency. We must observe that the Department now has authority to directly fund improvements at the two National Capital Airports, and our study of priorities and investment alternatives has dealt only with those airports.

You ask "Has such a cost-benefit study been made or does the Department intend to make such a study before recommending major improvements at National Airport?"

While the Department has not made the comprehensive study of the three airports described in question 2, we have stated that we believe all three of the airports serving the area need improvements. The proposals to modernize Washington National Airport are based on an economic feasibility study. As indicated in our answer to question 2, we have stated our belief that whatever is done about planning and operation of the three airports, Washington National Airport will be in need of improvement.

You ask "At the Committee's first hearing, Chairman John Crooker of the Civil Aeronautics Board testified that the Department had requested a delay in formal hearings into the question of congestion at Washington area airports until it could evaluate the effect of its new high density traffic airport rules. However, Mr. Arven Saunders later told the Committee that these new rules would make little if any change at National either in regard to air carrier operations or number of passengers. Can it be inferred from this that the Department no longer has reason for delaying this important investigation?"

For a time we believed that the CAB Washington-Baltimore Airport Investigation should be delayed until we could determine the effect of the High Density Traffic Airport Rule on operations at Washington National Airport. It now appears that the rule and the earlier voluntary quota system have contained congestion at the airport. In any case, the rule provides a mechanism for further reducing operations at the airport, should that action be necessary. Further, the Department believes that the studies discussed in the answer to question 1 may well yield a better mechanism for the planning and operation of the three airports; and that such mechanism might better effect the objectives of the investigation than CAB action. Accordingly, we believe that the Washington-Baltimore Airport Investigation should be discontinued. We plan to so recommend to the CAB Examiner hearing the case.

Finally, you ask "If the Department has some other reason for asking for a delay in the CAB investigation, would you tell the Committee what that reason is, and when the Department expects to have the matter resolved? Specifically, is this other policy matter the Kling Report on the improvement of National Airport?"

The Department has had no reason for requesting a delay in the CAB investigation other than that described in the answer to question 4. Specifically, the Kling Report on the improvement of National Airport has not been the reason for our asking for a delay in the CAB investigation since its release.

We hope that these answers to your policy questions will benefit the Committee in its hearings respecting the Utilization and Future of the Three Major Airports in the Washington, D.C.-Baltimore Area. Please do not hesitate to contact the Department if we can further assist the Committee.

Sincerely,

JAMES M. BEGGS,
Acting.

Mr. BYRD of Virginia. Mr. President, will my colleague yield to me?

Mr. SPONG. I am happy to yield to my distinguished colleague.

Mr. BYRD of Virginia. Mr. President, I concur in the statement just made by my distinguished colleague from Virginia as to the need to reduce the heavy traffic at National Airport. It seems to me that an airport that was designed to accommodate 4 million passengers a year, and which is now carrying 10 million passengers a year, presents quite a traffic hazard. I feel it is important that many of the flights be shifted from National Airport—thus reducing the congestion there—to Dulles Airport, which is an underutilized facility with the capacity to become the greatest airport in the world.

Thus, I concur in the assertions of my distinguished colleague as to the need for reduction of congestion at National Airport.

Mr. SPONG. I appreciate very much the remarks of my senior colleague from Virginia.

THE VIETNAM WAR

Mr. ERVIN. Mr. President, the Washington Post of August 2, 1969, published a column by William S. White entitled "Nixon's Trip Just Compounds Disputes Over Vietnam War." In this column, a wise commentator makes some thoughtful comments upon the President's trip and the Vietnam war.

I ask unanimous consent to have this column printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NIXON'S TRIP JUST COMPOUNDS DISPUTES OVER VIETNAM WAR

(By William S. White)

The realistic verdict on President Nixon's Asian mission must be that he has compounded, rather than reduced, his basic problems over Vietnam.

He has first pleased, only then to enrage, the American home-front doves, and those abroad, too, for that matter. He returns to Washington, moreover, compelled to face the bleak truth that his hard-core support for a firm posture on the war has itself been shaken, to some degree even within his own administration.

The soft-liners were enchanted by what were in fact very careful and limited presidential suggestions at Guam, early in the trip, that the American military presence in Asia would be steadily—but never recklessly—scaled down. Characteristically, and perhaps also only humanly, they chose to interpret all this for what the President never meant—the beginning of a wholesale, emotional retreat from our Asian responsibilities.

Then, they reacted furiously against presidential statements in Thailand and Saigon which amounted to pledges that the United States is simply not going to abandon its treaty obligations, its military commitment to South Vietnam and to the anti-communist South Vietnamese government of President Thieu.

The hard-liners, for their part, were made disconsolate and deeply troubled by the comments at Guam and then somewhat—but only somewhat—reassured by the strong line the President took in Thailand and Vietnam.

What it all proves all over again is the tiresome but unalterable reality that there is at the end no way out of Vietnam except for ultimate American surrender on the one hand or, on the other hand, for the application to a stubborn and arrogant enemy of unstinted American military power until a tolerable if imperfect solution can at last be attained.

Beyond this, the mission has established the wisdom of Mr. Nixon's own general view—departed from in this instance—that presidential journeys having in the popular mind something of the tone and color of "summit conferences" should never be undertaken unless and until successes for American diplomacy are more or less guaranteed in advance. Too much was inevitably expected by too many of this journey.

So the central actuality with which the President must now grapple is that his sustained efforts to placate the doves have led him into both a short-run difficulty that tends to upset both doves and hawks and a long-run peril of far more profound meaning. This later danger is that his true and final purposes may be misapprehended on both sides.

So much has been said and written of public frustrations that the present cliche insists that "everybody" in this country is "sick and tired of the war" and thus that the President simply must "get us out of it," at whatever cost to the national position in this world, before this or that election rolls around. The trouble with this is that it is in the first place a gross oversimplification. The undoubted public weariness with the war is felt as much by hawks who want more military action as by doves who want none; and this is one thing.

Quite another thing is any notion that the people will long reward or even tolerate any American administration that actually surrenders our sword in any war. For let this, the world's greatest power, actually accept a humiliating defeat, however dressed up, from a tin-pot and fifth-rate Communist state and the sentimental cheering certain at first to be heard "when the boys come home" will within months turn to a deep national growl of disillusion and rage. This will make the initial happy cries sound like a single piccolo beating against the thunder of a thousand bass drums.

In a word, there is a short-term view of this wretched affair that is so preoccupied with instant public approval as wholly to underrate the ultimate consequences of what would surely be a most evanescent national mood of rejoicing. And some of the President's advisers are pushing and will push this view of what might be called the happiness boys.

Then there is a long-term view which realizes that it is not the score in the early innings but rather the score when the game is all finished that alone determines the outcomes of both wars and presidential elections. And some of the President's advisers are pushing and will push this view.

He returns, in other words, to make a choice between the short view and the long view; and for this task the journey has done no good. This columnist, as a card-carrying hawk, has no doubt where the President will stand at last—but a man does get a little nervous sometimes.

SUPPORT FOR CONSTITUTIONAL CONVENTION LEGISLATION

Mr. ERVIN. Mr. President, a few days ago the Subcommittee on Separation of Powers of the Judiciary Committee approved and ordered reported to the full committee S. 623, a bill I

first introduced in 1967 to provide much needed procedural guidelines for a constitutional convention to consider amendments to the U.S. Constitution should one be invoked by petitions from the States.

As the country now knows, such a convention is no longer an improbable theoretical event, but a very real possibility. Thirty-three States have already submitted petitions for a convention to consider amendments on reapportionment. Under the Constitution, petitions from two-thirds of the States—or 34—are required for a convention to be called. Although news reports indicate that Wisconsin, which is the most likely candidate for No. 34, has postponed action until the fall, the possibility of a convention in the near future is still very much alive.

The legislation reported by the subcommittee has from the very start attempted to be as neutral as possible with respect to its effect on the very controversial reapportionment issue. The subcommittee's bill seeks neither to facilitate a convention on reapportionment nor to lay so many obstacles in its path that one would be impossible. The approach of neutrality is in line with what the subcommittee and I believe to be the obligation of Congress under article V; that is, to prepare machinery for the effectuation of this portion of the Constitution so as to make it a possible, however improbable, method of constitutional amendment. The bill has been drawn to meet not only the immediate needs of the country, but also to serve as the direction for the Congress and the States in the future, when the convention route of proposing amendments might serve liberal as well as conservative political interests.

The neutrality of the bill is demonstrated by the wide support it has received from the partisans on both sides of the reapportionment controversy. Senator DIRKSEN, the leading proponent of reapportionment amendment, is a member of the subcommittee, and he has approved the bill. The Washington Post and the New York Times, both ardent opponents of any change in the Supreme Court rulings on reapportionment, have also supported it. This is proof that the legislation favors neither side—and it is proof that both sides of the reapportionment issue recognize the overriding need to adopt the bill with the least possibly delay. I sincerely hope that prompt and favorable action will be taken on it.

I ask unanimous consent that a number of editorials recognizing the urgent need for this legislation be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Post, Feb. 4, 1969]

BACK-DOOR AMENDING PROCESS

The threat of a new constitutional convention called by the states may not be very grave, but the fact that such a threat exists at all is cause for vigilance and effective counteraction. Senator Dirksen has indicated that he is still eager to press his proposed amendments to the Constitution to allow prayers in the schools and apportionment of one house of the state legislatures on various other criteria in addition to population. Since neither proposal can muster a two-thirds vote of Congress, he wants to invoke the never-used device of a constitutional convention called by two-thirds of the states.

In our view this sleeper in the Constitution should never be used. The threat to use it appears to have been influential on one occasion in inducing the Senate to accept the amendment for the popular election of Senators. But in general amendments to the basic law ought to have the approval of two-thirds of the Senate and House before being submitted to the states for ratification.

The first line of defense against a constitutional convention initiated by the states lies in the states themselves. Though 32 states had petitioned for such a gathering when excitement was running high over the Supreme Court's reapportionment decisions, there are indications that some of these resolutions may be rescinded by legislatures meeting this year. Newly reapportioned legislatures are less concerned than their predecessors about a return to the old structure, and they have reason to fear the outcome of a possibly unrestrained revision of the Constitution.

The second line of defense lies in Congress. Some members believe that Congress would not have to call the proposed convention even if petitions should come in from two-thirds of the states. Others who read the word "shall" in Article V in a more literal sense are trying to lay down rules that both the states and Congress would have to comply with in utilizing the rusty state-initiated convention device. Senator Ervin has introduced a revised bill which would greatly reduce the dangers of any wholesale constitutional revision by this means.

The Ervin bill would require states seeking to invoke Article V to state the nature of the amendment or amendments proposed. A resolution for that purpose would have to be passed by the regular lawmaking processes, except for the Governor's signature. Then it would be sent promptly to both houses of Congress, where it would be widely publicized to avoid the dangers of a sneak campaign. Such resolutions would remain effective for only four years, and could be rescinded any time before two-thirds of the states have joined in the petition. But Congress would decide whether the state resolutions were valid and confined to the same subject or subjects.

If a constitutional convention were called by this method, the states would have to elect their delegates—equal in number to their Senators and Representatives. Congress would specify the problems to be considered by the convention, and if the proposed amendments emerging from the convention did not conform to the congressional limitations they would not be submitted to the states for ratification. With these guidelines on the statute books, the risk of a runaway convention would probably be gone, although other powerful arguments against using the back-door amending process would remain.

[From the Washington (D.C.) Post, April 12, 1969]

CONSTITUTIONAL CONVENTION BILL

The Iowa Senate did not create much of a stir the other day when it passed a proposal for a national constitutional convention, although (if the House should concur) Iowa would be the 33d state taking such action. If 34 states join in this petition, it is widely assumed that Congress would have to call such a convention. And some people fear that a convention initiated solely by the states might abolish the Bill of Rights, create an elected Supreme Court and critically curb the powers of the Federal Government.

This venture aroused a great deal of alarm two years ago when the 32d state resolution was passed. Since then much of the steam has gone out of both the drive for a constitutional convention and the opposition to it. One reason for this is the careful work done by Sen. Sam J. Ervin Jr., which makes it evident that Congress would not need to call a wide-open convention even if two-thirds of the states should seek constitutional changes under the unused portion of Article V.

Another factor is the passage of time. The first petitions to Congress to call a constitutional convention came from 12 states in 1963. The purpose behind them was to deny the Federal courts jurisdiction over state legislative apportionment cases. Most of the petitions since then have asked for a convention to propose an amendment which would permit one house of a state legislature to be apportioned by some standard other than population. Are the two groups sufficiently related to be joined together into a single demand upon Congress? Another question must be raised about the validity of four petitions which apparently have not been received by Congress. Then there is the question as to whether the early petitions are still valid six years after they were voted. Under the terms of the Ervin bill designed to guide the submission of such petitions, they would remain in effect only four years.

Whether or not 34 petitions are ultimately received Congress ought to take up the Ervin bill at the first opportunity. It would tell the states how to proceed in petitioning for a constitutional convention and how to elect their delegates if such a convention should be called. It would make Congress the sole judge of whether the states had complied with the requirements in any instance. More important, it would confine the convention to the specific problem raised in the state petitions and the congressional call and give Congress discretion to kill any proposed amendment on other subjects by not submitting it to the states for final ratification.

In our view this safety valve is both proper and essential. Senator Ervin has noted that when the framers adopted two methods of amending the Constitution, one to be invoked by Congress and the other by the states, they did not intend to make one superior to the other. They did not invite the states to junk the Constitution and write a new one in a convention called by themselves. Both Madison and Hamilton make clear that the conventions which the states might initiate were intended for the proposal of specific amendments only.

We think Congress would be well within its rights in passing a law to implement this understanding. If it does so, most of the fear that has been associated with state-initiated conventions will evaporate. As a matter of policy it is infinitely better for constitutional amendments to be approved first by Congress and then ratified by the states, so that the will of the Nation as well as that of the states will be expressed. But as long as an alternative amendment procedure remains in the Constitution, and it is not likely to be repealed, Congress has an obligation to provide sensible guidelines for its use and not to risk a constitutional crisis after petitions from two-thirds of the states have been laid at its door. This would be a good bill for Congress to get to work on while it is complaining that it has nothing to do.

[From the Washington (D.C.) Post, June 21, 1969]

GUIDELINES FOR A CONSTITUTIONAL CONVENTION

Congress has waited until the eleventh hour to face the problem of a possible constitutional convention called by the states. When a Senate subcommittee reported out a bill the other day to guide such ventures, 33 of the 50 states were on record as having approved a convention to deal with legisla-

tive reapportionment. Affirmative action by one more state legislature would, according to some views, require Congress to summon a convention under the terms of Article 5. But there are no rules whatever on the books as to how such a convention should be called or how it should operate.

At last the Judiciary Subcommittee on Separation of Powers has offered such rules, and Congress should lose no time in making them effective. No doubt the proposed rules would require many of the states to start over again in calling for a convention, but that is unavoidable. It would be quite intolerable to allow a convention to assemble under this heretofore dormant provision of the Constitution with no requirements as to how it should be constituted or as to what its limitations and responsibilities would be.

The chief provision of Senator Ervin's bill which the Subcommittee approved is designed to prevent a wide-open convention which might seek to rewrite the entire Constitution. Petitions to Congress for a convention would have to be related to a specific issue or issues, and Congress in turn would specify in making the call the nature of the amendment or amendments to be considered. The delegates would be required to take an oath that they would not propose or vote on any extraneous issue, and if they should approve a constitutional amendment outside the scope of their authority Congress could refuse to send it to the states for ratification.

This seems to us a wholly legitimate means of restricting proposed changes to the status of "amendments," as the Founding Fathers provided. There should be no question at this stage in our history of starting out afresh with a wholly new constitution initiated by the states without even the approval of Congress.

One provision of the Ervin bill, however, was broadened unreasonably. As introduced this year, the bill would have allowed the states only four years in which to petition for a constitutional convention. An amendment approved by the Subcommittee stretched this to seven. If there is really a burning issue on which the states feel they must seek an amendment, they should be able to make up their minds in less than seven years.

We hope that both the Senate and House will give early attention to these guidelines in order to avoid the chaos that otherwise may be unloaded on Capitol Hill at any time.

[From the New York Times, June 16, 1969]

MR. DIRKSEN'S TIME BOMB

After six years, Congress has at last become aware of the time bomb set off by Senator Dirksen of Illinois in his effort to erase a decision of the Supreme Court.

Unable to persuade his colleagues to adopt a Constitutional amendment that would have allowed states to elect one house of their legislatures on a basis other than population, Mr. Dirksen in 1962 launched a campaign for a constitutional convention to be called by the states for that purpose. Of the 34 required to force such convention, the like of which has not been seen since the one in 1787, 33 states have now voted to make the necessary application.

Faced with the possibility that such a convention could, in the absence of prior legislative restraint, act to undo the entire Constitution, a Senate Judiciary subcommittee has just voted to recommend drastic limitations. To prevent a runaway convention, the subcommittee under Senator Ervin of North Carolina would confine such conventions to the subject or subjects specifically stated in the applications. The bill must pass if, in Senator Ervin's words, "we are to avoid the threat of a major constitutional crisis in the very near future."

There is always the chance, of course, that the 34th state will not come through or that the applications of some of the states will be found to be irregular—partly on the ground that the very legislatures voting them were malapportioned. But the risk is far too great that Mr. Dirksen's plan will succeed mechanically and then proceed to yield more mischief than anyone could have foreseen, even including Senator Dirksen. In any case, if his interest is solely in getting the Court's opinion reviewed by a higher body—the citizens of the United States in convention assembled—he should be willing to support the Ervin proposal.

A Constitution that has stood the tests of nearly two centuries may need amending from time to time, but it must not be laid open for random surgery, casually and for reasons that suggest political maneuvering rather than political philosophy.

[From the Houston (Tex.) Post, July 6, 1969]

CONVENTION LAW IS NEEDED

There is a good chance that nothing actually will come of the effort to force the calling by Congress of a national constitutional convention, the first since 1787, for the asserted purpose of restricting the one-man, one-vote requirement of the federal Constitution as it now stands.

This is true even though the legislatures of 33 states at various times have approved petitions of some kind, and there always is the chance that 34 will join the procession to make the needed two-thirds of the 50 states.

There are so many legal questions involved, which presumably would have to be resolved in each case by the Supreme Court, that the possibility of a convention's ever being assembled are remote. While Wisconsin legislators recently debated whether that state should become the 34th petitioner, a three-judge federal court began hearings on whether or not Utah's petition was valid and the House of Representatives of the Illinois legislature voted to remove that state from the list of petitioners.

On the other hand, an effort in the recent regular session of the Texas Legislature to get rescinded a petition approved by a previous Legislature in 1967 did not succeed.

Although the Constitution provides that it can be amended by the convention method, no such convention has ever been held since the Constitution was adopted. And there are no statutes on the books to govern the procedures for implementing this method of amending the nation's fundamental law.

There is nothing to keep any such convention, once assembled, from going hog wild and attempting to rewrite the entire Constitution. In the absence of any such restraints, Congress would be endangering the nation's entire system of government and the Constitution it is sworn to uphold if it should call such a convention.

Even if it is unlikely that a national constitutional convention will be called in the foreseeable future, it still would be wise for Congress to enact legislation spelling out requirements for implementing the constitutional provision that permits the convention method of amendment, if it is to be left in the Constitution, and there are good reasons for doing so.

Any law should fix clearly the procedures to be followed in getting a convention of this kind assembled, and it should impose restrictions on what the delegates would be able to do once convened.

Sen. Sam J. Ervin, Jr. of North Carolina has proposed a measure along these lines, and it has been approved by a Senate Judiciary subcommittee. It provides that the petitions must be limited to a specific issue or issues, and the scope of the convention's authority would be limited accordingly. Moreover, the petitions would have to be filed within a specific period.

Whether or not Sen. Ervin's bill is entirely satisfactory is less important than the fact that it is a step toward filling a rather glaring gap in existing laws. The bill can be amended, of course, and made acceptable if it is not.

The current effort to force a convention on the part of politicians and others interested in limiting application of the one-man, one-vote principle at least has spotlighted the lack of statutory rules for dealing with situations of this kind, and that may prove to be constructive even if nothing else about the movement is.

It is hard to understand why the needed law has not been enacted in the past. Perhaps it has been the difficulty of getting a consensus on what the rules should provide.

But reason would seem to dictate that legislation be enacted to cover implementation of the constitutional provision, or else the provision should be removed from the nation's basic law.

[From the Grand Rapids (Mich.) Press, July 9, 1969]

LOCK THE DOOR NOW

A minimum of 34 states must act to call a federal constitutional convention. At this point in time 33 state legislatures have voted to call a convention to consider the Dirksen amendment, which is intended to undo the Supreme Court's one man, one vote decision in apportioning legislative bodies. Two more legislatures even now are weighing whether they want to take similar action. At the same time, the Illinois legislature is debating whether it can or should withdraw its vote for a convention.

At this juncture, therefore no one knows what the fate of the convention proposal will be. Or whether the Illinois Legislature can rescind the action taken by an earlier legislature. But Congress finally is awakening to the fact that constitutional chaos may be ahead unless preventive action is taken. A Senate Judiciary subcommittee, headed by Sen. Sam Ervin, a recognized constitutional authority, has recommended that severe limitations be imposed on any constitutional convention that might be called.

Specifically, it has proposed that if a convention is to be called to consider the Dirksen amendment it should be restricted to considering only that question. The reason for this proposal is that it is widely believed that unless a convention should be so restricted it could undertake to rewrite the entire Constitution. Ervin's view that a constitutional crisis could develop if restrictions were not imposed is scarcely debatable.

Regardless of what happens this year with respect to the Dirksen amendment, Congress should proceed promptly along the lines of the Ervin proposal. It can't know when the country may need some such measure to prevent a mass assault on the Constitution. And it could happen anytime now.

[From the Columbia (S.C.) State, June 25, 1969]

ERVIN'S SENSIBLE RULES

At long last, a Senate Judiciary subcommittee has approved a set of rules governing constitutional conventions. Since no such assembly has convened since the original one in 1787, it might be supposed that no great emergency exists. But this is not the case. Thirty-three states have issued convention calls—one shy of the number specified in Article V of the Constitution.

Assuming that the needed convention call comes, what next? The truth is no one is sure. Article V sets up the machinery for calling a convention to propose amendments and, having done that, lets the matter drop. With one specific exception, the convention presumably would have unrestricted authority to rewrite the national charter. Article V provides that no amendment can deny any

state of "equal suffrage in the Senate." Otherwise, it bars no holds.

By reason of this nearly unlimited authority, Congress historically has viewed convention calls with alarm. On several occasions, when it seemed likely that the necessary two-thirds of the state legislatures would call for a convention, Congress has rushed forward to propose amendments of its own. Until now, timely congressional action has prevented the convention process from coming to a boil.

This time, Congress failed to respond. One by one, state legislatures slowly applied for a constitutional convention to deal with legislative reapportionment. Specifically, they had in mind an amendment to reverse the Supreme Court's "one-man, one-vote" rule, and Congress hesitated to trifle with the court.

The result has been an accumulation of convention calls from the states. And, as the total drew nearer to the number required for a convention, so did the likelihood increase that the nation might be pitched into a first-class constitutional brawl—with two-thirds of the states insisting on a convention and Congress, contemplating the uncertainties, engaged in a mad scramble to come up with some technicality whereby to circumvent the supreme law of the land.

It was to prevent just such an occurrence that Sen. Sam Ervin of North Carolina proposed a set of ground rules defining the authority of constitutional conventions. Under the Ervin proposal, conventions would be restricted to specific amendments—those mentioned in the applications of the states. In addition, the states would have only seven years to propose a national convention. After this period, any convention movement would have to begin anew.

These are sensible requirements, well within the intent of the Framers. If adopted, the Ervin plan would do away with the objections to a constitutional convention and, as a result, actually make convention calls easier. This would restore to the states and the people a greater role in the amendment process, which until now has been monopolized by Congress, with the states having only a veto power over Congressionally initiated amendments.

Most important of all, the proposed rules would head off the constitutional crisis so far averted by a hair's breadth. Now that the guidelines have been put in final form by a Senate subcommittee, Congress should hurry them to the floor. Unless it comes this session, congressional action may very well come too late.

[From the Rhinebeck (N.Y.) Gazette, Jan. 12, 1969]

LID ON PANDORA'S BOX

There is now a fair possibility that, in spite of warnings as to the Pandora's Box that would be opened if Congress were forced to call a constitutional convention, this may happen. A two-thirds vote of the states is required. As matters stand, 32 of the necessary 34 have already applied for such a convention to take up the matter of an amendment to override the Supreme Court's one man-one vote rulings on legislative apportionment.

The prospect of a convention call is serious enough to have prompted Senator Ervin of North Carolina to introduce a bill fixing ground rules for such an assembly. The need for this is evident, since Article V of the Constitution offers no guidelines and since there are no clear precedents of any kind.

The most obstrusive danger is that, once a convention were called, there would be no constitutional restriction on what might be discussed. Debate would not be confined to the proposed amendment for whose enactment the several legislatures have applied. At present there is nothing in the law to prevent a general revision of the Constitution, with all the potential hazards involved in such a move.

Ervin's bill provides that such a convention could propose only amendments related to the specific subject of state applications. This is a vital safeguard. An even better safeguard would be for the remaining states to recognize the perils in this unprecedented course and decline to add their voice to the call.

U.S. WHEAT CRISIS

Mr. MILLER. Mr. President, the world wheat situation has now turned into a crisis of chaotic proportions. a condition of which I have been repeatedly warning ever since the Senate, over my opposition, ratified the International Grains Arrangement. The facts are these: World wheat trade has shrunk 30 percent during the past 12 months due largely to the International Grains Arrangement, which forced the United States to tax its wheat exports by specifying increased world wheat trading prices. Not only has this encouraged foreign wheat production to abnormal levels, particularly in other exporting nations, but because of technicalities contained in the fine print of the agreement, the United States does not compete effectively in any market of the world against French and Australian wheat. This results in a drastic loss of business, a reduction in foreign exchange earnings, piling up surpluses, and most importantly, a depression in the farm wheat economy. Domestic farm wheat prices recently went to a 27-year record low.

The reason is this:

The United States now taxes exports of Hard Winter ordinary wheat by 20 cents per bushel at Gulf ports. The ECC currently pays a subsidy of about $1.67 per bushel to export wheat. The U.S. export price last Thursday, July 31, f.o.b. gulf ports was $1.55 per bushel, while on the same day the equivalent computed price for EEC wheat was $1.15 per bushel. In other words, U.S. wheat was made 33 percent more expensive than EEC wheat because of the loopholes in the International Grains Arrangement. If we are going to export wheat in the face of such a situation, prices must be lowered.

Now, I ask, when, in the annals of world commerce, has the leading trading country in such an important commodity as wheat thrown away its markets by export taxation, and refused to grant an export subsidy of just 10 percent of its primary competitors export subsidy in order to be competitive, preserve its traditional markets, and strengthen a faltering economy?

Mr. President, I ask unanimous consent to have an additional 2 minutes.

The PRESIDENT pro tempore. Without objection, the Senator from Iowa is granted 2 additional minutes.

Mr. MILLER. This is the heritage the Nixon administration received from the previous administration and its ill-conceived negotiation and support of the International Grains Arrangement. Those who are complaining the loudest about the lowering of prices to keep our export trade from being catastrophically reduced seem to be the ones who supported ratification of the International Grains Arrangement, but I have not heard them admit their mistake and call for withdrawal from the arrangement.

I have just been advised today that our good neighbor to the south, Ecuador, has bought 50,000 tons of wheat—its total annual wheat import requirement—from Russia. U.S. pricing policy has sent a Latin American neighbor to a different supplier.

The crisis is here, and the time is now to demand that U.S. wheat be kept fully competitive in world markets. Immediate action is required to prevent a complete debacle in U.S. wheat export trade which will drastically impair the wheat market for U.S. farmers. I repeat my statement of July 18 that the United States should give notice of its intention to withdraw from the International Grains Arrangement.

The editorial in the July 29 issue of the Southwestern Miller effectively expresses the dire implications of this situation.

I ask unanimous consent that this editorial and several other articles relating to the subject be placed in the RECORD.

There being no objection, the editorial and articles were ordered to be printed in the RECORD, as follows:

[From the Southwestern Miller, July 29, 1969]

THE FIRST HALTING STEP

That wheat futures advanced ahead of the expected announcement of downward revisions in export prices and declined sharply in the sessions immediately following implementation of the changes provides a broad consensus on the efficacy of the actions. What the futures market initially said was that the looked-for reductions in U.S. wheat export quotations would stimulate sales abroad to the point that the overall price level would be strengthened. The declines that followed disclosure of the actual revisions reflected disappointment over their extent as well as concern that little or no increase in business abroad will be realized. Certainly, the latter conclusion is justified on the basis of the complete absence of dollar sales abroad in the first week following the adjustments announced by the Department of Agriculture on July 18. It is difficult to dispute assessments made by a market as viable as wheat futures are. Nevertheless, it is important to keep in mind that the export price moves were initiated by men in Washington who fully recognize the impossible marketing position created for the United States by even minimal adherence to the International Grains Arrangement and whose commitment is to the expansion of wheat sales abroad.

What emerges is the necessity for balancing the good faith and practicability of the top officials of the Department of Agriculture who pressed for reductions against the dictates of world politics that extend beyond the wheat economy alone. These divergent forces came to bear, after literally months of agonizing debate and discussion. That the political considerations, as opposed to forces who desire to sell more U.S. wheat into dollar markets, prevailed is crystal clear in an analysis of the revised export rate schedule that was adopted to implement the price changes. That export rate schedule includes an incredibly complex series of different certificate costs and subsidy payments for hard winter proteins from the Gulf, excludes South America from the benefits of major hard winter adjustments and provides for no change from the Pacific coast. Even where the price cuts were deepest, about 12 cents a bushel on

hard winters, eight cents on soft wheat and varying adjustments for proteins, they are widely regarded as inadequate to meet world competition.

One particularly valid assessment of the revisions is that they represent a "gentleman's" approach to world wheat pricing, or, more specifically, a desire to assuage the clamor for U.S. actions by delicate adjustments that would not draw the ire of other selling countries. The actions taken are very similar to trying to have one's cake and eating it also. This cannot be done in world wheat pricing. A wheat exporter cannot be "half-competitive" any more than a woman can be "half-pregnant."

While the price adjustments that have been made may permit sales of a few parcels of wheat to a few buyers, the United States still has no chance at all of competing for the major dollar business in Western Europe or other areas of the world where price is the sole consideration. In order to sell wheat abroad in a volume that even approaches the rightful share for this country of world dollar business, the United States must be willing to undertake bold price moves. These obviously were prevented by the political response to the pleadings of other countries with which the United States competes in the world dollar market. Pledges by these nations to correct their ways and to lessen their competition in markets traditionally served by the United States have been worthless in the past and little reason prevails for expecting a different outcome in the future. The value of such pledges is all the more lessened by the fact that Soviet Russia and the nations of Eastern Europe were not a party to any of the discussions that preceded the U.S. moves, and that absolutely no basis exists for expecting the Communist nations to follow other than a fiercely competitive course.

While many disturbing elements have been noted in the adjustments undertaken by the United States, the most nonsensical from a practical sales viewpoint is the exclusion of South America and the major dollar outlets in the Far East from the benefits of price declines. That ruling is equivalent to telling one's best customers that they must pay more than the buyers who shift sources of supply with each fluctuation in price. Included in the nations of the Far East and South America are not only the principal dollar customers for U.S. wheat, but those buyers that have the most promise for developing into important commercial markets in the future. Japan, which in the 1968–69 crop year accounted for nearly a third of U.S. dollar wheat exports, has made its views on this discrimination known to Washington in no uncertain terms. Brazil has followed the same course. The upshot may be the unbelievable circumstances of the United States losing these markets that were important buyers before any price changes were made.

Although the price adjustments are a deep disappointment to those who had anticipated and wished for dramatic actions by the United States to regain its role in world markets, the fact that any changes at all were forthcoming must be considered a victory. The reductions were the first overt U.S. step to move away from even scant recognition of the I.G.A. price schedule as the determinant for U.S. wheat offerings abroad. This is a plus. It is a decision that came after numerous conferences between ministerial and sub-cabinet officials of the exporting member countries of the pact and after what seemed like interminable debate between all the elements in Washington that demanded a voice in U.S. export wheat pricing. At last it can be said the U.S. government has formally recognized the failings of the I.G.A.

Now that this first halting move has been made away from adherence to the I.G.A., the next step, it is hoped, will come without the long debate that preceded the initial action. The need for additional steps, in pricing, as well as elimination of exclusions and complexities, is readily apparent from a cursory examination of the U.S. position in world markets. The present U.S. stance in world wheat markets has been aptly compared to that of a young boy who had been forced for months to watch the baseball game through a knothole in the fence and at last had obtained a seat in the ballpark, even though it was in the bleachers. The youngster aspires now to a seat in the front boxes. U.S. wheat exporters are presently "in the ballpark," but they, too, seek and deserve the wherewithal, through government actions, to be in the front row of competitors for the world's business in wheat.

[From the Southwestern Miller, July 29, 1969]

SPRINGBOARD FOR WHEAT

"The time was never more propitious for those concerned with wheat, milling, baking and wheat-based foods" to make a contribution to the solution of the malnutrition problems facing the United States. This is one of the conclusions of a proposal emanating from the Wheat Flour Institute of the Millers' National Federation to stimulate all segments of the breadstuffs industry to assist in a project designed to develop a prominent place in the American diet for two wheat-based products. These products, now named Blend A and "WSB," have the potential of helping to eliminate malnutrition from the American scene through incorporation in traditional foods such as bread, cookies and pasta. The Institute statement on the opportunity facing the breadstuffs industry is hardly an exaggeration in view of widespread attention to findings of failure in supplying adequate nutrients at many levels of the U.S. population. Nutritional needs are at the very pinnacle of national concern. The Institute is providing the industry with a project that promises a dramatic role in the ending of these problems as well as offering a great vehicle for increasing consumption of wheat foods.

Responding with very commendable promptness to the thrust of the times, the Institute has mapped a domestic marketing proposal for products that were developed originally to meet special dietary needs in developing countries. Blend A is a concentration of nutrients separated from middlings and mixed with 70 per cent regular flour. It yields a bakery flour with markedly superior protein quality and quantity. WSB, or Wheat-Soy Blend, is formulated of a mixture of wheat protein concentrate and straight grade flour or bulgur flour, supplemented by soy flour and soy oil, as well as vitamins and minerals.

Several steps already have been taken by the Institute and other interested organizations to implement the plan and to gain through promotion and education a large-scale exposure of these products to consumers. Formulations and sampling plans are being worked out for breads, rolls, cookies and pastas, both for commercial and home use. An impressive array of industry groups has been enlisted—the American Institute of Baking, America Bakers Association, National Macaroni Manufacturers' Association, North Dakota State University. The proposal calls for coordination of efforts with the Consumer and Marketing Service and Agricultural Extension Service of the Department of Agriculture, Office of Economic Opportunity, Department of Health, Education, and Welfare and state and local departments of health.

Significant attention in the prospectus is given to the subtle problems of marketing such specially-compounded products among the urban poor. Just in the past week, the importance of recognizing the sensitivity of this socio-economic class received major emphasis in statements by industry leaders before the Senate Select Committee on Nutrition and Human Needs. "It must be understood that the most nutritious product in the world does no one any good unless it is consumed," Robert D. Stuart, Jr., president of the Quaker Oats Co., told the committee. Dr. Howard E. Bauman, director of science and technology for the Pillsbury Co., spelled out for the committee the basic requirements to gain acceptance for a special food—it cannot be sold only on the basis of nutritional quality, and no stigma of inferior social status can be attached; it must taste good and be comparable with other preferred foods of less nutritive quality; it must have a brand name to develop consumer confidence, and it must be familiar in flavor and form. In recognition of these marketing criteria the Institute plan gives high prominence to the projection of a "prestige" image for Blend A and "WSB," so as to make them acceptable among low income groups as well as popular with more affluent consumers.

Industry-wide support of the Institute proposal would be unique for the food industry. To achieve the success envisioned, adequate financing is required as well as all-out cooperation by associations and individual companies. In his message to Congress on hunger and malnutrition in early May, President Nixon said, "Something very like the honor of American democracy is at issue." Not an inappropriate paraphrase might be, "Something very like the honor of the breadstuffs industry is at issue."

WHEAT PRICES SKID TO 1942 LEVEL IN REACTION TO HEAVY CARRYOVER; OTHER GRAINS DECLINE

Wheat prices in U.S. markets plunged to 27-year lows yesterday.

The September wheat contract on the Chicago Board of Trade sold at $1.195 a bushel, down 5⅞ cents and the lowest since June 1942. The closing price, after a slight recovery, was $1.21, off 4⅜ cents.

Wheat prices at Kansas City retreated as much as 3⅞ cents a bushel. At Minneapolis, the drop was 1 cent.

The weakness in wheat unsettled holders of other grain contracts. Corn values fell 1⅝ cents a bushel. Oats fell 1 cent a bushel and rye slipped ⅝ cent a bushel.

The general selling of wheat contracts was stimulated by large stocks of the grain in the country and the failure of foreign buyers to respond to recent price cuts.

The U.S. Government ordered a 12-cents-a-bushel reduction on sales of wheat to Western Europe a little more than a week ago because other nations were selling the grain at less than the floor agreed on in the International Grains Agreement.

Yesterday, in Brussels, agricultural ministers of the six Common Market nations voted unanimously to authorize export sales of Common Market wheat at prices below the minimums set by the international agreement.

Foreign buyers, exporters believe, are waiting for still lower prices.

Normally at this time, domestic bakers buy a large amount of flour to cover baking needs for three months or more.

Annual midyear flour purchases by the bakers in recent years involved 20 million to 25 million 100-pound sacks. The bakers buy the flour at the height of the winter-wheat harvest or shortly thereafter. Grain merchants say the buyers are taking their time now because of the unsettled wheat price situation. Presumably they are expecting still lower prices.

COPPER FUTURES GAIN

The copper futures market in New York was strong, rising as much as 1½ cents a pound to seasonal highs.

Copper prices at London rose ⅝ cent a pound.

U.S. dealers handling scrap copper raised the scrap price 1 cent a pound to 51 cents. Quotations charged by the dealers for refined

copper made from the scrap metal or imported ore were raised ½ cent a pound.

Copper traders in London and the U.S. again turned their attention to the tight supply situation and were concerned about the continuing strike of workers at International Nickel Co. of Canada's facilities in Ontario, which had been producing 2,500 tons of refined copper weekly. The strike was called July 10.

Liquidation continued to depress silver futures prices in New York. Prices in this trading fell more than 4¼ cents an ounce for some contracts. The failure of industrial demand to be attracted to the metal at current prices created selling, brokers said.

The cocoa futures market was another weak spot. The loss was 1 cent a pound, the daily limit. Traders said some speculators who bought contracts recently were tempted to sell when it became evident that European demand, which was responsible for bolstering prices recently, was absent. Dealers also noted a favorable new cocoa crop outlook in Ghana.

CHICAGO BEEF RISES

Chicago wholesale beef prices rose ½ cent a pound, the first upturn in 10 days. Choice beef sold at 48 cents.

Beef prices fell nearly 3 cents a pound last week and were down 8 cents from 17-year tops set early in June. Brokers said the low prices attracted increased demand from the consuming trade.

Better wholesale beef prices and reduced cattle receipts prompted packers and shippers to bid steady prices for live steers. Receipts of cattle at the 12 major marketing centers totaled 44,400 head, 2,900 less than a week earlier.

Farmers shipped 52,300 hogs to the large marketing centers, nearly 3% more than a week ago.

[From the Wall Street Journal, Aug. 1, 1969]

BIG WHEAT EXPORTERS ARE TRYING TO AVERT INTENSIFYING PRICE WAR, BUT DELEGATES TO LONDON MEETING TODAY UNABLE TO DO ANYTHING BUT REPORT TO THEIR CAPITALS

NEW YORK.—The price war in the world wheat export market is reaching a point that could render the International Grains Agreement of 1968 "just a piece of paper," grain analysts say.

A delegation from the major wheat-exporting nations will meet in London today to determine if an intensified wheat "price war" can be averted, Washington officials said. Comenting on the sessions, an international grain merchant said, "The group is powerless to do anything except watch what is going on and report to their governments."

Charges of cut-rate wheat sales have been directed against the European Economic Community early this year. These applied to France, because it is the only nation in the Common Market that has a large wheat surplus. France sold wheat to the Far East at that time at less than $1 a bushel, or about 67 cents below the minimum agreed to by the IGA. Thereafter, grain men say, Australia sold wheat at price concessions.

Two weeks ago, the U.S. and Canada, in what was termed a "corrective measure," lowered export prices to Western Europe as much as 12 cents a bushel to be competitive in the export market. This was done despite previous assurances from the EEC that price cutting would be stopped.

Apparently in retaliation to the U.S. and Canadian action, the EEC yesterday increased export subsidy payments to its shippers $2.65 a ton to as much as $8.90 a ton.

U.S. exporters didn't get full details as to how the new rates would apply, but they know that subsidies prior to the rise ranged from $34.38 a ton to $61.50 a ton, depending on the nation buying. One point, however, was cleared. This is the new subsidy rate to Brazil, currently $66.55 a ton, up from $61.50.

Brazil was scheduled to buy around four million bushels of wheat on Wednesday, but refused all offers presumably thinking the grain could be bought at a later date and cheaper. Exporters said offers to sell came from many areas and the volume was far more than four million bushels.

France offered to sell Brazil soft red wheat at $1.33 a bushel. U.S. exporters offered hard wheat, a better grade, at $1.57½ a bushel.

While the common market's latest price cut, through increased subsidies, didn't apply to the Far East, exporters here said France sold soft wheat to Singapore at $1.10 a bushel. This compares with a U.S. price of $1.50 a bushel for soft wheat at the Gulf.

So far the U.S. and Canada haven't cut export wheat prices to the Far East. Japanese buyers who tried to buy the grain from the U.S. during the past two weeks refused all offers and complained of discrimination. Brazil also was excluded from U.S. and Canadian price cuts.

[From the Wall Street Journal, Aug. 1, 1969]

PRICE TRENDS OF TOMORROW'S MEALS AND MANUFACTURERS

Wheat futures prices in Chicago and Kansas City fell ⅞ cent a bushel. Loss for corn and rye contracts on the Chicago Board of Trade was 1¼ cents. All deliveries of rye sold at seasonal lows.

Futures markets in New York were quiet, with price changes mixed.

Selling of wheat contracts in U.S. markets was spurred by news Brazil and Japan refused to buy wheat in the export market. It was thought the two countries were hoping to buy wheat at lower than current prices.

The European Economic Community yesterday raised subsidies on exports of wheat in order to compete in the world market with the U.S. and Canada. Indications were that the EEC also was making cut-rate sales to some areas in the Far East.

Representatives of leading wheat exporting nations are to start meeting in London today to discuss conditions in the world wheat export market that are labeled by grain dealers as a "price war."

BUYING CUSHIONS DROP

Flour millers bought wheat contracts. Brokers said this support cushioned the wheat price drop. Millers were buying wheat to cover milling requirements on sales of flour made to large chain bakers. Flour mill representatives estimated some chains bought enough flour to cover baking needs for about one month.

Favorable new crop outlook continued to create selling of corn and rye futures by speculators.

Copper futures prices rose ½ cent a pound for some contracts. Demand was stimulated by firmness in London.

The strike at International Nickel Co.'s facility in Canada continued. Traders said the work stoppage would add considerably to the tight copper supply in the world market. The strike started July 10.

Silver futures prices in New York declined about 1¾ cents an ounce. Failure of the market to attract more buying following Wednesday's advance discouraged holders of contracts.

The Florida Canners Association said 1,694,925 gallons of frozen concentrated orange juice were shipped by processors last week, down from 1,829,366 gallons a week earlier. Traders had expected latest shipments to be between 1.8 and 1.9 million gallons. The lower than expected movement prompted some traders to take profits.

F. O. Licht, a European statistician, estimated world sugar production this year at 68,591,000 tons, up slightly from the forecast of 67,961,000 tons he made last March. The estimate was in line with previous trade predictions.

Hog prices rose as much as 50 cents a hundred pounds at Chicago and Peoria, Ill. At other terminals, quotations were unchanged to up 25 cents.

Packer and shipper demand was active for moderate supplies. Buying was stimulated by improved business in the wholesale pork trade.

Farmers delivered 42,200 hogs to the 12 major marketing terminals, less than last week's 42,326 volume. However, in Chicago the total was only 2,000 or 20% less than a week earlier.

Whole pork loin prices were unchanged but for pork bellies, quotations were raised as much as 1 cent a pound.

CATTLE PRICES MOSTLY UNCHANGED

Cattle prices were mostly unchanged in unusual quiet Thursday dealings.

Chicago wholesale beef was in demand. Prices rose ½ cent a pound. Choice beef sold at 48½ cents.

Quicksilver prices in New York fell $4 a flask yesterday to $489. This followed a drop of $10 on Wednesday. Each flask contains 76 pounds.

The weakness followed news that the Atomic Energy Commission has a surplus stock of 15,000 flasks of the liquid metal. In connection with the excess supply, a spokesman at the General Services Administration, the agency that previously sold excess stocks of Government mercury, said "market studies are being conducted at this time. No final decision has been made to sell the mercury." Last sales of Government mercury from a previous program was made by the GSA earlier this year.

[From the Wall Street Journal, July 30, 1969]

PRICE TRENDS OF TOMORROW'S MEALS AND MANUFACTURERS

Grain markets improved yesterday following recent sharp price declines.

Advance in the wheat market ranged to 1¾ cents a bushel. At Kansas City, prices rose 1⅞ cents. The corn market posted a gain of ⅞ cent.

The Chicago rye market was an exception to the trend, dropping 1½ cents a bushel to seasonal lows.

In other trading, New York copper futures prices rose to seasonal highs, gaining almost 1⅝ cents a pound for some contracts. Orange juice futures prices also were strong, but silver and world sugar futures quotations continued to drop. Some cocoa contracts fell 1 cent a pound for the second consecutive day.

Spectators and commercial dealers started to buy wheat contracts shortly after the opening yesterday when it appeared liquidation that dropped prices sharply on Monday spent its force.

Traders heard talk that some bakers may be interested in buying flour at current prices. Reports also circulated that farmers weren't satisfied with current wheat prices and were holding back supplies.

News from Moscow indicated that Russian farmers were having trouble harvesting this year's wheat crop. The Soviet Union had unfavorable growing weather, and wheat plants are short, making it difficult for machines to harvest the grain. It also was stated machinery for gathering the grain had been badly prepared and that storage sheds and elevators weren't in good condition. Russia has been selling wheat in the world market for several years. Traders thought current crop conditions may take Russia out of the export market as a seller during the present season.

WAITING FOR CHEAPER VALUES

"The world wheat export market has been stagnated by recent price cuts," said a leading international grain merchant.

Large exporting nations cut prices below the minimum established in the International Grain Agreement, and potential buy-

ers are standing by hoping to get still cheaper values.

Further explaining the present condition the grain man said, "It seems to be a case of nerves." He, however, expects a scramble to sell by the surplus wheat producers when buyers appear.

A test may come today. Brazil needs 3.7 million bushels of wheat for shipment during August and September. All nations having wheat to sell were invited to make offers. Brazil entertained offers last week, but refused to buy because prices were too high.

Japan, another large importer, shortly must buy around 15¼ million bushels of wheat needed for home use during September and later. Japan normally bought wheat from the U.S., Canada and Australia, with smaller purchases made from Russia. Japan also considered buying last week, but refused to place orders because prices were too high.

Both Japan and Brazil weren't included in the recent price cuts. They complained of discrimination. There is now a growing belief exporting nations may extend to the two countries the same cuts, amounting to as much as 12 cents a bushel below the IGA minimums. The price reductions were made to Western European wheat importers, almost two weeks ago.

STORM WARNINGS

Strong prices paid for refined copper in the U.S. dealer market and the continuation of a strike at International Nickel Co's., facility in Canada, capable of producing 2,500 tons of copper weekly, prompted heavy demand for copper futures in New York. Copper prices in London rose ⅞ cent a pound.

U.S. dealers quoted refined copper for delivery in September at 66¼ cents a pound, up 1¼ cents from Monday. The price for October delivery copper was raised 1½ cents to 65¼.

Speculators dealing in orange juice futures were concerned with tropical storm Anna now churning in the central Atlantic. The Weather Bureau expects the storm to reach hurricane intensity. Traders feared if the storm moved close to the Florida mainland it could heavily damage next season's orange crop.

Wheat prices in the world sugar export market continued to create selling of futures in New York and London.

A continuation of reports that dealers who bought cocoa earlier in the year were attempting to sell some of the supplies created further selling of cocoa contracts by speculators.

Hog prices were 25 cents to 50 cents a hundred pounds lower at Midwestern markets yesterday. Packer and shipper demand slowed after farmers delivered liberal supplies to the large terminals.

[From the Wall Street Journal, July 28, 1969]

WAR ON WHEAT PRICES BY MAJOR EXPORTERS EXPECTED TO INTENSIFY—COMMON MARKET HAS UNFAVORABLE RESPONSE TO CUTS BY CANADA, UNITED STATES TO EUROPEAN PURCHASERS

WASHINGTON.—The international wheat price war on commercial sales by major exporting countries to the Far East and other markets is expected to grow more intense.

The European Economic Community (Common Market) informed the U.S. and other big exporters of its "unfavorable reaction" to recent reductions in U.S. and Canadian prices to European buyers. The EEC is a member of the International Grains Agreement, which established "floor selling prices" for leading exporters. France has a large wheat supply, and its sales amount to about 95% of the export wheat trade from the tax nations belonging to the group. Italy is also selling wheat.

Informed sources now say the Common Market's agriculture ministers will meet this week to consider cutting export prices as a response to the U.S. and Canadian reduction on sales made to Western European nations.

Canada and the U.S., a little more than a week ago, cut the IGA floor price 12 cents a bushel to $1.55 and termed the action as a "corrective measure."

MOVE WAS PRESUMABLY RETALIATORY

This action was presumably taken in retaliation to cut-rate sales by France and other nations.

Early this year, France offered to sell wheat to Far Eastern buyers at prices sharply below the IGA minimum of $1.67 a bushel. By the end of May about 9.5 million bushels were sold to the Philippines, Hong Kong, Singapore and Taiwan. The price obtained for some of the grain was less than $1 a bushel figured back to U.S. Gulf ports, the basing point for IGA sales. Export wheat business was done earlier in the year by Australia at the IGA minimum, but after low ocean freight rates were considered, the price was less than the IGA minimums. This, too, upset major exporters.

After the U.S. and Canada lowered the export wheat price, EEC officials told the big North American exporters it would adhere to the minimum in the pact.

The U.S. and Canada had cut the price despite urgings of EEC officials to refrain from the action. The EEC promised to manage Western European wheat exports in a way that would result in no further commercial sales to the Far East. The group also proposed an International Grains Agreement "working group" be established in London to keep world wheat prices under constant review.

"Now we've been informed that this deal is off," said a U.S. official.

Despite this, he said the U.S., Canada, Argentina and Australia as well as some other wheat exporting members of the IGA intend to send delegations to London early this week to set up new administrative machinery for reviewing prices.

CANADA SEEKS TOP-LEVEL MEETING

To keep the tottering IGA, which is applicable only to wheat, from collapsing entirely, it's understood here that Canada also is seeking another ministerial-level meeting of major IGA wheat-exporting countries. U.S. sources said the Canadians are proposing that floor prices be discarded for lower grades of wheat, which at uncontrolled prices might find larger world markets as animal feeds.

While some U.S. officials believe this would be a good idea, they said another ministerial-level session so soon after the conference that was concluded at the State Department here on July 11 appeared to be out of the question.

Since the price was cut, business in the export market came to a near halt.

Japan, one of the biggest buyers in the world wheat market, said it was interested in buying 12¼ million bushels of wheat, mostly from the U.S. Exporters quoted sales prices, but these were rejected. Offers from Canada and other areas also were refused.

It was learned last week that the Japanese food agency in charge of wheat purchases "fired out protests" to U.S., Canadian and Australian officials because they didn't reduce prices to it in line with those offered on export sales to Western European nations. Brazil also was excluded from the cut-rate purchase, and postponed a buy order until a later date.

Even Russia tried to get into the act last week by offering to sell Britain spring wheat at about 3¼ cents less than the price sought by U.S. exporters. British buyers refused this order.

Exporters say Japan has placed contracts a while ago to cover wheat needs through August. "Somewhere along the line, Japanese buyers will have to start shopping," a leading exporter said. This may be a test of the present wheat arrangements, he added.

[From the Wall Street Journal, July 25, 1969]

U.S. WHEAT HOARD HITS 4-YEAR HIGH; SOYBEANS AT RECORD; CORN DROPS—WHEAT STOCK 811 MILLION BUSHELS AT JULY 1, A 50 PERCENT RISE FROM 1968; GAIN TIED LARGELY TO EXPORT FALL

WASHINGTON.—U.S. stocks of wheat were a hefty 811 million bushels at the July 1 start of the new marketing year, 50% above a year earlier and the largest wheat carryover since 1965, the Agriculture Department reported.

Soybean stocks on July 1, at a record 448 million bushels, were up 57% from last year's 284.9 million bushels, the department said.

Corn stocks dropped 6% below last year to two billion bushels but were still 18% above the 1967 hoard.

Rye stocks totaled 15.9 million bushels, down 12% from 1968 and 15% below 1967.

Wheat supplies exceeded the 780 million bushels the department predicted last January, but were 300 million bushels below its 1.1-billion-bushel April 1 expectation. Last year's carry-over of 539.3 million bushels reversed 1967's 14-year low inventory of 425 million bushels.

Feed-grain stocks rose slightly to 79 million tons from 78.2 million tons in 1968, the department reported, despite the decline in corn stocks, which normally account for about 80% of feed-grain supplies.

The wheat-stock increase includes a 69% rise in durum wheat supplies for a July 1 carry-over of 41.1 million bushels, up from last year's 24.3 million bushels and the largest since July 1966.

Department analysts said the rise in wheat was due largely to an export decline of about 200 million bushels, to about 535 million bushels, in the year ended June 30.

Durum wheat exports were good, however, and a large crop contributed to the substantial carry-over stock for that grain, a department analyst said.

Corn consumption in the June quarter showed a definite "slowdown" at 958 million bushels, a department official said, compared with 1.03 billion bushels, in the 1968 quarter. Higher corn prices, ranging from $1.15 to $1.20 per bushel, were causing farmers to turn to other feed grains and even wheat, he said.

[From the Washington (D.C.) Post, July 29, 1969]

GRAIN PRICES LOWERED

(By Richard Norton-Taylor)

BRUSSELS, July 28.—The European Common Market hit back today at the U.S. and Canadian decision to sell grain at below the minimum prices set by the international grains arrangement in 1967.

"The European community had counted on the United States and Canada abstaining from unilateral measures which did not conform to the terms of the arrangement," a communique of the six agricultural ministers of the Common Market stated.

The communique said the Common Market had no alternative but to follow suit and lower their selling prices for grains accordingly. This means that community farmers' export restitutions, the difference between the Common Market support price and the world price, will be increased at the expense of all six market members. The farm payments are paid out by a common farm fund to which all members contribute. The Common Market will hold off these measures until the end of July, in the hope that some other arrangements can be worked out in the meantime, possibly at a meeting this week of representatives of the world's leading grain exporters.

On July 18, the U.S. (soon followed by Canada) decided to lower its selling price for grains. For example, the price of hard

winter wheat was cut by 12 cents a bushel under the grain agreement minimum. These cuts affected exports from East Coast and Gulf ports.

These decisions followed a meeting in Washington earlier this month of ministers from grain-exporting countries at which the conclusion was reached that some price adjustments had to be made at a time of wheat surpluses.

A Common Market spokesman said the U.S. action could have grave consequences for the future application of the Kennedy Round of tariff cuts.

France, the market's principal exporter of grains, has been accused by the U.S. of undercutting the grain minimum price in sales to Thailand, Japan, and the United Arab Republic.

The PRESIDENT pro tempore. Is there any further morning business?

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORT OF DIRECTOR OF SELECTIVE SERVICE

A letter from the Director, Selective Service System, transmitting, pursuant to law, a report on the operations of Selective Service during the period from July 1, 1968, to December 31, 1968 (with an accompanying report); to the Committee on Armed Services.

REPORT OF THE SECRETARY OF THE AIR FORCE

A letter from the Secretary of the Air Force, transmitting, pursuant to law, a report entitled "Semi-Annual Experimental, Development, Test and Research Procurement Action Report," for the period January 1, 1969, through June 30, 1969 (with an accompanying report); to the Committee on Armed Services.

REPORT OF EXPORT-IMPORT BANK OF THE UNITED STATES

A letter from the Secretary, Export-Import Bank of the United States, transmitting, pursuant to law, a report on actions taken by the Bank during the quarter ended June 30, 1969 (with an accompanying report); to the Committee on Banking and Currency.

REPORTS OF THE COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on an examination of financial statements of the U.S. Government Printing Office, fiscal year 1968, dated August 4, 1969 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on silver sales limited to small business concerns, Treasury Department, dated August 4, 1969 (with an accompanying report); to the Committee on Government Operations.

REPORT OF BUREAU OF LAND MANAGEMENT

A letter from the Acting Director, Bureau of Land Management, Department of the Interior, transmitting, pursuant to law, a report of negotiated sales contracts for disposal of materials during the period January 1 through June 30, 1969 (with an accompanying report); to the Committee on Interior and Insular Affairs.

THIRD PREFERENCE AND SIXTH PREFERENCE CLASSIFICATIONS FOR CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, reports relating to third preference and sixth preference classifications for certain aliens (with accompanying papers); to the Committee on the Judiciary.

SUSPENSION OF DEPORTATION OF CERTAIN ALIENS

Two letters from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders suspending deportation of certain aliens, together with a statement of the facts and pertinent provisions of law pertaining to each alien and the reasons for ordering such suspension (with accompanying papers); to the Committee on the Judiciary.

ADMISSION INTO THE UNITED STATES OF CERTAIN DEFECTOR ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders entered granting admission into the United States of certain defector aliens (with accompanying papers); to the Committee on the Judiciary.

TEMPORARY ADMISSION INTO THE UNITED STATES OF CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders entered granting temporary admission into the United States of certain aliens (with accompanying papers); to the Committee on the Judiciary.

REPORT ON ACTIVITIES IN CERTAIN COUNTRIES RELATING TO APPLICATIONS FOR CONDITIONAL ENTRY

A letter from the Commissioner, U.S. Department of Justice, Immigration and Naturalization Service, pursuant to law reporting on activities in certain countries relating to applications for conditional entry, for the period January 1, 1969 through June 30, 1969; to the Committee on the Judiciary.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A letter in the nature of a petition, from Allan Feinblum, New York, N.Y., praying for the issuance of certain IBM cards; to the Committee on Post Office and Civil Service.

A resolution adopted by the Board of Chosen Freeholders, Union County, Elizabeth, N.J., supporting the further extension of the Interstate System of Highways; to the Committee on Public Works.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. BROOKE (for himself and Mr. McINTYRE):

S. 2761. A bill to amend the United States Housing Act of 1937 to provide additional rental assistance payments to enable families of very low income to afford to live in low-rent housing projects and to improve operating and maintenance services in such projects; to the Committee on Banking and Currency.

(The remarks of Mr. BROOKE when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. STENNIS:

S. 2762. A bill to amend the Civil Rights Act of 1964 to assure a more uniform enforcement of title VI thereof; to the Committee on the Judiciary.

(The remarks of Mr. STENNIS when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MUNDT (by request):

S. 2763. A bill to allow the purchase of additional systems and equipment over and above the statutory price limitation; to the Committee on Government Operations.

By Mr. MAGNUSON:

S. 2764. A bill to make it unlawful to install nonsafety glazing material in sliding glass doors and other high risk areas of residential, public, and commercial buildings in the District of Columbia to protect the health and safety of the public, and to direct the Director of the Department of Health to establish and promulgate standards for safety glazing material and its application; to the Committee on the District of Columbia.

(The remarks of Mr. MAGNUSON when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MAGNUSON (by request):

S. 2765. A bill to consent to amendments to the Pacific Marine Fisheries Compact; to the Committee on the Judiciary.

By Mr. JACKSON:

S. 2766. A bill for the relief of Guillermo Blonquis (William Bloomquist); to the Committee on the Judiciary.

By Mr. GURNEY:

S. 2767. A bill to amend the Federal Water Pollution Control Act, as amended; to the Committee on Public Works.

(The remarks of Mr. GURNEY when he introduced the bill appear later in the RECORD under an appropriate heading.)

By Mr. TYDINGS:

S. 2768. A bill to amend the Atomic Energy Act of 1954 in order to promote the preservation of environmental quality; to the Joint Committee on Atomic Energy.

(The remarks of Mr. TYDINGS when he introduced the bill appear later in the RECORD under the appropriate heading.)

ADDITIONAL COSPONSORS OF BILLS

S. 2073

Mr. DIRKSEN. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Kansas (Mr. PEARSON) be added as a cosponsor of S. 2073, to prohibit the use of interstate facilities, including the mails, for the transportation of certain materials to minors.

The PRESIDENT pro tempore. Without objection, it is so ordered.

S. 2108

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Maryland (Mr. TYDINGS), I ask unanimous consent that, at the next printing, the names of the Senator from Massachusetts (Mr. BROOKE), and the Senator from Virginia (Mr. SPONG), be added as cosponsors of S. 2108, to create a National Center for Population and Family Planning and other purposes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

S. 2315

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Washington (Mr. JACKSON), I ask unanimous consent that, at the next printing,

the name of the junior Senator from Arizona (Mr. GOLDWATER) be added as a cosponsor of S. 2315, to restore the golden eagle program to the Land and Water Conservation Fund Act.

The PRESIDENT pro tempore. Without objection, it is so ordered.

S. 2470

Mr. SCOTT. Mr. President, I ask unanimous consent that, at the next printing, the names of the senior Senator from California (Mr. MURPHY), the junior Senator from California (Mr. CRANSTON), the Senator from Maryland (Mr. MATHIAS), and the Senator from Utah (Mr. Moss) be added as cosponsors of S. 2470, to amend the Food Stamp Act of 1964 to authorize elderly persons to exchange food stamps under certain circumstances for meals prepared and served by private nonprofit organizations, and for other purposes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

S. 2644

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Maryland (Mr. TYDINGS), I ask unanimous consent that, at the next printing, the name of the Senator from Ohio (Mr. YOUNG) be added as a cosponsor of S. 2644, to amend the Legislative Reorganization Act of 1946.

The PRESIDENT pro tempore. Without objection, it is so ordered.

S. 2674

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Hawaii (Mr. INOUYE), I ask unanimous consent that, at the next printing, the names of the Senator from Montana (Mr. METCALF), the Senator from Missouri (Mr. EAGLETON), the Senator from Nevada (Mr. BIBLE), the Senator from Washington (Mr. JACKSON), the Senator from Connecticut (Mr. DODD), and the Senator from South Carolina (Mr. THURMOND), be added as cosponsors of S. 2674, to amend title 37, United States Code, to provide for the procurement and retention of judge advocates and law specialists officers from the Armed Forces.

The PRESIDENT pro tempore. Without objection, it is so ordered.

S. 2689

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Hawaii (Mr. INOUYE), I ask unanimous consent that, at the next printing, the names of the Senator from Connecticut (Mr. DODD) and the Senator from New Jersey (Mr. WILLIAMS) be added as cosponsors of S. 2689, to amend the Internal Revenue Code of 1954 to provide the same tax exemption for servicemen in and around Korea as is presently provided for those in Vietnam.

The PRESIDENT pro tempore. Without objection, it is so ordered.

S. 2761—INTRODUCTION OF A BILL TO PROVIDE ADDITIONAL RENTAL ASSISTANCE FOR LOW-INCOME FAMILIES

Mr. BROOKE. Mr. President, in just a few short years we have made significant strides in removing the social barriers to better housing. But two gross impediments still remain—the lack of sufficient standard housing to meet the needs of all our people, and the inability of our poorest citizens to benefit from the units which are available.

The measure which I introduce today—on behalf of myself and Mr. MCINTYRE—would help to overcome the second of these two obstructions. Basically, the bill would make it possible for the Federal Government to provide rental assistance payments to public housing agencies for the purpose of making up the difference between the actual cost of the unit and one-fourth of the income of the tenant. Assistance would be in the form of annual payments by the Secretary of Housing and Urban Development to public housing agencies pursuant to contracts entered into with the local agencies. It would enable families, regardless of how low their incomes may be, to afford decent housing at a reasonable cost; the "one-fourth of income" figure is exactly the same as the rent-to-income ratio used in HUD's other subsidized rental programs.

Let me illustrate how the program would work. At the present time, the nationwide average operating cost per housing unit is about $50 per month, or $600 per year. Thus $50 is the minimum monthly rent which a developer or housing agency would have to charge each tenant just in order to break even. But based on Federal calculations of a reasonable proportion of annual income devoted to housing needs, this simple minimum figure automatically excludes the many millions of families with incomes below $2,400 per year. One undesirable alternative, which has been used to some degree in the past, is to charge those tenants who can afford to pay more a higher rent for the same kind of unit in order to compensate for the low-income families who cannot afford to bear their fair share of the cost. The other alternative, which is even less desirable, has been to exclude the very poorest and most needy of our citizens from participation in public housing projects.

The bill which I introduce today is, I believe, a far better alternative than either of the two approaches outlined above. It would simply permit the Federal Government to pay the difference between what a family can afford and what the unit actually costs. It would distribute the burden of the supplement evenly. And it would insure that Federal housing programs will at last begin to meet the requirements of our most needy citizens.

Mr. President, I send this bill to the desk and ask unanimous consent that it be printed at this point in the RECORD.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2761) to amend the United States Housing Act of 1937 to provide additional rental assistance payments to enable families of very low income to afford to live in low-rent housing projects and to improve operating and maintenance services in such projects, introduced by Mr. BROOKE, for himself and Mr. MCINTYRE, was received, read twice by its title, referred to the Committee on Banking and Currency, and ordered to be printed in the RECORD, as follows:

S. 2761

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the United States Housing Act of 1937 is amended by redesignating section 24 as section 25, and by adding after section 23 the following new section:

"ADDITIONAL RENTAL ASSISTANCE

"SEC. 24. (a) In order to enable public housing agencies to provide housing within the means of families of very low income and to provide improved operating and maintenance services, the Secretary may make, and contract to make, annual rental assistance payments to public housing agencies with respect to any low-rent housing projects.

"(b) The amount of the annual payment with respect to any dwelling unit in a low-rent housing project shall not exceed the amount by which the rental for such unit exceeds one-fourth of the tenant's income.

"(c) There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this section, including such sums as may be necessary to make the rental assistance payments under contracts entered into under this section. The aggregate amount of the contracts to make such payments shall not exceed amounts approved in appropriation Acts."

Mr. MCINTYRE. Mr. President, the crisis in public housing is reaching dramatic proportions. Public housing authorities across the Nation are no longer able to provide adequate maintenance and services for tenants and at the same time preserve the low-rent character of the projects. Even though the Housing Act of 1937, which established the public housing program, stated that the program would serve those "families in the lowest income group" local authorities have been forced to set minimum income requirements and raise rentals in order to meet the rising costs of maintenance and operation. As a result, more and more of the poor and very poor are barred from admission to public housing projects.

In some cities operating costs on a three-bedroom apartment, for example, are $70 per month. If a family were to spend only 25 percent of its income in order to meet that rental figure, it would have to earn $3,400 per year. The average annual income of public housing tenants is $2,709.

Since the Federal contribution to public housing pays only debt service and amortization charges, local authorities are required to charge rentals which will produce a project income equal to project operational costs. From the beginning, this meant that the very poor, those who could not afford their portion of the operating expenses of the project, could not be admitted. According to the studies of the President's Commission on Urban Problems, "This group seems to amount to at least 8 percent and possibly as much as 10 percent of the urban population."

It is this group which is forced to find housing in the most substandard, dilapidated, and overcrowded dwellings.

The Federal Government has the responsibility for assuring that all Americans have a decent place to live. That

pledge is two decades old. But two decades later there is no Federal program to provide housing for our poorest citizens.

The bill being introduced today by Senator BROOKE and myself would help to remedy that situation. It would set a standard, used in other housing programs, that tenants pay 25 percent of their income as rent in public housing. The difference between the rent paid by the tenant under this formula and the rental value of the unit would be paid by the Federal Government. The rental value of the unit would be proportionate to the operational cost of the project.

In this way, minimum rents would no longer be required by the local housing authority. Tenants with the very lowest incomes would be eligible for admission to public housing. It would also mean that tenants already living in public housing will not be spending a disproportionate amount of their incomes for shelter.

In addition, local housing authorities would receive adequate funds to maintain and operate the facilities and to provide needed services to tenants. It would no longer have to resort to the only method available, raising rents, to guarantee residents a decent place to live.

S. 2764—INTRODUCTION OF SAFETY GLAZING BILL FOR THE DISTRICT OF COLUMBIA

Mr. MAGNUSON. Mr. President, much has been said but little has been done about the large number of disfiguring and fatal injuries resulting from persons walking or falling into transparent glass doors and panels in residential housing and public buildings. The American consumer was first apprised of the problem posed by annealed glass used in sliding patio doors, storm doors, adjacent panels, and glass room partitions 9 years ago when a west coast medical journal reported $40,000 insurance claims per year by victims of glass injuries. In 1966, after further study by representatives from the Division of Accident Prevention of the Public Health Service and the National Safety Council, aided by door and glass manufacturers and code officials, estimates of glass injuries reached 100,000. And just last January, attention was again focused on the problem by the National Commission on Public Safety at public hearings held here in Washington. Testimony was heard from the parents of children who were killed or disfigured by injuries when they inadvertently plummeted through non-safety glass used in various areas of family residences. The great danger of annealed glass is that when it breaks, it does so into extremely sharp, jagged, spear-like edges which are capable of inflicting deep wounds into the victim, severing vital arteries, nerves, and muscles. One mother related at the Commission hearings how her 9-year-old daughter's jugular vein was severed when she walked through a glass room divider and in only minutes bled to death.

The frightening aspect of this problem is that unless legislative action is taken, there is reason to believe that the hazard will increase. In 1966, an estimated 1.1 million sliding glass doors were being installed in homes and office buildings each year and by 1970 this annual volume was expected to reach 1.4 million units. The free operation of our economic system has not been adequate to compel the use of safety glass in the home for a number of reasons:

First, the demands for lower costs in housing are driving contractors to cut cost on the materials they use to increase their profits; second, considering the number of people who today live in large apartment complexes, who purchase homes already built, or who buy homes in subdivisions developed by large homebuilders, the consumer seldom has a choice in the material that is used in the construction of his residence; third, at present, replacement costs for safety glass are substantially higher than for ordinary sheet—annealed—glass although original installation of a sliding glass door with tempered glass—one kind of safety glass—is only about $20 more than a door with regular annealed glass. I might point out that the industry has acted to reduce these costs by standardizing the sizes of glass used in sliding doors and storm doors and so we can expect this difference in cost to decline in the future. And further, the cost differentiation may even become less of a factor with the increase in the use of tempered glass which governmental regulations at all levels can bring about; fourth, the door manufacturer who sells a storm or sliding glass door with only annealed glass in it has a decided economic advantage over the conscientious manufacturer who will only install safety glass.

The sad aspect of the problem confronting us is that technology has provided us with the solution which will substantially reduce, if not completely eliminate, the injury hazard as it exists and yet this know-how is not being fully employed. There presently are three types of safety glass that can eliminate this problem: These are tempered, laminated, and wire glass. I have pointed out these three types of safety glass primarily to demonstrate to you that present technology is capable of eliminating the problem. However, the proposed legislation which I introduce does not hamstring the ingenuity of our modern industry by requiring a specific type of safety glass, but rather requires that whatever kind of glazing material is used, it shall meet certain impact and breakage tests designed to eliminate the hazards that I have mentioned.

Although this problem probably could be dealt with more effectively at the national level, I think it is best to wait for the report and recommendations of the National Commission on Product Safety before taking Federal action. Nevertheless, effective action can be taken at the local level, and such stopgap legislation will go far to reduce the injuries in the District of Columbia.

It is unfortunate that the District, which is seeking to become a model city, must follow, rather than lead, such States as New Jersey, Washington, Maryland, North Carolina, and California in passing similar legislation. Therefore, we would be remiss in our duties to hesitate any longer in passing legislation for the District of Columbia, and it is for these reasons that I am proposing this legislation today.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 2764) to make it unlawful to install nonsafety glazing material in sliding glass doors and other high-risk areas of residential, public, and commercial buildings in the District of Columbia to protect the health and safety of the public, and to direct the Director of the Department of Health to establish and promulgate standards for safety glazing material and its application, introduced by Mr. MAGNUSON, was received, read twice by its title, and referred to the Committee on the District of Columbia.

S. 2767—INTRODUCTION OF THE WATER QUALITY FINANCIAL ASSISTANCE ACT OF 1969

Mr. GURNEY. Mr. President, today I am introducing a bill to assure that the maximum amount of money possible is available for the building of waste treatment facilities. We are currently faced with a serious problem in financing the construction of needed waste treatment works. With our present budgetary situation, it seems unlikely that the appropriation for the forthcoming fiscal year and the year following will equal the authorization for funds to build these sewage treatment works.

However, we cannot afford to lose any more time in controlling the pollution of our Nation's waters. The proverbial "ounce of prevention" certainly applies here. Reasonable expenditures now to halt further pollution of our waterways above and below ground may well preclude the enormous costs of rehabilitation of such systems later.

Intense river pollution already threatens underground aquifers, as is now the case in the Hudson River Valley. As anyone can appreciate who has stood on the shores of the Potomac on a summer's day in a freshening breeze, the cost to sweeten the stench of this river has now been estimated as high as $500 million. While it is technologically possible to redeem these sources of our water supply, the costs remain prohibitive. For this reason, it is imperative that we act as swiftly as possible to prevent further pollution.

The bill I am introducing today is designed to meet that need to the best extent possible. It provides that during fiscal year 1970 the amount of the funds for waste treatment works that has been authorized, but unappropriated will be authorized under a contract program.

The Secretary of the Interior would be authorized to enter into long term, not to exceed 30 years, contracts with a State or local governmental unit to pay in installments the Federal share of the costs of constructing such works. The Federal share would be determined in the same manner as the Federal share is determined for grants.

This bill would provide a mechanism to produce the necessary Federal financing to help meet water quality standards.

It would allow significant increases in capital investments within State programs for the construction of new facilities to help meet abatement schedules presently established in accordance with water quality standards.

For fiscal year 1971 a formula is devised to encourage increased appropriations for grants by this contract authority. In this case, the contract authority can be up to three times the amount of the grants appropriated. The purpose of this formula is to preclude any idea that we are encouraging a contract program in lieu of a grant program. It should be clear that it is the intention of Congress that there be a grant program, if necessary to be supplemented by a contract program.

Last year both houses of the Congress passed legislation to provide this supplemental method of financing waste treatment works. However, the Senate and House did not resolve differences on this legislation and it was never enacted. Congressman WILLIAM CRAMER has again introduced this legislation in the House with the full support of the administration. I am pleased to be able to do the same here in the Senate.

We cannot delay this vital program any longer. We must take action to indicate to all that it is the intent of Congress, that higher priority be given in the saving of our Nation's waterways.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 2767) to amend the Federal Water Pollution Control Act, as amended, was received, read twice by its title, and referred to the Committee on Public Works.

S. 2768—INTRODUCTION OF A BILL PROMOTING THE PRESERVATION OF ENVIRONMENTAL QUALITY

Mr. TYDINGS. Mr. President, I introduce today a bill designed to grant the Atomic Energy Commission the statutory authority to take into consideration the effects of thermal discharges in the licensing of nuclear power facilities.

At present the Commission lacks this authority. It may consider only questions of national security, health, and safety. It does not have the jurisdiction to concern itself with thermal pollution and other factors of environmental quality.

Last January, the U.S. Court of Appeals for the First Circuit underscored this inadequacy of the law. In New Hampshire against Atomic Energy Commission and Vermont Yankee Nuclear Power Corp., the court affirmed a lower court decision that the AEC was correct in refusing to consider the possibility of thermal pollution from a nuclear powerplant. The court ruled that the Commission did not have the necessary authority.

In comments on my own statement regarding the proposed nuclear plant at Calvert Cliffs, Md., the Commission restated this position. The AEC writes that it "presently lacks authority to impose restrictions regarding the thermal effects of discharges from licensed nuclear facilities."

This is unfortunate.

Our national demands for power are growing rapidly. They are expected to double every 10 years. This means that the number of nuclear power plants in operation will increase substantially. A February 1968 report showed that 15 plants were then operating, 23 were under construction, and 57 more were being planned. Consequently the threat from thermal discharges looms large in the future. Substantial damage to our marine environment could result.

I am particularly concerned about the Chesapeake Bay, Maryland's great natural resource. Predictions are that there may be six nuclear stations the size of the 1,600 megawatt Calvert Cliffs facility operating on the Bay by 1980. Each one would draw two million cubic feet per minute of water for cooling purposes. On the Chesapeake and its tributaries there are presently 15 nuclear power plants operating, under construction, or planned—more than in any comparable area of the country.

Every possible step must be taken to ensure that the thermal discharges from these facilities do not endanger the bay.

While it lacks specific authority to consider such discharges, the Commission is not insensitive to the problem. As a matter of course, when issuing reactor licenses it seeks the advice and recommendations of the Interior Department and passes this on to the applicant. Such information is, unfortunately, not binding, but does at least indicate that the AEC is cognizant of the problem. Additionally, the Commission is now conducting a survey of all AEC licenses to determine the extent of their cooperation in resolving various environmental problems.

In my statement on the Calvert Cliffs facility, I urged the AEC on its own to seek redress before the Congress and seek the additional authority required. The Commission has not yet done so. I have, therefore, gone ahead and introduced the necessary legislation.

Essentially what my bill does is to insert, where required, the phrase "environmental quality" in the Atomic Energy Act of 1954, as amended.

The act's declaration of policy states that atomic energy should be developed "to promote world peace, improve the general welfare, increase the standard of living, and strengthen free competition in private enterprise." This is amended to include the preservation of environmental equality as well. The finding of facts states that nuclear material be "regulated in the national interest and in order to provide for the common defense and security and to protect the health and safety of the public." To this is added the charge of protecting the environment.

Similar insertions are made elsewhere in the act.

One of particular significance concerns that section of the act dealing with the issuance of licenses. The bill assigns an additional requirement to the licensee. Not only must he agree to observe safety standards to protect health and property, he must now agree to observe "such standards to protect and promote the preservation of environmental quality, as the Commission may by rule establish."

Another significant addition concerns the denial of a reactor license. Presently the law reads that if in the opinion of the Commission issuance "would be inimical to the common defense and security or to the health and safety of the public" it may be denied. My bill amends this to include an adverse impact on the environment as further reason for such a denial.

This bill supplements S. 7, the Water Quality Improvement Act of 1969 which contains a provision on thermal pollution. This act, which I am cosponsoring, in part requires certification by the State water pollution agency or in some cases, the Interior Department that the discharges from a nuclear facility will not violate the water quality standards established under the Water Quality Act of 1965. It is the purpose here to regulate the discharges. My bill aims at the basic statutory authority of the AEC and gives the Commission discretion to act in matters affecting environmental quality which without doubt would include thermal pollution.

Mr. President, I ask unanimous consent that the bill be printed at this point in the RECORD.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection the bill will be printed in the RECORD.

The bill (S. 2768) to amend the Atomic Energy Act of 1954 in order to promote the preservation of environmental quality, introduced by Mr. TYDINGS, was received, read twice by its title, referred to the Joint Committee on Atomic Energy, and ordered to be printed in the RECORD, as follows:

S. 2768

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That paragraph b of section 1 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2011), is amended by inserting immediately after the last comma, the following: "promote the preservation of environmental quality,".

SEC. 2. (a) Paragraph d of section 2 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2012), is amended by deleting "and to protect the health and safety of the public" and inserting in lieu thereof the following: ", to protect the health and safety of the public, and to protect the environment".

(b) Paragraph e of section 2 of such Act (42 U.S.C. 2012) is amended by deleting "and to protect the health and safety of the public" and inserting in lieu thereof the following: ", to protect the health and safety of the public, and to protect the environment".

(c) Subsection a (2) of section 274 of such Act (42 U.S.C. 2021) is amended by inserting "or other" immediately after the word "radiation".

(d) Subsection b of section 103 of such Act (42 U.S.C. 2133) is amended to read as follows:

"b. The Commission shall issue such licenses on a nonexclusive basis to persons applying therefor (1) whose proposed activities will serve a useful purpose proportionate to quantities of special nuclear material or source material to be utilized; (2) who are equipped to observe and who agree to observe (A) such safety standards to protect health and to minimize danger to life or property, and (B) such standards to protect

and promote the preservation of environmental quality, as the Commission may by rule establish; and (3) who agree to make available to the Commission such technical information and data concerning activities under such licenses as the Commission may determine necessary to promote the common defense and security, to protect the health and safety of the public, and to protect and promote the preservation of environmental quality. All such information may be used by the Commission only for the purposes of the common defense and security, to protect the health and safety of the public, and to protect and promote the preservation of environmental quality.".

(e) Subsection d of section 103 of such Act (42 U.S.C. 2133) is amended by inserting immediately before the period at the end thereof the following: "or adversely affect environmental quality".

SENATE RESOLUTION 229—RESOLUTION RELATING TO A SUBPENA DUCES TECUM DIRECTED TO THE FINANCIAL CLERK

Mr. MANSFIELD (for himself and Mr. DIRKSEN) submitted a resolution (S. Res. 229) relating to a subpena duces tecum directed to the financial clerk, which was considered and agreed to.

(The remarks of Mr. MANSFIELD when he submitted the resolution appear earlier in the RECORD under the appropriate heading.)

ALASKA NATIVE CLAIMS SETTLEMENT ACT OF 1969—AMENDMENT

AMENDMENT NO. 112

Mr. ALLOTT (by request) (for himself and Mr. JACKSON) submitted an amendment, in the nature of a substitute, intended to be proposed by them, jointly, to the bill (S. 1830) to provide for the settlement of certain land claims of Alaska natives, and for other purposes, which was referred to the Committee on Interior and Insular Affairs and ordered to be printed.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH—AMENDMENT

AMENDMENT NO. 113

Mr. TYDINGS. Mr. President, it is a fundamental principle of our system of government that only with congressional approval may the executive branch spend the billions of dollars that make up the Federal budget. We have developed a system of authorization and appropriation of funds in order to give Congress an opportunity to examine each of the competing claims on our Nation's resources, and to demand that each program for which funds are allocated be thoroughly justified.

A singular exception to this principle occurs in the area of national defense. Maintaining an adequate and everready military capability requires that our defense establishment have some degree of fiscal flexibility in order to pursue unexpected technological breakthroughs and to meet unexpected problems and threats. But precisely because such fiscal flexibility results in erosion of the principle of congressional control of Government spending, and inevitably poses a threat to the principle of fiscal responsibility, flexibility in military spending must be limited to the minimum amount necessary to maintain sound national defense.

One of the devices available to the Defense Department to provide for fiscal flexibility is the defense emergency fund. Established during the Korean war, the emergency fund may be used at the discretion of the Secretary of Defense "for research, development, test, and evaluation, or procurement or production related thereto." In recent years most of the money appropriated to the fund has been used to solve Vietnam-related problems.

Although in each of the last 3 years the amount of money allocated to the emergency fund has been reduced, in fiscal year 1969 Congress still approved the substantial sum of $50 million for the fund. This same amount was requested last January by the Defense Department for fiscal year 1970. On the basis of a revised DOD request, however, the defense authorization bill, S. 2546, which is now before the Senate, authorizes $100 million for the defense emergency fund, double the amount received last year.

Fifty million dollars is a remarkably large amount of money for a discretionary fund over which Congress has no control. There is no justification whatsoever for allocating an additional $50 million to the fund.

Therefore, with Senators EAGLETON, FULBRIGHT, HARRIS, HART, HATFIELD, JAVITS, MONDALE, MOSS, PACKWOOD, and PROXMIRE, I am submitting an amendment to S. 2546 to reduce the emergency fund authorization to the $50 million level of last year.

There has been no demonstration that the need for the emergency fund has increased. Last year was a period of heavy fighting in Vietnam, but even with this burden on our fighting men, and the identification of many military problem areas, the emergency fund was not fully exhausted until the end of the fiscal year. With the experience of last year behind them, the Defense Department had initially determined that no increase in the emergency fund was needed for this year. And the prolonged lull in the Vietnam war, coupled with plans for troop withdrawal, indicate that the number of Vietnam-related problems may actually decrease.

It has been argued, however, that the additional $50 million for the emergency fund is needed to insure adequate financial flexibility within the Defense Department. But the Defense Department already has more than enough fiscal flexibility and independence. Much flexibility results from the authority granted the Secretary of Defense to use up to $150 million in funds from congressionally approved programs for other projects. The usefulness of this transfer authority is not seriously impaired by the reduction in total research and development funds available this year, since the amount of money authorized in this year's bill is a full 95 percent of last year's amount. But even assuming that the R. & D. reductions have made the transfer authority somewhat less useful, by increasing the emergency fund, their effect is largely vitiated; we would be replacing programs which must be presented to Congress for approval with a fund over which Congress has no control.

Additional flexibility comes from other funds within the Defense budget which serve the same purpose as does the emergency fund. For instance, last year the military was initially authorized to spend a total of $522 million for research and development on Vietnam problems—in addition to funds used from the emergency fund and transfer authority. In addition, there are contingency funds for specific purposes, such as the $25 million requested this year for the defense agencies military construction contingency fund, which provides for military construction anywhere in the world necessitated by unforeseen circumstances. And, finally, to meet any additional needs, the Secretary of Defense has a separate $10 million contingency fund which has even fewer restrictions than the emergency fund.

With so many budgetary devices to insure flexibility, and so much money allocated to unspecified uses, the Defense Department already has more than enough fiscal independence.

In short, we cannot afford to double the defense emergency fund by authorizing a total of $100 million for fiscal year 1970—because the increase is unjustified on its face, because the increase purports to serve the purpose of flexibility already accomplished by other means, and because the increase represents an unwarranted incursion on the principle of congressional control of Federal spending.

To paraphrase Shakespeare, there comes a time when the representatives of the taxpayer must cry "Enough"—and there has already been enough money wasted by the military, and enough fiscal independence in the Defense Department. Fifty million dollars is enough for the defense emergency fund, and I, therefore, urge that S. 2546 be amended to limit the emergency fund authorization to that amount.

The PRESIDENT pro tempore. The amendment will be received and printed, and will lie on the table.

MEETING SCHEDULE OF COMMITTEE ON INTERIOR AND INSULAR AFFAIRS

Mr. JACKSON. Mr. President, I wish to announce for the information of the Senate that because of the pending vote on Wednesday, the Committee on Interior and Insular Affairs will not meet as scheduled on S. 1830, to provide for the settlement of certain land claims of Alaska natives. This hearing will be postponed until 10:30 a.m. on Thursday, August 7. The executive session of the full committee previously scheduled for 10 a.m. on August 7, will now be held at 9 a.m. to be followed by the hearing on the Alaska native claims.

DIRECTIVES AFFECTING SALARIES OF MANAGEMENT-OFFICE EMPLOYEES OF SENATE RESTAURANT

Mr. ALLEN. Mr. President, under the Federal Salary Act of 1967, the President pro tempore of the U.S. Senate is authorized and directed to issue certain directives in implementation of the salary comparability policy set forth in the law.

I ask unanimous consent that a directive affecting the salary of management-office employees of the Senate restaurant, dated June 26, 1969, and certain related correspondence, be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

ARCHITECT OF THE CAPITOL,
Washington, D.C., July 29, 1969.

Hon. JAMES B. ALLEN,
Chairman, Subcommittee on the Restaurant, Committee on Rules and Administration, U.S. Senate.

DEAR MR. CHAIRMAN: I am enclosing, herewith, copy of order dated June 26, 1969, issued by the President Pro Tempore of the Senate upon my recommendation and with your concurrence, providing for an increase in the compensation of management-office employees of the Senate Restaurants as required by Section 212 of the Federal Salary Act of 1967.

I would appreciate your having this document inserted in the Congressional Record in order that it might be a matter of record.

Sincerely yours,

J. GEORGE STEWART,
Architect of the Capitol.

ORDER PROVIDING FOR INCREASE IN COMPENSATION OF MANAGEMENT—OFFICE EMPLOYEES OF THE SENATE RESTAURANTS EFFECTIVE JULY 13, 1969

JUNE 26, 1969.

By virtue of the authority vested in me by section 212 of the Federal Salary Act of 1967 (81 Stat. 634), it is hereby

Ordered, That (a) effective July 13, 1969, the annual rate of gross compensation of each management—office employee of the Senate Restaurants (such employees having been recognized by the Comptroller General of the United States as employees of the United States Senate) whose compensation is increased by section 214(a) of the Federal Salary Act of 1967 (81 Stat. 634, Public Law 90–206) and the Order of the President pro tempore of June 29, 1968, is hereby increased by 10.05 per centum; and

That (b) for the purpose of arriving at the "annual rate of gross compensation" on which the increase of 10.05 per centum is to be applied, (these employees being compensated on a weekly, rather than an annual, basis), the weekly gross rates of compensation shall be converted for the purpose of this Order, to appropriate annual gross rates.

RICHARD B. RUSSELL,
President pro tempore, U.S. Senate.

CONTRACT COMPLIANCE AND THE "PHILADELPHIA PLAN"

Mr. BROOKE. Mr. President, one of the most serious problems which this country faces is that of improving employment opportunities for our minority citizens. Despite the passage of a great deal of equal employment legislation, there is still far too much "token compliance," particularly in the various construction industries.

It was to counter this problem that the city of Philadelphia established a program under the direction of an area coordinator for contract compliance designed to go beyond paper compliance to the adoption and implementation of specific goals of numerical standards in certain critical crafts.

This valuable program is now under serious consideration by the city of Boston in my own State of Massachusetts. I am most hopeful that an area coordinator for contract compliance may soon be approved for the New England area, and I have written to Secretary of Labor George Shultz in this regard. I ask unanimous consent that the text of my letter to Secretary Shultz be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JULY 30, 1969.

Hon. GEORGE P. SHULTZ,
Secretary of Labor,
Department of Labor,
Washington, D.C.

DEAR MR. SECRETARY: I have just met with the Massachusetts State Advisory Committee of the United States Civil Rights Commission, which I understand has also conferred with Assistant Secretary Fletcher. The Committee has just completed a review of federal contract compliance in the Boston construction industry and, as they indicated to Mr. Fletcher, have urgently recommended the adoption of a plan for Boston comparable to that being implemented in Philadelphia.

I fully agree with the Committee that this is a matter of the highest priority. In particular, the appointment of an area coordinator to insure effective contract compliance is a fundamental necessity. I hope you will act immediately to appoint such a coordinator, perhaps as part of the consolidation of federal regional offices in Boston.

Your efforts to breach the barriers of discrimination in the construction industry are among the most encouraging initiatives taken by the Administration. I respectfully urge you to carry that effort forward by taking these steps in the Boston area.

With best personal regards, I am,

Sincerely yours,

EDWARD W. BROOKE.

AMERICAN PRISONERS OF WAR

Mr. BAYH. Mr. President, there are many ramifications to the conflict in Vietnam, but one of the most disturbing aspects of this tragic war is the fact that American prisoners of war are not being treated in accord with the Geneva Convention. More than 120 nations, including the United States and North Vietnam, have expressed their deep concern that personnel captured in wartime be treated humanely by endorsing the Geneva Convention of 1949.

Not only are more than 1,300 U.S. servicemen classified by the services as either prisoners of war or missing in action, but also, according to the Department of State, more than 40 American civilians are missing in South Vietnam plus more than 400 military personnel listed as missing, many of whom have been captured and are being held in South Vietnam. Of the total of 1,303 men being held captive or missing in action, over 200 have been held captive over 3½ years and over 500 have been held more than 2 years.

There is reason to believe that many of these listed as missing in action are being held captive by the North Vietnamese, but the families of these men do not even know if their loved ones are dead or alive because Hanoi refuses to provide even a list of those being held captive. This is truly the epitome of barbarism.

The State Department and the Department of Defense have been thwarted at every turn because Hanoi refuses to identify the U.S. prisoners held captive; they refuse to permit neutral inspection; they refuse to release the sick and wounded captives; they refuse to permit the regular flow of mail; in essence, Hanoi refuses to act in a civilized, humane manner. This callousness is absolutely inexcusable.

When Defense Secretary Melvin Laird demanded a full list of the prisoners held by the Republic of Vietnam on May 19, North Vietnamese negotiator Xuan Thuy replied:

> He might as well know that so long as the United States has not ceased its aggressive war in Vietnam and withdrawn its troops from Vietnam, he will never have such a list.

It is my contention, Mr. President, that the United States has demonstrated its desire for peace. At present, our troops are being withdrawn from South Vietnam and we have modified our policy of "maximum military pressure." The United States has demonstrated its sincerity to end this conflict. How can we believe that Hanoi is sincere when it refuses to comply with a simple request? The total lack of reciprocity is appalling. However, my main concern is that the North Vietnamese abide by the requirements of the Geneva Convention which they endorsed in 1957. Specifically, I call for the adherence to the Convention which requires the release of names of prisoners held, the immediate release of sick and wounded soldiers, regular flow of mail, proper treatment of all prisoners, and the impartial inspection of prisoner-of-war facilities.

I urge that our negotiators in Paris do everything in their power to influence Hanoi to abide by the Geneva Convention. I urge all foreign governments, including the Soviet Union and all regimes closely associated with Hanoi, to lend their assistance to the demands of the United States. I urge that the American public voice its cries louder than ever in demanding that the North Vietnamese behave and react in a civilized humane manner. And I appeal directly to North Vietnam and the Vietcong to terminate this lack of concern for the many families in the United States who are living in uncertainty and to respect the humane rights of those whom they hold prisoners of war. Why is it that the United Nations has not exerted itself and fulfilled its responsibilities on this matter?

How can it possibly harm the enemy to release the names of its prisoners? Think what a response to such a simple request would mean to the hundreds of wives, parents, and children who live in anguish, not knowing whether their husbands, sons, or fathers are being detained in a prisoner camp. I urge the State De-

partment and the Defense Department to continue their efforts to obtain the release of those prisoners who are sick or wounded, to do everything humanely possible to obtain a list of names from Hanoi, and to work for the prompt release of all prisoners.

The United States has abided by the Geneva Convention in regard to prisoners of war. Those North Vietnamese and Vietcong forces captured in South Vietnam are taken to prisoner of war camps which are inspected regularly by the International Committee of the Red Cross. Prisoners who are sick and wounded have been repatriated to North Vietnam. The United States, in essence, has responded in a humanitarian way. Now it is time that the enemy reciprocate and that the United States strongly demand that its servicemen be treated properly.

Needless to say, everyone has been shocked by Hanoi's uncivilized attitude and response. Hopefully, the entire civilized world will exert influence to end such flagrant violation of international law.

Mr. President, by coincidence, an excellent editorial pertaining to the families whose loved ones are being held by the North Vietnamese was published in the Washington Post this morning. It is evident that all Americans are concerned about servicemen who are missing in action and being held captive. Because of the editorial's relevance and timeliness, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Post, Aug. 4, 1969]

KEPT IN THE DARK

The letters come in every day, in big and little batches from Santa Fe and Monterey, from Aberdeen, South Dakota, and Purdy, Missouri, from Richmond, Virginia and Lake Lure, North Carolina, from Downers Grove, Illinois and Finnville, Michigan. Some are hand-scrawled and some typewritten and they all speak piognantly of the suffering of mothers and fathers and wives and sons and daughters of the over 800 men who are missing and presumed to be prisoners of the North Vietnamese. They ask about the treatment the men are getting. But because the Hanoi Government won't even confirm the names of the men it is holding, their first concern is with the cruelist question—whether a husband or a brother or a son or a friend is even still alive, let alone well. Somebody has told them that just maybe a newspaper editorial would help persuade the North Vietnamese to say at least that much to show at least that much human decency, and so the letters keep coming in.

And about all we can say in reply is that we have tried before and that we do not have any illusions—not even when it comes to counselling our own Government, which by the nature of the system it lives by is not insensitive to public pressure. But the case against Hanoi in the matter of our prisoners of war is so persuasive, and the anguish of their friends and relatives is so acute, that one wouldn't want not to keep trying.

The case against North Vietnamese treatment not only of war prisoners, but of their next of kin, rests very largely on Western values—compassion, humanity, a natural aversion to cruel and unusual punishment. And while this is the strength of the case in Western eyes, it is also of course its weakness, because the same values are not universally prized by Asian Communist Governments; we have the treatment of our Korean War POW's and more recently the crew of the Pueblo to vouch for that, as well as the treatment of our prisoners in North Vietnam.

The techniques are as subtle as they are vicious, as psychological as they are physical, and the results have nowhere been more affectingly recorded than in interviews with two of our captured pilots conducted by Oriana Fallici and published in *L'Europeo* a few months ago. Of U.S. Navy Lieutenant Robert Frishman, she wrote:

He was very young, very tall and terribly thin. Of a sickly, consumed thinness . . . He wore Chinese wool slippers and walked bent like an old man . . . With his left hand he held up the right arm, shorter and shrunken . . . He looked around with a lost expression and blinked his eyes . . . Obviously he had been kept in the dark for a long time . . . "It has been almost a year and a half since I last spoke to someone, Madam."

There are probably places in the world where this sort of thing is effective, the use of God knows what sort of inhuman pressures to reduce men to parroting banal, fawning propaganda in a crude and almost ludicrously primitive effort to influence public opinion. But there are not many, not where men are free to judge for themselves. And the tragedy of it is the pointlessness of it, leaving wholly aside the morality; it isn't working the way the North Vietnamese must think it will work. The sympathy of the world is not going to be swung toward the North Vietnamese side of the argument by barbarism, as the press comment in large parts of the world, including countries by no means sympathetic to *our* side of the argument, amply testifies. And still less is world opinion likely to be swung by the even more mindless cruelty of preying on the grief of the next of kin, by teasing them with invitations to send gifts, by releasing a handful of prisoners now and again, but never releasing the names of those still held in captivity.

More important, perhaps, the North Vietnamese have it all wrong if they think that this refusal to release the list of POW's will significantly influence American public opinion against the war or serve some purpose as a negotiating counter, as Hanoi's Paris negotiator Xuan Thuy has implied.

There are things about this war that have, and will continue to have, a profound and disquieting effect on American public opinion; merely by dragging on, the war has that effect; so do continued American casualties in battle; so does the absence of any believable end in sight. These things may sap the will and encourage the belief that the effort is not worth the price, that conciliation and a rapid transfer of the burden to the South Vietnamese is the proper course. There are countless ways that the enemy might try to encourage these tendencies by promoting the belief that an honorable accommodation is possible with the North—an accommodation within which our South Vietnamese allies and their followers and the people of South Vietnam could survive. But a continuing demonstration of relentless cruelty, of an incapacity for showing even the most elementary evidence of decency and humanity, is not one of these ways.

RETIREMENT OF BRIG. GEN. ROBERT E. LEE

Mr. BIBLE. Mr. President, on July 31, the Nation's small business firms in the defense contracting community lost a firm friend, when Brig. Gen. Robert E. Lee retired from service in the U.S. Air Force. General Lee had, for the past 3 years, served as Executive Director of Procurement and Production at headquarters of the Defense Supply Agency. In that capacity, he had been an avid supporter of the DSA small business program.

General Lee had been associated with military procurement since 1949, at which time he joined the Air Force Air Materiel Command Headquarters. He later served as Chief of the Procurement Policy Division of that command. His next assignment was as Director of Procurement and Production in the Warner Robins Air Materiel Area Headquarters at Macon, Ga., where he served for several years before becoming Deputy Director of Procurement Policy at U.S. Air Force Headquarters in 1964. He assumed the duties of Executive Director, Procurement and Production, Defense Supply Agency, in 1966.

During his tenure at DSA, General Lee gained renown as a procurement official interested in carrying out the mandate of the Congress, that:

The Government should aid, counsel, assist, and protect, insofar as is possible, the interests of small-business concerns in order to preserve free competitive enterprise, to insure that a fair proportion of the total purchases and contracts or subcontracts for property and services for the government . . . be placed with small business enterprises.

General Lee actively sought to encourage small business firms to participate in the supplying of goods and services to the military departments. He made himself available as a featured speaker at countless industrial gatherings. He gave unflagging support of DSA's procurement opportunities counseling services and always demonstrated sharp insight and keen understanding of the problems facing the small businessman in doing business with the giant Military Establishment.

During the time General Lee directed the DSA procurement program, that agency either met or exceeded the yearly small business participation goals set by the Office of the Secretary of Defense.

General Lee appeared before the Subcommittee on Government Procurement of the Senate Small Business Committee in February of 1968. Mr. President, it goes without saying that the membership of the Senate Small Business Committee will feel the loss of a knowledgeable procurement official who has understood and taken to heart the desire of the Congress to hold the doors of opportunity open for American small businesses to grow and flourish in our economy. Too often, procurement officials do not show interest in the many small businesses who are attempting to become part of the Government's massive supply system merely only because they are directed to do so. It is encouraging to know a man like General Lee, who not only enthusiastically supported the small business program, but comprehended the overall objectives of the program.

Mr. President, it is indeed a signal honor for me to rise on this occasion to express my sentiments and pay tribute to a truly fine and extremely dedicated man who has in every respect served his country well.

THE IDAHO BASQUE COMMUNITY

Mr. JORDAN of Idaho. Mr. President, yesterday, in Boise, members of Idaho's

Basque community celebrated their annual St. Ignatius Day picnic. On the same day, the Washington Post published two articles, written by Paul A. Dickson, chronicling the history of these industrious and freedom-loving people.

Idaho's Basques have made a most significant contribution to the development of our State. It is appropriate that Idaho, respecting as it does the traditions of freedom and individualism, should take the Basque people so much into its heart. Theirs is a proud legacy. So that Senators and all other readers of the CONGRESSIONAL RECORD may have access to these two articles by Mr. Dickson, I ask unanimous consent that they be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

FRANCO FACES BASQUE POWER

(By Paul A. Dickson)

Part of the legacy that Generalissimo Francisco Franco of Spain will pass on to his announced heir, Prince Juan Carlos de Borbon y Borbon, is the "Basque problem."

Franco first faced the Basques during the Spanish Civil War, when the Basque provinces of Vizcaya and Guipuzcoa existed as the Republic of Euzkadi. The weak republic was easily conquered in a few months, but in his 30 years in power Franco has been unable to kill the Basque's independent spirit and separatist aspirations.

Events of recent months—strikes, renewed separatist activity, demonstrations by the clergy, acts of terrorism, university uprisings and the like—may portend even tougher days ahead for Franco or his successor.

"The Basque problem" has existed for those who have ruled the Iberian peninsula since the days before Spain was a nation. Often described as the oldest homogeneous racial group in Europe, the Basques are closely knit and have resisted amalgamation since the first Roman legions descended upon them. They waited until the 11th century to embrace the "foreign" influence of Christianity, but when they did, they produced such illustrious Christians as St. Francis Xavier and St. Ignatius of Loyola.

By reputation—often self-proclaimed—they are a proud, industrious and strong people. By profession, they are famed as sailors, shepherds and smugglers. They have excelled in each area.

Basques claim that their fishermen were fishing off the Grand Banks of Newfoundland before Columbus set sail. Another claim has it that when the Genoan stopped in the Azores, Basque fishermen assured him that there was land toward the setting sun. In addition, there is a Basque claim, though never given wide publicity that Basques landed in Newfoundland before 1492.

These claims aside, their position in the age of discovery is well established. Elcano, a Basque, was Magellan's navigator and took command when his master died in the Philippines. Chachu, another Basque, served as Columbus's boatswain on the Santa Maria. Basque fishermen are to this day considered the most daring in Spain and brave the North Atlantic in small boats to bring back cod and other fish from the Grand Banks.

As for their reputation as smugglers, it is not as sinister as it might sound. There are about 600,000 Basques living in the Spanish provinces of Vizcaya and Guipuzcoa and about 200,000 in the French Basque provinces of Labourd, Basse Navarre and Soule. The feeling among the Basques of both nations is that all Basques should live with the best that both countries can manufacture: hence the traffic through the Pyrenees. Part of the Basque rationalization of smuggling points out that Basques are not greedy smugglers (which may also account for their success).

LANGUAGE OF PARADISE

The Basque language is called Euskara. It has no clearly recognizable roots in any other language, although tenuous links have been made between its pronouns and Hebrew pronouns, its verbs and Aztec and Dakota Indian verbs and other elements of the language and tongues as diverse as Arabic and Japanese. One Spanish linguist early in this century went as far as to propose that Euskara is the basis of all language and was spoken by Adam and Eve.

The Basque hills are rugged and rocky and the Basque aptitude for shepherding is legendary. Many of the estimated two million Basques in the Western Hemisphere are shepherds and special immigration rules in the United States permit Basque shepherds to enter the country on a preferred basis.

The language does not lend itself to abstraction and has never lent itself to literary use. It is spoken in several dialects. There was a moment in 1937 when the Franco government tried to outlaw Euskara in an attempt to curb Basque nationalism, but the edict was written in Spanish and in many small towns, few people understood any Spanish.

The unique flavor of the language, which is peppered with Xs, Ks and Zs, can be sampled in a few words. The numbers one through five are, *bat, bi, iru, lau,* and *bost.* The sun is *eguzki* and the moon is *illargi.* The sea is *itxaso* and river is *ur.* Man is *gizon* and woman is *emazteki.* Many Basque words are onomatopoeic: *gili-gili* is the verb to tickle and *bimbi-bimaki* is the pealing of bells. The word for god is *jaungoika*—literally "the lord of the manor most high."

Basque folklore is concerned with objects and settings foreign to the Spain of the hot sun and sprawling bullranch. Witches, shegoats, night visitors, demons of all types, devils and ancient woodsmen cavort in caves, dark forests, inert swamps and rocky crevices.

The Basques' earliest history is mostly a matter of conjecture and is as elusive as their language. Such tags as Cro-Magnon, Berber, Lapp, Celt, Finn and Magyar have been used to explain their origins, and the idea that they were the basis of the original Iberian tribe has been advanced regularly. From time to time, it is suggested that the Basques are the human remnants of the lost continent of Atlantis.

A BAND OF WILD ASSES

When the Basques were found by the Romans, blood sacrifice was common among them, their staple was acorn bread and their many gods lived in mountains and among the rocks of the Basque shores. Basque customs and cults were upheld during the Roman period.

In the 6th century, they were invaded by the Visigoths, who were soon driven out. The Moors, after taking most of the rest of Spain, were content to leave them alone, calling them "a band of wild asses." Basque mountaineers trapped and defeated part of Charlemagne's army under Roland in 778. They resisted the centralizing grasp of both the Bonapartes and Bourbons.

From the early 14th century to 1839, they lived in confederation with Spain, recognizing the King of Spain as the Lord of the Basques with the understanding that he would affirm the established liberties or *fueros* of the Basques.

In the aftermath of a civil war, which ended in 1876, the Basques were fully incorporated into the Spanish state and lost their final special privileges of exemption from military service, financial autonomy and local administration. From this time forward, the Basques always have had a substantial cadre of separatists in their provinces.

The Spanish monarchy fell in 1931, and the Spanish Republic was established. The Basques immediately petitioned for independence. In 1933, the Republic authorized a plebiscite among the Basques and an overwhelming 88 per cent voted for a separate state, which was finally authorized as the Spanish Civil War broke out in 1936.

If the existence of the Basque Republic of Euzkadi was short, it was not without worldwide implication. The attack on Guernica by German planes on Franco's side clearly established the Nazi proclivity for brutality.

In a war of intense cruelty and vindictiveness, it was the Basques alone who were reported by the correspondents as incapable of atrocity. As the front moved closer, the Basques attempted to evacuate their children. (The United States made a decision during this period that struck some as particularly pathetic: to turn down a cargo of 500 Basque children who had been evacuated from Bilbao before it was attacked. Though many nations that were neutral during the Spanish war accepted children, the United States decided that such an action would be taking sides).

IGNORED BUT ALIVE

The history of the Basque national movement in Spain has been for the most part unchronicled since 1937.

None of the world's major newspapers or press services have correspondents in the area, and the Spanish press does little to report events that reflect antagonism to the government. Most of the old voices of Euzkadi are gone.

But in the more than 30 years since the fall of Euzkadi, Basque nationalism has stayed very much alive. In the last two years have occurred some of the strongest separatist demonstrations since the early 30s. It is almost impossible to know exactly how many have been arrested for nationalistic activities, but the number is sizable.

Except for major eruptions, Basque nationalism traditionally has provided those one-inch fillers in the back of major newspapers: like "15 Basques on Trial" and "25 Successionists Arrested." In the period from 1950 to 1967, The New York Times reported a total of more than 300 arrests. In the last two years, more than twice that number of arrests have been reported.

Basque priests have been consistently outspoken in their dealings with the Franco regime. The priests have been almost constantly at odds with their Franco-appointed bishops, provincial governors and the regime itself.

By making decisions that pertain directly to religion, the governors have kept dissatisfaction alive. Euskara has been banned for use on tombstones and outlawed as the language in sermons.

In 1960, 342 Basque priests signed a letter to Franco protesting the "lack of freedom" and "oppression of the Basques" by his regime. In 1963, a Basque statement was forwarded to the Ecumenical Council in Rome, denouncing a "violation of basic human rights" by the government in Madrid.

Recently, the action has been more direct. Priests have refused to allow the Spanish flag in their churches, refused to bless Franco-sanctioned public works or buildings, staged vigils (sit-ins) in the offices of higher authority (in once case, 47 stayed in the bishop's palace in Bilbao for six days) and bluntly advocated separatism.

Several monasteries have become active centers for nationalism and one went as far as to edit and publish a pro-Basque newspaper that reached a circulation of 40,000 before being stopped by the regime. Last summer, the problem became so severe that Pope Paul ordered Basque priests to stay out of politics and, at the same time, asked the Franco government to release eight priests

arrested for alleged collusion in the Basque movement.

ACTS OF TERRORISM

While much of the leadership—or at least those with a platform from which to be vocal—is in the clergy, the move to nationalism is strong among the rest of the population. It ranges from the Basque who is simply in favor of regaining old freedoms to the members of the small terrorist organization known as ETA or Euzkadi ta Askatasuna (Basque Land and Liberty). In the middle is the Basque Nationalist Party, a loosely organized group that has peacefully lobbied for separatism for almost 100 years.

For 30 years, Basque nationalists have been a tolerable nuisance to the Spanish government. Manifestations of the nationalist spirit were for the most part confined to nonviolent but illegal acts such as clandestine meetings, painting slogans on walls, circulating pamphlets and the like. In the last two years, however, matters have become much more serious.

Acts of terroism have occurred, including the killing of two Spanish policemen. Massive demonstrations have taken place in San Sebastian and Bilbao, resulting in numerous arrests and other forms of retribution. Twice, rights guaranteed under Spanish law have been suspended in the Basque area. Rights regarding arrest, house search and freedom of movement have been suspended on occasion.

Day-to-day expressions of Basque nationalism come in many forms. Speaking Basque in the presence of outsiders is one. Calling Pio Baroja and Miguel de Unamuno Basque—not Spanish—writers and pointing out that Simon Bolivar and Maurice Ravel were Basques are others. The green, white and red colors of Euzkadi are illegal on a flag but are worn discretely on jacket lapels at festival time. Basque Christian names are also illegal, but there is no way of stopping a mother from calling her son, christened Jose, by the equivalent Basque name Joseba.

EVERY MAN A NOBLE

Basque liberty is not a vague concept but a specific tradition that has been maintained, at least in men's minds, for centuries.

The Basque *fueros*, or rights, were for the most part formulated in the *Batzar*, or parliament, in Guernica. Nobody is exactly sure when the *batzar* first convened, but it produced a body of laws that were egalitarian and often unique.

A fuero written in 1526 declared that every Basque was a nobleman. The law not only prevented nobility from dominating the Basque lands but also gave Basques traveling in other lands the privileges of title.

Other fueros prohibited torture as a means of punishment, allowed for free trade with other lands and guaranteed a trial by a jury of peers.

A fuero of the 16th century stated that freedom and liberty were established by law and that any order from the king in contradiction with the fueros would be "respected but not carried out." No law or decree issued by the king went into effect until ratified by the batzar.

No taxes (stipulated as free and voluntary gifts) could be paid to the crown until all petitions were heard and wrongs redressed.

Although Basques have a reputation for being extremely religious and concerned with law, their fueros prohibited clergy or lawyers from sitting as deputies at Guernica.

Contemporary Basques claim that their 16th century forebears had more personal freedom than they do.

The Basques, who hold tenacity and strength to be great virtues, have been around for a long time and know that the irritations of a dictatorship cannot last forever. Their ideals, manners and customs have had the strength of centuries.

When John Adams wrote "A Defense of the Constitution of Government of the United States," he spoke of the Basques:

"While their neighbors have long since resigned all their pretensions into the hands of kings and priests, this extraordinary people have preserved their ancient languages, genius, laws, government and manners without innovation, longer than any other nation in Europe."

The Basque ethic and ideal may be the sanest on the whole Iberian peninsula, but it will probably be a while before they dominate in their native provinces again. Until that time, resilience will have to do.

THE BASQUES' PRESIDENT

(By Paul A. Dickson)

The North of Spain was falling and the leaders had retreated as far as the city of Santander. Jose Antonio de Aguirre was convinced by his ministers that he must escape immediately. Under heavy aerial bombardment, he managed to board the only airplane his tiny government still owned, an old Curtiss pursuit plane that had once belonged to Haile Selassie. An hour later he was in France.

Aguirre was the elected president of Euzkadi, the Basque Republic, which had come into existence in October, 1936. Now, with Aguirre's exile, it had fallen in less than a year. As the Nationalist armies of Francisco Franco moved through Vizcaya and Guipuzcoa, the two separated provinces once again became part of Spain.

As the errant provinces were again being put under Spanish rule, Aguirre had to plot and execute his escape from Europe. He stayed in France for a while, but was soon on the run again.

Aguirre had been an outspoken antifascist who rallied worldwide sympathy for the Basques when he cried out against the bombings of the undefended Basque towns of Guernica and Durango by the Nazi Condor Legion, then in the service of Gen. Franco.

The Nazis and their collaborators actively pursued Aguirre in occupied Europe. If caught, he would presumably have shared the same fate as Luis Companys, president of the similarly separatist Catalan Republic, who was captured in France by the Vichy regime, turned over to Spain and shot.

Aguirre moved from hiding place to hiding place. Just as he felt he was about to be captured in occupied Belgium, he decided upon a bold course of action: he would escape through Berlin. As he later explained in his book, "Escape Via Berlin," "While the rest of the world ran away from their clutches, I would run between their legs."

He was crafty and calm, and it seems, driven by the same sense of bravado usually attributed to spies in Hollywood movies. Posing as a Panamanian traveler, bolstered only by a false passport and a new mustache, Aguirre attended the funeral of the Spanish King Alfonso XIII in Berlin and sat in the same section of the church as Spaniards who would have had him shot had they recognized him. He dined with a Spanish diplomat and impishly brought up the subject of "that criminal" Aguirre. In occupied Belgium, he played in a well-attended tennis match with his brother—who was being watched to see if he would make contact with the escaped president.

With the help of several sympathetic Latin American diplomats, Aguirre escaped with his family to neutral Sweden, then Brazil and finally New York, where he established headquarters for his exile government. When World War II ended, the government-in-exile moved to Paris (where it still exists) and Aguirre continued as an active propagandist for the rights and separatism of the Spanish Basques.

Aguirre died in 1960. The world's press gave him the type of deferential obituary reserved for men who have had their one moment of significance. To the world he was a colorful, quixotic anachronism crying for separatism at a time when alliances, treaties and blocs were the order of the day.

Throughout history there have been many exiled leaders: men who perish in foreign lands claiming to the last that they have been slighted and their people deprived of their birthright. The Spanish Civil War alone provided a handful of such men. Often the claims of deposed leaders add up to nothing more than bids for publicity by desperate despots. To the end, Aguirre claimed that he represented a courageous, idealistic and democratic people with a long felt desire for nationhood. Seen in the context of the Spanish Basques and their history, customs and traditions, Aguirre's claim appears valid.

SAFEGUARD CREDIBILITY UTTERLY DESTROYED

Mr. YOUNG of Ohio. Mr. President, the St. Louis Post-Dispatch recently published an outstanding editorial, entitled "The Credibility of Safeguard," which clearly and concisely details the checkered history of the proposed ABM system. The editorial points out that President Eisenhower and President Kennedy both rejected the importunings of Pentagon generals and admirals for deployment of an ABM system. Furthermore, it was not until 1967 that President Johnson succumbed to Pentagon pressures and prevailed upon Secretary of Defense McNamara to yield to the Joint Chiefs of Staff and the military-industry complex. Secretary McNamara then recommended the so-called thin ABM, supposedly a defense against Communist China—a rationale that has been thoroughly discredited. It had no validity at that time as Communist China had then as it has now, but crude nuclear capability.

To embark upon a project of such dubious value and at such fantastic expense against the advice of the scientific advisers to Presidents Eisenhower, Kennedy, and Johnson and of practically all of the scientists who, incidentally, would be called upon to help build this boondoggle, makes no sense whatever. The alleged purpose of the ABM has been changed so many times and altered to fit so many conflicting assumptions that the credibility of Safeguard, formerly termed the Sentinel ABM, has been utterly destroyed.

Mr. President, I commend this excellent editorial to Senators who have not had the opportunity to read it, and ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CREDIBILITY OF SAFEGUARD

As the ABM question nears a Senate vote, it is well to recall the checkered history of the defensive missile project.

The Pentagon's military planners began promoting defensive missiles during the '50s, in the Eisenhower Administration. After extensive consideration of two competing concepts, point defense and area defense, they decided to concentrate research on point defense, and the Army set about designing and testing Nike-Zeus. The Defense Department in 1959 strongly urged immediate production and deployment of this system, to be operational by 1964.

But President Eisenhower was never convinced that such a vast expenditure could be

justified. He left the matter to the incoming Kennedy Administration, which decided not to deploy Nike-Zeus but to splurge instead on a huge expansion of offensive missiles, on the basis of "missile gap" which later turned out to be the figment of somebody's imagination.

The wisdom of the decision against Nike-Zeus has been attested by Dr. G. B. Kistiakowsky, President Eisenhower's science adviser. He recently pointed out that if the system had been deployed in 1964, at a cost of perhaps 40 billion dollars, by this time it would have been made obsolescent by the current numbers and sophistication of offensive missiles being deployed by the superpowers.

Undismayed, the Pentagon during the early '60s switched its planning concept from point to area defense, and began working on Nike-X, which was intended to protect major population centers. Both the Kennedy and Johnson Administrations decided against deployment of Nike-X, for much the same reasons that had prevailed against Nike-Zeus.

After the Soviets began deploying a limited ABM system around Moscow, the Pentagon renewed its pressure. Nike-X became the Sentinel system, based on the same components. Secretary McNamara, convinced that with or without ABMs on either side the U.S. had enough nuclear power to wreak total destruction on any enemy even after absorbing a missile attack, continued to oppose ABM. He said all it would accomplish would be to force the Russians to build more and more offensive missiles.

In late 1967, Mr. McNamara compromised. Still rejecting as unnecessary an ABM defense against Russia, he inexplicably came out for a "light" deployment against China. There is every reason to believe that this was a political decision, designed to deprive the Republicans of a "missile gap" issue in the 1968 campaign. The aerospace industry's house organ, *Aviation Week*, so described it at the time.

Congress approved and work began on Sentinel. So many protests came from the proposed ABM sites around Detroit, Boston and other cities, that the incoming Nixon Administration suspended the project for a review. The upshot was the transmutation of Sentinel into Safeguard.

Now the strategic concept shifted back once more from area defense to point defense. Instead of protecting cities, the ABM was to protect the sites of Minuteman offensive missiles against a possible first strike by the Russians (not the Chinese, anymore). This doctrine required, as Senator Symington has pointed out, changing the previous appraisal of Russia's SS–9 missiles from second-strike to first-strike weapons. The Pentagon also raised the megatonnage the SS–9s are supposed to carry, and it further gave them the potential of carrying multiple warheads.

Whether SS–9s do in fact have all that capability is not known. Senator Symington notes that the SS–9 is a liquid-fuel missile like the Titan, which the U.S. abandoned years ago. Yet all of a sudden, according to the Pentagon propaganda, the SS–9 has become a fearsome weapon able to knock out all our missiles at one blow, and therefore we need the Safeguard ABM system to "protect our deterrent."

Senator Symington, one of the most knowledgeable men in the Senate when it comes to missiles, is not fooled by this propaganda, and we do not see how a Senate majority can be fooled by it. Those who pay thoughtful attention to the 15-year effort by the Pentagon to inflict a costly ABM commitment on the American people can only conclude, with Senator Gore, that the ABM is a weapons system in search of a mission. Its alleged mission has been changed so many times, the security justification altered to fit so many conflicting assumptions, that the credibility of Safeguard has been utterly destroyed.

SENATOR YARBOROUGH TALKS ABOUT THE WORLD HUNGER PROBLEM

Mr. McGOVERN. Mr. President, I noted with interest a speech made by one of the members of the committee of which I am chairman, the Select Committee on Nutrition and Human Needs. The speech, by the distinguished Senator from Texas (Mr. YARBOROUGH), constitutes a most enlightening and eloquent discussion of the problem of world hunger.

It includes a thorough review of the fundamental facts pertaining to the existence of world hunger, a brief discussion of the history of famine and hunger, an analysis of suggested solutions to world hunger, and an articulate summary of his suggested approach to the immediate problem.

I ask unanimous consent that the speech, entitled "A Beacon in the Malthusian Darkness," and delivered to the Canadian-American Assembly on World Hunger on Thursday, June 26, 1969, be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

A BEACON IN THE MALTHUSIAN DARKNESS

(Remarks of Senator RALPH W. YARBOROUGH to the Canadian-American Assembly on World Hunger in Toronto, June 26, 1969)

President Nelson, Distinguished Delegates to the Canadian-American Assembly on World Hunger, Fellow North Americans, Ladies and Gentlemen:

As a Texan, I feel awed in coming to the Province of Ontario, so much larger than the empirical State of Texas, and to Toronto, with a metropolitan population of over two million. But I have been to Canada a number of times before, and I know that Canada is not merely big in area, it is big in thought and ideals, which is the most important of all.

It is in keeping with the great size, the great ideals, and great compassion of Canada, that you are holding this conference here, to deal with one of the most urgent problems of mankind. The problems of hunger and malnutrition among the world's people, coupled with the population explosion, presents man with one of the gravest problems in all his life on this continent.

It is a pleasure to have this opportunity to participate in a meeting of individuals so genuinely concerned about one of man's greatest crises.

Cardinal Spellman, in his Prayer for Children, eloquently characterizes the pathos of this crisis with these words:

"Somewhere—the place it matters not
Somewhere I saw a child hungry and thin of face
Eyes in whose pools life's joys no longer stirred
Lips that were dead to laughter's eager kiss
Yet parted fiercely to a crust of bread."

Such a child can be found in any part of the world; in the river plains of India; the hamlets of Vietnam; the villages of Biafra; the teeming ghettoes of Tokyo or Mexico City; in the hills of Appalachia; or the streets of the proud but turbulent American cities. We cannot escape the haunting eyes of hunger; they see us when we dine on veal Francoise, or drive either one of our two family cars, or watch our color television.

While one billion of the three billion people on Earth share in an ostentatious abundance, the other two billion struggle on the brink of starvation and disaster. Those two billion people receive on a daily basis half or less as many calories as the one billion in the affluent nations, and only one-fifth as much high quality animal protein.

It has been established by the President's Science Advisory Committee that over 50 percent of the pre-school children in the developing nations are physically affected, from a severe to moderate extent, by protein-calorie malnutrition. The physical manifestations are tragic indeed; anemia, goiter, pellagra, beri-beri, rickets, mental retardation and other diseases associated with malnutrition. It is estimated that approximately 10,000 people, mostly children, die from hunger or from the associated effects of malnutrition each day, while millions suffer in the psychological despair created by hunger and poverty and their corrollaries of lethargy and hopelessness. As Adlai Stevenson noted, "A hungry man is not a free man."

We cannot escape a plain truth: Up to now man has not been able to eradicate the scourge of hunger. How then can man ever hope to cope with the problem as it is compounded by future population growth?

Dr. Paul Erlich of Stanford University answers this question dogmatically in the negative. He says:

The battle to feed humanity is over . . . Sometime between 1970 and 1985, the world will undergo vast famines. Hundreds of millions of people are going to starve to death. That is they will starve to death unless plague, thermonuclear war or some other agent kills them first.

Dr. Erlich thus pessimistically proclaims that man cannot escape the ominous shadow of Malthus. His conclusions paraphrase T. S. Eliot: The world will end with the whimper of a starving man, rather than with the bang of an exploding planet.

Many scientists and experts disagree with Dr. Erlich, and do not feel that the situation is hopeless. But even those hasten to recognize that the hunger problem has thrown the world into crisis, a crisis that is calculated to be frightfully deepened by the sheer reality of mathematics.

According to United Nations studies, the world population will be at least doubled by the year 2000 and the population could reach 7 billion. In 1966 alone, the world population was increased by some 70 million, and there was no compensating overall increase in food production. Because of the agricultural disasters of 1965 and 1966, each person on earth had 2 per cent less to eat in 1967 than in the preceding year.

We must face up to some stark facts:

According to the study of Dr. Thorkil Kristensen, Secretary-General of the Organization for the Economic Cooperation and Development, the less developed countries' demand for food in 1960 was 47 billion in terms of dollars, and their production was 48 billion; but by 2000, their demand will be 170 billion with a production of only 135 billion.

As Dr. Frank Notestine, President Emeritus of the Population Council, stated, there is no realistic possibility that the population growth can be reduced by human fertility control or family planning to an extent sufficient to significantly lessen the projected food deficiency.

The less developed nations will have to double their historic rates of growth in food production if they are to break their dependence on food aid and reach minimum levels of adequate diet by 1980, and to do this the resources required are far in excess of present levels of investment in agricultural development.

So, in the absence of drastic measures, the dreadful gap between the nations that have and the nations that have not is calculated to widen. Even the most optimistic among us have to yield to the incontrovertible: mankind is on a collision course with catastrophic famine if it continues its present direction, at its present pace.

It is true that man has always been plagued with hunger and famine. The first historically recorded famine occurred in ancient Egypt some 2000 years before the time of Abraham. The so-called Stele of Famine, found over a granite tomb at the first cataract of the Nile, recorded with terrible foreboding the famine that ravaged the land of the Nile during the reign of Tosorthrus:

I am mourning on my high throne for the vast misfortune, because the Nile flood in my time has not come for 7 years. There is lack of crops and of all kinds of food. Each man has become a thief to his neighbor. The child cries, and the youth creeps along, and the old man—their souls are bowed down, their legs are bent together and drag along the ground, and their hands rest in their bosoms. Everything is exhausted.

In A.D. 331, Antioch in Asia Minor was afflicted by so devastating a famine that a bushel of wheat sold for 400 pieces of silver. In Scotland, after 4 years of famine about A.D. 936, "people began to devour one another." During the Irish famine of 963, peasants sold their children for food.

Hunger and misery were the impelling forces of two of history's greatest revolutions: the French and the Russian. In 1876–78, 5 million persons perished from famine in Bombay, Madras, and Mysore, India; while in a famine in Northern China, at about the same time, 9½ million people died of starvation.

History now records our present nemesis, Biafra. As Senator Edward Kennedy noted on the Senate floor just a few days ago:

"The mercy airlift of food and medicine into Biafra has stopped. The three million people supported by the airlift face starvation and death."

Despite the persistent recurrence of famine, I cannot accept the dogmatic despair of the Malthusians. Hope springs eternal in the human breast. It has to—that is the human way.

Whatever the probabilities of disaster, we have to *at least try* to preclude its convergence with reality. There has been too much talk about hunger and too little action. If we could eat rhetoric, hunger would have vanished by now. It is time to act, and to act as if our lives depended on it—for indeed they do.

While we must energetically foster population control, we must recognize that such efforts cannot provides an immediate solution to the hunger problem. I have had some direct involvement with population control efforts. As a member of the Senate Subcommittee on Employment, Manpower and Poverty, I was a co-sponsor of former Senator Ernest Gruening's bill on population control in the last session of Congress. I am a cosponsor of Senator Joseph Tydings' bill, pending in this session of Congress, to expand and improve family planning services and population research activities. This bill has been referred to the Senate Labor and Public Welfare Committee, of which I am chairman.

From these vantage points, I have seen that population control is absolutely essential if we are to win the race between food and population. You may have noticed the full page ad in the larger newspapers throughout the United States last week. It refers to Robert McNamara's speech at the University of Notre Dame where he said:

"Providence has placed you and me—all of us—at the fulcrum point in history where a rational, responsible, moral, solution to the population problem *must be found.*"

There can be no doubt that a solution must be found and found soon. None of the medical or mechanical remedies have proven effective among those with the highest birthrate, the poor and illiterate masses of the world. More education and counseling is needed, and more research is needed. The United States spend only 116 million dollars on population control programs; this is not enough. Senator Tydings' bill calls for a substantial acceleration in spending for poulation control research, establishment of population and family planning centers, grants for public health services dealing with family planning and grants for training personnel to provide counseling on family planning. It is urgent that this bill pass the Congress of the United States. If the United States will lead legislatively, many other nations will be encouraged to cooperate.

But the population control will take time and its salutary effects will not come on the wings of the morrow. It will take at least 20 years, probably more, before even the most ambitious population control efforts can have any significant effect upon food requirements.

Thus, we must turn to the two areas where we can have a more immediate impact. I am referring to a drastic acceleration in the direct provision by the affluent nations to the developing nations of two things:

1. Emergency food and fiber;

2. Technical assistance to increase agricultural production within the developing nation.

The total food aid from all sources to the developing nations is not over 2 billion dollars. Until we can be sure that the developing nations can produce the additional 58 million metric tons of grain they will need by 1980, food aid must be increased by at least 50 percent.

Even more necessary is a dramatic upsurge in technical assistance. This involves expanded support for research in plant sciences, full development of water resources, assistance in transforming the subsistance farming of the developing nations into modern agriculture, the expansion of extension services, the provision of fertilizer, pesticides, higher quality seed, and farm equipment, the commencement of comprehensive community development schemes, and the establishment of graduate institutions of agricultural education and research. No one of these is a panacea, but a combination of all and the many other components of a modern technological society is absolutely essential if agricultural production in the developing nations is to be substantially improved.

Some say that it is impossible to significantly increase production in the underdeveloped nations through technical assistance. But they are wrong. In Mexico, for example, a cooperative venture, between the Government of Mexico and the Rockefeller Foundation, to improve agricultural production, was begun in 1940. By 1955, Mexico had closed its food gap in the production of both corn and wheat. By 1968, the national average wheat yields in Mexico exceeded 40 bushels an acre, or almost quadruple the 11.5 bushel average in 1943; and corn yields, in the same period, had doubled.

I have the faith that commensurate progress can be made in most of the developing countries of the world if we can just modernize their production techniques and show them the way to the maximum utilization of their soil. Scientists tell us that we will eventually be able to produce some of the major staple crops the year round in tropical climates. This attainment will provide the world with tremendous potential, since so many of the underdeveloped nations lie within the tropical zone.

Still, these optimistic developments should not lull us into any false sense of security.

Too often the hungry, underdeveloped country calls for an aluminum plant or a steel mill when it needs food production. Its local politicians want a big industrial mill to show off and for pay-off, and too often the developed industrial nation will build it for the profit of its own production.

The hungry nations need better agricultural technicians, the equivalent of county agricultural agents and home demonstration agents in each comparable area of the undeveloped nations. There is an unbelievable shortage and a great need for veterinarians around the world. There is a great need for game specialists in the game abundant areas of the world. Many areas of Africa can produce much more meat per square mile from wild animals, properly managed, than from domesticated animals grazing on grass alone.

The astonishing increase in wheat production in the Punjab and in some other areas of India, and the miracle rice of the Philippines, open the doors for a better future for Asia.

The advanced nations are presently providing the developing countries about 6.5 billion dollars per year in food aid, technical assistance and capital investment. George Woods, former president of the World Bank, estimated that a minimum of another 4 billion dollars per year in aid will be absolutely essential for the future. Of the annual aid recommended by Mr. Wood, the United States would be asked to furnish over half; since our gross national product is over half of the total gross national product of the advanced nations.

Hunger and malnutrition exist in the United States. Recent surveys, conducted under the sponsorship of the Senate Special Committee on Malnutrition and Hunger, have revealed widespread malnutrition and hunger. The estimates of the cost of the elimination of malnutrition and hunger in the United States range from a low of one billion dollars a year to three billion dollars a year, but the average estimate is two billion dollars.

The Administration is too timid. It has requested only 610 million dollars for the Food Stamp Program for the next fiscal year, though the Senate, just this week voted for 750 million dollars for this one food program. We also use a Food Stamp Program and a school lunch and school breakfast program, but all combined are too little. Far more must be done to eradicate hunger and malnutrition in the United States.

Worldwide, it will take billions more. We need a crash program now for agricultural experts in all needy nations, developing new seeds, new productivity in food plants, for veterinarians to grow better and more healthful food-producing animals. And for the machinery of food production—soil, enriching chemicals, and fruits and vegetables for the family table.

We in America can do our part, but we are prevented today by the drain of an unwise military venture in Southeast Asia which costs us about 36 billion dollars a year. We need to put first things first, end this needless depletion of our resources, so that we can go forth, not with the sword to cut down men, but with a scythe to harvest grain.

We need in the United States an excess war profits tax, such as we had in World War I, World War II, and the Korean Conflict to keep our economy in economic balance and our government in political balance.

We need more concern for the pain and hunger and disease in foreign countries, than for their political beliefs. Our obsession should be to become the most humane society, not the more military society.

The great difficulty in generating the thrust needed to cope with the hunger crisis is that the members of the affluent societies are too far removed from the horror of mass hunger. This accounts for the apathy and indifference of so many in the advanced nations. When will we ever learn with George Bernard Shaw that the essence of man's inhumanity to man is indifference—cold, calloused, carefree indifference?

Mankind cannot survive this indifference. We are compelled by the sheer struggle to preserve life on this planet to comprehend the truth of Donne's famous words:

No man is an island, entire of itself . . . any man's death diminishes me, because I am involved in mankind; and therefore never send to know for whom the bell tolls, it tolls for thee.

While I have been speaking to you today, the bell has tolled for 2000 people, mostly children, who have died of starvation. "As the grim reaper of hunger, with sickle keen, reaps the bearded grain at a breath, and the flowers in between," mankind is diminished with each stroke. Recognizing that every life upon earth is precious and every man, woman and child is only a "little lower than the angels," let us throw off the shackles of indifference, roll up our sleeves and be about the business of serving mankind. In so doing, we will ennoble ourselves, and the inner glow which comes from selfless aid to others will grace our lives and light fires of hope in the remotest corners of this planet.

Thank you for kindling the flames of that hope. Lead us in making this dream of mankind come true.

TRIBUTE TO THE LATE CHARLES A. WOLVERTON

Mr. CASE. Mr. President, recently Alfred J. Lippman, Consulado Honorario de Mexico, sent me a copy of Pepe Romero's newspaper column from Mexico City. The article paid tribute to the late Charles A. Wolverton, a longtime friend and esteemed colleague of mine in the House of Representatives. A member of the Committee on Interstate and Foreign Commerce, Representative Wolverton was deeply concerned about Mexico, her people and progress. In recognition of his stanch championing of the cause of Mexico, Mr. Romero suggests that Mr. Wolverton be posthumously awarded the Aztec Eagle, Mexico's highest decoration. Mr. President, I ask unanimous consent that Mr. Romero's column, entitled "Un Momento With Pepe Romero," be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UN MOMENTO WITH PEPE ROMERO

A few days ago former Representative Charles A. Wolverton, who served in the House of Representatives in Washington, D.C. for thirty-two years, died in Camden's "Our Lady of Lourdes Hospital," at the age of eighty-eight. He had served a total of sixteen terms, a record for any congressman. He was a graduate of the Pennsylvania Law School, and in the twenties was alternate delegate to the Republican National Convention. In 1926 he was elected to his first of 16 consecutive terms in the U.S. Congress. He was a past master of the Ionic Lodge, F and AM—a thirty-two degree mason. His wife had passed on many years ago, so now we send his son Donnell Knox Wolverton Mexico's deepest sentiments.

In the fifties, I was present when Mexico's Foreign Minister don Manuel Tello, representing President Miguel Aleman, awarded Mr. Robert Crosser, U.S. Congressman from Ohio, and Chairman of the Committee on Interstate and Foreign Commerce, Mexico's highest decoration, the Order of the Aztec Eagle, in a reception which took place in the Chandelier Room, a jarabe-tapatio dance away from my stupendous office in the lobby of the Hotel Del Prado. Several of us who attended the ceremony were extremely disappointed because Charles A. Wolverton, Republic congressman from New Jersey, and one of Mexico's staunchest friends who had constantly championed the cause of Mexico from the floor of the United States Congress, did not also receive the Order of the Aztec Eagle on that occasion. We could not understand why, until many months later a Cabinet Minister who is my good friend explained, "The calibre of a man like Mr. Wolverton is rare. He refused to accept our country's highest award, so as not to take any of the limelight from the Chairman of the Committee. The Aztec Eagle was certainly offered to him by our Government, in recognition of valuable friendship."

When the Committee on Interstate and Foreign Commerce made its first trip to Mexico, Mr. Wolverton was its Chairman, on its second visit to further study Mexico's Oil situation, Mr. Crosser was its Chairman. But what I did in my book. "Mexican Jumping Bean," was to point out the important statement from that Committee's report to the Congress of the United States upon its return from Mexico at the time when Mr. Wolverton was its Chairman, and I quote from the Wolverton report which I published: "At a time when these world and United States Petroleum conditions prevail it is manifest that the United States has an interest to see that Mexico contributes to world oil supply." Of even more significance in the disturbed times of today are considerations of National Defense and the position of the U.S. in the event of an emergency. The Secretary of Defense in testimony before the Armed Service Committee estimated our Petroleum deficiency in the event of such an unwelcome happening as being some two million barrels per day. In view of such possibilities it appears clear that not only must we have reasonable assurance of continuation of supply from present sources available for emergency demand. As the committee has stated before it is not at all clear what reliance can be placed on the Near East as a source of supply so that dependence on Western Hemisphere sources becomes only a matter of reasonable prudence. There seems to be no disagreement whatsoever that Mexico possesses potentially large petroleum resources. The United States has had and continues to have a large interest in export surplus of Mexican petroleum, not only because it represents a way by which the large United States trade with Mexico may continue to be financed, but as also stated before, because of considerations of Hemispheric Defense."—These opinions were being expressed officially, and I had been given the green-light to publish them in letters received in 1952 from Congressman Wolverton, which I quote, "I also enclose two copies of Report of our Committee with reference to our trip last fall. You may incorporate any part of the Report into my statement." A couple of years later I received a note from him saying that he had heard that I had been in New York and then scolds. "Please do not ever come to the United States again without stopping to see me in Washington. If you do I will have to figure whether or not I should keep you on my list of friends. And in 1958, Mr. Wolverton said, "I hope our paths will cross frequently in the days and years ahead." On my stops in Washington, I always visited him and his hospitality I knew was not for me alone but for Mexico, because on these occasions he asked after mutual friends, and about my country's progress. And the reason that I was certain he had proven years before his sterling concern for Mexico, was because those were the days when, as attorney Frank Rashap had said, "Black Oil, boycott and condemnation was the attitude, after total disregard of the laws of Mexico, and one-sided view in the press of the Expropriation of the Foreign Oil companies."—And so deep sentiments not only to the Free State of New Jersey but to all of the United States on the loss of a very special patriotic son. Mexico's Aztec Eagle should be awarded to him—even though posthumously . . .

. . . Un Momento.

THE 150TH ANNIVERSARY OF ALABAMA STATEHOOD

Mr. ALLEN. Mr. President, Saturday, August 2, 1969, marked the 150th anniversary of the State of Alabama's adoption of the resolution of statehood and a State constitution by a convention assembled at Huntsville, Ala. On December 14 of that year, Alabama was admitted to the Union as the 22d State.

The late Judge Walter B. Jones, of Montgomery, Ala., son of a former Governor and for 44 years a circuit judge in Alabama, was a much beloved gentleman and scholar whose public career was marked by legal and cultural contributions to the State in the finest tradition of Alabama and the South. For a period of 33 years, Judge Jones wrote a weekly column for the Montgomery Advertiser entitled "Off the Bench." On one occasion he used his column to bring vividly to life a scene from history which took place in the office of President James Monroe upon the occasion of his receiving the resolution of Congress declaring Alabama to be one of the United States of America.

Mr. President, the Montgomery Advertiser in commemoration of the death of Judge Walter B. Jones and the birth of Alabama as a State reprinted Judge Jones's column which was written several years prior to his death. We believe that Members of the Senate and others will find the column pleasurable and instructive reading and that it might serve to remind us that all States entered the Federal Union on "equal footing" and that we depart both from the letter and spirit of our Constitution when Congress enacts punitive laws applicable to some but not to all the States. I ask unanimous consent that the column be printed in the RECORD.

There being no objection, the editorial and column were ordered to be printed in the RECORD, as follows:

ALABAMA'S BIRTH AS A STATE

Today is the 150th anniversary of Alabama's adoption of a resolution of statehood and a state constitution by a convention assembled at Huntsville. That was Aug. 2, 1819. On Dec. 14 of that year, Alabama was admitted to the Union.

The late Judge Walter B. Jones, who died six years ago yesterday at his home on Adams Avenue, wrote the following column for The Advertiser about the office of President James Monroe on that December day when the August resolution was received and acted on.

Judge Jones, son of a former Governor and a circuit judge for 43 years, wrote a weekly column, "OT The Bench," for The Advertiser for 33 years, from Dec. 14, 1925, to March 31, 1941 and from Dec. 1, 1947 to June 2, 1963, when his illness forced him to discontinue it. He had interrupted the column between 1941 and 1947 to write a massive legal work.

In commemoration of his death and the birth of Alabama as a state, we are reprinting his column of Dec. 17, 1962.

OFF THE BENCH

(By Judge Walter B. Jones)

December 17, 1962.—On a dreary December afternoon, 143 years ago Friday last, down on the south side of Pennsylvania Avenue in Washington City, a little town of about 13,000 population, two-thirds of whom were white, a chilly damp wind swept in from the Potomac, moaning through the trees surrounding a large white building. The building had

been burned by British troops only a few years before, and now rebuilt and painted white to hide the marks of the fire, it was the official residence of the president of the United States.

While it was cold and damp outside the building, big wood fires made the inside fairly comfortable. In a large room on an upper floor huge oak logs piled high upon the fire, blazed cheerfully on the hearth, brightening and warming the room. At an oval table a few feet back from the fireplace a tall, thin man sat looking over a bundle of official documents just handed him. Occasionally he put his signature to some of the documents.

The distinguished looking man seated at the table was Virginia-born James Monroe, fifth president of the United States, a battle-scarred hero of the Revolution and four times governor of Virginia. His grayish-blue eyes were deepset and kindly. He was six feet tall, but being stoop-shouldered and ungainly, seemed of less height. His face was delicately refined.

Monroe's eight years in the White House were known as the "Era of Good Feeling." In a message to Congress, December 1823, he stated the Monroe Doctrine that the United States would regard as an unfriendly act any attempt by a European nation to interfere in the affairs of the American countries or to increase its possessions on the American continents.

In his reelection to the presidency in 1820 he received all the votes cast in the electoral college but one cast by a New Hampshire presidential elector for John Quincy Adams in order that no one might share with Washington the honor of a unanimous election.

With the President were two of his clerks, his vice president, Daniel B. Tompkins, formerly governor of New York for 10 years; and the President's Secretary of State, John Quincy Adams, the son of the second president of the United States and in a few years to succeed Mr. Monroe in the presidential office.

As the clerk handed the papers from Congress to Secretary of State Adams, sitting at Mr. Monroe's right hand, the former read them to the President, stating to him the purpose and legislative history of the bills and resolutions.

"Now, Mr. President," said the Secretary of State, picking up a document from the table, "here's a resolution I know you'll be happy to sign."

"Yes?" inquired the President.

"It's a resolution of the Senate and House of Representatives which gives us a new state," replied Mr. Adams. "It puts into effect an act you approved last March to enable the people of the Alabama Territory to form a constitution and a state government and for the admission of the territory as a state into the Union."

"How does the resolution read, Mr. Adams?" asked the President, "and what are its chief provisions?"

"Well, it is a resolution declaring the admission of the state of Alabama into the Union," replied the Secretary of State, "and the resolution recites the fact that on Aug. 2, last, the people, by a convention called for that purpose at Huntsville formed themselves a constitution and state government. These are republican and conform to the principles of the articles of compact between the original states and the people and the states in the Northwest Territory."

"And does the resolution," inquired the president, "admit Alabama on an equal footing with the original states? Please read me the text as to this point, Mr. Secretary."

Mr. Adams read: "Resolved by the Senate and House of Representatives of the United States of America, in Congress assembled, that the state of Alabama shall be one and is hereby declared to be one, of the United States of America and admitted to the Union on an equal footing with the original states in all respects whatever."

"Very good. Let me approve the resolution," said the president.

The document was handed to Mr. Monroe, who then moved his inkhorn closer and taking the quill of a feather used in those days as a pen for writing, he wrote the words, "Approved, Dec. 14, 1819," and under them signed "James Monroe."

"Now, gentlemen," said Mr. Monroe, "the Union has a new member, Alabama has just become our 22nd state. So let us stand and salute the new state with a toast. Fill every glass up. Pour forth the cheering wine."

The President stood up beside the table facing the south, all following his example. Secretary Adams poured bright sherry from a handsome old cutglass decanter into each small wine glass. When all the glasses had been filled, the President lifted his glass, and standing his full six feet in height, said: "Let us drink in honor of our youngest state." He paused, each lifted high his glass and faced Mr. Monroe as he said:

"I drink to Alabama and her people. May God graciously smile upon the state and bless her people with all goodness, happiness and prosperity." Each glass was lifted high.

The President, the Vice President and the Secretary of State resumed their seats, a servant chunked up the fire. The President turned his attention to other official documents. The ink dried on his signature to the joint resolution. The Territory of Alabama, after a brief life of two years, had passed on into history; and come July 4 in the Union of the flag there would be another five-pointed white star in the cluster on the blue field.

That star, the 22nd, first put in the flag July 4, 1820, represents our state, Alabama and her 3,000,000 people.

U.S. ACHIEVEMENTS IN AERONAUTICAL AND SPACE SCIENCES

Mr. MAGNUSON. Mr. President, the last 2 years have seen amazing and even fantastic progress in the development of the Nation's aeronautical and space programs and it was fitting that in June many of these remarkable achievements were on display for all the world to see at the International Air Show in Paris.

The Apollo 8 spaceship, a tremendous achievement made possible by a Government-industry team and the Boeing 747, the world's largest civil air transport were truly momentous achievements over which the United States should take great pride. Despite those two great technological advances in aerospace, we cannot take much solace in the fact that the British-French Concorde supersonic transport was also a major focal point in aeronautical achievement in Paris. While the United States may be very proud of our showing there, we must also realize that in this one vital area of aerospace technology, we have not moved forward as quickly as we might have. The British and French and the Russians are moving ahead quickly with the development of supersonic transports. The U.S. SST program is still bogged down at the executive level. While the world moves on quickly around us in this vital development, the President of the United States has yet to ask the country to move ahead on our SST project. I ask the President to delay no longer because the technology gap widens with each passing day and if the United States is to maintain its worldwide superiority in civil aviation, we must proceed with quick and orderly development of the SST. Mr. President, I commend to the Senate three editorials published recently in Aviation Week & Space Technology dealing with American aerospace achievements at the International Air Show in Paris. These concise editorials explain well both the achievement about which we can be proud and the challenge that we face in the future. I ask unanimous consent that the editorials be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

OUR BRIGHTEST IMAGE

(By Robert Hotz)

Never in the history of its participation in the Paris air show has the U.S. projected a brighter image of its aerospace technology and international stature than it did during the 28th Salon International de l'Aeronautique et de l'Espace. It was the strongest overseas presentation of the U.S. aerospace capability that we can remember. It was also the most accurate reflection of the genuine state of this country's technological achievements that we have ever seen at a Paris air show.

It combined a glowing image of a technically competent and aggressive nation with a very hard sell indeed. This hard sell produced a substantial return in immediate sales on the specific show investment of U.S. government and industry. It paved the way for even more productive market development in the years ahead. Since aerospace exports are one of the brightest spots in helping to solve the perennial U.S. balance-of-payments problem, this is an important achievement.

The Apollo exhibit was superbly executed. It combined the realism of the charred Apollo 8 capsule, equipment carried by Astronauts Borman, Lovell and Anders on man's first voyage to the moon and actual tapes of their broadcasts from lunar orbit, with imaginative presentation of the Apollo 11 lunar landing mission.

In the dim lighting of a simulated lunar surface, the steady stream of European visitors saw an extremely realistic reproduction of what they will be seeing in actuality on television next month. A full-scale replica of the Grumman lunar module stood in the sand and rocks on the surface of a simulated Sea of Tranquility. An astronaut with full lunar exploration gear and portable life support pack demonstrated egress from the LM and initial manned operations on the lunar surface.

Full-scale models of the equipment the astronauts will deploy on the moon were shown in addition to Grumman's lunar rover that will extend surface exploration on later missions. A realistic cockpit mockup of the LM put each visitor in an astronaut's position for a simulated descent to the moon's surface while tapes of the Apollo 10 crew reports during their low-level reconnaissance lent an air of startling realism to the display.

Also extremely effective was a psychedelic montage of color movies of various Apollo missions keyed to a countdown and launch and interspersed with spectacular low-level reconnaissance film of the moon. Only the physical limitations of the traffic flow through this exhibit kept the attendance here somewhat below that of the entire show.

The hard-sell portion of the U.S. exhibit scored even beyond its great 1967 success. More than 5,000 pre-screened and specially invited potential European customers registered there. Sales will probably soar to more than double the 1967 total when finally tabulated. The spectacular arrival of the Boeing 747 giant jet and its brief exhibition cast

a long shadow of U.S. market dominance in the wide-body high-bypass-ratio turbofan transport generation.

Even more impact would have been provided by the Lockheed C–5A military transport. It was indeed a craven performance by the Department of Defense to withhold its advanced technology from the U.S. exhibit simply because some aspects of it, such as the C–5A and the F–111, were embroiled in domestic political controversy. The F–111 pioneered operational swing-wing technology, and variable geometry is now very much the vogue in new European military designs.

A prior gap in the U.S. technological image projected at Paris was filled this time by a strong metallurgical exhibit supported by 16 companies displaying state-of-the-art advances. In comparison, the Soviet metallurgical exhibit that was so spectacular in the 1967 show was placed in its proper competitive perspective. In fact, the whole Soviet technical image was greatly diminished in the 1969 show, not by any great change in its achievements but simply because the U.S., for the first time, displayed more of its technology than ever before. As we so often predicted, when faced with the full impact of the U.S. challenge, the Soviets, of necessity, soft-pedaled their own accomplishments and were resigned to seeing them placed in proper international perspective.

U.S. industry, of course, deserves ample credit for the manner in which it has developed its Paris show participation into a finely honed competitive effort in the export market. But we also think the U.S. Department of Commerce deserves special credit for its tough and lonely fight within the government bureaucracy to keep the U.S. participation at the show at an effective level, both as national image projection and as a hard-sales effort.

Department of Defense has an understandable budget problem in supporting a military flying display at Paris since former French President Charles de Gaulle withdrew logistic support of French bases for U.S. NATO forces. But there has been too much weight given to pique of minor defense officials in determining Paris policy and not enough to the overall national goals that could be reached.

Without the dogged persistence of the Commerce Department in the long between-show, behind-the-scenes struggles in the Washington bureaucracy, the U.S. image would not have shone as brightly as it did during the 10 days of the 28th Paris air show at Le Bourget. This is a lesson that should be remembered well when planning for the 1971 exercise begins this fall. The U.S. has a lot to gain from a strong, well coordinated projection in this international market-place and a lot to lose from a sloppy or indifferent approach.

Challenge of the 1970's

(By Robert Hotz)

The major aerospace companies of the world are gathered this week on the historic tarmac of Le Bourget airport near Paris for the opening salvos in the toughest technical sales campaign this industry has ever experienced. The occasion is the 28th Salon International de l'Aeronautique et de l'Espace, known more colloquially as the Paris air show.

Never has the aerospace industry faced such rosy prospects for such a burgeoning market for its hardware across the entire technical spectrum it encompasses. Never has the aerospace industry faced such challenges in technology, management and politics as the next decade will impose upon it. The challenge of the 1970s to the aerospace industry and its customers lies primarily in the new patterns they must develop to compete successfully in what is fast changing into a basically new global environment.

Perhaps the fastest growing and most profitable market for the 1970s will lie in the commercial area. The rapid growth of the commercial aerospace market has already become a dominant trend of the fading 1960s. The message is clear that no major aerospace complex can hope to survive without carving a lucrative slice from the expanding civil markets of the 1970s. Only a decade ago the aerospace industry was 90% military and 10% commercial. Already the commercial market has grown to about 40% of the total, and some of the largest U.S. corporations are gaining more than half of their sales from commercial products.

But even while the commercial market is expanding its percentage of the total market, the military market will continue to grow far beyond its present dimensions. A whole generation of flight hardware will have to be replaced on a global scale during the 1970s.

Each geographic area of the aerospace world is also facing new challenges imposed by the inexorable march of technology and international politics.

The United States is pressing its international competitors hard in the air transport market. There it already has developed some basic new patterns of management and technology to produce the new family of wide-bodied transports powered by high-bypass ratio turbofans that will dominate the airline market of the 1970s. But it faces a difficult task in maintaining or expanding its military export market.

The lost generation of aircraft research and development has left the U.S. with little new technology to sell in the 1970s. Lack of the built-in boost of a military aid program, combined with restrictive credit policies, also will make U.S. military export campaigns vulnerable to foreign competition.

Europe faces the problem of how to organize its aerospace resources into effective combinations that can compete successfully for both military and commercial programs. The government-level consortiums that have produced the Concorde supersonic transport program, the Jaguar strike fighter and the airbus fiasco cannot meet the challenge of the 1970s in advanced technology, development costs and production time scales.

Private industry needs more opportunity to exert technical leadership and generate initiative for program organization to eliminate this built-in bureaucratic drag. Governments must sacrifice some of their chauvinistic prerogatives to allow a more sensible flow of the technical tides. Without a new and more effective method of multi-nation program organization, Europe will find difficulty in competing outside its own national markets.

Smaller nations of Europe, the Middle East, Africa and Asia face the problem of avoiding the tactical vulnerability imposed by their current dependence on buying aerospace hardware from the major powers. Foreign policy shifts, such as the French export ban on Israel and the U.S. and British restrictions on South African purchases, have emphasized the need to develop indigenous aerospace production bases.

Soviet Union is finding that its desire to push aerospace exports as a means of alleviating its hard currency deficits, promoting its political penetration and polishing its international technical image requires new patterns that don't exist in the Soviet system. Recent slumps in Soviet aerospace exports are forcing radical changes that reach back through the production system into the design bureaus.

There is no doubt that the expanding markets of the 1970s will develop. In addition to the growth of the commercial aircraft market and expansion of the military replacement market in aircraft and missiles, there will be a major rise in the opportunities for sales of space technology hardware. The space business is just about to burst the relatively restrictive bonds of a strictly research and development phase into operational space system hardware on a global basis for communications, weather, navigation and earth resources satellite systems.

But the name of the aerospace game certainly will change. The stakes are growing enormous. The rewards can set new peaks in profitability. The penalties for failure will be disastrous. The overture to this epic drama of the next decade is now being played beneath the caparisoned chalets, flapping house flags and popping champagne corks of the 28th Paris air show. The main events will unfold in succession during the next 10 years.

Report From Paris

(By Robert Hotz)

Not since Austerlitz has French pride soared so high as it escalated every time the Concorde supersonic transport flew at the Paris air show. The first time this graceful gull soared over Le Bourget airport the French crowds broke the barrier fences and swarmed over exhibition aircraft and chalets in a mad charge to get closer to their pride and joy as it taxied up the runway. French police had to use fire hoses to drive the crowd back to the airport perimeter, and the Concorde stood immobilized for 15 min. until the crowd was driven from its path and brought under control.

Every time it was flown, there was a wave of emotional agitation that swept through the crowds that was hard to describe. When Chief Test Pilot Andre Turcat descended from the Concorde cockpit and took the short walk to the Sud Aviation chalet, he was besieged by camera-clicking Frenchmen, women and children snapping his picture as if he were a movie star.

Perhaps never before in history has a commercial aircraft developed into such a strong symbol of national pride as the Concorde is now to the French. Even to the melange of international visitors, it was a beautiful sight when it took to the air. There can be no doubt that it was the brightest star in the flying display at the 28th Salon International de L'Aeronautique et de L'Espace, known around the the world as the Paris air show.

As the Concorde started in the air, so did the U.S. Apollo provide the strongest magnet on the ground. For the first time in many Paris air shows, the U.S. space exhibit overshadowed the Russian contribution. Crowds poured into the main entrance of Le Bourget flowed into the U.S. Apollo exhibit like country fair crowds into the dancing girls' side show.

The giant boat-tail mockup of the Boeing S–1C stage of the Saturn 5 with its cluster of 1.5 million lb. thrust North American Rockwell rocket engines dwarfed the complete Russian Vostok booster exhibited at the last show. The charred Apollo 8 command module that made man's first voyage to the moon exuded a mystique hard to describe as it sat on the gravel at Le Bourget, canted in the same attitude that it splashed into the Pacific after its half-million-mile roundtrip to the moon last December.

The other portion of the United States exhibit featuring hard-sell component manufacturers also drew well to stimulate a brisk business in export products.

In addition, the Boeing 747's graceful bulk added solid achievement to the United States image, overshadowing the Soviet Antonov An–22 by the same dimensions Apollo outshone Vostok. Boeing's giant jet made an impressive entry to Le Bourget, boring through low cloud and mist for an initial pass after a 5,000-mi. nonstop over the arctic flight from Seattle. The weather was so bad that the crowd couldn't see its landing on the farthest runway, but its great bulk

loomed out of the mist on taxiing to the flight line in awesome spectacle.

The Soviets obviously conceded honors for this Paris air show to the Anglo-French Concorde in the aircraft field and the U.S. Apollo in space. The Soviet's space exhibit was drastically curtailed from what they originally planned. The giant hole dug to display the Soyuz manned spacecraft was filled in and covered over. Their space exhibit was both smaller and far less spectacular than the last two shows. The Russian aircraft display was substantial and had many interesting marks of progress. But it was strictly playing second or third fiddle in the international spectrum at Le Bourget.

As always, there was a large quantity of new technology on display although perhaps not quite as much as in the vintage year of 1967. The pace of technical progress in the aerospace field is such that it is difficult to follow the brilliant years with a steady stream of equally significant technology. The surprising element of this Paris air show was that it came so close to the astounding display two years ago in new technology across the entire spectrum from space through airliners, military aircraft and business jets. The business flying portion of this show has been growing by leaps and bounds. The 1969 effort was a varied and lively one. Probably more solid sales were being transacted in this area than in any other spectrum.

Another major trend evident this year was the strong thrust of the German aerospace industry to regain a major role in the international markets. Most of the new European projects on display had a strong German flavor.

Whether the German industry will be successful in its bid to carve a new role for itself is still a moot point. But there can be no doubt that it is now making its move in earnest.

While Le Bourget provided many of the answers to the technical questions of the contemporary aerospace scene, it also posed some questions that are obviously unanswered. Perhaps the most significant is whether the European aerospace industry can develop an effective technical and management pattern to enable it to become a major competitive force in the really lucrative areas of the international aerospace markets of the 1970s. The various patterns that have been tried during the last decade all leave much to be desired in meeting the challenge of the future. This observer at Le Bourget feels that Europe is still groping toward a solution.

But the only real progress achieved to date may lie in the realization that the patterns of the past hold no promise for the future. If the European aerospace industry cannot muster its considerable engineering, production and managerial resources into a more effective competitive pattern, it may have to reconcile itself to a future that holds nothing better than subcontracting and licensed production of designs developed elsewhere.

RATIFICATION OF CBW PROTOCOL CONSISTENT WITH U.S. POLICY

Mr. PROXMIRE. Mr. President, on September 3, 1959, Congressman ROBERT KASTENMEIER, of Wisconsin, introduced a resolution—House Concurrent Resolution 433—that called for reaffirmation of "the longstanding policy of the United States that in the event of war the United States shall under no circumstances resort to the use of biological weapons or the use of poisonous or obnoxious gases unless they are first used by our enemies."

Congressman KASTENMEIER argued for the passage of a no-first-use agreement—such as the Geneva Protocol of 1925—to make absolutely clear the position of the United States and to forestall Soviet propaganda about our failure to ratify such a declaration.

This resolution encountered considerable opposition, most forcibly from the Departments of State and Defense, which sent letters advising against adoption of the resolution. The arguments presented in these letters are common ones and seem to have carried much weight at the time. Yet they are unacceptable and even dangerous misrepresentations of the basic issues involved and should not be allowed to influence our policy on this vital matter.

The Defense Department stated:

Similar declarations (to the Geneva Protocol) might apply with equal pertinency across the entire weapons spectrum, and no reason is perceived why biological and chemical weapons should be singled out for this special declaration. Whether the use of any major type of weapons should be initiated is a matter to be decided at the highest levels of Government in the light of the Nation's longstanding policies and principles, its international obligations and the emergent situations it will confront.

If indeed we are to determine our policy with respect to chemical and biological weapons in the light of "longstanding policies and principles" then certainly this calls for ratification of this treaty as it has always been our policy to refrain from first-use of C and B weapons. Since the time the Senate unanimously ratified the Washington Treaty of 1922, our policy has been consistently to refrain from the use of C and B weapons unless first attacked with them. President Roosevelt reaffirmed this policy during World War II, and it has remained unchanged to the present.

Ratification of the Geneva Protocol would not, moreover, single out C and B weapons for this sort of treatment, for it has been our equally consistent policy never to use nuclear weapons unless first attacked with them. Indeed, in a broader sense, the principle of no-first-use has been a cornerstone of our foreign policy, and thus applying it to C and B weapons is nothing more than making our policy consistent across the entire weapons spectrum.

The State Department said:

Of course, we must recognize our responsibilities toward our own and the free world's security. These responsibilities involve, among other things, the maintenance of an adequate defensive posture across the entire weapons spectrum.

But there is nothing defensive about the first-use of C and B weapons, and thus there can be nothing destructive to an adequate defensive posture in a no-first-use agreement. In fact, as I argued yesterday, such an agreement would actually strengthen our defensive position by making absolutely clear our intentions and thereby making more credible our retaliatory capacity.

Mr. President, I am happy to say that this week Senator HARTKE introduced a resolution—of which I am a cosponsor—calling on the President to resubmit the Geneva Protocol to the Senate for advise and consent to its ratification. I urge the Senate not to accord to the inaccurate arguments of the Departments of State and Defense and to ratify the 1925 Geneva Protocol.

EVERGLADES

Mr. NELSON. Mr. President, I am heartened by the rapidly increasing public concern and attention to the very difficult problems faced by Everglades National Park in southern Florida. The latest evidence of this attention is an excellent article by Mr. Paul Brooks in the July issue of Audubon, the magazine of the National Audubon Society.

I ask unanimous consent that this article be printed in the CONGRESSIONAL RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EVERGLADES NATIONAL PARK

(By Paul Brooks)

"Human history," wrote H. G. Wells, "more and more becomes a race between education and catastrophe." A precise illustration of his thesis, in terms of land use, is the huge jetport about to be built (unless someone stops it) in the heart of the Florida Everglades. Promoted by the Dade County (Miami) Port Authority, backed by four major airlines, by the Federal Aviation Administration, by local boosters and land speculators, it threatens the very existence of that unique subtropical wildlife paradise, Everglades National Park. Thirty-nine square miles in extent, it will be big enough to contain the Los Angeles, San Francisco, Washington's Dulles, and New York's Kennedy airports with room to spare. The land has been condemned and work already begun on training runways at the intended location only six miles north of the park boundary. "A new city is going to rise up in the middle of Florida," said Alan C. Stewart, director of the Dade County Port Authority, recently. "You are going to have one whether you like it or not." If he is right, the impact on the surrounding country will be devastating. Local speculators will get rich; but Everglades National Park, which belongs to all the people will be doomed.

To understand the seriousness of the threat, one must be aware of the special conditions in southern Florida. Socially, politically, and geographically it is a region of extremes. Population is exploding; by the year 2000, Florida will probably be the third largest state in the union. Real estate development is booming; traffic by road and air is increasing at a fantastic rate. Pressures on the land and water are at a maximum; zoning for their protection at a minimum. The politicians and promoters (often indistinguishable) are everywhere calling the tune. The physical environment, on the other hand, is extraordinarily fragile and vulnerable to misuse. In short, the greatest alteration of the landscape anywhere in the United States is being imposed on the area perhaps least prepared to withstand it.

Where does the proposed jetport fit into this picture? Unfortunately, in dead center. Looking at the Florida peninsula as a finger extending into the sea, the vast expanse of Lake Okeechobee lies roughly at the final joint; the Everglades run south down the center of the peninsula from there to Cape Sable and Florida Bay. West and north lies the Big Cypress Swamp. To the east, like a long curving fingernail, extends the rim of rock that forms the Atlantic coastline, protecting the freshwater of the Everglades from the saltwater of the ocean. Here are concentrated the seaside resorts and burgeoning cities. Here, dominating all, is Miami.

As anyone knows who has visited or read

about Everglades National Park, the Everglades consist of a vast, shallow, slow-moving river: *Pa-hay-okee,* or "Grassy Water" as the Indians called it—reminding New Englanders of the Indian name of *Musketaquid,* or Grass-Ground River, for Henry Thoreau's beloved Concord. Freshwater moves south and southwestward from the region of Lake Okeechobee, reaching the boundary of the park some seventy miles to the south where U.S. 41, the Tamiami Trail, runs due west from Miami. When left to its own devices, the water flows under the highway and on through the park to empty eventually into the Gulf of Mexico. On this seasonal flow (southern Florida, through technically north of the Tropics, has the Tropical pattern of wet and dry seasons), the entire character and life of the park depends.

The fight for the use of this water, that is to say for the existence of the park, has recently received national publicity. Directly north of the Tamiami Trail lies Water Conservation Area 3-A, managed by the Central and Southern Florida Flood Control District and the U.S. Army Corps of Engineers. As the president of the National Parks Association pointed out, these conservation areas, like the park, "serve as a habitat for a teeming plant and animal life, subtropical in character, of immeasurable scientific, esthetic, ecologic, scenic, and human value, which can be found nowhere else in the United States."

During the severe drought of the early 1960's, the floodgates along the highway were closed; the local farmers got water for irrigation, while the park dried up. When Lake Okeechobee was full again, water desperately needed for the park was diverted directly to the sea. Endless negotiations with the Army Engineers and state authorities still have not resulted in a firm agreement to allow Everglades National Park its share of water. Even if an agreement is reached, the victory may be short-lived. Only six miles north of the park, in the southeast corner of the Big Cypress Swamp and bordering the Conservation Area, lies the projected site of the new jetport. Two of its runways will be six miles long, to accommodate the supersonic transports and other flying monsters of the future. A corridor to Miami, 50 miles long and perhaps a quarter of a mile wide, will bring fuel by pipeline, supplies by road and rail, and passengers in transit (estimated at 50 million per year) by some as yet undetermined speed device (lest they spend more time between city and airport than they spend jetting halfway around the world). Landings and takeoffs will eventually average one every 30 seconds around the clock.

To service this frenetic activity, and to make sure that some of the golden rain it will generate falls on southern Florida, developments of every sort will arise from the surrounding saw grass and cypress. Indeed they are being greedily anticipated and prices are skyrocketing; speculators are already organizing drainage districts to "improve" the land between the jetport and the park. "I'll make you a bet," said Alan Stewart last fall, "that five years from now the hotels will be there." He is delighted at the prospect. "Let's do something big enough for a change."

What will this mean, in terms of the region as a whole? "Slow death," says Park Superintendent John C. Raftery succinctly. "Portions of the park literally face ruination." It is shocking but true that there has been no coordinated attempt to determine scientifically the impact of the airport, much less the surrounding development, on the total environment. Yet one needs only a rudimentary knowledge of ecology to realize the consequences of such a concentration of men and machines on a vast man-made island in the heart of a swamp. Can an area of perhaps 150 square miles be drained for urban and industrial subdivision without affecting the quantity and quality of water flowing through the Everglades? Pollution is inevitable. How much and how deadly cannot be estimated, but enough is known to make one shudder. For example, on takeoff a jet plane discharges about a gallon of unburned fuel into the air: two gallons a minute, ten years from now, will rain down on the water and vegetation of the Conservation Area that lies just beyond the runway. Add to this all the chemical wastes associated with any large maintenance and servicing operation. Worst of all, visualize the effluent, domestic as well as industrial, produced by a city whose eventual population may reach over a million—along with the pesticides that will be used to keep down the mosquitoes, the herbicides that will be sprayed along the roadways, the fertilizers that will run off in Florida's torrential rains.

Nor can the results be confined to the neighborhood of the city. The entire environment "downstream"—which is to say all of central-southern Florida—will be subject to creeping death. It will not always be obvious to the casual visitor, since the little known forms of life at the base of the ecosystem—the algae, the plants, the insects—are the ones affected first; by the time the more spectacular birds and animals at the top of the pyramid begin to crash, it will be too late. This is not just horrid fantasy; serious effects have already been observed. Replacement of one type of algae by another is already taking place, and pesticide levels found in the tissue of fish taken from the park are already alarmingly high. Concerned with "the far-reaching effect on the entire environment of south Florida" of the jetport and satellite developments, state and federal conservation agencies and private conservation groups addressed over a hundred questions about environmental control to the Dade County Port Authority. The answers added up to a litany of evasion: "This is under study," "Cannot be answered at this time," "Study in progress at this time," "No study of this type has presently been started." "No such studies have been conducted . . ."

The slow poisoning of the air and the water may escape attention, but evolution has not yet produced a human being insensitive to the roar of jet engines, much less to a sonic boom. The Port Authority, aware of complaints from residents near the existing Miami International Airport, has the effrontery to designate Everglades National Park a "sound screen." "The park and Conservation Area 3 are sound barriers in that no human habitation in these areas is anticipated." Spokesmen for the aviation industry are even franker: "Favorable noise environment of the 39-square-mile site is indicated by large undeveloped areas, with Indian reservations, Everglades National Park, and state water conservation areas serving as buffers . . ." A training field already being built, and known to some airline officials as the "Green Corn Dance Airport" from the Indian ceremonies associated with the area, is expected to permit 24-hour training operations because of the "absence of neighbors to complain about the noise." Though the flight plan calls for planes to gain altitude (when they are at their noisiest) directly over the park, the Federal Aviation Administration's Miami area manager is not concerned. "Nobody will be close enough to complain—except, possibly, alligators." Except, possibly, the Indians who have lived there for generations, and the one million annual visitors to the park, whose chance for a wilderness experience will have gone forever.

Unlike other Port Authority officials, the director is brutally frank. If the wilderness and wildlife are to be protected, "the conservationists had better start saving up their pennies around the country and buy the land." As he well knows, the conservationists don't have that many pennies. Neither does the National Park Service, which ideally should have acquired the land at the time the park was established. The Port Authority's pennies, however, are safely invested. Another comment by Mr. Stewart is even more revealing: "If the airport doesn't develop the way we think it will, we'll have twenty square miles of real estate we can sell off. It will still be a good deal."

What then is to be done? Has ecological disaster again won the race against education? Not quite. The boosters and speculators are far in the lead, but they still face the hurdle of public opinion. If the people haven't raised their voices, it is because they haven't known what is at stake—or have been baffled into silence by a churned-up political scene as obscure to the outsider as a squirming alligator hole in the dry season.

The proposed jetport site lies at the juncture of Collier, Monroe, and Dade counties. Collier county has one city, Naples; most of the rest is cypress swamp, already spawning the worst type of "development," from poachers' shacks to colossal real estate ventures. Here Gulf American Corporation is "building new worlds for a better tomorrow" on a 100-square-mile tract christened "Golden Gate Estates." "The wilderness has been pushed aside," the promoters boast, 'with calipers and slide rules . . . draglines and dynamite rigs . . . we are literally changing the face of Florida." Monroe County, less fortunately blessed, consists only of the Florida Keys and a bit of land north of the park. This leaves Dade County—which is to say Miami—at the controls. Up to now the Dade County Port Authority has been flying high, but flying by the seat of its pants—without ecological studies, without even a master plan for the area. Through arrangement with the other counties, Dade will control the jetport area. For the rest it will take no responsibility, and neither will anyone else.

The land for the jetport has already been condemned, and construction begun on that training airport with a $500,000 grant from the Department of Transportation. From a low-flying plane it looks like a festering wound on the wilderness. As a biologist at the University of Miami pointed out, "the environment has already been drastically changed." "The engineers who are engaged in construction are not concerned with environment planning," states the Port Authority. The authority says it is "in negotiation with an entirely independent Overview Group to provide advice on preservation of the existing environment." Flight operations are scheduled to start long before these studies have been completed; they will, in fact, be post-mortems. Yet, by admission of the authority itself, sites for the training port have been under consideration since 1957. Even now, when planning consultants are finally being hired, their work is "limited only to the training port as part of the airport."

"Facts," wrote Winston Churchill, "are better than dreams." Not in Dade County they aren't. Shooting words are safer. Richard H. Judy, deputy director of the Port Authority (and formerly comptroller of the State Road Department), assures conservationists that their interests will be protected. He doesn't say how. By discussing the problem piecemeal with the various agencies involved—the Flood Control District, the Game and Fresh Water Fish Commission, the Federal Aviation Administration (no trouble there!), the State Board of Conservation, etc.—he has built up a fine file of letters of consent, each being concerned only with the "jurisdictional areas for which this agency is responsible." (Mr. Judy did slip up once when he apparently sponsored a highway to Miami straight through the holdings of the Flood Control District. This was too much. "I am extremely sorry," he wrote to its chairman, "that one of the suggested 1–75 corridors that runs through the middle of Conserva-

tion Area 3 was even located on the map which I used as an exhibit in my presentation to you." "Jurisdiction" is the key word here. Without some overall control, Mr. Judy's lullaby leads only to nightmares. "Dade County Port Authority has no responsibility or jurisdiction for off-airport areas . . . this will depend on controls by other appropriate agencies." What agencies? "If the affected agencies are involved in coordination with the Port Authority," wrote a representative of the Federal Bureau of Outdoor Recreation as late as last October, "they are quite unaware of it."

The Port Authority's objective is the economic development of southern Florida. In the deputy director's own words (alas for consistency) it is not confined to the airport area. In a letter to Arnold Ramos, district engineer of the Florida State Road Department on November 8, 1968, Judy urged "that we move with great speed" in planning the transportation corridor. (Secretary John A. Volpe's Department of Transportation has since made a grant of $200,000 for this purpose.) He goes on to say that "four of the world's major airlines are standing by to help implement the final engineering concepts . . . If we can establish this schedule we can promote new air industries to locate in Dade and Collier counties." Where but in "off-airport" areas, for which "we" have no responsibility? Meanwhile the Miami office of the Federal Aviation Administration, while doing lip service to "compatibility with park interests," cannot contain its enthusiasm. "The start of this airport is a great event for southern Florida. When you think of what New York, Chicago, New Orleans, or Los Angeles would give for such an opportunity . . ."

The local interests know what they want and they are determined to get it; the fate of a national park is not their concern. But where has the federal government been all this time—specifically, the Department of the Interior and its agency, the National Park Service? The Park Service has stated that the Port Authority's search for a jet training site first came to its attention "early in 1967" (ten years after the search, according to Mr. Judy, had begun), and that "subsequently, the plans were enlarged to include regular commercial operations, including SST's." Deeply involved in the apparently endless struggle to assure water for the Everglades, park officials were slow in recognizing the new menace to the jetport, and accepted at face value the assurances that park values would be protected. "Don't be concerned," was the line taken by the Port Authority, "we'll consult you before we pick a site."

The site was actually chosen for all practical purposes in the late fall of 1967, when Dade County got the right to acquire land in Collier County; there had been no approval from the National Park Service. On December 20, 1968, the superintendent of Everglades National Park wrote as follows to the director of the Port Authority (showing that the Park Service, like the rest of us, only knows what it reads in the papers): "A recent news column by Mr. Clark Ashe of the *Miami News* states that the Port Authority has demonstrated it has been clearing its moves wtih the Flood Control District, Everglades National Park, and other conservation-minded agencies for many months. I was aware of and pleased by the series of meetings initiated by your design firm to develop the problem areas resulting from the jetport development. The initial development at the jetport site is now proceeding rapidly, yet, to my knowledge, we have not been advised how the Authority proposes to resolve any of those matters of concern that evolved from the meetings. Since the jetport has the potential for a significant and perhaps disastrous effect on Everglades National Park, I am concerned that we have not been included in further planning or advised regarding your proposed solution to the very serious questions that have been raised."

Another tragic example of too little and too late? The layman who is accustomed to think of the United States Government as a fairly powerful protector of the nation's heritage gets quite a jolt when he reads the account of a meeting that took place on February 27, 1969 (high time!), in Miami between representatives of the Interior Department, the Central and Southern Florida Flood Control District, the Sierra Club, and the National Audubon Society to determine, among other things, what position the department should take at the public hearings the following day. It was decided that "strong arguments should be avoided" and that the presentation of "the facts concerning the federal government's interest and involvement would only show the weakness that the government has in achieving proper planning and control measures for the preservation of the Everglades area." Whatever the "weakness" of Interior's position (we shall come to this shortly), the shocking fact remains that no formal statement concerning the jetport had been made up to this time to the Dade County Port Authority by the U.S. Government.

Are the people of the United States powerless in the face of a determined local pressure group? Not, in this case, if the Secretaries of Transportation and Interior are willing to act. Section 4(f) of the Department of Transportation Act requires the Secretary of Transportation to cooperate and consult with the Secretary of the Interior in developing any transportation project. Furthermore "the Secretary [of Transportation] shall not approve any project or program that requires the use of any publicly owned land from a public park, recreation area, or wildlife and waterfowl refuge" unless there is no feasible and prudent alternative and unless such a program includes all possible planning to minimize harm to such a park. By the Port Authority's own admission, Everglades National Park is to be used as a climb-out area and as a sound buffer. The harm to the park is obvious. The state conservation and recreation area will also be used as a sound buffer, and for surface transportation to Miami. No one can claim with a straight face that there has been "all possible planning to minimize harm," either from intolerable noise or from pollution, or that all feasible and prudent alternatives have been explored.

On April 23rd (shortly after the president of the National Audubon Society had called four other major conservation organizations to a strategy session, where a nationwide coalition was planned to carry the fight straight to Washington) a meeting which represented "practically the entire conservation and environmental movement in the United States" addressed a letter to the Secretary of Transportation pointing out the damage that a jetport on the projected site would cause to the national park and state conservation area, and stating the belief that the Secretary "is in a position to settle this question" without need for any legislative action. Then in early June, Senator Henry M. Jackson of Washington, chairman of the Senate Committee on Interior and Insular Affairs, held hearings on what he termed a "classic case history of" the impact of modern technology on the environment. The purpose was "to review the process of federal decisionmaking which has contributed to the conflicting patterns of federal, state, and local land use which presently threatens the Everglades National Park"—and, by extension, to demonstrate the need for the legislation he has introduced to establish a national environmental policy.

Under questioning from the committee, there emerged an amazing pattern of confusion and frustration in high places: confusion because each branch of the government had been acting (or failing to act) independently; frustration because the federal government, lacking either an environmental policy or the police power for enforcement, finds itself at the mercy of state governments whose machinery is even more archaic, and who are therefore in turn thwarted by local authorities whose single goal is economic development, and who can proceed on their own as long as they can raise the money. It soon became clear that no high-level discussions had ever taken place between the Interior Department, the Department of Transportation, and the State of Florida before the jetport site was chosen; that the Port Authority and the Federal Aviation Administration had not even seriously attempted to bring state or federal conservation agencies into the making of the decision. Other sites with less of an ecological impact could have been, and still can be found. As an ultimate absurdity, one such site was rejected because the counties involved could not agree on the allocation of landing fees.

As now located, the Everglades jetport is an abortive offspring of the unholy wedlock of the booster and the engineer. It represents the same philosophy that allows industry to pollute air and water to the brink of disaster, agriculture to use poisons like DDT long after the hazards are known, the Army Engineers to dam rivers and dig canals with no concern for the total environment. The peak of such folly was almost achieved, not surprisingly, in the Everglades country, when the Corps of Engineers decided to "pull the plug" in Canal III to see whether the result would be as disastrous as ecologists claimed. Fortunately the latter were alert. A frantic weekend of calculations with a computer showed that the whole area would be covered with two feet of saltwater. The plug is still in place. But the philosophy endures: you are an alarmist until you can be proved dead. The Corps of Engineers, for example, while recognizing the enormous water requirements of a future city of a million people, does not want to "make an issue" of park water needs "until the situation gets tight." The Corps claims that it has no legal right to establish regulations to provide the park with water. The Department of the Interior disagrees. The Undersecretary, Russell E. Train, believes that regulations should be set up now; the plan of the Corps is "to invite growth, and then struggle with the results later."

The present priorities of the Corps and of the state are clear: people first, agriculture second, Everglades National Park third—if there is any water left over. "You can grow as long as you can steal water from the park," remarked Senator Gaylord Nelson of Wisconsin, pointing out that we are producing with federal money far more water than the park is asking for. "We don't have to sit here and be clobbered by the State of Florida." Turning specifically to the problem of the jetport, he concluded that we have only two alternatives. Either we stop it at the present site, "or we publicly admit that we are going to destroy the park." As a matter of fact, many state and local political leaders share his concern.

Can it be stopped? A "task force" has finally been appointed to make technical studies that should have been started long ago, before any site was selected. Ecologists are being asked for immediate answers to problems that take years to solve, while the promoters and engineers go blithely ahead, a procedure which has been well described as a "built-in system for errors." There is lots of time, says the Port Authority; we don't expect to start construction of the commercial jetport till 1975. Yet at this very moment they are completing the first training runway and are pressing for decisions on highway location that will lock in the commercial site beyond any hope of future change. The Department

of Transportation admits that transportation programs are on a collision course with environmental management. Interior promises to "do everything in its power" to stop the jetport if it is satisfied that either the training field or the commercial airport will destroy the park. On April 30, 1969, James L. Hamilton, special assistant to Secretary of the Interior Walter J. Hickel, wrote to Robert Wenkam, chairman of the Hawaii chapter of the Sierra Club: "As regards other Park System problems, I can only say that no single problem approaches in seriousness the threat posed to Everglades National Park by the proposed Miami jetport. We are in the process of arranging studies to determine what adverse effects will occur and what measures are realistically available to reduce these effects to tolerable levels. The studies may reveal, however, that the park and the jetport will not be compatible, in which case relocation of the proposed jetport will be the only solution. And as we face this problem, we must yet bear in mind that the ultimate solution of the park's water problem, while now in the offing, remains unobtained."

A meeting between Secretaries Hickel and Volpe took place, we are told, the day before the Jackson Committee hearings opened. The final decision may rest, after all, not with the Dade County Park Authority, but with the President of the United States and his Cabinet. The jetport issue "will be the first crunching test" (in Senator Nelson's words) of the President's newly appointed Environmental Quality Council. Moving it to another site "will cause one hell of an uproar, but it can be done."

It can. If we care enough, it will.

EXTENSION OF THE SURTAX

Mr. WILLIAMS of Delaware. Mr. President, last week the Senate rejected the administration's request for a 1-year extension of the surtax on the phased-out basis—6 months at 10 percent and 6 months at 5 percent—and also rejected the repeal of the 7-percent investment tax credit.

During and since the consideration of that tax measure considerable comments have been made and some misunderstanding has developed as to the highly irregular procedure followed toward obtaining a vote in the Senate. To keep the record straight the following is a brief chronology.

On June 30, 1969, the House passed H.R. 12290, which extended the surtax on a phased-out basis for a full year and repealed the investment tax credit retroactively effective April 18, 1969. The bill also contained two other sections—one extending the excise taxes on telephones and automobiles for an additional year, from January 1, 1970, through December 31, 1970, and the other section substantially reducing or eliminating the tax liability of those taxpayers in the lower brackets.

The Committee on Finance held 5 days of hearings on the measure as passed by the House. The hearings were held on July 8, 9, 11, 14, and 15.

On the last day of the hearings, July 15, the Democratic policy committee forwarded to the Committee on Finance a resolution which informed the Finance Committee of the terms under which the bill could be considered by the full Senate. The Finance Committee was advised that the Senate Democratic policy committee would permit consideration of the proposal to extend the income tax surcharge only with the understanding that it be considered simultaneously with their recommendations on tax reform and that during the interval it would only permit an extension of the income tax withholding rate for one quarter, or from June 30 to September 30.

I ask unanimous consent that at this point the resolution of the Democratic policy committee, as forwarded to the Finance Committee on July 15, be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas, the Senate Majority Policy Committee, having met and considered the matter of the extension of the income tax surcharge, hereby resolves:

That meaningful tax reform should be adopted as a means or achieving an equitable national income tax policy, and further resolves,

That any proposal to extend the income tax surcharge be considered simultaneously with recommendations on meaningful tax reform and further resolves,

That the present income tax withholding rates be continued after June 30, 1969 for a period of one quarter to permit full consideration and disposition of the reform and extension of the surtax.

Mr. WILLIAMS of Delaware. Mr. President, 2 days later, July 17, the Finance Committee met in executive session and by a vote of 9 to 8 rejected the right of the Democratic policy committee to dictate to it the amendments or bills that it could or could not report to the Senate. Instead, the committee ordered H.R. 12290 reported in exactly the same form in which it had passed the House.

Thus, on Friday, July 18, the bill H.R. 12290, was placed on the Senate Calendar and was ready for Senate consideration.

On July 23 the Democratic policy committee meeting again in executive session, delivered to the chairman of the Finance Committee the terms of an agreement which it insisted must be entered into prior to any Senate consideration being given to the approval or disapproval of the tax bill.

In the letter, the chairman of the committee was advised that the Democratic policy committee had decided that no consideration would be given to any sections of H.R. 12290 except the proposal to extend the surtax, but this time they would agree to extend the surtax—not simply the withholding authority—for 4 months, or until October 31.

I ask unanimous consent that the letter of instructions from the Democratic policy committee, as forwarded to the chairman of the Finance Committee, be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
DEMOCRATIC POLICY COMMITTEE,
July 23, 1969.

HON. RUSSELL B. LONG,
Chairman, Finance Committee, U.S. Senate, Washington, D.C.

DEAR RUSSELL: On July 22, the Majority Policy Committee met and considered further the floor scheduling of legislation on the surtax extension and tax reform. In doing so the Committee was responding both to your earlier efforts to resolve this difficulty and also to the Administration's views as advanced at the recent White House meeting.

The Committee is persuaded that a permanent extension of the surtax must remain wedded to tax reform, not only in words but in scheduling procedures lest there be a continuance of the burden of the surtax on wage-earners and salaried employees without a bona fide opportunity to bring about in legislation, corrections in the inequities of the present tax structure.

The Committee is appreciative of the Administration's desire to provide prompt reassurance to the business community and to foreign governments with respect to the surtax. By unanimous vote, therefore, it was resolved that I bring to the attention of the Finance Committee and the Administration certain suggestions. If acceptable on all sides, the Committee would consider communicating these suggestions to the Senate as the position of the Policy Committee.

(1) If the Finance Committee reports out on the vehicle of any minor House bill now in Committee, an extension of the surtax (not simply the withholding authority) until October 31, the Senate willing, the bill would be brought up for consideration without delay. It would be understood that this bill as it comes from Committee would carry nothing else except the surtax extension. If promptly passed in that form by the Senate and approved by the House, the measure would provide assurance of a continuance of the surtax until October 31.

(2) When the promised tax reform bill arrives at the Senate from the House, it would be stopped at the door and referred to the Committee on Finance by the Senate with instructions to report back with or without amendment by no later than October 15.

(3) Consideration of the continuance of the surtax beyond October 31 could then be considered in juxtaposition to the tax reform bill which the Finance Committee will have reported by instruction of the Senate no later than October 15.

The Policy Committee will be glad to have any reactions from the Finance Committee to this suggestion as to possible procedures for scheduling. In any event please be assured, Russell, of my personal appreciation and the appreciation of the Policy Committee for your efforts to bring about reforms in the tax structure in tandem with surtax extension.

With best personal wishes, I am
Sincerely yours,

MIKE MANSFIELD.

Mr. WILLIAMS of Delaware. Mr. President, a day or so later, apparently after a series of meetings between the Democratic policy committee and the Democratic members of the Finance Committee, a further proposal was made.

This time the Democratic policy committee's proposal provided for an extension of the surtax for 5 months, or until November 30, 1969, and was coupled with the promise of the Democratic members of the Finance Committee that they would report the tax reform package to the full Senate no later than October 31, 1969. This agreement was contingent upon advance Senate agreement to consider only the extension of the surtax on a 5-month basis, and it was emphasized that before this measure would be brought before the Senate the Democratic policy committee must have complete assurance that no additional amendments dealing with the extension of the surtax for the full year or for the repeal of the investment credit would be offered or attached thereto.

I ask unanimous consent that the July

24 memorandum of instructions by the Democratic policy committee to the chairman of the Finance Committee be printed in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

The Democratic Policy Committee and the Democratic members of the Finance Committee have agreed upon the following understanding:

1. Support an extension of the surtax until November 30, 1969. This will be accomplished by attaching this temporary extension to a separate House-passed bill. The House-passed surtax extension, containing the investment credit repeal, the extension of the excise taxes and the change of the standard deduction will remain on the Senate Calendar until the tax reform bill is reported by the Senate Finance Committee.

2. The Chairman of the Finance Committee and the Democratic members of that Committee have given their assurance that the tax reform package will be reported to the full Senate not later than October 31, 1969.

3. The Democratice Policy Committee has endorsed the position of the Finance Committee that the date of the investment tax credit repeal will be identical to that date in the House-passed bill (April 18, 1969). The endorsement was at the specific request of the Democratic Finance Committee members to assure all that the investment credit repeal is endorsed and the date is specified as contained in the bill on the Senate Calendar.

Pursuit of this understanding in the Senate is contingent upon its acceptance by the Administration and the Republican leadership which has been pressing in the Finance Committee and on the Senate floor for the extension of the surtax. May I say that many of the members present today went along with this understanding notwithstanding grave reservations about the usefulness of the continuance of the surtax as an anti-inflationary measure. The approach is offered as an accommodation to the Administration. If it is not acceptable, the Majority Policy Committee is compelled to stand on its previous resolution.

Mr. WILLIAMS of Delaware. Mr. President, it should be pointed out that at no point during any of the negotiations between the Democratic members of the Finance Committee and the members of the Democratic policy committee were the minority members being consulted; however, these instructions were being relayed to the chairman of the Finance Committee, and sometime later became known to the minority members of the committee and the administration. The minority members of the committee made it clear that we would not be a part of any such prearranged agreement but that we would insist upon the right of the full Senate to consider and vote as to whether or not the surtax was to be extended for a limited period or for the full year, and that at the same time the Senate must have the right to vote upon the question of repeal of the investment tax credit.

On July 30 the House of Representatives, recognizing the apparent deadlock in the Senate, reported and passed H.R. 13080, the purpose of which was to provide a further 15-day extension of the withholding rates.

The day before, on July 29, the Democratic policy committee had met again with the Democratic members of the Finance Committee and released a statement to the effect that they had agreed that they would: First, reject the 15-day extension of the withholding rates; and second, renew the previous offer to support an extension of the surtax until November 30, 1969, with an understanding, with the Democratic members of the Finance Committee, that the major tax reform measure would be reported to the Senate by October 31. This offer to extend for 5 months the surtax was contingent, however, upon an agreement by the administration and the minority members of the Finance Committee that no amendments to the tax bill would be considered after it had been brought before the Senate other than the one proposal; namely, the 5-month extension of the surtax.

I ask unanimous consent that the memorandum released by the Democratic policy committee, dated July 29, 1969, be printed at this point in the RECORD.

There being no objection, the letter and memorandum were ordered to be printed in the RECORD, as follows:

U.S. SENATE, OFFICE OF THE MAJORITY LEADER,
Washington, D.C., July 29, 1969.

Hon. EVERETT M. DIRKSEN,
Minority Leader,
U.S. Senate,
Washington, D.C.

DEAR EV: In an attempt to carry out my promise at our meeting this morning in the Vice President's office, I am sending this statement to you, the Vice President, and Senator Williams so that, if you desire, you can discuss it with your colleagues.

I have been instructed by the Policy-Finance Committee to make a public statement on this situation today. I will not do so, however, until you have completed your discussion and are on the floor.

With best personal wishes, I am.

Sincerely yours,

MIKE MANSFIELD.

STATEMENT OF SENATOR MIKE MANSFIELD

The Democratic Policy Committee met with the Democratic members of the Finance Committee today. The joint membership agreed unanimously that a further 15-day extension of the withholding rates would not meet the problem of surtax-extension. Rather it would serve only to postpone a decision and create an unnecessary pall of uncertainty.

The group agreed further that the previous offer to the minority to support an extension of the surtax until November 30, 1969 on a separate House-passed bill—with the understanding that the general tax reform measure would be reported by October 31—should be renewed as offering the best prospect of passing a surtax-extension and still meeting the public demand for the removal of the inequities in the present tax structure.

The Democratic Policy Committee-Finance Committee group agreed unanimously to renew the effort to secure a five-months extension of the surtax provided, of course, that the approach receives the accord of the Administration and the minority leadership. This endorsement seems necessary to preclude the offering of extraneous amendments to the House-passed bill which would be used as a vehicle for effecting the extension of the surtax until November 30.

If the Administration and the Minority Leadership give the word on the acceptability of the compromise, the Leadership is prepared to move without delay—it is prepared to move today—in an effort to bring the surtax extension before the Senate for prompt disposition. I would hope for the assistance of the distinguished Minority Leader and the ranking Republican member of the Finance Committee on this urgent and difficult matter.

The House-passed bill, H.R. 9951, which is on the calendar would provide the vehicle. The controversial amendment in this bill dealing with foundations would be removed—as per the earlier offer of Senator Williams—since this matter is being considered in the general tax reform package. The extension of the surtax—and nothing more—would be offered as a substitute for that committee amendment.

Without clearance all round, it is difficult to say how an extension of the surtax can be brought about at this time.

Mr. WILLIAMS of Delaware. Mr. President, this offer was likewise rejected by the minority members of the committee on the basis that: First, to enter into any such advance agreement would be denying the Senate its historical right to make its own decision as to whether it would or would not approve a bill as reported by the committee; and second, many of us were of the firm opinion that the failure of Congress to make a prompt decision as to whether it would or would not extend the excise taxes and if so at what rates and for what period, and whether it would or would not repeal the investment tax credit and if so the effective date of such action, and to what extent if any certain industries would be exempt, was creating an unnecessary disturbance in the financial communities both at home and abroad.

This unwarranted delay by Congress in making its final decision on these top measures was adding fuel to the fires of inflation, and we feared that unless the decisions were made promptly this period of indecision could precipitate a recession. For this reason many of us insisted that we would enter into no agreement that did not provide for the Senate an opportunity to vote on the question of the full-year's extension and also to vote as to whether or not Congress wanted to repeal the investment tax credit.

Finally, on July 30, an agreement was reached with the majority leader wherein the Senate on the following day, July 31, was to be given the opportunity to work its will and vote on both the question of the extension of the surtax and the question of repealing the investment tax credit.

At this point I ask unanimous consent that the consent agreement as entered into on that date be printed at this point in the RECORD.

There being no objection, the agreement was ordered to be printed in the RECORD, as follows:

UNANIMOUS-CONSENT AGREEMENT

Mr. MANSFIELD. Mr. President, I send to the desk a unanimous-consent request and ask for its immediate consideration.

The ACTING PRESIDENT pro tempore. The unanimous-consent request will be stated.

The bill clerk read as follows:

"*Ordered,* That, effective immediately H.R. 9951 be made the pending business and that during its further consideration, debate on any amendment, motion, or appeal, except a motion to lay on the table, shall be limited to one hour, to be equally divided and controlled by the mover of any such amendment or motion and the Chairman of the Com-

mittee: *Provided*, That in the event the Chairman is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the minority leader or some Senator designated by him: *Provided further*, That no amendment that is not germane to the provisions of any amendment dealing exclusively with the extension of the surtax or the repeal of the investment tax credit shall be received.

"*Ordered further*, That on the question of the final passage of the said bill debate shall be limited to two hours, to be equally divided and controlled, respectively, by the majority and minority leaders: *Provided*, That the said leaders, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, motion, or appeal."

Mr. WILLIAMS of Delaware. Mr. President, Friday, July 31, on a rollcall vote of 51 to 48, the Senate approved the 6 months rather than accept the full-year extension as recommended by the administration and as had previously been agreed upon by both the House of Representatives and a majority of the Finance Committee.

The Senate likewise, on the same day, by a rollcall vote of 66 to 34, rejected the amendment which would have repealed the investment tax credit.

The Senate had at last had an opportunity to vote on both the question of the extension of the surtax and the repeal of the investment tax credit and I accept its decision; however, in my opinion Congress has made a mistake in only acting on a temporary basis. The investment tax credit, which represents a $3 billion annual subsidy for industrial plant expansion, in a period of high employment and runaway inflation cannot be justified, and likewise failure to extend the surtax for the full year and thereby remove this continued uncertainty is inflationary and will only result in continued uncertainty and speculation as to what action Congress may ultimately take.

With interest rates at the highest level in the history of our country and with our Government now operating at a deficit averaging over $600 million per month the time is long past when Congress can postpone these hard decisions. Congress should take more affirmative steps both toward controlling Government expenditures and in providing sufficient revenue to restore some degree of sanity to our financial picture.

The extension of the surcharge for 6 months was but a faltering step in the right direction, and I regret that the Congress did not face up to its responsibility and make a real effort to check this inflation.

Nothing is to be gained by a further discussion of the unusual if not highly arbitrary procedure that prevailed before getting this tax bill to a Senate vote, but I will add that I hope that never again will the political arm of either political party try to dictate how a Senate committee or the U.S. Senate must vote on any bill as a condition to having a bill considered.

As evidence that others considered the Senate's action inadequate at this time of inflationary psychology, I ask unanimous consent that a series of editorials appearing in the August 1 issues of the Evening Star and the Daily News of Washington, D.C., the Evening Journal of Wilmington, Del., also of August 1, and the August 4 issue of the Wall Street Journal, all commenting upon this proposal, be printed at this point in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Evening Star, Aug. 1, 1969]

HALF A LOAF

The outcome yesterday on the surtax was very much the product of the Senate's Democratic majority under Mike Mansfield's leadership. In line with their continued insistence on delaying a full-year extension of the surtax until passage of a tax reform package is assured, the Democrats defeated an amendment to extend the surtax for a full year. They reversed field, however, and voted through a six-month extension of the surtax in a transparent effort to avoid being saddled with the blame for letting the surtax go off the books altogether.

How is one to view this half a loaf of surtax now with the implied promise of the rest later if tax reform is approved this session? Obviously, as the saying goes, half a loaf is better than none. This surely is so, for the lapse of the surtax would probably doom the administration's efforts to curb inflation as well as raise serious doubts about the stability of the dollar in the world's money markets.

On the other hand, the uncertainty engendered about the chances for a full year of the surtax is bound to feed the prevailing inflationary psychology of buy and borrow now because it may cost more later on. And this at a time when the economy is truly in perilous straits; real economic growth has slowed markedly but prices continue their inexorable rise. Without doubt, we are skating on the edge of a bust, with its predictably high social costs in out-of-work teen-agers and blacks.

Perhaps by the first of the year, the inflationary steam will bit by bit have gone out of the economy. The point is, however, that there is on present form absolutely no assurance whatsoever of such a slowdown. Make no mistake about it, by failing to act now to extend the surtax for a full year, we are running a dangerous risk with the future of the economy. It should be clearly understood, moreover, that this is a risk which the Senate's Democratic leadership is forcing upon the nation.

What's more, there is a paradox in the Democrats' holding out for tax reform as the price of a full-year extension of the surtax that also should be clearly understood by all. It is not the Nixon administration that is dragging its feet on tax reform. The administration, after all, has sent its tax reform proposals to the Hill and is on record as favoring tax reform on general principle.

Rather, the fate of tax reform rests ultimately with the Democrats who control both houses of Congress. So if anyone is to blame for not moving faster on tax reform, it is the Democrats themselves. Moreover, the plain fact of their ultimate responsibility in this matter is evidenced by the deal between Majority Leader Mansfield and Russell Long, Democratic chairman of the Senate tax-writing committee, which paved the way for yesterday's vote on the surtax.

The grand strategy of the Democrats in tying a full-year extension of the surtax to tax reform doubtless has a certain high liberal tone to it, but it could backfire badly. While it is still not too late, Mansfield and company should pause and reconsider what harm they may inflict upon the country, not to mention damage to the Democratic party in the 1970 elections.

[From the Washington (D.C.) Daily News, Aug. 1, 1969]

RECKLESS POLITICS IN THE SENATE

It was a last-minute "compromise" and it smelled of third-rate politics and a complete lack of responsible understanding of the government's financial plight and the inroads of inflation.

The Senate, voted to extend the surcharge on the income tax for only six months. (The keyvote was only 51 to 48.)

In doing this, the Senate ignored the rest of the tax bill already passed by the House. Left out of the Senate's measure is repeal of the seven per cent investment tax credit plan, which is highly inflationary in these times. And left out were extensions of the auto and phone taxes.

So as it stands, the government faces the loss of $5 billion or $6 billion in revenue. Which is enough to wipe out the surplus President Nixon had planned for this fiscal year.

Sen. Mansfield, the Democratic leader, indicates these other tax issues can be brought up in the Senate later. But in the light of the senator's recent zigs and zags, who knows?

Anyway, this is a preposterous way of doing business.

Taxes are paid by the people and the businesses of the country. And they are entitled to reasonable notice of what is expected of them. The surtax expired June 30, and a month later the Senate voted to extend it, retroactively, for six months; leaving until later in the year the question of another six-month extension.

The auto and phone taxes expired June 30, and it would be hard to say what the Senate may do with them now.

The investment tax credit law was enacted when President Kennedy was trying to "get the country moving." It gives any business a tax deduction for spending money on capital improvements.

But huge expenditures for capital improvements are exactly what the government has been trying to discourage, because they fuel inflation. And they help boost interest rates, which many of the same Senate Democrats have been wailing about.

Moreover, Sen. Mansfield and his fellow Democrats ignored a plan in the House-passed bill which would have relieved some 12 million of the nation's poorest taxpayers of paying anything at all. They are the same Democrats who have been clamoring for "tax reform."

The only possible explanation of this blundering conduct by the Senate Democrats is that, with a Republican in the White House, they think they are playing cute politics. But we see nothing cute about jeopardizing the Federal budget, or adding more push to inflation, or repudiating a tax reform the Democrats long have been demanding.

The House next week will try to salvage something from the mess. But the performance of the Democratic Senate, in short, is stupid.

[From the Wilmington (Del.) Evening Journal, Aug. 1, 1969]

SURPRISE, THE SURTAX LIVES

The Senate consideration of the surtax extension was as excitingly uncertain as the rescue of Pauline from any of the perils Hollywood contrived for her. Pauline was invariably rescued in the nick of time, even though she wasn't safe forever. The Senate voted to extend the surtax only hours before it was due to expire but that extension won't last forever; it won't even last the 12 months President Nixon insisted it should.

As a result of the prolonged struggle over

the surtax, the extension approved by the Senate would be at the current 10-percent rate for six months. That was the price demanded by Senate Democrats, led by Sen. Mike Mansfield, D-Mont., for the extension. Any more, they insisted, would leave them with no leverage to bring about necessary tax reforms.

Their position still seems unnecessary and it ignores some immediate reforms that were included in the House version of the surtax extension. Not only did the House provide for a one-year renewal of the surtax, six months at 10 percent and the remaining six at 5 percent, but its version included repeal of the 7-percent investment tax credit and reduction or elimination of income taxes for millions of the nation's lower income citizens.

The same House Ways and Means Committee that reported that measure to the floor yesterday approved the promised tax reform bill. The committee chairman is Rep. Wilbur D. Mills of Arkansas, a Democrat like the senators who insisted they need a bargaining counter for tax reform.

There never has been any genuine doubt that the Administration, which has proposed some significant tax reforms, and m- ibers of Congress were serious about pledges to act on the issue. How necessary additional muscle is to the Democrats is indicated by the fact that they have agreed now to a simple six-month extension when only days ago Sen. Mansfield rejected any extension unless tax reforms were available for consideration too.

The issue of the surtax had been debated originally before its passage last year. Aside from the question of the need for an extension there was no reason to delay a vote, certainly not for the time that tax reform debate deserves and should get.

Despite the differences between the House and Senate-passed extensions, the question at least has been answered before the withholding procedure had to be interrupted and then re-established. What everyone knew was going to be necessary has been done but was all the excitement necessary?

AN UNSEEMLY SPECTACLE

Congress and the Administration are expected to tie up the loose ends on the surtax extension today, but even barring further mishaps their handling of the issue has been an unseemly spectacle. Obviously they have not begun to work out the problems of running the nation while one political party controls the White House and the other holds Capitol Hill.

As matters now stand, the surtax argument will be resolved by an uneasy compromise. The Administration will not get the full 12-month extension it sought, but neither will the Senate Democrats succeed in passing tax reform before the surtax is extended. The ironic thing is that leaders in both parties professed to support both measures. Their differences about which should be passed first arose over who gets credit or blame for what, and the argument had all the grace of a spat between two secretaries over who will put her party on the telephone first.

In some ultimate sense, we suppose, the greater responsibility for this lies with the Administration. For better or worse, the Executive Branch is today expected to furnish national leadership, giving form and direction to national policy and selling its ideas to Congress and the people. When its proposals do not pass, it has not met this expectation. Evidently Administrtaion nose-counters were belated in realizing their political difficulties. When the difficulties became apparent to all, the Administration seemed unwilling to compromise with the Senate Democrats, but unwilling to fight them vigorously either.

In an immediate sense, though, the surtax hassle was mostly the handiwork of the Senate Democratic leadership. A line of too-clever partisanship ran through its maneuvers. It seemed for a time the Democrats could have it both ways. If the surtax failed, the Democratic Congress would get credit for cutting taxes. And if inflation then continued, the Republican Administration would inevitably tend to get the blame for not doing anything much about it. Or if the Administration retained its budget control by slashing expenses severely (which strikes us as not a bad idea), the Democrats could make electoral hay over Republican "insensitivity" to this and that.

Tax reform, meanwhile, loomed as a political plus for anyone who could claim credit for it. Since the Administration had announced that inflation control was its number-one priority, it obviously would resist any attempt to subordinate the surtax to anything else. So using the extension as hostage for tax reform was a neat gambit to pit the Republicans against tax reform, to claim for the Democrats any political credit for it.

The obvious Republican counterplot would have been to blame any economic difficulties on the Democrats' refusal to cooperate with the President. Thus the situation came very near to one where both parties were willing to see the nation suffer so they could blame the ills on their partisan opponents. Not until the last moment did both sides start to recognize that partisan effects would cut both ways, and that partisanship should not be allowed to get too far out of control. Then they framed a compromise which, whatever its substantive merits, at least got both sides off the hook.

Well, politicians will be politicians. In the long run, indeed, partisan interplay does make for sounder public policy. But in the short run, a partisan split between the President and Congress raises the danger that the nation will be cut loose to drift amid partisan maneuvering. Even if no further disagreement breaks out on the surtax, the wrangle will stand as a warning of this danger.

As the Eisenhower years demonstrated, it's altogether possible to achieve the necessary cooperation between a President of one party and a Congress controlled by the other. But in such circumstances, constructive government does require a certain suppression of partisan urges, and a certain determination to work out the problems that inevitably arise.

These qualities have been conspicuous by their absence in the surtax episode, and unless both the White House and the Senate draw the appropriate lessons, this spectacle may be only a taste of others to come.

WILLIAM PROXMIRE: TRIBUTE WELL DESERVED

Mr. CHURCH. Mr. President, the most recent edition of Parade magazine, included in the Washington Post for August 3, contains a feature article on the efforts of the distinguished Senator from Wisconsin (Mr. PROXMIRE) to repair and restructure our national priorities.

The article states of Senator PROXMIRE:

He knows that since the end of World War II we have spent one trillion, five hundred billion dollars on defense needs. And the demand for more military programs of every type continues to mount. But still our cities fester. Our air is fouled. Our water is polluted. Our minorities riot. Many of our people go hungry. Our children clamor for educational reforms. Our old people ask for just a little better life.

The article continues:

Proxmire realizes that it costs more and more money to run the nation. But he believes the budgetary pie must be sliced differently, "that the federal government is spending too much money on military programs," and that "any analysis of national priorities must look to that budget first."

He puts the question: "How can we balance our military needs and expenditures with our domestic problems and needs?"

This is perhaps the most pertinent question of the day. It is a question that can no longer be ignored or shunted aside. We are, indeed, in need of a thorough reexamination of our national priorities.

I commend this article to every Senator and ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GUNS OR BUTTER? WHICH COMES FIRST? SENATOR PROXMIRE SEEKS TO REVERSE NATION'S PRIORITIES

(By Derek Norcross)

WASHINGTON, D.C.—Sen. William Proxmire, at 53 a trim balding Democrat from Wisconsin, has a strong sense of priorities, both personal and national.

Each weekday he snaps out of bed at 6:30, performs a half hour of brisk calisthenics. He downs a high-protein breakfast, kisses Ellen, his equally trim wife, goodbye. Then, clad in shorts, he jogs to his office at the Capital—a four-mile run.

One of Washington's early-morning tourist attractions, Proxmire completes the stint in 35 minutes. He showers in the Senate gym, changes into a single-breasted tropical, slides onto his desk chair. By 8 a.m. he is refreshed and ready for a hard day's work.

Proxmire's prime concern is with the priorities of the nation. Like many men, in and out of government, he wonders and worries whether we have become "a militaristic nation . . . a militaristic society . . . a national security state."

He knows that since the end of World War II we have spent one trillion, five hundred billion dollars on defense needs. And the demand for more military programs of every type continues to mount. But still our cities fester. Our air is fouled. Our water is polluted. Our minorities riot. Many of our people go hungry. Our children clamor for educational reforms. Our old people ask for just a little better life.

IT'S ONLY MONEY

Proxmire realizes that it costs more and more money to run the nation. But he believes the budgetary pie must be sliced differently, "that the federal government is spending too much money on military programs [approximately $80 billion this year—about half the federal budget]" and that "any analysis of national priorities must look to that budget first."

He puts the question: "How can we balance our military needs and expenditures with our domestic problems and needs?"

Few men in the U.S. Senate or elsewhere are as well qualified as Bill Proxmire to conduct an inquiry into the basic economic orientation of this country.

The son of an Illinois doctor, Proxmire was educated at Hill, a prep school in Pottstown, Pa., was graduated from Yale, was awarded two Master's degrees at Harvard, one in public administration, the other in business administration.

FROM WALL STREET TO SENATE

He worked for J. P. Morgan & Co. on Wall Street and volunteered for the Army nine

months before Pearl Harbor. After four years in the Counter-Intelligence Corps and postwar graduate work in economics, he moved to Wisconsin. There, he worked as a reporter on the *Madison Capital Times* and entered politics. Having married a Rockefeller heiress, he found himself socially and financially secure. But the alliance did not help him politically. He ran for Governor of Wisconsin three times, and three times lost.

In 1957, however, he was the best-known Democrat in the State. When Wisconsin's controversial Senator, Joe McCarthy, died, Proxmire won the special election to fill McCarthy's seat.

Shortly before this victory, Proxmire, by then divorced, met and married Ellen Hodges Sawall, executive secretary of the Wisconsin Democratic Party. She, too, had been previously married. Her first husband was Warren Sawall, now a public relations man for Wisconsin's other Senator, Gaylord Nelson.

AUTHOR, BUSINESSWOMAN

At 46, Ellen Proxmire—she was voted the most beautiful girl in her 1942 class at Woodrow Wilson High School in Washington, D.C.—knows a good deal about budgets, economics, and priorities. Two years ago she and a pair of other Washington wives, Mrs. Raymond Poston and Mrs. Thomas Boggs, daughter-in-law of Louisiana Congressman Hale Boggs, organized Wonderful Weddings Inc., which stages complete weddings so that parents of the bride can enjoy the festivities, too. "Last year," reports Mrs. Proxmire, "we ran at a loss. But this year we'll be in the black."

Ellen Proxmire is also the author of a successful book, *One Foot in Washington*, in which she describes the life of a Senator's wife. Politically hip, she knows and appreciates that as chairman of the Subcommittee on Government Economy, her husband in the past few months has become one of the most publicized members of the U.S. Senate. Also one of the most shrewd, studious, industrious, and intelligent members in that sometimes illustrious body.

After more than 11 years in the Senate, nine of which he spent as a sort of institutional maverick fighting valiantly for seemingly hopeless causes, Bill Proxmire knows how to handle himself in clinch and crunch. He does his homework and tries to be scrupulously fair. For example, when he invited witnesses to testify on military spending at his Government Economy hearings, he not only called a proper mixture of hawks and doves—such highly qualified big names as Harvard professor John Kenneth Galbraith, Senators Barry Goldwater and William Fulbright, labor leader Walter Reuther and former Secretary of State Dean Acheson—he also invited the chief executives of five of the nation's leading defense contractors: Lockheed, Boeing, General Dynamics, North American Rockwell, and Litton Industries.

OUTSIDE OUR PROVINCE

The executives, some of whom serve as trustees for our most distinguished universities, refused to appear at the Proxmire hearings. Questions concerning overcharging the government, negligence, and downright incompetency were described by them as "outside our province."

Their refusal angered much of the nation. "How in all good conscience," Proxmire asked, "can these men who are so intimately involved in the decisions which affect our national security and our $80 billion military budget, be so sanctimonious and uncooperative?"

Even without the cooperation of the defense executives, Proxmire proceeded to extract testimony which revealed all too clearly shocking deficiencies in the entire defense spending program. A few cases in point:

1. The Air Force ordered the C–5A, world's largest cargo plane from Lockheed at a cost of $3.4 billion for 120 planes. Not only did the cost soar by about $2 billion, but the Air Force was reluctant to admit it to Congress.

2. The Defense Department ordered deep-diving rescue submarines for the Navy at $30 million each. The cost is now $80 million each. And the subs may be unnecessary to boot.

3. Minuteman II missiles, ordered at $3 billion, cost $7 billion.

Proxmire believes: "Defense spending is out of control. The system is top-heavy. The military-industrial complex writes its own budgetary ticket . . . after World War II, we over-reacted with respect to contracts for weapons systems. Nothing was too good for the military . . . the military has had a blank check. It could be said that we have had over two decades of *carte blanche* for defense."

The Senator wants control of "the blank check" restored to a more inquiring, careful, scrutinizing Congress.

He does not blame the military for the immense size of the defense budget. He sees no conspiracy between collusive forces. He knows that it was the nations civilian policymakers who were paramount in setting national priorities which grant billions to defense and thousands to domestic needs.

It was a preacher's son from Wall Street, John Foster Dulles, who spent much of his time building military alliances with more than 40 nations. It was an investment banker, James Forrestal, the first Defense Secretary, who created the National Security Industrial Association to insure defense contractors a close relationship with the government. And it was Robert McNamara of the Ford Company, the so-called "business schools' idea of God," who used advanced systems development techniques to concentrate great power in the office of the Secretary of Defense. It was the no-nonsense McNamara who centralized the operations of the Pentagon, an institution which has more than $200 billion in assets including real estate holdings almost the size of New York State. This year the Pentagon will spend $21 billion in procurement, displaying an economic potency that makes General Motors look like small potatoes.

INEFFICIENCY PAYS

What most Americans do not realize but what Senator Proxmire does is that 90 percent of all defense industry contracts are negotiated with the government, and not won by competitive bidding. The government also provides free to defense firms more than $15 billion worth of government property, including land, buildings, and equipment facilities for private production. According to Richard Stubblings, an examiner for the Budget Bureau, the highest profits sometimes accrue to the most inefficient companies.

Supposedly the Bureau of the Budget is responsible for scrutinizing government spending. But only 50 of the 500 persons in the Bureau are assigned to check defense spending. "I think it is fair to say, therefore," Proxmire declares, "that the Budget Bureau makes no adequate review of the military budget."

THE PRICE OF VIGILANCE

Worse yet, when employees inside the Defense Department try to expose waste they have been ignored or chastised. Take the case of A. E. Fitzgerald, a deputy for management systems in the office of the Assistant Secretary of the Air Force. Fitzgerald revealed at a Proxmire hearing that the cost-overruns on the Lockheed C–5A cargo plane were staggering. The Air Force thereupon rewarded his vigilance by assigning him to check bowling alleys in Thailand.

"Here was a man," an indignant Proxmire points out, "who testified at our request. He testified with the permission of the Air Force. He was right. There is a $2 billion cost-overrun on the C–5A aircraft. But because of what he said, the department tried to fire him. His duties were circumscribed. They treated him as if he had typhus or was radioactive."

What bugs Proxmire and many other legislators is that the American people are devoting more of their resources to defense needs than is spent by all agencies of the federal, state, and local governments on health and hospitals, education, old age and retirement benefits, public assistance and relief, housing and community development and agriculture.

After all this Gargantuan spending is the nation more secure? Is it possible in this nuclear age to buy our way to safety?

Says one Defense Department official who prefers to remain nameless lest he be sent to Greenland to roll Red Cross bandages: "We can destroy the Russians tenfold and they can destroy us. No one is really safe any longer. Our only defense is peace."

INFLATION CAUSES

Senator Proxmire is fearful that in the pursuit of national security, the country may very well be depleting itself. "The bloated military budget and the excessive prices paid in military procurement . . . are the single biggest causes of the present inflation. We should cut wasteful defense spending to stop inflation instead of relying upon sky-high increases in interest rates which squeeze funds out of the home buyer, small businessman and farmer."

Recognizing the problem, President Nixon a few weeks ago named a blue ribbon panel to study the Defense Department. Subsequently, *The Wall Street Journal*, in an editorial headed "No Whitewash Wanted," commented:

". . . It is responsibly asserted that $10 billion or more a year could be cut from the military budget without impairing national security. Costly mistakes have been made in planning, execution and contracting."

What, if anything, can be done to reverse American priorities? Says Proxmire: "Congress must do a far better job in scrutinizing and appraising the military budget and procurement contractor practices." Sen. Stuart Symington believes the U.S. must re-think its worldwide commitments and stop being the world's policeman. A recent Congressional conference on national priorities suggested that Congress set up a defense review office to examine military budget requests and that another committee draw up a list of domestic priorities to be checked against a list of military priorities.

Citizens in their own communities can also play a vital role by organizing their own priority committees and asking their Congressmen a list of pertinent questions.

Just for starters, Proxmire suggests the following:

(A) Do we really need a new nuclear task force at a cost of $1.8 billion when carriers are sitting ducks for missiles or modern submarines?

(B) In an age of sophisticated missiles, do we need a new manned bomber to be delivered a decade from now at a cost of $12 billion or more?

(C) Are we really strengthened when there are ten supply troops for every man in a combat unit?

(D) Do we really need more than 400 military and naval overseas bases?

(E) Is this country strengthened when our military aid props up potentates or dictators?

(F) What about priorities for houses, schools, and jobs? With the extra $2 billion for the C–5A cargo plane, this country could house 3.3 million poor families or 12 million poor people for an entire year. Which has the higher priority?

Says Senator Proxmire: "Luxury military budgets weaken this country. Freedom is stifled when we ignore human needs. Let us get our priorities straight."

THE PESTICIDE PERIL—XXXVIII

Mr. NELSON. Mr. President, the current international controversy over the continued use of persistent, toxic pesticides is thoroughly reviewed in the July issue of Audubon, the magazine of the National Audubon Society.

The society recently announced an all-out campaign to inform the public of the threat to our environment and to human health from DDT and related pesticides. Recently, I placed in the RECORD, an editorial, published in the society's magazine, citing the failure of the National Academy of Sciences to recommend a ban on DDT after its 2-year study of persistent pesticides.

I ask unanimous consent that the article by George Laycock, entitled, "The Beginning of the End for DDT," published in the same July issue of Audubon, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BEGINNING OF THE END FOR DDT

(By George Laycock)

On the day of its April meeting this past spring, the Michigan Agriculture Commission attempted to conduct its business behind closed doors and thereby draw a screen over its discussion of the most troublesome question it had faced for many years. The commissioners had a hot potato to juggle, and they hoped in vain that they could dispose of it quietly. But the decision to be made that day was perhaps the biggest news of the year on the conservation front.

Shortly after the meeting there came an announcement: "The Commission of Agriculture today took action to initiate cancellation of all DDT registrations in Michigan . . ." When fully effective this order would be the death knell for DDT use in this major agricultural state.

By this one order, admittedly much too late in coming, Michigan took the lead in the mounting effort to halt the spraying of DDT. Some months earlier, Arizona—concerned because much of its milk production was unsalable due to excessive DDT content—had prohibited use of DDT for agriculture purposes. Overseas, Sweden—alarmed by growing evidence of an environment contaminated by DDT—placed a two-year moratorium on use of the insecticide the same month Michigan was moved to forbid its sale. And in Wisconsin, a lengthy legal hearing aimed at classifying DDT as a pollutant and hence outlawing its use—was concluded in May, though no official decision is expected for several months. So there, and in every other state, the spreading of DDT continues unhampered by law or regulation.

Nor was the fall of DDT in Michigan easy. The campaign was long and hard, and the resistance stubborn. And elements of the story should help conservation forces everywhere understand why millions of pounds of DDT are still being manufactured every year.

For several months Michigan newspapers had carried accounts of a running battle between the state's Departments of Agriculture and Natural Resources. This governmental family fuss over the "hard" pesticides—the chlorinated hydrocarbons—sometimes spilled over into the governor's office, distressing the state's chief executive.

The issue was clearly drawn. Michigan Director of Agriculture B. Dale Ball held that society should not abandon its servant, DDT. His counterpart in the Department of Natural Resources, Dr. Ralph A. MacMullan, insisted that "Michigan has come to a point in its history when it must completely outlaw the use of certain highly destructive pesticides such as DDT, dieldrin, aldrin, heptachlor, endrin, lindane, chlordane, and other 'hard' or persistent chemical compounds used to kill insects." These are the chlorinated hydrocarbons, sometimes referred to as "the dirty seven," although toxaphene and benzene hexachloride also belong on the list.

Michigan's agricultural community might have guessed as far back as 1964 that Dr. MacMullan was going to rock the boat. That year he was given the post of director of the Department of Conservation, since renamed the Department of Natural Resources. "The Conservation Commission told me to run the thing, and I expect to run it," he announced. In those first days he reviewed the challenges which he would have to meet. Prominent among them was the pesticide problem; he was convinced that DDT and its relatives were making devastating inroads on Michigan's wildlife populations.

There was no shortage of evidence against these killers. DDT came to this country as a war baby from Switzerland, where the insecticidal properties of dichloro-diphenyl-trichloro-ethane were discovered in 1939—a breakthrough for which a Nobel Prize was awarded. (The chemical had been synthesized in Germany in 1874.) DDT came with good credentials and glowing promise, and insect suffers everywhere hailed the compound as the greatest invention since the flyswatter. It was easily and cheaply produced, and deadly to a wide variety of pests.

But it gradually became apparent that DDT possessed serious shortcomings. Refusing to stay where it was put, it filtered and flowed into streams, lakes, and ocean currents—where it still retained its toxic properties. It is known to ride not only the waters but the winds of the Earth. Particles of DDT fall as dust and in rain, far from the lands where originally applied.

Also disturbing is the fact that, while chlorinated hydrocarbons go everywhere, they do not go away. Instead of breaking down in the environment, they are cursed with a half-life variously estimated at four to sixteen years, depending on soil or water conditions. They may still pollute land and water a quarter of a century after application. All major river basins in the United States, according to the U.S. Public Health Service, are now contaminated with dieldrin, endrin, and DDT and its derivatives. "We don't know how long it will take for Lake Michigan to lose its DDT even after we stop using it," says Dr. MacMullan. "Estimates run from ten to thirty years, but I'm hopeful it will be less than thirty years."

Speaking at a symposium sponsored by Rockefeller University and The New York Botanical Garden, Dr. George M. Woodwell, chief ecologist at the Atomic Energy Commission's Brookhaven National Laboratory on Long Island, said that DDT and similar pesticides constitute the world's worst pollution problem. He estimated that one billion pounds of DDT and its derivatives are now circulating through the world's water and air. Dr. Woodwell added that, in the last decade, about 200 million pounds of DDT have been used annually worldwide.

In addition, because DDT is fat soluble, it is stored in living tissue, accumulated by animals in natural food chains and increasingly concentrated toward the top of such ecosystems.

Researchers now know that DDT and dieldrin in mammals, man included, pass from mother to unborn offspring through the placenta. And human babies are fed 0.1 to 0.2 parts per million of DDT residues with their mothers' milk. (The U.S. Food and Drug Administration has set a DDT tolerance level of 0.05 ppm for milk in interstate commerce. Since 1964, the U.S. Department of Agriculture—which encourages the use of DDT—has paid out more than $1,000,000 to reimburse farmers who have been forced to dump milk because of its DDT content.)

As long ago as 1946, U.S. Fish and Wildlife Service biologists warned that DDT dosages recommended for control of Dutch elm disease would prove fatal to birds. There has been ample proof in the years since—robins virtually annihilated on a university campus, dead warblers on another college town's lawns, songbird populations reduced by as much as 98 percent in heavily sprayed communities.

The birds of prey have been hit especially hard by DDT. Eagles and peregrine falcons—at the top of their respective food pyramids—have suffered spectacular reductions in nesting success. Instead of the 44 pairs of bald eagles nesting around Lake Michigan in 1945, there remains today a single pair—which has not raised young successfully since 1964. Until recent times pairs of peregrine falcons made their nests on New York skyscrapers, but no longer is there a breeding pair to be found in the United States east of the Rocky Mountains. Dr. Tom J. Cade of the Laboratory of Orinthology at Cornell University has studied peregrines along Alaska's Colville River in the Brooks Range, where production of young peregrines in that wilderness fell from 2.5 young per pair prior to 1960 to one fledgling per pair in 1968, and unhatched eggs carry high pesticide concentrations. Extinction stalks the magnificent peregrine.

Chemical industry apologists have long insisted such evidence is circumstantial, that "there is no scientific proof" that chlorinated hydrocarbons are responsible for catastrophic losses of wildlife. But recently a U.S. fish and Wildlife Service team at the Patuxent Wildlife Research Center in Maryland substantiated the relationship between DDT and reduced reproductive success. They were investigating whether there did indeed exist a link between DDT and a phenomenon which has fascinated and frightened naturalists in recent years—the "thin shell syndrome."

That pesticides are a factor in the frequency of abnormally thin eggshells had first been suggested in Scotland by research ornithologist D. A. Ratcliffe. Ratcliffe studied records of 109 duck hawk nests visited by British falconers between 1904 and 1950. In only three had falconers found broken eggs. But from 1960 to 1966, when 68 nests were studied, 47 contained broken eggs. Ratcliffe also knew that European sparrow hawks (an accipiter) and eagles were suffering from widespread egg breakage. "The introduction of DDT into general use (about 1945-46)," wrote Ratcliffe, "coincided closely with the onset of the eggshell change."

Next, Ratcliffe invaded the dark recesses of museums where he began measuring the shell thickness of more than 1,600 blown eggs and weighing them. Significantly, he learned that both weight and shell thickness had decreased sharply after 1946

By measuring and weighing thousands of eggs of a wide variety of species in American museums, a University of Wisconsin team found that Ratcliffe's discovery applied to this continent as well. Recent eggshells were thinner and thus more easily broken. Some scientists have also suggested that birds carrying heavy loads of DDT residues are more subject to nervous stress, and that this restlessness further contributes to egg breakage.

At Patuxent, biologists installed thirty-six pairs of sparrow hawks in flight pens and divided the birds into three groups of twelve pairs each. Food supplied to one-third of the sparrow hawks contained DDT, plus dieldrin, at a level considered high—but not high enough to kill the raptors. The second group was fed moderate dosages similar to those they might obtain in a wild environment. The more fortunate third group was fed no insecticide.

Those sparrow hawks on an insecticide-free diet hatched 84 percent of the eggs produced. Those on the modest dosages of DDT similar to what they might encounter out-of-doors hatched 61 percent, and the third group hatched 59 percent. Here was firm experimental evidence, for the first time, that there exists a positive correlation between ingestion of chlorinated hydrocarbons and nesting failure. Further, diets containing 3 ppm of DDT have caused thin eggshells and reduced reproduction in malliards.

Does the thin shell syndrome extend to other families of birds? Dr. Robert W. Risebrough, molecular biologist at the University of California at Berkeley, says that the brown pelican faces extinction along the coast of his state. DDT, he adds, is responsible for their abnormally thin shells, which break instead of hatch.

Could a wild bird's functions be so drastically upset that it might lay eggs with no shell at all? Until recently, such a condition was unknown in nature. But in April 1969, on the shore of Lake Superior in northern Michigan, investigators found a bald eagle nest containing remains of an egg *without a shell.* Meanwhile, eggs without shells were being found for the first time in colonies of brown pelicans along the Gulf of California. "There is absolutely no question," says Sandy Sprunt, research director of the National Audubon Society, "that pesticides are responsible for thin shells."

Yet despite such evidence, DDT still has many defenders. On the floor of Congress, one of its major champions is Representative Jamie L. Whitten of Mississippi. In 1968 he told Congress that the record showed no injury to wildlife from DDT except by improper use, a statement that prompted one observer to note that the Congressman's speech was made on April Fools' Day.

Even entomologists are changing their thinking on DDT. Dr. Robert van den Bosch of the Department of Entomology at the University of California testified recently in Wisconsin that although he had recommended spraying of DDT for many years, he no longer approved its use. "We had created a monster," he said, "it's a lesson for all of us to learn."

There was nothing new in Dr. MacMullan's theme that it is time to stop spreading DDT and its relatives. It was the President's Science Advisory Committee which said in 1963 that "Elimination of the use of persistent toxic pesticides should be the goal." But the chemical companies and the agricultural establishment still call most of the shots six years later, arrogantly fighting every effort to halt the contamination of the environment with their products.

Faced with such economic power, politicians too often take refuge in silence, perhaps hoping the problem will go away. But it will not, for the half-life of DDT is greater than the half-life of the average governor. And the governor willing to come to grips with this issue is rare. In Michigan, however, with two departments in his own administration feuding, Governor William H. Milliken has had little choice.

Two separate developments helped bring the DDT story to a climax in Michigan. In the spring of 1966, under the leadership of Dr. Howard Tanner, Michigan began releasing four- to six-inch coho salmon in tributaries of Lake Michigan. With visions of fifteen- or twenty-pound game fish dancing before their eyes, Michigan anglers and tourism promotors were paying close attention to every phase of Dr. Tanner's highly publicized coho experiment.

As they gorged on the lake's heavy population of alewives, the coho grew at fantastic rates. By the spring of 1967 the salmon weighed two to four pounds, and they continued to prosper until fish as heavy as twenty-two pounds were taken. Fishermen flocked to Lake Michigan in pursuit of these grand new trophies. The fishing tackle industry, outboard motor merchants, marinas, motels, restaurants, and all the other beneficiaries of a flourishing tourist industry prospered. Long traffic jams snarled movement on Michigan highways near fishing spots and boat launching ramps as the first coho seasons opened.

But Michigan's fisheries specialists were already worried about DDT. Lake Michigan flushes slowly and may take thirty years for a complete change of water. Some biologists, including Dr. Charles F. Wurster, Jr., of the Environmental Defense Fund, made dire predictions that the salmon program would run into trouble at the hatcheries when the fry were in those critical first days during which they draw on their own egg yolk for sustenance. Then early in 1968, salmon fry being carefully tended at the Wolf Lake State Fish Hatchery began to darken in color and die. At first 160,000 perished. Soon the losses had climbed to 700,000.

Affected fry were checked for viral disease—and pesticide content. Studies at Michigan State University made it plain that "DDT is the most likely suspect." Michigan-raised coho eggs carried loads of DDT residues ranging from 1.5 to 3 parts per million, levels believed to be high enough to cause substantial losses at the critical "button-up" stage in the salmon's reproductive cycle. New York State had already experienced similar losses in its lake trout hatchery program at Lake George, where 2.95 ppm of DDT caused the death of trout fry at the same stage.

This development should not have been particularly surprising. Practically every fatty fish checked from Lake Michigan waters carries substantial dosages of DDT, so much so that, as one conservation worker in Lansing assured me, "If pork or beef were as heavily loaded with DDT as most Lake Michigan fish, it would be taken off the market."

Michigan fisheries biologists fell short of their coho stocking aims, and had to increase their hatchery production. But this was only a stopgap measure. "The real answer," said fisheries biologist Thomas B. Durling, "is that pesticide levels be reduced and eventually eliminated."

An earlier development, precipitating Michigan's fight over DDT, was the appearance of the Environmental Defense Fund in the state. EDF can trace its birth to the National Audubon Society's 1967 convention in Atlantic City, to which Attorney Victor J. Yannacone, Jr., came to report on his lawsuit against the Suffolk County Mosquito Control Commission on Long Island.

Yannacone saw his county's spraying of DDT for mosquito control as both a degradation of the environment and a breach of constitutional rights. In 1966 he had filed a suit in behalf of his wife Carol to bring a halt to twenty years of DDT pollution. The courts, he reasoned, were the only bodies left to settle such issues. He explained to the Audubon convention that both legislative and administrative arms of government had failed their responsibilities in not protecting the people from insecticide contamination. The courts would offer a fair and impartial forum, said Yannacone, urging conservation-minded citizens to take environmental polluters to court.

After Long Island newspapers carried the story of the unusual court action, the Yannacones soon learned that numerous other people were equally concerned over the misuse of pesticides. Yannacone met Dr. Wurster, assistant professor of biology at the State University of New York at Stony Brook, and Dr. Woodwell of the Brookhaven Laboratory. Both testified for Yannacone, and a temporary injunction was issued against Suffolk County Mosquito Control Commission.

At the Audubon convention, where he reported on this pioneering court case, the exuberant Yannacone went a step further. Also present were Dr. Wurster, and Dr. H. Lewis Batts, Jr., who once taught Yannacone ecology and other biological sciences at Kalamazoo College in Michigan. Dr. Batts is director of the Kalamazoo Nature Center and past president of the Michigan Audubon Society. Together the three drew up a resolution suggesting formation of an Environmental Defense Fund, to take environmental pollution cases into courts.

The resolution passed, but its impatient sponsors saw little evidence that it was going to be acted upon rapidly. So ten persons, most of them scientists, later assembled and incorporated the Environmental Defense Fund under the laws of New York State.

In Dr. Batts' state there was precisely the kind of case EDF had in mind. In Berrien County, the Michigan and U.S. Departments of Agriculture, by late 1967, were planning a massive dieldrin attack against a recurring "infestation" of Japanese beetles. The plan called for spraying 2,800 acres of small watersheds draining into Lake Michigan. Dr. Batts raised funds for the initial court action, asked for and obtained the help of the National Audubon Society, and Yannacone won a temporary injunction from the State Court of Appeals in Grand Rapids. Among the witnesses lined up to testify against the hard pesticides were Dr. MacMullan and his pesticides advisor, Dr. C. T. Black.

Michigan's legal community scarcely knew what to do with EDF and its determined attorney. The case was refused in a federal court in Grand Rapids on the grounds that those bringing the suit were from another state. The Michigan Court of Appeals agreed to hear the testimony, but after several hours the case was dismissed on a technicality.

But before the drama was played out, the state attorney general's office came in for a little act of its own. There were assistant attorneys general supposedly defending both the Michigan Department of Agriculture and the Department of Natural Resources. Under subpoena, the Department of Natural Resources had joined the case against its sister agency. The attorney general stopped the whole show by forbidding his assistant working with the Department of Natural Resources from even speaking in the courtroom.

"You want me to get my own lawyer?" Dr. MacMullan asked. "You can't do that either," the attorney general told him. Having declared the scientific affidavits from Natural Resources inadmissible, the Court of Appeals ruled that the Department of Agriculture was immune from suit.

By this time, however, the fight between Agriculture and Natural Resources and its accompanying newspaper coverage had brought then Governor George W. Romney into the fray. Romney summoned directors of the feuding departments to his office. To help them resolve the issue, the governor named a three-man factfinding panel, both directors agreeing to abide by its findings.

The three men chosen included two with close ties to agriculture. And the panel ruled that if allowed to go untreated, the Japanese beetles would require heavier chemical treatment later. So three crop-dusting planes went aloft on October 21st and 23rd, 1968, and spread two pounds per acre of dieldrin over 3,000 acres and ten pounds of chlordane per acre over another 1,600 acres. To Dr. MacMullan this was a "bitter pill."

The Environmental Defense Fund, meanwhile, had also brought court action against the use of DDT for Dutch elm disease control by local governments. In the face of possible court decisions against DDT, these suits, coupled with mounting public opinion, led 56 Michigan cities to announce, one after the other, that they would no longer

spray elms with DDT. Soon the list of court orders held by EDF included all of the offending cities except Detroit, which finally capitulated this past May.

The EDF action in Michigan made the conflict between the two state departments a public issue, and set in motion a continuing campaign by the Department of Natural Resources against DDT. Dr. MacMullan held regular staff meetings within his department to plan a concerted campaign against DDT. The strategy was to strike hard and repeatedly until DDT was banned. Conservationists, augmented by a newly formed citizens' group, the Michigan Pesticides Council, took their message to the people. First came an article "The Case Against Hard Pesticides," by Dr. MacMullan in Michigan Conservation, the department's magazine. Other articles followed at regular intervals, and the message was spread through radio and television programs, public speeches, and a barrage of newspaper articles. Conservationists soon knew that people throughout the state and across the nation shared their concern over the continued degradation of the environment by these long-lasting poisons. "The Case Against Hard Pesticides," as one example, has been reprinted a half-million times.

But the chemical industry had no intention of yielding ground gracefully. The manufacturers reacted through the National Agricultural Chemicals Association, their well-financed lobbying and propaganda arm which goes to great expense to convince the public that DDT is the servant of man, that it carries no serious threat to the ecosystem, fighting any government actions that might curb pesticides use, and laboring constantly to undercut the mounting evidence against DDT.

The association frequently sends to 3,500 newspaper editors easily reproduced cartoon panels titled "The World Around Us." These punchy cartoons hammer away at the theme that man has risen to his current exalted state because of pesticides. But they lump all pesticides together and ignore the fact that conservationists are fighting only that small list of long-lasting, broad-spectrum killers, the chlorinated hydrocarbon insecticides.

The association recently supplied its members with a "briefing paper" said to introduce "facts" ignored by those calling for the banning of DDT. This propaganda claims that DDT benefits wildlife through control of disease and parasites and by killing insects that destroy wildlife cover.

"DDT is a low cost item, wholesaling at 17–18 cents a pound," states the briefing sheet, and adds, "Almost any alternative pesticide would bring a greater return to the manufacturer." What then makes the chemical industry fight so desperately in behalf of DDT? The public, incredulously, is asked to believe that the agricultural chemical industry is interested less in profit from its annual $20 million production of DDT than in serving mankind.

We are then assured that 70 percent of the DDT produced in this country goes to foreign lands. This is less comforting than the manufacturers would like it to be, since it is common knowledge that DDT sent out into the world can boomerang and return home on the elements.

Insisting that DDT is valuable because it lasts so long, the association then claims that nonetheless it degrades into harmless products. "All species of animals, insects, fish, amphibians, birds, and mammals that have been studied," says the briefing sheet, "are able to degrade and excrete DDT residues they have acquired in their fat." Of course, wilflife may perish in the process, or suffer serious sublethal effects.

The association also claims the half-life of DDT to be only "as long as one to three years," which it may be under some conditions, but independent research has computed DDT's half-life at periods up to 16 years. And in one test in Maryland, 31 percent of the dieldrin originally applied was still present in the soil after 17 years, while 39 percent of the DDT remained.

Chemical industry propagandists often repeat the claim of worldwide malaria control as a result of the multimillion-dollar DDT export business. This was a major argument presented again in the letters department of the May 4, 1969, *New York Times*. The writer, Samuel Rotrosen, president of Montrose Chemical Corporation, manufacturers of DDT, and chairman of the Industry Task Force for DDT, must have known at the time about a story carried in the same paper five weeks earlier. Authorities in India, the story reported, are worried because mosquitoes there have developed resistance to DDT. Malaria cases have been increasing rapidly in India in recent years despite DDT treatments. And the World Health Organization has announced it would review its entire malaria eradication program because of this spreading mosquito resistance to DDT.

As for human health, and whether DDT and the other chlorinated hydrocarbons pose a threat to man, merely asking such a question makes chemical industry spokesmen shout "foul." Apparently, different organisms can tolerate varying levels of DDT in the body tissues. Man, we are told, normally does not build up concentration beyond 12 ppm of DDT and its derivatives.

This may or may not be a harmful level, although some scientists suspect the prolonged existence of such a level will affect humans. "Frankly," says Dr. MacMullen, "no one knows what 12 parts per million in human fatty tissue means. But we know it is going to stay there and that DDT in far smaller concentrations has awesome consequences for many small or simple forms of animal life." Currently the level of DDT in the "average" American man, woman, and babe is said by the Public Health Service to be between 8 and 10 ppm.

But despite the reassurances that all is well, even though each of us carries a quantity of DDT, there are disturbing signals that should not be ignored. It was the December 1968 issue of "Occupational Safety and Health Abstracts," published by the International Occupational Safety and Health Information Center in Geneva, Switzerland, that reported: "Soviet workers occupationally exposed to DDT and other organochlorine pesticides have shown disturbances of stomach and liver functions after ten years of contact with the pest destroyers." Scientists checked seventy workers. They found, in those with less than a decade of exposure, an increased acid and pepsin secretion in the stomach, along with disturbed liver functions. But those with more than ten years exposure were found to have decreased secretion of acids and pepsin and resulting disturbances of liver function. And DDT is also under suspicion as a potential cause of cancer in warm-blooded animals. Still, the president of one DDT manufacturing firm recently quoted to me the comforting 1967 statement of the U.S. Public Health Service that "there is no well-described case of fatal, uncomplicated DDT poisoning."

With public pressure already bearing heavily on DDT, the coho salmon came back into the Michigan picture early in February 1969. Commercially caught Michigan coho were being advertised and sold. The Food and Drug Administration collected samples of frozen Michigan coho shipped to Minnesota and Wisconsin and ran tests for DDT and dieldrin. The fish averaged a DDT content of 16 ppm. Although the FDA had not then established tolerance levels for DDT in fish, it seized fourteen tons of frozen Michigan coho in Wisconsin. The tolerance level for meat is 7 ppm in the fat alone, equal to about 1 ppm in the whole cut.

This announcement cast a pall over the entire Michigan coho program. The state had 2,500,000 smolts ready for release into Lake Michigan tributaries. The tourist industry envisioned its summer business cut back severely. Sport fisherman were asking what to do with the salmon they caught.

In New York, the secretary of that state's Pesticide Control Board wrote that some consideration was given to closing lakes to fishing there because of the problem of chlorinated hydrocarbons in fish, "but the idea that prevailed was that the greatest pleasure in fishing was catching the fish and that there is probably no real danger to man even from eating the fish, although the fish may not taste entirely as expected. With these considerations, a warning to the public was considered sufficient."

Actually, the high level of DDT in Lake Michigan coho has been known for several years. John Carr, who directs a pesticide monitoring program for the Great Lakes from his U.S. Bureau of Commercial Fisheries office in Ann Arbor, had begun testing several species of fish for pesticides in 1965. He found that the levels did not change much from year to year. He also found that the fatty tissues of fish carry far heavier loads of chlorinated hydrocarbons than are found in the rest of the fish. His tests revealed DDT levels in the fat of coho as high as 105 ppm.

The FDA, meanwhile, having long neglected this problem, was pondering where to set the DDT tolerance level for fish to be sold commercially throughout the country. On April 22nd the limit was set at 5 ppm, which threatened the commercial fishing industry with a lost of $2.5 million annually in Michigan alone and would place commercial fish products throughout the country under inspection for the first time.

This federal action put still more pressure on DDT peddlers to meet the growing public concern. But there exists between the chemical manufacturers, extension services, departments of agriculture, and schools of agriculture and entomology in the land grant colleges a strong bond of mutual protection. And when any one of their spraying recommendations is challenged, there is a solid defense front, and the "official" position within the agricultural community is maintained with an arrogance that seems to have more than the economic welfare of the chemical manufacturers behind it.

Within the agricultural community of Michigan one hears now that the ban on DDT was an orderly and expected development growing out of accumulated research at Michigan State University's Agricultural Experiment Station and the longtime desire of agricultural leaders themselves to bring an end to the use of DDT. They insist that DDT would have been banned just as soon without pressure from conservationists or the exposure to public opinion. Indeed, on the day before a legislative committee hearing which would have established a state pesticide control committee with strong representation by conservation interests, DDT was removed from the list of chemicals approved for mosquito control. This action by the Michigan Agriculture Commission was merely considered as a coincidence. But it would take a lot of selling in Michigan to convince people that Dr. MacMullan's Department of Natural Resources and the Environmental Defense Fund had nothing to do with speeding up the demise of DDT there.

Quite likely, the action of the Agriculture Commission in banning the sale of DDT in Michigan was prompted partly by fear that the state legislature would pass a law even more restrictive. "They decided," as one conservationist said, "to toss MacMullan a bone." They should not, however, assume that Dr. MacMullan and other conservationists see the job as complete. Next on the schedule is dieldrin. And once it has followed DDT

into limbo, the rest of the persistent pesticides will gain attention. Dr. MacMullan is convinced all must go.

The Michigan regulation is by no means perfect. It did not go into effect until June 27th, and any DDT on dealers' shelves or in warehouses up to that date can still be sold. "It will take at least five years before present stocks are disposed of," Dr. Black predicted. Nor is the purchase of DDT in another state for use in Michigan prohibited, although legislation to forbid DDT use is certain to be introduced in Lansing. Meanwhile, one major DDT manufacturer has hinted it will challenge the legality of the Agriculture Commission's ruling (which has since been amended to permit use of DDT indoors for control of bats, mice, and body lice).

Recently Governor Milliken took an important step in protecting the environment when he created a fifteen-member Council for Environmental Quality. "I have big hopes for this council," says Dr. MacMullan. The Michigan Department of Natural Resources has now instituted a ten-point program to advance the continuing fight against "hard" pesticides.

What has happened in Michigan is significant because it is a dent in the incredible armor of the agricultural combine. Viewed nationwide it may seem a small victory. But the chemical industry must sense that the implications reach far beyond Michigan.

Several states in the Great Lakes drainage, meanwhile, are reappraising their stands on DDT. Ohio, whose natural resources leaders are unlikely to show Michigan's strength, scheduled a conference of top officials to discuss the pesticide issue following the Michigan ban. At least half a dozen states are considering legislation that would ban DDT. In Washington, Senator Gaylord Nelson of Wisconsin introduced a bill aimed at federal control of DDT by prohibiting its sale in interstate commerce. In the last session of Congress, a similar bill was quickly killed by the Senate Committee on Agriculture and Forestry.

So Michigan has finally come to grips with the world's most dangerous environmental pollutant. But other states drag along, permitting agricultural interests to blindly add more tonnages of DDT to the environment year after year. All the blame, however, cannot be placed on agriculture. Municipalities strive to control mosquitoes, Dutch elm disease, and other pests with DDT. Woolen mills use pesticides to moth-proof their products, then run their wastes into rivers. Foresters and even wildlife managers have used persistent pesticides. Homeowners, gardeners, and outdoorsmen continue to buy millions of small spray cans containing chlorinated hydrocarbons—when they should instead be reading the labels and refusing such products. But with the connivance of the U.S. Department of Agriculture, manufacturers have stacked the cards against such public intelligence, using jaw-breaking technical names, instead of simple generic terms on their labels.

What is needed is more than a simple phasing out of DDT state by state, with each state repeating the research of the others on its own farms and experiment stations while DDT peddlers buy time. This procedure, if effective at all, could only lead to a nationwide hodgepodge of laws and rulings. And farmers forced to turn to more costly insecticides would be at an economic disadvantage with their competitors using DDT in neighboring states.

Chlorinated hydrocarbons in the air and water do not pause at state lines or national borders. The threat of DDT and other "hard" pesticides in the environment is at the very least a national problem calling for federal laws. Such laws, say conservationists, should do nothing less than rule out the use of all such pesticides, except in cases of dire public emergency where no substitute exists, and then by prescription only.

SCOTT BILL SPURS ACTION IN CALIFORNIA

Mr. SCOTT. Mr. President, my bill, S. 114, to establish a Commission on Afro-American History and Culture, is pending before the Subcommittee on Arts and Humanities of the Committee on Labor and Public Welfare. I am delighted to report that the California Senate has passed a bill—California Senate bill 114—to establish a commission on minority history and culture which was based upon my legislation. I hope the U.S. Senate will act as promptly and as affirmatively on this matter as did the California Legislature.

I ask unanimous consent that the letter informing me of the action in California be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CALIFORNIA SENATE,
July 28, 1969.

Hon. HUGH SCOTT,
Old Senate Office Building,
Washington, D.C.

DEAR SENATOR SCOTT: Enclosed is a copy of Senate Bill 114. This legislation originated from your bill introduced in the United States Senate.

Senate Bill 114 passed the California Senate yesterday and will be heard by the State Assembly next week.

It is my feeling that this commission will provide a much needed service. I am grateful for your assistance.

Sincerely,

MERVYN M. DYMALLY.

MORE FUNDS FOR AUTO SAFETY

Mr. NELSON. Mr. President, in 1966 Congress initiated a broad attack on auto safety with the passage of the National Traffic and Motor Vehicle Safety Act. Certainly no consumer program has been launched with more fanfare and promise than this effort to make a meaningful reduction in the number of deaths and injuries from automobile accidents.

But the program has been severely crippled from the very beginning because of lack of funds. Neither the administration nor the Congress has been willng to back up its commitment of the 1966 act with the necessary funds to do the job.

In a very good article entitled "Congress Ordains Safety but Won't Put Gas in Tank," and published in Sunday's Washington Post, Morton Mintz reviews the program's funding problems. In the last 3 years, the vehicle safety program has received only $33.9 million—or just one-half of its $66.3 million authorization.

A new 2-year authorization is now before the House Committee on Interstate and Foreign Commerce. The total request for 2 years is $58 million. As Mr. Mintz points out, "this total is $20.4 million less than the cost of financing the war for 1 day.

It is time we put the auto safety crisis in our list of national priorities—and time we put all of our energy and resources behind those priorities.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONGRESS ORDAINS SAFETY BUT WON'T PUT GAS IN TANK

(By Morton Mintz)

A common complaint on Capitol Hill is that on a whole range of health, safety, consumer and environmental problems, the White House and Congress don't put our money where their mouths are.

It's a complaint that Sen. Abraham A. Ribicoff (D-Conn.) has made about auto safety, that Sen. Vance Hartke (D-Ind.) has made about pipeline safety and that Sen. Philip A. Hart (D-Mich.) has made about truth-in-packaging, to name a few specific complainants.

The legislators say that the Government has said the right things about such matters and has even passed the right laws—sometimes by unanimous votes—but then has denied the money that the enforcement agencies need to make the laws live up to the rhetoric. The auto safety law, signed by President Johnson almost three years ago, is a classic case.

BATTLEFIELD ANALOGIES

The groundwork for the law was laid in 1965 with hearings by Sen. Ribicoff, Ralph Nader's book "Unsafe at Any Speed" and attacks on unsafe tires by Sen. Gaylord Nelson (D-Wis.). In 1966, President Johnson developed into an ardent advocate. He repeatedly put the need for a strong bill in the context of the Vietnam war.

In February, for example, Mr. Johnson said that the highway toll was "the gravest problem before this Nation next to war in Vietnam." On June 3, he told the National Governors Conference, "Since the automobile was first invented, we have had 1½ million deaths from automobile accidents. That is three times as many as our enemies have ever been able to kill in all of our wars.

"Between 1961 and the end of last year, motor vehicles killed many more times as many of our servicemen as the Vietcong were able to kill in Vietnam."

At the signing of the auto safety bill on Sept. 9, 1966, Mr. Johnson returned to the theme. He noted that over the recent Labor Day weekend, 29 American servicemen had died in Vietnam while 614 Americans had been killed on the highways.

Less than five weeks after the bill signing, the President's words boomeranged in a letter from Sen. Warren G. Magnuson (D-Wash.), chairman of the Senate Commerce Committee and a prime mover behind the legislation.

Reminding Mr. Johnson that he had ranked auto and highway safety second only to the war, Magnuson expressed "deep concern" and "near disbelief" that the Administration's requests for auto and traffic safety in fiscal 1967 were "less than 30 per cent of the amount Congress considered adequate." The Administration said that some of the cuts merely reflected realistic appraisals of what could be spent efficiently.

The auto safety law created the National Highway Safety Bureau, which has been put under the Federal Highway Administration in the Department of Transportation. (Ribicoff and other legislators want the Bureau spun off because they feel that the FHA is so strongly oriented toward road building that it tends to neglect the safety of the vehicles on the roads.)

The Bureau's first and only director, Dr. William Haddon Jr., resigned in mid-February, less than a month after President Nixon took office. Mr. Nixon meanwhile, has said nothing or almost nothing about auto safety. And more than six months after Haddon's departure, he has not named a replacement.

The man in charge is Robert Brenner, who was Haddon's deputy. Brenner has a staff of

500 rather than the 2000 originally envisioned for 1969. He has one person to deal with all aspects of school bus safety.

Haddon had started a program for crash-testing various makes and models of car to get a real reading on safety. Tests were made with the Subaru minicar, a Japanese import that, because it weighs less than 1000 pounds, is administratively exempt from safety standards, and the Volkswagen.

Now the tests have been halted by Francis C. Turner, head of the Highway Administration. Turner has said that he wants to see if there isn't a cheaper way to get the same kind of data.

Brenner is operating without an authorization—let alone an appropriation—for the fiscal year that began July 1. The authorization bill has gotten only as far as the House Commerce Committee, which has approved $23 million for work on vehicle safety for fiscal 1970 and $35 million for fiscal 1971. The two-year total is $20.4 million less than the cost of financing the war for one day.

In an interview, Brenner talked about some issues and developments in auto safety. Speaking of grilles that come at pedestrians like the cutting edge of a meat cleaver, and of other sharp surfaces and protrusions, he called the manufacturers involved "irresponsible." He named none.

Similarly, Brenner feels that "fastback" sedans, because they reduce rear visibility, are a trend "absolutely in the wrong direction." He said that styling and safety are "completely compatible," and cited instrument panels on 1969 cars as "gorgeous" evidence of this.

Brenner gives "top priority" to getting a facility for testing vehicles and components, including tires, to see if those certified by their producers as meeting safety standards actually do. The authorization bill originally contained a $10 million item for design and planning of such a center, including a proving ground. The House committee allowed $100,000 for preliminary planning and asked for a new presentation after that is done.

Despite the law's emphasis on setting safety standards, Breener hopes to accomplish a good deal by persuading Detroit to adopt features that could be required only after a long legal process. He hopes, for instance, that General Motors will apply its side rail protection—against side collisions—to all of its cars, and that Ford will extend its no-skid braking feature to all of its models.

SMALL CAR EQUALIZER

Under Haddon, Bureau policy was not to let research contracts to auto manufacturers, not only because of possible conflict of interest but also because of a desire to build an independent expertise in the Bureau.

Brenner, however, said that "I don't think there has to be" a conflict of interest in contracts with Detroit's Big Four, and that, "where there is none, or is not even the appearance of one," he would not hesitate to let a contract for urgent work that otherwise would not be done or would be seriously delayed.

Brenner looks on the air bag restraint device as "the big equalizer" between big cars and little ones in crash survival. The device inflates in front of the occupants in the first milliseconds of a crash and puts a big plastic cushion between them and hard surfaces. Brenner estimates that it will be standard equipment on the 1971 models at the earliest.

OUTER CONTINENTAL SHELF SUBCOMMITTEE

Mr. JACKSON. Mr. President, discussions now underway in the executive branch concerning the development of the resources of the seabeds are of vital importance to all Americans, both present and future. Proposals that would have far-reaching effects on this development, and our relations with other nations, are being pushed vigorously in the United Nations, and the Departments of State, Defense, and Interior are endeavoring to arrive at a unified position for the United States with respect to these proposals. Some of the ideas that have been advanced would place the seabeds relatively close to our shores under an international regime. It readily can be seen what problems with respect to control of pollution, for example, such a proposed system would involve for us.

Recently the Committee on Interior and Insular Affairs held comprehensive public hearings on a measure sponsored by the distinguished senior Senator from Colorado (Mr. ALLOTT) to establish a national mining and minerals policy. At these hearings, the need of our country for new sources of supply for nonfuel minerals was established beyond dispute; our requirements for additional sources of energy fuels, primarily oil and gas, long have been self-evident.

Exploration of the Continental Shelf adjacent to our shores has shown it to contain tremendous reserves of oil and gas, which are susceptible to immediate production under known, existing technologies. The shelf also has been shown to have resources of other minerals, notably manganese, and gold and silver. Technology for development of these reserves is progressing to the point of economic feasibility.

Mr. President, these facts, namely, our Nation's need for the mineral resources of the seabeds and the proposals to place the development of these resources adjacent to our coasts under international control, call for most careful and most full policy considerations. Accordingly, I am appointing a special subcommittee of the Interior Committee to assist the executive branch in every way possible in arriving at a policy position that is in our country's best interests.

The Interior Committee is the unit of the Senate to which was referred the bill that Public Law 212, 83d Congress, which is the Outer Continental Shelf Lands Act of 1953. This statute was the first, and is the only, legislative assertion of the sovereignty of the United States over the mineral resources of the Continental Shelf adjacent to our shores. The 83d Congress did not attempt to define the outer limits, or seaward boundary of this sovereignty.

Rather, the boundary provided by the Outer Shelf Act is the limit of our ability to develop the resources of the subsoil. This statutory concept was carried over into the Geneva Convention of 1958 on the Continental Shelf. The convention defines the limits of national sovereignty as being at depths out to 200 meters—600 feet—or as far as the exploitation of the resources of the adjacent seabed lands permits.

In view of the legislative history of the Submerged Lands and Outer Continental Shelf Acts, and its overall legislative jurisdiction over development of the mineral resources of the United States, the Interior Committee has clear-cut responsibility for legislation affecting the Outer Shelf. In fulfillment of this responsibility, I have named Senators METCALF, MOSS, and GRAVEL to serve with me on the majority side, and, on the recommendation of the ranking minority member of the Interior Committee (Mr. ALLOTT), Senators BELLMON, HATFIELD, and STEVENS on the minority side, to compose the Subcommittee on the Outer Continental Shelf of the Interior Committee. I am happy to announce that the Senator from Montana (Mr. METCALF) has agreed to be the chairman of this important subcommittee.

The Interior Committee shares its jurisdiction over the outer shelf with other units of the Senate, including, of course, the Foreign Relations Committee and the Commerce Committee. I am informed that my colleague from Washington (Mr. MAGNUSON), chairman of the Committee on Commerce, also has a Special Committee on Seabed Problems. The Outer Shelf Subcommittee will work closely with this and all other units of the Congress concerned, as well as with the several agencies of the executive branch.

OPEN LETTER TO MEMBERS OF CONGRESS FROM POW WIFE UNDERSCORES NEED FOR RELENTLESS PRESSURE ON HANOI

Mr. MONTOYA. Mr. President, there is a particular urgency to speak up anew on behalf of American prisoners of war in North Vietnam and their families. Mrs. Dottie Hughes, wife of Lt. Col. James Lindberg Hughes of the U.S. Air Force, recently wrote an open letter to Members of Congress calling attention to the special plight of Americans held captive by the Vietcong, and asking each of us for help. Her own husband has been a prisoner of the Hanoi government for more than 2 years. Dottie and her two children—Darrya 12, and Peter 9—live in Santa Fe, N. Mex., having moved there 3 years ago before Jim went overseas.

Dottie Hughes' letter has been written with that special poignancy and sentiment that a wife and mother feels for families undergoing the same heartbreaking circumstances she and her children are experiencing, and expresses the cruel and gnawing feeling that their loved ones are being neglected and treated with indifference by the American Government. I ask unanimous consent that her letter be printed in the RECORD at the conclusion of my remarks, and urge that it be given special attention by all Members of Congress.

Mr. President, the faith of Dottie Hughes and other families of American prisoners of war must not be shaken. I hope that we, not only as Members of Congress but as a nation, will not ever forget that these fine men in the U.S. armed services who have served us so well are being needlessly held captive under unknown circumstances, and that they are desperately needed at home. I believe Mrs. Hughes' letter will serve to remind each of us that we must renew our efforts to use whatever powers of persuasion we have to urge the President, our State Department, the South Vietnamese Government, the United Nations,

and others in the field of diplomatic and foreign affairs, to continue to pursue more vigorously than ever efforts to gain release of these men.

Mr. President, the inhumanity of North Vietnam's lack of response to our pleas and efforts in attempting to secure release of American prisoners of war is obvious and deserves the condemnation of all humane peoples and nations alike. The Hanoi government has even refused to provide us with a list of names of American POW's, causing needless anxiety and uncertainty for the wives, children, and parents of these men. As of this writing, there are some 1,400 American servicemen "missing in action" in Southeast Asia, about 340 of whom are known or presumed to be prisoners of war. The Saigon government, in turn, is holding approximately 25,000 POW's in South Vietnam.

Worthy of still further condemnation is Hanoi's persistent refusal to honor and abide by the provisions of the 1949 Geneva Convention. As a signatory to that document, the Hanoi government is bound by its provisions, which call for: First, release of names of prisoners held; second, immediate release of sick and wounded prisoners; third, impartial inspections of POW facilities; fourth, proper treatment of all prisoners; and fifth, regular flow of mail.

The North Vietnamese have refused to respect these requirements of the Geneva Convention despite our repeated urgings. On the other hand, the 25,000 prisoners held in South Vietnamese POW camps are treated in accord with the Geneva Convention. Their names are provided to Hanoi through the International Red Cross; they are allowed to correspond; they are given food, medical attention, treated well, and periodic inspection of South Vietnam's POW facilities takes place. It is hard to believe, Mr. President, that, in the face of this, the North Vietnam regime still refuses to be stimulated or impressed by this policy of humanitarianism under the rule of law, and that it callously and coldbloodedly continues its own policy of failing to respond to any such example set. It is difficult to believe that we are still unable to get from them even so basic a civilized requirement as a list of our prisoners, and we have not been successful in getting our men out.

During the past year and a half, some 2,000 Communist POW's and civilian detainees in South Vietnam have been released by the Saigon government, with our cooperation, and North Vietnam knows only too well that large numbers of their men are still being held prisoner. During the same period, they have released to us but six of our servicemen in 1968; and Hanoi announced on July 3, 1969, that three additional U.S. prisoners would be released, but no further action has been forthcoming.

Mr. President, as a humanitarian issue which transcends all politics and political motives, this matter is of direct personal concern to Americans, to the United Nations membership, and to civilized mankind as a whole.

While we may have succeeded in making our position clear to the Hanoi government—both at the Paris talks and through enlisting the intervention of other governments—nevertheless, I believe we must explore and open up every possible avenue of approach with Hanoi on a renewed and intensified basis.

Mr. President, I cannot believe that there is not some means available to us for securing the release of our U.S. prisoners of war—even if it means releasing all 25,000 prisoners held in South Vietnam, or, as suggested by Mrs. Hughes, possibly organizing an effort permitting the wives of these men to journey to Asia, if this would help persuade the North Vietnamese Government that they must respond on purely humanitarian grounds.

The Hughes family, and families of other American captives wait, hope, and pray for word of and the rapid and safe return of these fine men who have answered the call of their country. So let us all intensify our support for them by demanding renewed and immediate action on the part of the Nixon administration, the State Department, and the United Nations, in putting relentless pressure on Hanoi for their release. We must do everything we can to get the Saigon government to lean over backward in their willingness to go more than halfway—indeed, all of the way—to release prisoners in exchange for American prisoners of war. We must also demand continuous public accounting of what action has been and is being taken to secure their release, and what can be done to insure that this sort of thing does not happen again.

As Members of Congress, we cannot any longer take this important matter on faith, and I urge every Senator to join me in getting not only some results but also more light from the Nixon administration and the Saigon government on the subject.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OPEN LETTER TO MEMBERS OF CONGRESS FROM MRS. JAMES LINDBERG HUGHES, WIFE OF AMERICAN PRISONER-OF-WAR

The unawareness of the citizens of the United States and the seeming indifference of countries all over the world to the special plight of the prisoner-of-war being held captive in Vietnam is heartbreaking. This is especially compounded for families who have children growing without fatherly guidance.

These forgotten men in Vietnam who fought loyally for their country have become trapped in a tragic diplomatic crossfire. They can't be helped by our country—and, they won't be helped by North Vietnam. There is no free flow of mail between families. It has been four years for some families who only 'now the cryptic words, 'missing in action.' There are no available lists of prisoners and very little contact with the outside world.

All that the families can do is to wait—patiently—which we have done in our case for more than two years—waiting for something to happen. But, nothing has, and we have come to a point where we feel that the world must be alerted and asked to participate in this problem. Help must come from neutral sources and impartial groups for these neglected Americans. People with hearts—outside the sphere of this political conflict—must come forth to offer assistance. These men, most of them pilots, are but innocent victims of a bad situation.

I implore that some neutral country intercede in behalf of the wives and families of the prisoners. People with sympathy in their hearts can accomplish miracles, and I truly feel that there are people such as this all over our world who are not aware of the plight of these men and the anguish caused their families by the insensitivity surrounding the problem. I am prepared to journey to Hanoi tomorrow as a wife and mother if this were allowed by the North Vietnamese and permitted by our own government.

I believe sincerely that even the people in North Vietnam realize that family ties are the same the world over, and I cannot feel they would ask less for their own people. If they were approached by an impartial nation, in behalf of the American families, they could not help but allow things they would want for their own people . . . the release of sick and wounded prisoners, free flow of mail between families, acknowledgment of lists and status of prisoners, and ultimate release of all prisoners on purely humanitarian grounds.

I would hope that the Congress of the United States would accept the challenge of this request and work along the lines I have suggested in hopes that it would evoke a favorable response from a sympathetic nation who might peruse the facts with the thought that "but for the grace of God, this could be me."

CONCLUSION OF MORNING BUSINESS

The PRESIDENT pro tempore. Morning business is closed and, under the order heretofore entered, the Chair recognizes the Senator from Mississippi (Mr. STENNIS) for 40 minutes.

S. 2762—INTRODUCTION OF BILL TO AMEND THE CIVIL RIGHTS ACT OF 1964 RELATING TO SCHOOL GUIDELINES

Mr. STENNIS. Mr. President, my purpose is to do everything that I possibly can to help save the public school system for all areas of the Nation. I am convinced that a demanding and hasty application of the extreme guidelines as to school integration will destroy the public schools in many areas of the country, including my own State, and in other areas of the country outside the South, when and if the application of these guidelines in such extreme form is ever actually put into operation there. Further, I am satisfied—and I am familiar with this subject—that the primary purpose of the present school guidelines and their application is merely to enforce racial integration through the schools rather than to improve educational standards.

These guidelines have not been applied, however, except in relatively few cases, outside the South, even though the Civil Rights Commission has repeatedly pointed out, as I shall develop in details later, the conditions of racial segregation in schools outside the South as equal to that found in the South.

It is abundantly clear to me that substantial moderation in the content and application of these guidelines would be brought about if they were applied uniformly throughout the Nation, thus including schools outside the South.

Accordingly, I am today introducing a bill that will provide that school guidelines shall be applied uniformly throughout the Nation.

There is no use to repeat all the facts here, but after years of effort by several of us along this line, even though promises have been made, and intentions have been stated, very, very little effort to apply these guidelines to schools outside the South has ever been shown and virtually no result has been shown.

A sense of common fairness should give wide support in the Senate to this measure. Further, for the first time, it will bring to a test the question of how far the people outside the South want to go in the application of these guidelines to their own schools.

I am further satisfied, Mr. President, that the uniform and extensive application of school guidelines will not be made outside the South unless they are required by law.

Further—I repeat—I am fully satisfied, from my experience with this problem, that this uniform application will result in substantial modification of the terms and application of the school guidelines. If enforced nationwide on an impartial basis, I believe the neighborhood school will be saved and a reasonable form of freedom of choice would thereby be saved.

Before I pass to the main portion of my remarks, I mention a few facts as to what is happening. I am deeply interested in education for all children, and have kept in close touch with the problem through school trustees, school administrators, and faculty members.

I have learned that when school funds are withheld for "noncompliance" it causes more Negro students than white students to be penalized. This is because there are more Negro schoolchildren in many of the school districts than there are white, and this is especially true in the lower grades.

I have learned that Federal loans to Negro students in colleges outnumber the Federal loans to white students in colleges in my State. I find that if these funds should be cut off and denied, the Negro students would thus lose more than would the white students.

I find that withholding of funds is happening at a time when the educational opportunities for Negroes are greater in the entire South than in any time in history, and at a time when the educational opportunities are growing faster than ever before.

The school guidelines being insisted on by the courts, the Justice Department, and HEW are so severe and demanding, timewise, that the school system in some instances will be closed, and in other instances so weakened that the opportunities for both white and Negro children will be destroyed or certainly greatly lessened. A public school cannot continue unless it has some positive local support. Taxes have to be voted. Support has to be given to the faculty in the community. Someone has to serve in the sometimes thankless job of school trustee. Many times there is little or no compensation, nor even money available to reimburse the expenses of members of the local school board.

Now, back to the main points of my presentation today and the background of facts pertaining thereto.

When the civil rights bill was passed, it was argued that segregation is wrong because it denies the Negro an equal opportunity to obtain an education.

If that is true, thousands of Negroes in the North are being denied an equal opportunity for an education.

If that is true, the Justice Department and HEW are grossly derelict in fulfilling their duty to remove injustice in the North and West, and to right the wrong in the North and West.

Let us look at the facts. As early as 1959, the U.S. Commission on Civil Rights reported:

> Concentration of colored Americans in restricted areas of most major cities produces a high degree of school segregation even in communities accepting the Supreme Court's decision. With the migration of Negroes and Puerto Ricans to the North and the West, and an influx of Mexicans into the West and Southwest, the whole country is now sharing the problem and the responsibilities . . .

In 1961, the Civil Rights Commission said:

> This migration has continued. The 1960 Census lists five cities in the North and West, each with more Negro residents than any southern city where separate public schools for white and Negro children were required by law in 1954. Indeed, only 9 of the 25 largest cities in the United States in 1960 lie in the South and 3 of them have completely desegregated their school systems since 1954.
>
> Public schools enrolling Negroes almost exclusively in some cases, and whites almost exclusively in others, are found in many cities throughout the North and West . . .

In 1966 the U.S. Office of Education stated:

> When measured by that yardstick (segregation), American public education remains largely unequal in most regions of the country, including all those where Negroes form any significant proportion of the population.
>
> The great majority of American children attend schools that are largely segregated—that is, almost all of their fellow students are of the same racial background as they are . . .

In 1967, the Civil Rights Commission reported that racial isolation or segregation in the North had increased, not decreased.

The Commission stated flatly:

> The extent of racial isolation in Northern school systems does not differ markedly from that in the South."

In 1967, the Civil Rights Commission report stated these facts:

> The Cleveland city schools were 47 percent nonwhite in 1960. By 1969, they were more than 50 percent nonwhite . . . In 1960, the Philadelphia city schools were 48 percent Negro. By 1965, they were almost 60 percent Negro. This pattern of racial concentration is typical of major metropolitan areas.
>
> . . . The high degree of racial separation in the schools shown by these national figures is found in the North as well as in Southern and border states. In Buffalo, New York, for example, 77 percent of the Negro elementary school children attend schools that are more than 90 percent Negro, while 81 percent of the whites are in nearly all-white schools (90 percent or more white). In Gary, Indiana, the figures are 90 percent and 76 percent, respectively. Again, in the North, the proportion of Negro children in majority-Negro schools often equals or exceeds the national average. In Flint, Michigan, 86 percent of the Negro elementary schoolchildren are in majority-Negro schools; in Milwaukee, 87 percent; in Chicago, 97 percent.
>
> A high degree of racial separation of Negro students frequently prevails regardless of the size of the school system. Examples from Northern and border state school systems are illustrative. Kansas City, Missouri has an elementary school enrollment twice as large as Fort Wayne, Indiana, yet in each city more than 60 percent of the Negro children are in nearly all-Negro schools. Detroit, Michigan has an elementary school enrollment almost four times as large as Newark, New Jersey, yet in each city more than 90 percent of the Negro children are in majority-Negro schools.
>
> Nor does the pattern necessarily vary according to the proportion of Negroes enrolled in the school system. For example, Negroes are 26 percent of the elementary school enrollment in Milwaukee, Wisconsin, and almost 60 percent of the enrollment in Philadelphia, Pennsylvania, yet in both cities almost three of every four Negro children attend nearly all-Negro schools. Negroes are only 19 percent of the elementary school enrollment in Omaha, Nebraska, and almost 70 percent of the enrollment in Chester, Pennsylvania, yet in both cities at least 80 percent of the Negro children are enrolled in majority-Negro schools . . .
>
> Racial isolaion in the schools, then, is intense whether the cities are large or small, whether the proportion of Negro enrollment is large or small, whether they are located North or South.

Despite the fact racial segregation in schools is as extensive in the North as in the South, HEW has done little to correct it in the North while concentrating a strong effort in the South.

The March 1, 1969, report of the Secretary of Health, Education, and Welfare admitted that almost nothing is being done in the North, while a crash enforcement program is underway in the South.

Mr. President, that report came in, as I recall, because of one of the mandates of an amendment that we put on the HEW appropriation bill here last year, which required a larger percentage of the money than therefore be spent toward enforcement in the North, and also that a report of the action taken be made to Congress.

I quote now from the report of March 1, 1969:

> During 1968, for example, there were Title VI compliance reviews in more than 400 Southern school districts as compared to only 40 Northern district reviews in thirteen Northern and Western states. In October of 1968, there were 67 Title VI staff members assigned to the South and only 32 persons covered the Northern and Western states.

That was after we agreed to that amendment offered by the Senator from Georgia, who has worked on this matter for years, and has had some mighty strong promises made to him in previous years by HEW.

(At this point Mr. ALLEN assumed the chair as Presiding Officer.)

Mr. RUSSELL. Mr. President, will the Senator yield?

Mr. STENNIS. I am happy to yield to the Senator from Georgia.

Mr. RUSSELL. I am happy that the Senator from Mississippi has introduced this bill. I do not know how far he will be able to get with it, but I am glad it has been introduced, and I am glad he is making this speech.

I do not think we can talk about this matter too much. There has undoubtedly been more sanctimonious hypocrisy in the administration of this law than there has ever been in the administration of any other law in the entire history of this Republic.

The Senator has read from the reports of the Civil Rights Commission—a Commission established by the Congress of the United States to investigate and make these reports. These statements reveal that there is as high a degree of segregation in such cities as Chicago, New York, and other Northern cities, as there has ever been in the South even before the passage of the 1964 bill.

Mr. STENNIS. Yes.

Mr. RUSSELL. No one has taken any steps whatever to correct it. The only visible gesture that has been made is one relating to the teachers in Chicago. No one has had the forthrightness to move into the schools themselves.

We have had a little taste of this hypocrisy here. Senators who have had segregated conditions in their own States, secure in the knowledge that the Department of Health, Education, and Welfare has no intention of invading their States, vote for more and more restrictive provisions to be applied solely in the Southern States, where they are now not only enforcing the law, but undertaking to enforce guidelines written in that Department which go far beyond the law.

Indeed, they have adopted guidelines that were specifically disavowed here on the floor of the Senate by the former Senator from Minnesota and former Vice President of the United States, Mr. Humphrey, the Senator from Rhode Island, and others who were in charge of the bill.

The situation has cried out to high heaven for justice and rectification; but I have about given up hope of getting any sense of fairness and relief from the Department of Health, Education, and Welfare. I thought at one time that perhaps, on getting a new Secretary, we might somewhere, sometime, run into some man who had a sense of fairness. I have all but abandoned that hope now; but we can continue to appeal to the sense of fairness of our colleagues in this body and in Congress generally, and to plead that if this infringement on not only the rights of States but the rights of the local school districts of the States is to contitnue, it be made general throughout the United States.

If the people of other sections experience what we have encountered in dealing with a group of fanatical bureaucrats who have gone about this very delicate matter in about as high-handed a fashion as it was possible to do, the attitudes of some Senators will surely change.

Mr. STENNIS. Mr. President, I thank the Senator for summing up in such a clear-cut and splendid fashion the facts as they have existed and the practices that have been going on. I have shared with the Senator from Georgia a long time the hope for bringing about some equality and some moderation in the application of these guidelines; perhaps the answer would be a national application. But, with him, I have just about given up. I do not see how anyone who is an advocate of these requirements could fail to support a bill of this kind. I believe in it so strongly that I am willing for it to be applied in my own State. If the Senator is willing to listen for 1 minute more here, I have before me, from the proceedings of the House of Representatives in the CONGRESSIONAL RECORD for July 31, 1969, a speech made there by Representative GREEN of Oregon. I intend to put much of it in the RECORD later, if permitted to do so, but I shall read only quite briefly at this point.

She said:

I am as committed to an integrated society as fully—as completely as any person in this Chamber. I always will be committed to an integrated society. I think that is the only way we can live on our little corner of this planet.

But also I have serious questions about a society that places the major responsibility for our social ills on one insitution in our society. That is what we are doing. We are placing the major responsibility for integration on one institution. I think this ought to be examined by the most ardent supporters of civil rights. Also, I think it is very difficult for any society to cross two social barriers at one time, and this is what we are trying to do.

Representative GREEN went on to support the Whitten amendment that was designed to bring at least some semblance of freedom of choice and to help preserve the neighborhood schools.

She was a very ardent supporter of that amendment and gave examples of her own close friends who came to Washington with high-minded ideas about school integration and bringing order into the schools, but in the course of years gave up and went to Maryland.

Mr. RUSSELL. Mr. President, I read the speech of the distinguished Representative. I can only wish that the same courage and forthrightness that characterizes her remarks would become instilled in the minds of all Senators and Representatives. If it did, this could be rectified within a very short period of time.

Mr. STENNIS. The Senator is correct. I was confident that he had read the remarks.

Mr. President, I ask unanimous consent that the remarks of Representative GREEN be printed in the RECORD for the information of all Senators and for additional circulation.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Mrs. GREEN of Oregon. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I agree with the gentleman from Michigan (Mr. RIEGLE), who spoke a few moments ago. I would say it certainly is wrong to have any black children continue to have less spent on them in school than other children.

It is wrong to have any black children—or any other children—continue to go to rundown and dilapidated and overcrowded schools. It is wrong to have black children—or any children—neglected by a society that professes to care.

If this happens any place in the United States, it will not be just these children who will suffer, but it will be future generations that will suffer, because an irresponsible Government did not give yet another generation the education that was rightfully theirs.

Mr. Chairman, I have voted for every Civil Rights Act that has been before this House of Representatives. I favor the Civil Rights Act.

I have no quarrel with the gentleman from Illinois in terms of the Civil Rights law, but I do quarrel with the way the Civil Rights Act is being administered.

Two or 3 years ago on the floor of the House, I put into the RECORD some memorandums which were sent by HEW officials and were signed by them when they visited for a few days in various school districts. They said in those memorandums which were written and signed by them:

"In "X" school you are to have a black teacher. In "Y" school you are to have a white librarian, etc., etc."

Where is this to be found in the Civil Rights Act?

If anybody on the floor says that the enforcement division of the Civil Rights Act does not require busing, in my judgment he is blind to what is taking place.

When the civil rights enforcement people say that in a school 5 miles away you must have a certain racial mix and then you are not requiring busing—what are we doing? Requiring youngsters to walk 5 miles? Is that what we are asking?

I am not going to argue from the legal standpoint, because I am not a lawyer. But I am going to describe what I think is happening. I think we are witnessing in this country the deterioration of our public school system. I think certain national policies are contribtuing to this deterioration.

All that I would ask is for the House of Representatives in a levelheaded way to examine what is actually happening and what is the result of certain national policies in our school system? Then on the basis of the evidence, make a judgment.

The gentleman from California a moment ago asked the rhetorical question: "How do you enforce civil rights if you do not cut off funds?"

Well, a moment ago we were arguing on another matter and it was suggested another law might be enforced by the cutting off of funds to individuals who abuse the law and he was very much opposed to that.

May I suggest that we are obliged not only to write laws but to see how those laws are enforced and how they are working. I really am not fully persuaded that we have found the absolutely correct solution by cutting off funds to enforce civil rights. It may be that it is true, but I would like to see evidence and I would like to see this question brought out to the stage of "visible discussion"—and not just in private conversations or in the cloakroom.

Recently there was a situation in the State of Mississippi where funds were cut off and the first thing that happened was that 80 Negro teachers were fired.

I think it is a legitimate question to ask: Are we really hurting the very people we want to help? What happened to the black children in this case? I would like to see title VI requirements reexamined by the most ardent supporters of civil rights. Who is being helped? Who is being hurt? How has the cutoff affected the quality of educational opportunity?

Is there another way—a better way to enforce the provisions of the Civil Rights Act against discrimination in any form?

I am as committed to an integrated society as fully—as completely as any person in this Chamber. I always will be committed to an integrated society. I think that is the only way we can live on our little corner of this planet.

But also I have serious questions about a society that places the major responsibility for our social ills on one institution in our society. That is what we are doing. We are

placing the major responsibility for integration on one institution. I think this ought to be examined by the most ardent supporters of civil rights. Also, I think it is very difficult for any society to cross two social barriers at one time, and this is what we are trying to do.

We are trying as a society to cross the racial barrier and the class barrier all at the same time—and, if I may say so, I think the latter is probably creating greater problems, greater disruption—yet we hear very little about it. We have never examined this closely when we talk about civil rights.

I should like to talk informally about a situation of which I know. Again, I do not discuss it from a legal standpoint, but it is what is happening, and I think this case can be multiplied by hundreds of thousands of cases across the country.

The CHAIRMAN. The time of the gentlewoman from Oregon has expired.

Mrs. GREEN of Oregon. Mr. Chairman, 8 years ago one of my close friends came to Washington with the Kennedy administration. This gentleman was and is committed to an integrated society. He had always supported civil rights legislation at the State level as well as the national. This family—and I am going to discuss them in personal terms, but not use their name. I think he would not object. This family is a Catholic family. They are also committed to the public schools. This family, because of income, could probably have moved into almost any area they wanted to in the District of Columbia. This family chose, because of their commitment, to move into an integrated neighborhood. They have three daughters. They placed all three daughters in the public school system.

About 2 years ago or 3 years ago they starting busing 90 youngsters from Anacostia—and I am extremely critical of the deplorable situation of the District of Columbia schools. That is why I am pleased when we voted more funds for vital education programs—funds for the District of Columbia—and all other school districts. I may have different priorities on the programs that we ought to support, and had I had my druthers—I would have increased vocational education funds more and impact aid less. But we must improve the quality of education, and equality of educational opportunity for all. But let me get back to this particular family and their series of problems.

Two years ago their youngest daughter became one out of three white children in an all-black classroom. Ninety youngsters were bused from Anacostia. It was not a "random sample" who were bused—and I do not blame any principal in Anacostia—already overburdened with problems—short of space in the classroom. But discipline problems emotionally disturbed youngsters, were the ones to be bused out. At 8:15 in the morning the small buses came and picked up children of white families in this neighborhood, who had the money to send their children to private schools, and at a quarter to 9 the big buses came from Anacostia and put the black children in the schools to occupy the spaces that the white children had just vacated.

I agree with the gentleman who spoke—and I have forgotten who it was—a moment ago about the questionable benefits to be gained from busing. It is the disadvantaged home, the disadvantaged neighborhood which must be improved equally as much as the school. Will 30 or 35 hours in another school offset the other 120 or 130 hours a week spent in deprivation? Can we continue to ask miracles of a teacher during 5 hours a day in class? If we rely on busing to correct social ills, are we not obliged to ask what is at the end of that bus line? Emphasis on integration and busing unaccompanied by a demand for academic excellence is worthless. This is what we ought to be concerned about—the quality of the programs. But the busing from Anacostia continued and the quality deteriorated.

Last year, this youngster would have been the only white child in an all-black classroom. This family had to face the problem, "Is my first responsibility to provide the best education I can for my daughter, or is my responsibility to maintain my commitment to an integrated class?"

And they decided, as hundreds of thousands of parents across this land are deciding, "My first responsibility is to provide the best education I can for my own child."

So this year they took all three of their children out of the public schools. The oldest daughter had also encountered major problems and threats of physical safety. All three of the daughters were taken out of the public schools and placed in private schools. This friend said—and he laughed—embarrassed as he said it—

"Edith, for the first time in my life—and I am ashamed to admit it—I have a serious question whether I am going to support tax levies and bond issues. I'm now paying for tuition for all three daughters in private schools."

About a month ago this family, because the neighborhood was changing and because of the situation of their three daughters, this family sold their home in the integrated neighborhood and they moved out to Maryland.

Now, what are we accomplishing? What are we accomplishing in terms of improving education? I believe the situation I described has been duplicated thousands and thousands of times all across the Nation.

I want to say that what is happening in terms of national policy affects Oregon. We do not have the problems in Portland that we have in the District of Columbia, but in Oregon this year 126 tax levies for schools were defeated—an all-time high. More and more people become dissatisfied, they are going to refuse to support the public schools. You see it in every State of the Nation.

If this happens, we have another step in this vicious cycle and a further deterioration of the public school system. So I make the plea for the Members who are lawyers and who say the Civil Rights Act is working out as they intended, and that busing is not occurring, take another look, examine the results—really inquire as to whether it is being enforced the way it ought to be enforced, and let us not let the eager beavers in the enforcement division of HEW enforce it the way they want to enforce it irregardless of the law—but require them—if they want to rewrite the Civil Rights Act, to present their proposals to the Congress; let us argue the issues on their merit, and write the laws and decide the issues by a majority vote.

It seems to me these are policies we must consider if we are really concerned about quality education, and we must not continue to let people outside the Government or let those in the executive branch enforce their version of what they think a civil rights law should require.

Mr. STENNIS. Mr. President, I will finish reading now the quotation I was reading from the report of March 1, 1969, and to bring it all together, I will re-read about three or four lines. It reads:

During 1968, for example, there were Title VI compliance reviews in more than 400 Southern school districts as compared to only 40 Northern district reviews in thirteen Northern and Western states. In October of 1968, there were 67 Title VI staff members assigned to the South and only 32 persons covered the Northern and Western states. While significant steps have been taken in hundreds of urban and rural school districts in the South, the large and sprawling urban centers of the North remain relatively untouched.

Mr. President, where is the sincerity, where is the fairness, where is the crusading spirit of those who pass laws and insist on urgent and demanding formulas being carried out and carried out now? Where is the sincerity, that should go along with the application of such a rule when that rule does not apply to one's own State?

The Department of Health, Education, and Welfare has been asked, they have been begged, they have been told, and they have promised over and over again that they would do something about this very matter. And they hardly turned a hand until finally we included a provision in last year's appropriation bill under which they had to make some kind of move.

Mr. President, I refer back now to the address in the House of Representatives by Representative GREEN of Oregon, as it appears on pages 21660 and 21661 of the CONGRESSIONAL RECORD of July 31, 1969. I refer particularly to the paragraph on page 21660 which begins:

Recently there was a situation in the State of Mississippi where funds were cut off and the first thing that happened was that 80 Negro teachers were fired.

That illustrates the course of action I refer to in the first part of my speech with reference to the cutoff of these funds hurting the Negro children, since these teachers were those employed especially in the particular special program supported by Federal funds.

Mr. President, I ask unanimous consent that, beginning there at that page of the address of Representative GREEN of Oregon, the remainder of her address be printed at this point in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Mrs. GREEN of Oregon. Recently there was a situation in the State of Mississippi where funds were cut off and the first thing that happened was that 80 Negro teachers were fired.

I think it is a legitimate question to ask: Are we really hurting the very people we want to help? What happened to the black children in this case? I would like to see title VI requirements reexamined by the most ardent supporters of civil rights. Who is being helped? Who is being hurt? How has the cutoff affected the quality of educational opportunity?

Is there another way—a better way to enforce the provisions of the Civil Rights Act against discrimination in any form?

I am as committed to an integrated society as fully—as completely as any person in this Chamber. I always will be committed to an integrated society. I think that is the only way we can live on our little corner of this planet.

But also I have serious questions about a society that places the major responsibility for our social ills on one institution in our society. That is what we are doing. We are placing the major responsibility for integration on one institution. I think this ought to be examined by the most ardent supporters of civil rights. Also, I think it is very difficult for any society to cross two social barriers at one time, and this is what we are trying to do.

We are trying as a society to cross the racial barrier and the class barrier all at the same time—and, if I may say so, I think the latter is probably creating greater problems, greater disruption—yet we hear very little about it. We have never examined this closely when we talk about civil rights.

I should like to talk informally about a situation of which I know. Again, I do not discuss it from a legal standpoint, but it is what is happening, and I think this case can be multiplied by hundreds of thousands of cases across the country.

The CHAIRMAN. The time of the gentlewoman from Oregon has expired.

(By unanimous consent, Mrs. GREEN of Oregon was allowed to proceed for 5 additional minutes.)

Mrs. GREEN of Oregon. Mr. Chairman, 8 years ago one of my close friends came to Washington with the Kennedy administration. This gentleman was and is committed to an integrated society. He had always supported civil rights legislation at the State level as well as the national. This family—and I am going to discuss them in personal terms, but not use their name. I think he would not object. This family is a Catholic family. They are also committed to the public schools. This family, because of income, could probably have moved into almost any area they wanted to in the District of Columbia. This family chose, because of their commitment, to move into an integrated neighborhood. They have three daughters. They placed all three daughters in the public school system.

About 2 years ago or 3 years ago they started busing 90 youngsters from Anacostia—and I am extremely critical of the deplorable situation of the District of Columbia schools. That is why I am pleased when we voted more funds for vital education programs—funds for the District of Columbia—and all other school districts. I may have different priorities on the programs that we ought to support, and had I had my druthers—I would have increased vocational education funds more and impact aid less. But we must improve the quality of education, and equality of educational opportunity for all. But let me get back to this particular family and their series of problems.

Two years ago their youngest daughter became one out of three white children in an all-black classroom. Ninety youngsters were bused from Anacostia. It was not a "random sample" who were bused—and I do not blame any principal in Anacostia—already overburdened with problems—short of space in the classroom. But discipline problems emotionally disturbed youngsters, were the ones to be bused out. At 8:15 in the morning the small buses came and picked up children of white families in this neighborhood, who had the money to send their children to private schools, and at a quarter to 9 the big buses came from Anacostia and put the black children in the schools to occupy the spaces that the white children had just vacated.

I agree with the gentleman who spoke—and I have forgotten who it was—a moment ago about the questionable benefits to be gained from busing. It is the disadvantaged home, the disadvantaged neighborhood which must be improved equally as much as the school. Will 30 or 35 hours in another school offset the other 120 or 130 hours a week spent in deprivation? Can we continue to ask miracles of a teacher during 5 hours a day in class? If we rely on busing to correct social ills, are we not obliged to ask what is at the end of that bus line? Emphasis on integration and busing unaccompanied by a demand for academic excellence is worthless. This is what we ought to be concerned about—the quality of the programs. But the busing from Anacostia continued and the quality deteriorated.

Last year, this youngster would have been the only white child in an all-black classroom. This family had to face the problem, "Is my first responsibility to provide the best education I can for my daughter, or is my responsibility to maintain my commitment to an integrated class?"

And they decided, as hundreds of thousands of parents across this land are deciding, "My first responsibility is to provide the best education I can for my own child."

So this year they took all three of their children out of the public schools. The oldest daughter had also encountered major problems and threats of physical safety. All three of the daughters were taken out of the public schools and placed in private schools. This friend said—and he laughted—embarrassed as he said it—

"Edith, for the first time in my life—and I am ashamed to admit it—I have a serious question whether I am going to support tax levies and bond issues. I'm now paying for tuition for all three daughters in private schools."

About a month ago this family, because the neighborhood was changing and because of the situation of their three daughters, this family sold their home in the integrated neighborhood and they moved out to Maryland.

Now, what are we accomplishing? What are we accomplishing in terms of improving education? I believe the situation I described has been duplicated thousands and thousands of times all across the Nation.

I want to say that what is happening in terms of national policy affects Oregon. We do not have the problems in Portland that we have in the District of Columbia, but in Oregon this year 126 tax levies for schools were defeated—an all-time high. More and more people become dissatisfied, they are going to refuse to support the public schools. You see it in every State of the Nation.

If this happens, we have another step in this vicious cycle and a further deterioration of the public school system. So I make the plea for the Members who are lawyers and who say the Civil Rights Act is working out as they intended, and that busing is not occurring, take another look, examine the results—really inquire as to whether it is being enforced the way it ought to be enforced, and let us not let the eager beavers in the enforcement division of HEW enforce it the way they want to enforce it irregardless of the law—but require them—if they want to rewrite the Civil Rights Act, to present their proposals to the Congress; let us argue the issues on their merit, and write the laws and decide the issues by a majority vote.

It seems to me these are policies we must consider if we are really concerned about quality education, and we must not continue to let people outside the Government or let those in the executive branch enforce their version of what they think a civil rights law should require.

Mr. STENNIS. Mr. President, the courts must also share some responsibility for the confusion and difficulty that confront our educators, school trustees, and the communities involved.

In some instances the courts have rushed hearings on appeals to the extent of denying the basic principles of due process of law.

And I carefully chose my words there. I know that this is a serious business, and these are serious remarks that I am making.

I cite here the facts relative to a hearing in New Orleans involving the consolidated cases of 33 school districts in south Mississippi.

And I speak with all deference in a personal way to all the members of that court in New Orleans, including the three-judge panel that I will refer to later.

I am not attacking them in any personal way at all, but I am pointing out, as a Member of the Senate, what I consider to be a flagrant case of the denial of due process of law in a case involving hundreds and hundreds, and literally thousands, of litigants.

A three-judge U.S. District Court of the Southern District of Mississippi handed down a judgment favorable to the school districts, authorizing the continuation for this year of their desegregation plan based on freedom of choice, primarily on the grounds there was not sufficient time from the date of the order until the beginning of the school term to complete and implement and put into operation new school integration plans—additional school plans—for the year 1969–70. The United States and other plaintiffs appealed. The case was heard before a panel of judges of the U.S. Court of Appeals of the Fifth Circuit at New Orleans—three members of that court.

On June 25, 1969, the clerk of the U.S. Court of Appeals for the Fifth Circuit addressed a letter to counsel of record in all cases, including those in which there were private plaintiffs and those in which the plaintiff was the United States of America, to the effect that the court would hear oral argument on all of these cases "on the motion for summary reversal and the merits in all of the cases both private plaintiffs and those of the United States." This letter further advised that the argument would be held in New Orleans beginning at 9:30 a.m., July 2, 1969, and any memorandums or responses would have to be filed in the office of the clerk by noon, July 1, 1969. In this letter, it was recited that the court had taken notice of the district court's order with respect to the record but that since appeal was being expedited on the original record, the U.S. attorney should make arrangements with the district clerk to transmit to the clerk of the court of appeals the entire record of the district court so that same would be available to the court if needed during the argument and summation. It was further stated that the court recognizes that "this is a huge record involving a large number of parties and matters of great public interest and importance."

I recite that matter here to show that the court knew this was of the utmost importance and of the greatest public interest to many people.

The letter was dated June 25, 1969, and was received by some of the counsel of record on June 26, and by others on June 27.

That meant that in this vast number of cases, with a record that I understand composed of five large boxes that were in the courtroom, but never used—not during the argument—counsel had at best Friday, June 27, Saturday, June 28, Sunday, June 29, and Monday, June 30, to prepare any response, since it had to be filed July 1, 1969. That is a total of 4 days, with a Saturday and a Sunday intervening—Friday, Saturday, Sunday, and Monday. Only two of those were what might be called workdays by staffs, stenographers, and secretaries.

Briefs filed by the United States of America as appellant were received by

some of the counsel for defendant school districts on Monday, June 30, 1969, and by others on Tuesday, July 1, 1969. In addition, supplements to the brief were delivered to counsel on the morning of the hearing, July 2, 1969. The case was heard that day. Thus, counsel was afforded no opportunity whatsoever to examine or inspect the supplements to the brief in order to reply thereto either in writing or orally. They did have these 4 days, but only 2 were ordinary working days, to apply to the appellant's main brief.

The proposed opinion and decree as submitted by the private plaintiffs and the United States of America—this thing came to a head there on July 2, and they already had a decree prepared; the United States of America and the private plaintiffs had a decree already prepared—not submitted to nor seen by counsel for the school districts until the morning of the hearings, July 2. Accordingly, there was no opportunity to examine same or make any meaningful comments in regard thereto.

These facts within themselves, I submit to my colleagues in the Senate, obviously show a denial of due process of law to the litigants, in that there was not sufficient notice and time for the school districts to respond to the appeal and the proposed decree, nor to prepare for the hearing. This hearing lasted only 1 day, and a decree was handed down by the panel the next day, July 3, 1969.

I understand that when attorneys for the Government got there, they already had the decree written out. I understand that attorneys for the school districts were told they could bring along a decree written out in their favor. But who was so foolish as to think that a part of this little 4 days of time to prepare should be used in writing up a decree in their favor? I submit that the question answers itself.

This curtailment, which amounted to a denial of due process of law, cut off the right to be heard of literally thousands and thousands of people throughout the 33 school districts which cover all or the most of 33 counties. It cuts off the rights of hundreds of school trustees, administrators, superintendents, and other officials who had labored long and faithfully in their efforts to perform their duties in their official capacity. I know something about what a job it is to go through those long, long hours of tortuous proceedings. Few of them receive any pay for it. They barely receive some of their expenses. I understand they do not receive their expenses for coming to meetings.

This happened at a time when most of the courts are greatly extending, rather than curtailing, the rights of litigants, including those charged with crime, and extending the requirements of what is called due process of law. All persons charged with rape, murder, treason, theft, or other felony are having extended to them rights and privileges far beyond what has heretofore been known as due process of law, and are rendered actually untouchable in many instances.

I refer to matters such as the Miranda case. The great history of this trend was brought forth in debates on the floor of the Senate last fall. At a time when all these extensions were afforded to everybody, even those charged with the most heinous crimes, when due process of law is being extended with more and more liberality, these school trustees, laboring with this problem to which Representative GREEN refers, were cut off—I say on my responsibility as a Member of this body—without being given due process of law in this instance.

I speak with deference to the judges on this panel, but conclude that this set of facts clearly shows a lack of due process of law having been accorded these litigants at this appellate level. In fact the school districts were denied appellate consideration of their case.

Thus, harm has not only been done to the judicial process but if this case is pursued to conclusion in this fashion it will also do harm to the cause of public education.

But, after all, the ills are measured in the field of education, but the blight on the judiciary for its failure to afford due process of law to the thousands of people involved here will remain. The indelible stain will not be erased.

In view of all the foregoing facts, I think the Department of Justice should in its discretion—I hope that it will, and I ask to—withhold any further prosecution of these cases until all of the cases can be reviewed by competent advisors—competent educators—who have time and a chance to make a fair, painstaking study of the problem and a chance to consider alternative plans on their merits and from the standpoint of educational achievements.

I am now talking about the advisers to the school trustees and the courts. They are people who are employees of the Department of Health, Education, and Welfare. I have nothing personal to say about them. But every informed person knows that they are aggressive and vigorous. They openly say, and have said to me, "We will use every line, every sentence, every phrase, and every bit of the argument on the floor of the Senate or the House, bring in the reports, everything in the law, any loose language, and anything else, to try to carry our point and rush this thing through to completion." I am talking about total integration of the schools. They have told me that many times. At the same time, though, limping and lame, they just could not get around to applying their own doctrine anywhere, with slight exceptions, except in the South.

Incidentally, the original Court decree apparently was so severe in its language that it cut off the rights of the school trustees to propose an alternative plan. But I am glad they did modify the language and finally made it clear that the school trustees, after all, would have a chance to propose an alternative plan. That was clearly set forth in the cases from the Supreme Court of the United States.

Mr. President, I do not think any of these advisers have any business representing the Department there and being used by the Court as advisers. These advisers should not be connected with the Government or any department of the Government; nor should they be responsible to any department of the Government, but should report their proposals to the local boards of the school districts in litigation.

I am sure some of these HEW people are very fine, but they are working for Mr. Finch, and they are going to have a plan there of which Mr. Finch approves, or he well reject it.

I am not attacking him personally. He has one of the worst jobs in the whole Government and I make nothing except complimentary remarks with respect to him personally. My point is that these advisers should not be working for anyone. They should be independent.

Instead we now have investigators from HEW hastily trying to devise integration plans for 33 school districts.

I know these investigators have been doing that in my State. They are a nice group of men as far as I know, but it has been directly reported to me by a gentleman I have known all of my life, and I know he is telling the truth, that one of these investigators said, "We have a job to do here, and we have a little over a week to do it when we should have 4 months." That proves my point. This is a shotgun action and a shotgun method, which is contrary to all reason.

Under direct decree from this three-judge panel, these HEW investigators are being given only about 15 days to study all the conditions and educational problems in the 33 districts and only a few more days more than that to devise plans to submit to the trustees. I learned of the modified decree of the fifth circuit panel wherein they would permit the trustees to propose an alternative. They did modify it so that the trustees could have an alternative proposal. The districts are to have only 10 days to file objections to the HEW plan or to file alternative plans.

As I said, one of these gentlemen stated that they have only a week or 10 days to devise plans when they need 4 months to do the job.

I hope in some way, and there are ways it can be done, that that court will yet give these trustees an opportunity to present their case on appeal and if they still reverse the lower court, that at least they will give them a reasonable opportunity and give the investigators—I hope they are independent investigators, but if not, independent from the HEW—a reasonable chance because this matter involves literally hundreds and hundreds of teachers, thousands and thousands of students, and it involves the school buildings and all the complications that go with it.

These schools are scheduled to open August 25. The court is trying to beat that deadline. It is very obvious. I hope that is the only reason there was such a scanty appellate hearing and such a pell-mell rush into this matter.

Mr. President, in many areas we are not prepared for these drastic changes which demand almost total integration now. A sufficient number of teachers are not available many times; even if available, many of them are unwilling to proceed in their profession under the drastic conditions required.

These conditions are not peculiar to

the South. In one of those rare proceedings outside the South I read about teachers being offered a bonus of $1,000 to accept a transfer in order to comply with an order from HEW, but that the teachers' union sharply objected. The school superintendent stated that he would ask for $5.6 million additional in Federal funds to implement the new plan.

The great city of Chicago with all the resources behind it, has not had separation of schools by law. This demand on them seems to be so great that they are sending a bill here, for their expenses perhaps through their Senators or Representatives.

The PRESIDING OFFICER (Mr. CRANSTON in the chair). The Senator's 40 minutes have expired.

Mr. STENNIS. Mr. President, I ask unanimous consent that I may proceed for 4 additional minutes.

The PRESIDING OFFICER. Without objection, it is ordered.

Mr. STENNIS. Mr. President, on the other hand, many educators inform me that workable plans are available; school trustees and educators also advise me that some plans are being used to carry out an orderly and effective school integration program. I know as a fact of my own personal knowledge that hundreds and hundreds of school trustees and school officials, dozens and dozens of superintendents and administrators, and many faculty members have taken the lead and have patiently worked with sincerity and sacrifice—admirable sacrifice—on these school plans. Some of the plans are working. But Federal officials, and many times the courts, are now rejecting these efforts as insufficient and are thus rebuking and rejecting the people that are really trying to carry out the demands of an integration policy. Commonsense tells us that the rejection of the efforts by these people does not make sense.

I fully recognize that any discrimination against any child in public school matters, because of color, is illegal under present law. However this does not mean that all children and all parents must be denied all their basic rights concerning school attendance. Children that are not objects of possible racial discrimination also have certain rights that cannot be denied. Certainly everyone has some right to have a part in making choices as to schools.

The trend of these school guidelines and their application puts everyone in a strait jacket in order to meet the required formulas. The trend of guidelines and orders chains everyone down to the requirements of the formula. Like the serfs of old who were "tied down to the land," every child now is tied to a formula.

These formulas are tied to the percentages of school population according to color. They have long been used by HEW and are now being adopted by the courts. This is another instance of doing the opposite of what was used in the original argument in the passage of the civil rights bill.

Mr. President, I introduce, for appropriate reference, the bill to which I have already referred. Briefly, the bill would require as a matter of law that compliance be nationwide regardless of the history of the law in any area with reference to public schools. I ask unanimous consent that the bill be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2762) to amend the Civil Rights Act of 1964 to assure a more uniform enforcement of title VI thereof, introduced by Mr. STENNIS, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

S. 2762

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 601 of the Civil Rights Act of 1964 is amended by inserting "(a)" immediately after the section designation thereof and by adding at the end thereof the following new subsection:

"(b) It is the policy of the United States that compliance with the provisions of this title be effected uniformly in all regions of the United States and that the provisions of this title be enforced against de facto discrimination to the same extent as against de jure discrimination."

Mr. ALLEN. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. ALLEN. Mr. President, I commend the distinguished Senator from Mississippi for his statesmanlike address, for its logic, its reasonableness, and its fair approach to this problem. I should like to associate myself with his remarks.

Some weeks ago, we read in the press that the guidelines to which the Senator has referred, and which are not receiving fair and equal enforcement throughout the country, had been relaxed.

For the life of me, I see no evidence whatsoever of any relaxation of those guidelines. Far from it. If we did not know that there had been a change in the occupant of the White House, if we did not know that there had been a change in the position of Secretary of Health, Education, and Welfare, we would think that members of the past administration were still in charge. Because just as soon as it was suggested there had been a relaxation of the guidelines, funds were withheld by the Secretary from schoolchildren, and many new suits were filed to place these matters in the Federal courts.

Instead of relaxation, we see an escalation of strict enforcement of the guidelines.

The PRESIDING OFFICER. The time of the Senator from Mississippi has expired.

Mr. STENNIS. Mr. President, I ask unanimous consent to proceed for 1 additional minute.

Mr. ALLEN. Mr. President, I ask unanimous consent that the Senator's time be extended for 10 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. STENNIS. I am delighted that the Senator can have 10 minutes.

Mr. ALLEN. I commend Representative JAMIE L. WHITTEN, of Mississippi for the amendment which he was successful in getting adopted by the House last week to the Health, Education, and Welfare appropriation bill, an amendment which was passed by the House, as I recall from reading the newspapers at that time, as to 1968 appropriations for the Department of Health, Education, and Welfare. It provided in 1968, as it did in the present amendment, that the funds appropriated for the Department of Health, Education, and Welfare cannot be withheld to force the busing of students, and cannot be used to force the closing of schools, and cannot be used to force any child to attend any particular school against the wishes of that child's parents. As I understand it, when that bill reached the Senate in 1968, the amendment was emasculated by having the additional provision added that such measures cannot be used to force a racial balance in schools. The Department of Health, Education, and Welfare has taken the position that they are not using methods of enforcement in order to force a racial balance in school systems.

However, that is exactly what is being done.

As the Senator from Mississippi has stated, segregation through the years has not been confined to the South, but the guidelines are being enforced unequally throughout the country.

I heartily approve of the bill introduced by the Senator from Mississippi and hope that it will pass.

In Alabama, our State government and our people want to see every child in Alabama receive a quality education. We want to see freedom of choice exercised by school patrons. It is the policy of our school system that any child be allowed to go to any school in that system that he or she wishes to go to, but not be forced to attend a school he does not wish to attend.

So far as I have been advised, the Supreme Court has never ruled that freedom of choice is illegal. Alabama's school policies are not designed to help only the white pupils and operate against Negro students. Far from it.

I received a call the other day from patrons of a colored high school in Alabama, which is a fine school, with a wonderful school building and fine faculty and student body. Its patrons were calling me to ask what could be done to halt the closing of their school.

They told me, "They have ordered the closing of our school. We have a wonderful band. We have a splendid football team and a wonderful spirit in our school and we do not want to see it closed. We do not want our children to have to go to a white school."

Mr. President, that is what application of the guidelines is requiring. Yes, that and the reverse of that.

Mr. President, in Alabama, the Department of Health, Education, and Welfare, and the Federal courts have caused the closing of school buildings, mostly new, which have cost over $15 million. They have ordered them closed in order to carry out the policy of forced integration of our schools.

We used to hear it said that we could not discriminate in the operation of our public school systems. But now present policies of HEW constitute discrimination in reverse, because they are forcing integration and not just outlawing segregation.

Thus, speaking on behalf of the people of Alabama, I would say to the present administration, do not destroy our public school system.

By continuing the present policy of the Department of Health, Education, and Welfare, both in the application of the guidelines and by throwing these matters into the Federal courts, the Department and the administration are destroying the public school system of Alabama.

I would say to the administration, which on occasion I support if its policies are in accord with my convictions and principles, that in Alabama—and I believe in the whole South—the present administration will not be judged by whether it presents a balanced budget to the country, it will not be judged by whether we have a recession, or whether we have good times, it will not be judged by whether the administration is able to extricate the country from the Vietnam war, but it will be judged on the fairness with which it handles the school situation in Alabama and throughout the South.

Again I say to the administration, do not destroy our public school system. We love our schoolchildren. We want to see every schoolchild, irrespective of race, receive a quality education. Under the rules and policies of the Department of Health, Education, and Welfare, and the present administration, they are not going to be able to get that quality education.

Mr. President, I thank the distinguished Senator from Mississippi very much for yielding to me.

Mr. STENNIS. I thank the distinguished Senator from Alabama for his comments.

Mr. President, I yield the floor.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH, AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

Mr. MILLER. Mr. President, I ask unanimous consent that the Senate resume the consideration of the unfinished business.

The PRESIDING OFFICER. The clerk will state the bill by title.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the bill.

The Senate resumed the consideration of the bill.

IN SUPPORT OF THE PRESIDENT ON THE ABM

Mr. MILLER. Mr. President, the Senate debate on the ABM has been in the finest traditions of a separate, coequal, independent branch of the Government. Everyone has had an ample opportunity to make his points. In my judgment, further debate will change no minds, and I hope we can get on with the voting on this matter and any amendments that may be offered.

I have been pleased that this debate has been free from partisanship, because anything relating to the security of our country certainly should not appear in the partisan political arena. I note, for example, the great leadership among my Democratic colleagues, especially the Senator from Mississippi (Mr. STENNIS) and the Senator from Washington (Mr. JACKSON), in support of the President on this issue.

It is regrettable that a certain amount of emotionalism has entered this controversy—not so much here on the floor of the Senate as among some members of the public. When the national security is involved, it is most inappropriate and unhelpful to suggest that those on either side of the controversy have a premium on morality, good faith, or wisdom. Resort to such extreme tactics, I might add, generally tends to weaken the position of those who follow them, because the natural inference is that a genuinely strong position would command a confidence which would preclude the use of such tactics.

This is a most complex issue for all of us. None of us is a physicist, and no Member of Congress I know of has had much contact with Soviet or Red Chinese officials, much less has participated in extensive negotiations with them. Accordingly, we are forced to look to those possessing expertise in the fields of physics and diplomacy, supplemented by experts—both civilian and military—in the field of national defense and such knowledge and experience as we individually possess on that subject. Ultimately a judgment factor is involved, and when some of the experts differ among themselves, judgment is more difficult. It is for this reason that I have constantly made the effort to point out that there are good, honest, decent, and conscientious people on both sides of the controversy.

MY CONCLUSION

I do say, however, that my own careful analysis of the evidence, the arguments, and the professional judgments advanced has caused me to conclude in support of the President on this issue. And let let me point out that the President's assurance to the Congress that each phase of the deployment of the ABM will be reviewed to insure that we are doing as much as necessary but no more than that required by the threat existing at that time—this assurance seems most reasonable in light of the anticipated negotiations with the Soviets on the subject of arms control and limitation.

PUTTING COST IN PERSPECTIVE

A great deal has been said about the cost of the ABM, the size of the national defense portion of the budget, and the needs of other areas of Government for money. Interesting as this information is, it seems to me that it is somewhat beside the point. If, indeed, one concludes that the the ABM "won't work," we should not approve it—regardless of how lean or fat the budget may be. If, on the other hand, one concludes that it will work and that it is likely to be necessary to our Nation's security, then it should be approved, and the state of the budget is very secondary.

I appreciate that the Senator from Missouri (Mr. SYMINGTON) is concerned about the size of the defense portion of the budget. So is everyone else. However, the size should be placed in perspective if we are to properly evaluate it. Thus, for example, the $78 billion defense budget is about 40 percent of the total expenditure budget of $195 billion. It is estimated that our total GNP for fiscal 1970 will be $960 billion, so you can see that defense will comprise approximately 8.1 percent of our GNP. If the estimated cost of the war in Vietnam totaling $28 billion is taken out of the $78 billion defense budget, this leaves $50 billion or 5.2 percent of our GNP.

For fiscal 1969, our GNP totaled $895 billion and Defense Department expenditures $75.2 billion, or 8.4 percent of our GNP. If the estimated cost of the war in Vietnam totaling $28 billion is taken out of the $75.2 billion defense budget, this leaves $47.2 billion, or 5.7 percent of our GNP.

These percentages should be compared with 1964—8.1 percent, GNP $612 billion and defense $48.9 billion—when the war in Vietnam costs were relatively small; 1959—8.5 percent, GNP $469 billion and defense $40 billion; and 1954—9.5 percent, GNP $362 billion and defense $34.4 billion.

Compared to 15 years ago, 10 years ago, 5 years ago, and last year, the portion of our gross national product going to all Department of Defense costs for fiscal 1970 is smaller in three and equal in one. And if the costs of the war in Vietnam are taken out, and this should be done to look at the defense budget from the standpoint of "sufficiency" compared to Soviet military power and also to accurately compare 1964, 1959, and 1954, the percentage of GNP for fiscal 1969 and 1970 is greatly less. This is the perspective we should have in evaluating the argument of the Senator from Missouri. Furthermore, it would be well to consider that, with a GNP of only half that of the United States, the Soviets have a military budget equal to ours—exclusive of the costs of the war in Vietnam—so it is clear that the burden on the people of the Soviet Union is very great.

On the money point, which, as I have pointed out, is something of a side issue, it appears that most of the opponents are favorable insofar as strictly research and development costs are concerned.

Of the total authorization before us, they only question some $345 million, which is scheduled for procurement leading to deployment. Of the $78 billion defense budget, one could hardly argue that $345 million is a major factor. For those who do not favor even the research and development and think the whole ABM program should be canceled, we are talking of a system which, fully deployed at all sites, would cost an estimated $10 billion, of which $9 billion would be spread over the next 7 years. This could hardly be said to be of major significance in the overall Federal budget.

WILL IT WORK?

The first real point to judge on this issue is whether or not the ABM system will work, because, regardless of how lean or fat the budget may be, it would be improvident to spend any money at all for something that will probably not work. Here is where one must look to the scientific community—particularly the physicists. As I pointed out to the Senate on May 1, Prof. Eugene P. Wigner, Nobel Laureate of Princeton University, is preeminent; and his speech of April 29 supporting the ABM before the American Physical Society, which I placed in the RECORD, is most persuasive. Even Prof. Hans Bethe of Cornell University, one of the opponents, concedes that the system could be effective and places his opposition on the matter of timing rather than on the "won't work" theory.

IS IT NEEDED?

The next point is whether it is needed, because, even if it is likely to work, it would be improvident to go ahead on it if it will not be needed. Here is where so many opponents have so much trouble, because it is necessary to project not only our own capabilities, but those of the Soviets and Red Chinese, many years into the future. It is not a question of our relative strengths today, but rather our relative capabilities in the mid-1970's. The best intelligence information we have indicates that by that time period the Soviets will have sufficient power to seriously threaten our deterrent capability; and the Red Chinese will have sufficient power to hold some of our major cities hostage. What their intentions will be then, no one knows, and there has been too much hair splitting, I think, over whether the Soviets are "going for a first strike capability"—as if it was their intention to follow a first-strike strategy—or whether they will have such a capability. It is the capability which poses the threat. Hostile intentions, without the capability, do not pose the threat. Friendly intentions, with the capability for a first strike, do not pose a threat either; but intentions can change. So it is the capability which is of primary importance.

Against this there are those who argue that we should, nevertheless, ignore the capability and stand still. Otherwise, they say, we will escalate the arms race. But who, indeed, has been doing the escalating? Who was the first to deploy an ABM? Who was the first to test it? Who is moving toward a capability of destroying our deterrent power? Who has refused during all of these years to enter into negotiations, much less an agreement, on nuclear arms limitation and control, with effective inspection to prevent cheating? It has not been the United States. I find this argument not only invalid but a dangerous form of unilateral disarmament; because one can have unilateral disarmament by standing still while a potential adversary moves ahead—just as well as by destroying one's weapons while a well-armed adversary stands still. Additionally, as I shall point out later on, the cost considerations make it unlikely that the Soviets would attempt to neutralize our ABM system.

Hopefully, the United States and the Soviet Union—and eventually the Red Chinese—will enter into a meaningful agreement which will put a stop to the arms race. To be meaningful, there will have to be some procedure to prevent cheating, and this means a certain amount of inspection. However, we have been advised that negotiations—even if they prove successful—will be terribly complex and of several years' duration—much longer than those resulting in the Nuclear Nonproliferation Treaty. It would be suicidal to entrust the security of our people meanwhile to mere hopes and trust in the "good faith" of our adversaries.

IS AN ABM THE BEST ANSWER?

The third point is whether, assuming something is needed to counter the capability of the Soviets and Red Chinese, the ABM is the best answer. For example, it is argued that it would be cheaper to simply add more Polaris submarines, or to add more Minuteman missiles, or to put our missiles in harder sites. There are several insuperable difficulties with such alternatives. For one thing, they do not afford us a capability of protecting a few of our cities which could be threatened by Red Chinese intercontinental ballistic missiles. To the people in those cities, it would be no protection if our only option was massive retaliation against Red China. If a small attack, by accident or design, occurred from the Soviet Union, our President surely should have another option than massive retaliation, which could work a holocaust on both sides. From the standpoint of the Soviets, there is no cause for concern about a purely defensive system, like the ABM, which is designed to protect our deterrent capability and, to the limited extent necessary to guard against a Red Chinese threat, a few of our cities.

TIMING OF "DEPLOYMENT"—UPCOMING TALKS WITH SOVIETS

A fourth point relates to timing of deployment. This is raised by those who say they recognize the first three points; but for the current fiscal year, at least, we should authorize the President merely to engage in further research and development on the ABM. There are three arguments revolving around this point, any or all of which are dominant in the thinking of those who advocate delay in deployment:

First. The design of the ABM system is defective in that the radars are too vulnerable to enemy attack. There are two answers to this: If, indeed, there were an enemy attack of sufficient size to threaten the radars, there would be no choice except massive retaliation—launched before the radars were struck; and, with deployment of both phases of the ABM system not scheduled before the mid-1970's, there will be time to modify the radars or to "harden" them if such action is feasible.

Second. Future action by the Soviet Union in deployment of missiles which would threaten our retaliatory force hopefully may indicate that they are not pursuing a first-strike capability. There are two answers to this: If we wait, our hopes may well not be borne out. After all, there is no indications that the Soviets will slow up or stop their deployment of such missile power; all indications are the other way. And if our hopes are not borne out, it could be too late due to the long leadtime required for deployment of an ABM system. This, incidentally, is where I must respectfully disagree with Prof. Hans Bethe. If, indeed, the Soviets slow up, reorient their system to meet a Red Chinese threat, or stop such deployment, we can slow up, reorient, or stop our own ABM deployment in line with the President's assurance to which I have previously referred.

Third. If the Congress authorizes the President to commence the long leadtime procurement required for deployment by the mid-1970's, this will undercut the arms control and limitation talks which are scheduled to begin late this summer with the Soviets. The point seems to be that the President's bargaining position with the Soviets will be better if the Congress refuses the authorization which the President has requested. My reaction is that his position would be undercut by such action by the Congress. This is supported by the recent testimony of former Secretary of State Dean Acheson—June 11, 1969, before the Subcommittee on Economy in Government of the Joint Economic Committee—as follows:

> As we add to, maintain, and protect our power, we do not in any way diminish the possibility of an agreement with the Soviet Union. In fact, we strengthen it . . . The idea that the Soviet Union will negotiate with us in the sense in which we use that term is quite untrue . . . The Russian conception of negotiation is carrying on of war by other means . . . Therefore, as we strengthen ourselves, we bring about that calculation of forces by the Russians which induces them to make a deal. They are not moved by argument, nor by exhortation, nor by considerations of morality. They are moved only when their calculations lead them to believe that it is more advantageous to make a deal than not to do so.

Mr. Acheson has had considerable experience in negotiating with the Soviets. With the Korean war, one could say that he learned the hard way and, having done so, his viewpoint is even more to be respected.

But there is an even greater deficiency in this argument to limit the President's authority to research and development without deployment. It is that "research and development," in the broad sense, includes service testing, and there can-

not be service testing without deployment. It is in the service testing that deficiencies are very often detected on the basis of which modifications are made in a weapons system—be it an aircraft, a tank, a missile, a radar, or an ABM system. Those Members of the Senate who seek to limit deployment to Kwajalein Island rather than to North Dakota and Montana, as the President requests, understand very well that service testing is a part of research and development. Where they err, it seems to me, is that service testing at Kwajalein would have to be followed by final deployment to North Dakota and Montana; whereas deployment for service testing in North Dakota and Montana would be followed by final deployment, with such modifications as service testing indicates should be made, at minimal cost to the taxpayers. I understand informally that at least $2 billion would be saved by handling the service testing this way, and there seems to be no good reason why this extra cost should be incurred.

POSSIBLE SOVIET RESPONSE

A fifth point to be considered is whether a fully developed ABM system in the mid-1970's could be neutralized by the Soviets simply by increasing the number of their SS–9 missiles. Theoretically this is possible, but as a practical matter it is unlikely because the assured destruction required to preclude us from making a sufficient retaliatory strike would be too costly. In other words, although a large force of SS–9 missiles could destroy most, if not all, of our Minutemen without an ABM protection, with an ABM system there would be enough Minutemen which would survive to provide us with a deterrent capability. From that point on, the cost of adding to our ABM system would be much less than the cost of the additional SS–9's required to overcome our deterrent capability.

It is for this reason that William R. Kintner, in his article "The Prudent Case for Safeguard," published last June, concludes that, with the Chinese Communist threat by the 1970's, the most stabilizing system as between the Soviets and the United States is the Safeguard ABM system.

The interesting and informative statement by the Senator from Wisconsin (Mr. PROXMIRE), "Russian Military Power Limited by Economic Weakness," lends support for the conclusion that cost considerations make it unlikely that the Soviet response to Safeguard would be to try to neutralize it. And this holds true even if the Soviets proceed to provide their SS–9's with a MIRV capability.

POSEIDON AND BOMBER FORCE

The so-called overkill adherents argue that even if all of our Minutemen were destroyed, we would have sufficient deterrent power left over in our Poseidon submarine force and our strategic bombers. This argument, of course, completely ignores the Red Chinese threat to hold some of our cities hostage unless we have a defensive system. But vis-a-vis the Soviets, it ignores the observations made by Dr. Wigner about the city evacuation program in the Soviet Union. Estimates of fatalities in the Soviet Union which are made by the "overkill" adherents therefore are unrealistic. As Dr. Wigner points out, only 35 to 45 percent of such fatalities could be attributed to Poseidon, and this could be a gross overestimate because the calculation assumes that all our submarine fleet is on station and the people have not evacuated their cities; further, technical developments may negate its effectiveness, so that it would be dangerous to put all our trust in a single-type deterrent. The capability of negating the effectiveness of our bomber force is even greater.

The underlying weakness of the "overkill" argument is that it proceeds on the false assumption that our planners are seeking to add to the number of weapons that can be detonated on major targets in the Soviet Union. Rather, what is being attempted is to maintain the number of such weapons we believe required for "assured destruction capability" after—not before—a first strike against us and after—not before—running the gauntlet of Soviet defenses, taking into account also anticipated failures among our strategic weapons. Accordingly, it is invalid to take into account our tactical nuclear weapons, which are designed to deter attack against Western Europe and, because of their short range, cannot be taken into account in calculating assured destruction capability against the Soviet Union.

NAIVETE TOWARD SOVIET LEADERS

Opponents of the Safeguard system are motivated by various arguments, the major ones of which I have sought to rebut. I do not question the good faith behind the arguments, although the logic, assumptions, emotionalism, and side issues must be questioned. But there is one weakness which, though not representative of the opponents, characterizes the approach of a few of the opponents and concerns me more than all of the questionable arguments. It is a naivete toward the Soviet leaders—an inexplicable tendency to overlook their words and especially their deeds, and to proceed on the basis of hope rather than on the basis of realism in our relations with them.

I am not talking about Red Chinese leaders or Rumanian leaders or Yugoslavian leaders, whose ideological differences demonstrate that there has been a departure from the Communist monolith—one which, in the case of Yugoslavia and Rumania, at least, provides optimism for genuinely friendly relations. All of us hope for genuinely friendly relations with the Soviet leaders, but this hope must be tempered with realism and a willingness to look at things as they are. As former Secretary of State Acheson testified on June 11:

> The power of the United States alone blocks the Sino-Soviet ambitions in the world. They may fall out between themselves, they may have difficulties, they may fight with one another in a minor way, but on one matter they are completely and wholly agreed. The United States is the enemy.

He continued:

> The idea has been expressed that if we take the step proposed here [authorization of the Safeguard system] it is going to make negotiations much more difficult. It is not going to make it any more difficult. Any negotiation will be difficult to start with. All the problems are very difficult. They are not made any more difficult by adding to our defense. I doubt emphatically that some great transformation of relations with the Soviet Union is about to move us from an era of confrontation to a phase of negotiation. We have been negotiating with the Soviet Union all along. We shall be involved in confrontation into an indeterminate future. The two go hand-in-hand in the Soviet view, and perforce we must see the matter in that perspective. The Soviet Union will come into agreement with us only in the measure that it discerns advantage in doing so and detriment in doing otherwise. I certainly do not oppose such negotiations. I am merely warning against the notion that the Soviet Union is on the verge of a conversion to tractability and accommodation.

It seems to me that the recent Czechoslovakian invasion underscores the realism of the former Secretary's views.

I have always supported negotiations with the Soviets, and I have advocated people-to-people type programs between our two countries as a means of laying a foundation for better relations. We must keep trying for better relations, because these would diminish the possibilities of war and enhance the progress toward a more orderly and peaceful world. But our efforts will not succeed and, indeed, could cause us to go backward if we do not proceed on the basis of things as they are rather than on the basis of what we would like them to be—if we do not maintain a posture of resoluteness and firmness of purpose.

SUPPORT OUR PRESIDENT

Mr. Acheson well summarized the ABM controversy when he said:

> Suppose the expenditure is not made, and suppose the choice turns out wrong. The consequences could be disastrous. Turn the proposition around. Say to yourself that, to be on the safe side, we had better go ahead. Then suppose that the proponents of the ABM turn out to be wrong and that this weapon will not do all that they say it will do. Has anything disastrous happened? Have you wrecked the United States? Have you ruined the internal economy? Certainly not. . . . The responsibilities seem to be wholly different. To reject ABM may mean terrible trouble. To go ahead with it cannot mean terrible trouble. It may indeed bring great assurance. If you lose the whole investment, it is not a very serious loss.

In this perspective, and assuming this is a close decision for some of my colleagues, I believe prudence requires us to support the President of the United States.

Mr. LONG. Mr. President, will the Senator yield?

Mr. MILLER. I yield.

Mr. LONG. Mr. President, I congratulate the Senator on his very intelligent speech, which I think pretty well destroys the arguments I have heard made in this body against proceeding with the ABM.

There are two kinds of waste one can contemplate. One is the kind of waste that we all hope would occur—that we would never have to use these weapons. We should all hope that we would be strong enough to defend this great Nation, and so strong that no one will attack us.

There is an old Spanish saying:

If you would have peace, be prepared for war.

If you would be independent and free, you should be prepared for war. If, by being strong, no one cared to go to war with us, that is the kind of waste we should hope for—possession of the latest weapons which we never have to use, such as the hydrogen bomb. We developed it; we hoped we would never have to use it, and we never have; and may God grant it will never be necessary. That is one way in which we can waste something and hope we would waste it.

The other waste is where you spend a great deal of money for defense, perhaps $80 billion or more a year, and, having done all that, you fail to provide the essentials, so that when the showdown comes, you cannot save your country. In that event, it all has been wasted; but, in addition, you have lost your country, your lives, and your freedom. There is the supreme waste one should avoid—the failure to have the sophisticated weapons of the future that would assure you that you could fight successfully in the defense and salvation of your Nation and your people, if that should become necessary. That is the fantastic supreme waste, as I see it, that some Members of this body have been advocating, in their folly and poor judgment, although they may be sincere.

The Senator has pretty well answered the argument.

It may well be that one could not develop a successful ABM system, although I cannot see how we could put men in orbit around the earth, then have the vehicle leave the earth's gravity, orbit the moon several times, land on the moon, reenter space outside the pull of the moon's gravity, bring the two vehicles together, then dispose of one, then orbit the earth again and splash down within 3 or 4 miles of a carrier waiting to receive the capsule, and then not be able to shoot down a missile. It seems to me that all the technical problems involved in one would indicate that if one can solve all that, we can shoot down a missile. It might take a great amount of technical expertise. It might take some practice and know-how. But if those three men can do all that, with the help of a vast army of technicians to back them up, then something can be developed to shoot down a missile.

But I should think that if we cannot do it, the Russians cannot do it, either. If it is possible for one to develop it, it would be sad to think that, although we have the technical competence to build the weapons to save this great Nation, there are some in this body who lack the foresight to recognize that this would be the difference between liberty and destruction for this great Nation—when one would try to save a few billion dollars in the hope that the Communists have all of a sudden changed their ways, changed their minds. I cannot buy those arguments.

We have been successful in saving this great Nation by following the logic that the Senator has pursued; and, insofar as the major Communist powers are concerned, we have saved it without going to war with them.

I think the Senator makes an argument that is irrefutable.

Mr. MILLER. I thank the Senator from Louisiana for his kind and gracious comments. I do think that he puts his finger on a very important part of this matter.

It is something like life insurance. We have been carrying life insurance policies for a long time, and somebody could say: "Look at the waste. All those premiums down the drain. Look at what you could have been doing with those premiums—buying some extra things you would like to buy; but you never got them because you put it on insurance, and here you are, still alive."

But I assure the Senator that most of us are carrying life insurance, and we are very pleased that the premiums have been wasted, because they did provide us with the assurance that if something happened, our loved ones would be taken care of.

I hope, with the Senator from Louisiana, that the expenditures made on an ABM system will be a complete and utter waste of the taxpayers' money, in the same sense as life insurance premiums have been a complete and utter waste for those of us who are still around. I hope we will never have to use them. But I do think that prudence requires us to keep strong as a matter of life insurance to the people of our country.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. MILLER. I yield.

Mr. THURMOND. Mr. President, I commend the able and distinguished Senator from Iowa for the magnificent presentation he has made today on the necessity for going foward with the antiballistic missile. The able Senator was a member of the Committee on Armed Services for some time, and his experience in the Air Force Reserve as well as the experience in World War II undoubtedly gird him with a lot of information from practical standpoint in military matters. In addition, the Senator from Iowa is a distinguished Reserve general, and he is well informed on military matters.

There is no question in my mind that it would be a fatal mistake for the United States not to go forward with the ABM, and as quickly as possible. If we build the ABM and never have to use it, well and good. If we build the ABM and the enemy sends over a missile to destroy our country, then we will be mighty glad we have it.

For the life of me, I cannot see how anyone would object to building a purely defensive weapon such as the antiballistic missile. This is not the type of missile that would cross the ocean and kill millions of people. This is not the type of missile that would cross the ocean and destroy military installations. This is not the type of weapon that is calculated to kill anybody. This is purely a defensive missile that will destroy the enemy's missiles in the event the enemy sees fit to send its missiles over here to try to destroy us.

To me, it only makes good sense that we can. I think it is a very peaceful weapon. It will help to preserve peace because if we do not have this missile, suppose the Soviets by accident, a pure accident, should send an ICBM across the ocean. Suppose some sergeant misunderstood orders or someone miscalculated through error and sent an ICBM over here. If we had an ABM we could knock that missile down. The exchange could stop there. If we did not have an ABM and an ICBM kills millions of people or destroys much property in this country, or if we feel it might be the beginning of a nuclear war, naturally we would respond and quickly. When we do respond with our ICBM's, the Soviets might feel we intend an all-out war and we might have a nuclear exchange which could result in the loss of millions of lives.

I think it is vital to our country that we go forward and build the ABM, not only from the standpoint of a defensive weapon but also from the standpoint of national security and preserving peace.

Again, I commend the distinguished Senator on his fine argument.

Mr. MILLER. I thank the Senator from South Carolina for his kind remarks.

Mr. President, I might say, as I pointed out in my speech, none of us in the Senate is a physicist and I do not think anyone in the Senate has had very much negotiating experience with Soviet diplomats. Therefore, we have to go outside to the experts, to the physicists and the diplomats. It becomes difficult for all of us when there are experts who disagree. In that event, who is one going to support?

As I pointed out in my remarks several weeks ago, I have put my confidence in Dr. Eugene P. Wigner because he is preeminent in the field. He is the only one of the physicists of the world who received all the major awards for physicists. He received all of them. Other physicists have received one or two of the awards but Dr. Wigner has them all and to me he is preeminent. That does not mean that there are not other good physicists who disagree with him, because there are. One must make a judgment on which physicist he is going to rely upon. I put my judgment with Dr. Wigner. Further, I must say the logic of his argument to me is almost irrebuttable.

In the area of diplomacy, how many people do we find in the United States who have had much experience negotiating with the Soviets? I do not think very many of us, outside of Averell Harriman, have had as much experience as former Secretary of State Dean Acheson. I say that the logic of Dean Acheson's statement is irrebuttable. One might say he learned the hard way from the Korean experience. When someone has learned the hard way and takes a position, it is more realistic than someone who did not learn the hard way.

I think on those two points we all have to make up our minds as to where we are going to go and in whom we are going to have confidence.

Then, we get into the fine points such as the one which will be coming up by

way of an amendment on Wednesday as to whether or not we are going to go ahead only on research and development, or permit deployment.

The Senator from South Carolina alluded to the fact that I served on the Committee on Armed Services and that I have had a number of years' experience in the Air Force. That experience gave me an opportunity to evaluate the amendment which will be voted on Wednesday, because early in World War II, I was engaged in some research and development activities for the Air Force. Along came a phase known as service testing. I did not know anything about service testing before, but I do now. Service testing means we have to have deployment for an ABM system. Service testing is a part of the broad concept of research and development. If we were going to consider buying a new fighter aircraft, I can assure the Senator he would find no procurement on it until after it had been deployed for service testing at the proving ground at Eglin Field, Fla.

I am sure the Senator from South Carolina, who has had a great deal of experience in the Army, would say, "You are not going to have the Army procure a tank unless it has been deployed and tested at one of the proving grounds."

This is where the amendment we will be voting on misses the point. They do not appreciate that there must be service testing and that is part of research and development. It is in the service testing phase of research and development when many so-called bugs are worked out. I never heard of an aircraft being sent to Eglin Field that did not have bugs in it during the first testing phase.

Some of our colleagues are opposed to the ABM as it is now. They want to confine the deployment to the Kwajalein Islands. They appreciate the fact that deployment and the service testing is a part of research and development. Where I part company with them is if it is done that way it will cost the taxpayers $2 billion more than if it were done at the sites in North Dakota and Montana. I have not heard any argument with respect to incurring that extra expense.

Mr. THURMOND. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. GRAVEL in the chair). Does the Senator yield?

Mr. MILLER. I yield.

Mr. THURMOND. Is it not a fact that all of the component parts of the ABM have been tested except the perimeter acquisition radar, that is, PAR? In other words, the missile site radar, that is, MSR, has been tested. The Spartan that can go 400 miles and knock down a missile has been tested. The Sprint, which would be used in the event the missile gets by the long range Spartan, has been tested. The computers have been tested. Mostly, it is a matter of assembling all these parts and getting them together and deploying this weapon because then undoubtedly there will be some bugs that have to be ironed out and the quicker we do this service testing the quicker we will have a more perfect weapon.

Is it not sensible that we go forward and not delay? Is it not a fact that the Soviets built their system in 1962 and had it deployed in 1963, when the Senator from South Carolina called for a secret session to tell the Senate about it, the dangers of it, and urged then, 6 years ago, that we go forward? Is it not a fact that we are at least 5 years behind the Soviets today? Can we afford not to go forward? Some say this would be provocative. The Soviets have said they do not consider it to be provocative. However, if they believe it to be provocative, they took a provocative step then and they could not blame us for doing it today. If they do blame us is it not our first duty to the American people to protect this country and our national security?

I thank the Senator.

Mr. MILLER. I thank my colleague.

I yield the floor.

DEPLOYMENT OF THE ABM

Mr. MATHIAS. Mr. President, in an earlier speech in the Senate several months ago, prior to any statement of position by the administration, I explained my reasons for opposing deployment of an anti-ballistic-missile system. I emphasized that the relatively imperfect and fleeting protection offered by such a system could not compensate for its large social, economic, and diplomatic impact.

Since expressing those thoughts, I have studied closely the voluminous literature on the subject which accumulates in undiminished quantity each day, perhaps because of our efforts. During this time, of course, the proposed system and its rationale have been significantly revised by the new administration. Improvement was needed. By indicating a U.S. policy of protecting cities through active defense, the Johnson administration's Sentinel proposal implied adoption of an essentially new and open-ended defense policy goal. Not only would we maintain deterrence through secure second-strike forces, we also would advertise to the world that for the first time since the abortive fallout shelter campaign we claimed technical ability to protect our people if deterrence fails.

This new commitment, to the extent it succeeded in achieving credible population defense, seemed to suggest a U.S. resolve to retain the option of a first strike. This option—and this protection—would entail virtually unlimited increases in defense spending, since the United States would have to respond to every anticipated improvement in the Soviet or Chinese offense. Such a policy would accentuate the action-reaction cycle of the arms race.

The Safeguard proposal, on the other hand, seemingly avoids this major new turn in our armaments policy. By focusing on defense of Minuteman missiles—a key part of our second strike forces—the Nixon administration proposal indicated continued dependence on a deterrence strategy. The President courageously accompanied his recommendation with a declaration that population centers could not be protected against major attack.

This new approach was less provocative than Sentinel since it did not envisage a degree of effectiveness that would give us a plausible first-strike option. Thus, despite a larger estimated cost, Safeguard is a more limited and sophisticated proposal than its predecessor. It does not commit us to the nearly impossible, and thus egregiously expensive business of protecting population in the midst of nuclear conflagration, a form of combustion, we should remember that naturally occurs on, and consumes, whole stars.

The Safeguard recommendation is also tactically superior to Sentinel in terms of domestic politics. By focusing debate on ABM's technical utility—essentially a scientific question—rather than on its strategic and diplomatic implications which Senators are more qualified to judge, the new proposal seemingly locates the debate on the Pentagon's own ground of expertise. The Pentagon, however, also offers an argument for supporters of the coming disarmament and arms control negotiations. It is alleged that endorsement of ABM would strengthen the President's hand in the talks.

Yet, despite all, I have concluded that I should oppose deployment of Safeguard at this time, as well as Sentinel. In fact, if I may be permitted to use rather blunt and provocative language, I have come to believe that such deployments may weaken the United States just as surely as a program of unilateral disarmament. I believe that under present conditions Safeguard represents a step in the wrong direction in the arms race and actually could be a blow to the national security. Further, I believe that the proposal is based on an overall arms race strategy that has been steadily weakening the United States over the past several years.

I do not believe the Pentagon has won the technical arguments. But I think Safeguard deployment is unwise even if the system works as well and Soviet capabilities are as great as its proponents claim.

The nature of the arms race has been radically changed by the quickening rate of technological progress. During the last decades, there has been a revolution in the nature of strategic war approximately every 5 years. Bombers have given way to several generations of liquid fueled missiles, which in turn were replaced by solid fueled Minutemen and by mobile Polaris submarines. Strategies relying on instant response to enemy attack preparations have given way to a determination to wait out an attack before retaliating. Now MIRV—assuming its deployment is not arrested—promises yet another overwhelming change in the configuration of the military balance. The Poseidon missile system, submarine based, seems the ultimate in mobile, invulnerable retaliatory power, but in the realm of technological advance, the word ultimate is regarded as an impertinence.

This pace of change means that most existing systems are obsolescent—that is, more effective alternative or countervailing technology is already in prospect. Thus heavy investment in deploying or

multiplying present systems is ordinarily uneconomical.

But the Pentagon does not adequately take this reality into account. Its proposals for new bombers, air defense, and other traditional systems mean enormous commitments of resources to strategically obsolescent weapons. These investments greatly reduce our flexibility in responding to unexpected new threats in the future.

Our current propensity to deploy and expand any new system and to retain and elaborate any old system with some utility is partly based on a false notion of national security. Our national security in future years depends on what is going on today not at our missile sites, but in our classrooms. In fact, in a time of such rapid change, our national security, even in the relatively short run, relies at least as much on civilian as on military activity.

It is speaking in these terms that I say ABM is a step backward for the United States. It represents not only an extravagance in the use of resources, but also a grievous failure of strategic imagination. Minutemen in fixed bases are already a technology with predictable obsolescence. For they are ultimately vulnerable to refinements in missile accuracy; ABM, for all its redoubtable intricacy and ingenuity, is also of little usefulness in the strategic environment of the seventies. It is a system of the sixties that we wisely refrained from deploying in different forms earlier in this decade despite repeated demands from the military. The Pentagon, in effect, now is putting together two obsolescing technologies in the hope of getting one useful system. What it gets is futility at compound interest for the taxpayer.

Even if the United States succeeded in creating and deploying a completely effective ABM system—one that hermetically sealed our skies from missile attack—we could not expect our adversaries to relinquish their retaliatory ability. They would simply find other ways to visit devastation on our country—whether by exploding nuclear weapons in the ocean off our shores and flooding our coastal cities; or by some unidentifiable low altitude delivery system; through resort to chemical and biological agents; or through some as yet unanticipated mode of destruction. The only thing we can confidently say about future offensive technology—whether Russian or Chinese—is that it will be designed to frustrate any defense in which the United States invests as heavily as ABM would require.

Technologically advanced and strategically retarded, ABM symbolizes the American defense posture. New technology is too often employed not to produce more cost-effective and less provocative systems, but to redeem old modes of thought and obsolescent hardware. We do not sufficiently acknowledge the implications of mutual deterrence in an essentially qualitative arms race at a time of rapid technological change.

In these new conditions, a sure way of losing an arms race is to spend too much money on it. The Vietnam war provides an example of another kind. In Vietnam we are also using expensive new technology in an attempt to make up for strategic and political failure. But despite a spending ratio of 10 to 1 over the Soviet Union, we are not winning. Of course, Vietnam is not directly analogous to other areas of arms competition. But vis-a-vis the Soviet Union, our experience confirms the principle: the race will be won not by the side that most readily deploys its hardware but by the side that most effectively employs its resources.

In supporting the policy of heavy deployment of existing technologies, it is said that we must emphasize the capabilities rather than the intentions of our adversary. But capability is just as problematical and elusive a concept as intention. If we—or the Soviet Union—are willing to sacrifice civilian, economic, and social stability and longer term technical and military goals, either side is capable of mustering a military establishment of incalculable power. Either side can produce a military machine that would boggle the mind. But in the nuclear age, that is all that such a military machine can accomplish: it would boggle the mind, and, by extension, the social and political stability of the country that acquired it. But it would not permit either side to gain a peremptory first-strike position. And it would impair the social, economic, scientific, and educational base on which future security will depend. It would hurt our society without helping our security.

One reason for the futility of an attempt to "win" the arms race in this manner is the advantage possessed by the side that is behind. In a sense one can even win such a competition—that is, achieve one's military goals at lower cost than one's opponents—by staying behind. For the dynamics of technological arms races favor the underdog, if his basic capacity is comparable. Not only is he relieved of the expensive burden of anticipation but long before a new discovery is translated into an effective and operational weapons system, integrated in the military forces of the leader, it has usually become known to the side that is behind.

Even if the follower cannot determine the particulars of a new development, his knowledge of the general area of experiment which produced it will enable him to concentrate his effort and make similar progress more quickly and cheaply. He may be able to avoid costly experimentation with other methods of acquiring the same weapon or other weapons designed to fulfill a similar function.

Thus the country which is defeated in a race for a particular technological development may be able to save both time and money as a result. Much of the expense for weapons development is directed toward the pursuit of unsuccessful possibilities. The follower in a technological race can eliminate some of these failures.

Examples of this handicapping system abound. It is illustrated by the remarkable achievement of the Soviet Union in closing the enormous gap between herself and the United States at the end of the Second World War. American scientists consistently overestimated the time it would take the Soviet Union to equal American achievements in nuclear technology. That this process also works the other way, to our benefit, may be indicated by the speed with which we closed the presumed Soviet lead in ballistic missile technology after Sputnik. It would appear that qualitative arms races between comparable technologies tend to equalize military forces.

Of course, this does not mean we should allow ourselves to fall behind overall military strength. But the handicap for the underdog does mean that attempts to forge ahead have more to do with national vanity than with national security. In fact, if the Soviet Union did decide to invest everything in deploying new technology it would likely doom itself as a first-class power in coming decades. Already falling behind Western Europe and Japan in economic growth—already stinting on industrial modernization—the Soviet Union would fall back irretrievably if it undertook some futile and extravagant ABM-SS-9 campaign for first-strike supremacy.

In other words, achievement of the ultimate war capability of each side would combine military futility with social and political impoverishment: each side is capable of foundering its ship of state with military ballast. Neither is capable of striking its opponent without suffering devastating retaliation.

Although I do not wish such a disaster on the Soviet people, if I were exclusively concerned with disproving Communist theory with bringing down the Soviet experiment, I would hope that the Soviet leaders would embark on an attempt to fulfill their theoretical military possibilities. But since the attempt would inevitably be accompanied by an enormous aggrandizement of the power of the Soviet military—and by an expansion of their imperial designs—I shrink from an American military posture that could contribute to such an imbalance in Soviet leadership.

It should not be imagined, however, that the United States can proceed with impunity on its present course. It is sometimes asserted on the left that the American economy benefits from defense expenditures. During the ABM debate, it has been implied that the system's supporters are motivated in part by its impact on employment. This notion only reveals a failure to recognize the changing nature both of defense expenditures and of the American economy since World War II. I can say that spending, such as that proposed for ABM, contravenes most of the urgent economic and social objectives of current U.S. Government policy.

The administration currently declares that its first economic priority is to curb inflation without significantly increasing unemployment or substantially reducing real economic growth. Spending on ABM increases inflation and unemployment without contributing significantly to real economic growth. It is peculiarly inflationary because it generates demand in the economy without providing goods to

fulfill it. It increases unemployment because it diverts resources into highly specialized technical industries which hire very few marginal workers who could not easily afford to find a job elsewhere. It impedes economic growth because it employs the most valuably catalytic manpower in the economy. These are technicians and scientists who could make far greater contributions to economic growth in the private sector or in public services which improve our economic infrastructure.

When analyzing the impact of defense spending, it is crucial to consider the benefits we forgo, whether in the public or private sector. I do not deny the enormous amount of employment created by the defense budget. I merely say that the amount of employment and growth generated by a dollar of defense spending is much less than that generated by a dollar of spending in the private sector or on public services.

Strategic defense spending is now concentrated in industries with high, technically specialized labor intensity, and with relatively low capital expenditures and value added per employee. These industries make a relatively small net contribution to the economy. Yet they deprive the private sector of essential expertise for research, which is only partly recovered through military development convertible for civilian use.

I do not exaggerate when I suggest that, in purely economic and social terms, the United States would benefit more from building pyramids than from building missiles.

Mr. FULBRIGHT. Mr. President, will the Senator yield at that point?

Mr. MATHIAS. I am happy to yield to the Senator from Arkansas.

Mr. FULBRIGHT. I have read the Senator's speech, and I wish to congratulate him on the entire speech; but that particular passage he has just read, in a way, sums up this whole issue. Although the Senator uses the allusion in a way that could be discounted, perhaps, I think there is a great deal of truth in it. At the last hearing the Foreign Relations Committee had with regard to this whole complex of weapons it was urged that the Minuteman itself is becoming obsolete, because it can be destroyed by these more accurate missiles. This means, therefore, we are considering the development of an obsolescent ABM to protect an obsolescent weapons system.

This, I think, makes the Senator's analogy to the pyramids very appropriate indeed. At least the Egyptians did end up with a tourist attraction, which is of use to that country hundreds of years later.

I think the Senator has made a great contribution to this debate. I think his speech is one of the most thoughtful I have read on this subject.

Mr. MATHIAS. I thank the Senator very much for his very kind remarks and his helpful counseling.

I repeat, Mr. President, that I think in economic and social terms the United States would benefit more from building pyramids than from building missiles—since pyramid construction would at least employ people who need work, and, as the distinguished Senator from Arkansas, the chairman of the Committee on Foreign Relations, has pointed out, would at least serve as a tourist attraction. Pyramids aside, the economy would benefit far more, of course, from investments in education, medical care and housing. But even if defense retrenchments were passed on to taxpayers in tax cuts, the economy would benefit since private demand would be released into areas which employ more marginal workers per dollar of investment or which contribute to real economic growth.

Compared to most other industrial products, moreover, defense items do not have a significant multiplier effect. A missile or a submarine is not serviced, retailed, or otherwise introduced into the catalytic flow of the domestic economy.

The arms race thus is economic insanity. But I contend further that current arms race policies are also irrational in terms of the national security. Our defense budget tends to overreact to current threats, overspend on present technology, and produce a useless overkill capacity, while diverting funds and energies from efforts to reinforce the social foundations of our national strength and stability. It hurts our society without helping our security.

The problem thus is not excessive emphasis on national security in the order of our priorities. In a broader sense, the security of our Nation—considered not as just a geographic or demographic entity but also a spiritual and institutional cause—national security in these terms, which indispensably include military defense, must be the primary concern of Government. The problem is the tendency of Government to identify national security with the immediate demands of the military leadership, which understandably fail to recognize the broader prerequisites of national preservation. These are popular morale, economic stability and growth, educational progress, balanced technological development and maintenance of broadly supported popular institutions. Vast multiplication of existing systems might be valuable if one planned to initiate nuclear war in the immediate future; but nuclear war is suicide. For the maintenance of our defense over a long period, advanced technology, social progress, and economic growth are imperative. Deployment should be relatively modest until real new threats materialize. We should maintain a continuing reexamination of our strategic assumptions.

This means a new set of criteria for specific defense proposals, emphasizing minimal deployment and maximum commitment to basic research, technological development, education, economic growth, and social progress. All these fields—and particularly science and education—are being deprived today. Although Safeguard is a substantial improvement over Sentinel in these terms, deployment now would nonetheless represent a severe blow to our national security.

Several Senators addressed the Chair.

Mr. MATHIAS. I yield to the Senator from New York.

Mr. JAVITS. Mr. President, I have heard a part of the Senator's speech, and I have read the rest of it. I should like to direct his attention to two points, upon which he might like to comment further.

He says:

> It is a system of the sixties that we wisely refrained from deploying in different forms earlier in this decade despite repeated demands from the military.

Is it not true that, except for the fact that the system has caught on more vigorously now, that was also the history of the various Nike series—of which the present system is a variant—and that this has been going on for the last 10 years?

Mr. MATHIAS. The Senator is absolutely correct.

Mr. JAVITS. So, if the technological progress and advance have made a weapons system first designed in the late 1950's obsolescent now, the same thing is much more likely now than when Nike-Zeus was first thought of; is that not correct?

Mr. MATHIAS. The Senator is correct.

Mr. JAVITS. I think it is an extremely valuable point. One of the strongest arguments against deployment of the ABM is that it is just about—because of the history of weaponry—to be overtaken by technological advances. If anything, it is a very late starter, and we would be very much better advised to leapfrog it technologically rather than be locked into an obsolescently conceived system.

Another very important point which the Senator makes in his speech, is:

> In fact, if the Soviet Union did decide to invest everything in deploying new technology it would likely doom itself as a first-class power in coming decades. Already falling behind Western Europe and Japan in economic growth—already stinting on industrial modernization—the Soviet Union would fall back irretrievably if it undertook some futile and extravagant ABM–SS–9 campaign for first strike supremacy.

Is it not a fact that the world should know that it is the United States and the Soviet Union which—because of this enormous defense load—are falling behind in productivity, and even in the longevity of their people? Falling behind, for example, Japan and Germany, the two powers which are the least encumbered by military expenditure?

Mr. MATHIAS. The Senator is correct. Of course, just to look at the trade balances with Japan, for example, illustrates what happens when a nation is free to invest its capital and to use its expertise in the social areas and in the private sector.

Mr. JAVITS. Therefore, it is not a sterile but a very real question to ask if the two superpowers are running themselves into the ground by the nuclear arms race, and in our case by the Vietnam war as well. If we are about to come to grips in terms of seeking an arms agreement, is it not best to leave open—without any real jeopardy to the national security—the greatest, most fertile field for agreement, the greatest consumer of resources that might now be conserved, when the two countries are coming together for the purpose of seek-

ing agreement? Does the Senator feel there is the remotest likelihood that in the next 6 months, because the President says he is going to deploy the ABM at two sites in the northwestern part of the United States, that is going to represent such material change to the Russians that they are going to make agreements which they never would have made before, and that we would have won a game of "nuclear blackmail" because the President is going to deploy this system at these two missile sites?

Mr. MATHIAS. I cannot believe that this policy will bring about all of that fallout which has been claimed.

Mr. DOMINICK. Mr. President, will the Senator yield at that very point?

Mr. JAVITS. I will yield in a moment.

Mr. DOMINICK. I am a little tired of the Senator's saying that we are engaged in nuclear blackmail.

Mr. JAVITS. I am not saying that we are engaged in nuclear blackmail.

Mr. DOMINICK. The Senator just finished stating it.

Mr. JAVITS. Not at all. And the RECORD will not show that, in my judgment. However, if the Senator will, I should like to finish with my inquiry of the Senator from Maryland.

As a matter of fact, is not the concession that this will make no difference to the Russians any more than what they have done in Moscow and in the SS–9 will make any difference to us, practically yielding the whole point? If it will make no difference, why do it?

Mr. MATHIAS. The Senator is absolutely correct.

Mr. JAVITS. To deal with the point of the overkill, we are not seeking to take advantage of nuclear blackmail. It is not so. Then, why argue that it is or that this will strengthen our hand?

Mr. MATHIAS. Exactly right.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. MATHIAS. I yield.

Mr. DOMINICK. Mr. President, I do not know whether the Senator from Maryland was present before when the distinguished Senator from Iowa (Mr. MILLER) spoke. The Senator from Iowa had some analyses of the military spending vis-a-vis our gross national product exclusive of the Vietnam war. And he showed that in percentages the proposed budget, exclusive of expenditures for Vietnam, were the same or less in terms of percentages than the budget was for last year, 5 years ago, 10 years ago, and 15 years ago. So, when the Senator speaks of vast military expenditures, I point out that we would all, of course, like to cut them down. Obviously this is what we would all like to do.

As a matter of fact, the committee cut them down by $2 billion. I think, however, that to leave an impression on the floor that we are engaged in something new and unique at an enormous cost when we are dealing in this particular debate in this particular amendment with $345 million, is a little bit extravagant.

I was wondering if the Senator had any comment on the percentage figures that the Senator from Iowa placed in the RECORD.

Mr. MATHIAS. I certainly do. I would call to the attention of the distinguished Senator from Colorado the fact that some industrial concerns that want to expand their plants and hire new people and manufacture new goods have to pay an interest rate of 10 or 12 percent to get the money.

I point out that our trade balances with foreign countries are in worse condition today than in recent history.

I point out to the distinguished Senator the fact that it is costing the U.S. Treasury more to borrow money today than it has for a long time, maybe ever in our history.

Mr. DOMINICK. I agree with all of that.

Mr. MATHIAS. I think the Senator must agree with it because it is a fact.

These unhappy facts result in large part from too much defense spending over a long period of time, and the fact that it is down a little now or up a little at another time does not eliminate the fact that over this period there has been too much and that we are suffering for it at this time.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. MATHIAS. I yield.

Mr. MILLER. Mr. President, I think it should be pointed out—and the Senator is talking about our trade balance—that the percentages of gross national product that has been going for national defense was a little higher in 1964 than it was last year or is going to be this year. Yet, if my recollection proves correct, we had a magnificently favorable balance of trade in 1964.

If I may have the attention of the Senator, I should like to make a point because I should like to have a responsive answer.

The Senator talks of a long, sustained period of defense spending. That is exactly why I went back to 1954 and ascertained the percentage of gross national product going for national defense.

I point out to the Senator from Maryland that he will find that the projected defense spending for fiscal year 1970 will be a lesser percentage of our gross national product than it was for 3 years in that period of time—1954, 1959, and 1964. So I must respectfully point out to the Senator that his thesis that this defense spending has ever had a direct bearing or maybe even an indirect bearing on the unfavorable balance of trade simply will not stand scrutiny.

I am concerned about defense spending. In fact, I do not know of anyone who is not. Everyone on both sides of the aisle or on either side of the controversy should be concerned about defense spending and other areas of Government spending.

That does not get us anywhere. We are all equally concerned about it. The question is whether we need something for our national security.

If the ABM will not work, and if we are convinced that it will not work, there is no point in our spending anything regardless of how lean or fat the budget is.

I must say that I think the matter of budget spending is a sort of side issue. I can assure the Senator that if I am persuaded that the ABM will not work, I will not buy it regardless of whether the budget is in good condition or not.

On the other hand, if we need it, then I think the budget condition is very secondary to what we need.

I think it is very important to point out that the defense spending is not involved in our drop in a favorable balance of trade.

Mr. MATHIAS. Since the question of defense spending up and down has been brought into this discussion, and I think very properly so, I refer the Senator from Iowa and the Senator from Colorado to the current issue of Fortune.

There is a very interesting and authoritative article in the Fortune magazine written by Ian Cameron, a splendid and well-informed writer, in which he quotes the Secretary of Defense as saying that even if we are successful in eliminating the war in Vietnam, we will still not come up with a drastically reduced defense budget.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. MATHIAS. I will yield in a moment.

Let me say that if we go ahead with the ABM and MIRV, we can, I think, safely project a continuing expenditure of anywhere from $20 billion to $30 billion a year for strategic systems alone for perhaps the next 10 years.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. MATHIAS. I yield.

Mr. DOMINICK. Mr. President, I had the same discussion with the Senator from Maine (Mr. MUSKIE) on Friday. It is in the RECORD.

I pointed out at that time—which I am sure the Senator from Maryland will recognize—that the question of what our defense budget will be after the Vietnam war will depend upon what Congress authorizes and appropriates. It has nothing to do with the question of what the automatic system might be, what Mr. Cameron and the like do, or anything else.

Let me point out that the question of how much we will spend on an ABM and where we will put it is under constant review, as the President pointed out, and that Congress can reduce funds. The Committee on Armed Services has cut out the funds for the Navy version of the F–111, the F–111B, after we had spent a lot of money on research. We have cut out the Cheyenne helicopter and all of these fast deployment logistic ships and a whole variety of weapons.

The statement made is not borne out by history.

Mr. DOLE. Mr. President, will the Senator yield?

Mr. MATHIAS. I yield.

Mr. DOLE. Mr. President, I have listened with great interest to my friend, the Senator from Maryland, say that we should not proceed with the deployment of the Safeguard system.

The Senator recognizes that the Safeguard system is an improvement over the Sentinel system.

I want to clarify the matter. What does the Senator suggest we do as an alternative? Does the Senator suggest more

research and development, or does he suggest doing nothing?

Mr. MATHIAS. Mr. President, the distinguished Senator from Kentucky (Mr. COOPER) has suggested in the amendment which we will vote on on Wednesday that we proceed with research and development for a period of time, during which we can satisfy ourselves as to the desirability of going forward.

Mr. DOLE. Mr. President, the reason I ask the question is that I think there may be a feeling or at least a misunderstanding on the part of many Americans that there are 45 or 50 Senators who want to do nothing and 45 or 50 Senators who want to do something. I point out, as I have in the past, that I think it is misreading the tenor of the Senate.

As I understand it, not one Senator says we should do nothing, that we should go backward. Senator COOPER and Senator HART are advocating what they think to be in the best interests—appropriate the money and do everything but deploy.

I have said many times that perhaps we could have chosen a better word. Perhaps we should have chosen the words "operational development" instead of "deployment," because that is what I really think it is.

But I commend the Senator from Maryland for his remarks. I disagree with his conclusion, but I am in accord with him when he says we must do something. There must be more research; there must be more development; and we must, even in the case of the Cooper-Hart amendment, authorize the money and move ahead with everything except deployment. Is that, in essence, what the Senator suggests?

Mr. MATHIAS. The Senator from Kansas, I think, has the nub of it, as usual, we find ourselves in broad general agreement on the goals to which we are moving.

Mr. DOLE. Or broad disagreement.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. MATHIAS. I yield.

Mr. COOPER. I appreciate very much the statement by the distinguished Senator from Kansas. He has brought into better focus the purpose of the amendment we propose—what we hope our country will do.

We talk about deployment, about making a decision to deploy. That, of course, connotes that we will be able in this fiscal year to actually emplace some component of the Safeguard system on the two missile sites. Of course, that is absolutely incorrect. There is no component, there is no element of a component, that can be physically placed upon a missile site in the coming fiscal year; I am sure that no proponent of the ABM system will question that statement. It cannot be, and I have that statement from the Department of Defense.

I would point out that the funds requested in the bill are proof that nothing can be done in the fiscal year except in research and development programs. Three hundred forty-five million dollars is asked, supposedly for procurement, but when one searches out the elements of that sum, it is chiefly for preparation for procurement. The antimissile system is admitted to be a research and development program. Compared to the sum of $345 million, which is characterized as a fund for procurement but which is not at all, $400 million for research and development is requested.

In addition to the $400 million, the Department of Defense has transferred from the old Nike X program—which they have given up—an additional $120 million for research and development. A total of $520 million plus the carryover from last year for research and development, is available and requested for research and development programs, which we believe proves our point: The Department of Defense has transferred $120 million in addition to the $400 million for research and development. It is a part of the record. The Senator from Mississippi (Mr. STENNIS) brought this fact out in the hearings.

We ask that there be no decision to deploy in the future, until in this year, we can determine whether there is any necessity for deployment at all. It might turn out—I hope it will—that the Soviets will not proceed with their program of deploying SS–9's. If they do not, there will be no necessity for spending a vast sum in deployment of the ABM system. If they proceed, we believe that our scientists and engineers will design a system which will be of greater effectiveness than the proposed design of Safeguard.

Above all, we hope that, through agreements in talks or action which indicates tacit agreement, the arms race may be limited. The Senator from Maryland and the Senator from Kansas, Senator DOLE, have correctly brought out our purposes.

I was very interested in reading the testimony of Dr. Foster before the Committee on Armed Services. When asked what we will do about the ABM system around Moscow, he said, "We will simply overwhelm it." That, I think, is what the Russians would propose to do about a system which a great many people think would be ineffective.

The Senator from Maryland has opened up fields which go far beyond the limited question of the feasibility of this program. As usual, he has made a very enlightened and constructive speech.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. MATHIAS. First, I thank the Senator from Kentucky for his astute observations which, as always, help to illuminate these discussions. I concur in his thanks to the Senator from Kansas for really making a very important point, from the point of view of the general public.

I also thank the Senator from Kentucky for shedding light on the question of the possibility of deployment within the next 12 months. In an earlier colloquy with the Senator from Iowa, it was stated categorically that everything is ready to go; all you have to do is hook it up and turn on the lights and see if it works.

Mr. MILLER. Mr. President, will the Senator yield at that point?

The Senator from Iowa made no such comments.

Mr. MATHIAS. I did not say the Senator from Iowa said that. To keep the record clear, the Senator from Iowa did not make that statement, but it was said in a colloquy which followed the Senator's remarks. I think the Senator from Kentucky has put the right interpretation on that and has stated to the Senate, frankly and accurately, what the situation is.

I yield to the Senator from Iowa.

Mr. MILLER. I thank my colleague for yielding.

I think the Senator understands that the Senator from Colorado and the Senator from Iowa were trying to illuminate this matter, too.

Mr. MATHIAS. And I appreciate that contribution.

Mr. MILLER. The point I was going to bring out is this: I believe the Senator, in about the last sentence that he read from his speech, said something to the effect that we should not have deployment now. That was the point I wanted to bring out—that deployment now is just not feasible, and the Senator from Kentucky has done a pretty good job of bringing that out.

I think it is wrong for people to get the idea that what we are all fighting about is whether we are going to have deployment 6 months or 12 months from now, rather than, as I understand it, the earliest we could have full deployment, for service testing purposes, not for final purposes, would be some years yet ahead.

Mr. MATHIAS. Yes. But the Senator will recall that that was not the statement with which the Senate was left a few minutes ago. I am not saying the Senator was responsible in any way.

Mr. MILLER. But I do think that when it is said we should not have deployment now, we are not really facing up to the real issue. The Senator from Kentucky has put that in perspective.

However, I do think one thing should be emphasized, and that is that so long as we cannot possibly have deployment now, I wonder what the real reason is for the amendment on which we are going to vote on Wednesday, which provides we are only going to have research and development and not deployment. If we cannot have deployment what are we arguing about? It seems to me that what is getting across to the public and the people around the world is the fact that we are in danger of going on record as tying the hands of the President. I do not like to see us do that. I well remember some of the amendments that were debated here in earlier years during the terms of the late President Kennedy and former President Johnson. Some amendments would be introduced from this side of the aisle. We would be met with the retort from the other side of the aisle that an amendment should be defeated because it would tie the hands of the President. And it will, indeed, in the eyes of many people around the world. His hands are tied by the very fact we cannot have deployment in the next 12 months, whether we wanted it or not.

However, to go on record and indicate we cannot have procurement with long leadtime, looking forward to deployment—I am not talking about final de-

ployment but service testing—I am afraid will give us the picture in the eyes of the world of tying the hands of the President.

More than anything else, I think that is very unfortunate. I do not think we should be debating here about tying the hands of the President, especially when we are debating about something that is not going to happen because, as the Senator from Kentucky said, Mr. President, you cannot have deployment in the next 12 months.

Mr. COOPER. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. SAXBE in the chair). Does the Senator yield?

Mr. MATHIAS. I yield.

Mr. COOPER. Mr. President, the Senator from Iowa has said:

> You cannot have deployment in the next 12 months, so what are we arguing about? What is the purpose of your amendment?

The purpose of the amendment has been expressed so many times on the floor of the Senate. Either we do not do it very well, or it is not understood well enough by others.

Mr. MILLER. It is not lack of good faith.

Mr. COOPER. No, it is not lack of good faith. I point out with respect to deployment that the misunderstanding has arisen because of the statements of the Secretary of Defense. We have to be very frank. He said in his testimony before the Committee on Armed Services and before a committee in the other body that the components have been tested and that we are ready to deploy. He was quoted on television a few days ago, as saying that the components have been tested and that we are ready to deploy.

The impression that the United States is ready to deploy a Safeguard system arises from such statements.

Mr. MILLER. Mr. President, will the Senator yield on that point?

Mr. COOPER. I shall yield. We know it has not been tested.

Mr. MILLER. I think we have to be fair to the Secretary of Defense.

Mr. COOPER. I will be fair.

Mr. MILLER. I do not believe the Secretary of Defense, certainly among the sophisticated Members of the Senate, implied we could have deployment of this system much before the mid-1970's even for service testing purposes. Does the Senator remember how long the Secretary said it would be before there would be service testing?

Mr. COOPER. The initial operation date was 1974.

Mr. MILLER. Very well.

Mr. COOPER. But we are talking about an impression that has gone across our land. Some believe we are holding back on the Department of Defense from deploying a system which is needed to protect the Minuteman when in truth it cannot be deployed in fiscal year 1970.

Mr. MILLER. But the Secretary of Defense said it cannot be fully deployed for service testing purposes before 1974, and he was not in the same breath saying that we are ready to have it deployed in 12 months.

Mr. COOPER. I am only saying that when the head of the Department of Defense makes the statement that "we have tested the elements and we are ready to deploy," people will believe the testimony. I do not question his good faith—I speak only of the impression that people have.

Mr. MATHIAS. Mr. President, if I may interrupt the Senator, he is absolutely correct, because that is the statement that was repeated or paraphrased in the Senate just a few moments ago by a Senator who is no longer in the Chamber, and it gives a completely distorted picture. I think words were used here to the effect that every component had been tested and all that had to be done was to hook it up and get the bugs out. That is not the question.

Mr. COOPER. All of us, opponents and proponents, seek to do what is right on this issue and to do what is best for our country. I certainly would not question the good faith and purpose of any Member of this body, although we may form judgments that differ.

However, the statement has been made on the floor of the Senate that we have had enough research and development; let us go ahead and deploy; the impression has gone forth that the Department of Defense is ready to deploy and as a natural consequence some may believe we are endangering the security of the country by opposing deployment of the system. We do not want to lock the hands of the President, and as there can be no deployment we are not locking his hands. If the statement is made that we are opposing a decision to deploy at some time in the future, we are in opposition on that score.

If, in this year, it should be found that the system which is proposed is not an effective system as presently designed—and I believe that inference can be drawn from the fact that the administration is putting $520 million into a research program—and if the Department of Defense should procure parts of the system which may be found later to be inadequate, we may become locked in on an ineffective system. This would not contribute to the security of our country.

Finally, my chief reason for opposing a decision to deploy—and I believe it is the chief reason of many who support the amendment—many people believe there is no chance of reaching any agreement with the Soviet Union. I must say I do not know that we can. Perhaps we cannot. But it is my view that we should not make a decision to deploy a new nuclear weapons system just as we enter negotiations whose purpose is to control new weapons systems.

The President can enter the negotiation in a position that is clear and understandable. He can say, "We are not going ahead. We will not start a new weapons system when we seek to control the deployment of additional weapons systems." This is my hope.

Mr. MILLER. Mr. President, will the Senator from Maryland permit me to respond briefly to the Senator from Kentucky. I realize that I have intruded considerably on the Senator's graciousness and time.

Mr. MATHIAS. I am delighted to do so. The Senator from Iowa has not intruded or trespassed in any sense. I appreciate the spirit in which the Senator from Iowa is participating in the discussion. I think his comments have been extremely valuable and helpful, particularly on the point of deployment. I think there is a lot of popular misconception. The Senator from Kentucky and the Senator from Iowa have made extremely valuable contributions by their candor and fairmindedness. I am delighted to yield further to the Senator from Iowa, to continue the discussion.

Mr. MILLER. I thank the Senator from Maryland.

I do appreciate the delineation by my good friend from Kentucky of the rationale behind the amendment. As I understand, he says that no matter what is in the bill, the President cannot deploy in the next 12 months, but that there are possibilities of going ahead with some procurements looking toward a phased-in deployment of the system, which he does not want us to authorize now.

I suggest that if we authorize the President to go ahead with the long lead-time procurements, which may be 2 or 3 years from now, and maybe start to deploy as a part of a system, it may be that additional research will show that the procurements are not calculated to give us the most effective system, assuming at that time that we want to go ahead with it.

My trouble with that reasoning is, as I understand it, that the research and development necessary to determine whether the system, overall, is the best we can achieve within the time frame we are talking about has really been done. There may be a little extra work that can be done, such as with radar, but the system as a whole will be pretty well set. Additional research may be needed to improve some of the things. But overall, the system is pretty well set and pretty well set to the extent that the President and the rest of the Defense Establishment think it will work. If we come along and say, in effect, to the President, "Even though you cannot do anything about deployment, we are not going to let you go ahead on these procurements," I suggest, most respectfully, that we are tying the hands of the President of the United States, even though we may not like to think so. Because I just do not believe that the President of the United States would go ahead with these procurements and get locked in. Let us assume that he did, through an honest mistake; and 1 year from now we will be right back in this Chamber, after running the gauntlet of the committees, on this side of the Capitol and on the other side, and I am quite confident that the fact a mistake has been made will be brought out and Congress will certainly be in a position to vote up or down the appropriations to continue or not to continue the locked-in position.

Thus, I cannot quite understand why we are so concerned about denying the President the authority he asks for, which authority cannot be carried out within the next 12 months, but can only begin to be carried out through long leadtime procurements. Congress has a

continuing opportunity to vote up or down appropriations; yet, in many respects, we are involved in a tempest in a teapot, even though it is a very big issue in the minds of many people. The difference between research and development and deployment issue is very fine.

Now if the Senator from Kentucky is saying that we do not want any ABM system at all, let us stop all work on it, that there is no point in having an ABM system, that would be one thing; but here we are involved in a very fine delineation between research and development and deployment, in the case of a bill authorizing expenditures which will not give us deployment until 1972, 1973, or 1974.

We are all men of good will, acting in good faith. I most respectfully suggest that whether we think we are tying the hands of the President in the eyes of many people around the world, the President's hands will have been tied by Congress. I think that is a most unfortunate impression to leave in the minds of people overseas at this very touchy time in international relations.

Mr. COOPER. If the Senator from Maryland will bear with me a moment——

Mr. MATHIAS. I am delighted to yield further to the Senator from Kentucky.

Mr. COOPER. It has been stated many times by the proponents of the system that it is vital to the security of this country. Awesome pictures of the growing nuclear strength of the Soviet Union have been given in the form of projections and extrapolations. They may turn out to be a reality.

We respect the President of the United States. We know him, many of us have served with him and know the efforts he is making for peaceful solutions. I respect him. The security of this Nation, while it is very much in the hands of the President of the United States, is also in the hands of Congress. We have a joint constitutional responsibility. We too represent the people. It is also in the hands of the people. We in the Congress have a special responsibility to make judgments as to whether a process or program is in the best interests of the security of this Nation. We argue about feasibility, about funds, about deployment, and can reasonably disagree about them. But we too have the responsibility to make judgments about the best way to stop the arms race which threatens the ultimate security of the United States.

It is our judgment that it would be better not to make a decision to deploy a new weapons system in the year when we seek to control nuclear weapons, if this can be done, we would agree that the greatest step toward true national security for our country had been taken.

Thus, as we may differ with the President on this issue, it is done honorably and with great respect for him. Our duty is to be responsible to the people as Members of Congress. If deployment is not agreed to, I do not consider, as Senator AIKEN has said, that it will represent a setback for the President of the United States. He is demonstrating every day his leadership on great issues.

Mr. MATHIAS. Mr. President, I appreciate very much participation in this colloquy by the Senator from Kentucky, the Senator from Iowa, and the Senator from Colorado. It has been extremely helpful to clarify some of the questions which do exist.

I particularly want to concur with the Senator from Kentucky when he says that whatever honorable disgareements may exist, they are taken pursuant to our responsibilities as Senators to provide for the common defense of our country, which is the responsibility imposed on us by the Constitution and which we can only discharge in conscience and in no other way.

Mr. DOMINICK. Mr. President, will the Senator from Maryland yield for a unanimous consent request?

Mr. MATHIAS. I yield.

Mr. DOMINICK. Mr. President, I ask unanimous consent to have printed in the RECORD a report entitled, "Good Guys, Bad Guys, and the ABM," written by Albert Wohlstetter of the University of Chicago, which was submitted to the Los Angeles Times for publication Sunday, August 3, and Monday, August 4, 1969, and which has been published as a report by the Committee to Maintain a Prudent Defense Policy.

I have read this. It refers to several participants in this debate, not on today but on previous occasions. It has some good points, and it states them in very readable language. I think it is worthwhile to have them in the RECORD at this point.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

[A report from the Committee to Maintain a Prudent Defense Policy, Washington, D.C.]

GOOD GUYS, BAD GUYS, AND THE ABM

Choices about bombers or missiles or defenses against them are, in the most literal sense, vital. They can mean life or death. Yet making such choices carefully has never been easy. And least so now when the closing agonies of Vietnam drive us to wish away all problems of national defense. Even thinking about such questions is unpleasant and can make your head hurt. Answers don't come in black and white and mustering vast public sentiments about precise shades of grey is particularly hard. It is much easier then to make believe that the issues are simpler than they are, that the answers are plain to any man of good will, that the issues are in fact between the concerned men of good will and a reckless entrenched malevolent authority. The good guys are against nuclear war, against taking reckless chances on nuclear accidents, against wasting money that might be used to solve our urgent domestic problems, against the "ever accelerating arms race", against the generals and munitions makers, for peace abroad and redressing the inequities at home. The bad guys. . .

The impassioned ABM debate, as the news media tend to picture it, does array the good guys on one side and on the other, the bad. The forces of virtue at last aroused against the forces of evil. ABM, as many of its opponents have said, is a symbol. One trouble with symbols, however, is that they often have little to do with reality. Any close look at the realities of the ABM and the way the debate has developed, blurs this simple picture. In fact, erases it entirely.

Intense controversy blew up suddenly last fall with an alarm sounded by some Argonne physicists about placing Sentinel defense missiles only a few miles outside Chicago's city limits. It was not hard to arouse public interest groups on this subject. It seems that very few Republicans or Democrats favor nuclear accidents. By spring, however, distinguished opponents of ABM like Hans Bethe indicated that the nuclear safety of Sentinel was not really troubling. And by late spring various opponents of ABM were themselves recommending that, rather than use Safeguard ABM to protect our bombers and missiles, we should undertake (a) an emergency dispersal of armed bombers—which would mean landings and takeoffs with nuclear bombs in commercial airports of large cities; (b) an armed air alert—that on a continuing basis might mean an average of a dozen accidents per year involving nuclear weapons; and finally, (c) most amazing, that we try to empty our silos before enemy bombs get to them by immediately launching our Minuteman at Russian cities on the basis of radar indications—which would increase the nightmare possibility not only of a nuclear accident, but of an accidentally started worldwide nuclear holocaust.

Senator Symington asked, "After PAR finds the incoming missiles, why then couldn't you fire the Minuteman on target instead of the Spartan?" And Senator Fulbright engaged in this dialogue, ". . . if the objective is deterrence . . . then . . . this would really concern the Russians to know what you would really do if they sent over a massive attack."

Senator Gore, "Or a light attack."

Senator Fulbright, "Or even a light attack, one that could be detected. . . . I would think that is the greatest deterrent you could have, and you are going to release ours before they are destroyed, and you could do it."

Indeed you could. But such a mode of decision risks delegating to a computer the most terrible decision that would ever have been made, the decision for World War III. Recognizing that, our government decided years ago to try to preserve our political decision centers and to protect our forces so that they could ride out an attack and in that way leave time for responsible political decision. A recommendation by the good guys to launch missiles on radar warnings hardly fits the simple picture. Who *are* the prudent, reflective, good guys and who are the bad guys?

Even given the deserved unpopularity of nuclear accidents, the ease with which indignation was aroused about the local defense of urban population has in it a good many paradoxes. At the very least it knocks down one widespread argument that was being made as recently as last year against an attempt to defend some cities. That, the argument used to run, can only lead to an arms race, since it was certain that the undefended cities would demand defense. Doesn't this vociferous demand not to be defended at the least suggest some flaws in the older theory?

Trying to fit the pieces of the ABM debate about arms race and military budgets and domestic needs into the simple picture yields many insoluble puzzles. Major critics of ABM (for example, Professors Wiesner, Weinberg, Panofsky and Senators Fulbright and Symington) run on about arms races; nonetheless suggest increasing, even doubling, the Minuteman force rather than defending it with ABM. But a doubled Minuteman force could annihilate the projected large number of Soviet ICBMs: it would seriously endanger Russian ability to retaliate. If the Russians, following the policy suggested by the vociferous ABM critics, responded by increasing *their* force, an accelerating race in strategic budgets and numbers of weapons would then be on in earnest. It has *not* been on in the past, despite the stereotypes. In the last 10 years our strategic budget did not "accelerate"; it *declined* by half and precisely because in the 1960s we did not merely multiply strategic vehicles but increased their

protection by methods such as blast resistant silos appropriate to the 1960s threat. In the mid and late 1970s improved offense accuracies will make blast protection inadequate and will make ABM an appropriate method for preserving a fixed offensive force. Moreover such active defense of the offense would not provoke a spiral any more than our silos did. It frustrates an adversary's ability to strike first effectively, without removing his ability to strike second, that is, his ability to strike back after attack. Protecting Minuteman doesn't add to our first-strike capacity. Doubling Minuteman does. Just who is thinking prudently about avoiding arms races?

Or about excessive military costs? Doubling the Minuteman force and keeping B–52s steadily aloft in numbers equal to our ground alert would cost several times more than protecting Minuteman and B–52s with ABM; over 20 billion dollars on a 5-year basis, even neglecting the implicit "spiral"! Hardly the way to free resources for urgent domestic needs. Moreover, unlike Safeguard, doubled Minuteman and air alert B–52s would do nothing to protect our national command or to shield our population against even small attacks.

This neglect of the expense of alternatives to ABM is only one example of the casual handling of costs by the critics of ABM. And treating costs in an offhand way turns out to be crucial for their substantive criticism. Today it is plain that these critics were extremely hasty in presenting calculations that purported to show that Minuteman would be safe without extra protection in the mid and late 1960s. And many of them have retreated on this point: they now say Minuteman will be so unsafe as to be obsolete and not worth defending. It is not yet as plain that their treatment of the costs and effectiveness of a Safeguard defense of Minuteman and its alternatives is as faulty as their earlier proofs that Minuteman would be safe. Perhaps I can make it plain. It is an important matter. Central questions that seem unrelated turn on these matters of cost, for example, the questions below.

1. CAN SAFEGUARD BE "EASILY" OVERCOME?

Opponents of ABM support their claim that overcoming Safeguard is easy by referring to a mysterious secret chart showing how the Russians can overwhelm the defenses of Minuteman by adding more of their SS–9 missiles. Such a chart hardly proves their point. Any fixed amount of defense can, of course, be overcome by adding enough to the offense. This is obviously true. It is equally true that any fixed amount of offense can be smothered by adding enough defense. Both these truths are nearly tautological. For adversaries with roughly the same resources, the practical question has to do with how much extra the offense must pay to overcome a given amount of defense and how this compares with the cost of that defense itself. The answer in the case of Safeguard defense of Minuteman is that it would cost the Russians more than twice as much to add offense as it would cost us to add an offsetting number of Sprint missiles with their fair share of the missile site radar expense.

That is why starting to deploy Safeguard is a good way to discourage an adversary from persisting in any attempt to remove our second-strike capability. On the other hand, if we do nothing to protect so large a part of our retaliatory force, we make it relatively cheap and fruitful to get the capability to destroy it. The stereotypes about the arms race talk always of "action-reaction cycles." There are inaction-reaction cycles too. And some positive acts inhibit response by making it fruitless.

How have the critics of ABM missed the point on costs? First, they rarely mention the adversary's costs and never measure the extra cost to the offense to overcome an increment in Safeguard defense. In fact, one distinguished Senator opposing ABM has suggested that the large costs of SS–9s do not concern the Russians since they are not capitalists. Another opposition Senator holds that the Russians are so limited in resources that they will not buy enough SS–9s to destroy Minuteman even if there is no Safeguard to make their resource cost higher. A more reasonable suggestion than either of these two is that expanding the SS–9 involves a serious resource expenditure for the Russians: perhaps worth it if we indicate we have no intention of protecting Minuteman: and not worth it if we can add protection much more cheaply than they can overcome it.

Not only are SS–9 missiles with three 5–MT reentry vehicles expensive, but so are the lower-yield less accurate SS–11s, which have recently been proposed by critics as "cheap defense radar killers." In fact, on a per warhead basis they are more expensive than the SS–9s and much more expensive than the defense missiles that would counter them. Nor would SS–9s with 20–30 low-yield reentry vehicles be cheap radar killers, as recently suggested by Professors Wiesner, Weinberg and Rathjens. They are much more advanced than the SS–9 with three accurate 5 megaton MIRVs. Yet these same critics doubt that the Russians can get the latter. Most important, if one includes the several billion dollars for research and development, getting two dozen missiles especially to kill radar would involve extremely high unit costs, even neglecting the expense of procurement and operation.

The critics not only neglect adversary costs, they inflate the costs of the Safeguard defense of Minuteman. They attribute the entire costs of the Safeguard program to the protection of Minuteman. They include research, development, testing and evaluation costs which both opponents and advocates of Safeguard agree should continue whether or not we start deployment now; these are not properly an *extra* cost of the decision to deploy Safeguard at the Minuteman sites or anywhere else. Furthermore, they include costs, all or part of which are required for other functions of Safeguard than the defense of Minuteman.

Safeguard is intended also to protect the National Command authority, to defend manned bombers and to provide a thin shield for population. When the critics of Safeguard want to question the value of the area defense of the bombers and of our population, they may estimate that most of the cost is for area defense and attribute only $730 million of the entire Safeguard program to the defense of Minuteman. (See Chayes and Wiesner, Eds., *ABM: An Evaluation.*) On the other hand, when they are attacking the use of Safeguard to defend Minuteman, they pile on this function the entire costs of the program including not only research and development, but also expenditures for the purpose of defending National Command, bombers and population. (See Rathjens, Wiesner and Weinberg, "Commentary on Secretary Laird's May 22 Defense of Safeguard.")

In estimating the cost of a defense interception, they neglect a major feature of the Safeguard system, that will permit immediate replacement of defense missiles that fail during or shortly after launch. Since most failures occur within this time period, a reserve of some 15% or 20% assures an extremely high probability of interception. Critics of ABM, by ignoring this, have assumed that some three times more defense missiles are required than the probable number.

This neglect is related to the critics' misunderstanding about the "softness" of the defense radars (MSRs and PARs) and the role of blast resistance in the defense. It is well known that the radars have less than one tenth the blast resistance of the Minuteman silos. They are, however, protected primarily by interceptor missiles, and they are made just blast resistant enough to force an offense warhead to come close and so permit the defense to fire several times at it. If the first or even second Sprint fails, there is time enough for a third to destroy an incoming warhead.

A final major defect in the critics' estimate of the cost of a defense interception comes from ignoring the important strategy for defending an offense force known as "preferential defense." Defending missiles is a very different thing from defending population. If only half the population survived, this would be a catastrophe of unimaginable dimensions. But the survival of fewer than half our missiles may be more than enough to assure retaliation. The defense then can decide which Minuteman silo, or if there is more than one radar, which radar to defend and can decide this at the last minute. The offense cannot know this and therefore must attack all targets as if they were all defended. When the defense doubles the number of interceptors and radars, the offense must multiply its warheads four times.

All these errors in costs add up to a very large mistake about the ease of overcoming Safeguard.

2. WILL SAFEGUARD WORK?

The answer to this question may not seem directly related to the matters of cost we have been discussing. But it is related both to our costs and to those of an adversary. When a critic says Safeguard won't work, it sounds as if he were claiming that when a switch is thrown, there will be a fizzing sound and then merely some smoke coming out of the computers. A closer look at his argument, however, will reveal that he means Safeguard will not work because in an actual war the adversary wouldn't let it work; the adversary will think of all sorts of effective counter-measures.

For the apparent (or smoking computer) meaning, the fact that Safeguard is complicated seems to be crucial. Bell Laboratories, which have technical charge of the Safeguard system design, are most experienced, cautious and successful in engineering complex systems. They are used to making very complicated things work with very high reliability. But if the trouble lies in what an enemy can do to counter Safeguard or its alternatives, complexity is not the issue at all. Many simple things won't work when a modern adversary won't let it: slingshots, catapults, moderately hardened silos, and even the "cheap" small defense radars and missiles proposed by some of the ABM critics—which unfortunately are very vulnerable to inexpensive counter-measures. The cost of the defense and the cost of offense counter-measures are at the heart of the matter, and it is here that the critics have been weakest.

The components of Safeguard and their interactions have undergone and will undergo very extensive testing. Sometimes the argument is made that this is not enough, that the only realistic test would be an actual nuclear war. This is one test we all want to forego. However, the critics appear unaware of the fact that this is a limitation affecting our certainty as to the performance of our offense also. It applies equally to Russian and American offense and defense. But this limitation does not show that defense is worse off than offense, or that we are worse off than our adversaries.

Finally, the history of the last 25 years suggests that it is hard to take claims about whether a system will work or not work on their face value, especially when there are strong passions involved. When something new is proposed for our side, scientists who oppose it tend to say not only that it would be bad, but that it won't work at all. If they

are for it, not only would it be nice, but it works like a dream. So when they were against an emphasis on the offense, the H-bomb wouldn't work. In the late 1940's, when they opposed continental defense as a poor substitute for international control, no defense was possible. In the 1950s when international control was out of the picture and continental defense seemed essential, then an adequate defense was possible. Then in the 1960s, judgments about feasibility were once more reversed to match views on the value of defense.

3. IN CASE DETERRENCE FAILS, IS IT WORTH ATTEMPTING EVEN A LIMITED POPULATION DEFENSE—ONE THAT WORKS AT LEAST AGAINST IRRATIONAL SMALL ATTACKS?

The critics of defense in general hold that there is no need to worry about reducing the damage that would be done in case deterrence fails, because, they say, it is extremely unlikely that it will fail. But they are really of two quite different minds about the possibility of the failure of deterrence, depending on what they are advocating. When they want to forego any attempt to reduce the castastrophe, they are extremely reassuring about the low probability of nuclear war. They say deterrence is stable now and will be in the face of technological change. When they are urging drastic early steps towards disarmament and perhaps risky ones, they say the very opposite. Far from being stable, deterrence is certain to fail. The critics may then even give precise odds on how soon it will fail. The odds are high. The apocalypse, it seems, may be soon.

Take Professor Wiesner. Against the Chinese as against the Russians, he says, ". . . we must rely on the offensive deterrent . . . on our known ability to retaliate devastatingly in case of a nuclear attack. Ten percent of our SAC bomber force could kill 200 million Chinese." (*Look*, November 28, 1967.) This is evidently all right, for he also says, "The fantastic power of nuclear weapons provides a high degree of stability. Consequently a few bombs, certain to be delivered, will constitute a powerful deterrent." (*Washington Post*, January 22, 1967.) On the other hand in his apocalyptic mood, Dr. Wiesner has said, "There is an ever-increasing likelihood of war so disastrous that civilization, if not man himself, will be eradicated." (*Daedalus*, Fall 1960.) The probability is not only rising, but apparently it is already high. "The odds," he estimated recently, "are in favor of a major war within the next two decades." (*Washington Post*, January 22, 1967.)

Similarly, Senator Fulbright expressed astonishment at recent Hearings that the Department of Defense has sponsored a system for protection against the Chinese, since a Chinese attack would be irrational, suicidal in fact. A system for such a purpose is so far-fetched he suspects an ulterior motive. On the other hand, in an article entitled, "Now Is the Time to Take Great Risks," in which he urges drastic and evidently chancy steps towards disarmament, he explains, "Sooner or later the law of averages will turn against us; an extremist or incompetent will come to power in one major country or another, or a misjudgment will be made by some perfectly competent official, or things will just get out of hand without anyone being precisely responsible as happened in 1914." Under present deterrent arrangements, in short, this suicidal act is in the cards; the apocalypse is certain.

My own view is that the probability of nuclear war, if we are careful, can be kept small. But this requires continuing attention to the protection of strategic forces in the face of technical change. And even then there is always a significant possibility of breakdown and therefore the need for some insurance in the form of defense.

Critics of ABM are strikingly inconsistent in their treatment of the Russians and the Chinese. In saying we don't need to defend Minuteman against Russian attack in the mid or late 1970s, they presume that, 20 years after Sputnik, Russian missiles would not be able to achieve accuracies and other performance characteristics of the Minuteman III and Poseidon missiles that we ourselves are now in the process of deploying. In opposing an area defense of population against Chinese attack, they assume that the Chinese in their first generation ICBMs will be able to deploy penetration aids that took us billions of dollars and many trials and failures, and a dozen years to develop. These are extraordinarily backward Russians and most advanced Chinese.

At a modest extra cost over and above that of defending our offense force, we can manage a very effective defense of our population against a small attack, a defense that can keep us free of substantial damage from the Chinese without our initiating a nuclear attack upon them. Moreover, given the general technological levels in the two societies, we can stay ahead of them for the foreseeable future. Even if Chinese offense technology were at a much higher level, the difference in the resources of the two societies would be decisive. I said earlier that for adversaries with roughly the same resources the practical question has to do with how much extra the offense must pay to overcome a given amount of defense and how this compares with the cost of that defense itself. A relative cost disadvantage to the offense will bear down much harder on an adversary with much smaller resources as is the case for China whose gross national product is less than a tenth and whose per capita income is about 2% of ours.

Those who reject even a thin shield for population manage simultaneously to hold that (1) the shield would have no substantial effect even against a small first generation Chinese attack, but (2) it would be so effective against the massive sophisticated Russian force that the latter could not inflict enough damage on us to deter us, even though (3) it takes only the prospect of a few bombs delivered to deter the Russians. These and other absurdities stem, I believe, from an extreme strategic dogma whose origins go back many years to the French General Staff and to a few members of operational research staffs like the Weapons Systems Evaluation Group of the Joint Chiefs of Staff. I refer to a doctrine known as "Minimum Deterrence" that holds that any attempt to protect our own civilians will make nuclear war more likely, that we must depend exclusively on a threat to bomb enemy civilians. Not an obviously humane or liberal doctrine. It defies common sense as well as rigorous analysis.

Of course very few of the public interest groups who oppose defense of population are at all aware of the origin of their views. Indeed, they abhor "Think Tanks" like the Weapons Systems Evaluation Group (now a division of IDA, a famous target for the SDS). Yet just as Keynes remarked that the practical man who scoffs at theory is frequently the slave of theorists long defunct, so the ladies in the Women's International League for Peace and Freedom and other similar organizations may say unkind things about Think Tanks, and wear Stop ABM buttons. But the theory behind the button originates from individuals in some of these same Think Tanks.

I would not myself have thought a few years ago that one could organize widespread popular indignation among church groups and mothers on the basis of so extreme and far-fetched a dogma, one that suggests that it is all right to threaten to launch missiles at enemy civilians, but peculiarly heinous to prepare to knock a missile down on its way to destroy millions of our civilians. Clergymen for Bombing Civilians Only? Mothers for the Offense? I'd have thought it would never fly. I was quite wrong. The massive lobbying activity of the last year or two has mustered a plenitude of organizations with names like "Another Mother for Peace," "Womanpower in Action," "The United Methodist Board of Christian Social Concerns." When men and women of good will take it as so obviously right to depend solely on a threat to launch nuclear weapons against cities, we've come a long way from the Spanish Civil War and the world's shocked reaction to the bombing of several thousand civilians at Guernica.

And a long way from the position taken throughout most of the 1950s by the same scientists who now refer to any use of defense as "Maginot Line mentality." "History," quotes the epigraph to the Wiesner-Chayes book on ABM, "is littered with Maginot Lines." The Final Report of the Lincoln Summer Study, in which Drs. Wiesner, Killian, Kaysen and others were prominent, had a whole section on Maginot, replying to the offense ethusiasts of that time. Putting "all our eggs in one basket," they said, is the essence of "Maginot psychology," and it is exemplified by the "great emphasis placed in recent years on the development of an effective 'retaliatory force'." Liberals have forgotten that the key substantive issue that was obscured by the tragic outcome of the Oppenheimer hearings had to do with whether a large enough part of our effort was being devoted to continental air defense. In fact, history tells us less about the relevance of Maginot (a dead Frenchman whose name is too often used to settle deep and complex issues) than it does about the pitiful inadequacy of all slogans about offense and defense. ("Maginot!" "There is a counter to every weapon!" "The offense always gets through!" Etc., etc.)

Indeed, many of these same scientists have turned 180 degrees at least twice since Hiroshima in their slogans about defense. Immediately after the war the American Federation of Scientists printed its "Creed" with the second point in bold face: There is no defense. It was, they said, One World or None. After the Russians turned down the Baruch plan for international control of atomic energy, and it soon became clear that we were not about to have one world, a majority of these articulate scientists looked a bit more closely at whether the alternative really was no world at all. Then it was announced (e.g., by Ralph Lapp) that the scientists were "rebelling against the *military* dictum that there is no defense." The rebels lobbied for civil defense and continental air defense; opposed the H-bomb on the grounds that it was infeasible; or if feasible, undeliverable; and in any case, usable only against cities rather than legitimate military targets; and finally clashed bitterly with a minority that favored going ahead with the H-bomb. I myself believe that the opposing factions of scientists tended to caricature each other. It was not really that one side wanted to depend exclusively on offense and the other solely on defense. The genuine differences concerned emphasis and allocation. But the ironic next 180 degree turn at the end of the 1950s saw the majority faction turn once more and adopt almost the caricature of the position it had been most recently opposing. It now calls for a nearly exclusive reliance on offense and the total rejection of defense of population against ballistic missiles. Cities, it seems, are now the only "legitimate" targets and defending cities is a provocation.

But even minimum deterrers who oppose defending population normally believe that we should protect our retaliatory force by concealment, shelter or active defense. The Safeguard ABM which aims to protect bombers and missiles is precisely the kind of thing that Minimum Deterrers would normally support. And in fact, many of them did, at least through March 6 of this year.

In testimony before the Senate, Hans Bethe, for example, said quite unequivocally that while he was opposed to the Sentinel defense of cities there was another kind of ballistic missile defense, namely the defense of retaliatory hard points, and that was different; he favored that:

"A completely different concept of ABM is to deploy it around Minuteman silos, and at command and control centers. This application has gone in and out of Defense Department planning. I am in favor such a scheme."*

In fact, he said, the Sprint and MSR are good components for the purpose.

Then on March 14 the President announced the Safeguard program which was primarily directed at the defense of missiles, bombers and the national command authority. This apparently posed something of a dilemma. A tremendous effort had gone into lobbying against ABM when it had been intended mainly to provide a shield for population against light ballistic missile attack. Hundreds of scientists had signed indignant petitions; public interest groups had been mobilized; speeches had been written for now indignant senators; ABM had become a symbol. The push against it gained enormous momentum; Senate hearings were rolling; and, it seems, if you push hard enough against a symbol, you may find you are being pulled. At any rate, a good many of these scientists then said that, nonetheless, even with the change, they were *still* against it; and some offered extremely hasty calculations to suggest that the missiles and the bombers really required no protection, that Sprints and MSRs wouldn't do it anyway, that it would be better simply to multiply offense forces, or launch them on warning or do almost anything other than defend them.

This sequence of events suggests the folly of transforming a complex substantive issue into a symbol in black and white. I would not turn the simple picture upside down, with the good guys supporting ABM and the bad guys in opposition. I do not represent the Safeguard issue as one that divides the forces of light from those of dark. And neither do temperate opponents of starting deployment this year, like Senator Brooke. Senator Brooke has not been pushed to the rash extreme of calling for launching Minuteman at Russian cities on radar warning or doubling the offense or doing almost anything rather than support the scoundrels advocating ABM. He rejects the first as lunacy and deplores the second.

Simply for the symbolism of taking Safeguard out of the country, some Senators propose to build on distant Pacific atolls PAR and MSR radars that could if located in Montana and Dakota protect Minuteman. This would waste billions of dollars just to defeat the bad guys in the Administration. It is such bitter symbolic struggle with shadows that makes reflective choice hard to manage and delays the sober and rigorous examination required both for our defense and domestic needs.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, announced that the House had agreed to the amendment of the Senate to the bill (H.R. 9951) to provide for the collection of the Federal unemployment tax in quarterly installments during each taxable year; to make status of employer depend on employment during preceding as well as current taxable year; to exclude from the computation of the excess the balance in the employment security administration account as of the close of fiscal years 1970 through 1972; to raise the limitation on the amount authorized to be made available for expenditure out of the employment security administration account by the amounts so excluded; and for other purposes.

The message also announced that the House had passed a bill (H.R. 13111) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1970, and for other purposes, in which it requested the concurrence of the Senate.

HOUSE BILL REFERRED

The bill (H.R. 13111) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1970, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

GAO STUDY OF B. F. GOODRICH PERFORMANCE ON CONTRACT FOR THE A–7D AIRCRAFT BRAKES

Mr. PROXMIRE. Mr. President, some weeks ago I was given information alleging that B. F. Goodrich delivered brakes that failed to meet specifications to Ling Temco Vought/Vought Aeronautics Division (LTV/VAD) in Dallas, Tex., to be installed on the $1.2 million A–7D light attack aircraft.

Although the charges were difficult to believe, I was further informed that Goodrich's delivery of defective brakes to LTV for an airplane they are preparing for the Air Force involved highly questionable business practices on the part of the Goodrich wheel and brake plant in Troy, Ohio.

I was told that in order to deliver brakes that appeared qualified according to military specifications Goodrich officials altered data on the test specification logs and deviated from standard industry and military testing procedures and standards to show that the defective brakes were a qualified component.

On the basis of the allegedly false qualification report the brakes were installed on production models of the A–7D for testing, and the safety of both LTV and Air Force test pilots were endangered.

B. F. GOODRICH EMPLOYEES KNEW OF ERROR

The allegations recited here were brought to my attention by two Goodrich employees: A design engineer, Cyril Lawson, who was involved in the research and design of the A–7D brake, and the Goodrich technical writer, Kermit Vanderveer, who contends he was instructed to write the false qualification report by his superiors at the Troy, Ohio, wheel and brake plant.

The engineer said that a design miscalculation on the brake was made and subsequently discovered during the design phase. But, he explained, by the time it was found out tooling had already begun for the brake and a delivery date had been set. The engineer said he advised his superiors at the plant of the error and assumed that production of the brake would stop immediately, while the Goodrich engineering department developed a new design that would meet the specifications.

Instead of starting a new design, my two informants at Goodrich said, the company ordered qualification tests on the brake continued in the hope that it would perform satisfactorily despite the design error. In the meantime the unqualified brakes were shipped to LTV with the technical writer's inaccurate qualification report.

BRAKES COULD NOT MEET MILITARY SPECIFICATIONS

The Goodrich employees who were responsible for bringing these remarkable accusations to my attention contend that 14 separate attempts were made to nurse the brake through the required laboratory tests. All ended in complete failure they told me and it was then obvious to the Goodrich engineers working on the A–7D brake project that the brake had no chance of ever meeting the stringent military specifications.

Still, Goodrich neglected to recall the bad design nor did they give any hint that the technical writer's "concocted" qualification report contained erroneous material that showed the brake meeting the military specifications of quality and safety required before flight tests are allowed.

Customary procedure in the brake industry, I am told, is to provide this qualification certification, in writing, with all brakes. The report gives all the details of laboratory tests and supports these details with documentary evidence that all the requirements for the design, manufacture, and testing of the brakes have been met. According to the military specifications covering preproduction tests for aircraft wheels and brakes, the tests are supposed to be conducted on test articles that are representative of the production items.

TECHNICAL WRITER ADMITS WRITING FALSE REPORT

The technical writer who authored the qualification report has said in writing:

Since there was no evidence that would substantiate any of these claims (i.e. that all requirements for the design, manufacture and testing of the brakes have been met) the only alternative was to write a false qualification report.

Furthermore, he states:

I was ordered to concoct a report that would establish that the brakes had met all the necessary requirements, and to manufacture the documentary evidence to go with it.

The technical writer says:

I flatly refused, and for almost a month, a bitter argument raged between myself and various company officials. Finally, I was ordered to "write the thing" and shut up about it.

According to the technical writer, the brakes were actually never tested as his report claimed. Furthermore, he has presented evidence to my office that appears to show that additional components were added in his words, to "beef up" the

* Mimeographed statement submitted on March 6. The printed version published at the end of the month, added the phrase "at the appropriate time" to the last sentence.

brakes during laboratory tests—components that were not actually a part of the production brakes—so the brakes could successfully complete simulated aircraft landings.

ORIGINAL TEST LOGS SHOW FAILURE

In a last minute effort to exonerate himself from writing the false qualification report the technical writer says he noted in the report's conclusion that:

The B. F. Goodrich Part Number 2-1162-3 Brake Assembly does not meet the intent and requirements of the applicable specification documents and therefore is not qualified. When the report was sent to the Air Force the "nots" had been removed from the conclusion by the Technical Writer's superiors.

I have been told that the flight tests on the brake at Edwards Air Force Base, Calif., were a failure. The design engineer has said that on one occasion when the test pilot landed the plane and applied the brakes the wheels locked and the plane went into a skid. He released brake pressure, but the intense heat generated by the faulty brakes caused the brake discs to weld together. The plane continued its high-speed skid down the runway, stopping 1,500 feet later. The plane remained upright and the test pilot was uninjured, but after witnessing the near accident the design engineer said he determined to go to Government authorities before a pilot was killed or injured as a result of the design error that was being hidden from LTV and the Air Force by the false qualification report. Both the technical writer and the design engineer went to the FBI in Dayton, Ohio, with their evidence—the same evidence they later presented to me and which I am relating here today.

GOODRICH REFUSES AIR FORCE INSPECTION

The technical writer has said:

At this time, because of the numerous failures encountered during the flight tests at Edwards Air Force Base Goodrich admitted, under intensive pressure applied by LTV and Air Force personnel, that certain portions of the formal report issued by Goodrich were erroneous.

As a result of this admission, according to the technical writer, "the Air Force immediately demanded to see data taken during laboratory tests of the A-7D brake. Goodrich flatly refused to produce the data for the Air Force inspection."

Both the engineer and the technical writer resigned from B. F. Goodrich.

REQUEST FOR A GENERAL ACCOUNTING OFFICE INVESTIGATION

Although the design engineer and the technical writer both appeared to be responsible individuals, I found their account incredible. That one of the country's major corporations intentionally delivered unqualified brakes to LTV for installation on production aircraft seemed impossible.

Also, I could not believe that the Defense Department did not have some means of independent inspection and testing that would prevent defective parts from being installed on production aircraft. If true, that seemed to be a serious failure on their part.

However, in spite of my incredulity on these two points, I felt it my duty to clear the air of these accusations against B. F. Goodrich and to definitely determine the effectiveness of the Defense Department's quality control efforts. I called upon the General Accounting Office—GAO—to investigate the allegations of the design engineer and the technical writer, paying particular attention to the following two assertions:

1. that the test logs and the qualification report that indicated that the brakes were qualified were erroneous; that they were intentionally altered to show that the brakes qualified when they actually could not qualify because of a basic design error, and

2. that a test pilot's safety was endangered because the defective brakes were installed on at least two production aircraft and tested in flight tests on the basis that the erroneous qualification report showed the brakes to be qualified component.

Also, I asked the GAO to define the effectiveness of the Government's responsibilities in the testing of brakes in this case.

GAO REPORT CONFIRMS THE GOODRICH EMPLOYEES ASSERTIONS

The report handed to me by the General Accounting Office recently is startling in its crystal clear, carefully documented confirmation of the design engineer's and the technical writer's assertions.

In reviewing the qualification tests performed on the brake, the GAO reports that Goodrich's test procedures on the brakes for the A-7D do not, "comply with the specification requirements or normal industry practices." GAO concludes that—

As indicated in our report, there were discrepancies between the data shown in the B.F. Goodrich test report (Q-6031), and the data shown by its test instruments.

In our examination we noted instances where data were reported notwithstanding the fact that none were available from the test instruments. In other instances we noted that reported data were at variance with recorded test results. In some instances B.F. Goodrich personnel could not offer an explanation, while in other instances the discrepancies were justified by so-called "professional judgment."

The GAO said:

In our opinion, the B.F. Goodrich Company should have accurately reported the test results in its report Q-6031. In the absence of accurately reported test results it is difficult, if not impossible, to properly evaluate product performance.

GAO DOCUMENTS DISCREPANCIES

The GAO report confirmed the Goodrich employees assertions by showing that on a machine designed to test stop effectiveness of the A-7D brake, "brake pressure was released at 10 miles per hour and the wheel permitted to coast or taxi for 10 to 15 seconds. Military specifications required the brake to bring the wheel to rest." The report states in no uncertain terms that—

An Air Force Engineer considered that the failure to come to a complete stop was unacceptable because torque stresses reach their peak during the 10 to 0 miles per hour velocity.

The fact that the wheel was allowed to coast to a stop on the testing device was not included in the qualification report. Nor did the report indicate that Goodrich had requested a deviation from the standard testing procedure which requires the wheel to be braked to a dead stop.

Also confirming the story I had learned from the design engineer and technical writer, GAO reported that Goodrich did not use a "test sequence of 45 normal, 5 overload, and 2 rejected-take-off brake stop tests, although it was common industry practice to intersperse the normal and overload stop tests."

An Air Force engineer told GAO investigators that "any failure would disqualify the test;" and, in his opinion, "had Goodrich performed the tests on the 9 to 1 interspersed basis, the brakes would have not lasted through the 50 normal and overload stop tests."

GAO CONFIRMS GOODRICH SWITCHED PARTS

These two incidents taken either alone or together would have disqualified the brake if standard industry and military brake testing procedures had been followed by Goodrich. However, the GAO report reveals that the company went much further in their efforts to qualify this vital part for the A-7D aircraft in spite of the fact that it was evident that the brake was plainly not a qualified component. GAO investigators discovered that the test operator on the A-7D brakes even documented some of the unorthodox testing procedures. For instance, the GAO report notes:

Goodrich's Special Test Requirement and Procedures and Operator's Comments set forth various other instructions or actions regarding the procedures or methods in the qualification testing. Among these was the statement that the stators (stationary parts in the brake assembly) were switched between the number 1 and number 3 positions and we selected this for further inquiry.

B. F. Goodrich attempted to explain the changing of parts thus:

This was a laboratory technique in which the results were studied by an engineer to determine the wear pattern of the linings on the stator.

LTV officials had another description of this switching of parts for GAO:

LTV officials advised us that the switching of stator positions was not normal industry practice.

The Air Force was even more outspoken on the matter:

In the opinion of an Air Force Engineer, this switching of parts was unacceptable.

Unequivocal language of this sort throughout the GAO report leaves no room for doubt. The story I had learned through the engineer and the technical writer is confirmed in every detail by the GAO report. If anything, the GAO account is even more serious than the evidence that had been presented to me by the two Goodrich employees and that I originally found so difficult to believe.

GOODRICH PERSONNEL COULD GIVE NO EXPLANATION

For instance, in the altering of the operator-recorded test data, GAO reports that B. F. Goodrich revised the data every single time in the critical "overload brake stop, worn brake rejected takeoff tests." The GAO report

states that "Goodrich personnel could give no explanation."

In this and other critical tests Goodrich recorded data in the qualification report when the raw test records show that "the recorder was not working properly" or was not working at all.

In still another instance, the GAO report notes:

Goodrich personnel expressed the opinion that the data had been rationalized from tests of another part on which the temperature had been monitored and which was considered comparable.

According to the GAO, "this constitutes a 'rationalization of data.'"

In all of these examples, where data was altered or where data was recorded when no recorder was operating, the information reported by Goodrich in the qualification report made it appear that the A–7D brake was qualified, when in fact, if accepted industry standards had been followed, the qualification report would have shown that the brake did not meet its specifications.

Accompanied by the doctored qualification report, the brakes were installed on production aircraft at Edwards Air Force Base, Calif.

FAA WARNS OF POTENTIAL FIRE DANGER

When the GAO questioned the Federal Aviation Administration on the danger of defective brakes to test pilots and to the aircraft the report notes:

In response to our question regarding pilot safety and structural damage, FAA officials stated that warping or welding of the brakes would blow out the tire, which in turn might cause (1) collapsing of the landing gear, (2) breaking of the hyrdaulic lines, and/or (3) puncturing of the gas tanks located in the aircraft wing. As the result, they further stated the most likely danger was a fire due to the combination of the heat in the brakes and leaking hydraulic fluid and/or jet fuel.

The GAO report then notes that on "two contractor flight reports, in one instance, the wheels locked up and in another instance the brakes fused so that they had to be loosened with a screwdriver."

Fortunately on neither occasion was their a fire as there had been during the in-plant testing. The technical writer says:

I have witnessed several fires during testing caused when the pistons bottomed out allowing brake fluid to hit the hot brakes and causing the whole thing to burst into flames.

It was at this stage in the on-plane testing that the design engineer and the technical writer resigned from B. F. Goodrich rather than carry on with the A–7D brake project. In his letter of resignation, the technical writer frankly told the head of the B. F. Goodrich wheel and brake plant that he was leaving the company because he had been a part of, "numerous deliberate and willful misrepresentation which, according to legal counsel, constitutes fraud and thereby exposes both myself and others to criminal charges of conspiracy to defraud. Events of the past 7 months have created an atmosphere of deceit and mistrust in which it is impossible to work productively and effectively."

It was also at this time that the Air Force demanded to see the raw data that Goodrich had recorded when qualifying the brake. Goodrich refused. The GAO reports:

After Goodrich refused the Air Force access to Goodrich's raw data supporting the four-rotor brake Qualification report, a LTV representative was authorized to review this raw data.

GOODRICH ADMITS DATA DISCREPANCIES

The GAO reports:

LTV's review in the fall of 1968 disclosed discrepancies in the qualification tests which were considered to be of such significance as to conclude that the four-rotor brake did not qualify to the "letter of specification." Subsequently, Goodrich proposed to substitute a five-rotor for the four-rotor brake.

Thus, even though LTV had previously approved the four-rotor brake qualification test report, they now said the "brake did not qualify." LTV officials explained this turn-around to GAO by saying that in approving the original Qualification Report, "they reviewed only the data contained in the report and did not compare the reported data with the original recorded test results."

If they had made the comparisons as we now know, they would have discovered that the qualification report's figures were far different from the operator-recorded logs from the Goodrich testing laboratory.

The Air Force, perhaps because of the design engineer's and the technical writer's warning to the FBI, protected the Government's interest by withholding approval of the Qualification Report, and, as of today, they have yet to approve the Qualification Report on Goodrich's new five rotor brake.

QUALITY CONTROL IS A MYTH

In describing the Government's contract administration responsibilities in this case GAO cogently describes how quality control is a myth and how the company is really on an honor system to conduct legitimate tests and write factual qualification reports. In the case of B. F. Goodrich's Wheel and Brake plant this honor system does not work. GAO explains:

The contract administration functions at LTV were assigned to the Naval Plant Representative Office located at the prime contractor's plant. Secondary delegations of quality assurance responsibility at Goodrich was assigned to the Defense Contract Administration Services District (DCASD), Dayton, Ohio.

LTV's purchase order P–237138 provided for Government source inspection at Goodrich and the referenced LTV specification required the Government inspector to sign the qualification report without further describing the meaning or significance of such a signature.

GAO states flatly:

In our opinion, the affixing of a signature to a report is meaningless unless accompanied by some other act, such as verifying, at least on a test basis, the reported information to the original documents.

We also believe that the report or document should contain a clear and concise statement as to the meaning of the signature to indicate the reliance that may be placed upon such actions by other readers.

The DCASD quality assurance representative told GAO investigators that—

Goodrich required his signature on the qualification report because LTV would not accept it without his signature; however, he had not received any specific oral or written instructions from any Government activity or the prime contractor's officials as to what steps were to be taken prior to signing the four-rotor brake assembly qualification report, Q–6031. His signature was affixed to the Q–6031 report, in which it was concluded that the brake assembly met the intent and requirements of the applicable specification document and therefore was qualified.

The quality assurance representative explained that he interpreted LTV's quality control requirements to mean an inspection of the qualification test report in the manner as for any other hardware item, thus he assured himself that all the tests listed in the front of the report were accomplished and successfully solely on the basis of the report contents. The quality assurance representative also stated that he did not witness any of the tests on the four-rotor brake or compare any raw data with the Q–6031 report and commented that this was DSASD's normal practice.

However, the Chief, Quality Assurance Section, DCASD Dayton had a different interpretation of what the signature meant. He told GAO investigators:

The quality assurance representatives' signature meant that he had compared, on a test basis, the raw data generated by the test recording machine with the information reported in the Q–6031 report and that the information was in agreement. He stated also that he had contacted Defense Contract Administration Services Region, Cleveland, for an interpretation of the signature on a qualification test report, but that they could not provide any assistance.

We know now that the raw data generated by the test recording machine either did not exist or was in disagreement with the information reported in the qualification report on critical tests.

The GAO investigation of this matter has already produced some reforms in the area of meaningful Government inspection and quality control of the defense contractors in the Dayton, Ohio, area. It is a small start in a small area. But it is a start.

GAO INVESTIGATION BRINGS IMPROVEMENTS

The GAO report states:

Subsequent to our discussions, DCASD, Dayton issued, basically, the following internal guidance to their quality assurance personnel:

"1. Do not countersign qualification reports unless contractually required or unless directed by higher authority.

"2. A signature constitutes verification of the data contained in the report and shall not necessarily indicate concurrence with the conclusions in the report.

"3. When countersigning as authorized in 1. above, identify in the report the test data for the tests actually witnessed."

As I have stated, these improvements in inspection are a small start in one area of the country. Much more guidance is needed if the DCASD is to function effectively; many questions remain to be answered before we can be certain that an incident of this type does not occur again. For instance:

QUESTIONS REMAINING

I question the method of testing which allows a company to write its own quali-

fication report without proper supervision by the contracting governmental agency.

I question the business practice in defense plants which allows—even encourages—executives to coerce their employees to fabricate documents that determine the safety of the U.S. servicemen.

I question the justice of a system that allows a company to merely submit a new report and a new product to the Government, without penalty, when the company has been caught indulging in the business practices outlined here and confirmed by the GAO.

It is significant to note at this point that Goodrich is proceeding with business as usual, supplying brakes for the A–7D, in addition to the brakes for such aircraft as the F–111, the C5A, the AH–56A and other aircraft considered vital to the security of this Nation.

The GAO concludes:

Although we have no firm evidence, at this time, that the conditions noted with regard to the A–7D brake are widespread throughout the defense industry, we have previously programmed audit work in the area of quality assurance. Our audit staffs, in performing this work, will examine into whether or not similar situations are occurring with respect to other defense procurements. We will furnish you with any reports that result from this work.

More of this work is needed, not only to prevent the business practices outlined here and to protect the lives of our servicemen, but also to assure the taxpayers that defense spending is not a payment for waste, inefficiency, and unethical professional standards.

Had the brake in question in the GAO inquiry been permitted to go into full production for final use on the A–7D plane, we possibly would be reading in the newspapers a year or more from now about a rash of inexplicable air base accidents involving defective brakes, and wondering how it had all come about.

Many lives might have been lost—lives of our servicemen. And the taxpayer would be faced with the enormously expensive job of refitting the undamaged planes with new brakes and replacing the planes destroyed in the unnecessary accidents.

And all of this because the brake's test performance was inaccurately reported by the manufacturer and inadequately monitored by the Government.

It is this kind of laxity that is at the base of the current crisis of confidence in military procurement.

Mr. President, I ask unanimous consent that the GAO report to which I have referred be printed in the RECORD following my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. PROXMIRE. I also direct the attention of the Senate to a telegram which I have received from the B. F. Goodrich Co., following an advance on this speech which I am giving now, which was released last night.

B. F. Goodrich has replied; and I think in fairness, although it is a long telegram, I should read in full the company's response to my speech.

They said:

A wholly untrue statement has appeared in the press today that B. F. Goodrich has falsified test reports to hide defects in brakes which it made for the Air Force A7D attack plane. The statement is not supported by the findings and conclusions of the General Accounting Office report issued to Sen. Proxmire. The facts regarding the brakes which were designed and manufactured by B. F. Goodrich for the A7D plane are as follows:

There are eight A7D attack planes which have been assembled and are undergoing flight testing. The B. F. Goodrich brakes on these planes have operated successfully, exceeding the brake capacity requirements. The brakes have passed their military pilot's acceptance tests according to the responsible Air Force brake authorities Ling-Tempco-Vought. In short, the performance of the brakes has been excellent, and there have been no safety incidents of any kind in any way relating to the brakes.

The current five rotor brakes on the A7D were qualified in December, 1968, and replaced the original four rotor brake design which, although it successfully met the indoor laboratory qualifications tests, presented technical problems in the initial field testing on the first four A7D airplanes. The laboratory test data for the brakes were made available to the GAO and reviewed with it in detail. The GAO people who reviewed the test reports raised no questions whatever regarding the reports.

Mr. President, as I shall point out subsequently, the B. F. Goodrich Co. is talking about different brakes. They are talking about five-rotor brakes. I have made no criticism of the five-rotor brakes; what I am talking about are the four-rotor brakes, the original brakes which, as I have documented here, failed, as the General Accounting Office has brought out so effectively in documenting their failure.

The telegram continues:

The B.F. Goodrich Company for many years has been a leading manufacturer of airplane brakes. Many thousands of our airplane brakes are in service on commercial airlines and military planes, both in this country and throughout the world. Further, we know of no aircraft accident which has ever occurred which was related to a B. F. Goodrich aircraft brakes.

All of the above facts would be corroborated by the Air Force, LTV, and the General Accounting office.

Following is the text of the findings and conclusions of the General Accounting office:

In some instances Goodrich test procedures for the 4-rotor brake did not appear to comply with specification requirements or normal industry practice.

Goodrich's qualification report on the result of testing the 4-rotor brake contained some discrepancies that might be considered significant;

Opinions differed as to the danger to the pilot and the potential danger to an aircraft due to brake failure. No significant aircraft damage due to the use of the 4-rotor brake had been reported;

Goodrich offered to, and did, replace the 4-rotor brake with a new 5-rotor brake without any apparent increase in cost to the prime contractor or the Government. We were advised that the change did not cause any delays in the delivery or testing of the aircraft.

The prime contrators, procedures and those of the defense contract administration services district /DCASD/ were inadequate to protect the Government's interest in the qualifications test of the 4-rotor brake; and

The Department of the Air Force protected the Government's interest by withholding approval of the qualification report.

Mr. President, finally I should like to reply to the telegram.

The company bases its denial that there was any wrongdoing in the manufacture, testing and qualification reporting for the first A–7D brake, a four-rotor brake, by saying that they now produce a workable five-rotor brake for the A–7D.

No one has ever denied that B. F. Goodrich is capable of producing a qualified brake. What the GAO report states and clearly documents is that Goodrich did not produce a qualified brake for the A–7D when they manufactured the four-rotor brake.

And yet, they sent this four-rotor brake to Edwards Air Force Base, California, for installation on production aircraft, verifying the quality of the brake with a qualification report that was filled, according to GAO, with misinformation.

When Goodrich says in their denial of the GAO charges that, "final qualification of the B. F. Goodrich brake currently in use on the A–7D was performed in the presence of engineers representing the aircraft manufacturer, the Air Force, and B. F. Goodrich," they are not discussing the same brake that GAO criticized in its report.

However, a close reading of the B. F. Goodrich denial reveals that the company is admitting that testing procedures at the Troy, Ohio, wheel and brake plant have been changed since the GAO reported on testing practices at that plant. Prior to GAO's report on the four-rotor A–7D brake, B. F. Goodrich brakes did not require the, "presence of engineers representing the aircraft manufacture, the Air Force and B. F. Goodrich." The Goodrich word on the qualification report was taken at face value.

In their denial Goodrich does not address themselves to the fact that the four-rotor brake produced for the A–7D was recalled by the company only after two employees went to the FBI with the information that all was not right with the qualification report.

They do not address themselves to the fact that the brake was replaced only after the Air Force declined to approve the qualification report and demanded to inspect the raw test data that Goodrich was supposed to use to write the qualification report.

Instead of answering the GAO charges Goodrich has chosen to discuss an entirely new brake that was inspected and qualified with GAO-improved procedures on the basis of the GAO investigation.

EXHIBIT 1

Review of the qualification testing of brakes for the A–7D aircraft—Department of the Air Force, Department of the Navy, Defense Supply Agency B–167023.

(Comptroller General's report to the Honorable WILLIAM PROXMIRE, U.S. Senate)

ABREVIATIONS

DCASD: Defense Contract Administration Services District.

ECP: Engineering change proposal.

GAO: General Accounting Office.

LTV/VAD: LTV Aerospace Corporation, Vought Aeronautics Division.

COMPTROLLER GENERAL OF THE UNITED STATES,
Washington, D.C., July 11, 1969.

Hon. WILLIAM PROXMIRE,
U.S. Senate.

DEAR SENATOR PROXMIRE: This letter is an addendum to our report to you dated July 3, 1969, on the review of the qualification testing of brakes for the A–7D aircraft, and

is in response to your further inquiry of July 9, 1969, and discussion with your staff on July 10, 1969.

As indicated in our report, there were discrepancies between the data shown in the B. F. Goodrich test report (Q–6031), and the data shown by its test instruments. In our examination we noted instances where data were reported notwithstanding the fact that none were available from the test instruments. In other instances we noted that reported data were at variance with recorded test results. In some instances B. F. Goodrich personnel could not offer an explanation, while in other instances the discrepancies were justified by what they consider "professional judgment."

In our opinion, the B. F. Goodrich Company should have accurately reported the test results in its report Q–6031. In the absence of accurately reported test results it is difficult, if not impossible, to properly evaluate product performance.

Although we have no firm evidence, at this time, that the conditions noted with regard to the A–7D brake is widespread throughout the defense industry, we have previously programed audit work in the area of quality assurance. Our audit staffs, in performing this work, will examine into whether or not similar situations are occurring with respect to other defense procurements. We will furnish you with any reports that result from this work.

Sincerely yours,

LAWRENCE J. POWERS,
Acting Comptroller General of the United States.

COMPTROLLER GENERAL OF THE UNITED STATES,
Washington, D.C.

Hon. WILLIAM PROXMIRE,
U.S. Senate.

DEAR SENATOR PROXMIRE: The accompanying report presents the results of our examination into the qualification of brakes furnished by The B. F. Goodrich Company to LTV Aerospace Corporation, a subsidiary of Ling-Temco-Vought, Inc., for use on the A–7D aircraft, as requested in your letter of May 13, 1969. The significant contents of this report are summarized in the digest included with the report. The review was made pursuant to the Budget and Accounting Act, 1921 (31 U.S.C. 53), and the Accounting and Auditing Act of 1950 (31 U.S.C. 67).

We did not submit copies of this report to the Department of Defense or the contractors, The B. F. Goodrich Company, and LTV Aerospace Corporation, Vought Aeronautics Division, for comment.

We plan to make no further distribution of this report unless copies are specifically requested, and then we shall make distribution only after your agreement has been obtained or public announcement has been made by you concerning the contents of the report.

Sincerely yours,

ELMER B. STAATS,
Comptroller General of the United States.

DIGEST

Why the Review was made—At the request of Senator William Proxmire, the General Accounting Office (GAO) has reviewed certain aspects of the qualification tests of brakes for the A–7D aircraft. These tests were performed by The B. F. Goodrich Company under a subcontract with LTV Aerospace Corporation, Vought Aeronautics Division (LTV/VAD), the prime contractor with the Navy for the A–70 aircraft to be used by the Air Force.

Findings and conclusions—The results of GAO's review indicated that:

In some instances Goodrich's test procedures for the four-rotor brake did not appear to comply with specification requirements or normal industry practice;

Goodrich's qualification report on the results of testing the four-rotor brake contained some discrepancies that might be considered significant;

Opinions differed as to the danger to the pilot and the potential damage to an aircraft due to brake failure. No significant aircraft damage due to the use of the four-rotor brake had been reported;

Goodrich offered to, and did, replace the four-rotor brake with a new five-rotor brake without any apparent increase in cost to the prime contractor or the Government. We were advised that the change did not cause any delays in the delivery or testing of the aircraft;

The prime contractor's procedures and those of the Defense Contract Administration Services District (DCASD) were inadequate to protect Government's interests in the qualification tests of the four-rotor brake and;

The Department of the Air Force protected the Government's interest by withholding approval of the qualification report.

INTRODUCTION

The General Accounting Office, at the request of Senator William Proxmire, has examined into the qualification testing of the brake assemblies for the A–7D aircraft at The B. F. Goodrich Co., Troy, Ohio.

The Naval Air Systems Command is purchasing 74 A–7D aircraft for the Department of the Air Force under contract N00019–67–C–0143 with LTV Aerospace Corporation, Vought Aeronautics Division.

We were asked to inquire into whether (1) Goodrich's qualification report accurately presented the actual recorded test results, (2) the use of a defective brake endangered the test pilot's safety, and (3) the Government incurred additional costs due to the changes in the brake. In addition, we were requested to determine the Government's responsibilities in the qualification testing of the brakes and the Air Force's actions to protect the Government's interest. Additional information furnished by a member of the Senator's staff related the requested information to the four-rotor [1] brake assembly.

LTV/VAD solicited, and we were advised that they received, quotations from The B. F. Goodrich Co., Bendix Aviation Products Division, General Tire and Rubber Co., and Goodyear Aviation Products Division on various items, including the brakes, for the A–7D aircraft. LTV/VAD officials stated that The B. F. Goodrich Co., Aerospace and Defense Products Division, was selected on the basis of the price and technical design. LTV/VAD officials stated that the Air Force concurred in their selection. Thereafter, LTV/VAD issued a firm-fixed-price purchase order, number P–237138, dated June 18, 1967, to Goodrich and supplements to this purchase order have been issued, exercising options granted to LTV/VAD by Goodrich in the basic purchase order, as follows:

Purchase order document	Date	Quantity of brake assemblies	Firm-fixed unit price	Total price
Basic	June 18, 1967	40	$364.50	$14,580
Supplement 2X	Mar. 20, 1968	160	338.50	54,160
Supplement 5X	Dec. 9, 1968	2	338.50	677
Total		202	[1] 343.64	69,417

[1] Weighted-average unit price.

Also, LTV/VAD exercised the 1969 option of the above purchase order through the issuance of purchase order P–354831, dated February 10, 1969, for 260 brake assemblies at $338 each, or a total of $87,880. On April 30, 1969, this purchase order was amended to increase the number from 260 to 267 brake assemblies at the same unit price for a total price of $90,246. These brake assemblies had been included in LTV/VAD's proposal to the Government at $343.70 per unit, excluding general and administrative expenses and a 7-percent factor for scrap and other miscellaneous costs, in determining the initial cost for contract –0143.

LTV/VAD initially purchased a four-rotor brake but, in January 1969, revised, in part, the purchase order to require five-rotor brake assemblies. The differences between the four- and five-rotor brake assemblies are as follows:

Part name	4-rotor brake: Part number	4-rotor brake: Quantity	5-rotor brake: Part number	5-rotor brake: Quantity
Rotor	134–44	4	134–49	5
Stator	244–270	3	244–306	4
End plate segments	244–271	28	244–307	28

The LTV/VAD purchase orders show that the following types of brake assemblies had been ordered:

LTV/VAD purchase order No.	Quantity of brake assemblies: 4-rotor	5-rotor	Total
P–237138	46	156	202
P–354831	0	267	267
Total	46	423	469

LTV/VAD purchase order P–237138 required Goodrich to perform qualification testing on the brake assemblies and to submit a report on the results of such testing. The qualification tests are referred to as preproduction tests in the referenced specifications. Both LTV/VAD specification 204–16–37d and military specification MIL–W–5013G defined preproduction tests as tests conducted by the vendor on samples representative of the production item to ensure conformance with the specification requirements. Goodrich lawyers stated that the four-rotor brake assemblies subjected to qualification tests were hand made units, similar to brake assemblies to be manufactured, rather than production models.

Goodrich submitted to LTV/VAD its qualification test report, Q–6031 revision A, dated July 12, 1968, on the four-rotor brake assembly. This report was signed by a DCASD Dayton representative and approved by LTV/VAD. However, the Air Force's Aeronautical Systems Division recommended withholding approval of the report. Subsequently, Goodrich proposed to supply a five-rotor brake as it did not believe that the four-rotor brake met their "suitable for the intended use" obligation to LTV/VAD and requested that LTV/VAD withdraw its approval of the four-rotor brake qualification test report.

Goodrich submitted the five-rotor brake assembly qualification test report, Q–6046 revision A, dated February 18, 1969. This report also was signed by the DCASD Dayton representative and approved by LTV/VAD. We were advised, however, that, as of June

---

[1] A rotor is a rotating metal disc interspersed with stators, which are stationary metal discs carrying brake lining material. The rotor and stator discs, when compressed, perform the braking action.

5, 1969, the Air Force's Aeronautical Systems Division had not approved Goodrich's qualification report on the five-rotor brake.

REVIEW OF QUALIFICATION TESTS OF BRAKES

Variations in qualification testing procedures and results reported

The results of our review indicated that, in some instances, Goodrich's qualification test procedures for the four-rotor brake did not appear to comply with the specification requirements or normal industry practices. Also, we found that Goodrich's qualification report data on the results of testing the four-rotor brake contained some discrepancies which, in the judgment of an engineer assigned to our staff, may be considered significant.

The qualification report and its supporting data were considered to be proprietary information by Goodrich, who requested that this information not be further disclosed. We have, therefore, omitted from our report the specific data obtained from Goodrich during this review.

Test Procedure for the Four-rotor Brake

Qualification report Q–6031, which was applicable to the four-rotor brake, indicated that the tests adhered to the requirements of military specification MIL–W–5013G, except where the specification differed from the LTV/VAD specification. This report indicated also, that no deviations were requested by Goodrich.

However, Goodrich's project manager stated, and documents showed, that the brake pressure was released at 10 miles per hour and the wheel permitted to coast or taxi for 10 to 15 seconds. Military specifications required the brake to bring the wheel to rest.

Goodrich officials stated that, to compensate for the rolling stop, higher energy was imposed on the wheel at the higher speeds. Goodrich's project manager stated that LTV/VAD had orally approved this waiver to the test procedures and LTV/VAD officials acknowledged verbal approval of minor deviations to Goodrich's test procedures but did not describe to us the specific deviations. However, an Air Force engineer considered that the failure to come to a complete stop was unacceptable because torque stresses reach their peak during the 10 to 0 miles per hour velocity.

Goodrich's project manager advised us of the following test procedures which, he said, were orally approved by LTV/VAD.

1. Use of the 84-inch instead of 120-inch dynamometer for the 45 normal brake stop tests because Goodrich stated the larger dynamometer was, tied up, with other programs.

2. Use of a test sequence of 45 normal, 5 overload, and 2 rejected-take-off brake stop tests, although it was common industry practice to intersperse the normal and overload stop tests.

A Goodrich official informed us, and we verified the fact, that test sequence requirements were not specified in military specification MIL–W–5013G or LTV/VAD specification 204–16–37d. LTV/VAD officials advised us that they considered the significance of the test sequence a matter of opinion, but their Assistant Director for the A–7D program stated that he preferred an interspersed 9 normal to 1 overload stop test sequence. However, an Air Force engineer stated that any brake failure would disqualify the tests; and, in his opinion, had Goodrich performed the tests on the 9 to 1 interspersed basis, the brakes would not have lasted through the 50 normal and overload stop tests.

Goodrich's Special Test Requirement and Procedures and Operator's Comments set forth various other instructions or actions regarding the procedures or methods in the qualification testing. Among these was the statement that the stators were switched between the number 1 and number 3 positions and we selected this for further inquiry. Goodrich stated that this was a laboratory technique in which the results were studied by an engineer to determine the wear pattern of the linings on the stator.

Military specification MIL–W–5013G and LTV/VAD specification 204–16–37d are silent regarding the switching of parts or components. LTV/VAD officials, however, advised us that the switching of stator positions was not normal industry practice. In the opinion of an Air Force engineer, this switching of parts was unacceptable.

Reported Test Results on the Four-Rotor Brake

We selected brake stop tests from qualification report Q–6031 for verification of the basic recorded test results. Each of these brake stop tests included the recording or measurement of 18 characteristics, or parameters, 16 of which were selected for verification. The extent and results of our verification were as follows:

Test title	Stop tests: Number in universe	GAO sample: Number	GAO sample: Percent of universe	Discrepancies [1]: Number	Discrepancies [1]: Percent of sample
Normal brake stop	45	7	15.6	2	28.6
Overload brake stop	5	5	100.0	5	100.0
Worn brake rejected, takeoff stop	2	2	100.0	2	100.0
Total, stop tests	52				
Total, GAO sample		14	26.9	9	64.3

[1] These are the discrepancies, existing in at least 1 or more of the 16 test characteristics or parameters in each of the stop tests, that may be considered significant.

The parameter discrepancies that may be considered significant between data shown in the test report (Q–6031) and data shown by Goodrich's test instruments, as well as Goodrich's explanations, are set forth in the exhibit of this report. In addition, we found other discrepancies which we considered to be insignificant because they were due to variations in engineering interpretations and transposition of the report data between stop tests.

On the two remaining parameters in our selected sample of 14 stop tests, we compared the reported data with the operator-recorded data and Goodrich's test requirements. We noted that reported and operator-recorded data on stop time were in agreement except on the five overload stop tests where reported data presented a lesser stop time than that of the operator-recorded data. A Goodrich project manager advised us, however, that LTV/VAD had orally accepted the five excessive overload stop times after the tests but prior to the issuance of the qualification report. In 12 instances the stop time reported was greater than Goodrich's test requirements. Limitations on our time for this review precluded our comparing the stop times to the basic recorded test results and discussion of the resulting discrepancies with a Goodrich engineer.

Test Procedures and Reporting on the Five-Rotor Brake

We did not review the test procedures regarding the five-rotor brake or verify the resulting data contained in qualification report Q–6046 due to the limited time for our review. However, as discussed in subsequent report segments, LTV/VAD, Air Force, and DCASD representatives monitored, at least in part, Goodrich's performance of the testing and/or were provided access to the basic recorded test results.

Inquiry into possibility of danger to pilot and aircraft damage

We found that there were differences in opinions on the danger to the pilot and potential damage to an aircraft due to brake failure but that no significant damage due to the use of the four-rotor brake had been reported.

Air Force, Navy, and LTV/VAD officials generally agreed that the brakes did not endanger the life or safety of the test pilots. However, among these same officials, there was no definite consensus regarding the potential of damage to an aircraft, which may be incurred as the result of brake failure.

In response to our question regarding pilot safety and structural damage, Federal Aviation Administration officials stated that warping of the brakes would blow out the tire, which in turn might cause (1) collapsing of the landing gear, (2) breaking of the hydraulic lines, and/or (3) puncturing of the gas tanks located in the aircraft wing. As the result, they further stated the most likely danger was a fire due to the combination of the heat in the brakes and leaking hydraulic fluid and/or jet fuel. They told us, however, that they did not have any accident investigation reports concerning such incidents.

Both contractor and military pilots conducted flights in the aircraft with four-rotor brakes prior to and after LTV/VAD's engineering approval of the qualification report. However, Air Force, Navy, and LTV/VAD officials advised us that there was no requirement for brake qualification prior to use on an aircraft. The following statistics on flights and brake problems were obtained from the contractor and military flight reports and/or flight discrepancy sheets.

	Flights: Prior to LTV/VAD approval of qualification report	Flights: After LTV/VAD approval of qualification test and before installation of the 5-rotor brake	Flights: Total
Number of flights:			
Contractor	37	192	229
Military	12	26	38
Total	49	218	267
Number of flights indicating potential brake problems: [1]			
Contractor	6	6	12
Military	0	0	0
Total	6	6	12

[1] The brake is used in conjunction with an antiskid system. These reports describe other problems which the pilots appear to relate to this system.

Generally, the contractor noted brake problems were described in terms of the sensitivity of the brakes, which concerns the relationship between the brake pedal travel distance and the braking action. This problem was also reported in a military preliminary evaluation summary report. On only two contractor flight reports did we note any effect of the brakes on the aircraft. In one instance, the wheels locked up and, in the other instance, the brakes fuzed so that they had to be loosened with a screwdriver. In addition, an LTV/VAD official stated that, in one other instance, the brakes fuzed as anticipated during a ground test.

Discussions with the contractor's test pilot who had flown the flights where the lock-up and fuzing occurred and with military test pilots indicated that they considered that there was no danger to the pilot and/or aircraft from the four-rotor brake performance.

Air Force and LTV/VAD officials stated that they were satisfied with the five-rotor brake although there were some minor problems with this brake.

No additional costs incurred due to changes in the brake

We found no evidence of an increase in the costs to the Government or LTV/VAD for the replacement of the four-rotor brake assemblies with five-rotor assemblies or for the performance of the second qualification test.

A listing of the engineering change proposals (ECPs) was furnished to us by LTV/VAD officials as being those changes to the prime contract, where additional funds had been requested by LTV/VAD but had not been negotiated as of May 26, 1969. Our review of this listing did not identify any ECPs related to brake assemblies. Furthermore, LTV/VAD officials advised us that neither had there been nor did they contemplate any ECPs for the brake assemblies under the prime contract. Also, LTV/VAD and responsible Air Force officials stated that, to their knowledge, the prime contract price to the Government had not been increased because of the brake assemblies.

Goodrich offered to replace the four-rotor with five-rotor brake assemblies and to perform the new qualification tests at no cost to LTV/VAD or the Government.

We found that the price set forth in LTV/VAD's initial purchase order, P–237138, had not been revised except for exercising the options contained in the basic order for additional quantities at predetermined unit prices. Further, we did not find, in the purchase orders we reviewed, any other LTV/VAD purchase orders which provided Goodrich with compensation for modifying the brake assemblies or performing the second brake qualification test.

Our review of the receiving and shipping records furnished to us by LTV/VAD showed that 46 four-rotor brake assemblies were received but that three had been rejected during LTV/VAD's incoming inspection. We ascertained that, of the remaining 43 units, 33 had been exchanged for five-rotor brakes at no cost to LTV/VAD or the Government. LTV/VAD officials stated that they could not readily provide us with the status of the remaining units. They assured us, however, that all four-rotor brake assemblies received from Goodrich have been or will be returned for replacement with the latest brake configuration at no charge to LTV/VAD or the Government.

Aircraft delivery and testing were not delayed by brake problems

We were advised that problems encountered with the brakes did not affect aircraft delivery or testing. We discussed the effect of the brake problems on aircraft delivery and testing with an Air Force Aeronautical Systems Division engineer and LTV/VAD officials. They advised us that the brake problems had not delayed either delivery or testing of the aircraft.

Weakness in contract administration procedures

We found that contract administration responsibilities had been assigned to LTV/VAD and DCASD. In our opinion, however, procedures of both were inadequate to protect the Government's interest in assuring that the qualification tests were properly performed and the results were correctly reported on the four-rotor brake.

Requirements of the Armed Services Procurement Regulation

According to Armed Services Procurement Regulation 14–102, the prime contractor is responsible for controlling product quality, including that at the subcontractor level, and for offering to the Government only those supplies or services which meet the contract requirements. This section provides, in addition, that the control of quality by the prime contractor may relate to, but is not limited to, testing and examination to ensure that practices and equipment provide the means for optimum evaluation of inspection characteristics.

Armed Services Procurement Regulation 14–103.1 and 14–407.1 provide for Government inspection, when deemed necessary, to assist the assigned contract administration office for the prime contract to determine whether the prime contractor is ensuring conformance of the subcontracted supplies or services with the contract requirements. They further provide that Government quality assurance actions at the subcontract level do not relieve the prime contractor of any responsibilities for subcontract administration.

Prime Contractor's Contract Administration Responsibilities

The prime contract assigned LTV/VAD the responsibility for ensuring that all supplies and services procured from the subcontractor conformed to contract requirements. However, the extent of control exercised by LTV/VAD was to be dependent upon the type of supplies purchased, the subcontractors' demonstrated capability, and quality evidence made available by the subcontractor. In addition, the prime contract reserved the right of Government inspection at the subcontractors' facilities.

LTV/VAD's purchase order P–237138 and the referenced LTV/VAD specification requirements for the qualification test included:

1. LTV/VAD's approval of Goodrich's qualification test procedures.
2. LTV/VAD's rights to witness the tests and to perform other tests to ensure a satisfactory product.
3. LTV/VAD's approval of the qualification test report.
4. Government inspection of Goodrich's plant.
5. Government inspector's singnature on the qualification test report.
6. Government inspector's right to use drawings or other pertinent data required for adequate source inspection, available at the subcontractor's plant.

LTV/VAD officials stated that they relied upon Goodrich, whom they considered a responsible contractor, to satisfactorily perform the qualification tests on the four-rotor brake assemblies. LTV/VAD officials also stated that none of their engineers were brake experts. They stated, however, that LTV/VAD's representatives had witnessed some Goodrich tests on the four-rotor brakes, but that the tests witnessed were performed prior to normal, overload, and worn brake rejected-take-off stop tests supporting the qualification test report, Q–6031.

LTV/VAD officials stated that, prior to granting its approval of the four-rotor qualification test report, they reviewed only the data contained in the report and did not compare the reported data with the original recorded test results—hereafter referred to as raw data. LTV/VAD's approval of Goodrich's four-rotor qualification test report, Q–6031, was incorporated into LTV/VAD's purchase order P–237138 in supplement 4X dated August 1, 1968, by reference to LTV/VAD's engineering order E 1001.770, signed July 16, 1968, by LTV/VAD officials. This engineering order also included LTV/VAD's approval of Goodrich's preproduction test plan for the four-rotor brake.

LTV/VAD officials stated that, after Goodrich refused the Air Force access to Goodrich's raw data supporting the four-rotor brake qualification report, a LTV/VAD representative was authorized to review this raw data. LTV/VAD's review in the fall of 1968 disclosed discrepancies in the qualification tests which were considered to be of such significance as to conclude that the four-rotor brake did not qualify to the "letter of the specification." Subsequently, Goodrich proposed to substitute a five-rotor for the four-rotor brake.

LTV/VAD officials stated that its representatives were present during the performance of the qualification tests on the five-rotor brakes. Approval of the five-rotor brake qualification report, Q–6046, was made by LTV/VAD's engineering order E1026.17, which was signed by LTV/VAD officials during February 1969 and incorporated in purchase order P–237138 by supplement 7X, dated April 9, 1969. In addition, LTV/VAD's engineering order E1026.17 canceled engineering order E1001.770 regarding approval of the four-rotor brakes and approved Goodrich's preproduction test plan for the five-rotor brake.

Government's Contract Administration Responsibilities

The contract administration functions at LTV/VAD were assigned to the Naval Plant Representative Office located at the prime contractor's plant. Secondary delegations of quality assurance responsibility at Goodrich was assigned to DCASD, Dayton, Ohio.

LTV/VAD's purchase order P-237138 provided for Government source inspection at Goodrich and the referenced LTV/VAD specication required the Government inspector to sign the qualification report without further describing the meaning or significance of such a signature. In our opinion, the affixing of a signature to a report is meaningless unless accompanied by some other act, such as verifying, at least on a test basis, the reported information to the original documents. We also believe that the report or document should contain a clear and concise statement as to the meaning of the signature as indicate the reliance that may be placed upon such actions by other readers.

The DCASD quality assurance representative stated that Goodrich required his signature on the qualification report because LTV/VAD would not accept it without his signature; however, he had not received any specific oral or written instructions from any Government activity or the prime contractor's officials as to what steps were to be taken prior to signing the four-rotor brake assembly qualification report, Q–6031. His signature was affixed to the Q–6031 report, in which it was concluded that the brake assembly met the intent and requirements of the applicable specification documents and therefore was qualified.

The quality assurance representative explained that he interpreted LTV/VAD's quality control requirements to mean an inspection of the qualification test report in the same manner as for any other hardware item, thus he assured himself that all the tests listed in the front of the report were accomplished and successful solely on the basis of the report contents. The quality assurance representative also stated that he did not witness any of the tests on the four-rotor brake or compare any raw data with the Q–6031 report and commented that this was DCASD's normal practice.

The Chief, Quality Assurance Section, DCASD Dayton, stated that the quality assurance representative's signature meant that he had compared, on a test basis, the raw data generated by the test recording machines with the information reported in the Q–6031 report and that the information was in agreement. He stated also that he had contacted Defense Contract Administration Services Region, Cleveland, for an interpretation of the signature on a qualification test report, but that they could not provide any assistance.

The DCASD quality assurance representative stated that he witnessed two of the qualification tests on the five-rotor brake at Goodrich. This qualification report, Q–6046, also was signed by the DCASD quality assurance representative.

Subsequent to our discussions, DCASD Dayton issued, basically, the following internal guidance to their quality assurance personnel:

1. Do not countersign qualification reports unless contractually required or unless directed by higher authority.

2. A signature constitutes verification of the data contained in the report and shall not necessarily indicate concurrence with the conclusions in the report.

3. When countersigning as authorized in 1. above identify in the report the test data for the tests actually witnessed.

Air Force actions to protect the Government's interests

We found that the Air Force took action to protect the Government's interest by withholding approval of the qualification test reports until assuring itself that the brake assembly either qualified or performed satisfactorily on the aircraft.

Air Force engineers advised us that the engineering responsibility for the A–7D Government-furnished aeronautical equipment and all contractor-furnished equipment was assigned to the Chief System Engineer in the Directorate of Systems Engineering, Aeronautical Systems Division, Air Force Systems Command, Department of the Air Force. We were also told that, within the Aeronautical Systems Division, the Project Engineer in the Landing Gear and Mechanical Equipment Division, Directorate of Airframe Subsystems Engineering, was responsible for reviewing and recommending approval of the design, development, and testing of the A–7D aircraft landing-gear equipment, including Goodrich's four- and five-rotor brakes.

The Project Engineer stated that he had reviewed and approved LTV/VAD's brake specifications which in his opinion were very good and exceeded the military specifications. The Project Engineer also stated that he had not witnessed any of the qualification tests of the four-rotor brake, and during August 1968 he recommended withholding approval of the qualification report, Q–6031. His recommendation was based on various specific irregularities noted during a review of the qualification report. This recommendation was forwarded by the Chief System Engineer to the Naval Air Systems Command, Washington, D.C.

The Project Engineer stated that he had requested Goodrich to furnish him with the raw data supporting its Q–6031 report during a meeting between Air Force, LTV/VAD, and Goodrich representatives in early October 1968. This request, he advised us, was not honored by Goodrich who claimed that the raw data was proprietary information.

Regarding proprietary information, attachment "E" to LTV/VAD purchase order P–237138 states that Goodrich reiterates it will provide all the data required by the prime contract pursuant to the provision of Armed Services Procurement Regulation 9–203(b). This provision sets forth the Government's "Rights in Technical Data" and provides, in part, for the Government's right of access to technical data resulting from the performance of an element of work specified in a Government contract or subcontract.

The Project Engineer stated that, during the October 1968 meeting he had advised Goodrich that he would not approve the use of the four-rotor brake assembly on the A–7D aircraft. Subsequently, during another meeting, LTV/VAD informed the Air Force engineers that Goodrich was redesigning the brake assembly and would requalify the new design.

The Project Engineer stated that he closely monitored the qualification testing of the five-rotor brakes, was provided access to the applicable raw data, and reviewed Goodrich's qualification test report, Q–6046, which he found to be satisfactory. However, because of reported problems with brake adjusters the Project Engineer, in April 1969, recommended withholding approval of Q–6046 until satisfactory performance on the aircraft was demonstrated. On June 5, 1969, the Project Engineer stated that he had not yet recommended approval of Q–6046.

SCOPE OF REVIEW

We reviewed records and discussed the performance and qualification testing of the brakes for the A–7D aircraft with officials at contractor locations and military installations associated with the design and manufacture, administration, and testing of these brakes. These locations include The B. F. Goodrich Co., Troy, Ohio; LTV Aerospace Corporation, Vought Aeronautics Division, Dallas, Texas; Naval Air Systems Command, Washington, D.C.; Naval Plant Representative Office, located at LTV/VAD, Dallas, Texas; and the Aeronautical Systems Division of the Air Force Systems Command, located in Washington, D.C., and at Wright-Patterson Air Force Base, Ohio.

In addition, we discussed brake performance with a LTV/VAD test pilot at the contractor's plant and with military test pilots located at Edwards Air Force Base, California, and Patuxent River Naval Air Station, Maryland, and with officials of the Federal Aviation Administration.

EXHIBIT

DESCRIPTION OF THE DISCREPANCY	EXPLANATION BY GOODRICH'S REPRESENTATIVES
Reported data exceeded the basic recorded test results (analog data since digital data was not available).	Normally, digital recorded data exceeds analog readings. Therefore, using one's best judgment, a similar value from an earlier similar test would be used. In this instance, he felt, the reported value had been extrapolated from the preceding and subsequent stop test.
Do.	The basic recorded value was taken from the prior stop test since the stop times were identical. This constitutes a "rationalization of data" or exercise of professional judgment.
Reported data less than the basic recorded test results.	Not discussed with Goodrich representatives due to the limited time for our review.
Data were reported; however, basic recorded tests results were not available.	Do.
Do.	Do.
Reported and digital data in agreement; however, digital data less than analog data.	Do.
Reported data less than basic recorded test results.	Do.
Reported data less than basic recorded test results. We also noted that the reported data were less, and the recorded test results were greater, than requirements of MIL–W–5013G, dated February 20, 1967, which was referenced by LTV/VAD specification number 204–16–37d.	Goodrich personnel could give no explanation.
Reported data less than basic recorded test results. Also, reported and recorded data exceed the requirements of MIL–W–5013BG, dated February 20, 1967.	Goodrich personnel could give no explanation.
Data were reported; however, basic recorded test results were not available.	No reading, due to the reaction of the thermocouple.
Do.	The recorder was not working properly.
Do.	Not discussed with Goodrich representatives due to the limited time for our review.
Reported data less than basic recorded test results.	Goodrich personnel could give no explanation.
Data were reported; however, basic recorded test results were not available.	Goodrich personnel expressed the opinion that the data had been rationalized from tests of another part on which the temperature had been monitored and which was considered comparable to the center stator.
Do.	Do.
Do.	Not discussed with Goodrich representatives due to the limited time for our review.

DATA DISCREPANCIES THAT MAY BE CONSIDERED SIGNIFICANT BETWEEN DATA SHOWN IN TEST REPORT AND DATA SHOWN BY GOODRICH'S TEST INSTRUMENTS

DATA IDENTIFIED IN TEST REPORT

Test description	Stop number	Parameter
Overload brake stops	49	Peak temperature of bead seat.
Do	49	Peak temperature of rotor.
Do	50	Peak temperature of bead seat.
Do	50	Peak temperature of tube wall.
Rejected takeoff brake stops.	1	Peak torque.
Do	2	Initial temperature of center stator.
Do	2	Peak temperature of center stator.[1]
Do	2	Peak temperature of rotor.[1]

[1] The Goodrich project manager stated that the peak temperatures reached during rejected takeoff stop tests were academic since the brake is destroyed by heat as the result of the test.

Note: Reported data are the elements set forth in qualification test report Q-6031 on the 4-rotor brake. Basic recorded test results refer to digital data, which are digital printout tapes prepared only on brake pressure and torque parameters, and/o analog data, which are pen recorder strip charts prepared on al parameters.

ORDER FOR ADJOURNMENT FROM WEDNESDAY, AUGUST 6, 1969, TO THURSDAY, AUGUST 7, 1969, AT 11 A.M.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business on Wednesday next, it stand in adjournment until 11 a.m. Thursday morning next.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR HARTKE ON THURSDAY, AUGUST 7, 1969

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, upon the conclusion of the prayer and the disposition of the reading of the Journal on Thursday morning next, the able Senator from Indiana (Mr. HARTKE) be recognized for not to exceed 30 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

PRESIDENT NIXON'S SUCCESSFUL TRIP ABROAD

Mr. DOLE. Mr. President, last night President Nixon returned from his trip to Southeast Asia and Rumania.

Today, as a result of that trip the whole world breathes a little easier because war and destruction are perhaps a little further away and peace with honor is perhaps a little closer.

Mr. President, seldom has a trip abroad by an American President been so successful, seldom have the purposes been so well met and seldom have the American people been so well informed on a day-to-day basis about the results of such a trip.

For this we can all be grateful.

The President has termed his trip "a quest for peace, reflecting the spirit of Apollo."

And truly, there is an apt comparison. During all man's time on earth he has reached out for the moon. Less than 2 weeks ago he was finally successful.

For equally as long a time man has yearned for peace. And just as surely he can reach that goal—if he will.

That goal is one the President is attempting with all his heart and all his skill to reach. He has charted new courses in two of the world's troubled areas—Southeast Asia and Eastern Europe—courses that give hope for eased tensions and international cooperation, but courses, also, that assure those who stand with us that we will continue to stand with them.

Mr. President, the success of the President's journey is a success that the entire world shares. I am certain my colleagues on both sides of the aisle join with me in congratulating the President for a task well done.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

ABM: THE MISBEGOTTEN MISSILE

Mr. McGOVERN. Mr. President, the decision the Senate will soon make regarding deployment of the antiballistic missile will be one of the most fateful in our national history. In economic, political, social and moral terms America will feel the weight of it for many years to come.

The significance of the ABM issue reaches far beyond the system itself; for it will signal the direction of the Nation in the next critical decade. At issue is the central question of whether we shall continue to pour increasing energy, brainpower and wealth into armaments, or into the urgent human needs of our society. Does the route to security and well-being lie in another costly new missile system, or should first priority go to reaching arms limitations among the great powers while we set about the reconstruction of our country and the protection of our environment? Beyond the enormous financial cost of the ABM is the danger that it contributes tc the militarization of our society and the neglect of urgent domestic problems. It may decrease our national security by increasing international tension and with it the possibility of nuclear war. Militarily, it is doubtful that it would contribute to the defense of our country.

At a time when the great powers seem to have reached an understanding that nuclear war means the end of much of mankind, one wonders why this current effort to add a new round of missile construction. Do we really believe that either Russia or China has gone so completely mad that they would invite their own certain destruction by launching a nuclear attack on the United States? Is there evidence that even a $40 or $50 billion ABM would add to our security if the adversary had such an act of madness in mind? Is it not more likely, as Senator MUSKIE has warned so convincingly, that the construction of yet another missile system will only heighten the anxiety and tension that could lead to a nuclear exchange?

It is frequently said of the ABM that it is "a missile in search of a mission." Certainly, the history of the ABM does not suggest that our military planners saw a particular national security need and developed a system to meet it. Rather, the constantly shifting rationalizations of the ABM lead one to wonder if Washington Star columnist Frank Getlein was not justified in observing:

> The real point was to spend the money and in order to spend it, the military would cheerfully swear it was needed to save the swan boats on the lagoon at the Jefferson Memorial.

First was the proposal for a $50 billion "heavy" system. This called for "thin" Spartan area defense of the entire country and for "thick" Sprint point defense of ICBM sites, SAC bomber bases, ABM radars, and 49 major population centers—plus the hometown of the chairman of the House Armed Services Committee, Charleston, S.C.—the 228th largest city in the United States.

The purpose of the heavy defense was to decrease the damage our country would suffer in a heavy Soviet attack. The Johnson administration rejected the heavy system on the grounds that the ABM as presently conceived would not perform this function; that is, there was no way to prevent the Soviet Union from destroying the United States if it were willing to see itself destroyed in return. This was valid reasoning at the time; it is still valid. Barring a fundamental technological breakthrough, which incidentally would make obsolete the system we are now considering, we would be foolish to think that any ABM can really prevent unacceptable devastation in an all-out nuclear war.

Since the heavy anti-Russian system seemed too implausible and too expensive, the ABM proponents turned next to a light ABM to defend against the Chinese. The Chinese, it was argued, would have 10 or 20 ICBM's in a few years and they might go berserk and launch these against our cities even though to do so would be to provoke the total destruction of their society.

We were told a thin Spartan area defense would be sufficient to protect the entire country against a small unsophisticated attack such as China might launch during the 1970's.

Oddly, it was said that this anti-Chinese system could serve as a bargaining counter in arms-reduction talks with the Russians, and abandonment of plans for the anti-Chinese system might be a re-

sult of these United States-Soviet talks. It was never clear to me why those who said we needed an ABM system against China were willing to abandon it if the Russians agreed not to build one.

In any event, the anti-Chinese rationale seems conspicuously invalid.

First, it relies entirely on the Spartan missile, which is easily penetrated. It assumes the Chinese will be clever enough to build an ICBM but not clever enough to incorporate simple penetration aids such as chaff. It also assumes they would be so foolish as to neglect to time their missile attack to take advantage of blackout effect.

Second, it assumes the Chinese will not try to circumvent the ABM by using cruise missiles, nuclear torpedoes, or other relatively simple devices. At this very moment, a disguised Chinese merchant ship could be sailing into New York harbor with a hydrogen bomb in its hold. If one is not concerned about size or weight, such a device is cheap and well within the reach of Chinese technology.

Any attempt to establish a dependable nuclear defense is an exercise in futility.

I think the events of the past year indicate that not even our military planners had much interest in a thin anti-Chinese system. If they had—if they had planned a thin national defense using long-range Spartan missiles—they would have purchased land for Sentinel sites in the unpopulated rural areas. Instead, last fall and winter we found that land was being purchased for Sentinel sites adjacent to our major cities. This indicated an intention to escalate Sentinel into a heavy anti-Russian city defense using short-range Sprint missiles.

But then the citizens of Boston, New York, Chicago, and Seattle made their feelings known. They were not pleased to be made links in this electronic maginot line. They did not want nuclear warheads in their backyards, and they began organizing political and legal action to prevent their communities from being used as ABM sites. Once publicized, the issue quickly became a hot political issue.

Conveniently, the ABM proponents then found it was not feasible to defend cities against a heavy attack. Even more conveniently, they suddenly found the Soviet Union was approaching the point where it would be able to destroy our ICBM and bomber forces on the ground. It also claimed the Russians would be able to detect and destroy our missile submarines, although it is not clear how this would be accomplished. Therefore, we were told that, by happy coincidence, military considerations required that the politically dangerous thick defense of the cities be withdrawn in favor of a politically safer thick defense of Minuteman ICBM sites in North Dakota and Montana. These sites are located in relatively unpopulated western areas where the inhabitants have been introduced to nuclear sites years ago.

While politically safer than the earlier city defense, the new hard-point Safeguard defense is somewhat more expensive than the earlier system.

Mr. President, if a heavy city defense is now impossible, was it possible 2 years ago when its advocates tried to get us to spend $50 billion on it? Was it possible this past winter, when military strategists tried to escalate Sentinel into a heavy city defense? If the proponents were wrong about city defense 6 months ago, why should one believe they are right about hard-point defense now?

Or is the question of whether or not any missile defense is possible of no concern to the ABM advocates? It may be that the convolutions the pro-ABM arguments have undergone result from honest technical reevaluations. Certainly, cities are less defensible than hardened missile sites. But it is hard to avoid the thought that Mr. Getlein may be right—that the main objective is to spend the money, and that rationales are changed purely as a function of what it is believed the public will swallow.

Currently, the public is being asked to accept three arguments for the Safeguard system. This system would consist of thin Spartan defense for the entire country, plus thick Sprint defense for 350 Minuteman ICBM's and about 10 ABM radars scattered around the country.

These are the three current rationales: First, Safeguard is alleged to protect our cities against an accidentally launched Russian missile. Second, it is alleged to protect our nuclear deterrent by guaranteeing the survival of at most 300 Minutemans in the event of a heavy Russian attack. Third, it is hoped that Safeguard can function as a bargaining counter in the coming United States-Soviet arms reduction talks.

In my view, none of these has much validity.

Safeguard would have little chance of protecting our cities against an accidental ICBM unless the latter conformed to highly unlikely restrictions. The ICBM would have to be devoid of all penetration aids, for even the simplest pen-aids render a Spartan umbrella useless. It is difficult to believe the Soviet Union would not respond to any American ABM by installing penetration aids on all or nearly all of its ICBM's and submarine-launched missiles. Furthermore, the more missiles we or the Soviets build—defensive or offensive—the greater is the danger of an accidental launch that could bring on war or the accidental destruction of millions of people.

The second, and most important, rationale is that Safeguard will protect our strategic deterrent.

The Secretary of Defense tells us our deterrent is in jeopardy. He tells us there is a serious possibility that within a few years the Soviet Union will have the power to destroy our Minuteman silos in a first strike, and to detect and destroy our missile submarines. These assumptions are sharply challenged by many of our most respected scientific experts. Indeed, during his short period as Defense chief, Mr. Laird has shown a tendency to make doubtful assumptions as a basis for doubtful recommendations. For example, his description of the SS–9 as a first-strike weapon is challenged by competent authorities as a piece of guesswork or rationalization. Unless one assumes that Moscow has gone mad, a more likely assumption is that they see their nuclear weapons as a deterrent rather than as a first-strike instrument against the United States.

In May, Mr. Laird told reporters the manned orbiting laboratory was essential to national security; in June, he canceled it. I expect that whether or not the ABM is deployed, it will eventually be admitted by nearly everyone that it never was a very good idea.

There are two facts we must keep in mind as we consider the protection of our strategic deterrent.

First, it is impossible to destroy both our ICBM's and our manned bombers in a first strike. It is conceivable, although extremely unlikely, that the Soviet Union will develop the ICBM ability to take out our Minuteman ICBM's on the ground. But such an attack would give our bombers the 15-minute warning they need to become airborne and safely on their way to destroy the Soviet Union. It is possible, if extremely unlikely, that the Soviet Union will develop the ability to wipe out our bombers on the ground by using orbiting or submarine-launched missiles. These weapons may give us only a 3-minute warning, but lack the accuracy-payload combination necessary for an attack against hardened silos. Hence, such an attack would leave our ICBM's intact. On learning that our SAC bases had been taken out and that Soviet ICBM's had been launched and would strike out Minuteman bases in 10 minutes, the President would certainly launch the Minutemen immediately, thereby destroying the Soviet Union.

Thus, there is no way the Soviets could hope to strike the United States without incurring self-destruction.

Moreover, we have our submarine force, which is a full deterrent in itself. And Adm. Levering Smith, who commands it, tells us this deterrent is not in jeopardy, and will not be in the foreseeable future. I have been puzzled throughout the ABM debate that its advocates so seldom refer to the enormous deterrent we have in 41 submarines, each armed with 16 missile launchers, and each of those capable of devastating a large city.

So, a first strike seems highly unlikely.

Second, the entire question of Soviet first strike capability is irrelevant to the ABM debate. It would be relevant only if we had reasonable confidence that ABM could neutralize this ability. We do not have that confidence.

Mr. President, militarily and technically, the crux of the matter is: Will the ABM do the job or will it not? Even if we restrict ourselves to consideration of defense of Minuteman sites, the overwhelming body of evidence suggests that it cannot offer meaningful protection.

I have heard it said "If we can put a man on the moon, then surely we can build an ABM." But the analogy is not valid. The question is not "Can an effective defense be built against the present offense?" This might be possible, given enough time, although Safeguard does not appear to be such a system. But the real question is: "Can a missile defense be built that will be effective against the improved offense it will have to face

by the time it is built?" For both the United States and the Soviet Union, the answer is most likely "No." The people working on offense are just as capable as those working on defense, and they have a very long headstart. In addition, their problems are inherently simpler.

There is no inherent principle that offense must always be stronger than defense. But the evidence is overwhelming that in modern nuclear weaponry, offense is stronger will remain so in the foreseeable future. Penetration aids, decoys, radar jammers, maneuverable warheads, and above all, multiple warheads give the offense an immense advantage.

If the Soviet Union builds up its offense to the point where it can threaten our hardened Minuteman silos, is it not likely that a modest further buildup would neutralize the Safeguard system? If the Russians have a first strike in mind, it is inconceivable that they would not take this further step.

From that point on, every time we built an additional ABM, the Soviets could counter by deploying a few additional MIRV warheads. Even if one assumes that a virtually impossible accuracy would enable each ABM to destroy an incoming attack missile, it would only be necessary to send one more offensive missile to a particular target than there were defensive missiles to defend it.

Of course, our offense enjoys the same advantage over the adversary's defense.

In short, we are being asked to build an ABM that would not work to protect a deterrent that is not threatened.

Mr. President, the antiballistic missile is not a question of national security; it is a question of national judgment. It is said the ABM presents the American people with a choice between butter and guns. It would be more accurate to say we have a choice between butter and a leaky maginot line that may well be obsolete before it can be constructed.

And as construction proceeds, the costs will mount. The ABM advocates would have us believe they will spend $6 or $7 billion for Safeguard. But defense contractors have a way of radically underestimating their costs, apparently with the tolerance of the Pentagon. If Safeguard follows the common pattern, it will cost several times the projected figure.

Already we are seeing private estimates of $11 or $12 billion. The official estimates went up $1.2 billion overnight, when it was pointed out that one can't build an ABM system without warheads.

But more importantly, Mr. President, I want to go on record today saying that Safeguard is not an end but a beginning. If this hard-point defense is approved, the Pentagon will then remind us that it is hopeless to try to defend even a compact ICBM site without increasing the number of ABM missiles and radars many times; they will tell us national security demands we triple or quadruple the size of our system. Next will come hard-point defense for all ICBM sites and SAC bases, and finally heavy defense for the cities.

And when we have built all this, we will find ourselves with the complete heavy system the Pentagon has sought for years, we will find ourselves $50 to $100 billion poorer, and we will find ourselves less secure than ever.

Mr. President, I predict that if we approve this Safeguard system, we will see the Vietnam pattern repeated. In Vietnam the military strategists always told us they could not win the war unless they got so many thousand additional troops and were allowed to bomb such and such targets. When we gave them the troops and let them bomb the targets, and the war continued as before except for bigger casualty lists, their answer was always to come back with still bigger troop requests and longer target lists.

The fact is that a military solution to Vietnam's problems was never possible. This enabled the generals to claim correctly that their present forces were insufficient.

This is how it is likely to be with the ABM. No matter how much we appropriate, no matter how many ABMs we build, the Pentagon will tell us, quite correctly, that it is not enough. It will never be enough because, barring an unforeseen technological breakthrough, defense against heavy missile attack is and will remain impossible. Like Vietnam, missile defense is a bottomless pit. It will swallow as much as we pour into it with no dependable increase in our security.

And the ABM is like Vietnam in still another respect: its proponents argue that we owe the President as Commander in Chief the benefit of the doubt on such national security issues. But to approve the Safeguard on this basis would constitute a major abdication of congressional power and responsibility. We have had more than enough of that in recent years.

This is not the way to serve either the President or the Nation. For if the ABM is approved, over the years we shall see its cost increase and its ineffectiveness become more apparent. We shall see a bizarre and expensive new cycle of the arms race, and we shall see our neglected domestic needs and problems rise intolerably. And the administration will have to face the electorate encumbered by a costly blunder, just as the previous administration had to face the people encumbered by Vietnam.

As we approach the first major vote on the ABM, we would do well to remember the words of President Eisenhower's last state of the Union address:

> Every dollar uselessly spent on military mechanisms decreases our total strength and therefore our security. We must not return to the "crash program" psychology of the past when each new feint by the Communists was responded to in panic. The "bomber gap" of several years ago was always a fiction, and the "missile gap" shows every sign of being the same.

Mr. Eisenhower was right about the "missile gap." The present "security gap" is equally fictitious. We have less cause to fear what the Soviet Union can do to us than what our own fears may make us do to ourselves.

Mr. TOWER. Mr. President (Mr. DOLE in the chair), unfortunately, too often in this debate, the analogy of the ABM with the maginot line has been made. I think it is a false analogy. It conveys an erroneous impression.

What the ABM is designed to do is to protect an offensive system. Everyone knows that when troops go out on offensive operations, when they bivouac at night they draw up a defense perimeter. That can hardly be considered an analogy to the maginot line.

What we propose to do here is to develop and ultimately to deploy a system that will defend an ability to mount an offense.

THE APOLLO 11 MISSION TO THE MOON

Mr. ALLOTT. Mr. President, Milford E. Shields, poet laureate of the State of Colorado, has written a poem with respect to the men on Apollo 11 and their great achievement in landing on the moon.

The poem has a rare quality which I believe commends itself to the attention of every Senator, and I therefore ask unanimous consent to have the poem, entitled "He Walks With God," printed in the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

HE WALKS WITH GOD

He walked with God, his name was man,
He left his tracks upon the moon;
He walked in love and showed the plan
Where men could walk and move in tune.

He walked in joy, he walked in peace,
He walked in hope, he walked in truth;
His walk has made all men increase,
His walk has brought a buoyant youth.

His tracks are pointed for the stars
As he unfolds the greater plan
Where mankind walks on tranquil bars—
He walks with God, his name is Man.

MILFORD E. SHIELDS.

JOSEPH McCAFFREY'S 25TH ANNIVERSARY

Mr. MATHIAS. Mr. President, what is the measure of the passage of time in a man's life?

We mark the passing of time with clocks, calendars, and anniversaries, but they do not truly measure what effect time has on a man and his contributions to the world.

Not long ago, someone reminded me that "time is life itself." Thus, it seems, it is not the passage of years that is worth commemorating but, rather, what those years have continued in the way of effort, aspiration, and achievement.

For some man, a silver anniversary may represent only a wastebasket full of old calendars. But this year, we are fortunate in celebrating a 25th anniversary which has meaning in the finest and fullest sense.

I am referring, of course, to Joe McCaffrey's 25th year of broadcasting, of broadcasting news from Washington to the American people.

During that quarter of a century, Joe McCaffrey has won the greatest reward that any profession can offer; namely, the confidence of the people.

When Joe McCaffrey reports it, the people know that it is so.

This is more than a personal reward.

As we know in the Senate, the news media are a vital and integral part of modern, representative, democratic government.

Without reporters of Government affairs in whom the people have confidence, our American Republic would not be what it is today.

Thus, in joining many others who have congratulated Joe McCaffrey on his 25 years of service, I also want to thank him for the important part that he plays every day in the successful operation of his Government, and of the institutions which support it.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. MATHIAS in the chair). Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Bartlett, one of its reading clerks, announced that the House had passed the bill (S. 912) to provide for the establishment of the Florissant Fossil Beds National Monument in the State of Colorado, with an amendment, in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled bill (H.R. 9951) to provide for the collection of the Federal unemployment tax in quarterly installments during each taxable year; to make status of employer depend on employment during preceding as well as current taxable year; to exclude from the computation of the excess the balance in the employment security administration account as of the close of fiscal years 1970 through 1972; to raise the limitation on the amount authorized to be made administration account by the amounts so excluded; and for other purposes, and it was signed by the President pro tempore.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

NEED FOR CONTINUED ABM RESEARCH BEFORE DEPLOYMENT

Mr. ELLENDER. Mr. President, I have for months made it publicly known that I oppose congressional authorization for deployment of the Safeguard ABM system which has been recommended by the administration.

I wish to make it crystal clear at the outset that I do not oppose more research into the feasibility and workability of Safeguard or of any other ABM concepts. I intend to support either the so-called Cooper-Hart amendment or some provision similar to it which authorizes continued research and development of the Safeguard system.

Mr. President, before proceeding to outline the demerits of the ABM, I thought I would ask the indulgence of the Senate to say a few words about the various deterrents that we now have to protect our country against a surprise nuclear attack. To hear some persons talk, it would seem that without the ABM we will be defenseless against the world.

I can well remember when, 13 or 14 years ago, we built the DEW line. That line was established notwithstanding the fact that at the time there was evidence to indicate that the Russians were more or less giving up the manufacture of long-range bombers.

The DEW line cost us $1.6 billion. Although it is obsolescent, it is still being used. In order to operate this facility, in order to protect against bombers, we spend $38.9 million yearly on the DEW line alone.

It is operated, of course, by the Air Force. Outside of civilian employees, it requires 34 officers and 19 enlisted men.

In addition to the so-called DEW line, we have the ballistic missile early warning system, known as BMEWS. The cost of operating that warning system is $55.3 million a year. Over the years, it has cost the taxpayers $1.6 billion. That system is operated by the Air Force. Aside from the civilian employees, 134 officers and 734 enlisted men are used.

Aside from these, Mr. President, we have a variety of other facilities in what is called the SAGE system, costing $220.2 million annually. That system includes five types of facilities: combat centers, direction centers, BUIC centers, surveillance radars, and communications to integrate the above facilities.

To operate the combat centers, that I previously described, requires 67 officers and 340 enlisted men.

The second phase—that is, the direction centers—requires 859 officers and 3,040 enlisted men. That does not include the civilians who are employed at those centers.

The third system, the BUIC—the backup interceptor control—requires 260 officers and 818 enlisted men.

The surveillance radars require 616 officers and 10,988 enlisted men. They are aside from the civilians who are employed at the various areas.

To operate the communications which integrate these facilities—part of the NORAD system—we spend each year $30.3 million.

In addition, we have the NORAD Operations Center, which connects all of the facilities I have just mentioned to a central command post located somewhere in the Rocky Mountains near Denver. To connect and coordinate these various facilities, we have spent a total of $191.6 million, with an additional $36.6 million budgeted for fiscal 1970.

I am not quarreling at all about the amounts of money or the number of people who are employed to administer the various facilities; I simply want to show that the Department of Defense has been for many years done a thorough job of looking into and testing a multitude of warning systems which enable our offensive deterrent forces to maintain their credibility.

In addition to that, Mr. President, we have the over-the-horizon radar system, by which we are able to detect immediately a missile launch from Russia.

We also have several other warning devices which I am not privileged to mention.

The cost of the facilities I have mentioned aggregates almost $8.6 million, with an additional $371 million budgeted for fiscal 1970.

So, Mr. President, we have not been timid. The Defense Department has not been timid in providing us with all that it desired for protection by warning.

In the event that these warning systems ever give advance notice that we are under bomber or missile attack, we have the awesome power of our Minuteman and Polaris missiles, together with the SAC bombers to retaliate against any aggressor.

Mr. President, there seems to be no end to the research that we are capable of doing to improve these systems and to develop new ones. I am for that. I am very hopeful that some day we shall be able to find some one kind of instrumentality that will take the place of all these we now have. It is possible. Serving on the committee that passes on the research money, I can say that, aside from the ABM research funds that are being provided in the pending measure, we have approved, in another appropriation bill, a small sum, not too large—only $50 million—to carry on further research on one aspect of the ABM.

Mr. President, we have in another portion of the bill a sum which is not very large, only $60 million, in order to find ways and means of hardening the silos into which we put our Minuteman.

Mr. President, aside from the land-based and the sub-launched missiles and all of the warning systems, we have 528 bombers, 78 of which are medium, and 450 of which are heavy bombers. In addition, there are hundreds of carrier-based fighter bombers capable of carrying nuclear payloads against anyone who might attack us.

I point this out so as to dispel the notion that to delay deployment of Safeguard will leave us defenseless against nuclear attack. On the contrary, we have a variety of deadly systems spread around the world and representing an investment of hundreds of billions of dollars which, in my opinion, give us the

advantage of not having to take the desperate and extravagant risk of deploying an unproven ABM system.

The vast amount of "overkill" represented by all of these systems which have been built up over the past two decades should serve to give us breathing room for further testing and research into the concept of Safeguard before we talk in terms of actual deployment.

Mr. President, before I turn to my prepared statement, I should like to read from the 1970 defense budget and defense program which was issued just before Secretary of Defense Clark M. Clifford was succeeded by Mr. Laird. On page 50 of that document, after reciting things that had been done along the same lines I have been speaking of, Mr. Clifford states:

> Thus, by any definition of the term, our "Assured Destruction" capability now and over the next several years should be fully adequate even against the highest expected threat projected in the most recent NIE (National Intelligence Estimate).

Mr. Clifford indicated that we were well protected. And there is no doubt in my mind, from what I have heard, that with the weapons we now have at hand, we could destroy every city in Russia. In fact, I do not doubt that we could destroy the whole world if we were to use all the nuclear warheads in our arsenal.

With this background in mind, I would therefore like to discuss some of my reasons for opposing immediate deployment of the Safeguard system in the hope that my observations will have some constructive effect on the great debate which has evolved, not only in the Congress, but also throughout the land, regarding the fiscal, the strategic, the military, the psychological, the political, and the scientific aspects of this most complex issue.

As a further prelude to my remarks, may I point out that my observations as to fiscal aspects of the ABM program are made from the viewpoint of a fiscal conservative.

I have long carried on a campaign—sometimes a one-man campaign—to cut nonessential Federal spending wherever possible. I am sorry to observe that many of my fellow fiscal conservatives who, like me, are appalled at waste and nonessential spending in the broad spectrum of bureaucratic social programs, refuse now to apply their fiscal conservatism to the Military Establishment in evaluating the benefit-cost ratio of Safeguard.

I, for one, do not intend to exempt the Military Establishment from my motion that the wild spiral of Federal spending must be curbed where it involves nonessential and wasteful programs. I would suggest, therefore, that opposition to this ABM proposal is a noble cause for those on both sides of the aisle who, like me, have for years been fighting against nonessential Federal spending, against waste, against the resultant unbalanced Federal budget, and against an ever-increasing national debt.

May I point out further that my observations as to the military aspects of this debate are not those of a casual onlooker, but are those of a long-time member of the Senate's Subcommittee on Defense Appropriations who has attempted for years to be a conscientious student of our Nation's military operation.

Nor are my comments the remarks of a "dove" insofar as that term has been used vis-a-vis the Vietnam conflict, for I believe that we must see that conflict through to the sort of honorable and meaningful conclusion which will deny the North Vietnamese the intended fruits of their aggression upon neighboring countries.

Neither are my words those of one who ascribes to the unrealistic arguments that some propose for massive unilateral disarmament. Unfortunately, the kind of world we live in demands that we remain, as President Nixon said in his inaugural address, "as strong as we need to be for as long as we need to be."

With these basic considerations in mind, I shall now list several points which seem, to me, to argue against deployment of the ABM system which has been proposed by Mr. Nixon.

First, there is a very substantial doubt within our scientific community that Safeguard will function properly once its seven component parts are put together and are called on to interreact as a system. This evaluation seems to be based in part on suspected inadequacies of the system itself, which is fantastically complicated and which cannot be fully tested except in the event of nuclear war.

Each of the major components presents a very difficult engineering and development project in itself. The Spartan missile, the Sprint missile, the Parimenter Acquisition Radar, the Missile Site Radar, the Master Computer, the Command and Control system, and the atomic warheads—all are at varying stages of development, and none have been perfected or tried out in conjunction with all of the other parts.

As an example of the technical problems involved in deploying and keeping such a system in working order, capable of firing many missiles at a minute's notice any time of any day or night, I cite the rather embarrassing experience we have had recently with one of our supposedly well tested, highly reliable Minuteman missiles.

The Minuteman case involved a test scheduled for October 1966, which failed and had to be rescheduled for later that same year, only to fail again. It was attempted again—and failed again—late last year, and only a few weeks ago failed for the fourth consecutive time. First, there was trouble with a resistor, then with a capacitor, then with a pin in a connector, and finally with some other faulty component. In a way, each of these was a minor malfunction, but each was quite enough to disable the missile and prevent its launch—even after lengthy and highly elaborate preparations had been made in each case to insure a successful launch. I am speaking of the Minuteman.

I cite this incident not to embarrass the military or to belittle our ICBM program but to stress the point that in such a fantastically complex operation, involving literally millions of electronic components, we are foolishly optimistic to presume that even a relatively simple, fully proven offensive missile such as Minuteman will work reliably on a moment's notice.

The Safeguard system presents problems which are far more staggering than those of the Minuteman system, particularly when we consider that, unlike our Minuteman, Polaris, and other offensive missiles, it will have to operate on a "hair" trigger for weeks, months, and years at a time.

I contend that with such a complicated system, we should, by all means, be sure of what we are doing, rather than take a chance. That is exactly what we will be doing if we deploy the present system. It was known as the Nike-Zeus at one time, then as the Nike X, and then the Sentinel—all the same system.

I can well remember that President Eisenhower refused to go along with the Nike-Zeus. There has been very little added to that system since that time.

As the minority report of the Armed Services Committee so ably explains:

> Safeguard is the most complicated technological development ever planned for operation by man. The system consists of three major component parts: (1) missiles (2) radars (3) computers.
>
> Although we have had a long and therefore disturbing series of failures in missile testing, including another Minuteman failure only last week, there is no reason to conclude that the two Safeguard missiles, the Spartan and the Sprint, will not work. But there is reason to doubt that the long-range radar (PAR) and the short-range radar (MSR) parts of which have not been built, let alone tested, will operate successfully together in that almost instantaneous manner which would be necessary in case of sudden attack; and there is even more reason to doubt that the computer, which has been neither built nor tested, and which is admittedly far more complicated than any computer ever yet attempted, will operate properly when called upon to do so.
>
> Finally, it is logical to consider whether, even if these three separate components would operate properly as separate units, would they so operate when combined? For obvious reasons, the testing of any joint operation has not been possible.

Second, and also on the technical question, is the contention by many experts that it is relatively easy to take counter-ABM measures, either by disrupting the radar and guidance components of the system, by flooding the system with the decoy missiles, or by sending in a very heavy overkill of actual warheads.

In other words, even if the Safeguard system does not fail of its own innate disabilities—as the Minuteman missile did on four successive occasions as reported by me earlier—then there are a multitude of tactics that the enemy can take to overwhelm and bypass its capacity to handle incoming missiles.

In this regard, I know that our own Department of Defense and our own ICBM experts are entirely confident that they can penetrate the ABM system which the U.S.S.R. has deployed in a limited fashion around Moscow. There are apparently five or six offensive maneuvers or tactics available to us, any one of which will probably foil the Soviet ABM and the combination of which will surely do so.

Basically, what I am contending in this second argument is that offensive missile technology has a fundamental and per-

haps insurmountable advantage over defensive missile technology. If that is, indeed, the case we should all want to see a system fully proven and fully tested before we go forward on the bold assumption that it can overcome the built-in handicap it faces in trying to knock down a swarm of incoming warheads.

As defensive technology advances, so will offensive weapons technology and so will the sheer force of numbers of deliverable warheads. All of this, I feel, is certain to result in continued confidence on both sides in our respective offensive nuclear forces and continued doubt as to the reliability of the present generation—and indeed the present concept—of ABM forces.

On this point, I have just this week viewed a classified film produced by the General Electric Co. before the ABM question became such a heated national issue and while GE was promoting the notion that we should expand our offensive rather than our defensive missile systems. The film makes a very convincing demonstration of obvious, fundamental, and perhaps insurmountable advantage which offensive missile technology has over defensive missile technology. I stress the word "missile" because in a later point I will suggest that there may be alternatives to the very concept of missile versus missile.

Third, there is a closely related point which is perhaps technical in nature but which really involves nothing more than a bit of simple grade-school arithmetic. It has to do with the number of ABM missiles our system would have, compared to the number of ICBM missiles it would be guarding against.

As now proposed, by 1974, the Safeguard system would have 100 missiles at most, ready to be launched at incoming warheads. As I understand it, about half of these would be the long-range Spartan and half the short-range Sprint missiles.

For the sake of demonstrating my point, let us use this round figure of 100 ABM missiles deployed in 1974. We could use any number, as far as that is concerned. We could use 1,000 or 2,000.

The scientists—both opponents and proponents of Safeguard—seem to agree that an 80-percent reliability factor in such a set of missiles would be the very upper limit of what could be expected. In other words—assuming that there is no catastrophic failure with the whole system in which case no missiles would fire at all—everyone would be highly pleased if 80 of these 100 missiles got off the ground when the proverbial red button is pressed.

Judging from the recent record of the Minuteman tests, this is being extremely generous; but for the sake of the argument, let us assume an 80-percent reliability.

The next step is to estimate the degree of effectiveness of each of these missiles which does succeed in getting off the ground. In this regard, the experts seem to agree that it would be highly satisfactory if half of these were to find their target. This would mean that one out of every two Safeguard missiles would destroy an incoming warhead—an effectiveness factor of 50 percent.

When we apply this generous figure to the 80 Safeguard missiles which get off the ground, we find that they are able to knock out a maximum of 40 incoming warheads. By the proponents' own standards of performance, this is the result which could be expected in 1975 if the system works. My question is: Even if Safeguard works, does it give us anything really worth having and, if not, should not we be looking elsewhere for the kind of protection that is worth having.

As I read the figures which have been offered by the proponents, the U.S.S.R. will have about 2,500 ICBM's by 1975. I think that is the precise figure used by Secretary Laird on April 25 of this year. In addition, the proponents estimate that the Soviets will have at least 1,000 sub-launched missiles by 1975. This is a grand total of 3,500 missiles. Judging from "scare" statements to which we were subjected in the executive session on July 17, those estimates may now be substantially higher.

If we then assume that by 1975 a respectable number of these have MIRV potential, the number of warheads may well be 5,000, 6,000, or 7,000. And how many will we be able to knock down? Forty at most—and even this pittance assumes many excellent performance characteristics for Safeguard which the system might not have and probably does not have.

What we will have is a 1- or 2- or 3-percent return on an investment in which a 95-percent return would still leave us devastated. Of course the long-range plan is that we will then have to deploy more and more Spartan and Sprint missiles so as to get a better return, but I say that no matter how many we deploy, the same basic arithmetic will apply.

If, for instance, we spend $50 or $100 billion to expand Safeguard 10 times over to deploy not 100 but 1,000 missiles by 1980, the Soviets by that time will probably have in excess of 5,000 missiles with perhaps 15,000 warheads. We would be at even greater disadvantage than in 1975. If 800 of our 1,000 ABM missiles get off the ground and if half of these were effective, we would knock down only 400 incoming warheads among a possible 10, 12, or 15 thousand. The exact number is really unimportant because all it would take to devastate this country is about 100 well-placed warheads.

In my judgment, it is for this very reason that the Soviets have stopped deploying ABM sites around Moscow. Their system, which is probably less sophisticated than Safeguard and similar to our 1960 Nike-Zeus system, is subject to the arithmetic I described above. The Russians have apparently done their homework and have seen the pointlessness of trying to defend Moscow from the kind of attack which we are capable of launching.

It is basic logic that the more big-bad-wolf stories the proponents tell about how rapidly the U.S.S.R. is deploying ICBM's and launching missile submarines, the more useless and preposterous becomes the plan to defend against them by means of the Safeguard system—even one that has 10 or 20 times the number of sites and missiles now envisioned.

It is this undeniable ability to overwhelm the enemy's ABM system, to kill him and to devastate his cities and his industry several times over which we refer to as "overkill." In considering this subject we should remind ourselves that a one megaton bomb is 50 times the power of the Hiroshima bomb and that by the time the Safeguard system is proposed to be operational as a deterrent to a Soviet attack, our varied offensive systems could conceivably deliver as much as 5,000 megatons on the Soviet Union in a total nuclear exchange.

That would be the equivalent of 250 thousand times the destructive force of the Hiroshima bomb. If we related that awful power to the 100,000 casualties at Hiroshima, this amount of megatonnage would inflict 25 billion casualties—seven times the population of the earth.

To anticipate all of the contingencies which might be raised by the proponents, let me put it in ultraconservative terms. If only one-tenth of our megatonnage got through and if that megatonnage caused only one-tenth the relative number of casualties inflicted at Hiroshima, they would still result in 250 million casualties—equal to the entire population of the U.S.S.R.

By the same token, the Soviets could dump and would dump enough megatonnage on this country and do just as thorough a job of extermination on us. If the nuclear blasts did not do the job instantaneously, the radiation, the long-term fallout and the chemical and germ warfare which would follow would certainly complete the job.

Fourth. As a logical extension of my observations relative to "overkill," I wish to challenge and to discredit the line of reasoning engaged in by the proponents of Safeguard that the Soviet Union is scrambling to achieve a nuclear superiority with the view of attacking the United States as soon as it can inflict substantially more damage on us than we can on them.

In essence, this is the fear tactic which is being exploited when the proponents of Safeguard raise the first-strike argument. They seem to preach the notion, and indeed the presumption, that if the U.S.S.R. ever attains nuclear superiority, she will attack us on the theory that we will get the worst of a nuclear exchange and that nuclear war would, therefore, be in the Soviet's best interests. Their presumption is ill founded.

In the most basic and most frightful of terms, there are three great presumptions—each of them highly unlikely, if not impossible—which the U.S.S.R. would have to make in order to attack us first with the expectation of being able to survive our counterattack.

First. They would have to presume that as a result of their attack and as a result of whatever ABM defense they might have, not enough of our nuclear warheads would get through to cause them an unacceptable level of immediate physical damage.

Second. Along with the first highly unlikely condition they would also have to presume that the plant, animal, and human life in their country and indeed in the Northern Hemisphere could survive the fallout and radiation effects of the several thousand nuclear explosions which would occur in an all-out war—no

matter over whose territory the most bursts occurred.

Third, they would finally have to presume that we would not resort to bacteriological and chemical warfare of a sort that can and probably would exterminate mankind from this planet. They would even have to be sure that whatever germ or chemical they released on us would not eventually drift around to their side of the world and exterminate them too.

The "first-strike" argument of the proponents is so short-sighted, so uneducated and so narrow-minded that it casts the Soviets in the role of a raving madman who has neither any intelligence nor any will to survive. A sane man could not and would not stake his life on any of these presumptions, much less on all three.

Believe what else you care about the Soviets—they are intelligent, they do want to survive, and they do not want the kind of war about which I have been talking.

In addition, the very concept of "first strike" and its attendant risks of complete devastation and annihilation are at total variance with the Communist view of history. A basic tenet of the Communist "religion" is the fundamental belief that communism will prevail over capitalism as a matter of fate, as a matter of history. They are woefully wrong in this belief, but they do most deeply believe it; and to risk their own nuclear extermination for a goal which they firmly believe can be won merely by waiting and by pursuing tactics of less catastrophic potential.

In this regard, let me quote one of the most respected military leaders in our country's history to support my belief that the Soviets fear us just as much as we fear them and that neither has the intention of picking a nuclear war with the other.

Gen. Douglas MacArthur once said that world tensions were kept at a fever pitch by two great illusions:

> The one a complete belief on the part of the Soviet world that the capitalistic countries are preparing to attack them, and the other, a complete belief on the part of the capitalistic countries that the Soviets are preparing to attack us; both are wrong.

Insofar as nuclear warfare is concerned, General MacArthur was absolutely right; and when they speak of "first-strike" proponents are resorting to fear rather than to reason in a desparate attempt to promote the cause of the Safeguard system.

Fifth, there is the convincing and ironic argument offered by many of the experts that such an ABM system will actually backfire by causing the U.S.S.R. to multiply its offensive nuclear weaponry far beyond what it would if we had no ABM.

I respect that argument because I know that is precisely what we are doing in response to the alleged deployment of a Soviet ABM system around Moscow. To counter the effect of an enemy's ABM system, the military strategists simply program two or three or 10 times the number of warheads that would otherwise be required to do the job on a given target. The result is obvious. If ABM fails of its own disabilities or is out-maneuvered by the enemy, the supposedly protected target suffers two or three or 10 times the destruction it might otherwise have received.

As one of the experts on the subject has explained in very mild, reasoned and restrained language—almost to the point of understatement:

> If our potential enemy takes no steps to compensate for the deployment of ABM, some damage and casualty reduction could be expected. But the assumption that such steps would not be taken appears highly improbable if the adversary is the Soviet Union which has the means to take them and will feel compelled to do so, to preserve its secure deterrence posture. In fact, overreaction as judged by the past, would be the norm, particularly when the uncertainties about performance are as great as with the ABM system. The probable responses include increases in the numbers of offensive missiles and the deployment of MIRV's with their destabilizing effect. The development of the latter we ourselves decided to undertake upon learning of the start of the deployment of the Soviet ABM. These steps induce obvious counteractions by the other super-power and the net result could easily be another major expansion of offensive missile forces and an accompanying uncertainty about the security of our deterrent.

Under this sort of logic—and I think it is eminently sound logic—this ABM system could be less than useless. It could be highly counterproductive, and at a cost of untold billions of dollars.

To those who contend that the Soviets will continue to manufacture and to deploy missiles at a rapid pace regardless of what we do on the Safeguard question, I say, "It ain't necessarily so."

From my many travels to the U.S.S.R. and my hundreds of conversations with officials at all levels of their government, I know that they, too, are constantly engaged in an internal tug-of-war over military policy and military priorities.

I say that there is a group within the Soviet Government which would like to cool down the arms race, free their country of the back-breaking burdens of an uncontrolled missile race. They would prefer to put the country's emphasis on agriculture, on consumer goods, on housing, and on modernization of Russian industry at all levels. They know that these are the areas which, if neglected for too long, can bring the Russian people terrible hardship and could even result in civil unrest.

But what happens when these moderate elements attempt to steer the U.S.S.R. away from the arms race by leveling off missile systems development and deployment? I will tell you what happens:

The super hawks and the militarists plow them under with scare stories about Safeguard, Poseidon, Minuteman III, MIRV, AMSA, and so forth. They point out how the combination of all of these mighty American systems will give the "fiendship militarists" of the Pentagon a "first-strike" capability by 1975, unless the Soviet military effort is redoubled, unless hundreds more of the SS–9 missiles are deployed, unless 50 more missile subs are launched—unless, unless, unless.

It seems to me that we have an opportunity to strike a blow for the growth of this moderate element within the Soviet leadership by delaying deployment of what is really an unworkable ABM system anyway, and giving them the elbow room to point out that in the absence of an American ABM system, Russia does not really need quite as many SS–9's, MIRV's and missile subs and that the resources of the country ought to be diverted elsewhere.

This sort of change of pace would not occur overnight in the U.S.S.R. I am not so unrealistic as to think that. But I do know that heavy Soviet expenditures on these expensive weapons programs are seriously retarding the Russian economy. In the long run, their natural tendency would be to put more emphasis there, rather than on limitless expansion of missile forces. All that I am saying is that we should hasten this process by avoiding deployment of a system that is really useless to us but whose mere existence can easily be used by the superhawk group within the U.S.S.R. as a pretense for further escalating the arms race.

Here is our chance, perhaps, to break the action-reaction cycle on which the arms race feeds itself. Even if it is an outside chance we should take it, particularly, since we can do so without endangering our own security. All we would have to do, for the present at least, is to limit ourselves to testing a system which in the final analysis we may find does not work well enough to deploy anyway.

Sixth, I wish to raise the issue of the fiscal and budgetary impact of the Safeguard ABM proposal. As a longtime member of the Defense Appropriations Subcommittee, I know from experience that the "six or seven billion dollars" estimate of the cost of the "thin" ABM system will, in my opinion, escalate to a sum several times that amount.

Once deployed, this system's substantial and obvious inadequacy will almost certainly result in the gradual evolution of a "thick" system whose cost could run from $60 or $80 billion to the $400 billion which has been projected by Senator STUART SYMINGTON, a former Secretary of the Air Force.

As one who has always tried to be a watchdog against excessive, unwise and nonessential spending, I see the Safeguard ABM as a bottomless pit for my constituents' hard-earned tax dollars. As such, I view it as an incurable sore on the efforts that some of us are making to balance our budget, reduce the tax load and return to fiscal responsibility.

As I stated in my introductory remarks, I find it disappointing that most of my fellow fiscal conservatives who, like me, are constantly using the paring knife on wasteful social programs refuse now to apply their fiscal conservatism and good sense to the Military Establishment.

We are now spending $80 billion a year—$220 million a day—on military programs, and in my opinion, the Safeguard system could very quickly expand this sum beyond the $100-billion-a-year level. As a fiscal conservative, I fear that when combined with ever-increasing demands for medical, welfare, and "social" programs in general, this level of military spending will eventually wreck our economy.

This is the sort of development which might well bear out the prediction of one of the founders of the Soviet Communist

State who predicted that the capitalist nations would eventually "spend themselves to death." Once the system is deployed, it will serve as a bottomless pit for countless billions of dollars which our over-burdened budget, and our over-burdened taxpayers, cannot afford.

In this regard, I know that once Safeguard is deployed, it will be increasingly difficult for this body to pass objective judgment on its workability. In such a heated legislative battle as this—in which the President, the Pentagon, and so many proponents are putting their reputations and their sacred honor on the line, insisting that Safeguard will work—there will be a great, politically inspired reluctance on the part of many to admit at some time in the future that they were wrong and that Safeguard is, indeed, an Edsel.

The tendency, I fear, will be to pyramid a mountain of fundamentally unworkable, unproductive, and extremely expensive ABM hardware rather than admit error and waste. In face of such a possibility, we must take a "go-slow" attitude about deployment—until we know for certain that we do want to deploy this particular system.

Another example, in which I made unheeded recommendations to "go slow," involves our Polaris submarine fleet which has been expanded at a maximum rate over the several years and which is now having to be converted to handle the larger Poseidon missile rather than the Polaris missile. We have known for several years that Poseidon was on its way and that Polaris would soon be "obsolescent" by today's standards.

Of course, it would have been a mistake to build no Polaris subs at all while waiting for the perfection and deployment of Poseidon; but by the same token, a great savings to the economy and to military spending could have been realized by going slow on the Polaris-type subs and waiting to put our money into the Poseidon-type sub which we knew was coming.

Instead, we went full speed ahead with the Polaris subs and we are now having to spend $50 to $60 million apiece to convert 31 Polaris submarines to the Poseidon system. This conversion plan alone will cost $2 billion—a huge sum which could be spent instead to purchase a number of new Poseidon-type subs.

I can easily visualize "secret" memorandums floating around the Pentagon in 1979 which suggest that the best thing to do with Safeguard is to sink it in the ocean—the solution proposed in 1969 for our older Polaris submarines—rather than be saddled with its huge and pointless costs of operation and maintenance.

It is the old question of "haste makes waste" and in my opinion we must not make that mistake vis-a-vis the gigantic Safeguard program. If we do, we are likely to find ourselves with an outrageously expensive white elephant on our hands which is not convertible to anything at all—at a great and damaging cost to our economy.

Seventh. In discussing research and development, I find a most disturbing aspect to the manner in which the Safeguard system is being handled vis-a-vis the normal procedure of developing, testing, procuring, and deploying major weapons systems.

As a member of the Defense Appropriations Subcommittee, I learned long ago that there is a set procedure by which a weapons system must grow from the status of an obscure scientific concept to the status of deployment. Experience has proven that the more complicated the system, the more vital it is not to skip or not to violate any of these successive steps.

In a nutshell, these stages of R. & D. are: Basic research, exploratory development, advanced development, engineering development, operational systems development, and management and support.

With all its priority, costing, and rushing ahead, even the Manhattan project followed the five R. & D. steps with the rather special exception that there was only the one Alamogordo Trinity Testing. If this test had not been near fully successful, the two flights from Tinian would almost certainly not have left as they did.

The nuclear sub project of Admiral Rickover, and the Polaris missile project of Admiral Raborn similarly followed the five R. & D. steps carefully. The dangers involved made it natural that none of the five steps were omitted, although clearly the project work was rushed. An untried reactor would never have been considered by Admiral Rickover for procurement and deployment. An untested Polaris missile would never have been approved for massive procurement by Admiral Raborn. Yet, this is just the sort of hop-skip-jump procedure which the Defense Department is following with regard to the infinitely more complex Safeguard system.

The only cases of which I have been aware of successful attempts to bypass any of the normal five R. & D. steps involve the B–29 program, the Russian T–34 tank development program in the early 1940's, and the British "Mark I Star" radar system.

All other systems which have attempted to violate the five R. & D. steps in one or more ways, instead of saving time, have become grossly expensive or completely unworkable, or both. Some celebrated cases today involve the M–16 rifle and the TFX aircraft. But the worst current example is probably the combustible casing for the Sheridan tank. As a result of faulty R. & D. procedures, we now have a billion-dollar tank without an artillery shell that can safely be fired from its gun.

In the case of the Safeguard system, my observations are that the system has proceeded only to the third stage of development, which, according to armed services procurement regulations is called advanced development, a stage which is not far enough along the line to permit procurement or deployment of hardware for service use.

Mr. President, I ask that certain excerpts from part 2, title 4, section 201 of the Armed Forces procurement regulations be printed in the RECORD at this point in my remarks so that I might then refer to some of the language contained therein.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

4–201 DEFINITIONS

(a) The followng definitions of the term "research and development" are those set forth by the Department of Defense for the reporting of research, development, and engineering program information, and are primarily designed for program control. To enable procurement personnel to understand the meaning of these words as used by research and development personnel, the definitions are set forth here for information purposes. As the term "research and development" is used in this Regulation, it ordinarily encompasses only the first four of the categories set forth below. The definition set forth in (5) and (6) are not likely to coincide with the meaning of "research and development" as that term is used for procurement purposes. For example, "military construction of a general nature unrelated to specific programs", as included in (6) below would not be within "research and development" for procurement purposes in the case of construction of recreation facilities at an installation used exclusively for research and development. The facts of a particular case, however, may be such that (5) and (6) below would include a procurement which satisfies the procurement meaning of the term research and development.

(1) *Research*—Includes all effort directed toward increased knowledge of natural phenomena and environment and efforts directed toward the solution of problems in the physical, behavioral and social sciences that have no clear direct military application. It would thus, by definition, include all basic research and, in addition, that applied research directed toward the expansion of knowledge in various scientific areas. It does not include efforts directed to prove the feasibility of solutions of problems of immediate military importance or time-oriented investigations and developments.

(2) *Exploratory Development*—Includes all effort directed toward the solution of specific military problems, short of major development projects. This type of effort may vary from fairly fundamental applied research to quite sophisticated bread-board hardware, study, programming and planning efforts. It would thus include studies, investigations and minor development effort. The dominant characteristic of this category of effort is that it be pointed toward specific military problem areas with a view toward developing and evaluating the feasibility and practicability of proposed solutions and determining their parameters.

(3) *Adavanced Development*—Includes all effort directed toward projects which have moved into the development of hardware for experimental or operational test. It is characterized by line item projects and program control is exercised on a project basis. A further descriptive characteristic lies in the design of such items being directed toward hardware for test or experimentation as opposed to items designed and engineered for eventual Service use.

SPECIAL TYPES AND METHODS OF PROCUREMENT

(4) *Engineering Development*—Includes all effort directed toward those development programs being engineered for Service use but which have not yet been approved for procurement or operation. This area is characterized by major line item projects and program control will be exercised by review of individual projects.

(5) *Operational System Development*—Includes all effort directed toward development, engineering and test of systems, support programs, vehicles and weapons that have been approved for production and Service deployment. This area is included for convenience in considering all RDT&E projects. All items in this area are major line item projects which appear as RDT&E Costs

of Weapons Systems Elements in other Program control will thus be exercised by review of the individual research and development effort in each Weapon System Element.

(6) *Management and Support*—Includes all effort directed toward support of installations or operations required for general research and development use. Included would be military construction of a general nature unrelated to specific programs, maintenance support of laboratories, operation and maintenance of test ranges, and maintenance of test aircraft and ships. Costs of laboratory personnel, either in-house or contract-operated, would be assigned to appropriate projects or as a line item in the Research Exploratory Development, or Advanced Development Program areas, as appropriate. Military construction costs directly related to a major development program will be included in the appropriate element.

Mr. ELLENDER. Mr. President, I note that according to the DOD's own standards and regulations, under point No. 3, known as advanced development:

A further descriptive characteristic lies in the design of such items being directed toward hardware for test or experimentation as opposed to items designed and engineered for eventual service use.

Since in the case of Safeguard, many of the parts of the various component systems have not even been built in prototype form, much less tested in conjunction with the other major components, it is basic logic to conclude that Safeguard as a weapons system is certainly not beyond stage 3. In some regards, it has not even reached stage 3 and should, therefore, be considered far removed from stage 5, which is the first point at which the regulations speak of "deployment" in any sense of the word.

Although I am no expert in the matter, it seems that we might be able to give some sort of rating, between Nos. 1 and 6, to each of the major components of Safeguard. Then we might reason from these the relative stage of development of the system as a whole.

Since this is too technical an issue to explore in detail at this moment, I shall merely express my interpretation of the matter and check the RECORD in the days to come to see if proponents can prove by facts and figures that the various major components of Safeguard have, in fact, advanced farther than the levels of R.D.T. & E. which I attribute to them. If a component is in the early stage of a certain step I will use the term "minus" and if in the late stage the term "plus."

First. The Spartan missile—Step 4.

Second. The Spartan guidance and control system—Step 3 plus.

Third. The Sprint missile—Step 3 plus.

Fourth. The Sprint guidance and control system—Step 3 minus.

Fifth. The PAR—long-range radar—Step 4.

Sixth. The MSR—short-range radar—Step 3.

Seventh. The master computer—Step 3 minus.

Eighth. The master command and control system—Step 3 minus.

Ninth. The warheads—Step 4.

For the simplest reasons of logic, the workability of such a complex system cannot be glibly presumed. Without bringing each of the component parts through the whole R.D.T. & E. procedure we would be deploying Safeguard on little more than a fanciful presumption. The burden of proof of Safeguard's workability has not been satisfactorily borne by proponents who recommend the expenditure of billions for deployment of an unproven system.

Eighth, and in the same vein, I feel that deployment of the Safeguard ABM system could have a highly counterproductive effect of diverting research and resources away from programs which might someday produce a truly workable ABM system. Such a system might be based on laser beams, on other high-intensity sources of sound or light or on force fields of some sort that are unknown to us at present. Who knows what system or what concept is waiting to be discovered which does not suffer from the foibles which so many of our scientists feel are inherent to a projectile system such as the Safeguard.

In this regard, I wish to make it very plain that I am not an opponent of ABM per se, for I would be the first to want a protective shield over this great country that I knew would work. Though I do not feel that the U.S.S.R. intends to risk nuclear war with us now or in the foreseeable future, no one knows what the threat might be 5 or 10 or 20 years from now—either Russia, or more likely China or even from some other nation not now a nuclear power.

I actively support efforts to continue ABM research and view deployment of Safeguard as a threat to this research and a waste of precious resources on a system that will bog down of its own weight. A striking parallel can be seen in the history of the Nike-Zeus program for which many of Safeguard's proponents were clamouring a decade ago.

As one expert told the story so clearly:

It is interesting to contemplate that, had the deployment of Nike-Zeus been authorized in 1960–61, we would have just about now had the full system in operational readiness, after spending what was then estimated as $20 billion and could have been, judging by analogy with other large weapon systems, twice as much. Considering the current numbers and sophistication of offensive missiles now being deployed by the super-powers it is technically certain that the Nike-Zeus ABM system would now be of little value.

Full deployment of Nike-Zeus would certainly have been a stumbling block to the improved—but still inadequate and obsolescent—Safeguard ABM system. And if Safeguard is deployed now, it will have serious and perhaps deadly effect on development and eventual deployment of a truly effective ABM system, if indeed such a device can ever be created.

Ninth, and in connection with this matter of ABM research, let me raise the specter of a frightful possibility that has not yet been considered by the Senate. Since there has been a great deal of "fright peddling" by the proponents, I feel at liberty to put the shoe on the other foot and peddle a bit of fear and uncertainty on behalf of the opponents. Maybe as a result of what I am going to say, some of my colleagues will benefit by a balance of fear within their analytical processes and will then be able to look at the Safeguard more objectively than if their appetite for fear is being whetted only by proponents frightful hypotheses of what the Russians might do to us if we do not install an ABM umbrella over our heads.

My countercharge is this: What if, while we are deploying expanding and pyramiding a system which—for the many reasons I have stated—will not work, the Soviets are in the meantime putting all of their resources into research and development of a new concept which 10, 12, or 15 years from now does work.

Visualize, if you can, the situation in 1985 when we might have 10,000 improved Spartan and Sprint missiles blanketing the country, feebly facing perhaps 30,000 Soviet warheads. The arithmetic of the situation will still carry the inescapable conclusion that this is no defense at all against the U.S.S.R. if she should decide like a mad dog to attack us. This would be true even if our missiles are 100 percent reliable and 100 percent effective, which they would not be, of course.

But what if, by contrast, the Russians have spent the time and the resources between 1969 and 1985 not in burdening themselves with a white elephant but rather in finding and perfecting a system which really does work.

As I indicated earlier, there are already indications that they have stopped deploying their Golash ABM system around Moscow and are looking for something that will work. They have, no doubt, done their arithmetic and realize that—similar to the figures which apply to our Safeguard—even a 50-percent effectiveness from a system that is 80 percent reliable will still do them no good at all in the event of nuclear war.

So, apparently, they have found the good sense to stop kicking their dead horse and to go out looking for a better one. If by their commonsense efforts in this regard they jump ahead of us during the next decade—while massive deployment of Safeguard detracts from realistic R. & D. efforts into other concepts of ABM—then it is the proponents of Safeguard who will have deprived us of whatever ABM protection we might need in years to come.

I am one who wants to see this country spend whatever money is necessary in research either to prove or, more likely, to disprove the feasibility of Safeguard and then to get on to looking for something better, if such a thing exists.

Tenth, as a further matter of military strategy and programing, I fear that deployment of a hugely expensive ABM system could very easily squeeze out or seriously undermine other important military programs and place our total military posture out of balance.

If, as I have contended, nuclear war will not be chanced by the nuclear powers, then I am sorry to say that there will likely be other types of wars and conflicts of various descriptions which fall short of nuclear holocaust. I personally shall oppose such involvement wherever possible, but I am practical enough to realize that they will most probably occur from time to time.

The type of war we are fighting in Vietnam, the one we are constantly in danger

of having to fight again in Korea, the ones we are "secretly" fighting in Laos and Thailand, the conflict that is festering in the Middle East, the unsettled situation throughout Latin America—all give evidence that for a long time to come we shall have to be spending large sums on "brushfire" wars. And, too, it is a well-accepted principle that the best way to avoid such conflicts is to be eminently well prepared for them. The fiscal impact of Safeguard will certainly detract from our ability to maintain preparedness in this respect.

With the growing sentiment in Congress and in the country for a ceiling or a basic reduction in military spending, the deployment of a very expensive ABM system of very doubtful reliability would seem to me to gobble up a topheavy share of total military spending.

My educated guess is that there are many military men who would like to speak out against ABM on the grounds that it presents a clear and present danger to all military programs that are designed to assure preparedness for conventional warfare and for the necessary maintenance, modernization, and perfection of our offensive deterrent forces.

As a practical military man, I think I would be more interested, for example, in spending the necessary time, effort, and money in making sure our Minuteman system as a whole is not in the inoperative condition of the missile that failed to launch on four successive occasions. What we need here is a bit more horsesense thinking, more first things first in terms of military priorities.

Eleventh, I have come to feel a certain cynicism and disgust for the whole controversy surrounding the Safeguard proposal, because I find that it was in the beginning—and is becoming more and more—oriented toward politics than toward considerations of national security. Frankly, I feel that the Nixon administration made its initial recommendation for deployment because it was politically afraid not to do so. I think it was afraid to approach either the 1970 congressional elections or the 1972 national elections subject to charges of having allowed an "ABM gap" to develop.

I am sure that President Nixon has vivid memories of the "missile gap" psychosis employed so effectively by President John Kennedy to defeat him for the Presidency in 1960. President Nixon needed political insurance against any similar occurrence in 1970 and 1972 and in my opinion rested his decision heavily on political grounds.

To use a modern phrase, this sort of self-serving political motivation "turns me off." I frankly do not want to vote for a program that will cost billions, that is of dubious reliability, and that may hurt rather than promote our national security, when my careful observations tell me that this program is being proposed for reasons which are basically political.

In making this point, I do not mean to be totally critical of the President and the administration. Mr. Nixon and his advisers are victims of a situation which has built up over a period of years, and in a very real sense I feel sorry for them that they find themsleves locked into a position of having to propose deployment of an ABM system which they know is defective and ineffective by its very nature. I know the President wishes he had the political breathing room to do otherwise.

Twelfth, I wish to challenge the argument offered by proponents that they must test the Safeguard system on the site on which it will eventually be deployed—rather than out in the Pacific Ocean—in order, first, to obtain a realistic idea of its performance at that location and, second, in order to save money by having it already installed on the proper site if it does prove to be workable.

I shall try to demonstrate, Mr. President, that these are hollow and faulty arguments. They actually constitute a "nonthink" position for the proponents in view of the real-life situation to be faced when we talk about testing such a system and proving that it will work.

In the first place, I take the position that before we make a final judgment on an ABM system we should see all of its component parts function as a unit under conditions which simulate as closely as possible the attack against which it is designed to protect.

In the case of Safeguard, this "final judgment" of which I speak would be the foundation upon which this country might proceed to invest tens or even hundreds of billions of dollars in ABM sites and hardware in the years to come. So, it should be a realistic test which leads us to the final decision. Otherwise, we run the risk of total waste.

The charge I make is that we cannot stage such tests in Montana and North Dakota. To be certain of whether we do not have a white elephant on our hands, we would have to deploy a number of Spartan and Sprint missiles at a site, hook them into both the long-range and short-range radar systems, tie those systems into the master computers and the command apparatus and then tell the Safeguard operators something like this:

"At any time during the next 6 months, day or night, you must be prepared to defend against surprise attack from Minuteman, Polaris, Poseidon, and whatever other missiles we see fit to launch, including MIRV. The direction from which the attacks are launched, the time of attack, the decoy techniques and the numbers of missiles will constitute an attempt to stimulate a Soviet 'first-strike' attack. Only the nuclear warheads will be lacking."

Then, on some unannounced day or night, within the confines of an hour or two, we would then actually have to launch at least two dozen ICBM's and SLM's from varying distances at targets within the guarded area to see how many of those could be "killed" by a similar number of Spartan and Sprint missiles actually launched at the incoming dummy warheads. The "kills" would, of course, have to be judged on the basis of the distance by which each unarmed ABM missile missed its target. Since simulation would be at a maximum, the results of the test would contain enough realistic data on which to base a valid judgment.

This would not be true of the sort of testing that could or would be done in North Dakota or Montana. ICBM's and SLM's would not actually be fired at the sites under protection, and ABM missiles would not be fired at the incoming dummy warheads. The reason is obvious; political risk and public opinion would not allow it; there would be too much danger of stray missiles falling into towns, cities, or other populated areas.

Instead, the whole routine of "testing" would be to run tapes through the computers to simulate incoming warheads and other tapes to simulate Safeguard and Sprint launching—with the result that we would still not know whether the system really works under stress.

In effect, proponents want us to adopt a plan which by its very nature would preclude realistic testing. They will then come back next year and in succeeding years, ad infinitum, asking for additional authorization and money to deploy additional sites—always without any hard proof that the many component parts of Safeguard will work as a system under battle-like conditions.

Under these circumstances, we might be victimized by Safeguard in the same way as we were in the infamous case of the torpedoes the Navy tried to use against the Japanese in the early stages of World War II. After launching these torpedoes against Japanese ships, our submarine crews could hear them thump against the sides of the target vessels; but no explosions and no sinking of enemy tonnage ever occurred.

The fact is that a simple torpedo, which had been fully "lab tested" by the experts, regularly failed to detonate. These experts, in their haste to deploy a torpedo, had felt that if they could make their weapon work on the drawing board and if the bench-model prototype seemed to work as designed, then the real weapon would work, too.

But it did not work, and under different circumstances this result of fuzzy R. & D. thinking and hasty deployment might have cost us the war.

So, I implore my colleagues, let us not chance the same mistake. Let us not allow proponents to argue unchallenged the faulty proposition that paper testing and simulated prototype testing in Montana is an acceptable substitute for realistic testing at the Kwajalein test site in the Pacific—where real Spartan and Sprint missiles can be launched against a surprise attack of ICBM's and SLM's, lacking only the nuclear warheads which we hope will never have to be used. Let us bear in mind that Safeguard is a supercomplex interconnection of at least seven major components, not one of which—as I explained in point No. 7 of these remarks—has yet been proven acceptable for deployment under the normal rules of R.D.T. & E.

To me, these commonsense observations relative to testing make short shrift of the "economy" argument which proponents offer for deploying prototypes on the spot where eventual permanent deployment is anticipated. As explained, proper and realistic testing cannot and will not be conducted at those sites. This kills any argument for economy because it allows for the strong possibility that

the entire system will be totally unworkable and thus totally uneconomic.

Thirteenth, I would like briefly to take issue with those who argue that "Because we were able to put men on the moon, we can certainly build the Safeguard ABM system in a way that will work."

As I have explained in previous arguments, this may well be so; but we should test and prove it out as a technological fact before deploying. Also, as I have said, even if it "works" in the technical sense, Safeguard may not be capable of doing the job in terms of the numbers of warheads potentially involved in a nuclear exchange. Furthermore, as stated, the Safeguard program may be the very factor that diverts our scientists from developing a system that will work.

Be that as it may, it is a fallacy to presume that Safeguard will work because we are as capable of making it work as we are of putting men on the moon.

The manned missions which NASA has handled so masterfully involve only one missile launch at a time. Each of these rockets is specially prepared and individually installed on the launch pad several weeks before blastoff. Each then receives the almost undivided attention of the entire multibillion-dollar worldwide NASA complex, with its tens of thousands of scientists and technicians. Finally, each rocket is subject to a highly elaborate countdown of 190 hours—with several built-in "hold" periods—before it is launched.

I say that it is not good thinking to draw general comparisons and hold presumptions from the admittedly spectacular successes of the NASA manned space programs and apply them to a system which, by contrast, would involve literally hundreds of highly sophisticated rockets, each one attuned to a hair-trigger where the mere concepts of "countdown" and a "hold" is totally self-defeating.

Fourteenth. I take issue with the argument of those who suggest that although Safeguard may be useless against a Soviet first strike, it is nonetheless a good investment against the possibility of a Red Chinese first strike.

The military and strategic facts of life do not support this sort of logic. In the first place a Chinese attack would be a "madman" attack, conducted with the knowledge that massive retaliation on China would result. In such a situation, the Chinese would not have the capacity to diminish our retaliatory capacity to any significant extent, if at all, and would instead try to devastate as much of our population, our industry and our commerce as possible.

That kind of attack would be launched at our coastal areas where most of our large cities are situated and where huge amounts of our industry and commerce is to be found. The attack would come not from a handfull of ICBM's that are projected for the Chinese arsenal in the mid-1970's but from a handful of submarines or even freighters or fishing vessels—or a combination of all three—stationed right off our coasts in international waters.

In such a situation, even obsolete or obsolescent subsonic, short-ranged missiles could be used with virtually no warning at all. Under these conditions, Safeguard would be totally useless. There might be some other defense against such a sea-based coastal attack; but whatever that may be, it has nothing to do with Safeguard. Since this system cannot be linked realistically to the kind of attack that we might logically expect from the Red Chinese, proponents should not be allowed to justify it on that basis.

May I point out, parenthetically, that one of the factors which originally caused me to question the feasibility of the Safeguard system was the apparent inability of its proponents to state clearly the kind of attack against which it is supposed to protect and by precisely whom this attack is to be launched. The illogic of linking Safeguard to a Red Chinese attack describes eloquently the illogic of Safeguard itself.

Finally, I want to comment on the cold war aspects of the ABM program. I make these observations in view of the urgent need I see for slowing down the arms race and for cooling down world tensions, the alternative to which is an intensification of the cold war and a further polarization of the peoples of the world into hostile camps bent on mutual destruction.

As I have tried to indicate at several points in this address, I feel that both we and the U.S.S.R. have developed nuclear forces of such fearful potential that neither of us will now or in the foreseeable future risk atomic war.

If this is a correct conclusion, then the contest between the free world and the Communist world will be won—or lost—in the battle for men's minds—on the battlefields of ideas, of economics, of internal progress, and of fiscal stability.

As I see it, we cannot hope to defeat communism militarily because to do so would be to invite our own destruction as well. That being the case, we should look for nonmilitary means of winning this competition.

On five different occasions in recent years, I have visited Russia and have seen in the Russian people the best bet for our success over the Soviet system. Despite the fact that the U.S.S.R. remains a dictatorship, it is not and cannot be completely unresponsive to the thinking of the Russian people. They are the only ones who can—and will, if we help them—change the face of Soviet communism and help make the world a safer place in which to live.

I am not one of those who believes that communism will never change and that the U.S.S.R. will forever be the same society over which Stalin presided. My five visits to Russia since 1955 have proved to me that there has indeed been great change.

I know, too, that there is potential for much more change among a people only 5 percent of whom are members of the Communist Party, almost all of whom are educated, and most of whom—like their restless neighbors in Eastern Europe—are enough like us in their human characteristics and aspirations to be our potential allies— if we will only find some way to bring them into the mainstream of Western civilization and show them the superior system we have in comparison to the one under which they now exist.

In these circumstances, the real battle against communism will not be won by ABM systems or by how much more "overkill" we can develop. It will be won or lost—on the battlefield of ideas, of economics, of internal progress, and development and of fiscal stability. If in the process of chasing the dream—the perhaps impossible dream of nuclear invulnerability—we wreck our economy, unbalance our overall military posture, and distract ourselves from the true nature of the competition, then communism may well win by default over the forces of individual liberty, of free enterprise, and of self-determination.

In conclusion, the argument I am making is that there is a point at which the proliferation of nuclear weaponry becomes useless at best and counterproductive at worst. I explained earlier how ABM systems will have a tendency to multiply offensive weapons deployment beyond all reason, thus adding to the dilemma rather than detracting from it. I would, therefore, like to see more of our attention directed toward the nonmilitary aspects of the competition with the U.S.S.R., for that is where our real strength lies—and where the real Soviet weakness lies.

As strong as Russia is militarily, her Communist government could probably not survive the effects of a few weeks or months of a free press or freedom of speech as we know it; yet we are spending no money, no time, and no effort on strategy aimed at promoting the growth of a free press or of free speech in Russia. Perhaps such an effort would not be fruitful; but in terms of the potential benefits, it would be at least worth an effort. At least it would point us in the right direction in our efforts to undo communism, rather than up the blind alley which is being suggested by proponents of Safeguard.

As many nuclear bombs as the Soviets have, their whole economic system could be transformed by increased demands by their people for a broad system of work incentives; yet we are doing next to nothing, either in terms of brain power or money, to encourage this movement within the U.S.S.R. What is happening there in the line of economic transformation seems almost to occur despite us rather than as a result of our encouragement.

As challenging as the U.S.S.R. has become politically, scientifically, and economically, we fail to recognize and to act on the one major flaw by which the whole system might be made to crumble. That flaw is the flaw of communism itself; namely, its incapacity to offer freedom, civil liberties, and the rights of self-determination to the people without bringing about its own destruction.

If, indeed, there is such a vulnerable spot in the Soviet armor, we must direct our efforts, our talents, and our energies toward that spot. We must somehow create an atmosphere in which we can show the Russian people the benefits of our free-world institutions—material,

spiritual, social, economic, and governmental and they in turn will defeat communism for us, not by revolution, but by the constant pressure of gradual demands which, when answered, will cause Russia to outgrow her Communist system and diminish her threat to our way of life.

Contrary to popular notions of the professional anti-Communists, I picture such a development as not only possible but almost inevitable in a basically wealthy and educated nation such as Russia, if we will only stoke the fires of freedom and human rights that already reside in the hearts of the people.

Mr. President, I should like to add at this point that in my visits to Russia on 5 different occasions, I could note the differences that have accurred from year to year.

When Stalin grew to power, he grew in the midst of ignorance, want, and povetry; but that situation no longer exists in Russia. Today I would say that 95 percent, or perhaps more, of Russian adults can read and write; and they are becoming curious. They want to know what we are doing, and why it is that they do not prosper as much as we do.

As I have stated, that situation is going to continue to evolve to our advantage, and all we need to do is encourage it. I sincerely believe that the Russian people, on the whole, do not want war any more than we do. I heard on the radio awhile ago that President Nixon used almost the identical words I have been using now for the past 10 or 12 years as to the possibilities of our living side by side with the Russians, without in any manner embracing any part of their system.

It should be clear from what I have said here that my opposition to deployment of Safeguard is not intended as an appeasement of communism. I abhor it and want to see it extinguished from this planet. Actually, what I am searching for is a more effective and more realistic sort of anticommunism than "ABM-ism" or "overkill-ism."

My complaint is that the narrow, unimaginative, type of anticommunism we practice today fails even to take into account the essential nature of the cold war; namely, the fact that it is a "battle for men's minds." We not only lack a positive policy for winning the minds and the sentiments of the Russian people, but we seem to follow policies at times which deliberately and needlessly tend to drive them into the arms of their Soviet masters by isolating them and alienating them from the influences of Western civilization and current events.

As long as we limit ourselves to a narrow policy of military confrontation and arms competition with the U.S.S.R., the best we can hope for is a frustrating, costly, and highly dangerous "coexistence" with communism. At a cost of $80 to $100 billion a year this sort of perpetual coexistence with communism will mean the eventual downfall of the American economy and the American morale.

In the 25 years since the end of World War II, we have spent approximately a trillion dollars to build up our military might and to protect our territory and the territory of our allies from attack by the Communists. I feel that the tremendous overkill we now possess in the form of more than 10,000 nuclear warheads which can be delivered from submarines, aircraft carriers, underground ICBM missile silos, mobile missile carriers, and by supersonic bombers and rocket bases scattered all around the world is sufficient to insure us against a first-strike attack by anyone but an absolute madman.

Since the Safeguard ABM system is no deterrent to a madman, it does not, in my opinion, add meaningfully to the deterrent effect of the vast array of armaments I mentioned above. We should not upset our economy to set up an imaginary defense against a madman who probably does not exist—and who, if he does exist, cannot be defended against by present concepts of ABM.

THE H-BOMB CONTROVERSY AND THE ABM CONTROVERSY: AN ANALOGY AND THE LESSONS

Mr. DODD. Mr. President, more than one observer has made the point that there is a remarkable analogy between the debate surrounding the ABM decision today and the debate that raged inside the administration around the decision to build the hydrogen bomb in 1949–50.

For example, columnist Joseph Alsop has pointed out that in the debate over the development of the H-bomb in the late forties:

> The prime arguments against the H-bomb that were used by Dr. J. Robert Oppenheimer were precisely the arguments now being used by the ABM's scientist-opponents. Oppenheimer said: (a) that the H-bomb would not work; (b) that it would be inordinately expensive to develop; (c) that development would only increase the instability of the world balance of power . . . As anyone can now see, he was nonetheless dead wrong on all three points. Later he admitted as much.

Alsop later asked Oppenheimer why he has been so wrong in saying that the H-bomb would not work, and Oppenheimer replied:

> I guess I concluded it wouldn't work because I wanted it so much not to work.

In the recent ABM book which they edited and to which they contributed, Dr. Jerome Wiesner and Mr. Abram Chayes denied that there was any basic analogy between the ABM controversy and the H-bomb controversy. This is what they said:

> It is necessary to be clear about the kind of question here involved. Some people have thought it analogous to the technical issues surrounding the decision to go forward with the development of the hydrogen bomb. In that instance, it is pointed out, a substantial and respected portion of the scientific community opposed a high-priority effort to develop the H-bomb. But in the hydrogen bomb controversy the scientific issue was whether a specific design concept could *in principle* ever be developed into a workable weapon. That question could be and was resolved by additional theoretical calculations; and, in fact, though this is not generally appreciated, the original concept was demonstrated to be unworkable.

Because I thought it important to determine whether there is a valid analogy between the ABM and H-bomb controversies, I wrote parallel letters to Dr. Wiesner and Mr. Chayes, in which I posed the following question:

> Could you give me the source or sources for your statement that there was little scientific controversy over the program for production and deployment of hydrogen weapons, and that the real issue in the controversy was "whether a specific design concept could in principle ever be developed into a workable weapon"?

In addition to writing to Messrs. Wiesner and Chayes, I also wrote letters to Dr. Edward Teller and Adm. Lewis Strauss, former Chairman of the Atomic Energy Commission, asking them for their comments on the statement made by Chayes and Wiesner, on the question of whether or not there exists an analogy, in their judgment, between the ABM debate and the H-bomb debate.

I also checked back through the record of the Atomic Energy Commission and through the literature dealing with the story of the H-bomb.

My research and the replies I received convinced me that the parallel between the arguments offered against the H-bomb in the late forties and the arguments today being advanced against the deployment of the Safeguard ABM system is even more marked than Mr. Alsop indicated in his column.

Among other things, it was argued:

First, that our development of the H-bomb would escalate the arms race by encouraging the Soviets to match our development;

Second, that it would make it more difficult to achieve any meaningful agreement with the Russians on arms control;

Third, that it would make nuclear war more likely rather than less likely;

Fourth, that we should delay embarking on the H-bomb program while we sounded out the Russians on arms control; and

Fifth, that, in any case, 1 or 2 years' delay would not make any serious difference.

One need only substitute the word ABM for H-bomb to realize the amazing and frightening similarity between today's catalog of anti-ABM arguments and the 1949 catalog of anti-H-bomb arguments.

The five-page joint letter which I received from Messrs. Wiesner and Chayes in my reply to my query made no concessions, however, to the existence of an analogy between the H-bomb controversy and the ABM controversy.

Instead, they repeated their statement that "in the hydrogen bomb controversy the scientific issue was whether a specific design concept could ever be developed into a workable weapon."

They further stated that the October 29, 1949, report of the General Advisory Committee on the Atomic Energy Commission "only opposed—party on extra-scientific grounds—a crash program for the development of the 'super,' based on the design concept then available."

The statement by Dr. Wiesner and Mr. Chayes that the central issue in the hydrogen bomb controversy had to do with the feasibility of the design concept originally proposed, is in such flagrant contradiction with the public record that it

is hard to believe their error was a product of simple ignorance.

I leave it to others to draw their own conclusions from the facts and the documents I shall here set forth.

One can only hope that they were somewhat less reckless with their facts where the facts are not a matter of unchallengeable public record.

THE REAL HISTORY OF THE H-BOMB CONTROVERSY

In his reply to my letter, Admiral Strauss asserted:

> There are striking parallels between the debate on the ABM and the debate on the fusion bomb ten years ago.

Recapitulating, point by point, the arguments that were made against the H-bomb program by the General Advisory Committee scientists, Admiral Strauss added:

> These points are not in accord with the emphasis in the book [the Wiesner-Chayes book] that "the scientific issue" concerns only the feasibility of an initial design concept. Another design concept proved feasible, but it would not have been found or, if found, would not have been developed, had the opponents of the hydrogen bomb succeeded in persuading the President to declare against it as a weapon. The principle which clearly guided him—that the United States could not afford to be less well armed than a potential enemy—has a modern corollary. We cannot afford to be less well defended than a potential enemy.

Dr. Teller in his reply to me confirmed that there had been some differences over design. He said that, while it was correct that a new concept had been proposed and was eventually demonstrated to be workable, it was "an oversimplification to state, as the Wiesner-Chayes report does, that 'the original concept was demonstrated to be unworkable.'"

Dr. Teller's letter made it clear, however, that the vigorous debate in the nuclear community during the latter part of 1949, had to do essentially with the question of whether or not we should make an effort to produce the H-bomb.

That the accounts given by Admiral Strauss and Dr. Teller are basically accurate is established by the now-public record of the historic meeting of the General Advisory Committee of the Atomic Energy Commission on October 29, 1949.

The report adopted unanimously at this meeting—Dr. Seaborg was absent—agreed that "an imaginative and concerted attack on the problem has a better than even chance of producing the weapons." The GAC members, however, opposed the effort to develop the H-bomb on essentially moral grounds.

We all hope—

Read the report—

> that by one means or another, the development of these weapons can be avoided. We are all reluctant to see the United States take the initiative in precipitating this development. We are all agreed that it would be wrong at the present moment to commit ourselves to an all-out effort toward its development.

That the members of the General Advisory Committee were moved far more by moral and ethical considerations than by any scientific considerations, was further emphasized in two supplementary statements to the main report, one signed by five of the members of the Committee and the other one by two of them.

The majority supplement said in part:

> In determining not to proceed to develop the Super-bomb, we see a unique opportunity of providing by example some limitation on the totality of war and thus eliminating the fear and arousing the hopes of mankind.

The language of the minority supplement was even more imperative. Let me quote one paragraph from it:

> The fact that no limits exist to the destructiveness of this weapon makes its very existence and the knowlege of its construction a danger to humanity as a whole. It is necessarily an evil thing considered in any light. For these reasons, we believe it important for the President of the U.S. to tell the American public and the world we think it wrong on fundamental ethical principles to initiate the development of such a weapon.

Fortunately, for the free world, the attitude of the General Advisory Committee was not shared by Dr. Edward Teller, Dr. Ernest Lawrence, and a handful of other scientists. They carried their arguments to the Atomic Energy Commission and to the Joint Committee on Atomic Energy and to President Truman himself.

Their viewpoint was supported in the Atomic Energy Commission initially only by Adm. Lewis Strauss and by Gordon Dean. It was only toward the very end that they were able to enlist the support of David Lilienthal, the chairman of the Commission.

Senator Brian McMahon, of Connecticut, the Chairman of the Joint Committee on Atomic Energy, was one of the first to accept the imperative logic of the argument that we could not afford to let the Russians beat us to the H-bomb without gravely imperiling our own security. In this view, he was joined by other members of the Joint Committee.

I might say parenthetically at this point that my knowledge of the H-bomb conflict is not based entirely on the historical documentation. Both Brian McMahon and Gordon Dean were old personal friends: McMahon and I had served together in the Department of Justice, while Dean had been with me at the Nuremberg trials. And on more than one occasion when I came to Washington in 1949, McMahon and Dean discussed the matter with me and told me of their concern and of the problems they were having.

Even at the Pentagon, Secretary of Defense Louis Johnson was still disposed to question whether the Soviet Union had really exploded an A-bomb in September 1949; and Johnson, too, until the last minute, argued against the effort to make the H-bomb.

Within the State Department a battle also raged.

George Kennan, director of the policy planning staff, led the forces opposed to the H-bomb project. In a 128-page memorandum which he submitted to the Secretary of State on December 15, 1949, he argued that the Soviet Union would not deliberately initiate atomic war, and he thought the Soviet Union would not proceed with thermonuclear weapons program if we did not.

It is interesting to note, parenthetically, that Kennan had offered a quite different estimate of the Soviets in 1945, when he opposed sharing atomic energy knowledge with them. According to his memoirs, he wrote the following dispatch in December of 1945:

> There is nothing—I repeat nothing—in the history of the Soviet regime which would justify us in assuming that the men who are now in power in Russia . . . would hesitate for a moment to apply this power against us if by so doing they thought that they would materially improve their own power position in the world.

Kennan's appraisal and that of the General Advisory Committee of the Atomic Energy Commission was opposed within the Department by Secretary of State Dean Acheson, Paul Nitze, and several other key officials.

At Acheson's request, a report was prepared which concluded that we should proceed to test the feasibility of developing an H-bomb because our national security would be gravely imperiled if we did not do so. The report called for a continued effort to achieve agreement on the international control of atomic energy. But it warned:

> The necessary negotiations probably could not be completed in less than a year and a half to two years. . . . to delay an accelerated program of development for such a period in the absence of adequate assurance that work in the Soviet Union has been similarly delayed, would measurably increase the prospect of prior Soviet possession of thermonuclear weapons.

On January 27, 1950, the counselor of the British Embassy asked for an urgent meeting with Undersecretary Robert Murphy, and informed him that Dr. Klaus Fuchs, who had worked at Los Alamos from 1942 to 1946, and who possessed complete knowledge of all our thermonuclear research during that time, had admitted that he had for many years been a Soviet spy.

Against this background, on January 31, Acheson, now joined by Johnson and, reluctantly, by Lilienthal, presented to President Truman a recommendation that the United States proceed with work on the H-bomb.

This report culminated the work of a special committee of the National Security Council created nearly a year earlier under Acheson's chairmanship to consider nuclear policy.

Mr. TOWER. Mr. President, will the Senator yield for an observation?

Mr. DODD. Yes; I am happy to yield to the distinguished Senator from Texas.

Mr. TOWER. I commend the distinguished Senator from Connecticut for his historical recitation. I think it is vitally pertinent to this debate. I express, with him, the hope that all Senators will read these remarks in the RECORD. I think they give us cause for serious reflection.

Mr. DODD. I thank the Senator from Texas for his remarks. They please me very much. I have noticed that he has been listening carefully to what I have said. In my limited way, I have tried to spread on the RECORD some facts which I think ought to be called to the attention of every Senator.

There is no Member of this body who is more capable of handling facts than

the Senator from Texas (Mr. TOWER). I am pleased that he has taken note of what I have said.

To come back to my historical recitation, it was fortunate that President Truman was a leader who was singularly free of fuzzy thinking about Communist intentions. Rejecting the unanimous advice of the General Advisory Committee, and knowing that his decision would be opposed by a majority of the scientific community, Truman decided to accept the recommendation of the final Acheson-Lilienthal-Johnson paper, and to proceed immediately with the effort to produce the H-bomb.

In retrospect it is frightening to think of what might have happened if the opinion of the General Advisory Committee of the Atomic Energy Commission and of the majority of the scientific community had prevailed. For then the Soviets might have beat us to the H-bomb by as much as 3 or 4 years.

Even with President Truman's fearless and timely decision to proceed, our H-bomb was perfected and added to our deterrent arsenal only in the nick of time.

The common impression is that the United States got the H–bomb before the Soviet Union. Actually, this is not entirely accurate.

The United States exploded its first hydrogen test device on November 1, 1952, in Operation Ivy. But this was not a deliverable device.

Our first deliverable weapon was not exploded until March 1, 1954, in Operation Castle.

Meanwhile, in early August 1953, the Soviets had staged their first thermonuclear explosion, which, according to our intelligence, did involve a weapon capable of delivery.

It was thanks only to a massive effort and to the inherent superiority of American technology that we were able to pull ahead of the Soviets in thermonuclear weapons over the following years.

It is also frightening to think of what might have happened had the decision to build the H-bomb been subjected to the prolonged emotional discussion in Congress and in public that has characterized the debate of the decision to deploy Safeguard.

Hundreds of thousands of letters, I am certain, would have descended on Congress urging them not to escalate the arms race and not to squander our national resources on additional weapons of mass destruction.

Many an honorable Member of Congress, unquestionably, would have been impressed by the arguments of the distinguished scientists who composed the General Advisory Committee and would have taken the floor to argue that we should heed the advice of the majority of our scientific community.

And no one can say for certain what the outcome of such an emotionally charged debate would have been.

I do not argue against public debate.

I am all in favor of it.

But I do believe that the public debate we are today conducting would be enormously enhanced in quality if, in making our decisions for the future, we stopped to examine the lessons of the past.

That is why I have considered it important to recount the H-bomb history, with a view to determining just how much analogy there is between today's debate on the ABM and the debate that took place almost exactly 20 years ago over the decision to build the hydrogen bomb.

I believe that this review of the essential issues in the H-bomb controversy has more than passing significance in the controversy over the ABM system.

What the H-bomb controversy established is that many of the most distinguished members of our scientific community, out of the most laudable ethical motivations, are disposed to close their eyes to the harsh realities of the cold war, to credit the Soviets with a far greater degree of good faith than any reading of the record would warrant, and to persist in the dogma that restraint on our side will inevitably result in parallel restraint on the Soviet side.

The dogmatic nature of this trustfulness vis-a-vis the Soviets is amply illustrated by a statement made by Dr. Hans Bethe in an Atlantic Monthly article dealing with the Geneva test ban negotiations. Dr. Bethe said:

> I had the doubtful honor of presenting the theory of the big hole to the Russians at Geneva in November, 1959. I felt deeply embarrassed in so doing, because it implied that we considered the Russians capable of cheating on a massive scale. I think that they would have been quite justified if they had considered this an insult and had walked out of the negotiations in disgust.

This statement came from a man whose credentials include a Nobel Prize for physics and the position of chief scientific adviser to the President, a man who was a vocal opponent of the H-bomb project and who has in recent years been just as vocal in his opposition to the ABM.

To justify their naive political and ethical dogmas, scientists like Oppenheimer and Bethe frequently invoked scientific rationalizations which, in retrospect, certainly did not reflect credit on their judgment.

About the H-bomb, for example, it is reported that Hans Bethe once said:

> It cannot be made and should not be made.

It appears that, having decided that the H-bomb "should not be made," he deduced from this moral proposition the scientific conclusion that it "could not be made."

America has every reason to be proud of the accomplishments of its scientific community and of the countless benefits their collective efforts have conferred on mankind. But when scientists assume that their expertise in their own field of specialization automatically qualifies them as experts in the field of politics, they more often than not wind up by making themselves look ridiculous or, worse still, by damaging the cause they honestly desire to serve.

At the height of the debate over the H-bomb, my good friend, Senator Brien McMahon, once said to me that in his opinion Oppenheimer and his associates had gone far beyond their area of scientific competence in opposing the H-bomb on moral and political grounds. For this transgression, he said, they would suffer in the judgment of history.

McMahon's opinion turned out to be prophetic.

One of the chief lessons to be learned from the H-bomb controversy is encompassed in the two rules to which I referred in my statement of last Friday.

These are the rules:

> Rule No. 1: In assessing the potential of any important new field of technology involving new processes or systems—*half the scientists, or at least a large fraction, are usually wrong.*
>
> Rule No. 2: If a significant percentage of scientists agree, or sometimes if only one or two agree, that something new can be done—It can be.

In my statements on the ABM controversy Friday and today, I have not engaged in any numbers games or presumed to make technological evaluations. I do not feel competent to do so. But based on past experience, I believe that if 50 percent of the experts say that the ABM will not work, and the other 50 percent say it will work, then the odds are heavily in favor of the group of experts who say it will work.

With this, I rest my case.

Mr. President, I ask unanimous consent to insert in the RECORD at this point my exchange of correspondence with Messrs. Wiesner and Chayes, Adm. Lewis Strauss, and Dr. Edward Teller.

I also ask unanimous consent to insert in the RECORD the complete text of an article which appeared in Life magazine for September 6, 1954, under the caption, "Dr. Edward Teller's Magnificent Obsession."

There being no objection, the material was ordered to be printed in the RECORD, as follows:

MAY 20, 1969.

Dr. JEROME B. WIESNER,
Massachusetts Institute of Technology, Cambridge, Mass.

DEAR DR. WIESNER: In the study of the ABM which you and Mr. Abram Chayes prepared at the request of Senator Kennedy, the opening overview makes the point that there is no real analogy between the ABM debate and the H-bomb controversy of the late forties. This point is made in the following passage of your study, which appears on page 14:

"It is necessary to be clear about the kind of question here involved. Some people have thought it analogous to the technical issues surrounding the decision to go forward with the development of the hydrogen bomb. In that instance, it is pointed out, a substantial and respected portion of the scientific community opposed a high-priority effort to develop the H-bomb. But in the hydrogen bomb controversy the scientific issue was whether a specific design concept could in principle ever be developed into a workable weapon. That question could be and was resolved by additional theoretical calculations; and in fact, though this is not generally appreciated, the original concept was demonstrated to be unworkable. As a result of this subsequent analysis, a new approach was developed which was found to be feasible, first by theoretical and laboratory studies and ultimately by test explosions. The program for production and deployment of hydrogen weapons, about which there was little scientific controversy, did not go forward until these theoretical issues had been resolved."

Because I think it is important to determine whether or not there is a valid analogy, between the ABM controversy and the H-bomb controversy, I had planned to ask

certain questions of you and Dr. Teller during the course of last week's hearing. As matters turned out, there was not time for these questions.

I am now, therefore, taking the liberty of addressing to you by letter the basic question which I planned to ask of you at the hearing: "Could you give me the source or sources for your statement that there was little scientific controversy over the program for production and deployment of hydrogen weapons, and that the real issue in the controversy was "whether a specific design concept could in principle ever be developed into a workable weapon?"

I would be grateful if you could let me have your reply to this question by immediate return mail.

Sincerely yours,

THOMAS J. DODD.

(NOTE.—Parallel letter sent to Mr. Abram Chayes.)

LAW SCHOOL OF HARVARD UNIVERSITY,
Cambridge, Mass., May 26, 1969.

Senator THOMAS J. DODD,
Senate Office Building,
Washington, D.C.

DEAR SENATOR DODD: This is in reply to your letters of May 20, 1969 to both of us. You ask for the sources of the remarks on the hydrogen bomb controversy in our recent study of the ABM. We are glad to learn of your interest in this matter, and will reply in this joint letter.

One source for our remarks was our own general information. Also, the contrast between the present controversy with respect to the Safeguard deployment and that concerning the H-bomb 20 years ago was illuminated for us by Dr. I. I. Rabi. He drew our attention to his testimony, as published in the A.E.C. publication "In the Matter of J. Robert Oppenheimer," transcript of hearing before the Personnel Security Board, April 12 through May 6, 1954, [Referred to below as JRO]. These hearings, together with the article "Thermonuclear Devices" by S. M. Ulam, in "Perspectives in Modern Physics" (John Wiley, Inc., New York, 1966), provide the necessary technical background for our remarks. To be specific,

(1) With regard to our statement that *in the hydrogen bomb controversy the scientific issue was whether a specific design concept could ever be developed into a workable weapon:* Gordon Dean testifies at p. 302 of JRO that "The only thing which we knew about in this field at that time [autumn 1949] was one method of approach, which unfortunately if it is to remain classified, I cannot describe . . ." Oppenheimer testifies at p. 78 of JRO that "We had in mind, but I don't think we had clearly enough in mind, that we were talking about a single design, which was in its essence frozen, and that the possibility did not occur to us very strongly that there might be quite other ways of going about it. Our report [the A.E.C. General Advisory Committee report of October 29, 1949] had a single structure in mind—or almost a single structure. . . ." For further background, see the testimony of Rabi, Norris Bradbury, and Oppenheimer on pages 454–455, 487, and 952 of JRO. It must be noted here that the GAC report only opposed (partly on extra-scientific grounds) a *crash* program for the development of the "super", based on the design concept then available. It did not predict that no hydrogen bomb could ever be produced; quite the reverse, it said that "an imaginative and concerted attack on the problem has a better than even chance of producing the weapon within 5 years."

(2) With regard to our statement that *the original concept was demonstrated to be unworkable:* Ulam's article states at p. 596 that even before the directive of President Truman in January 1950 to proceed with the planning and construction of an H-bomb, "certain doubts had arisen about the practicability of the schemes outlined during the war and elaborated in subsequent work. A very detailed and comprehensive calculation was planned to be performed on the newly available electronic computing machines of the whole course of the ignition process of the thermonuclear reaction and its subsequent course. . . . Quite independently, however, the present writer, in collaboration with C. J. Everett, had undertaken the calculation of the ignition process and the following course of the thermonuclear reaction by using numerous simplifications and guesses as to the values of certain multidimensional integrals defining the distribution of neutrons, and the products of reaction during the changing geometry of the mass of the active material. These calculations were performed with the aid of computers working by hand (i.e., with tables and desk computers). The results of this work (which are described in several reports—still classified) showed a very weak process. The mechanism of ignition, as considered in the existing schemata, was submarginal and led to disappointingly weak initial conditions, and, after a time, to decreasing rates of reactions. Shortly after that time, a calculation was similarly performed by Fermi and the present writer; we considered the 'next' problem: Assuming that in some way an ignition of the mass of deuterium—perhaps supplemented by quantities of tritium, how would the subsequent reaction proceed in a volume of deuterium? . . . The result of this work was again quite negative in the sense of showing that, most likely, even if the initial reactions were established, as in the scheme proposed, it would not continue and go anywhere near to completion or even sizable burning of the remaining material. Shortly afterward, the calculations which were proceeding in the meantime on the electronic computing machines, and in which some of our intuitive arguments were replaced by a full numerical work, were completed; and the results confirmed those of the above work."

Also, Rabi testifies at p. 456 of JRO that "The subject we discussed in the 1949 meeting, that particular thing has never been made and probably never will be made, and we still don't know to this day whether something like that will function." For further background, see Oppenheimer's letter, and the testimony of Oppenheimer, Dean, and Hans Bethe, on pages 20, 251, 305, and 330 of JRO.

(3) With regard to our statement that *there was little scientific controversy* about the program for production and deployment that went forward after the theoretical issues were resolved: Ulam's article describes the resolution of these issues at p. 597:

"Some new combinations of ideas had to appear before the successful thermonuclear device could be designed. A Los Alamos report by Teller and the present writer outlined a new approach. The theoretical estimates and the subsequent calculations based on this scheme were far more promising; and, as is well known, successful H-bomb designs were produced and tested quite soon after the appearance of these new ideas, thanks to energetic and imaginative teamwork of a whole group of Los Alamos physicists. Subsequently, numerous technical improvements in sizes, weights, etc., were made by scientists at both Los Alamos and at Livermore."

We do not know of anyone who, after these developments, doubted on scientific grounds that a workable thermonuclear weapon could be produced and deployed. Indeed, Oppenheimer testifies at p. 248 of JRO that even before the Eniwetok test, he had informed the President that "although you could not be certain of the performance of any one design, it was virtually assured that this (a thermonuclear explosion based on the Ulam-Teller concept) could be done." For further background, see the Oppenheimer letter and testimony by T. K. Glennan and Dean on page 19, 255, and 304–305 of JRO.

We should perhaps emphasize that by "scientific controversy" we mean controversy on technical scientific issues. Scientists, like other citizens, have had and expressed a wide range of opinions on the political, ethical, economical, and strategic implications of the hydrogen bomb and other military systems. We do not think it is fruitful to speculate on possible analogies among the positions that scientists have taken on such non-scientific issues.

It may be useful if we state again our views on why there is no real analogy between the scientific or technical aspects of the H-bomb and the ABM controversies. There was a fundamental uncertainty about the H-bomb in 1949 and 1950. Oppenheimer expressed these doubts in a letter to J. B. Conant on October 21, 1949 (printed at p. 242–3 of JRO) as follows: "I am not sure that the miserable thing will work, nor that it can be gotten to a target except by ox-cart." And Rabi testifies at p. 454 of JRO that "We didn't even know (in October 1949) whether this thing contradicted the laws of physics. . . . It could have been altogether impossible." However, once calculations showed that an H-bomb could be made to work and could be carried in an airplane, there was no doubt of its military effectiveness.

In contrast, there is no *fundamental* scientific uncertainty about the individual components of the Safeguard system. We know that an ABM missile can intercept and destroy a *single* re-entry vehicle fired *under test conditions.* As far as workability is concerned, the technical issues that the Congress must consider in its deliberations is of a far more practical nature: Can an ABM system, consisting of large numbers of missiles, radars, and advanced computers, and manned by military personnel, protect us with high reliability against a surprise attack of many ballistic missiles, using unforeseeable penetration tactics, in an environment complicated by offensive and defensive nuclear explosions? As our report shows, there is very grave doubt that it can.

We would be happy to discuss these matters further with you in Washington, at your convenience.

Very truly yours,

ABRAM CHAYES
JEROME B. WIESNER.

MAY 20, 1969.

Dr. EDWARD TELLER,
Livermore Laboratory,
Livermore, Calif.

DEAR DR. TELLER: Because I think it is important to know whether or not a valid analogy can be made between the ABM controversy today and the H-bomb controversy of the late forties, I had planned to ask questions on this point of you and Dr. Wiesner during the course of last week's hearings. As matters turned out, there was no time for these questions.

I am now, therefore, taking the liberty of addressing to you by letter the basic questions which I planned to ask of you at the hearing.

In the study of the ABM which Dr. Jerome Wiesner and Mr. Abram Chayes prepared at the request of Senator Kennedy, the opening overview makes the point that there is no real analogy between the ABM debate and the H-bomb controversy of the late forties. This point is made in the following passage of the study, which appears on page 14:

"It is necessary to be clear about the kind of question here involved. Some people have thought it analogous to the technical issues surrounding the decision to go forward with the development of the hydrogen bomb. In that instance, it is pointed out, a substantial and respected portion of the scientific com-

munity opposed a high-priority effort to develop the H-bomb. But in the hydrogen bomb controversy the scientific issue was whether a specific design concept could in principle ever be developed into a workable weapon. That question could be and was resolved by additional theoretical calculations; and in fact, though this is not generally appreciated, the original concept was demonstrated to be unworkable. As a result of this subsequent analysis, a new approach was developed which was found to be feasible, first by theoretical and laboratory studies and ultimately by test explosions. The program for production and deployment of hydrogen weapons, about which there was little scientific controversy, did not go forward until these theoretical issues had been resolved."

Does the above quotation in your opinion constitute an accurate description of what was involved in the H-bomb controversy? If it does not, I would be grateful if you could provide me with your own account of the H-bomb controversy.

I would also like to ask whether you see any analogies between the current debate over the ABM in the scientific community and the previous controversy over the H-bomb within the scientific community in the late forties.

I would be grateful if you could let me have your reply to these questions by immediate return mail.

Sincerely yours,

THOMAS J. DODD.

(NOTE.—Parallel letter sent to Admiral Lewis L. Strauss.)

UNIVERSITY OF CALIFORNIA,
Livermore, Calif., May 22, 1969.

Hon. THOMAS J. DODD,
U.S. Senate,
Washington, D.C.

DEAR SENATOR DODD: Thank you for your letter of May 20. Your questions are put in that kind of clear language which makes it relatively easy to give an answer, even though the subject is somewhat involved and even though secrecy restrictions still prevail.

The statement which Wiesner and Chayes make concerning the development of the hydrogen bomb on the 14th page of their ABM study, is much too short to bring out all relevant points of that story. A somewhat more complete description is the following:

At the end of 1949, after the first successful Russian test of an atomic explosion, a question was raised in the General Advisory Committee of the Atomic Energy Commission whether or not great emphasis should be placed on the development of a thermonuclear explosive. The General Advisory Committee, whose members at that time were familiar with the plans for the hydrogen bomb, made a negative recommendation based on the argument that there was no need for further increase of the explosive power of our nuclear weapons, and also based on the argument that decision of an accelerated development on our part would have the effect of stimulating a corresponding Russian development. In the fall of 1949 the General Advisory Committee did not express any clear doubt concerning the feasibility of the hydrogen bomb.

In early 1950 President Truman decided in a manner contrary to the recommendation of the AEC, which in turn was based on the recommendation of the General Advisory Committee. President Truman issued the instruction to proceed with the completion of the work on the hydrogen bomb. Unfortunately, this instruction gave the erroneous impression that all basic problems concerning the hydrogen bomb had been resolved at that time.

After President Truman's decision, members of the General Advisory Committee, together with many other scientists, started to raise questions concerning the feasibility of the hydrogen bomb. These questions were justified insofar as serious doubts indeed remained as to the possible functioning of the original design.

In the course of the next year confidence in the original design continued to decline. Security does not permit me to give you a complete story but I may state that the words used in the Wiesner and Chayes report "the original concept was demonstrated to be unworkable" is an oversimplification.

It is correct to state that a new concept was proposed and was eventually demonstrated to be workable.

It is of some interest to state that a short period before the actual test in 1952 some of the most influential opponents of the hydrogen bomb, who had agreed that the new concept was probably feasible, proposed that the test be cancelled. They hoped for an agreement with Russia to renounce a test of the thermonuclear bomb. It should be also recalled that the first Russian big thermonuclear explosion occurred in 1953, less than one year after our own test.

Finally, it must be remembered that the success of the hydrogen bomb contributed to the interest in the development of the intercontinental ballistic missile since it became possible to expect that such missiles could become effective even if they were not very accurate. I understand that in the considerations of the von Neumann Committee which led to our first effective plans on ICBM development, Dr. Wiesner participated. I believe that Dr. Wiesner is correct in stating that there was little controversy concerning the production and deployment of hydrogen bombs.

With this historical review in mind I can now turn to the second question, whether I see any analogy between the current debate over the ABM in the scientific community and the previous controversy over the hydrogen bomb.

Analogies are always incomplete. However, it appears to me that some analogies do exist.

In the first place, the original recommendation of the General Advisory Committee which stressed that a U.S. development may trigger a Russian effort, appears to be analogous to present claims that our ABM deployment would stimulate the arms race. This analogous approach on the part of some scientists is reinforced by the proposal of 1952 to abstain from the testing of hydrogen explosives by mutual agreement.

The analogy is less clear as far as the objective situation is concerned. In the hydrogen controversy the Russian development lagged behind the U.S. work by so short a period that one can hardly claim that the Russians would have abstained from the development had we withheld our own effort. In the case of the ABM debate it is known that the Russians have already deployed some ABM defenses. A claim made by Drs. Wiesner and Chayes that the Russian deployment is imitative can hardly be maintained, since so far we have not deployed a defensive system. The analogy therefore holds insofar as in both cases the assertion that American abstention would have prevented a Russian effort is incorrect. The analogy is incomplete, however, since in the case of the hydrogen controversy the Russians followed us in a short time period, while in the ABM deployment they appear to be ahead of us.

Wiesner and Chayes are correct in claiming that the analogy is far from complete, in that during the hydrogen bomb controversy the question could be answered on the basis of calculations followed by a test, while in the ABM case the functioning of a much more complicated system is in question. This circumstance emphasizes the point that the ABM debate may indeed be less easily resolved on the basis of conclusive evidence.

On the other hand, I seem to notice some analogy in the fact that in the ABM case a major portion of the scientific community is assuming that a technical development is not feasible, while a smaller number of scientists who are more closely connected with the actual problems have a more positive view of future technical possibilities. Whether or not the negative judgment of numerous scientists is connected with their wishes to limit the competitive development of arms is a question where any statement will probably be based on opinion rather than on proof.

I hope that you will find the discussion given above responsive.

I also should like to express my sincere gratitude for having created the opportunity for me to appear before Senator Gore's Committee. I share your regret that the discussion before this committee was cut short.

Sincerely yours,

EDWARD TELLER.

WASHINGTON, D.C.,
June 3, 1969.

Hon. THOMAS J. DODD,
U.S. Senate,
Washington, D.C.

DEAR SENATOR DODD: This is in reply to your letter of May 22nd concerning the ABM hearings and, more particularly, the book by Professors Wiesner and Chayes, written at the suggestion of Senator Edward Kennedy. The book attacks the proposal to deploy a specific system designed to afford a measure of defense against ballistic missiles.

In their preface, the authors state their conclusion that there is no need to deploy the system "at this time". For what could be the fatal significance of these three words, see sub-paragraph (j) below.

There are striking parallels between the current debate on the ABM and the debate on the fusion bomb ten years ago. The authors' state that "For far too long they [presumably decisions in such matters] have been made largely behind closed doors." Most certainly, this was not true of the fusion bomb issue which was vigorously debated in the press as well as before the President. The argument by the opponents of the fusion bomb development was heavily weighted, in numbers of speakers and writers and was well organized, just as in the case of the opposition to the ABM today. The debate continued into the period after President Truman's decision on January 31, 1950, with the effect of persuading some men not to work on the project.

Professors Wiesner and Chayes contend that ". . . in the hydrogen bomb controversy the scientific issue was whether a specific design concept could *in principle* ever be developed into a workable weapon."

Thus stated, they have speciously narrowed the issue to design. In fact, the arguments advanced by scientists opposed included "workability" (i.e., the design concept) and other scientific issues as well as military and political differences of opinion in the scientific community.

In preparing this letter, I have reviewed the Report made by the General Advisory Committee to the Atomic Energy Commission and statements of its members as individuals plus the views of other prominent scientists of the day. As you know, the Report of the General Advisory Committee was not unanimous in opposing the development, although the Commission was informed that it was. An absent member had expressed his opinion in a letter written in 1949 which remained unknown to the Commission until revealed five years later.

The reports and statements have not been declassified although participants have publicly discussed them with some freedom over the years so that it is possible to say that the following issues concerning the fusion bomb, in opposition to its development, were

presented by a number of members of the scientific community:

(a) The statement above-mentioned by Professors Wiesner and Chayes that the original concept was unworkable.

(b) The strategic military value of such a weapon was questioned.

(c) The economical alternative to fission weapons was questioned.

(d) The "ethical principle" that a fusion bomb was morally worse than a fission bomb was asserted. [On the moral issue, the late Senator Brien McMahon of Connecticut, then Chairman of the Joint Congressional Committee on Atomic Energy, stated that he could see no moral dividing line between a big explosion causing heavy damage and many smaller explosions causing equal or greater damage.]

(e) It was stated that there was no foreseeable non-military applications of fusion. [Beneficial spin-off is frequently cited today as a result of research into unexplored areas, e.g., our Space program. Our new ability to make harbors, canals, reservoirs, and other engineering works with little or no objectionable radioactivity is due to the development of fusion explosives.]

(f) The danger of global pollution was cited. Some opponents of the fusion bomb asserted that the detonation of a small number, "perhaps 10", might pollute the earth's atmosphere. [The estimate was subsequently raised to 500 to 50,000.]

(g) Doubt was expressed that the Russians could produce an H-bomb within a decade, which was to say, not before 1959. [We now know from Kurchatov's biography that the Soviets were at work on the fusion bomb at least as early as we were. They had their own very competent scientists and the advantage of espionage by Fuchs and other traitors in our laboratories. The best evidence is that they tested an H-bomb in August of 1953.]

(h) The pseudo-military judgment was expressed that if the Soviets should ever make and use the fusion bomb against us, our large stock of fission bombs would be adequate reprisal.

(i) The statement that it was quite likely that through leaks, our own research and development would stimulate and materially assist a corresponding Russian development.

(j) And finally, that our overall national position would be weakened, not strengthened, by committing ourselves to such a program "at this time." This phrase, which also appears in the Wiesner-Chayes preface, is worthy of note for, as matters turned out, there was *no time left* in 1949–50. Had the President not made the decision to proceed with the development of the H-bomb, the Soviets, being well on their way to it, would have had it ahead of us. Had they then, relying on our unilateral renunciation, decided not to reveal their hand (as has been their custom with other developments) by refraining from testing or by testing only to prove a small hydrogen component, we would have known nothing of their success and their qualitative superiority until a possible collision. By that time, it would have been too late for us. *"At this time"* would have been a policy of fatal procrastination.

These points are not in accord with the emphasis in the book that *"the* scientific issue" concerns only the feasibility of an initial design concept. Another design concept proved feasible, but it would not have been found or, if found, would not have been developed had the opponents of the hydrogen bomb succeeded in persuading the President to declare against it as a weapon. The principle which clearly guided him—that the United States could not afford to be less well *armed* than a potential enemy—has a modern corollary. We cannot afford to be less well *defended* than a potential enemy.

Faithfully yours,

LEWIS L. STRAUSS.

[From Life magazine, Sept. 6, 1964]

DR. EDWARD TELLER'S MAGNIFICENT OBSESSION: STORY BEHIND THE H-BOMB IS ONE OF A DEDICATED, PATRIOTIC MAN OVERCOMING HIGH-LEVEL OPPOSITION

(By Robert Coughlan)

From the testimony *In the Matter of J. Robert Oppenheimer* and the miles of comment on it in the press, it is well known that at the end of 1949 a great secret debate occurred in the government and among the atomic scientists about whether this country should try to build the hydrogen or "super" bomb; that Dr. Oppenheimer and the strong faction he led opposed and temporarily prevented it; and that another, smaller faction defeated them with the result that the H-bomb was achieved in 1952—barely nine months before the Russians fired a hydrogen device of their own.

Yet throughout these critical events, with the world balance of power and perhaps the political fate of mankind hinging on the outcome, the leading protagonist remained mostly invisible. Lately, it is true, Dr. Edward Teller's name has been in the papers; he is even recognized, although perhaps still not very widely, as "the father of the H-bomb." But as to who he is, where he came from and how he happened to achieve this extraordinary paternity—few even of the other actors in the drama could give a very full answer.

There have been good reasons for this. National security has required that his work be surrounded by secrecy. For reasons of his own Teller has welcomed anonymity. He still would very much prefer it. But now that the H-bomb is an accomplished fact, and now that the Oppenheimer affair has dragged Teller from the wings to a share of the spotlight, neither set of reasons is as valid as before. He has therefore given his cooperation during the preparation of this article—with the request that he not be given too much credit.

Very well: it can be said at once that many people at Los Alamos and Washington deserve a substantial share of it. Teller's role nevertheless was unique, indispensable and decisive. Without it the chances are quite strong that the U.S. would not have the H-bomb in deliverable form today. In that event, in the well-informed judgment of President Eisenhower, "Soviet power would today be on the march in every quarter of the globe." Teller not only produced the brilliant idea which converted the H-bomb from a monstrous "gadget" to a versatile weapon. He also, by an almost fanatic determination, kept the idea of an H-bomb from dying of pure neglect.

And among all the improbable events that led to this improbable creation, Teller's obsessiveness has struck some people as the most farfetched. An old friend said a few weeks ago, "I still don't understand it. Edward's monomania about the H-bomb simply leaves me mystified—it was so out of character with everything he had been. He was always so interested in everything. His trouble was *lack* of concentration on any one problem. Then this thing hit him and he seemingly couldn't let loose of it."

Teller's obsession, as it became fully developed, was fed from many sources: by his childhood and youth in Europe, by his personal philosophy, his political beliefs and by innate traits of character. A different mixture would have produced a different result: The key ingredient of the H–bomb is not, therefore, a certain unmentionable combination of ingredients. It is, instead, the even more complex compound comprising Edward Teller. He cannot be defined, but at least he can be described.

Physically and temperamentally he has little in common with the popular image of the calm, detached, essentially impersonal Great Scientist. His angular face is animated and his large blue eyes, under massive and expressive eyebrows, are alert, intent and often twinkling with humor. He is cheerfully pragmatic and eloquently witty, with an unabashed appreciation of his own jokes. His laughter begins from deep inside, shaking him as if he were in an incipient fit, and rises in a series of choking, half-shattered yelps until everyone within a hundred yards is made aware that Teller has just said or heard something entertaining. He is also a pianist, a poker player, a rhymester, a raconteur, a mathematician, and an avid ping-pong player and mountain hiker despite the loss of his right foot. This occurred when he was 20 and, as a student in Munich, was competing in the local sport of jumping off moving streetcars; he slipped under a wheel, and the foot had to be amputated. His limp is on the order of his accent—only enough to add novelty—and is no impediment as he lopes along with his air of purposeful energy, his dark hair and eclectic clothing always a little disarrayed, emanating a diffused human warmth and an attentive interest in whomever he meets.

By common agreement among his colleagues he is a genius. He not only knows a tremendous amount, seeming to remember everything he has ever learned, but is able to correlate his information on the run. Dr. Maria Mayer, a physicist and a personal friend of long standing, recalls the first time she was ever really awed by Teller's mind. She had joined the Manhattan District and was asked to calculate the chemical properties of a certain substance. But this required knowing the mechanical properties of its molecules. "They could be measured, but that would have taken several months. So someone said. 'Let's get Teller in and make him *guess* the data.' We got him into a room and locked the door, so no one else could get at him, and he asked questions and did some figuring at the blackboard. He got the answer in about two hours, not entirely accurately, of course, but—as we found out when we got around to verifying them—close enough for the purpose." "There is no one who equals him for sheer speed of thought," Dr. James Arnold of Chicago says. "There *may* be better scientists, but none more brilliant. You always find him a thousand feet ahead of you."

Teller's mental atheleticism, although the flashiest part of his equipment as a practicing genius, is far from being the most important part. Most of his calculations are not quite accurate—not because he lacks respect for accuracy but because he lacks the patience to spend his own time rounding off the figures. A friend says, "What Edward can't carry in his head and solve in his head, he doesn't want to bother with." He dislikes routine and method whether they affect him personally or professionally. He is unhappy and ill at ease under any imposed disciplines. This maverick streak, combined with intense gregariousness and even more intense intellectual curiosity, has given his genius some striking twists and some extra dimensions.

For instance, although Teller is one of the world's greatest theoretical physicists, he has published nearly all of his many scientific papers with collaborators. Dr. Frederic de Hoffmann, who has been his deputy and closest associate at Los Alamos, has described how this works: "Edward isn't the cloistered kind of scientist. He gets his ideas in conversation and develops them by trying them out on people. We were coming back from Europe on the *Ile de France* and I was standing in the ship's nightclub when he came up and said, 'Freddie, I think I have an idea.' It was something he'd just thought of about magnetohydrodynamics. I was a bachelor then and I'd located several good-looking girls on the ship, but I knew what I had to do, so I disappeared and started working on the calculations. I'd get something finished and start prowling on the deck again when Edward would turn up out of the night and we'd walk the deck together while he talked and I was the brick wall he was bouncing these things off of. By the end of the trip we had a paper. He'd had the ideas, and I'd done some solving of equations. But he in-

sisted that we sign in alphabetical order, which put my name first."

De Hoffmann's account is overly modest—he is a brilliant physicist in his own right—but the episode illustrates Teller's general method. He is a conceptual thinker, or, as Dr. Luis Alvarez of the University of California says, "an 'order of magnitude' man. That's his language. He's like the architect who likes to make the big drawing, the broad sketch, and not worry himself about the plumbing details."

This kind of thinking almost defines the traditional and proper role of theoretical physics, as distinguished from experimental and applied physics. The theoreticians, a small aristocracy of dealing purely in ideas, tend to regard the toilers in the latter fields as exceptionally well-educated engineers, or sometimes as mere "gadgeteers." Teller is by trade and at heart a theoretician and takes the universe for his province. But at the same time he has strong gadgeteering instincts. The result is that he is interested in everything. He has a faculty for entertaining many ideas, consequential and otherwise, at the same time, and for being almost equally fascinated by all of them. He is intellectually insatiable: as a friend has said, "All anybody has to say to Edward is, 'We've got a problem here, we need you,' and—zip! he's into it. It's helpfulness, plus maybe vanity, but mostly just curiosity."

Not all—in fact, not even most—of Teller's ideas are good, and he is often the first to recognize their flaws, interrupting himself in mid-flight to strike himself on the forehead and exclaim, "No! No! I'm an idiot!" But mistakes do not inhibit him. He likes to quote the dictum of Niels Bohr, the great Danish physicist, that, "An expert is a person who has found out by his own painful experience all the mistakes that one can make in a very narrow field." Teller succeeds, not only by the high average level of his ideas, but by producing them in unparalleled volume, thereby making his mistakes rapidly and becoming more and more expert. But until he or someone else can demonstrate that an idea is wrong he is infatuated with it. He is, moreover, intellectually aggressive, stubborn, and competitive. An idea is, for him, a personal antagonist which he conquers with an almost physical satisfaction.

His personal absorption in a problem or idea has a way of enveloping everyone with whom he happens to be, carrying them along, sometimes reluctantly, in the torrent of his enthusiasm. At the University of Chicago, where he taught for several years, his fellow physicists now measure enthusiasm in "Tellers," with Teller himself, of course, being the basic criterion comparable to the velocity of light. Degrees of enthusiasm are measured in millionths of "Tellers," called "micro-Tellers."

Teller is at the same time a philosopher, a moral and thoughtful man all of whose characteristics are subordinated ultimately to an attempt to understand the universe and man's position on the speck of it he occupies. But as a philosopher, as well as a scientist, he is an activist. As a human being faced with a moral or political choice, he not only makes the choice but reinforces it, if he can, with concrete effort. More than once this habit of acting on conviction has involved him in struggles with his colleagues and has made him unpopular.

All of these aspects of Teller's nature were important in making him "the father of the H-bomb." But the crucial ingredient was his attachment to the concepts of Western democracy, specifically those of the U.S., and conversely a fear that they would be destroyed; together with, perhaps, an inner, deeper and unarticulated fear of a more personal nature. His childhood and youth in Budapest, where he was born in 1908, were lived under several varieties of political tyranny, including the Communism of Bela Kun and the facism and Admiral Horthy. The sight of dead men, the insecurity of life from week to week, became an accepted part of existence. Being Jewish, the Teller family had to bear the complex malice of anti-Semitism as well. Edward Teller remembers that, by the time he was 10, he fully understood from family conversations that someday he would have to emigrate from Hungary and make his life in a politically different climate. He understood also that "the only way I'd be able to get along would be that I should be smarter than somebody else."

It was easy for him to be smarter than somebody else in mathematics, for which he showed a precocious gift. He remembers, at the age of about 6, lying awake in bed amusing himself before sleep by such exercises as calculating the number of seconds in a year. His father, a prosperous lawyer, and his mother, the daughter of a leading banker of a nearby smaller city, were part of a polished and intellectually eager upper middle class society in which one's position reflected mental and artistic attainment. So they applauded him when, for instance, at dinner one evening his father mentioned the figure "10,000," and young Edward piped, "That's 100 times 100, isn't it?" However, pleased though he was with this sign of talent, his father felt that mathematics was not practical as a life's work and urged him to compromise on something useful such as chemistry. Consequently Edward went in 1926 to the Institute of Technology at Karlsruhe and took a degree in chemical engineering, keeping mathematics as an avocation. Meantime, also in 1926, had come the discovery known as quantum mechanics, a system of mathematically formulated principles which can be used to calculate the behavior of atomic particles. This, Teller says, "suddenly explained almost everything—in physics, chemistry, almost everything in the world that we had wondered about could be interpreted." He began applying it to the problems of chemistry, from which he was led naturally (the two sciences being inseparable) into physics. He became hybridized: a specialist in physical chemistry. He went on to Munich and thence to Leipzig for his Ph. D., to Copenhagen for further study under Niels Bohr and to Göttingen to teach. At this point the Nazis took power in Germany.

A STRATEGIC TIME

In the ironic way that evil sometimes begets good, the tyranny of Hitlerism was indirectly responsible for strengthening democracy, for it drove many of Germany's leading physicists to the West. Teller went to England and from there, with a U.S. Rockefeller grant—and newly married to his childhood sweetheart, Maria Augusta ("Mici") Harkanyi, the younger sister of his best boyhood friend in Budapest—back to Denmark to work again under Bohr. Meantime he had become friends with Dr. George Gamow, the Russian-born physicist, and when Gamow went to George Washington University at Washington, D.C., he got Teller the offer of a job as visiting professor there. Thus it happened that the Tellers arrived in this country in 1935: a strategic time in the history of physics. It was only three years later that atomic fission was discovered in Germany, and only four years before the famous "Einstein letter" to President Roosevelt which launched this country on the development of the atom bomb.

Teller, then 27, had already developed many of the characteristics that were to amaze, charm and sometimes dismay his friends in later years. Maria Mayer, who had known him in Germany, was struck even then by his "intuitive" grasp of complex problems. He was facile, gay ("pure fun," she remembers), inquisitive and restless. Instead of settling sensibly into his chair, Teller at once began to seek out other physicists for companionable argument, trained minds against which to test his teeming ideas. And it is from these years—1935 to 1941—that the earliest origins of the conceptions that went into the H-bomb can be dated. Gamow was interested in the energy production of stars, a phenomenon thermonuclear in character. He discussed it with his brilliant young friend, and together they worked out formulas for these stellar reactions. As soon as the explosive possibilities of the atom were realized, Teller's mind took a "quantum jump" to the stars: for the heat that could be released by atomic *fission* would be comparable to the heat in the interior of the sun itself, and conceivably this heat might be concentrated long enough to bring about the *fusion* of some of the very light elements, just as hydrogen is fused in the sun to form helium and in the process gives off tremendous energy. There would be no theoretical limit to the size of such an explosion.

In simplest terms this is the theory that led to the hydrogen bomb. It was not original with Teller. As a theoretical possibility it was obvious and occurred to many physicists. But for some reason no more explicable than an unusual taste in food, it aroused an intense, specific curiosity in Teller and he never stopped thinking about it. He discussed it with Gamow and his other friends in Washington, and with Enrico Fermi, the great Italian physicist—"The Pope," as he is known—who was teaching at Columbia. The monomania of the following years had begun to take root.

Yet when he was asked to join the A-bomb project—the success of which was essential to any future H-bomb development—he hesitated for a long time. Was weaponeering the proper business of science? He thought not. Was it morally right to help create such a monster? He did not know.

On May 10, 1940, the day the Nazis invaded the Low Countries, President Roosevelt spoke before the American Scientific Congress in Washington. Teller had never heard him in person and attended out of curiosity. The President said, in part, "You who are scientists may have been told that you are, in part, responsible for the debacle of today . . . but I assure you that it is not the scientists . . . who are responsible. . . . Surely it is time for our republics . . . to use every knowledge, every science that we possess . . . You and I . . . will act together to protect and defend by every means . . . our science, our culture, our American freedom and our civilization." As the President talked, Teller began to feel that Roosevelt was speaking directly to him, answering all the questions that had been troubling him. He left George Washington the following year to join Fermi at Columbia and, when the uranium pile project that Fermi supervised was moved to Chicago, he moved with it. Later on he went to the University of California at Berkeley, where a well-known physicist of about his own age, Dr. J. Robert Oppenheimer, was assembling a group to do theoretical studies on the A-bomb. He returned to Chicago briefly and then, when Oppenheimer had established the central laboratory at Los Alamos, was among the first to join him there.

During his first conversations with Oppenheimer they had talked about the possibilities of a thermonuclear weapon, and Oppenheimer had seemed as interested by the idea as Teller himself. At Berkeley the theoretical group did preliminary studies on fusion and, as Oppenheimer has testified, "it excited us, and it seemed to make even more necessary that we understand what this was all about." Accordingly Teller went into the Manhattan District with the impression that the "super bomb," as it soon was called, would be given a high priority. And actually some of the first installations at Los Alamos were for the benefit of further studies on it. However, as Oppenheimer has said, there was "the very immediate job of getting some weapons into the places where they [were] needed," and until the A-bomb problem could be solved, few but Teller were inclined to give much

attention to the more formidable problem of the super. Teller at first tried to suppress his impatience but could not. The result was the first of what became a series of fission-fusion reactions between him and his colleagues.

He had been assigned to Los Alamos' theoretical division, headed by his friend Dr. Hans Bethe, Cornell's great physicist, As Bethe has testified, ". . . I hoped to rely very heavily on him to help our work in theoretical physics. It turned out that he did not want to cooperate. He did not want to work on the agreed line of research. . . . He always suggested new things, new deviations. So that in the end there was no choice but to relieve him of any work in the general line of the development of Los Alamos, and to permit him to pursue his own ideas entirely unrelated to the World War II work. . . ."

Teller was transferred to the F Division where Enrico Fermi presided over "advanced development." There, with Dr. Emil Konopinski and a few others, he devoted himself during the rest of the war to the super—to "my baby," as he had begun to call it. And by the end of the war he and his group had succeeded in working out some of its most intricate problems. He believed—as he was to testify later—that a concerted effort on the part of the other senior scientists could dispose of the rest by 1947. He had been led to suppose that this would occur: that once the A-bomb had been tested successfully, the great human and technical facilities of Los Alamos would converge on the super.

Instead, to his great dismay, after Hiroshima he found the laboratory disintegrating. One Los Alamos scientist remembers, "I was away for several months and got back after Hiroshima. There was a terrible sense of shock. I didn't recognize anybody. Everyone was wrapped up in petitions for world government, disarmament, internationalizing of the atom, and so forth." To this emotion, which Teller to some degree shared, there was, of course, added the normal reaction that affected scientists as well as GIs: the feeling that the war was over and it was time to get back home and pick up the threads of old lives. Teller appealed to Oppenheimer for help, but he was among the most eager to leave. At last, with great reluctance, Teller decided to join the exodus himself.

THIS FABULOUS MONSTER, RUSSIA

Early in 1946 he called a meeting of the leading members of the Los Alamos staff to summarize for them all that he and his associates had learned—a meeting known as "The Final Conference on the Super." Then, with Mici and their young son Paul, he drove to the University of Chicago, where he had been offered a job at the new Institute for Nuclear Studies. Fermi and many of his other old friends were there. The atmosphere was personally and scientifically congenial, and Teller tried hard to adapt himself to the peaceable pursuits of teaching and pure science.

For a while he succeeded. Additional "new things, new devitions" kept him embroiled in a self-renewing welter of projects, each requiring a collaborator or two, so that he was always enormously busy. With equal energy he plunged into the extracurricular aim of all the scientists who had contributed to the A-bomb; to make the atom peaceable and productive and—it was still possible then to hope—to use it as a foundation on which to raise a supernational authority, the beginnings of a real world government. Teller was a leading member of Union Now and Atlantic Union and a prolific contributor to the *Bulletin of the Atomic Scientists*, published in a basement room at the university. He endorsed the Acheson-Lilienthal report (written largely by Oppenheimer) who, became the basis of the so-called "Baruch Plan" by which this country attempted to bring the atom under international control. And in mid-1948 he wrote, "I believe that we should cease to be infatuated with the menace of this fabulous monster, Russia . . . We must work for something. We must work for world government . . . [and] concentrate for the time being on establishing common government with our friends and potential allies."

Nevertheless, the optimism he professed was qualified with private fears. Even during the war he had mistrusted the Russians. There were stories his parents told of oceans of men sweeping across the frontier during World War I, dying and endlessly replaced. The native prejudice faded when he grew up and traveled in the world, and, he recalls, he regarded Soviet Communism as "an experiment of interest and possibly of some merit." But the purge trials disillusioned him.

He believed in the ideals that were occupying so many of his colleagues, but he saw their attainment becoming increasingly unlikely while war became increasingly likely. It seemed to him that the way to prevent war was to arm this country beyond challenges with A-bombs and, if possible, with the H-bomb. The latter would deprive the Communist nations of their only advantage, their huge manpower, by making it impossible for them to mass their troops for 'human sea" breakthroughs. Possibly it would means the end of all mass armies, conceivably even the end of major wars. The result of this introspection led him to return to Los Alamos—"to do something I knew about"—at first for short periods as a consultant and finally on a leave of absence. This was 1949.

The same intuitive, synthesizing grasp of complexities that made Teller a genius in his profession seems to have been operating this time in his comprehension of world affairs. For 1949 was a decisive point in modern times. That summer the Russians exploded an atomic bomb, shattering the U.S. monopoly on which the security of the Western world was largely built.

"THE REASONS MADE ME MAD"

President Truman, reporting the Russian achievement—which had not been expected for years—to the National Security Council, finished with the simple but comprehensive question, "What do we do now?" The answer in part, was to junk the "economic budget" and put the nation "in situations of strength" throughout the world. But another part of the answer lay in the super. Could it be built? If so, should it be? And at this point the sense which had haunted the atomic scientists ever since Hiroshima asserted itself in one of the most startling decisions ever made by a sovereign and threatened government. The AEC's General Advisory Committee, made up mostly of leading physicists and chaired by Dr. Oppenheimer, recommended that then and during an indefinite future there should be *no* program on the super: partly because of technical difficulties but chiefly because they felt that the super would be an immoral weapon. And as for the Russians? Their atomic science "imitated" ours, so the reasoning went, and if we did not develop it, neither would they. The AEC commissioner supported these views of their Advisory Committee: not once, but twice they rejected the super.

The decision was, of course, a very heavy blow to Teller. Then his disappointment turned to pugnacity. "The reasons they gave just made me mad," he says. The technical difficulties seemed to him to be no different in kind or much different in degree from the normal routine of scientific effort. "A scientific invention," he says, "consists of six (or some number) ideas, five of which are absurd but which, with the addition of the sixth and enough rearrangement of the combinations, results in something no one has thought of before." He felt that the way to solve the technical problems of the super was to work on them, that sooner or later the missing "sixth idea" would emerge. As for the moral argument, Teller was as deeply conscious as anyone of the terrible possibilities of the H-bomb, but he felt that moral and political judgements were not properly the concern of science. "The important thing in any science," he has said, "is to do the things that can be done. Scientists naturally have a right and a duty to have opinions. But their science gives them no special insight into public affairs. There is a time for scientists and movie stars and people who have flown the Atlantic to restrain their opinions lest they be taken more seriously than they should be." However, Teller could do very little to make his own opinions effective. The decision had been made in Washington and it would have to be unmade there.

Lewis Strauss, who had been the only dissenter from the decision in the AEC, and Senator Brien McMahon, chairman of the Joint Committee on Atomic Energy, together set about unmaking it. McMahon wrote to the President outlining fully the case for the super and called on him for personal argument. Among some members of McMahon's committee there was talk of bringing impeachment proceedings if the final decision was negative. The President appointed a special subcommittee of the National Security Council, made up of Secretaries Acheson and Johnson and AEC Chairman Lilienthal, to advise him what to do. Strauss, who had been equally busy, became so discouraged at one point that he went to a bungalow his mother-in-law leased at the Beverly Hills Hotel and amidst the incongruous glitter of this Hollywood showpiece searched his conscience during the Christmas season. One night he received a call from the hotel lobby. It was Senator McMahon, who had come to assure him that he was right. Strauss had laboriously reached the same conclusion: they made plans to carry on the fight in Washington with even more vigor.

Their battle came to an abrupt end a few weeks later, but from a sickeningly unexpected cause. On Jan. 27, 1950 Dr. Klaus Fuchs confessed that he had been spying on behalf of the Russians since 1942. Fuchs had been a member of the British scientific mission to Los Alamos toward the end of the war. Moreover he had attended the "Final Conference on the Super" called by Teller in 1946. It thus could be assumed that the Russians not only knew all the wartime A-bomb "secrets," but also knew most of the progress that had been made by this country on the H-bomb.

The President's special subcommittee met and voted two to one for a crash program on the super, with Lilienthal in dissent. They took their decision to the White House, where President Truman concurred and released the announcement that afternoon.

Thus "Edward's monomania" found official sanction. Yet, at this stage, his and his allies' triumph was mainly theoretical. The work itself still had to be done, and Teller set out to enlist other physicists to help. He had already asked Oppenheimer once and been refused; now again he asked him, and was again refused, although one time Oppenheimer volunteered the names of people at Princeton who he thought could be useful. Teller tried them; all turned him down. Almost everywhere he encountered either indifference or active hostility. Early in February, at a meeting of the American Physical Society in New York, 12 of the most distinguished members issued a joint statement: "We believe that no nation has the right to use such a bomb, no matter how righteous its use. . . . Its use would be a betrayal of all standards of morality and of Christian civilization itself . . . we urge that the United States, through its elected government, make a solemn declaration that we shall never use this bomb first. This denunciation was soon followed by one from Dr. Einstein who warned that ". . . annihilation of any life on earth has been brought within the range of technical possibilities. . . . In the end there beckons more and more clearly gen-

eral annihilation." Hans Bethe wrote in the *Bulletin* that use of the H-bomb could be "compared to the warfare of Genghis Khan who ruthlessly killed every last inhabitant of Persia."

In an article called "Back to the Laboratories" in the March 1950 issue of the *Bulletin,* Teller pleaded with his colleagues: ". . . To my mind we are in a situation not less dangerous than the one we were facing in 1939, and it is of the greatest importance that we realize it . . . we must realize that democracy will not be saved by ideals alone. . . . The primary responsibility for action lies with the groups directing the policy and foreign relations of our country. To the scientist, at least, it should be clear that he can make a contribution by making the country strong. . . ."

Actually only three leading men joined him, John Wheeler of Princeton, John von Neumann of the Institute for Advanced Study, and Lothar Nordheim of Duke University. (Later, after Korea, Bethe and others turned up.) For the rest of his team he relied mainly on talented younger men. There were technical discouragements too: some of the earlier calculations were repeated more thoroughly and put the whole project in doubt. Even a year later, when the first "thermonuclear device" was approaching the test stage and someone asked Teller, "Will it work?" he had to admit that he didn't know. "But you didn't know *that* five years ago," the questioner pointed out. "True," Teller answered, "but now we don't know on much better grounds."

Moreover, even if this "device" worked, there was no way in sight of developing it into a really practicable weapon. Ordinary hydrogen atoms, although they fuse in the sun, cannot be made to do so under any conditions attainable on earth. Teller's calculations involved the use of special "heavy" forms of hydrogen called deuterium and tritium, and these had to be kept liquefied by means of cumbersome refrigeration equipment. The result was less a bomb than a "contraption," as Oppenheimer has called it, which could be carried in a ship's hold and thus conceivably be used against enemy ports, but which was too big to be carried in any airplane built or planned.

During the latter part of 1950 Dr. Stan Ulam, a Los Alamos mathematical physicist, was working on a paper on certain theories indirectly related to this problem. Teller got into a conversation with Ulam about it. Not long afterward something they had discussed touched a spark. That evening, as he and Frederic de Hoffmann were leaving the office, Teller said absently, "I think I have an idea." De Hoffmann recalls that he thought nothing of this at the time, "because, after all, Edward is always having an idea. But the next morning he came in to me and said, 'Freddie, I think I really have something. Stick some figures into it.' He told me about it and I started to work with my desk calculator. The answer came out right."

What Teller had thus casually and undramatically thought of was the missing "sixth idea" for his invention: an idea which disposed of all the technical and manufacturing difficulties and converted the "contraption" into a deliverable bomb as versatile as the A-bomb.

For technical reasons it was still desirable to go ahead with the test of the original device and this was done in May 1951. The next month the AEC called a meeting at Princeton, at which Oppenheimer presided, to examine Teller's "new concept." The result was general enthusiasm in which Oppenheimer joined, and it was decided to push ahead with a full-scale test as soon as possible.

Therein, however, as it turned out, lay an ambiguity which led to a fresh crisis in Teller's relations with his colleagues. Dr. Norris Bradbury, director of Los Alamos, and his division heads adopted a production schedule for "Mike," as the new device was code-named, which to them seemed efficient but to Teller seemed much too conservative. In the ensuing and growing disagreement, tempers were rubbed raw. Finally there was a definitive showdown in which Teller demanded that the target date for the test be moved ahead. Bradbury refused, and Teller thereupon resigned, "This is *not* a crash program," he commented bitterly to a friend. "They don't need me—I'm leaving."

Not only did he leave but, with the backing of his Washington allies, he persuaded the AEC to set up a new weapons laboratory especially designed for thermonuclear research. This was established the following year at Livermore, Calif., as an adjunct to the University of California Radiation Laboratory, which was under the direction of Teller's friend, Dr. E. O. Lawrence. The new lab contributed nothing to Mike, which was completed at Los Alamos and tested successfully at Elugelab in November 1952—by then the place barely existed as a going concern. However, to Teller that fact was unimportant. "There are three ways to encourage initiative," he has said. "One is to cut off people's heads as they do in Russia. Another is to subject people to public criticism which is impossible in such secret work as this. A third way is to set up competition. This is Livermore's most valuable function: simply to be a competitor."

At the time of the Mike blast, Teller was too busy helping at the birth of the new laboratory to attend in person, and he "saw" the explosion instead on the seismograph of the University of California. (His comment was, "That's very nice.") As for his being "the father of the H-bomb," he has said, "It is true that I am the father in the biological sense that I performed a necessary function and let nature take its course. After that a child had to be born. It might be robust or it might be stillborn., but *something* had to be born. The process of conception was by no means a pleasure; it was filled with difficulty and anxiety for both parties. My act—and my leaving—aroused the emotions usually associated with such behavior."

Teller's fission from Los Alamos was not final or complete. He made himself available for advice when it was wanted and returned from time to time for consultations, as he still does. Relations between the two laboratories are good, and there is full exchange of information and considerable visiting back and forth by staff members. Following the success of Mike, there was an effort mainly at Los Alamos, to simplify its construction still more and to develop it into a family of weapons comparable to the A-bomb family. This has been entirely successful.

Teller's work was complete. He had added in a fantastic measure to the power and security of the U.S. It had been for him a process filled with discouragements, anxieties an many painful experiences, but which at the same time stimulated his mind and emotions fully and carried with it, in the end, a deep personal satisfaction. But the story was to have a sequel which would bring him no satisfaction at all and disturb him more than almost any experience of his life. He was called upon to testify in the Gray board hearings "In the Matter of J. Robert Oppenheimer."

His emotions were extremely complex. He did not believe, in the first place, that the questions that had arisen about Oppenheimer were properly a matter for a "security" hearing which would carry with it connotations of disloyalty. On the other hand he had been increasingly disturbed by decisions and advice which Oppenheimer had given in his official capacities, which were so widely distributed as to give hm a dominating position in atomic matters and U.S. physics generally. Again and again, and not merely on the H-bomb development, he had thought Oppenheimer wrong, until at last he had begun to have very grave doubts about his judgment, not his motives. If asked, it would be his duty to say as much; but the idea was repellent to him. He knew that his own prestige was now so great that his testimony would be given much weight. To contribute to Oppenheimer's possible ruin was antipathetic to his nature, a nature which, where other human beings are concerned, is extremely compassionate.

Last April 28, in the small room at the Atomic Energy Commission building where the hearings were being held, Teller took his place as witness. Behind him, sitting on a leather davenport, was Oppenheimer, his old antagonist, a man he now deeply pitied. Teller paid tribute to Oppenheimer's talents, especially his "very outstanding achievement" as the wartime organizer and director of Los Alamos. He said moreover, "I have always assumed, and I now assume, that he is loyal to the United States. I believe this, and I shall believe it until I see very conclusive proof to the opposite." But he added in reply to the next question, ". . . I thoroughly disagreed with him in numerous issues and his actions frankly appeared to me confused and complicated. To this extent I feel that I would like to see the vital interests of this country in hands which I understand better, and therefore trust more." He also recounted the history of the H-bomb and gave his opinion that if Oppenheimer had thrown his prestige behind it the success could have been achieved years earlier. He went on to say, most damagingly, that ". . . if it is a question of wisdom and judgment, as demonstrated by actions since 1945, then I would say one would be wiser not to grant clearance."

At the close of his testimony he rose and turned to meet Oppenheimer's eyes. He stepped forward and said, "I'm sorry."

Oppenheimer answered, "You only did your duty."

They shook hands, and Teller said, "Good luck."

Oppenheimer looked at him oddly and answered, "After what you've just said, I don't know what you mean."

"And the terrible thing," Teller says in remembrance, "was that I don't think he did know what I meant." He turned away, his shoulders heavy, and limped slowly from the room.

Teller today, in the summer of 1954, is a man physically and emotionally depleted. He has worked beyond the limits of common sense, and his resiliency, although still exceptional, shows its diminution in the effortful, almost dragging quality with which he forces himself on. The emotional drain of nearly a dozen years' conflict was capped by the Oppenheimer case; only to be capped again by its aftermath. Nearly the whole community of physical scientists rallied behind Oppenheimer, attacked the recommendations made by the Gray board and the AEC, and inferentially and sometimes directly denounced those who, as Teller did, had denounced him. Some of Teller's old friends are charitably puzzled; others are bitter.

Teller, who has spent a gregarious life among the physical scientists and who has always cherished his friendships with them, has found this animosity very hard to bear. But what is more serious is the pressure of his own conscience; was he being morally and intellectually honest when he in effect condemned Oppenheimer because, he said, "his actions . . . appeared to me confused and complicated"? Had he inadvertently been guilty of endorsing what he himself feared most: intolerance, the limitation of debate, the punishment of a man for what was an honest mistake? Teller was immensely relieved when the AEC commissioners, in their review of the Gray board recommendation against reinstating Oppenheimer's security clearance, dismissed Oppenheimer's lack of "enthusiasm" for the H-bomb as immaterial.

But Teller's own role in the case has continued to trouble him.

Tired of controversy, duty and anxiety, Teller is perhaps most of all tired of weaponeering. At 46, long past the age when most men make their important contributions to physics if they have any to make, he realizes that he has been away from "basic physics" almost since he first became qualified to enter it. Sitting in his room recently at Los Alamos, where he was spending a fortnight helping on still more and newer weapons problems, he discussed what he hoped could be his future. "Everybody now wants to discover universal laws which will explain the structure and behavior of the nucleus of the atom. But actually our knowledge of the elementary particles that make up the nucleus is tiny. The situation calls for more modesty. We should first try to discover more about these elementary particles and about their laws. Then it will be the time for the major synthesis of what we really know, and the formulation of the universal law.

"It is like the difference between a specialist and a philosopher. A specialist is someone who knows more and more about less and less until at last he knows everything about nothing. A philosopher is someone who knows less and less about more and more until at last he knows nothing about everything. Physics is now too philosophical. In my work I would like to reverse the process, and to try to limit the things to be found out and to make some discoveries which may later be useful."

This unpretentious ambition is consistent with Teller's personal philosophy. He has no religious convictions: regarding the comprehension of God which is equally the goal of philosophy and physics, he has said, "I try to make a point not to talk about things I don't understand—at least the things I do not understand at all." But he is guided in ethics by the same pragmatism he brings to science: "We know a lot because we as a species have lived and behaved a lot." He finds himself most in tune with that very modest philosopher, Lao-tse. "He is not dogmatic, and he does not go in for big, universal ideas. For instance, I like what he says about failure and success, 'Failure is the foundation of success and the means by which it is achieved. Success is the lurking place of failure; but who can tell when the turning point will come?' "

THE ANTI-BALLISTIC-MISSILE SYSTEM AND THE DEFENSE OF THE AMERICAN PEOPLE

Mr. BYRD of West Virginia. Mr. President, whatever the outcome of the vote on the ABM in the Senate, it must be recognized that both the proponents and the opponents have made valuable contributions to the overall illumination of the critical problems of defense in the nuclear-missile age.

THE IMPORTANCE OF THE ABM DEBATE IN THE SENATE

The importance of extensive debate on national problems, both pro and con, was long ago recognized by the Founding Fathers of this country. In the Federalist No. 62, for example, which deals with the role of the Senate in our form of government, it is pointed out:

> A good government implies two things: first, fidelity to the object of government, which is the happiness of the people; secondly, a knowledge of the means by which that object can be best obtained.

It is here, in this extended debate on the deployment of an anti-ballistic-missile system, that men of good will, Senators who both defend and who oppose the ABM, seek to carry out the promise of the Federalist, by searching for "a knowledge of the means by which" the object of good government, "the happiness of the people," may be served.

The authors of the Federalist were also well aware that in world politics we Americans might have to deal with nations which had rising aspirations of world power. Wisely they understood that only power can check power. Their grasp of this basic and unchanged fact was stated clearly in the Federalist No. 4:

> We are not to expect that they [i.e., other nations] should regard our advancement in union, in power and consequence by land and by sea, with an eye of indifference and composure. The people of America are aware that inducements to war may arise out of these circumstances, as well as from others not so obvious at present, and that whenever such inducements may find fit time and opportunity for operation, pretences to color and justify them will not be found wanting.

How, then, should the United States "provide for the common defense" as mentioned in the Constitution's preamble, and avoid war? Again, the authors of the Federalist in paper No. 4 had an answer which seems, with a prophetic prevision, to apply to the complicated problems of defense in these, our own times. Their answer as to how best to prevent the scourge of war from reaching into the homeland of America was for the Congress to provide a situation that "consists in the best possible state of defence."

So, Mr. President, we come to the question before the Senate. What action will promote the "best possible state of defense"? I believe the answer lies in supporting the President's proposed Safeguard ABM system.

COMPARATVE UNITED STATES-SOVIET STRATEGIC MILITARY STRENGTH

Former Secretary of Defense Clark Clifford stated in his January 15, 1969, posture statement that the United States had 1,054 intercontinental ballistic missiles—ICBM's—and the Soviets had 900 ICBM's on September 1, 1968.

On March 19, Secretary of Defense Laird testified to the Senate Committee on Armed Services:

> As of today, the Soviets have in being and under construction more ICBM launchers than the 1,048 possessed by the United States.

On April 25, 1969, Secretary Laird reported the Soviet ICBM total was 1,140. This includes 1,000 ICBM's in hardened sites and 140 ICBM's on launching pads. He also said that the Soviets could have 2,500 ICBM's by 1975.

The New York Times, in an analysis of Soviet weaponry, April 14, 1969, said:

> Qualified sources say that the new evidence gathered by high-flying satellites shows that the Soviet Union has about 1,200 intercontinental ballistic missiles in place or rapidly going into place, roughly 150 more land-based ICBM's than the United States.

On April 10, 1969, the Institute for Strategic Studies, London, released a study which concluded:

> The Soviet Union must now be treated as a full equal in terms both of strategic power and of her ability to control conflict in the developing world.

Deputy Secretary of Defense David Packard, in testimony before the Senate Armed Services Committee March 20, 1969, stated:

> One of the things that impressed me very much in the studies that I have made is that we have a good deal of evidence, quite hard evidence, that the Soviet ICBM deployment and development is continuing. It was this that caused us to take another hard look as to what we should do about this ABM capability.

Fundamental to the understanding of this dramatic increase in Soviet missile is the erroneous assumption of U.S. policymakers in recent years that the Soviet Union would not seek a superior offensive capability but would only seek parity. This error imposed American assumptions on our vision of Soviet strategy. As a result the Soviets now enjoy a widening advantage. This was underlined by Deputy Secretary Packard on March 20 when he told the Senate Armed Services Committee, in analyzing charts of Soviet missile strength:

> As you can see, parity has been reached. The smaller Soviet missiles represented in this area of the chart make up the larger part of the totals. Those large missiles that have the accuracy and yield to be a threat to our Minuteman forces are projected on the larger part of the figure. They became operational in 1966 and their inventory has grown. . . . These are the large missiles on which the Soviets have flown multiple warheads. Thus, the force potentially represents a severe threat to our Minuteman.

Of special concern is the Soviet development and deployment of a very heavy intercontinental ballistic missile, the SS–9, which was unknown to the U.S. public until it was disclosed by Secretary Laird in his initial appearance this spring before the Senate Armed Services Committee. This missile carries a warhead in the range of 20 to 25 megatons, far larger than anything in the U.S. inventory. Because of its size and its accuracy, the SS–9 is regarded as a weapon designed to knock out American Minuteman ICBM's.

The present Soviet ICBM force now includes well over 200 SS–9's, and this deployment is progressing at a fairly rapid rate—particularly since December 1968. This is the missile which is projected by the Defense Department to reach possibly 500 by 1975. This missile booster can also be adapted to fire an orbital bombardment warhead. It can also be adapted to carry a multiple warhead, which the Soviets are known to have been testing.

With reference to Soviet testing, it is noteworthy that one such Soviet test into the Pacific Ocean was made public by Secretary of State Rogers on April 12, 1969. He stated that the Soviet Union had tested the multiple warhead before but that this recent test was a "longer shot."

In addition to the SS–9, the Soviets are continuing to deploy the SS–11 and the newer SS–13 model ICBM's. These carry smaller warheads than the SS–9, but the SS–13 is the first solid-fueled Soviet ICBM, and it can be developed and deployed in large numbers.

This surge in Soviet ICBM's is one of the most direct reasons for the Nixon administration's decision to proceed with the Safeguard ABM.

Then, too, the Soviets presently enjoy a clear lead in space orbital weapons.

Mr. McNamara released information in 1967 that the U.S.S.R. was developing a fractional orbital bombardment system. Mr. Laird confirmed that the Soviets were very likely deploying this system. He said:

> They are also working hard on FOBS . . . also designed to reduce warning time to our bombers so that they will not have sufficient time to become airborne. (testimony March 20)

I am told that, if these vehicles were launched into near-earth orbit on approximately 70 to 75 degrees inclination, they would bracket the United States periodically. They would then be known as orbital bombardment systems rather than FOBS. Properly deployed, a significant number, for example 100, could be in a position to attack the United States in a matter of seconds after the button was pushed in the Kremlin. This would add enormously to a credible Soviet capability to deliver a first strike against the United States.

Furthermore, in his testimony before the Senate Armed Services Committee on March 19, Deputy Defense Secretary Packard commented on Soviet submarine-launched missiles:

> We know that the Soviets have been moving ahead with a rather active program in producing Polaris-type submarines. They are now in production. They are not yet deployed as far as we know. But this gives the Soviets the possibility of launching missiles from locations close to our shores, and we are very much concerned about this threat which could reduce the ability of our bombing force to get off.

The submarine referred to here is the "Y" class, which went into production in 1968. Seven were commissioned in that year. This sub carries 16 underwater-launched, 1,500-mile range missiles. Secretary of the Navy Chafee, in his testimony to the Senate committee, referred to it when he declared:

> The Soviets are modernizing their submarine force, the world's largest. Following a period of large-scale shipyard expansion, new classes of ballistic missile submarine and nuclear attack boats are becoming operational. More of these new types have been launched than foreseen a year ago.

The Institute for Strategic Studies, London, recently pointed out that the Soviet underseas fleet now exceeds in numbers all the submarines in the fleets of the United States and other NATO nations.

The situation regarding attack submarines is critical and rapidly deteriorating. The Soviet Navy has more than a 2-to-1 numerical advantage over the U.S. Navy in this area of sea warfare, and this is a matter of concern since the attack submarine is considered to be the most effective weapon against a nuclear submarine.

The U.S. position is worsened by the age of many of the attack boats. Forty-five of the 105 attack submarines in the U.S. Navy are of World War II construction. On the other hand, I am advised that almost all of the Soviet attack submarines have been built within the last 14 years. It is these submarines that pose a direct threat to the U.S. ballistic missile-firing submarines.

Moreover, former Secretary of Defense Clark M. Clifford did not include the medium and intermediate range Soviet ballistic missiles in his 1969 posture statement assessment of the U.S.S.R. strategic inventory. The United States has no such weapons deployed against Soviet targets, whereas the Soviets have their missiles targeted against our NATO allies. Clifford credited the U.S.S.R. with 700 operational MRBM/IRBM launchers, some in hardened sites. He said:

> Evidence is accumulating that the Soviets have embarked on the development of solid-fuel missiles for medium and intermediate as well as intercontinental ranges.

British Defense Miinister Dennis Healy recently estimated that the Soviet MRBM/IRBM force now approximates 1,000 missiles.

As to bomber strength, the United States continues to lead the Soviet Union in heavy bombers—B–52's and B–58's versus Soviet Bisons and Bears—but Department of Defense figures show the United States ahead overall in bomber strength only because the Soviet Badger and Blinder medium range bombers are not credited with a strategic role. Both their threat to Western Europe and their threat to the continental United States—they are air refuelable—makes them strategic bombers.

Hence, Mr. President, not only has the military power of the Soviet Union grown more rapidly than that of the United States, but it has also rapidly overtaken the forces of the United States in new concepts and new weapons systems.

The U.S.S.R. now, for example, has whole families of military—and naval—weapons systems that the United States does not have in its inventory. Let us consider the following:

First. The large IRBM and MRBM force—1,000—is such a family of weapon systems. This force is primarily aimed at Europe and now completely pins Europe down. Generals of the U.S.S.R. have stated "we now hold Europe as a hostage."

Second. Very large—50 to 100 megaton—nuclear weapons which were tested in 1961–62 and which, it is generally conceded in unclassified literature, have been adapted for missile delivery. The United States not only has no such weapons in its inventory it has not even tested them and can only speculate as to the unique effects they may produce.

In this connection, it should be noted that the Proton satellite, according to Soviet releases, weighed some 40,000 pounds. The Proton booster, therefore, could launch very large ICBM warheads—50 megaton—or large warhead orbital bombardment systems.

Third. The Bear bomber is unique. It is the world's longest range, highest endurance bomber. It is an effective antishipping and antisubmarine attack aircraft with air-to-surface attack missiles on board.

Fourth. The ABM development and deployment in Russia is an innovation.

Fifth. The orbital bombardment system, of which the United States has no counterpart. The United States respects the treaty forbidding the use of space for weapons of mass destruction.

So, Mr. President, it is apparent that the Soviets have jumped into the lead in overall strategic missile strength. They have made optimum use of a much smaller economic base than the United States—in effect, they have been and are operating on a war economy basis.

The combined total of ICBM's, IR/MRBM's and SLM's is now estimated as 2,750 for the U.S.S.R., to 1,710 for the United States.

Meanwhile, the four-to-one U.S. lead in individually targeted warheads, which was long used by the Defense Department as a source of reassurance to the American public, was discarded by Air Force Secretary, Dr. Robert C. Seamans, Jr., in his testimony to the Senate Armed Services Committee on April 16, 1969:

> The much-quoted figure of a 4-to-1 U.S. advantage in individually targetable warheads may not be too reassuring. The 4-to-1 figure stems mainly from the bomber portion of the forces, since missile forces are rapidly approaching a 1-to-1 relationship. It was arrived at by omitting the Soviet medium bomber force from the calculations, while counting several bombs on each of our own bombers. The inclusion of Soviet medium bombers, medium-range missiles, and cruise missile submarines would bring the ratio of individually targeted warheads close to 1-to-1 with a payload advantage somewhat in favor of the Soviets.
>
> I might add that it is not enough to argue that these ratios involve relatively higher numbers—about 4,000 weapons on each side at the present time—and that only a few hundred weapons would be needed to destroy the Soviet Union. The critical factor here is not how many total weapons we have, but how many would survive a Soviet attack, and, of these, how many would penetrate Soviet defenses.

It should also be considered that Secretary Laird told the Senate Foreign Relations Committee that because of geography and the location of major centers of population and industry in Russia, as compared with the United States, the United States needs to be able to deliver six times as many warheads as would the Russians to achieve destruction "parity" with them.

It would take, Laird reported, some 1,200 one-megaton warheads to destroy 45 percent of the total population of Russia while the Soviet Union would need only 200 warheads of identical size to wipe out 55 percent of our population.

THE SOVIET STRATEGIC DEFENSE

Mr. President, the Soviets always have devoted great attention to active defense as a key component of their military policy. As Dr. D. G. Brennan, Director of the Hudson Institute, has pointed out—page 12 Adelphia Papers, November 1967:

> This heavy doctrinal bias in favor of defense can probably be traced to Russian military experience at least as far back as Napoleon. It is the Soviets who initiated ballistic missile defense deployment.

Against this background of Soviet thinking one can trace the manner in which the Soviet Union has developed strategic defense forces.

While the United States conducts a national debate over deployment of the Safeguard antimissile system, it is worthwhile noting that the genesis of the Soviet ABM system dates back from the early 1950's. With three generations of ABM weapons already developed, and a fourth undergoing tests, the Soviets are now in a position to deal with the far

more sophisticated problems of defense against space weapons. Even if the Safeguard ABM system is approved by Congress, the Soviet Union still will enjoy a sizable lead in strategic defense.

From the first, the Soviets have given strategic defense the command recognition it deserves in the nuclear era.

In April of this year, a new book, "Fifty Years of the Armed Forces of the U.S.S.R.," arrived in the United States for registration at the U.S. Library of Congress.

Published last year, it was written by Marshall M. V. Zakharov, Chief of the General Staff of the Soviet Armed Forces. In it, he states:

> The creation of ballistic missiles and space vehicles required a modern air defense system to respond not only against the aircraft threat, but also—and first of all—to provide anti-missile and anti-space (specifically, in Russian) anti-cosmic defense.

The Soviets are developing a new surface-to-air missile roughly every year to 18 months.

This means that the U.S.S.R. has made consistent and steady investments in research and development forces to create ABM systems.

So, if the present Galosh and Tallinn systems are not wholly effective in the judgment of the U.S.S.R., new systems will undoubtedly appear which will improve the effectiveness of the overall Soviet ABM system.

THE ABM

On March 14, 1969, President Nixon announced that his administration planned to modify the Sentinel missile defense system approved by Congress under the Johnson administration by using it first to defend some U.S. retaliatory missiles rather than to defend cities. This modification was named the Safeguard system.

According to the President, this measured deployment is designed to fulfill three objectives:

> 1. Protection of our land-based retaliatory forces against a direct attack by the Soviet Union.
>
> 2. Defense of the American people against the kind of nuclear attack which Communist China is likely to be able to mount within the decade.
>
> 3. Protection against the possibility of accidental attacks from any source.

President Richard Nixon, at his press conference on April 18, 1969, said:

> I believe it (the Safeguard ABM system) is absolutely essential for the security of the country . . . I do not want to see an American President in the future, in the event of a crisis, to have his diplomatic credibility be so impaired because the United States was in a second class or inferior position. We saw what it meant to the Soviets when they were second. I don't want that position to be the United States' in the event of a future diplomatic crisis.

Two American Presidents, representing our two major political parties, have now recommended to the American people that the United States needs a missile defense system.

The issue now squarely before the country is the Safeguard system. Unlike Sentinel, Safeguard has been modified so that its defensive intent is unmistakable. The first deployment is to cover only two missile sites, the first of which will not be completed before 1973. The President has asked for it in order that he or his successors hopefully will not be placed in a position where they can be blackmailed by our self-proclaimed Communist enemies. I do not want to see President Nixon or any other U.S. President ever placed in a position where he would be subject to blackmail by either the Soviet Union or Red China.

The opponents of Safeguard generally base their arguments on one or more of the following grounds:

First. It will not work.

One of the leading arguments advanced against the deployment of the ABM system is that the complicated array of radar and computer systems required to operate it are of such an involved nature that they will break down in face of an enemy attack.

Much testimony from scientific analysts who support the deployment of the ABM could be adduced against this argument. But perhaps the most graphic argument has just been shown on television screens across the Nation. That is the magnificent—and most highly complicated—American landing of men on the surface of the moon.

But little more than 8 years ago, the vision—and the belief in the scientific and technological capability of the American people—of President John F. Kennedy put in motion the work of going to the moon. At that time, too, there were many skeptics who argued that the thing could not be done, and that further years of research should precede any attempts at actual operational development and deployment of equipment. It is necessary to recall that the exotic array of radars, of computers, of electronic equipment which made the manned moon landing such a success will also constitute the basis for the radar array, the computers, and the sensitive electronic equipment which will go into the ABM system. These systems, too, will work if they are deployed, that is, if the ABM is made an operational system instead of being kept a theoretical, continuing research system.

Can anyone doubt that this vast, this extremely complicated American venture to the moon could ever have been made a reality if we had continued to study the matter, to research it for year after year rather than moving forward vigoously with actual development and deployment of the systems which made this entire great enterprise possible?

The "won't work" argument is seriously flawed on both specific and general grounds. Both the Spartan and Sprint missiles—the prime ingredients of the proposed Safeguard system—already have been successfully flown. These, in turn, are successors to the Nike series of missiles which were successfully employed to knock down other missiles. The prototype missile radar is in test operation at the present time. The initial deployment of the Safeguard missile defense is now necessary to give us further technical, engineering, production, and testing experience to improve the system. We learn by doing.

Safeguard will "work" in the sense it is intended to work. It is a "point" defense. A point defense is easier to achieve than an area defense since the enemy warhead can be usefully engaged at much closer proximity to its target. This, in turn, increases the time allowed the defense to track and react and greatly facilitates the separating out of decoys from the live warheads. Some people may feel that since all missiles may not be destroyed, the system is a failure. They say, "You may knock down nine, but the tenth will get through." But even if this is so, the enemy is forced to greatly multiply his arsenal with highly sophisticated missiles before he would dare to attack. This enormously complicates his offensive problem and adds immeasurably to the deterrent effectiveness of our own offensive missiles.

In a larger sense, however, the United States has amply demonstrated its capacity to produce and operate the most complex communications, electronic, and nuclear warfare systems. It is well to remember that some people declared the hydrogen bomb was impossible or that ICBM's and Polaris missile systems would not work. Moreover, the astonishing technical capacity revealed in the successful Apollo moon program—as I have already indicated—and in the Telstar communications satellites is evidence of what the United States can accomplish.

Throughout the history of warfare, every offense has produced a corresponding defense. To argue that no defense can ever be possible against missiles is to fly in the face of historical precedent. And it is to fly in the face of the opposite conclusions already reached by the Soviet Union. It is doubtful that the Soviets would have devoted the resources they have to ABM if they had concluded that it "won't work."

Second. The scientific critics of the system.

Some of the scientific critics of the ABM system may be compared to the past critics of what could be accomplished in space—an area, of course, intimately related to missile defense. This is brought out very cogently in the July 18, 1969, issue of the London Daily Telegraph which devotes a great amount of space to the American moon landing achievement. States the Daily Telegraph:

> It is only 13 years since Britain's Astronomer Royal described talk of space travel as "utter bilge."

Third. Safeguard is "too costly."

There are two broad subcategories of this argument. One is the technical one relating to the relative costs of defensive systems, and the corresponding offensive weapons needed to penetrate them. The other is that the Nation cannot "afford" missile defense because of the overriding priority of domestic social and economic programs.

On the first point, there are indications that the relative cost-ratios of offense-defense may be approaching parity. For example, D. G. Brennan, former president of the Hudson Institute, made this recent observation:

> Several years ago, it was widely believed that missile defenses were easy to penetrate —so easy that offensive increments costing only one or a few percent of the cost of opposing defense would serve to nullify it. In recent years, however, it has become apparent that cheap forms of decoys and other penetration aids cannot be relied upon to nullify modern defense techniques. A good

defense can be overcome, but it is difficult. This is reflected in the fact that cost exchange ratios for a good defense are now believed to be in the region of one to one—perhaps one-third or two, but not one-tenth or ten. Thus, it is about as expensive to nullify a good defense as to build it.

Even if we accept an estimate that missile defense may be two or three times more expensive than the offsetting attack, appropriate limited deployment could still force the attacker into greater expenditures than have been spent on defense. It is, therefore, of the utmost importance to find out whether effective defense can indeed be established for an expenditure which we can afford. This question cannot be answered by research alone. A limited deployment which may also be considered as a pilot operation is needed.

In weighing the second aspect of the cost question—the matter of national priorities—the American people would do well to consider the ultimate worth of the system which is measured in the safety of millions and the survival of the Nation. Without survival there will be no ghetto to rehabilitate. If we surrender as an independent nation to Soviet nuclear blackmail, it will be Soviet "welfare" programs we will live under and not our own.

Certainly, foes of the Safeguard ABM system should not underestimate the economic capacity of the United States. This capacity is far greater than many people realize. The Soviets have an advantage in the apparent lack of self-confidence among Americans in their own capacity to meet all of the Nation's needs.

Fourth. ABM is unnecessary: Deterrence is assured because U.S. retaliatory power will always be sufficient to destroy the Soviet Union if she attacks us.

The Soviets are serious people and they have long since rejected the hypothesis that a strong offense alone will guarantee deterrence. Their military policy is to create a balance of offensive and defensive power. How each will develop in relation to the other over future years is impossible to judge, they say. I think they make sense. If we counter Soviet ABM progress only by increasing our own offensive missiles, we would be gambling on the assumption that defense technology will not eventually overcome offensive weapons systems.

Additionally, the greater the number and the diversity of offensive and defensive systems the United States has in being at any time, the more difficult it will be for an aggressor to assess the probable effectiveness of a first strike and hence the more effective our deterrent becomes.

Fifth. Development of a U.S. ABM will only stimulate the arms race.

Will the Soviets now cease any further augmentation of their offensive striking power if the United States unilaterally refrains from missile defense? Will they cease their own ABM efforts? The burden of proof for such contentions falls heavily on its advocates. We know that the Soviets have not ceased offensive missile production, even though they have drawn past the United States—they are still building at a rapid rate. And we know from their statements that the Soviet leadership holds that active defense constitutes a vital component of the Nation's military capabilities. It seems only reasonable, then, to conclude that the Soviet leaders would regard U.S. failure to develop an ABM either as a sign of deficient military thinking—one that should be exploited, not followed—or as an indication that we lack the will or the technical ability to go forward with development and deployment.

Sixth. The argument that an American ABM will offend the Russians, that the Russians will consider it to be "provocative," and that it will thus prevent an arms-control agreement.

This argument rests on the thesis that the restoration of nuclear symmetry, through a U.S. ABM to match that of the Soviets, would be more destabilizing than the present asymmetrical situation which is developing between a balanced offensive-defensive U.S.S.R. force and an offensive-only U.S. posture.

To the extent that Safeguard is designed primarily as a defense of our retaliatory forces and not of our people it cannot be construed as indicative of a U.S. intention to attack the Soviets. The "provocative" argument also neglects the fact that the Soviets have deployed their ABM around cities—thus supporting a possible first strike intention—without worrying that this might be "provocative" to the United States.

While it may be true that Dr. Wiesner and Dr. York in the report attributed to them do not believe that an ABM system will work, the Russians most certainly do. Not only that, but they have been stating for the past 2 years or more that it will work, that it is a purely defensive system.

Thus, as long ago as February 23, 1967, Marshal of the Soviet Union Malinovsky, in a key speech in the official Soviet Communist paper Pravda, stated:

New and highly efficient antiaircraft rocket systems and aviation complexes have been deployed and accepted for armament. The various means of combat available to our antiaircraft defense troops insure the reliable destruction of any aircraft *and of many rockets of the enemy.*[1]

And Soviet Prime Minister Kosygin has said flatly that the Soviet ABM system is purely a defensive system, that it is not provocative, and that even though it might be expensive, it will save lives. In developing the concept that the deployment of the Soviet ABM would decrease tensions rather than raise tensions, the interview given by the Soviet Prime Minister deserves to be quoted at some length. Kosygin said:

Which weapon can be termed a factor of tension: An offensive or defensive weapon? I think that defense systems warning against attacks do not cause armament contests, but constitute a factor preventing the killing of people. Certain people—

Kosygin obviously thought of Johnson and McNamara—

think along the following lines: Which is cheaper? Offensive weapons which can destroy cities and entire States, or a defensive weapon which can prevent destruction?

The Chairman of the Soviet Government also replied to the question of "cheapness":

It is possible that an antimissile system costs more than an aggressive one, but it is destined to protect human lives.[2]

Seventh. There should be a moratorium on U.S. ABM deployment while we try negotiations with the U.S.S.R.

The difficulty with this argument is that it concedes to our adversaries the precious commodity of time. The Soviets would stretch out the talks and continue to develop their ABM system while our development of the ABM would be at a standstill. We are probably ahead of the Soviets in the level of our antimissile technology, but how long can we expect this to continue, since Soviet military research and development expenditures are running at a greater rate than ours?

It is unlikely that a U.S. ABM moratorium would be respected by the Soviet Union because, first, the Soviets are committed doctrinally to ABM no matter what the United States does; and, second, there is the complicating factor of Communist China. There are some indicators that the Soviet ABM system is being deployed partially against the potential Chinese threat to the U.S.S.R. If this is so, we cannot in any case expect the Soviets to dismantle or halt their ABM deployment because of any possible agreement with the United States. But if they continue to deploy and perfect their system—even if we were to concede that it was directed entirely against Red China—which is not the case—the Soviets would be in possession of a weapons system which could just as easily be used to neutralize U.S. retaliatory missile forces.

Eighth. The argument that, even though the Soviets have deployed an ABM, their most recent statements, such as that of Foreign Minister Gromyko, indicate a changed attitude.

Gromyko's foreign policy speech of July 10 might, at first glance, have appeared sweetly reasonable. But a more careful analysis indicates that he gave no slightest indication of any flexibility which would help to quiet the troubled situation in the Middle East. Furthermore, actions speak louder than words. What are some recent Soviet actions as opposed to words:

First. From March 1969 onward, the Soviet practice of jamming Voice of America broadcasts to the Soviet Union has been stepped up. In the past, this has been a sign of Soviet hostility.

Second. For the first time in history a Soviet naval squadron is visiting Cuba in an obvious show of force close to American shores. In addition, the Associated Press reported July 31 that this Soviet naval squadron was conducting exercises in the Gulf of Mexico. Further, the press reported on August 1 that the squadron contained a nuclear submarine.

Third. Further hard-line Soviet activities in Czechoslovakia are reported. The London Daily Telegraph, on July 4, 1969,

[1] Pravda, as quoted by Radio Moscow, February 23, 1967.

[2] Interview given in Moscow by Prime Minister Kosygin to the Czech Communist Party newspaper *Rude Pravo* and published February 22, 1967.

stated that Czech leader Husak reported that all "opposition to his tough pro-Russian policies had collapsed." The Daily Telegraph went on to say:

Czech newspapermen voted to make the Press, radio and television into "warriors" for the cause of Communism and to encourage friendship with the Russian occupation troops. They declared themselves to be "Communists first and newsmen afterwards."

Fourth. And a very recent issue of the Daily Telegraph, on July 16, 1969, warns:

Soviet naval activity in the Indian Ocean adds up to a significant display of power politics.

Fifth. Soviet Minister of Defense Andrei Grechko made a sharp attack on the United States about "continued aggression by the United States in Vietnam" and he further announced that the Soviet Union would continue "raising the military might of the army and navy" as reported by the Washington Post on July 28, 1969.

In view of these actions as compared to honeyed words, we may well say a prayer of thanks that the Founding Fathers warned the yet unborn generations of Americans that the most effective deterrence of attack against the American homeland "consists in the best possible state of defence."

THE URGENCY OF THE SAFEGUARD MISSILE DEFENSE SYSTEM

I believe that President Nixon was entirely correct when he said during his campaign for the Presidency:

At this time I do not believe that the United States can afford to accept the concept of parity with the Soviet Union. I believe that we face a potentially dangerous situation . . . to negotiate a de-escalation of trouble points around the world, whether in the Mideast or Vietnam or Western Europe or what have you, if the next President of the United States goes into those conferences with the possibility that the Soviet Union rather than the United States is in a stronger power position, I think that we would not be able to effectively reach the goals that we want to reach. . . . And at any kind of negotiation when one side wants to expand and the other side wants to defend, make sure that the side in that negotiation which is in the defensive position has more strength than the other side. That is why I would restore the strength of the United States, keep it at a proper level at this point, so that we would not be afraid to negotiate.

In the present situation, Mr. President, I believe that there cannot be any substitute for the maintenance of U.S. strategic military superiority. This superiority must be substantial because U.S. policies have always permitted the enemy the first blow. In a nuclear war, an enemy might wipe out a very large percentage of our weaponry—and population—in a first strike. Unless we have enough military strength to survive a first strike and still strike back decisively, the risk of a nuclear war increases.

Avoidance of nuclear war requires that the United States maintain overall nuclear superiority, rather than acceptance of any kind of "sufficiency" which can only be ephemeral and inherently unstable.

For more than two decades, the heart and core of America's strategy has been deterrence of Soviet aggression. This deterrence has been accomplished by establishing and maintaining a nuclear retaliatory strike force that could survive a surprise attack and still retain the capacity to inflict unacceptable damages on the Soviet Union.

If the United States is to continue as a viable and independent society, we should, as a first step, create a missile defense system to protect our nuclear deterrent. Such a system will not, by itself, restore the military superiority which we have now lost. But this essential first step is necessary if we are to reverse the sharp shift—adverse to the United States—now taking place in the world's power balance.

Protecting our retaliatory missiles is important because the United States has no intent of striking the first blow in a global conflict.

Thus, the refusal of the United States to consider a first strike makes it all the more important that our retaliatory force be protected against a Soviet attack. And it is to this end that a Safeguard antiballistic-missile system has been recommended by the President of the United States.

In addition, the Safeguard system is designed—as was the earlier Sentinel concept—to afford defense—of heavily populated areas—against the type of attack Communist China is likely to be able to mount sometime in the 1970's.

From the time the Chinese Communists exploded their first H-bomb—June 17, 1967—their progress in nuclear weapons development has been rapid. Hence, it may well be that they will develop a nuclear ICBM delivery capability sooner than the mid-1970's, the time phase generally estimated by Western analysts.

In this context it may be well to consider the thoughtful words of Secretary of Defense Laird. He testified on May 22, 1969, with reference to the Chinese Communist threat:

The effectiveness of option 2C [of the U.S. ABM] against the Chinese ICBM threat is expected to be very high. If the Chinese deploy a force of only 30 ICBM's on launchers by mid-1976, they could inflict about 15 million fatalities on us—if we had no ABM defense. With option 2C deployed, fatalities could be held to less than 1 million. And, even if they were to deploy as many as 75 ICBM's on launchers by the end of the decade, fatalities could still be held to less than 1 million, particularly if the improved Spartan is deployed. Here again, the deployment of Safeguard would have a very large payoff if the Chinese ICBM threat should, in fact, emerge.

Mr. President, a cursory reading of the press or a casual glance at the television programs might give the impression that the vast mass of the academic community in the United States is enlisted heart and soul on the side of the opposition to the deployment of an ABM defense. It is, of course, quite true that many distinguished scholars are opposed to the ABM. It is right and proper that, living as they do in the country offering the greatest amount of freedom anywhere in the world, these academics should be quite free to form their opinions on the ABM and to write and present freely their views in opposition to the ABM.

It is, however, equally true that a number of distinguished academicians have written cogent arguments in favor of deploying the ABM, among whom are two representatives from among our oldest and most distinguished universities, such as Princeton University and Georgetown University. These men are the outstanding physicists and Nobel Prize winner in Physics, Dr. Eugene P. Wigner of Princeton, and Dr. James D. Atkinson, professor of government at Georgetown and member of the British Institute for Strategic Studies. And there are other distinguished scholars and scientists who have written and spoken in support of the ABM.

Mr. President, the underlying logic of the ABM concept is that an enemy is unlikely to launch a nuclear attack on the United States, or credibly threaten such an attack, if he knows that U.S. retaliatory forces will survive—forces that would result in his own destruction.

ABM is a method of deterrence which will save lives and not destroy them.

I firmly believe than an American ABM system is the soundest insurance for peace and against nuclear war that the United States can buy in 1969 for the 1970's. Far from being an offensive weapon, the ABM is, in reality, insurance against war. It may well be, in fact, the single most important step the United States can take toward peace at this moment in nuclear history.

ORDER FOR RECESS FROM TOMORROW UNTIL WEDNESDAY, AUGUST 6, 1969, at 11 A.M.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business tomorrow, it stand in recess until 11 a.m. on Wednesday, August 6, 1969.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT UNTIL TOMORROW AT 11 A.M.

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, under the previous order, that the Senate stand in adjournment until 11 o'clock a.m. tomorrow morning.

The motion was agreed to; and (at 6 o'clock and 29 minutes p.m.) the Senate adjourned until tomorrow, Tuesday, August 5, 1969, at 11 a.m.

CONFIRMATIONS

Executive nominations confirmed by the Senate August 4, 1969:

NATIONAL BUREAU OF STANDARDS

Lewis M. Branscomb, of Colorado, to be Director of the National Bureau of Standards.

ST. LAWRENCE SEAWAY DEVELOPMENT CORPORATION

David W. Oberlin, of Minnesota, to be Administrator of the St. Lawrence Seaway Development Corporation.

The following-named persons to be members of the Advisory Board of the St. Lawrence Seaway Development Corporation:

Jacob L. Bernheim, of Wisconsin.

Foster S. Brown, of New York.
William W. Knight, Jr., of Ohio.
Miles F. McKee, of Michigan.
Joseph N. Thomas, of Indiana.

IN THE ENVIRONMENTAL SCIENCE SERVICES ADMINISTRATION

The nominations beginning David M. Wilson, to be lieutenant, and ending John E. Thomasson, to be ensign, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on July 14, 1969; and

The nominations beginning Philip J. Taetz, to be commander, and ending Michael E. Wagner, to be ensign, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on July 18, 1969.

IN THE COAST GUARD

The nominations beginning George A. Blann, to be lieutenant (junior grade), and ending Marcus L. Lowe, to be lieutenant, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on July 14, 1969.

HOUSE OF REPRESENTATIVES—*Monday, August 4, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you.—Matthew 7: 7.

O spirit of the living God, arise within us as we bow at the altar of prayer and lift our hearts into Thy presence. In this troubled time lead us beside the still waters where our souls can be restored and our faith renewed. In the quiet of this moment help us to hear Thy still, small voice and hearing it, obey it; and obeying it be led in right paths for Thy name's sake.

Direct and bless these leaders of our Nation that, in seeking to find solutions for the problems of this hour and endeavoring to discover a cure for the distress of our day, they first cleanse their own hearts and then may they see clearly to plan wisely and to move forward to the time when our people shall live together in good will and the nations shall dwell together in peace.

O God, make us good enough for this great day.

In the spirit of Christ we pray. Amen.

THE JOURNAL

The Journal of the proceedings of Friday, August 1, 1969, was read and approved.

NATION NEEDS A SOURCE OF INTEREST CREDIT AT REASONABLE RATES—AN RFC-TYPE AGENCY PROPOSED

(Mr. PATMAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PATMAN. Mr. Speaker, this Nation needs a source of funds at reasonable interest rates to meet its vast public needs.

The private money markets—regardless of the reason—are not providing the funds necessary to meet the needs of the school districts, the county, city, and State governments across the land. As a result, we are seeing school construction, water and sewage facilities, parks, roads, and housing fall far behind. We are creating a fantastically huge backlog of unmet public needs because of the lack of credit at interest rates that local governments can afford.

Every one of the 81,299 governmental entities across the country are finding it difficult—if not impossible—to raise the necessary funds. The municipal bond market—the prime source of funds for local governmental improvements—is virtually nonexistent and even huge units—like the State of California—are finding it hard to market bonds. All governmental entities are paying premiums—interest rates of 6 to 7 percent on tax-exempt bonds—and many are simply unable to market bonds at any price.

Mr. Speaker, I am convinced that this Nation must reestablish a Federal credit institution similar to the old Reconstruction Finance Corporation—RFC—that operated so successfully between 1932 and 1954. RFC saved thousands of schools, local governments, and small businessmen in all sections of the Nation by furnishing credit—big blocks of credit—at reasonable terms.

Mr. Speaker, in the near future, I plan to introduce legislation—discussed by me in remarks that appear at another place in today's RECORD—to establish a modern version of the RFC to meet the vast credit needs—at reasonable rates—of our local governmental units and other worthy borrowers. In this way, we can keep the basic needs of the Nation—items like schools, water and sewage facilities, parks—moving forward regardless of what happens in the money markets.

THE PRESIDENT'S TRIP A TREMENDOUS SUCCESS

(Mr. ADAIR asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ADAIR. Mr. Speaker, the President has now returned from a round-the-world mission which—while extremely difficult and very fatiguing—was a tremendous success.

If one reads the statements made by Mr. Nixon in the course of this trip, he readily discovers a common thread of thought which indicates a new dimension in our policy toward Asia. Briefly put, it seems to me that the President has said to friendly Asian nations that they will continue to have our economic support where necessary, but that we expect them to assume a greater share of the burden of developing and defending the free nations in that part of the world.

In the field of military assistance, it seems clear to me that the President is saying we are willing to provide materiel assistance where justified, but that we do expect these nations to provide the manpower for their own defense.

As a part of this policy, the President has indicated that the matter of replacing American soldiers in Vietnam with Vietnamese troops is receiving careful study and that we might expect a further announcement in this connection before the end of this month.

At the same time it is clear that we have made as many concessions to the North Vietnamese and Vietcong as we can under present circumstances. As I have said before, if they truly want peace, then it is high time that they indicate it by some meaningful response. Unless this is done, the world can only judge that the Communist leaders, in fact, do not desire peace, but rather wish a continuation of the bloody conflict.

One is impressed by the unexpectedly small amount of anti-American sentiment expressed toward the President during this historymaking mission. On the contrary, it proved again that there is a vast reservoir of respect, admiration, and good will toward this Nation and its people.

In short, by any standard, the President's trip must be labeled a great success and one which may lead to a proper and timely reevaluation of our policy toward other parts of the world, especially the Asian nations.

PRESIDENT'S TRIP AROUND THE WORLD

(Mr. RIVERS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RIVERS. Mr. Speaker, I was one of those who heard the report of the President this morning on his trip around the world.

I was very much impressed with his fine report. I was quite fascinated by what the President did do and what he tried to do.

The Nation should know the insuperable task imposed on this man. As we sat there listening to his account of his great odyssey, and it was an interesting one, all of us to a man—and I am sure, Mr. Speaker, you are not the least among those who have given the President your complete support—were determined to give this man our help; indeed, he is going to get our help and our understanding and our sympathy. He made a fine report.

I am not bragging—I happened to be one of those who went out to meet him last night. Seeing the outpouring of people who came out to greet him, and there were many thousands, meant one thing to me, that this country wants this man to succeed and they were with him on this trip around the world in which this country is being attacked in every area.

If the President can bring about a new understanding of America in the world, an understanding of the altruistic feeling of American and the humane efforts of this Congress and of the Nation which have been for a long time dedicated to

the betterment of conditions of all peoples of the world—then this trip will have been worth it. He deserves our gratitude and our prayers.

Mr. GERALD R. FORD. Mr. Speaker, will the gentleman yield?

Mr. RIVERS. If I have the time available, I am glad to yield to the minority leader.

Mr. GERALD R. FORD. Mr. Speaker, the President's report to the leadership of both major political parties and those from various committees having direct interest in foreign policy and military policy was a fabulously frank, very meaningful overview of his 12-day trip around the world. I was not only impressed with the details the President gave us, but the fact that he set forth a shift in foreign policy which will be better not only for us but for all nations, not only in Southeast Asia but throughout the world. I believe our Nation has benefited from this trip, and that we who were the beneficiaries of the President's report this morning are in a position to do a better job for the Nation.

Mr. RIVERS. I thank the gentleman.

PRESIDENT'S VISIT TO RUMANIA GIVES AMERICA THE INITIATIVE FOR THE FIRST TIME IN MANY YEARS

(Mr. PUCINSKI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PUCINSKI. Mr. Speaker, I believe the President's visit to Rumania over the weekend was a monumental triumph for American diplomacy. I think the President's tumultuous reception in Rumania again proves the tremendous respect that the people behind the Iron Curtain have for the United States, its people, and its leadership. Mr. Nixon received an ovation from the people of Rumania unprecedented by any leader, and it only recalls for us the visit by another American a few years earlier when the late Senator Kennedy visited Poland. There he also received a tumultuous reception by the people of that country.

I believe the visit by the President to Rumania may very well be the turning point in the cold war, because when the President sits down with Brezhnev and Kosygin sometime later this year, he will sit down with the full knowledge that the 180 million people behind the Iron Curtain are strong friends and supporters of the United States.

One can only wonder at the reaction in the Kremlin to this huge reception for this American President, when the Kremlin was reduced to making silly statements over the weekend reminding people behind the Iron Curtain that the Brezhnev doctrine applies, and that they should not cuddle up too closely to the United States.

I believe we Americans can be proud of the President's visit to Rumania. I think it shores up our own firm belief in something that many of us have been saying here for a long time: The people of those "captive" nations are with us. They are our friends; they are not Communists. They happen to be dominated by Communist regimes against their will.

I think the President's trip to Rumania proved that point. I do not know whose idea this was, but whoever thought up the idea of the President going to Rumania should be identified and promoted. It was an excellent gesture. It gives America the initiative for the first time in many years.

For years it has been the United States that always had to react to Soviet initiative. But the picture has changed with President Nixon's bold trip to Rumania. Now it is the Soviets who have to react and their frenzied statements disclose they had not anticipated President Nixon's triumph in capturing the hearts of the Rumanian people.

Mr. Nixon's trip once and for all puts to rest the saying of those who would have you believe American prestige is suffering around the world. The President's enthusiastic reception wherever he went clearly shows how much we are respected and admired. Let those who would sell American prestige short just look at the President's tremendously successful journey.

PROFESSIONAL BASEBALL SHOULD ACT TO ELIMINATE DISCRIMINATION AGAINST WOMEN UMPIRES AND COMPLY WITH FEDERAL LAW

(Mr. STRATTON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. STRATTON. As the Member who has the privilege of representing Cooperstown, the home of the Baseball Hall of Fame, I am worried that all the good work that Bowie Kuhn has been doing to improve the image of professional baseball could be destroyed by the shortsighted efforts of one Phil Piton of Columbus, Ohio, president of the National Association of Baseball Umpires, who is apparently trying to ignore the Civil Rights Act of 1964, prohibiting discrimination on the basis of sex.

Mrs. Bernice Gera, of New York City, was signed up recently by the New York Pennsylvania League as the first lady umpire in professional baseball and had been scheduled to umpire her first game in my congressional district at Auburn last Friday night.

The community had planned a big celebration, and were expecting a record turnout crowd of some 3,200. Then Mr. Piton lowered the boom and Mrs. Gera's contract was invalidated by the umpire organization.

The crowd that finally turned out on Friday was 572 instead of 3,200.

Mr. Speaker, some concern has been expressed about the fiscal future of the minor leagues. Certainly if Mr. Piton is going to run things, then minor league attendance may indeed be in trouble.

I have wired the Attorney General and the Chairman of the Fair Employment Practices Commission urging them to investigate this action, which is clearly in violation of section 703 of the Civil Rights Act of 1964 and insist on the full compliance from the professional baseball umpires' organization.

CONSENT CALENDAR

The SPEAKER. This is Consent Calendar day. The Clerk will call the first bill on the Consent Calendar.

DESIGNATING THE VENTANA WILDERNESS, LOS PADRES NATIONAL FOREST, CALIF.

The Clerk called the bill (H.R. 3687) to designate the Ventana Wilderness, Los Padres National Forest, in the State of California.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. HALL. Mr. Speaker, reserving the right to object, it is my understanding that this bill is substantially identical to the bill S. 714 which, I believe, passed that body on March 26.

After careful review as one of the objectors, I see nothing in the bill H.R. 3687 that will not be beneficial to the Nation, to those who use our wilderness areas, and indeed it simply transfers some acreage of the Ventana Primitive Area and adjoining national forest land in the Los Padres National Forest, Calif., which will have no effect on the Forest Service's ability to maintain park protection to a national wilderness area for preservation purposes. Therefore, it is in line with the consensus of Congress. There is no additional cost.

But, Mr. Speaker, I would like to ask the distinguished gentleman, the chairman of the Committee on Interior and Insular Affairs, what is the difference between "being identical" with the Senate-passed bill and "substantially the same as"?

Mr. ASPINALL. Mr. Speaker, if the gentleman will yield, there are two minor differences, and this is the reason I plan to ask that the Senate bill provisions be stricken and the House provisions inserted in lieu thereof. One difference has to do with the acreage, which is 95,000 in the Senate bill and is 98,000 in the House bill. The other difference has to do with the date of the legislation and in reference to the map referred to in the provisions. Those are the only differences.

Mr. HALL. Mr. Speaker, I thank the gentleman.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the present consideration of the bill?

There being no objection, the Clerk read the bill, as follows:

H.R. 3687

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in accordance with subsection 3(b) of the Wilderness Act of September 3, 1964 (78 Stat. 891), the area classified as the Ventana Primitive Area, with the proposed additions thereto and deletions therefrom, as generally depicted on a map entitled "Ventana Wilderness—Proposed," dated August 15, 1967, which is on file and available for public inspection in the office of the Chief, Forest Service, Department of Agriculture, is hereby designated as the Ventana Wilderness within and as a part of Los Padres National Forest, comprising an area of approximately ninety-five thousand acres.

SEC. 2. As soon as practicable after this Act

takes effect, the Secretary of the Agriculture shall file a map and a legal description of the Ventana Wilderness with the Interior and Insular Affairs Committees of the United States Senate and the House of Representatives, and such description shall have the same force and effect as if included in this Act: *Provided, however,* That correction of clerical and typographical errors in such legal description and map may be made.

SEC. 3. The Ventana Wilderness shall be administered by the Secretary of Agriculture in accordance with the provisions of the Wilderness Act governing areas designated by that Act as wilderness areas, except that any reference in such provisions to the effective date of the Wilderness Act shall be deemed to be a reference to the effective date of this Act.

SEC. 4. The previous classification of the Ventana Primitive Area is hereby abolished.

With the following committee amendments:

On page 1, line 8, strike out "August 15, 1967," and insert "March 14, 1969,".

On page 2, line 1, strike out "ninety-five" and insert "ninety-eight".

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent for the immediate consideration of a similar Senate bill (S. 714), to designate the Ventana Wilderness, Los Padres National Forest, in the State of California.

The Clerk read the title of the Senate bill.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The Clerk read the Senate bill, as follows:

S. 714

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in accordance with subsection 3(b) of the Wilderness Act of September 3, 1964 (78 Stat. 891), the area classified as the Ventana Primitive Area, with the proposed additions thereto and deletions therefrom, as generally depicted on a map entitled "Ventana Wilderness—Proposed", dated March 14, 1969, which is on file and available for public inspection in the office of the Chief, Forest Service, Department of Agriculture, is hereby designated as the Ventana Wilderness within and as a part of Los Padres National Forest, comprising an area of approximately ninety-five thousand acres.

SEC. 2. As soon as practicable after this Act takes effect, the Secretary of Agriculture shall file a map and a legal description of the Ventana Wilderness with the Interior and Insular Affairs Committees of the United States Senate and the House of Representatives, and such description shall have the same force and effect as if included in this Act: *Provided, however,* That correction of clerical and typographical errors in such legal description and map may be made.

SEC. 3. The Ventana Wilderness shall be administered by the Secretary of Agriculture in accordance with the provisions of the Wilderness Act governing areas designated by that Act as wilderness areas, except that any reference in such provisions to the effective date of the Wilderness Act shall be deemed to be a reference to the effective date of this Act.

SEC. 4. The previous classification of the Ventana Primitive Area is hereby abolished.

AMENDMENT OFFERED BY MR. ASPINALL

Mr. ASPINALL. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ASPINALL: Strike out all after the enacting clause of S. 714 and insert the provisions of H.R. 3687, as passed, as follows:

"That, in accordance with subsection 3(b) of the Wilderness Act of September 3, 1964 (78 Stat. 891), the area classified as the Ventana Primitive Area, with the proposed additions thereto and deletions therefrom, as generally depicted on a map entitled 'Ventana Wilderness—Proposed,' dated March 14, 1969, which is on file and available for public inspection in the office of the Chief, Forest Service, Department of Agriculture, is hereby designated as the Ventana Wilderness within and as a part of Los Padres National Forest, comprising an area of approximately ninety-eight thousand acres.

"SEC. 2. As soon as practicable after this Act takes effect, the Secretary of Agriculture shall file a map and a legal description of the Ventana Wilderness with the Interior and Insular Affairs Committees of the United States Senate and the House of Representatives, and such description shall have the same force and effect as if included in this Act: *Provided, however,* That correction of clerical and typographical errors in such legal description and map may be made.

"SEC. 3. The Ventana Wilderness shall be administered by the Secretary of Agriculture in accordance with the provisions of the Wilderness Act governing areas designated by that Act as wilderness areas, except that any reference in such provisions to be effective date of the Wilderness Act shall be deemed to be a reference to the effective date of this Act.

"SEC. 4. The previous classification of the Ventana Primitive Area is hereby abolished."

The amendment was agreed to.

(Mr. ASPINALL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. ASPINALL. Mr. Speaker, H.R. 3687, as amended and approved by the Committee on Interior and Insular Affairs, would designate approximately 98,000 acres of Forest Service land located in Monterey County, Calif., as wilderness. This land would then be administered in accordance with the Wilderness Act of 1964 and would be preserved in its unaltered wilderness condition for the enjoyment of present and future generations.

The designation of an area as wilderness precludes practically all commercialization. It precludes the construction of roads, buildings, or other structures, and generally prohibits the use of motorized vehicles or equipment. Other activities such as hunting, fishing, camping, and hiking are encouraged, but the facilities provided for these activities must be in keeping with the primitive and unaltered characteristics of a wilderness. Trails are simple; campsites are without tables or benches or the customary sanitary facilities. In summary, a wilderness area is set aside and preserved in such a manner that it will show a minimum influence or impact of man.

The proposed Ventana wilderness is located 120 miles south of San Francisco and 36 miles south of Monterey. Due to its proximity to the large population centers of the San Francisco Bay-San Jose area, it is easily accessible for weekend or short duration wilderness trips from these centers. Also, because of its relatively low elevation, it is accessible and usable in wintertime when higher wilderness areas are snowbound.

The area contains headwaters of the Carmel, the Arroyo Seco, the Little Sur and the north and south forks of the Big Sur River. The mountain scenery is superb and is typical of the Santa Lucia mountains and the coast range of which it is a part.

The designation of this area as wilderness will not have any foreseeable adverse effect upon either the local or national economy. The watersheds, which are substantial, will continue their water yield. Timber resources are classified as noncommercial; mineral values are not significant, and there is no commercial grazing of livestock within the area. The nine parcels of private land, comprising 2,510 acres, will be acquired whenever possible.

From testimony presented to the committee, it became evident the addition of approximately 3,000 acres along the easterly boundary of the area was justified. This tract, known as the Willow Creek area, is entirely undeveloped and has all the characteristics of true wilderness. For this reason, its inclusion is recommended. At committee hearings, the Department of Agriculture testified it had no objection to this addition.

There were no objections to the designation of this area as wilderness during our committee hearings, and I know of none that have been raised since.

Mr. Speaker, I recommend that the House act favorably on H.R. 3687, as amended.

(Mr. KYL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. KYL. Mr. Speaker, H.R. 3687 designates the Ventana Primitive Area in the Los Padres National Forest and contiguous lands in the State of California as the Ventana Wilderness.

The bill designates 98,000 acres to be administered as the Ventana Wilderness under the Wilderness Act of 1964 by the Secretary of Agriculture.

The proposed Ventana Wilderness lies on both sides of the Santa Lucia Mountains in Monterey County, Calif., approximately 120 miles south of San Francisco and 36 miles south of Monterey.

The area contains the headwaters of the Carmel, the Arroyo Seco, the Little Sur, and the Big Sur Rivers. Elevations range from 1,200 feet to 4,800 feet. It contains superb mountain scenery, basinlike valleys, unusual species of trees and wild animals. The area is used by hikers, horsemen, and campers, and for fishing and hunting.

Some of the unique features of the proposed wilderness is the variety of vegetation in the area and not commonly found in other wilderness areas such as the Santa Lucia fir and popular coast redwood. It is also the habitat of the wild boar and other wildlife.

The water resources of the area are significant but remain unchanged under wilderness management. Timber resources are noncommercial because of

inaccessibility. The area has no commercially significant mineral deposits.

Both the Department of the Interior and the Department of Agriculture recommend the area as having outstanding wilderness qualities.

The Senate bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill (H.R. 3687) was laid on the table.

The SPEAKER. This concludes the call of the Consent Calendar.

CALL OF THE HOUSE

Mr. GROSS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 134]

Adams	Frelinghuysen	Pepper
Arends	Fulton, Tenn.	Pickle
Ashbrook	Gallagher	Powell
Ashley	Gettys	Rarick
Baring	Giaimo	Rooney, Pa.
Barrett	Gray	Rosenthal
Berry	Gubser	Ruppe
Blanton	Hagan	Sandman
Brown, Calif.	Halpern	Saylor
Cahill	Hathaway	Scheuer
Carey	Hébert	Skubitz
Celler	Heckler, Mass.	Staggers
Chisholm	Ichord	Stephens
Clark	Kirwan	Stuckey
Clay	Lennon	Taft
Conte	Lipscomb	Teague, Calif.
Davis, Ga.	Lowenstein	Tunney
Dent	Mailliard	Utt
Diggs	Mikva	Vander Jagt
Edwards, Calif.	Minshall	Whalley
Fascell	Moorhead	Wyatt
Fish	Murphy, N.Y.	
Fraser	Ottinger	

The SPEAKER. On this rollcall 367 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

THE PRESIDENT'S TRIP ABROAD

(Mr. MORSE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MORSE. Mr. Speaker, the President returned last night from a trip which I believe will increasingly be viewed as an important turning point in the formulation of American foreign policy, especially as it regards Asia and Eastern Europe.

President Nixon's statements throughout his Asian tour—in the Philippines, Indonesia, South Vietnam, India, Thailand, Pakistan—indicate a departure from much of the rhetoric which has dominated American thinking and American foreign policy since World War II. He demonstrated his understanding that a changing world environment demands the abandonment of many of the preoccupations which have characterized this country's posture in Asia in the past. In his enunciation of a new attitude toward a future U.S. role in Asia, he has introduced a new flexibility—a flexibility that is essential if we are to avoid other Vietnams.

As the first American head of state to visit a Communist nation in over two decades, the President's reception in Rumania was overwhelming. The reaction of both officials and the population at large indicates their willingness to enter into more friendly and more fruitful relations with the United States. The two countries pledged to look for new ways of increasing economic exchanges between them. Coupled with the recent small steps taken toward easing U.S. relations with China, I am hopeful that this signals a new departure in American foreign policy—a departure from the rhetoric of the cold war which has lost much of its relevance.

I congratulate the President on a successful trip and join with my colleagues in welcoming him home.

PRESIDENT NIXON SEIZES THE INITIATIVE WITH COMMUNIST BLOCK

(Mr. BROWN of Ohio asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BROWN of Ohio. Mr. Speaker, President Nixon has returned from a 12-day round-the-world tour that will stand as a landmark in America's efforts to seize the initiative in the quest for peace and friendly relations between this Nation and countries behind the Iron Curtain.

Certainly the highlight of the President's trip was his stop in Communist Rumania, where an outpouring of friendliness and enthusiasm from an estimated 900,000 of the citizens of that nation proved that differing political systems need not stand in the way of the deeper feelings and beliefs that the common goal of man should be peace and friendship.

Too often in the past we have waited for the Communists to take the first step, apparently thinking that American initiative would be looked upon as an attempt of the United States to subvert the ties that bind the Communist community. We have been timid about what the Russian reaction would be to U.S. overtures to seeking partnership with the Soviets for improved relationships.

Often while we have waited for the proper time or the right conditions to move positively forward in this diplomatic area, small adversities have closed the door to progress, and we have had to start over.

In considering whether or not he should have visited Rumania during his latest trip, President Nixon could have allowed these conditions and some opposition from domestic pundits to stand in his way.

Instead, he seized the initiative in seeking a better understanding between the people of America and Rumania and received the most memorable reception he has gotten in visits to 60 nations during his travels to all parts of the world.

We will have to wait to see what we have gained by the President's visit to Rumania. It is better that the President has taken the step that can lead to an improved understanding and better relations in our quest for peace than to have missed the opportunity to extend the hand of friendship.

PRESIDENT NIXON BRINGS RENEWED HOPES FOR PEACE IN OUR TIMES

(Mr. BLACKBURN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BLACKBURN. Mr. Speaker, last night President Nixon came back to the United States bringing with him renewed hopes for peace in our times.

It is seldom that an American President traveling abroad has returned with such impressive results.

It is seldom that any statesman has so honestly faced up to the foreign policy problems of our times.

It is seldom than an American President has stated so well and succinctly the aims of the United States in today's world.

Mr. Speaker, without question the peoples of the entire United States and most of the world, regardless of differing philosophies of government, were cheered by the President's word that—

> The United States wants to bring peace to the world, and we want to work with others to maintain peace in the world.

Mr. Speaker, I urge my colleagues in both Houses and on both sides of the aisle to join wholeheartedly with the President in working toward those goals.

WELCOME HOME, MR. PRESIDENT

(Mrs. MAY asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. MAY. Mr. Speaker, the President's trip has been of unquestionable value diplomatically. The leaders of the visited nations must now have a clearer understanding of American attitudes and directions. Mr. President, your trip has served perhaps a larger purpose in its effects on the people of those countries, particularly the people of Communist Rumania.

You have given these Iron Curtain people the chance to get rid of the "bogeyman." Whatever the image of the United States held by these people, your presence, Mr. President, has let them know that behind the horrible image they sometimes get of America are people. People who are in many ways just like them.

Separated by distance, language, customs, and ideology, it is often easy to forget that nations are made up of people, and that people everywhere share dreams and hopes and aspirations. When two Americans stepped onto the moon 2 weeks ago, the brotherhood of man in that instant became highly visible. Mr. President, the warmth and interest you conveyed to the peoples you visited underlined this "spirit of Apollo."

The Eagle placed the olive branch on the moon's surface. Mr. President, you have carried it to the rest of the world. Welcome home, and thank you.

THE PRESIDENT'S TRIP BRINGS WORLD CLOSE TO PEACE

(Mr. McCLURE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. McCLURE. Mr. Speaker, I wish to join with those who have taken the occasion of the President's return home to praise the results of his trip abroad.

Without question the world is closer to peace today because of that trip.

Without question our chances to build a stable and peaceful Southeast Asia are better because of that trip.

We have been assured that no longer will the United States involve itself in the land wars of that subcontinent.

But at the same time our allies in that region have been assured of an American umbrella of protection against outside aggression, they have been assured that the United States surely will not abandon its allies, and they have been assured that the United States intends to continue to play a major role in the development of that region.

Mr. Speaker, the President has outlined a realistic policy for the United States to follow in Southeast Asia, and he has won agreement with that policy from our allies in that part of the world. The Nation can be proud of what he has accomplished.

A SUCCESSFUL TRIP BY AN AMERICAN PRESIDENT

(Mr. THOMSON of Wisconsin asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. THOMSON of Wisconsin. Mr. Speaker, last night the Nation welcomed home President Nixon after one of the most successful trips an American President has made abroad in recent years.

The trip began most auspiciously with the successful completion of the Apollo moon mission and with this impetus carried on to an equally auspicious close in Rumania.

During the President's trip he charted new and practical directions for us to follow in Asia, directions that give hope for an end to American involvement in land wars in that part of the world. And he brought renewed hope for better understandings between our Nation and nations of Eastern Europe.

Mr. Speaker, all Americans can be thankful at the results of President Nixon's trip. We hope and pray that his experience, his ability, and his efforts in dealing with the leaders of other nations will bring a lasting peace in our time.

THE PRIDE OF APOLLO 11

(Mr. FREY asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. FREY. Mr. Speaker, the Apollo 11 moon landing united this country in pride and purpose. It is true there were a few who attempted to interject politics into this great moment, questioning the President's communication with the astronauts on the moon. But even this soon died out when we learned that it had been done at NASA's request.

All Americans in one way or another participated in the moon landing. It was particularly fitting that the President, as a representative of all the people, was present at the recovery of the astronauts. The end of their journey marked the beginning of the President's journey, and the spirit of Apollo 11 accompanied him on the trip.

It was with special pride that the people of my district who helped launch Apollo 11 learned of the many people in Communist Rumania who lined the streets holding up newspaper accounts of the moon landing.

Apollo 11 showed the world that there is nothing this country cannot do if unified in purpose. Apollo 11 showed the world that the greatness of America is not just in material goods or technology, but in its spirit.

I congratulate the President for his continuing interest in our space program which began with his service as Vice President in the fifties. I salute the President for bringing the spirit of Apollo 11 to the rest of the world and showing the world what a free nation under God can accomplish.

PRESIDENT NIXON RENDERS SIGNIFICANT SERVICE

(Mr. BUCHANAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BUCHANAN. Mr. Speaker, our President has rendered a significant service to our country and to the entire free world in his recent round-the-world diplomatic mission in which I believe he has taken the great achievement of our astronauts and, in a timely fashion, helped to make it work toward better relations with other nations and toward peace with justice in our time.

The President's great expertise in foreign affairs and personal knowledge of many of the world leaders helped him in his quest. He is uniquely well-qualified for this kind of personal diplomacy, and will, in my judgment, prove himself increasingly to be as our President a significant force for good among nations. Every American has reason to commend what he has done for our country in this mission.

SOME COMMENTS ON PRESIDENTIAL TRIPS

(Mr. DERWINSKI asked and was given permission to address the House for 1 minute.)

Mr. DERWINSKI. Mr. Speaker, like so many other Members, I welcome the President home and trust that the results of his trip will be positive in the search for peace.

I should like to point out to the Members, especially those on the Republican side of the aisle, that we used to snicker a bit at the way in which our Democrat friends would rush to the well and eulogize Presidents Kennedy and Johnson after their worldwide trips.

I wish we would not fall into the same pattern. Let us treat the President's trips objectively. Let us not succumb to political idolatry.

While I believe the President conducted himself in an effective fashion and while I believe he has seized the initiative in foreign affairs, let us wait 3 or 4 months before we label this one of the great diplomatic trips of history. The results are not in yet, especially the results from some of the private conferences on the trip.

While we wish the President well and believe his trip has been successful, let us not blindly fall into the pattern of patting the Chief Executive on the back as if he possesses papal infallibility.

PROVIDING FOR AGREEING TO THE SENATE AMENDMENTS TO H.R. 9951

Mr. COLMER. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 509 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 509

Resolved, That immediately upon the adoption of this resolution the bill (H.R. 9951) to provide for the collection of the Federal unemployment tax in quarterly installments during each taxable year; to make status of employer depend on employment during preceding as well as current taxable year; to exclude from the computation of the excess the balance in the employment security administration account as of the close of fiscal years 1970 through 1972; to raise the limitation on the amount authorized to be made available for expenditure out of the employment security administration account by the amounts so excluded; and for other purposes, with the Senate amendment thereto, be, and the same hereby is, taken from the Speaker's table, to the end that the Senate amendment be, and the same is hereby, agreed to.

The SPEAKER. The gentleman from Mississippi is recognized for 1 hour.

Mr. COLMER. Mr. Speaker, I yield the customary 30 minutes to the minority, to the very able gentleman from California (Mr. SMITH). Pending that, Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this is a very simple resolution—a short horse that might be shortly curbed. This is another instance of where the so-called "other body" has taken a House-passed bill and placed upon it an irrelevant and nongermane matters. In other words, the House a social security bill dealing with withholding of taxes for unemployment. This bill went over to the other body, and the other body, after deliberating, wrangling, and maneuvering, added to it a simple provision or amendment providing for the continuation of the surtax for 6 months on a 10-percent basis.

Now, Mr. Speaker, this resolution would simply take that Senate-passed bill with this nongermane amendment from the Speaker's table and pass it. When that is done that part of the surtax and of the social security tax will become law.

Now, again, I want to point out that this is a nongermane amendment, it is another effort on the part of the other body, whether intentional or otherwise, to usurp the powers, the constitutional powers, of this body, the elected Repre-

sentatives of the people in the matter of revenue.

Now, as one who has supported the surtax extension, reluctantly, as many others did, I am going along with this, although I object to the procedure.

Now, I do not know that it is incumbent upon me to go into this, but actually, the question arises as to what happens to the balance of the House-passed surtax bill. Well, for the record's sake let it be noted that the Ways and Means Committee under the leadership of the outstanding gentleman from Arkansas has taken the rest of that bill that the House passed, including the repeal of the investment tax incentive, including the continuation of the surtax of 5 percent for the next 6 months after this 10 percent expires and put it into a package with the so-called tax reform bill.

In other words, the Committee on Ways and Means has taken everything that the Senate left out of the House-passed surtax bill and placed it into the reform package.

My understanding is that a rule will be requested on this combined bill tomorrow before the Rules Committee. And, then if that rule is granted and if the House passes that bill it will then go back to the other body and they can do such maneuvering as they see fit and make such disposal of the bill as they see fit.

Mr. Speaker, again, I want to register my protest against this procedure of the House of Lords—I do not mean it in that sense; excuse me; I want to retract that—but when the Founding Fathers set up this Government they provided that the purse strings—the raising of revenue and the making of appropriations must originate in this, the more populous body, the body that is elected by the people every 2 years. Of course, it is not necessary to remind you that our form of Government is pretty much based upon the English system with the House of Commons having the power and the House of Lords being a kind of cooling-off body. For years I have advocated, as a member of the Rules Committee, a rule of the House which would prevent the tacking of nongermane amendments in the other body upon House-passed bills.

In other words, if an amendment is put upon a House-passed bill that was not germane when that bill was considered in the House, it would be subject to a point of order when it came back to this body after a conference.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I am always happy to yield to my friend from Iowa.

Mr. GROSS. Mr. Speaker, I thank my good friend from Mississippi for yielding.

Does the gentleman recall about a year ago, when the surtax was added by the Senate to a bill on the continuation of certain excise taxes when it came back to the House, then at that time the gentleman from Iowa arose to a question of privilege of the House, and challenged the Senate action? For my pains, my resolution challenging the constitutionality of the Senate action, was defeated on a motion to lay on the table.

Mr. COLMER. I will say to the gentleman from Iowa that I do recall; and he was right.

Mr. GROSS. And the clear-cut test of the Senate's usurpation of House authority was shelved.

Mr. COLMER. I do recall the action taken by the gentleman from Iowa, which was quite appropriate. I am always happy when I find myself in agreement with the able and distinguished gentleman from Iowa.

Mr. GROSS. Mr. Speaker, will the gentleman yield further?

Mr. COLMER. I am sorry that I cannot yield further to the gentleman from Iowa at this time because of the limitation on my time.

Mr. VANIK. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I will have to yield to my friend from Ohio, and then if my friend, the gentleman from Iowa wants me to yield further to him then I will yield further, regardless of the time limitation.

Mr. VANIK. Mr. Speaker, I thank the gentleman for yielding me this time.

I would like to say that I agree with the distinguished chairman of the Committee on Rules about the need for germaneness. I hope the same principle applies when I appear before the Committee on Rules tomorrow to ask the Committee on Rules to give the Members of the House an opportunity to vote on the extension of the surtax for the first 6 months of 1970. This is extraneous to reform and should not be attached to the reform bill. The Members of the House should have a chance to vote on a reform bill without the encumbrances of a surtax extension.

Mr. COLMER. If and when the gentlemen from Ohio comes before my committee and asks for an open rule to consider this legislation, the gentleman will find me in his corner. I am not sure that I would want to limit the amendments to one amendment.

Mr. VANIK. I thank the gentleman.

Mr. COLMER. Mr. Speaker, I reserve the balance of my time.

CALL OF THE HOUSE

Mr. DOWDY. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER pro tempore (Mr. FLYNT). Evidently a quorum is not present.

Mr. SISK. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 135]

Adams	Gettys	Mikva
Addabbo	Giaimo	Moorhead
Arends	Gilbert	Morse
Ashbrook	Grover	Murphy, N.Y.
Baring	Gubser	Olsen
Berry	Halpern	Powell
Blanton	Hanna	Rarick
Brown, Calif.	Hastings	Rees
Carey	Hébert	Reid, N.Y.
Celler	Hogan	Ruppe
Clark	Howard	Saylor
Clay	Ichord	Scheuer
Cleveland	Kirwan	Stuckey
Cohelan	Lennon	Taft
Conte	Lipscomb	Thompson, N.J.
Corman	McEwen	Tunney
Diggs	McKneally	Whalley
Edwards, Calif.	MacGregor	Wiggins
Fascell	Mailliard	
Flowers	Mann	

The SPEAKER pro tempore (Mr. FLYNT). On this rollcall 374 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

PROVIDING FOR AGREEING TO THE SENATE AMENDMENTS TO H.R. 9951

The SPEAKER pro tempore. The Chair recognizes the gentleman from California, Mr. SMITH.

Mr. SMITH of California. Mr. Speaker, I yield myself such time as I may consume.

(Mr. SMITH of California asked and was given permission to revise and extend his remarks.)

Mr. SMITH of California. Mr. Speaker, as usual, the distinguished chairman of the Committee on Rules, the gentleman from Mississippi (Mr. COLMER), has explained this resolution in extremely accurate detail.

May I simply review the parliamentary situation which we are faced with here today.

Prior hereto the House passed the surtax bill. That bill also included the repeal of the 7-percent investment tax credit and some other provisions. It has not been acted upon in the other body. Then, subsequent thereto, you will recall that that particular surtax bill extended the surtax rate of 10 percent for the balance of this year—6 months—July 1 to December 31—and then 5 percent from January 1 to the end of the fiscal year, through and including June 30 of next year.

As I said, that bill has not been acted upon in the other body. Then, subsequent to that time the House passed a resolution extending the withholding tax on wage earners through July 31, 1969. That was to have expired on June 30. That measure was passed by the other body and became law. Subsequent to July 31, the House passed a resolution which extended the withholding on wage earners to and including August 15, 1969, which measure is also in the other body.

The other body then took this bill, H.R. 9951, which is a bill relating to unemployment tax withholding by quarterly installments and added on to that the extension of the 10-percent surtax until December 31, 1969. Other provisions that were in the House-passed bill on the surtax are not included in that extension. But, as I understand it, they have been included in the tax reform bill. My understanding further is that that bill will be heard in the Rules Committee tomorrow and if a rule is granted, it will be scheduled for floor action on Wednesday and Thursday of this week.

Then last week the other body placed this amendment in H.R. 9951. A request was made on the floor of the House to take that from the Speaker's table and to concur in the Senate amendments, which request was objected to.

The Rules Committee met that evening and reported out House Resolution 509.

Now, this particular resolution will—let me put it this way—the notice on the program may have been a little bit confusing inasmuch as underneath it we

have in parentheses "1 hour of debate," but that 1 hour of debate applies only to the consideration of House Resolution which is pending before us at the present time.

This measure, at the conclusion of the 1 hour of debate, will be voted either up or down. That is the 1 hour of discussion to which reference is made. In other words, there will not be an hour of debate on H.R. 9951 or the surtax extension amendment added to that bill. In other words, at the conclusion of the 30 minutes which are controlled by the gentleman from Mississippi and the 30 minutes which are controlled by myself, when that is over, the previous question will be moved. If it is adopted, then this particular bill is taken from the Speaker's table, to the end that the Senate amendment be and the same is hereby agreed to which will then insofar as both bodies are concerned continue the surtax to and including December 31, 1969, at a rate of 10 percent.

Mr. Speaker, I reserve the balance of my time.

Mr. COLMER. Mr. Speaker, I now yield 5 minutes to the gentleman from Louisiana (Mr. BOGGS).

Mr. BOGGS. Mr. Speaker, will the gentleman from California (Mr. SMITH) yield me an additional 7 minutes?

Mr. SMITH of California. I will gladly yield the gentleman from Louisiana an additional 5 minutes, and then let us see how much time the gentleman may need in addition.

Mr. BOGGS. I thank the gentleman. Mr. Speaker, the House Committee on Ways and Means has produced the most comprehensive tax reform package in the history of this great Nation.

The effect of the package must be considered as complementary to the bill passed on June 30—extending the surcharge at 10 percent through January and at 5 percent through June of 1970—when the surcharge ends—repealing the investment tax credit; postponing the repeal of certain excises on communications and autos; and removing all below the poverty line from the Federal tax rolls.

This passed the House by five votes.

After a labor of 6 months in which we filled 15 volumes of testimony, we have written a bill that makes basic changes in almost every phase of Federal income taxation to insure that every individual and corporation pays his fair share of the tax burden.

Most important, we have achieved tax equity with fiscal responsibility. We have reached a fairer system and we have provided the funds for making the changes we have made without any deficit financing.

I say we have gone beyond what anyone had dreamed we would. We have gone further than the 1963 proposals of President Kennedy. We have gone further than the 1968 proposals of the Treasury Department under President Johnson, and we have gone further than the proposals of President Nixon early this year.

As a matter of fact, we have picked out the best of all these proposals, added to that sum, and surprised many people.

These proposals by the Kennedy, Johnson, and Nixon administrations were more modest, because those administrations did not believe the House Ways and Means Committee would actually reform the tax structure because of the pressure from the many groups involved.

These three Presidents, two Democrats and one Republican, underestimated the depth of feeling of the American people for genuine tax reform.

The people have demanded that this business of some taxpayers with huge incomes enjoying all the privileges of American citizenship but managing to pay no tax at all, to support our Government. At the same time, they have seen the taxpayer making as little as $23 a week paying $42 a year in Federal income taxes, and they have seen the middle-income persons who bear the heaviest burden of all get no relief.

This bill meets those demands.

It meets those needs in the tradition of the U.S. House of Representatives, which under the Constitution has the exclusive power to initiate taxes.

This House of Representatives—your House of Representatives—is where Hamilton remarked to a visitor: "Here, sir, the people govern."

This bill is written in that spirit. It is not a partisan bill. It constitutes two essentials:

First, to cool the galloping inflation which has driven interest rates to the highest point in modern history; which has brought near depression to the construction industry, home building industry, and near panic in the financial community both here and abroad.

Second, to bring tax justice to all taxpayers. To insure that no one avoids paying tax, the bill restricts particular tax advantages in virtually all areas, ranging from the oil depletion allowance to the unlimited charitable contribution, which permits an individual to avoid tax completely by giving away property to charities and contributing nothing to the support of the Government.

By modestly lowering the oil depletion allowance—and remember, there are 110 items all cut about 30 percent—I believe we have assigned this heated controversy to the history books, much as we did to the butter-oleomargarine fight of the 1940's.

You remember how a candidate from Wisconsin had to pledge to be willing to die for butter, and how a man from the Cotton Belt had to pledge to be for oleomargarine.

Well, by lowering depletion allowances across the board by about 30 percent, we have eliminated oil depletion as a national issue.

A minimum tax or limit on tax preferences is provided in this bill. This limit means that if a man has let us say $10 million, half of that, or $5 million, would still be tax exempt, but the other $5 million would be taxed at regular rates.

Thus, thousands either paid no taxes, or greatly reduced taxes through these methods.

So the people have demanded tax relief for low- and middle-income taxpayers—those raising families and seeing inflation cut into them, and the older citizens on fixed incomes. This bill provides it in the way of a low-income allowance of $1,100 to replace the present minimum standard deduction of $300 for a single person and $600 for a married couple with two children.

When this provision is fully effective in 1971, it will provide tax reduction of more than $2.1 billion to the low-income persons.

Relief for middle-income taxpayers comes in the way of an increase in the standard deduction. This is of particular benefit to taxpayers with incomes of between $7,000 and $15,000. Because of the revenue cost involved, a balanced fiscal program requires that the increase in the standard deduction from the present 10 percent with a $1,000 ceiling take place in three stages: To 13 percent with a $1,400 ceiling in 1970, to 14 percent with a $1,700 ceiling in 1971, and a final increase to 15 percent with a $2,000 ceiling in 1972. For a taxpayer with $10,000 of income who used the standard deduction, this means an increased deduction of $300 in 1970, $400 in 1971, and $500 in 1972.

In addition, rate reduction, beginning at income levels above the income levels where the low-income allowance and the standard deduction provide the greatest tax relief, will provide tax reduction to the middle- and upper-income taxpayers. The rate reduction is generally 5 percent for this group. The rate reduction for the upper rates is necessary because these high rates have been one of the main sources of pressure to provide tax shelters. By reducing these rates, the top rate of 70 percent is cut to 65 percent. We can, in conjunction with the 50-percent tax limit on earned income, reduce the pressure to undo the reform and loophole closing of this bill.

First, the head of household for over 35;

Second, the widow and widower situation;

Third, tax averaging; and

Fourth, moving expenses deductions.

I want to emphasize that this is not a Democratic bill, it is not a Republican bill. It is a bill for our country, and it was reported by the committee, as far as I can remember with only two dissenting votes.

I want to pay special tribute to President Nixon, who, once having been convinced of the necessity of this program, "bit the bullet," and went to work to pass comprehensive legislation, and to President Johnson, who convinced the incoming administration that this had to be done.

ROGERS MORTON is chairman of the Republican National Committee, and he serves on the Ways and Means Committee. I am vice chairman of the Democratic National Committee, and I serve on the Ways and Means Committee. We both worked for this package. This is a bipartisan bill.

The work done by the staff of the Joint Committee on Internal Revenue Taxation, headed by Larry Woodworth; the work done by the staff of the Ways and Means Committee, headed by John Martin; the Treasury Department, headed by Secretary Kennedy and his Assistant Secretary in Charge of Congressional Affairs, Edwin S. Cohen; all were outstanding and they deserve the commendation of all Americans.

This great relief can be granted with

total fiscal responsibility. The projections show that for each year beginning this year, there will be substantial surpluses in both the unified and administrative budgets, and this contemplates, God forbid, the continuation of the war in Vietnam and a vastly increased expenditure for weapons.

I have just come from a briefing at the White House with President Nixon and others. I was greatly encouraged over the prospect for the lessening of world tensions. If this comes to pass, many billions of dollars now being used for destructive purposes can be put to work to rebuild our cities, to tear down our ghettos, to make the land serve the people, and make life livable and enjoyable everywhere in America.

Now is a moment for us to raise our sights. When Isabella hocked her jewels to a strange man from Italy named Columbus, I am sure her financial advisers questioned her sanity. Then, it was 3 months before she knew that he had discovered a new world. At that time, Europe was in a period of despair—men were killing one another in religious war after religious war, and there appeared to be no hope.

Shortly thereafter, another woman, Elizabeth, Queen of England, came along and she led Drake and all the others, as did the Spanish and Portuguese, to encourage their explorers to circumnavigate the earth.

And the despair of the late 15th century was dissipated by this great new challenge to mankind.

Last week, when you heard two men speak to you from the moon, when you saw them walk on the moon, you must have thought in terms of Samuel Morse, when he said—words engraved on a plaque in this Capitol Building—at the time of the first telegraphic message from Baltimore to Washington, a distance of about 35 miles, "What hath God wrought?"

Now, indeed, what hath God wrought?

Hopefully, in the words of the poet MacLeish, "We are indeed all brothers on this earth."

Prior to the events of last week, there was much despair in our Nation, disorientation of the young, a widening gap between the blacks and whites, between the inner city and the suburbs, our university campuses had become so disorganized that National Guardsmen and police were required to maintain law and order.

Hopefully, now, we can turn away from the strife at home and the strife abroad—the wars and bloodshed costing an untolled billion in treasure.

Hopefully, we can now think of man as he really is—created in the image of God—a finite creature with infinite capacity.

Hopefully, this legislative package will return confidence first to all Americans in our ability in both the executive and legislative branches to govern: In our ability to achieve economic stability without runaway inflation; in our ability to retain a healthy growth rate and thus prevent what could have developed into a panic resulting in a depression which would have made 1929 look like a Sunday afternoon breeze. And haunt the Democratic party for 30 years to come.

And, finally, restore the confidence the nations of the world in the ability of Americans to work together as one nation as we manifest determination and accomplish the miracle of last week.

Mr. Speaker, I include with my remarks a résumé of the committee action which appears in the New York Times of yesterday, and a résumé which appears in the Wall Street Journal of Friday:

[From the New York Times, Aug. 3, 1969]

WASHINGTON, Aug. 2—The House Ways and Means Committee, after more than five months of work, has completed action on a tax reform bill that runs 362 pages and is generally believed to contain the most extensive revisions of the tax law ever put together in one package.

Its dozens of provisions range from a change in the standard deduction that is expected to reduce the taxes of some eight million taxpayers to provisions that eliminate special tax preferences that affect fewer than 100 individuals.

An analysis of some of its most far-reaching provisions follows:

MINIMUM TAX AND ALLOCATION OF DEDUCTIONS

These two provisions, in combination, were aimed at making sure that all individuals of considerable means paid a substantial amount of Federal income tax. The aim was not fully realized in the bill the committee approved, which will still permit some individuals in the oil industry to pay no Federal income tax at all. (See Oil Industry below.)

The minimum tax is a sort of group approach to a number of existing preferential provisions of the tax law.

The provisions of the minimum tax proposal say, in effect, that an individual must lump together all of his income that is rendered tax-free by various provisions of the law—the one-half of capital gains that is not taxed at all at present, for example. If this tax-free income exceeds half of his total income (providing it is more than $10,000) then tax must be paid at the regular rates on that portion which does exceed half the taxpayer's total income.

Other forms of favored income that would be subject to the minimum tax include interest on tax-free city and state government bonds; losses from farms not really operated for profit; depreciation deductions on real estate that exceed actual depreciation, and the untaxed appreciation in the value of property given to charity.

Allocation of deductions

The allocation of deductions also deals with tax-free income, but the list of items is somewhat different. On the one hand, only interest from newly issued state and city government bonds need be counted. But the income rendered tax-free for oil operators by excessive depletion and drilling deductions is included in the computation of the allocation of deductions.

Fundamentally, the allocations provision is designed to make sure that no one with large amounts of tax-free income, who also has taxable income, can wipe out all or even most of that taxable income through the use of deductions. This occurs widely now.

An example illustrates the situation:

Suppose an individual had $100,000 in tax-free interest, the untaxed half of capital gains, and so on. Suppose he also had a taxable salary of $50,000. If he had interest payments, local taxes, charitable contributions and other deductions totaling $50,000, he would now pay no Federal income tax.

Under the provision for allocation of deductions, he could deduct from his taxable income only one-third of his interest, local taxes and so on—the amount of his total income represented by his taxable income. Actually, the deductions permitted would be a little more than one-third in this example, because the committee's bill permits the first $10,000 of tax-free income to be ignored.

Effect on the wealthy

The minimum tax and allocation of deductions will not only force some tax payments from almost all of the wealthy who currently pay no taxes at all, but it will also bring up to a fairly substantial level of tax payments many individuals who now pay relatively trivial amounts of tax.

This indirect group approach to tax preferences, rather than a head-on attempt to eliminate the underlying preferences themselves, is one of the more controversial features of the tax reform bill.

Those who oppose this approach say that it constitutes far less than a half-loaf in terms of eliminating tax preferences that they consider unjustified. They argue further that the indirect elimination of part of the preferences will make it harder to enact further reforms, because the public at large will think the problem has been taken care of, whereas it actually has not been.

Supporters of this approach, who include the present Administration's and the Johnson Administration's Treasury Department, say that in attempting tax reform, you take what you can get, and this partial change is better than nothing.

In addition, they argue that enactment of the minimum tax allocation of deductions may make it easier to reduce further or eliminate these tax preferences.

Their reasoning is that the fight against outright elimination will become easier as the preferences come to mean less and less to those who have them because of the operation of the minimum tax and allocation of deductions.

REAL ESTATE

The changes proposed in the taxation of real estate operations are aimed at reducing existing tax preferences granted owners and operators of commercial buildings, without diminishing the incentives that the tax preferences provide for construction of apartment houses.

While the committee's essential aim was to continue the incentives for investment in relatively low-cost, low-rent apartments, it found itself unable to devise a rule that would retain the incentives for low-income housing while eliminating them for middle-income and luxury apartments. It therefore left intact all of the existing preferential sections of the law applying to apartment houses.

The basic tax preference that real estate operators have is the ability to amortize their properties—that is, to deduct depreciation from their income—faster than the depreciation actually occurs. At present, depreciation at double the actual rate is permitted.

The committee left intact this double depreciation for newly built residential housing. But for other new building, effective on the date of the committee's decision, July 24, the depreciation deductions would be limited to one and one-half times the actual rate of depreciation.

Depreciation of old buildings

The ability of real estate operators to buy old buildings and still deduct a depreciation charge in excess of actual depreciation was ended completely. Depreciation on any old building bought after July 24 would be limited to the actual, or "straight-line," rate.

The committee also toughened the provision under which the Treasury can recapture from a building owner excessive depreciation that has been taken on a building that he subsequently sells.

Finally, with its focus on problems of slum housing, the committee provided a new incentive for rehabilitation of old residential buildings. Though these buildings, once refurbished, might have a useful life of many years, the cost or rehabilitation could be deducted in just five years.

The incentive is expected to be effective,

and there are already some reports of syndicates that may be formed to rehabilitate slum housing and take advantage of this new tax preference.

Double depreciation

The committee's decision to keep double depreciation for residential buildings and cut the depreciation on other types of buildings on one and one-half times the normal rate was a more limited action than the Treasury had recommended. It wanted these cutbacks as the first step in a two-step program of abridgement of real estate tax preferences.

Its recommended second step, in two or three years, would have eliminated the rapid depreciation for all types of buildings other than residential and for apartment houses other than low-cost.

The Treasury believed some means of defining the boundary between low-income and middle-income apartment housing could have been devised in the meantime, along with necessary changes in other Federal laws that assist housing.

The committee's changes are expected to increase the taxes of individuals and corporations in the real estate business by $400-million to $500-million annually after a few years. Since the provisions apply only to future real estate transactions or buildings, the increase in the first year would be only about half this amount.

OIL INDUSTRY

With the public at large, probably the most popular change that the committee voted was its reduction of the depletion allowance permitted the oil and gas industry from 27½ to 20 per cent. Proportional decreases were also voted in depletion allowances for almost all of the more than 100 other minerals on which smaller amounts of depletion may be taken. The depletion allowance is a simple deduction from gross income.

The committee also voted changes in the taxation of the oil industry that may have a greater impact on its operations than the cut in the depletion allowance.

It left almost untouched the present tax preference—accorded the oil industry alone—that can be coupled with the depletion allowance to permit many oil operators, especially the unincorporated independents, to escalate all, or nearly all, Federal income tax on millions of dollars of income annually.

The untouched provision is the ability of the industry to deduct in the year paid out most of its costs of exploration for/and development of oil wells. These costs are comparable to capital outlays, which in other industries, have to be deducted over a period of years. The special preference for the oil industry is called the "expensing of intangible drilling costs."

While the committee formally estimated that the cut in the depletion allowance for oil would increase the taxes paid by the oil industry by $360-million annually, there is general agreement that the estimate may be high. That is because the "expensing of intangible drilling costs" can still be used—even with the cut in depletion—to reduce taxable income as much as before.

The combination of depletion allowance and intangible drilling costs works like this:

Suppose an independent oil producer had gross income of $1-million from his existing wells. Suppose his business expenses—payroll and so on—totaled $300,000.

At present, in making out his tax return, he can deduct $275,000 from his gross income as the depletion allowance. That, with his regular operating expenses, makes $575,000 in deductions. If he wants to avoid all Federal income tax, he has to spend $425,000 in exploring and developing new wells, which he can then also deduct. He does not actually have no income; he has the $275,000 represented by the depletion allowance. But he has no taxable income.

Income cut to zero

With the depletion allowance cut to 20 per cent the deduction in the example would be reduced from $275,000 to $200,000. But the oil operator could still reduce his taxable income to zero simply by increasing his drilling expenses from $425,000 to $500,000. The additional amount he spent would produce more income for him in the future—against which a still-larger depletion allowance could be taken.

However, not all oil operators—particularly not the giant integrated corporations—are actually able to keep up their drilling expenses to the point of reducing their taxes to nothing, so the change in the depletion allowance will increase the industry's taxes to some extent.

Possibly greater impact on the industry would come, however, from the committee's actions to remove the tax advantage from some elaborate arrangements known as "carved out production payments" and "ABC transactions," in which several parties are involved in the sale, back and forth, of mineral rights or the shifting of income from one year to another—all for purposes of avoiding income taxes. The additional tax collections from these changes are estimated at $200-million a year.

In addition, the committee also clamped down on some of the tax advantages that can arise from the overseas operations of oil companies, especially those in parts of the world where royalties are paid to sovereigns for drilling rights. No real estimate has been made of the revenue effects of this provision.

TAX-EXEMPT FOUNDATIONS

A large number of restrictions were voted by the committee. They fall into two rough groups: limitations on the financial and business dealings of the foundations and restrictions on the way they can spend their money.

In addition, the committee voted a 7½ per cent tax on the income foundations have from their investments and an alternative tax of 5 per cent of the market value of a foundation's assets to prevent foundations from deliberately shifting into low-earning assets to avoid the tax.

There will be little revenue impact from the restrictive provisions the committee adopted. Raising revenue was not the committee's intent in this area. Instead it wanted to set forth new limitations on what foundations may do and still retain their tax-preferred status.

The restrictions on financial transactions are mainly aimed at stopping individuals from setting up foundations essentially for tax-avoidance purposes rather than the educational, scientific, civic, or other public purposes for which foundations are supposed to exist.

FOUNDATIONS' REACTION

The big foundations whose names are well-known to the public—Ford, Carnegie, Rockefeller, and so on—have no objections to these provisions.

The committee's decisions to limit foundation activities have stirred considerable protest, however, although many of the limitations originally voted were subsequently modified.

A bar against direct foundation financing of voter registration drives remains in the bill, although indirect financing through other organizations would be permitted. (The idea behind this ban was that such voter-registration drives are really not nonpartisan.) In addition, foundations would be barred from any attempts directly to influence legislation, even if such attempts did not constitute a substantial portion of their activity. They could still sponsor independent research on issues that might be related to legislative matters, however.

CURBS ON AID TO OFFICIALS

Details concerning the sources and disposition of foundation income—including the names of recipients of foundation grants—would be required to be made public.

No grants could be made directly to individuals except under specified standards, announced in advance, and approved by the Internal Revenue Service.

In addition, in an attempt to reduce the concentration of economic power in the hands of foundations, the committee voted generally to * * * ship of more than 20 percent of the voting stock of any company.

OTHER TAX-EXEMPT ORGANIZATIONS

Most tax-exempt organizations, such as educational institutions or charitable organizations, must pay taxes on the income they receive from business activities that are completely unrelated to the purpose for which they received their tax-exemption.

The income from any type of manufacturing would be taxable, for example.

At present, however, churches, social welfare clubs, civic leagues, social clubs and fraternal beneficial associations pay no tax on such "unrelated business income." (They would be required to do so, under the committee's bill.)

Churches were given six years to dispose of their unrelated businesses before the tax is imposed.

[From the Wall Street Journal, Aug. 1, 1969]

HOUSE UNIT PROPOSES $6.5 BILLION CUTS FOR TAXPAYERS; SENATE AGREES TO EXTENDING 10-PERCENT SURTAX ONLY UNTIL DECEMBER 31

MASSIVE REFORM BILL RAISES BURDEN ON RICH PERSONS, AIDS MIDDLE, LOW GROUPS

(By Fred L. Zimmerman)

WASHINGTON—The House Ways and Means Committee, in a stunning climax to months of work on a tax-reform bill, proposed nearly $6.5 billion of rate reductions and other benefits for taxpayers, mainly in lower and middle-income brackets.

The massive reform and relief bill, described by a Congressional tax expert as the "biggest restructuring of the tax code in history," is scheduled for a House vote next Thursday.

The politically difficult decision legislators will face in voting to raise substantially the tax burden on most wealthy individuals and on a variety of industries will be made easier by the committee's inclusion of sweeping relief for most individual taxpayers.

The bill is designed ultimately to increase annual Federal revenue through "loophole-closing" by almost precisely the same amount that the Treasury will lose each year through the rate reductions and other tax breaks the committee approved.

Rate reductions totaling $2 billion, which will take effect during calendar 1970 and 1971, will average 5% of taxable income when fully effective. Application of the cuts will begin at the point in current tax tables where individuals become subject to a 21% tax rate. This level generally applies to married persons with $8,000 of taxable income and single persons whose income is $4,000.

The committee also decided on a major increase in the standard deduction of 10% of adjusted gross income, with a $1,000 maximum—the device used by individuals who don't file itemized returns. The deduction would be raised gradually to an eventual level in 1972 of 15%, with a $2,000 maximum.

Standard deduction change

In calendar 1970, the standard deduction would go to 13% with a $1,400 maximum, and the following year it would rise to 14% with a $1,700 maximum.

The committee also decided to cut the top individual tax rate to 65% of income from

the current 70%. Additionally, it sets a 50% maximum tax rate on earned income, as of next year. This would benefit those relatively few wealthy persons who currently pay Federal income tax totaling more than half their income because they lack sufficient deductions and exemptions.

The committee also decided to lessen the tax burden on single persons over age 35 who maintain a household by allowing them to claim "head of household" status when they file tax returns.

Widows and widowers with dependents who are under age 19 or attending college would be allowed to file joint returns, generally lowering their tax liability.

The committee also decided to abandon its earlier plan to phase into law gradually a "low-income allowance" that will reduce or eliminate the tax liability on 12 million returns of lower-income persons. Making this allowance fully effective next year will constitute a bigger tax break than originally planned for low-income families.

As a final tax-tightening action, the committee voted to increase the corporate tax rate on long-term capital gains to 30% from 25%.

By 1975, when most of the provisions will be fully effective, the committee's reform package will have increased annual Federal revenue by $7.02 billion and decreased revenue by nearly $6.88 billion, for a net annual gain of $145 million.

Thus, the committee seemingly has made good on the long-standing prediction of Chairman Mills (D., Ark.) that the committee's tax-reform bill—on which work began last February—would have a "nearly neutral" revenue effect.

Costs to Government

Other revenue estimates, all still tentative, show the standard-deduction boost costing the Treasury $2.1 billion a year by 1972, and the low-income allowance costing the same annual amount starting next year.

The estimated overall revenue gain of about $7 billion includes an annual pick-up for the Treasury of about $3.3 billion from proposed repeal, retroactive to last April 18, of the 7% tax credit for business-equipment purchases.

Imposition of the 50% maximum tax on an individual's earned income initially would cost the Treasury an estimated $200 million annually but eventually the loss would drop to about $100 million.

Although $6.5 billion of tax relief will be an attractive proposition to vote for, many lawmakers will agonize over supporting the bill's tough tightening of a host of long-standing preferential tax arrangements.

Among the bill's most controversial provisions are these:

A cut to 20% in the 27½% oil-depletion allowance, a special tax break that's cherished by the politically potent oil industry but is widely regarded by Congressional liberals as the most glaring symbol of what's wrong with the Federal tax code.

Imposition of a tax of 7½% of net investment income on currently tax-exempt private foundations, as well as a series of stringent new curbs on their activities.

Elimination of the 25% maximum alternative tax rate on long-term capital gains, and lengthening to one year from the current six months the holding period that's required before sale of an asset is eligible for capital-gains treatment.

Imposition, under certain circumstances, of a tax on individuals' interest receipts from currently tax-exempt state and local bonds.

Establishment of a Federal subsidy arrangement designed to encourage state and local government to issue taxable, rather than tax-exempt, obligation. The committee decided that the subsidy should be fixed by the Treasury Secretary within a range of 25% and 40% of a bond's interest yield, except that during the first five years that the arrangement is in effect the range would be 30 to 40%.

FINAL ACTION IS EXPECTED ON MONDAY; EMPLOYERS TOLD TO CONTINUE WITHHOLDING

(By Arlen J. Large)

WASHINGTON.—Congress failed to meet in tidy fashion last midnight's deadline for maintaining income tax withholding rates at present levels, but lawmakers confidently insisted it won't make any difference.

Agreeing, the Internal Revenue Service "advised" all employers to continue using the present tables and rates for income tax withholding. These rates and tables include both the regular income tax and the surcharge.

As Congress quit for the night, this was the situation:

—Both the House and Senate had approved an extension of the 10% surtax through Dec. 31. But approval didn't come in identical legislative form, as required, and President Nixon wasn't here to sign any bill, so the new Dec. 31 expiration date isn't yet law.

—Legally, employers today are entitled to withhold tax from payrolls at the lower pre-surtax rates. But the House is prepared to vote Monday to accept the Senate version of the bill, extending both the surtax and the present withholding rates, and send it to the White House. President Nixon is scheduled to be home from his round-the-world trip by Monday and will be ready to sign the bill into law.

—Congressional tax-writers and Treasury officials contend that, during the interval between last midnight's expiration of surtax-based withholding schedules and their expected restoration sometime Monday, employers will be safe in withholding payroll taxes at the present level.

Approval seen Monday

Technically that's illegal, but their justification would be the fact that both the House and Senate are on record as wanting the surtax extended until Dec. 31, and the strong probability that the legislative mess will be tidied up on Monday. Both Chairman Mills (D., Ark.) of the House Ways and Means Committee and Rep. Byrnes of Wisconsin, the committee's ranking Republican, predicted the House will approve the surtax extension in final form on Monday.

IRS Commissioner Randolph Thrower "advised all employers" in a statement last night to continue using the present rates and tables in computing how much Federal income tax to withhold from workers' pay. He went on:

"Now that both the House and Senate have voted to extend the 10% income tax surcharge . . . Congress is expected to complete final action on the surcharge extension in the next few days. In view of this anticipated action it would be in the interests of both employers and employees to continue the present withholding rates, even though there may be a few days in which the statutory basis of the surcharge is in transition. This will maintain the withholding that many employes will need to meet their tax obligations, assuming the passage of the legislation."

Congress enacted the 10% surtax on individual and corporate incomes last year, and the surtax expired on June 30, as provided by law. But as the June 30 date approached, efforts to renew the surtax became mired in demands for basic reform of the tax laws. Old-fashioned squabbling between Democrats and Republicans and between the House and the Senate added to the problems. The result is today's confusion for employers on payroll withholding and the spectacle in Washington of 535 wrangling lawmakers who couldn't meet a deadline.

Previous House action

In late June the House narrowly voted to extend the surtax at its 10% level through Dec. 31 and to let it drop to 5% through the first half of 1970, after which it would expire. Included in the same measure was repeal of the 7% tax credit for businessmen's equipment investments, and a special provision removing low-income families from the tax rolls.

This bill hit the Senate at a time when Majority Leader Mansfield of Montana and other key Democrats were building a crusade for tax reform intended to close "loopholes" for the privileged and give a break to middle-income families. With the surtax extension obviously being held in the Senate as a hostage for that crusade, Congress acknowledged missing its first deadline—June 30—by voting a 15-day extension of the payroll withholding rates based on the expiring surtax. This was intended to give everyone more time to sort out the surtax reform muddle.

Then began a series of partisan maneuvers and rejected "compromises," which ended in a ringing verbal pledge by all Senate leaders with any rank whatever to bring a big tax reform package to the floor by Oct. 31. Only yesterday, with that wrangle evidently settled, did the Senate begin serious voting on what to do about extending the surtax.

On one key vote, the Senate decided 66 to 34 to defer for the time being any repeal of the 7% investment credit. It was generally agreed this will be accomplished in the promised tax reform package, and the repeal will be retroactive to April 18. A number of industries are fighting to continue using the investment credit for purchases of particular machinery, and various Senators will try to exempt these businesses from a general repeal. But the Senate didn't want this fight to interrupt the effort to extend the surtax itself; that's why the investment credit issue was postponed.

Sen. Mansfield and his Democratic troops already more or less had agreed on an extension of the 10% surtax through Dec. 31 only, letting it drop completely thereafter. Most Senate Republicans, regarding this as an overtly partisan proposal, voted against it. The Democrats narrowly prevailed, 51 to 48.

Then Sen. John Williams of Delaware, senior Republican on the Finance Committee, sought to give the Nixon Administration the rest of what it wants: The further extension of the surtax at 5% for the first half of 1970, as the House already had voted. But with all 100 Senators present in a rare display of perfect attendance, and with voting largely following party lines, the Democrats defeated that effort, 59 to 41. Then the Senate passed the bill—extending the 10% surtax through Dec. 31 only—by a vote of 70 to 30.

Not long after the final vote, the Senate adjourned for the day, leaving it to the House to decide how to reassemble these various scraps of legislation in which the two bodies agreed only on the extension of the 10% surtax at least through Dec. 31. Last night, after the House had adjourned, the Rules Committee met briefly and approved a plan that would bring the Senate-passed bill to a House vote on Monday afternoon. If the Senate measure is approved there, as expected, the surtax will be legal again.

Treasury Secretary Kennedy, in a statement, said the Senate vote "underscores the general consensus on the importance of action to curb inflation." Acknowledging that the extension "is six months short of the full year requested by the President," he took comfort in remarking that "Senate Democratic leaders gave assurance of early consideration" to the House-passed bill of late June that would extend the surtax through next June 30 at 5% and would repeal the tax credit for investment.

(Mr. BOGGS asked and was given permission to revise and extend his remarks and to include extraneous matter.)

Mr. SMITH of California. Mr. Speaker, I yield 4 minutes to the gentleman from Iowa (Mr. GROSS).

Mr. GROSS. Mr. Speaker, on the subject of the constitutional prerogatives of the House, I remind you that a year ago, when the Senate took a bill to continue certain excise taxes and added to it the surtax and sent it back to the House, I then challenged the action of the Senate by arising to a question of the privilege of the House. I did not see many hearts bleeding at that time in support of my contention that the Senate had gone beyond its constitutional authority in originating tax legislation. It is not difficult to remember that the resolution I offered was tabled by some of those who are now shedding tears over the treatment they are getting from the other body.

Mr. Speaker, in view of the fact that contradiction is an accepted way of life here, it is appropriate that this legislation to continue the surtax be considered today, coming as it does hard upon the heels of House approval of the health, education, and labor appropriation bill which was ballooned $2 billion above the spending rate of last year.

This despite all the fine talk on the part of some—and I said "some"—Members on the Ways and Means and Appropriations Committees who assert on one day that inflation cannot be halted by picking the pockets of taxpayers for additional billions to spend, and then, with the greatest of ease they vote for an appropriation bill that has been kited by $2 billion.

This is contradiction and worse. This is pouring gasoline—not water—on the flame of inflation.

Virtually every spending bill that has come before the House in this session has been increased over last year's spending rate and yet there is the colossal gall to continue to sock the taxpayers. Instead of fiscal responsibility there is the resort to fiscal quackery. Why not spending reform? Or is it proposed to continue kidding the public?

In a related area, our common-use currency has been debased and debauched. A few days ago, the U.S. Government joined with Europe's international bankers to perpetrate a further debauchery—the issuance of paper gold. Time was when civilized nations settled their debts in dollars, pounds, and gold metal.

Henceforth all that will be necessary will be to oil up the printing presses, put some gold colored ink in the ink wells on the printing presses, feed in the paper and presto—there is the money—paper gold, billions of it.

Mr. Speaker, until there is a clear demonstration—and I do mean a clear demonstration—that the revenues from the surtax are not going to be hauled to Washington merely to provide for more spending, more debt, and deficit, I cannot and will not vote to continue the surtax.

Mr. COLMER. Mr. Speaker, I yield 3 minutes to the gentleman from California (Mr. SISK), a member of the Rules Committee.

Mr. SISK. Mr. Speaker, I rise in support of this resolution.

I join with my distinguished friend the chairman of the Committee on Rules in deploring the procedures we are faced with today. It would be my hope that there might be some method found, either through legislative reorganization or some other approach, to avoid this all-too-frequent procedure whereby nongermane subject matter is added in the other body.

I think that the increasing frequency of this procedure is really becoming of great concern to most Members of this House. So, Mr. Speaker, I wish to raise my voice, along with that of the gentleman from Mississippi and others, in the hope that we might be able to develop some way to avoid this kind of procedure in the future.

Let me say that it would be my hope the House will proceed to pass this resolution today, since it is authorizing a 6 months' continuation of the surtax in the first place, and certainly it is my hope that we will proceed later this week to pass a good and meaningful tax reform bill and see if we cannot bring about a more equitable distribution of our tax load.

Mr. COLMER. Mr. Speaker, I yield 2 minutes to the gentleman from Louisiana (Mr. WAGGONNER).

Mr. WAGGONNER. Mr. Speaker, a few moments ago my colleague from Louisiana (Mr. BOGGS) spoke at some length and even then briefly about the so-called tax reform bill, H.R. 13270, which was introduced by the House Committee on Ways and Means Friday last. I hold here in my hand a copy of that proposal. I cannot help but note that this bill as printed contains 368 pages. Mr. Speaker, no Member of this House saw a full and complete copy, except that which was carried in the CONGRESSIONAL RECORD Friday, until today. As yet the only part of the report on this Tax Reform Act of 1969 is part I and it is 226 pages long. I understand that there are other parts to follow. How many I do not know, but probably only one other.

Mr. BOGGS. Mr. Speaker, will the gentleman yield to me?

Mr. WAGGONNER. In just a moment.

I do not consider myself to be stupid or a brain, either. The House Committee on Ways and Means has been giving consideration to tax reform in one form or another for a period of years, not just since February of this year. I do not believe, in all seriousness, that the Members of this House can give the consideration to this legislation that it is due and then cast an intelligent vote and know how this affects them and the people of this country at the time that we are going to be called on to vote, Thursday night. This is considered to be the most extensive tax reform bill in history. I simply believe this House needs more time to see what this bill does.

I have made a supreme effort to learn what has been going on in the committee hearings and I have read every account which has been published, but as to the actual consequences of this legislation, there is little I know and little anyone not a member of the Ways and Means Committee knows.

I want to know what I am voting for or against. I want to know how this legislation will affect every man, every businessman, every housewife. This bill covers 27 areas of taxation and is, in my studied opinion, the most complex piece of legislation that has come before the House in several decades. I beg the House to give us time to study this bill and its report. So far, we have been handed 594 pages of legislation and report, with even more to come. How can we possibly vote intelligently on this complicated measure on such short notice? Frankly, I believe the only reason we are being asked to rush this bill through is because there is serious doubt it would pass if we knew what was in it.

I am not interested in the snap judgment of some newsman who has probably had less contact with this legislation than I have had. I need time—we all need time—to study the details and the ramifications of this bill before we vote it up or down. I urge the leadership to give us that time.

Mr. BOGGS. Will my distinguished colleague yield to me?

Mr. WAGGONNER. I am happy to yield to the gentleman.

Mr. BOGGS. I never like to suggest outside sources to the gentleman, but I would suggest that he read the following: The New York Times of yesterday has a complete résumé of all the reforms. The Wall Street Journal of this morning has a complete résumé, and the Congressional Quarterly has a complete résumé.

Mr. SYMINGTON. Mr. Speaker, I rise in support of the surtax for the remaining months of this year. Only a few weeks ago there was little prospect that broad tax reform, and some tax relief, would be forthcoming. Opposition to the surtax at that time effectively registered this concern, and reform legislation will now be considered at an early date: this week in the House, and shortly thereafter in the Senate. Today I will vote in favor of the 6-month extension to fight inflation. By combining it with reform and relief we can maintain the confidence of the taxpaying public, as well as the economists; we insure that our responsibility to the economy is matched by our responsibility to the middle-income taxpayer.

Mr. HORTON. Mr. Speaker, the question before us is whether to approve the temporary, 6-month extension of the income tax surcharge which the Senate approved last week.

At the end of June I opposed the full-year extension of the surtax because I felt that it would, without needed tax reforms, intensify tax inequities for middle-income Americans. During debate on the full-year extension, I stated that I would favor temporary extension of surcharge withholding rates for a few months—as many as it would require Congress to enact tax reforms with deliberate speed.

The disturbing fact about extending the surcharge is that it is applied to the present inequitable tax base. A month ago, there was little or no prospect that the tax structure would be improved even in calendar year 1970. All we had to go on was talk about tax reform. Some members of the Ways and Means Committee indicated that they did not expect action on reforms until the second session of this Congress. Further, I felt that if the 1-year extension of this surtax were adopted, it would have removed pressure for prompt action on reforms.

Several legislative developments have taken place in the past month. First, and most important, the Ways and Means

Committee, after months of concentrated deliberation, has reported to the House, a 368-page bill containing many meaningful reform provisions. That bill, H.R. 13270, is scheduled for debate and voting at the end of this week. Second, the Senate leadership has placed a priority on tax reform by refusing to enact the full-year surcharge extension as passed by the House. Senator MANSFIELD has indicated, however, that Senate consideration and debate of a tax reform bill would carry into late October of this year.

I concur in the administration's view that the Federal budget must be balanced and inflation curbed. I agree that the surcharge, while it is far from the only tool that is needed, is one weapon needed to assure a balanced budget. I believe that those of us who have placed a higher priority on reform than on the surcharge have won a very significant victory.

It is clear that there will be no full year extension of the surcharge until and unless we have action on a tax reform bill. The final 6-month extension, from January 1 to June 30, 1970, is attached to the reform bill itself. Further, it appears that it will take almost a 6-month temporary extension to continue the surtax during congressional deliberation on the tax reform bill. If the Senate majority leader's estimate is correct, it may be November before the President has a reform bill for signature.

I feel that the very close vote on the full-year surtax extension in the House, and the opposition to the extension in the Senate have precipitated significant action on essential tax reforms. We have some further assurance of success in enacting reforms because if this year closes without the enactment of a reform bill, it will also see the end of the surtax.

Therefore, I feel I can support an extension of the surcharge until December 31, with some assurance that meaningful tax reforms will be on the books before the year's end.

Mr. REID of New York. Mr. Speaker, when this House voted for a 12-month extension of the surtax on June 30, I said:

> I feel most strongly that before final enactment of this legislation, there must be major tax reform, fair to all and to relieve the hard-pressed middle-income family, and I will oppose final enactment of the surtax unless tax reform is also passed.

For this reason, Mr. Speaker, I feel constrained to vote against the 6-month extension of the surtax today. I do not feel that there is sufficient assurance that we are going to get tax reform that will result in meaningful relief for middle-income families nor action to close serious, inequitable loopholes. I feel that I would be breaking faith with my constituents if I supported a final surtax extension before such reform is assured.

The distinguished gentleman from Arkansas (Mr. MILLS) and his colleagues on the Ways and Means Committee have reported out a tax reform bill which we will take up later this week and which contains improvements that have been long overdue. Yet I do not think that the small downward revision in the rate structure and the phased increase in the standard deduction will really make a significant difference to the middle-income family with a mortgage, medical bills, school taxes, and children to send to college. A minimum tax on the wealthy and restrictions on the tax preferences they now enjoy provides symbolic relief to middle-income families, but actually does little to lower their tax payments.

While there appears to be agreement to report a tax reform bill to the Senate floor by October 31, it is far from clear that the Senate will act firmly to close several blatant loopholes, such as the oil-depletion allowance.

Indeed, the bill reported out of the Ways and Means Committee could be stronger on this and other sensitive issues, and the measure before us today has been stripped of tax relief for the poor and repeal of the 7-percent investment tax credit—although both provisions have been included in the omnibus reform bill.

Thus, as the New York Times commented this morning:

> The unanswered question is whether the impulse for reform will be seriously blunted now that the surtax is no longer being held hostage by the liberal forces. . . . With an agreement on the surtax, there is now sure to be more backsliding in the face of pressure from the special interest lobbies.

There is much talk these days about what Americans in the heartland really want. I think that many Americans, in whatever section of the country they reside, want relief from an intolerable and unfair tax burden. I am not satisfied that that relief is assured, and, while there are sound fiscal and monetary reasons for extending the surtax, I cannot in good conscience vote for an additional tax burden on American wage earners at this time.

There are, to be sure, dangers in not enacting the surtax extension; but equally, there are dangers in not enacting major and meaningful tax reforms. The administration has had a number of months to work out a comprehensive and equitable plan with business, labor, and the financial community regarding the economy, including tax reform; continuing incentives for our competitive free enterprise system; spending controls on farm subsidies and the military-industrial complex; curbs on interest rates, provisions for dealing with the balance of payments, trade deficits, special drawing rights, and international liquidity; and other elements. I have indicated my willingness to vote for the surtax as an essential item in this picture to help control inflation, but not as the only item that is going to be acted on this year.

The surtax will not provide relief alone; nor will it alone control skyrocketing consumer prices. In short, there has just not been a timely and comprehensive approach to the problems of the economy, and I think it would be a disservice to the Nation to vote for the surtax when progress on other related economic questions is far from assured.

Mr. BINGHAM. Mr. Speaker, although it now appears that the House will have an opportunity to vote on a tax reform measure this week, it is not at all clear whether the Senate will act on it at this session or what kind of bill the Senate will pass if it does consider tax reform.

It has been my consistent position that the 10-percent surcharge should not be extended without accompanying tax reforms which will give relief to low- and middle-income taxpayers and will at the same time close some of the loopholes that now enable many wealthy taxpayers to pay little or no income tax.

The fact that the Ways and Means Committee was able to report out a reform bill with considerable speed confirms my judgment that it is entirely feasible to enact tax reform and the surcharge extension in one package.

Since the bill before us leaves the question of tax reforms unsettled and since a package bill would be feasible, I shall vote "no."

Mr. VANIK. Mr. Speaker, today I will vote against the extension of the surtax. It has utterly failed in its promise to control inflation. On the contrary, it has served to fuel the fires of inflation.

It is said that the surtax is essential to hold down inflation. Well, it has not done very much in the past year. Prices have been moving upward ever since. None of our very expensive economic advisers have been able to claim that our current inflationary thrust is consumer-oriented. The average taxpayer, the consumer, has not overindulged. We are not in short supply of anything but money.

When we passed the surtax, it served to raise the price of everything. It became an add-on price. The manufacturer added on the surtax, labor added the surtax, the distributor added the surtax, and the merchant added the surtax. The extension of the surtax will continue to "heat up" the inflationary spiral. Not all of the increases have yet been made. There is more to come. A final round of utility price increases is still in the works. The utilities need the surtax to maintain their claim for higher rates.

When Congress passed out the surtax, we rolled up the prices of everything. The Federal Government can roll back prices by rolling back taxes which are a part of the price of everything we buy. We can lead the way by collecting less and spending less.

The President would like the surtax—and I do not blame him for changing his mind. By Treasury's own admission last May, the extension of the 10-percent surtax to December 31, 1969, and the repeal of the investment credit and the continuation of the excise tax on motor vehicles and telephone service would produce a unified budget surplus of $4.3 billion. In view of the "surprise" 1969 surplus of $3.2 billion, there is every reason to believe that the 1970 surplus with a December 31, 1969, termination of the surtax would substantially exceed $5 billion.

Mr. RANDALL. Mr. Speaker, today as we come to another chapter in the extension of the income tax surcharge until December 31, 1969, we are engaging in what must be for the thoughtful bystander a mystifying and occult exercise.

If a visitor were to ask what was be-

ing considered by the House he would be told it was "H. Res. 509," which is an abbreviation for House Resolution 509. He would be told that the House was really considering the extension of the surtax. Our curious visitor would then ask and would receive a copy of the resolution and the report to accompany House Resolution 509.

Try as he would, our hypothetical observer would look in vain to find any reference in House Resolution 509 to a surtax. He would find instead that it provided for the adoption of H.R. 9551, which had to do with the collection of the Federal unemployment tax. He would ascertain the resolution contained exactly 12 lines on the first page and 2 lines on the second. Near the foot of page 1, at line 11, House Resolution 509 contained the words "and for other purposes, with the Senate amendment thereto, be, and the same is hereby taken from the Speaker's table to the end that the Senate amendment be and the same is hereby agreed to."

Then at this point, even a student of government who had studied something about how our laws are made would ask to see a copy of the report to accompany House Resolution 509, to try find out what the House was agreeing to. Our student would think, as he had been taught, that if there were some wording in the resolution which was not plain or clear, the best thing to do would be to read the report which would surely explain the purposes, the objectives, and all details about the measure under consideration.

Bear in mind our hypothetical visitor has been told that the House was considering an extension of the income surtax until December 31, 1969. When he finally, obtains a copy of the report it is headed "Providing for Agreeing to the Senate Amendments to the Bill H.R. 9551," which he finds has to do with unemployment-compensation insurance and which contains exactly three lines as follows:

> The Committee on Rules, having had under consideration House Resolution 509, reports the same to the House with the recommendation that the Resolution do pass.

Mr. Speaker, to suggest that we extend the surtax in this manner, is puzzling, is a masterpiece of understatement. It would seem that we are trying to involve ourselves in some kind of parliamentary mystery by which we deliberately set out to make the situation exceedingly difficult to understand. Could it be that we are trying to be occult? As I understand it, the definition of occult is something hidden from sight. I submit that House Resolution 509 and the report which accompanies it completely hides from sight any mention of the extension of the income tax surcharge. It is little wonder why one visitor today was heard to observe after reading both of these documents which were supposed to provide for the extension of the income tax surcharge:

> This is beyond the scope of my understanding. It is a strange way to legislate.

Mr. Speaker, without the time to explain to every visitor how we run our legislative railroad, House Resolution 509 should be defeated and the surtax should be ended. The surtax was sold to a reluctant Congress as the only effective way to halt inflation. The fact of the matter is, it has not even made a dent in inflation.

As we continue today the surtax in its full amount, we are in reality adding another tax increase. The reason is that the 1968 portion of the surtax amounted to only a 7½-percent tax on a tax because it was only for three-quarters of a year beginning on April 1, 1968. Extending it to cover the entire year of 1969 in essence amounts to a tax increase.

I was surprised at the comment by a well-known Washington newsletter, circulated privately to businessmen, which recently suggested that Congress had engaged in a display of irresponsibility because it had not passed the surtax for the full amount until mid-1970. Well, that is just one editor's view. In our country today there are an unlimited number of self-styled professional economists. In reality most of these persons are impractical, theoretical economists, lacking in practical economics and inexperienced in actual business management.

These are the theorists who have just finished telling us that the surtax is now beginning to take hold and that the economy is cooling off. The true facts are that there is abundant evidence to the contrary. Consumer installment credit rose by $795 million in June of 1969, after having risen by $846 million in May of 1969. The point should be emphasized that the June 1969 increase was $79 million greater than the consumer credit increase for June 1968, one year earlier. Does that show that the economy is cooling off?

Instead, the surtax may be adding fuel to the fires of inflation. There is no doubt but that there has been some consumer income going to pay the 10-percent surtax. Yet consumer purchases have not been cooled. This would indicate that, instead of consumers having the cash to pay for these purchases, they are today actually borrowing the money to make the purchases at 9 percent or more.

It would seem that a strong case could be made that the real issue over the surtax extension is not control of inflation, as is so frequently argued, but what is really involved is the level of Federal spending. If Congress continues to spend whatever the tax system will raise, then a vote for the surtax is a vote to continue to increase the fraction of our resources which will be used by the Federal Government. Inflation in the private sector may come under some small control, but the real inflation is in Government spending. To continue to ask consumers to cut back spending and enacting a surtax to enforce that request means to provide the way for the Government to spend more than can be accommodated by previous revenue yields. As I pointed out, from the huge increase in consumer installment credit, it is the consumer that is paying the surtax—but is doing it by borrowing the money at 9 percent or more.

Mr. SMITH of California. Mr. Speaker, I yield 3 minutes to the distinguished minority leader, the gentleman from Michigan (Mr. GERALD R. FORD).

Mr. GERALD R. FORD. Mr. Speaker, on June 30 of this year, by a close vote of 210 to 205, the basic bill involving the surtax extension and phaseout and other provisions passed this body. Let me say at the outset that I pass no judgment on anyone's vote at any time, but it seems to me that at this final stage, where we are considering a portion of that bill, I would hope that each and every one of the 210 who are here today who voted for it June 30 would maintain their position. And, I would like to urge that at least some of those who voted in opposition—the 205—to reconsider and on this occasion vote for this extension.

Basically, on June 30, those who opposed were in three categories: those who traditionally in this body on both sides of the aisle who have voted to a greater extent than most of us against appropriations felt that since they were not responsible for the increases in expenditures, had no compulsion to vote for the extension and phasing out of the surtax legislation.

Then there were some who voted against it, and I really was never quite clear as to why, but at least they voted against it and contributed to the narrow margin of victory by which it was passed.

Then there was, I gather, a very substantial number among the 205 who in good conscience questioned whether there would be tax reform legislation before this body this year, or in the near future.

Well, let me say this, taking the last first. We have a tax reform bill here—368 pages—it is bona fide, it is legitimate good tax reform legislation and I intend to support it. I think we ought to pass it. It will be before us on Wednesday and Thursday of this week.

So, the action of the Committee on Ways and Means should have dispelled beyond any doubt those who questioned the fact as to whether there would be tax reform legislation pending before this body to consider and approve. So, those who had that reservation on June 30 ought to join us who voted for the surtax legislation.

Then, those who fell into that category of voting against the surtax by having some questions, perhaps, about expenditures. These, who have consistently voted against appropriations, can rationalize support today by endorsing the views of economists and financial experts who say this surtax extension is badly needed to save the economy from the brink. They ought to be persuaded at this late date that it would be catastrophic for us to turn it down.

The SPEAKER pro tempore. (Mr. FLYNT). The time of the gentleman from Michigan has expired.

Mr. SMITH of California. Mr. Speaker, I yield the gentleman 1 additional minute.

The SPEAKER pro tempore. The gentleman from Michigan is recognized for 1 additional minute.

Mr. GERALD R. FORD. And, then there are those who voted against the

tax bill on June 30 for reasons which in their mind might be good, who yet voted for example last week to add $1 billion in expenditures to the fiscal year 1970 budget. However, I think they really ought to step up and bite the bullet. After all, if they are going to add $1 billion to expenditures, they ought to be willing to help finance the extra cost of those vast expenditures.

For those reasons, Mr. Speaker, I strongly hope that we have a substantial vote for this legislation today.

Mr. SMITH of California. Mr. Speaker, I yield 4 minutes to the gentleman from Wisconsin (Mr. BYRNES).

(Mr. BYRNES of Wisconsin asked and was given permission to revise and extend his remarks.)

Mr. BYRNES of Wisconsin. Mr. Speaker, as has been pointed out, we passed a bill to extend the surtax on June 30. In that bill, the surtax would be extended for the last 6 months of this year at a 10-percent rate, which amendment is now before us. That bill also contained other items.

Certainly there is much, it seems to me, that needs to be criticized in the way the other body has treated a most significant and most important piece of legislation sent to it by this body. The procedure of adding just one part of that legislation, taking one facet of that legislation and adding it to the unemployment compensation bill which we sent to the other body, leaves much to be desired. I do not believe, however, that there is anything to be gained at this time by rejecting that action.

I think we also have to recognize that if the business of this country is to proceed, then there must be comity between the two bodies. But I think it is appropriate, Mr. Speaker, at this time to say to the other body that at least as far as some of us are concerned, our patience is being worn rather thin with this failure on the part of the other body to recognize that this House has some rights.

Mr. Speaker, at the time this bill was before us in June many Members contended that they could not support a continuation of the surtax until there was tax reform. While I am not going to go into details at this time—and I do not believe that this is the appropriate time to discuss the reform package that was reported from the Committee on Ways and Means last week, and which will be before this House for consideration on Wednesday and Thursday of this week—I do think it must be said to those Members that you now have no excuse for voting against this limited continuation of the surtax on the basis that it has to be held hostage in order to obtain reform legislation. That reform legislation is before the House.

I think the committee, in reporting out the legislation, has confounded some of the skeptics who said it could not be done. Yet they have proved that it can be done.

I think we have reported a very substantial and meaningful bill to the House in a most difficult and a most complicated matter. I think the House, when it goes into details next Wednesday and Thursday, will give it an overwhelming vote of support.

But, Mr. Speaker, in spite of the delays, in spite of the procedures that can be criticized, it is time that we act—and act positively—on this most important item that is an inherent ingredient to fighting the war against inflation.

The SPEAKER pro tempore. The time of the gentleman from Wisconsin has expired.

Mr. SMITH of California. Mr. Chairman, I yield 1 additional minute to the gentleman from Wisconsin.

Mr. BYRNES of Wisconsin. Mr. Speaker, I thank the gentleman for yielding me the additional minute.

Mr. Speaker, I think some damage has already been done in our fight against inflation by the delays that have taken place, the psychological adverse effects of questioning "has Congress got the guts to do the things that are essential in this battle against inflation?"

There has been a wondering about our capability in that regard as a result of this delay. So let us today put an end to that speculation and show that certainly we, as Congressmen, have the fortitude to stand up and even do the hard things necessary in this battle against inflation by passing this legislation overwhelmingly today.

Mr. COLMER. Mr. Speaker, I yield the balance of my time to the very able gentleman, the gentleman from Arkansas (Mr. MILLS), chairman of the Committee on Ways and Means, to close debate.

Mr. MILLS. Mr. Speaker, I appreciate my friend, the gentleman from Mississippi, the chairman of the Committee on Rules, yielding this time so that I might discuss the matter presently before the House.

Mr. Speaker, as the membership will recall, on June 30 last, the House passed H.R. 1290, a bill making available additional revenues in the fiscal year 1970 of slightly over $9 billion.

The matter before the House today involves a part of that revenue—that portion of the bill which has to do with the 10-percent surcharge for the last 6 months in the calendar year 1969.

There is nothing, in my opinion, for the House to do except to approve the Senate amendment. Why do I say that?

Mr. Speaker, last year, in spite of all that was done by the Congress to obtain better control of fiscal policy, consumer prices rose from April 1968 through May 1969 by 6.9 percentage points.

Mr. Speaker, I am convinced in my own mind that if we do not continue the 10-percent surcharge and pick up the $5.6 billion of revenue which is involved in it for the last 6 months of this year, we may well be faced with price increases in the next 12-month period that exceed those in the period I have referred to.

Inflation is the same as a sales tax at the Federal level. It is the same as a sales tax increasing to 6.9 percent during this period.

Mr. Speaker, even if the bill we passed on June 30 were to be enacted without change, the administrative budget, or the Federal funds budget, for the fiscal year 1970 would still have a deficit of $5.1 billion.

If no part of that bill were to be enacted—including this 10 percent for 6 months—that deficit would be $14.3 billion.

We know that is too much of a deficit if we are to avoid a material increase in prices for the period ahead. There are those who have said that the enactment of the surcharge legislation last year had no effect. I want to dispute that, and if that is the feeling of any Member on the floor of the House, I hope I can dissuade them from that conclusion.

If you will look at the quarterly percentage increases both in the real gross national product, and in the GNP in current dollars, you will see that consistently in each quarter since the second quarter of 1968, when the surcharge was enacted, the percentage rate of increase in the GNP has declined. In the second quarter of 1968, in terms of real or constant dollars the increase was 7.2 percent. In each month since that time the percentage has declined until it reached the level of 2.3 percent in the second quarter of 1969, the latest period for which we have data. In terms of current dollars the percentage was 11.2 percent in the second quarter of 1968 and 7.2 percent in the second quarter of 1969.

A decline in the rate of increase in the GNP is one of the first and most reliable indicators of a slowing down in the economy.

Let me assure you that our action last year has had some effect as you can see from what I have said. But if we do not continue the surcharge now, I believe we will have lost the advantage we have already gained from having the surcharge in effect for this past year. I am firmly convinced that if we do not extend the surcharge now we will have put the taxpayers to the cost of this additional revenue for no purpose whatsoever. They will have lost all that has been gained as a result of the bill's enactment.

Let me emphasize again that the evidence indicates clearly that the surcharge has slowed down the inflationary push but if we—just as its effect is really beginning to be felt—do not continue the tax, we will have undone all of this. Then the only effect would be that we would have cost the taxpayers all of these dollars for no good purpose whatsoever. At the same time we would then be unleashing the type of inflation that existed in April, May, and June of 1968. That is something we do not want to have happen. That we do not want to have as a part of the American way of life.

Mr. Speaker, let me turn now to another point. I cannot see that there is any justifiable reason now for Members who did not see fit to vote for the bill on June 30 turning it down. I well understood the feeling on the part of many Members who wanted to combine action on the surcharge with tax reform. But

we have produced a tax-reform bill. It is here now, ready for House consideration. Under these circumstances, I do not, for the life of me, see how anyone who had that view could possibly have any further excuse for not voting for the bill. I cannot see how anyone would use that as an excuse for further opposition.

At this point, I insert in the RECORD two tables to which I have referred in my comments. One summarizes the budget situation and the other indicates the increase in the gross national product on a quarterly basis in the past 4 years:

BUDGET AND REVENUE ESTIMATES

BUDGET ESTIMATES FOR FISCAL YEARS 1969 AND 1970

[In billions of dollars]

	Receipts	Outlays	Surplus (+) or deficit (−)
(a) Preliminary budget results for fiscal year 1969:			
Federal funds	143.3	148.6	−5.3
Trust funds	44.6	36.2	+8.4
Unified budget	187.8	184.8	+3.1
(b) Budget estimates for fiscal year 1970, assuming enactment of H.R. 12290:			
Federal funds	148.6	153.7	−5.1
Trust funds	57.5	47.1	+10.3
Unified budget	198.1	192.9	+5.2

QUARTERLY INCREASES IN GROSS NATIONAL PRODUCT IN CURRENT AND CONSTANT DOLLARS

[In billions of dollars; seasonally adjusted annual rates]

Period	Current dollars			Constant dollars (1958=100)			Increase in real GNP as a percentage of current GNP
	GNP	Change from preceding quarter		GNP	Change from preceding quarter		
		Dollars	Percent [1]		Dollars	Percent [1]	
1966:							
I	729.5			649.1			
II	743.3	13.8	7.56	655.0	5.9	3.64	42.75
III	755.9	12.6	6.80	660.2	5.2	3.16	41.27
IV	770.7	14.8	7.84	668.1	7.9	4.80	53.38
1967:							
I	774.2	3.5	1.80	666.5	−1.6	−.96	−31.37
II	783.5	9.3	4.80	670.5	4.0	2.40	43.01

IV	892.5	16.1	7.36	718.5	5.7	3.20	35.40
1969:							
I	908.7	16.2	7.28	723.1	4.6	2.56	28.39
II	925.1	16.4	7.20	727.3	4.2	2.32	25.60

[1] Quarterly increases expressed in annual rates; quarterly percentage increase is ¼ of annual rate of increase.

Mr. CORMAN. Mr. Speaker, will the gentleman yield?

Mr. MILLS. I yield to the gentleman from California.

Mr. CORMAN. Mr. Speaker, I voted against the bill, and I think many of us did the last time, because portions of it were prospective in two ways. It had to do with low-income allowance and with the surtax for 6 months after January 1. Both of those matters are now properly handled in the omnibus tax bill. I will vote for this measure, and I hope all Members who have had some misgivings about an omnibus bill coming out this year will vote for this 6-month extension. I hope it carries by an overwhelming vote.

Mr. MADDEN. Mr. Speaker, I offer a preferential motion. I move to strike the enacting clause.

The SPEAKER. The Chair will state that that is not a preferential motion.

Mr. MADDEN. Mr. Speaker, we are having a debate here on the rule. I think a member of the Rules Committee should have an opportunity at least to express for a few minutes his thoughts on the subject.

The SPEAKER. The Chair will state that control of the time, 1 hour, is in the hands of the gentleman from Mississippi. The Chair is informed that the gentleman from California (Mr. SMITH) has 5 minutes remaining.

Mr. MADDEN. Mr. Speaker, will the gentleman from California yield 2 minutes to me?

Mr. SMITH of California. I would be happy to yield time to the gentleman from Arkansas (Mr. MILLS). I yield 2 minutes to the gentleman from Arkansas.

The SPEAKER. The gentleman from Arkansas is recognized for 2 minutes.

Mr. MADDEN. Mr. Speaker, will the gentleman yield?

Mr. MILLS. I yield to the gentleman from Indiana for a question.

Mr. MADDEN. Mr. Speaker, the Members should be acquainted with the fact that, 1 year ago I voted against the 10-percent surtax legislation because if the fabulous and extravagant tax loopholes on big oil, big foundations, big real estate, and so forth, were repealed we could get about $15 billion into the Federal Treasury. I will vote against it again on the theory that there is no tax reform bill enacted into law. I have in my hands an excerpt from the Indianapolis Star, issue of Saturday, August 2, and I refer to a United Press article entitled, "Some Tax Bill Portions Given OK." The Treasury Under Secretary Charles Walker and Edwin S. Cohen, Assistant Secretary, in a press conference expressed themselves as follows:

The proposal to impose a 7½ percent tax on foundations now exempt was "somewhat high."

They are going to present their case to the Senate Finance Committee when and if passed by the House of Representatives. The article continues:

They also expressed reservations over a proposal to limit deductions on farm losses—

Those are the farms where they hide millions in taxes, trick "playboy" farms, used by rich taxpayers for tax deductions—

saying, it should be tightened to make sure the wealthy could not escape taxes completely through this device.

Further they stated:

Proposed tax increases on banks, savings and loan associations and other financial institutions should be held up pending a study of all bank legislation.

The Assistant Secretary of the Treasury Charles Walker, and Edwin Cohen, Assistant Secretary, are going to present their case before the Senate Finance Committee. I am talking about the executive department. They are not for this Ways and Means Committee tax reform bill according to the executive department Treasury officials.

According to the article,

Walker said the Administration was developing a comprehensive proposal for Senate consideration on taxation of oil, natural gas and other mineral industries. He said the Administration has not decided whether to support the Ways and Means plan to reduce the oil depletion allowance from 27½ percent to 20 percent.

Here is the executive department of the administration opposed to this bill, according to the Under Secretary and according to Edwin S. Cohen, and that is a United Press dispatch from Indianapolis. So we have no tax reform bill before us at all until the executive department officials take their protest up with the Finance Committee of the other body.

Mr. MILLS. Has the gentleman asked his question?

Mr. MADDEN. You would think a tax reform bill had been passed already if you listen to the speeches here on the floor this afternoon. When the Senate Finance Committee completes its remodeling of this House bill our Members may reject it by an overwhelming vote.

The SPEAKER. The time of the gentleman from Arkansas has again expired.

Mr. SMITH of California. I yield the gentleman from Arkansas 1 additional minute.

The SPEAKER. The gentleman from Arkansas is recognized for 1 additional minute.

Mr. MILLS. Mr. Speaker, I want to correct the erroneous impression that my friend, the gentleman from Indiana, gathered from the newspaper account, because I have before me, and I will read it to the gentleman, who serves on the Rules Committee, a letter from the Secretary of the Treasury, dated August 4, 1969:

I would like to express to you the deep appreciation of the Treasury for your untiring efforts and your sterling leadership of the Committee on Ways and Means in the development of the Tax Reform Act of 1969.

We believe that the bill is a milestone in tax legislation and will be long remembered as a major advance in achieving an equitable tax structure.

While, of course, we have some reservations about some of the provisions in the bill and would plan to make some suggestions for revision in the progress of the bill in the Sen-

ate, we sincerely believe that, in general, the bill represents a major step forward in tax legislation and urge its prompt passage by the House of Representatives.

Along with Under Secretary Walker, Assistant Secretary Cohen, and our entire staff, I should like to thank you and the Committee for the kind and patient consideration that you have given to our presentations before the Committee. It has been a great privilege for all of us to work with the Committee in this common effort to improve the tax structure of the nation.

That is signed by the Secretary of the Treasury. He is for this legislation, have no doubt about that.

Mr. COLMER. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

Mr. GROSS. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused.

The question was taken; and on a division (demanded by Mr. JACOBS) there were—ayes 126, noes 61.

Mr. GROSS. Mr. Speaker, would the Speaker be good enough to repeat the result of the vote?

The SPEAKER. There were 126 Members voting in the affirmative and 61 in the negative.

Mr. JACOBS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Under count, evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 237, nays 170, not voting 25, as follows:

[Roll No. 136]

NOT VOTING—25

Arends	Edwards, Calif.	Powell
Ashbrook	Fascell	Rarick
Baring	Gubser	Saylor
Berry	Ichord	Stuckey
Brown, Calif.	Kirwan	Taft
Carey	Lennon	Tunney
Clay	Lipscomb	Whalley
Conte	Mailliard	
Diggs	Mikva	

So the resolution was agreed to.

The Clerk announced the following pairs:

On this vote:

Mr. Arends for, with Mr. Brown of California against.

Mr. Conte for, with Mr. Stuckey against.

Mr. Berry for, with Mr. Saylor against.

Mr. Taft for, with Mr. Diggs against.

Mr. Gubser for, with Mr. Baring against.

Until further notice:

Mr. Kirwan with Mr. Lipscomb.

Mr. Carey with Mr. Mailliard.

Mr. Edwards of California with Mr. Ashbrook.

Mr. Lennon with Mr. Tunney.

Mr. Mikva with Mr. Clay.

Mr. Fascell with Mr. Ichord.

Mr. GARMATZ and Mr. DULSKI changed their votes from "yea" to "nay."

Mr. FISHER changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The doors were opened.

The motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. MILLS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on House Resolution 509, just agreed to.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

FLORISSANT FOSSIL BEDS NATIONAL MONUMENT, COLO.

Mr. ASPINALL. Mr. Speaker, I move to suspend the rules and pass the bill (S. 912) to provide for the establishment of the Florissant Fossil Beds National Monument in the State of Colorado, as amended.

The Clerk read the bill as follows:

S. 912

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in order to preserve and interpret for the benefit and enjoyment of present and future generations the excellently preserved insect and leaf fossils and related geologic sites and objects at the Florissant lakebeds, the Secretary of the Interior may acquire by donation, purchase with donated or appropriated funds, or exchange such land and interests in land in Teller County, Colorado, as he may designate from the lands shown on the map entitled "Proposed Florissant Fossil Beds National Monument," numbered NM–FFB–7100, and dated March 1967, and more particularly described by metes and bounds in an attachment to that map, not exceeding, however, six thousand acres thereof, for the purpose of establishing the Florissant Fossil Beds National Monument.

SEC. 2. The Secretary of the Interior shall administer the property acquired pursuant to section 1 of this Act as the Florissant Fossil Beds National Monument in accordance with the Act entitled "An Act to establish a National Park Service, and for other purposes," approved August 25, 1916 (39 Stat. 535; 16 U.S.C. 1 et seq.), as amended and supplemented.

SEC. 3. There are authorized to be appropriated such sums, but not more than $3,727,000, as may be necessary for the ac-

quisition of lands and interests in land for the Florissant Fossil Beds National Monument and for necessary development expenses in connection therewith.

The SPEAKER. Is a second demanded?

Mr. KYL. Mr. Speaker, I demand a second.

The SPEAKER. Without objection, a second will be considered as ordered.

There was no objection.

Mr. ASPINALL. Mr. Speaker, I yield myself 5 minutes.

Mr. Speaker, I rise in support of S. 912, as amended by the Committee on Interior and Insular Affairs.

As most Members of the House will recall, we considered and approved legislation authorizing the establishment of the Florissant Fossil Beds National Monument during the 90th Congress. That legislation had the same objectives as S. 912, but it differed in one significant respect—that is, it authorized the acquisition of 1,000 acres of land within a designated area of 6,000 acres; whereas, S. 912 authorizes the acquisition of the entire 6,000-acre area. I might say at this point that the 6,000-acre national monument had the support of both the current and the past administrations. The committee was advised that, in the judgment of the National Park Service, 6,000 acres is viewed as the minimum amount of land necessary to adequately accommodate visitors and, at the same time, achieve the preservation objectives of the area. We were told that a thousand acres just would not achieve the objectives set forth in the legislation.

Because of the alteration in the size of the proposed national monument, of course, land acquisition costs are necessarily higher under S. 912. It is anticipated that $1,165,000 will be needed to acquire fee title to all of the lands involved. In addition, development of the area with appropriate visitor facilities, headquarters, tour roads, trails and overlooks, and so forth, would total $2,562,000. The bill explicitly limits the amount authorized to be appropriated to $3,727,000.

It is generally agreed that, if we are to have a national monument in this area, action is urgent. Acquisition of the lands is essential if they are not to be severely damaged by adverse activities which threaten the disruption of a significant portion of the proposed monument. While acquisition should be accomplished with dispatch, it is conceded that development, if necessary, could be deferred until funds could be made available.

This area is important scientifically. Everyone who testified agreed that the ancient Florissant lakebed is one of the uncommon areas of the world where the story of ancient times can be read through fossilized remains of leaves and flowers and sequoia stumps, as well as through insects and fish and small animals. It is said that the values of Florissant are not found in such quality and quantity at any other place in the United States. In fact, only one other known location in the world—in Europe—is said to be of comparable quality.

Except for comparatively minor improvements, Mr. Speaker, the Florissant Fossil Beds area has been altered very little by existing or previous users of these lands. What some have feared, however, now seems about to happen. Unsympathetic developers have gained an interest in the area and they threaten to cut roads and subdivide the lands under their control. Hopefully, they will not thwart the public desire to establish a national monument at this location by arrogantly proceeding without regard to our action on this measure. Every possible appeal has been made by those in Congress to forestall the destruction of these values and every effort has been made to expedite the consideration of this legislation. This extraordinary action would not be necessary, but for the danger we see for the area we seek to protect.

In conclusion, Mr. Speaker, I want to say that in spite of all of the apparent haste to secure action on this legislation, it has been thoroughly reviewed and considered. Public hearings were held in the 90th Congress, and again this year, by your committee. In addition, hearings were conducted in the field by the other body. I understand that all who testified, favored enactment of this legislation. Both a Democratic and a Republican administration have supported it; the State of Colorado recommends it; the local Congressman, Hon. FRANK EVANS, wants it; the county commissioners for the county involved favor it; and many learned individuals and professional and scientific organizations endorse it.

In light of all these facts, Mr. Speaker, as chairman of the Interior and Insular Affairs Committee, I recommend enactment of S. 912.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. ASPINALL. I yield to the gentleman from Iowa.

Mr. GROSS. I thank the gentleman for yielding.

What is the value of this land for grazing purposes?

Mr. ASPINALL. What is the value of this land for grazing purposes?

Mr. GROSS. Yes, what is the land worth for agricultural purposes of any kind?

Mr. ASPINALL. Land is worth only so much for any of the purposes which the market will bear as of the time. At the present time, if it is going to be used for grazing it is not as important as it would be if it were going to be used for development. As my friend knows, these lands are being moved into at the present time, to be used as land for the purpose of building homes. That increases the value tremendously over what they would be used for if they continued to be used just for grazing purposes. So when we get into the question of purchasing these lands we made the statement they would have a cost for the land of about $1,165,000.

Mr. GROSS. That makes it worth about $200 an acre; is that correct?

The SPEAKER pro tempore (Mr. RIVERS). The time of the gentleman from Colorado has expired.

Mr. KYL. Mr. Speaker, I yield myself such time as I may use.

Mr. Speaker, for millions of years during the Upper Cretaceous Age, most of what is now Colorado lay beneath the waters of a great inland sea. About 60 million years ago, as this period ended, the seas retreated and the continent rose. Profound movements within the earth's crust resulted in uplift of lofty and widespread mountains throughout the West. Then, for the next 10 million years or so, erosion attacked these early, lofty Colorado Rockies. Rock debris eroded from their flanks was carried eastward to the lowlands, and deposited widely for hundreds of miles by through-flowing streams—ancestors of today's Platte and Arkansas Rivers. These deposits, now exposed in the High Plains, make up the formations which are so well known for their richness in mammal fossils.

By Oligocene time, the mountains had been reduced generally to an upland, some of it almost a plain, but mainly a broad, gently rolling hill-land, possibly somewhat like our modern Ozarks. The upland still rose high enough to intercept warm, saturated air masses from the south and west, with consequent mild, moist climate and a rich vegetative response to these bland conditions. The rolling slopes were mantled by many types of deciduous trees and immense sequoia grooves. Small lakes occupied depressions here and there in the eastern margin of this ancient upland. Probably there were many such lakes, but evidences of only a few survive. The present Florissant area possesses such evidence. From a fortuitous constellation of circumstances, the area adjacent to this particular Oligocene lake experienced little disturbance by the innumerable subsequent uplifts and rock disturbances; and mud and silt deposits accumulating in the lake bottom may well have finally silted up the lake completely nearly 35 million years ago. But this alone does not make the area unusual. A far more spectacular geological process—volcanic eruption nearby—gave the Florissant area its unique fame.

Then, violent geologic processes began. Volcanic eruptions, undoubtedly accompanied by severe earthquakes, began as a precursor of renewed mountainmaking. Molten lava welled up from deep within the earth and piled up as a volcano, probably located only some 15 to 20 miles away from the lake. Eruptions were probably short—perhaps a week or so in duration—but violent; and they continued periodically over many thousands of years. Tremendous explosions of pulverized rock occurred, filling the air with dense clouds of dust and fine particles of volcanic ash. Swept forward by the prevailing wind, these great ash clouds rained down upon the lake and its forested shores. Much of the ash which fell into the lake carried flying insects to the bottom with it. And, too, as it brushed or pelleted against foliage in descending, it carried into the lake a wealth of leaves and a great number of insects which were feeding upon the lakeshore vegetation. Quickly buried and sealed off from the air, these remains did not decay. As ash fall followed ash fall, layer upon layer of paper-thin shale accumulated in the

lake bottom. Such insect life and plant foliage as were carried down became pressed and sealed within these deposits.

The ash fell on the ground near the lake accumulated to moderate depth, but each heavy rainstorm quickly washed much of it into the lake, where it spread out as layers of silt. Such ash and mud flows occasionally buried the bases of standing trees on the lake margin. This killed them, but also, by burial, saved them from decay. Later, mineral solutions in ground water filtered through the mud and the buried stumps to silicify and preserve them. These are now exposed as the great stumps which make up the area's "petrified forests."

These ancient events have been well described by Prof. T. D. A. Cockerell in his 1920 "Textbook of Zoology":

Around the lake were active volcanoes, which sometimes threw out very finely divided ash, sometimes liquid mud . . . At times of eruption there were, no doubt, violent gusts of wind and poisonous gases, while hot cinders fell here and there and set fire to the forests. Thus leaves and even branches were torn from the trees, and charcoal may still be found to testify to the forests fires. Insects and other creatures were killed and fell into the shallow water of the lake, where they were presently covered by deposits of the finest ash, falling gently from above. Thus the various remains were hidden beneath successive layers of volcanic material and when a mass of lava flowed over the whole, its weight pressed the wet ash down, and in course of time converted it into hard shale. What had been the life of the locality now crushed flat, was hermetically sealed between the layers. . . .

How long these dramatic processes continued is unknown, but they eventually ended, and within a few million years, the old upland was elevated again thousands of feet into another lofty mountain range. In this process the lake basin was slightly tilted, and its waters drained to the north leaving the lakebed dry.

Erosion once more began to plane away the "second generation" mountains. The drained lake basin, however, was not appreciably affected by these later events. It still remains shaped somewhat like its Oligocene counterpart, the existing streams which drain it having eroded away but a portion of the lake sediments. However, the former lakeshore vegetation has now been replaced by a coniferous forest; and the blue waters of the former lake by a basin surfaced with light-colored, paper-thin shale carpeted with grass. Although now consolidated to soft rock, the shale is clearly the modern counterpart of those repeated rains of volcanic ash, which entombed much tree foliage, untold thousands of insects, many thin-shelled frash-water mollusks, and randomly scattered fragmentary bones of small vertebrate animals.

Here and there, stone tree stumps rise from the pits dug to expose them. They are silent monuments to and remnants of the forests which once bordered the lake but which were killed and buried by floods and mudflows, long since ended.

ANCIENT LIFE

The rare quality of the Florissant site lies not in dramatic exposures of big-boned creatures, but rather in the delicacy with which thousands of fragile insects, tree foliage, and other forms of life—completely absent, or extremely rare in most paleontological sites of this period—have been preserved. The fossils at Florissant are individually quite small, but in the aggregate are tremendous. Few fossil sites in the world have yielded some 60,000 specimens of over 1,000 different species of life. In addition to this vast number of individual fossil specimens, is the remarkable way in which the fine-grained ash has preserved, in minute detail, delicate features of the innumerable specimens sealed within the layers of shale.

Almost all the fossil butterflies of the new world have come from this one site. An interesting occurrence of four species of *Glossina*—tse-tse flies—have given some paleontologists a possible cause for the extinction of certain tertiary mammals. Frank M. Carpenter, professor of entomology and curator of fossil insects at the Museum of Comparative Zoology, Harvard University, makes the statement—USDA Yearbook, 1952, page 14—that fossil insects have been collected at nearly 150 localities in various parts of the world, but about 90 percent have been collected at 12 of these deposits. He estimates the number of specimens collected from the richest deposits are 150,000 from the Baltic amber; 60,000 from Florissant; 10,000 from the Elmo limestone in eastern Kansas; and 1,500 from Commetary, France.

Dr. H. B. MacGinitie, in his monograph, "Fossil Plants of the Florissant Beds, Colorado"—Carnegie Institute of Washington, publication 599, 1953—describes 114 species of leaf fossils.

The Florissant site is not restricted entirely to vast numbers of small fossils. The petrified tree stumps are impressive to all who see them because of their considerable bulk and silent, mysterious presence. These giant stumps—buried and preserved by volcanic ash mudflows—are very striking examples of fossilization of vegetable material. Preserved exactly where they were rooted and growing, they approach the ideal of a "petrified forest" more than do the great prostrate logs of Petrified Forest National Monument in Arizona.

Harry Andrews—"Ancient Plants and the World They Lived In," 1947—in speaking of the degree of petrification of the stumps at Florissant says:

In [some] specimens a great deal of the organic tissue may be found intact after millions of years. In the huge petrified stump . . . most of the wood is well preserved as it was the day it last saw light as a living sequoia. . . . Fragments of this wood may be soaked in hydrofluoric acid for a few days to dissolve the silica. This leaves the wood itself free of the petrifying mineral and it may then be cut just as living wood samples are preserved for microscopic study.

Most of the foliage associated with the petrified stumps is suggestive of the coastal redwood of California—Sequoia sempervirens. However, since it differs some from the living species in California, the fossil wood has been named Sequoioxylon pearsallii and the fossil foliage Sequoia affinis.

Other trees represented by fossil wood and leaves found here are pine and several deciduous species such as walnut, beech, willow, oak and maple.

Ranking below the fossil insects and leaves in numbers of specimens found here are thin-shelled mollusks and freshwater fishes. As many as eight species and four genera of the latter have been found. Several bird feathers and a few bird carcasses have been found.

Sufficient samples of insect life have been already collected to suggest that few new species are likely to be found. However, there is no reason not to anticipate discovery of fragmentary remains, at least, of undescribed genera of birds, snakes, rodents, fish, and other small vertebrates, which may have inhabited the Oligocene uplands—the sources of streams which laid down the plains formations to the east which are so rich in large Oligocene mammal fossils.

During the Oligocene epoch, the Florissant upland surely was populated by many of the same great beasts whose fossil bones are found in abundance at Badlands National Monument and other noted sites of this age in the plains to the east. Conditions simply were unfavorable for preservation of carcasses of such of these creatures as may have died near the lake. However, fossils of an ancient opossum—Peratherium—and parts of an oreodont and a primitive horse have been found in the beds.

Now, Mr. Speaker, I should like to respond to my colleague from Iowa.

CALL OF THE HOUSE

Mr. GROSS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER pro tempore (Mr. RIVERS). Evidently a quorum is not present.

Mr. KLUCZYNSKI. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 137]

Arends	Foley	Powell
Ashbrook	Fulton, Tenn.	Preyer, N.C.
Ashley	Gibbons	Purcell
Baring	Gubser	Rarick
Berry	Harsha	Reid, N.Y.
Brown, Calif.	Hull	Riegle
Burton, Calif.	Ichord	Rosenthal
Carey	Kirwan	St. Onge
Clark	Kuykendall	Saylor
Clay	Kyros	Scheuer
Conte	Lennon	Smith, Calif.
Corman	Lipscomb	Stuckey
Daniels, N.J.	McCloskey	Taft
Dent	McCulloch	Tiernan
Diggs	Mailliard	Tunney
Edwards, Ala.	Martin	Whalley
Edwards, Calif.	Mikva	Widnall
Evins, Tenn.	Ottinger	
Fascell	Patman	

The SPEAKER pro tempore. On this rollcall 377 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

FLORISSANT FOSSIL BEDS NATIONAL MONUMENT, COLO.

The SPEAKER pro tempore. The gentleman from Iowa is recognized.

Mr. KYL. Mr. Speaker, when the absence of a quorum was suggested, the question had been raised concerning the value of land which would be purchased under this bill. That land has been used, except for a small area, for grazing, until recently, and it had the value of other grazing lands. Then suddenly a developer bought the land, drew up the plans for residential development, for streets and utilities and all the rest that is necessary in a residential area, and brought in bulldozers. Immediately that pastureland became residential land.

The people of this area, in an attempt to save the primary value, got an injunction to stop development. That injunction has now lapsed. The bill comes before the House today so that we might stop any further action in this area which might destroy the real value.

About $2.5 million in this bill is for development. That cost can be postponed. The urgent thing now is to purchase this land.

Every single member of the committee resents the escalation in value of lands which are projected for park purposes or for preservation just as much as any Member who is not on this committee, but it is a fact of life that as soon as any area is suggested for inclusion in any kind of preservation, the value skyrockets. It happens almost without exception. As long as this land was used for pastureland, the values were not destroyed, because there is an overburden over the fossils and the other things we want to save. But when the bulldozer comes in, that is an entirely different matter.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. KYL. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I thank the gentleman for yielding. What will be the situation when 6,000 acres are taken off the tax rolls in this country? Will the county commissioners of this county in Colorado be in asking for impacted school aid and other aid to make up the deficit in taxes from that land?

Mr. KYL. I can respond directly to the gentleman in this fashion. The county board and all other local governmental subdivisions are highly in favor of this protection and of taking this land off the tax rolls. It is felt there will be sufficient economic development associated with the visitation of the area to more than pay for the removal of these lands from the tax rolls.

Mr. GROSS. But not enough to compensate for the county turning over to the Federal Government the land without $1,165,000 being expended by the Federal Government for the acquisition of it. Is that correct?

Mr. KYL. I would repeat that the local governmental subdivisions are satisfied with the arrangement so far as the taxes and finances are concerned, and I have tried to explain why the land is as high priced as it is.

At this point I will yield to the gentleman from Colorado (Mr. EVANS) for a further explanation as to why the land value is so high.

Mr. EVANS of Colorado. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, this is in my district, and it is in the area of the old gold mining fields of Cripple Creek and Victor.

I can inform the gentlemen from Ohio that it is a depressed area and has been for many years. The number of children here is very small. Economic development has been almost at a standstill since gold mining became uneconomical.

The county commissioners and the members of the city council from the town in Florissant, which is very near, all are in agreement that this really must be done.

This is not so much for what it will or will not do economically for the area, but more out of the desperate hope that this area can be preserved. In fact, I believe there is only one other place in the world we know about which has fossil collections such as this which might be preserved for the future.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. KYL. I yield to the gentleman from Iowa.

Mr. GROSS. I note the very brief letter from the Bureau of the Budget, which says absolutely nothing. What is the position of the Bureau of the Budget with respect to the merit or demerit of this project?

Mr. KYL. The Bureau of the Budget apparently abides by its statement that there was no objection to the presentation of the report by the Interior Department; that they would not make any further statement regarding the project.

Mr. GROSS. The letter says:

> The Bureau of the Budget does not plan to submit separate views to the committee on H.R. 5953, and H.R. 6223, to provide for the establishment . . . of this monument.

And that is just about all of it. What is its position?

Mr. KYL. Again I would have to say that the only response we have from the Bureau of the Budget is that there is no objection to the submission of the favorable report.

Mr. GROSS. Ordinarily that is stated by the Bureau of the Budget in its letter which accompanies the report, but it is not stated in this letter.

Mr. KYL. I would have much preferred to have the letter stating the exact position of the Bureau of the Budget, but it was not forthcoming.

Mr. GROSS. I hope that we will not be suddenly informed that the picture of Federal participation in this project has changed, as it was in the Padre Island business and some other similar deals that have come before the House of Representatives.

Mr. KYL. I would say again, I share the gentleman's hope, and I can tell him every member of the committee will try to see that does not happen.

Mr. GROSS. I know. The committee tried to see that would not happen on the Padre Island deal, but it did.

Mr. KYL. In the case of the Padre Island project, the land owners requested a certain amount of money, and when they went through condemnation the jury decided the land was worth far more than the owners said it was worth.

I just want to take a couple of minutes more to explain why we want to save this spot.

There is only one other spot in the world similar to this. It is very important scientifically from a geologic standpoint.

Here one can see what happened in the Western United States as it was formed. Until about 60 million years ago in the upper cretaceous period this whole area was covered by an inland sea. Following the period when the sea receded we had the general upheaval in the area which created the early Rocky Mountains of the area. Then for perhaps 10 million years the hills were worn down, great plains were developed, and the area probably was, at the time our story of the fossils begins, an area much like we have in the Ozarks today.

Now, it was at this time that there was an ecology in this particular area around the lake which had cast a number of living specimens. There have been 60,000 separate specimens cataloged from this area. These are entomological and botanical, and mammalia are there.

Then all of a sudden, with the pyroclastic conditions, the volcanic eruptions, there was here preserved for all time, almost as though it had been canned up for 30 million years, this entire area. We have the whole ecology sealed off and, because almost all of the specimens located here still exist almost in the same form, it is possible for scientists to determine what kind of climate and ecology existed here. So, from a geological standpoint, from an entomological standpoint, a botanical and paleological standpoint, this is a most significant scientific area for study.

Mr. GROSS. Mr. Speaker, will the gentleman yield further?

Mr. KYL. Yes. I yield to the gentleman from Iowa.

Mr. GROSS. Do I understand that a real estate developer has moved on some part of the tract which is proposed to be taken over?

Mr. KYL. Your understanding is correct.

Mr. GROSS. How far is this from a populated center?

Mr. KYL. I would relay this question to the gentleman from Colorado (Mr. EVANS), who will be able to tell you exactly.

Mr. EVANS of Colorado. Mr. Speaker, will the gentleman yield?

Mr. KYL. Yes. I yield to the gentleman.

Mr. EVANS of Colorado. It is about 35 miles from the city of Colorado Springs, Colo., west and northwest, in a mountainous area.

Mr. GROSS. What would cause people to travel 35 miles over mountainous terrain to work in Colorado Springs and live in this place?

Mr. EVANS of Colorado. Again, if the gentleman will yield——

Mr. KYL. I yield to the gentleman.

Mr. EVANS of Colorado. I thank the gentleman for yielding.

The area of Colorado Springs is the

sixth or the seventh fastest growing area in the entire United States. It has had, since its early development in the 1850's and 1860's, a wide national reputation not only as a health center, but these areas of which I am speaking and the areas mined for gold where some of the most historical spots and some of the most popularly visited spots in the entire United States exist. There is traffic in there now, I am proud to inform the gentleman.

Mr. GROSS. Has the real estate developer started a residential development in this area in order to push up land prices on the Federal Government? Is that the story? I cannot believe that people from Colorado Springs would drive 35 miles over the high mountains when there must be land subject to residential development much closer to Colorado Springs.

Mr. KYL. First of all, let me respond to the gentleman in this way: In specifying the values of this area I did not speak of the recreation, which is of value, and also of the beauty of the area. This is a very beautiful area. It is an attractive area. There, as in Washington, D.C., New York City, or Waterloo, Iowa, people like to move from the city out to the country, to a beautiful spot. It is an ideal residential area. And 35 miles today is not a great distance to travel to work.

Mr. ROGERS of Colorado. Mr. Speaker, will the gentleman yield?

Mr. KYL. I yield to the gentleman from Colorado.

Mr. ROGERS of Colorado. May I say to the gentleman from Iowa (Mr. GROSS), that we have a very large number of mountains in the State of Colorado where people are anxious and glad to come and have either summer homes or have built permanent residences. As the gentleman from Colorado pointed out, we have had a tremendous amount of growth and development in those mountains. It is not unusual that areas of this type should be developed, and in this particular instance the people that the States recognized—and, of course, they knew they were there—were glad to build homes there. This area was used by scientists and determined these beds be preserved. There is a possibility that these beds would be destroyed if we did not take action today.

Mr. KYL. I would like further to respond to the gentleman's question by saying that I am not going to claim that the owner of this land projected the development so that he could peg the prices, because it is quite obvious that if he went ahead with his whole development plans, he would reap greater profit than if he simply held that land for the Government. But at the same time I would have to repeat to my colleague that every time the Federal Government proposes to buy anything anywhere in the country the value of that land almost without exception escalates immediately and unreasonably.

Mr. BROTZMAN. Mr. Speaker, will the gentleman yield?

Mr. KYL. I yield to the gentleman from Colorado.

Mr. BROTZMAN. I thank the gentleman for yielding.

With respect to the evaluation, as I read S. 912, it does provide that the land may be acquired by condemnation through court procedures and as no doubt the gentleman from Iowa (Mr. GROSS) knows and the Members of the House know, when you condemn land the value of that land is determined by a jury based upon expert testimony as to what the reasonable value of that particular property is. So, I would point out that while the authorization does, as the gentleman from Iowa says, provide for an authorization of, I think, $1,165,000, the actual evaluation per acre will be determined in a court of law, if it is not handled through private negotiations.

Mr. KYL. Mr. Speaker, I yield 4 minutes to the gentleman from Colorado (Mr. BROTZMAN).

Mr. BROTZMAN. Mr. Speaker, we have before us today a bill which will prevent the destruction of one of America's great natural treasures.

The Florissant fossil beds located near Pikes Peak in Colorado are considered one of the world's largest and richest deposits of terrestrial fossils. They have yielded more preserved specimens of Oligocene period life—age of mammals, Tertiary—than any fossil beds in the world, with the exception of the Baltic Amber site behind the Iron Curtain.

Researchers from around the world have been studying the Florissant since its discovery in 1877. Teams from the British Museum, the American Museum of Natural History, the University of California, Princeton University, and many others have worked here and uncovered 114 prehistoric plant species and over 900 species of insects.

The fossil-bearing shales range in thickness from 50 feet to a fragile 32d of an inch. They contain examples of the whole range of plant life from microscopic pollen specimens to massive petrified redwood stumps up to 10 feet in diameter.

But ironically even though this priceless window into the Oligocene period has lain undisturbed for 34 million years now, its destruction could come this very afternoon.

Florissant is located only 35 miles west of Colorado Springs, a major city which is enjoying the greatest building boom in its history. The fossil beds lie on private land, and nearly a third of the proposed monument is slated for immediate subdivision.

Early in July a coalition of citizen groups, fighting to preserve Florissant, won a temporary restraining order against a major Colorado Springs developer which plans to build A-frame vacation cabins on the site, prompting the remark "to build A-frames on this singular, national resource would be like wrapping fish in the Dead Sea Scrolls." That order has expired and the builder has announced plans to bulldoze his access road through the fossil beds today.

In light of the clear and present danger to this unique open-air museum, the House Interior Committee, at the direction of my distinguished colleague (Mr. ASPINALL) agreed to seek a suspension of the rules to bring this bill, S. 912, to create the Florissant Fossil Beds National Monument before the House.

The bill would preserve 6,000 acres which contain each of the significant types of fossilization in its natural setting. It would encompass the southern arm of the Florissant lake which is relatively undamaged by erosion and curio seekers. It provides only for the purchase of land and development expenses, and authorizes an appropriation of $3,727,000 for this purpose. Developments planned by the National Park Service include a visitor's center containing a museum and administrative offices; interpretive trails, and wayside exhibits detailing the area's scientific history.

As my colleagues may recall, a similar bill was passed by the House late in the last Congress but failed to pass the Senate due to adjournment. This year the Senate held field hearings in Colorado Springs and quickly passed the bill now before us.

This bill has the wholehearted support of the Department of Interior, Colorado County, and State officials, citizen conservation groups, members of the scientific community led by Dr. Bettie Willard and Dr. Estella Leopold, and literally thousands of concerned individuals, indicating, I think, how the American people, as a group, feel about Florissant.

Mr. Speaker, I would urge my colleagues to take this opportunity to prevent the destruction of a national treasure. Preserving the Florissant today will be relatively easy, but even 24 hours from now it may be futile.

Mr. Speaker, I shall not use all of my time except to sum up the argument this way:

I can say with reference to this property, No. 1, that it has been clearly established that the scientific world believes there is a great need to preserve this particular resource. That has been brought to the attention of the House upon two occasions, because we have passed this bill in, roughly, this form at the last session.

Second, I think that the gentleman from Iowa (Mr. KYL) has carefully articulated the sense of urgency confronting us today and that is if we do not act upon this particular occasion then, of course, the temporary restraining order will expire and the developer will be free to proceed.

So, I would ask you to consider carefully the merits of this particular bill and I would ask for your support not only because of the scientific involvement but also because I think that you and your constituents across this country will enjoy seeing this rich treasure trove.

Mr. ASPINALL. Mr. Speaker, I yield 5 minutes to the distinguished chairman of the subcommittee which handled this legislation, the gentleman from North Carolina (Mr. TAYLOR).

Mr. TAYLOR. Mr. Speaker, S. 912 and a companion House bill introduced by our colleague from Colorado (Mr. EVANS) are comparable to legislation which the House passed last year but was not acted on by the Senate. Of course, this year the

Senate has passed S. 912, which is before us.

Last year the House Committee on Interior and Insular Affairs and the House passed a bill which authorized the acquisition of 1,000 acres for the purposes of this monument. Members of the House Subcommittee on National Parks and Recreation and members of the House Interior Committee were convinced this year that the full 6,000 acres should be preserved. The evidence was much stronger, showing a need for the full amount. In fact, it was pointed out that the 6,000 acre figure is a compromise, as there are 12,000 acres in the entire Florissant area. It also was pointed out that a reduction in the acreage would provide only small savings, as the major cost is development. All witnesses who knew the area, including Congressmen—and this bill has bipartisan support—and including scientists and representatives of the National Park Service, emphasized that it is better to acquire the 6,000 acres now and postpone development until later but that we should get the land now.

Last year we had doubts that the area which had been preserved as grazing land so long with the valuable fossil deposits just below the surface was really threatened by destruction from homebuilders, but a new peril has arisen. A contract was recorded recently for the sale of 1,800 acres, nearly one-third of the area proposed, for summer homes. The developers started moving in bulldozers for the digging of roads and the grading of building foundations which would destroy the fossil deposits in the areas disturbed. Local citizens tried to stop the developers by persuasion. When this failed, they went to court and secured an injunction which stopped them until July 28, 1969. The injunction was based on the general welfare clause in the U.S. Constitution, which was thin ice even for the U.S. Supreme Court. It is my understanding that the injunction has been dismissed, so it is imperative that we act now and take now all of the land needed for this monument.

Almost all of the fossil butterflies now found in museums in the Western Hemisphere come from the property which we seek now to preserve. We must understand that this area has scientific values not duplicated anywhere else in the world. The Dinosaur National Monument, the Petrified Forest National Park, and the Agate Fossil Beds National Monument have other distinctive scientific and geologic values which are not duplicated at the Florissant site. Like those areas, the Florissant National Monument, if it is established, could become a natural museum for the benefit of our people for all time.

This area, if authorized, will not be a typical recreation area. Like comparable areas, it will be administered primarily for the protection of its scientific values.

The area is unique. For the most part, it consists of a significant part of a prehistoric lakebed. In it, deposited between thin layers of shale, are literally thousands of fragile, fossilized insects, leaves, and related objects of scientific value. Among scientists, the area is famous, because it is recognized as the richest fossil deposit of its kind in this hemisphere, and it is said to be the second most important one in the world.

Let me summarize a paragraph from the testimony: At Florissant we can be transported back in time 36 million years before the advent of man on this earth. Florissant Lake shales were formed by numerous violent eruptions of a nearby volcano that rained fine ash over the countryside. This ash fell in a large lake dammed by earlier lava flows from the valcano. As it fell it sieved the air and water with insects, animals, and plants that were living in the region of Colorado 34 to 38 million years ago.

The committee amendment strikes all after the enacting clause and inserts new language reflecting the amendments which the committee felt appropriate. For the most part, the amendments are technical and not substantive in nature. One difference between S. 912, as reported, and S. 912, as approved by the other body, involves the terminology stating the objectives of the legislation. Two other differences delete provisions which were unnecessary in light of existing general authority already available. And, finally, the last difference merely corrects a typographical error.

I say again this area is distinctive, unique, and valuable, and it is important that we pass this legislation.

Mr. ASPINALL. Mr. Speaker, I yield 5 minutes to the gentleman from Colorado (Mr. EVANS).

Mr. EVANS of Colorado. Mr. Speaker, I think this is a matter that is very familiar to most of the Members. The thing that highlights the question before us today is the fact that what has been feared for years, and yet has not happened in the past, is about to happen, and it is imminent.

A developer's contract of purchase is on record in this county. Conversations have taken place between several people, hoping to preserve the area with the developers. As a result of uncertainty as to the course to be taken by the developers, as to whether they would stay action until Congress could work its will, interested people then filed an action in the Federal district court in Denver, and it is now before the U.S. circuit court, for a temporary restraining order in order to stay development and permit Congress to work its will.

We came before the Congress the last time thinking that this was about to happen, and this year it has happened. Unless the Congress acts this year, and acts quickly, to retain this valuable area, it will be too late.

Mr. Speaker, this place has been known for over 100 years through the early scientific investigations on the part of Peale in 1877, Scudder in 1879, Carpenter in 1916, Cockerill in 1900, and MacGinitie in 1936, and we have been indeed fortunate that someone has not come in and destroyed this area earlier.

I would urge you to pass this bill, so that we can then get the Senate to agree on the few amendments we have here suggested.

Before I sit down, I would like to call attention to what I think are two of the most graphic descriptions of what we have on the Florissant beds of fossils.

The first is the description by the national areas committee of the University of Colorado, which described this area as follows:

> The Florissant Fossil Beds are the Pompeii of the Oligocene epoch. The life and times of the period 25 to 40 million years ago were trapped and preserved here by volcanic ash in the same way that life at Pompeii was frozen in place by volcanics from Mount Vesuvius.

Another description, which I also think is fitting, gives you a good idea of just exactly what we have here in terms of reserving for future scientific study of this world and it is contained in a comment made by Dr. Beatrice Willard, a doctor and professor of plant ecology, when she described the area as follows:

> This makes the Florissant Beds comparable in the record of life on this planet to the Dead Sea Scrolls of biblical fame, the Rosetta Stone that unlocked the secrets of ancient Egyptian civilization, and the Guttenberg Bible that records the first western printing.

Gentlemen, the time is late. It is now a question of whether or not in fact, no matter what we do today, we will have acted in time to preserve this area.

I hope you will support this legislation.

Mr. Speaker, I yield back the balance of my time.

Mr. ASPINALL. Mr. Speaker, I yield such time as he may desire to the gentleman from Colorado (Mr. ROGERS).

Mr. ROGERS of Colorado. Mr. Speaker, I rise in support of the bill, S. 912.

As I previously indicated, this legislation should be approved promptly. If it is not, then we run the danger of losing some of the florissant fossil beds that have been in the State of Colorado for centuries.

We believe this legislation will help to preserve at least 6,000 acres of land and will be used for scientific purposes in the future.

Mr. KYL. Mr. Speaker, I have no further requests for time.

Mr. ASPINALL. Mr. Speaker, I yield 3 minutes to the gentleman from Illinois (Mr. KLUCZYNSKI).

(By unanimous consent, Mr. KLUCZYNSKI was allowed to speak out of order.)

SELECT COMMITTEE ON HOUSE RESTAURANT OPERATIONS

Mr. KLUCZYNSKI. Mr. Speaker, a great many Members, as well as House staff people concerned, and others, have been in touch with me personally, and with other members of the Select Committee on House Restaurant Operations, regarding the action the select committee plans to take and the procedures it will follow.

I am taking these few minutes to give this brief report so that everyone will know what the select committee has in mind.

We have met and discussed several of

the matters already before us, and we believe it would be well for us to use the period of the forthcoming recess to review the information we have now collected, and to set up an office through which the work of the committee can be handled. I am sure everyone recognizes that those of us on the select committee are not going to be able to handle all of these meetings, telephone calls, and so on, individually through our own offices along with all of our standing responsibilities.

We plan, then, when the recess is over, to start meeting with Members who have recommendations for us, and with restaurant employees who have recommendations or complaints, or both, and with the present management. There will be ample advance notice when the select committee is ready to schedule these meetings, and out of them will, of course, develop the recommendations the select committee will make on restaurant policies and procedures.

Mr. ASPINALL. Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion of the gentleman from Colorado that the House suspend the rules and pass the bill S. 912, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

A motion to reconsider was laid on the table.

INCREASED EDUCATIONAL ASSISTANCE UNDER VA EDUCATION LAW

Mr. TEAGUE of Texas. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 11959), to amend chapters 31, 34, and 35 of title 38, United States Code, in order to increase the rates of vocational rehabilitation, educational assistance, and special training allowance paid to eligible veterans and persons under such chapters, as amended.

The Clerk read as follows:

H.R. 11959

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1504(b) of chapter 31 of title 38, United States Code, is amended to read as follows:

"(b) The subsistence allowance of a veteran-trainee is to be determined in accordance with the following table, and shall be the monthly amount shown in column II, III, or IV (whichever is applicable as determined by the veteran's dependency status) opposite the appropriate type of training as specified in column I:

"Column I	Column II	Column III	Column IV
Type of training	No dependents	One dependent	Two or more dependents
Institutional:			
Full-time	$127	$173	$201
Three quarters time	92	127	150
Half time	63	86	98
Institutional on-farm, apprentice or other on-job training: Full time	109	144	173

Where any full-time trainee has more than two dependents and is not eligible to receive additional compensation as provided by section 315 or section 355 (whichever is applicable) of this title, the subsistence allowance prescribed in column IV of the foregoing table shall be increased by an additional $6 per month for each dependent in excess of two."

SEC. 2. Chapter 34 of title 38, United States Code, is amended as follows:

(a) by deleting in the last sentence of section 1677(b) "$130" and inserting in lieu thereof "$165";

(b) the table contained in paragraph (1) of section 1682(a) is amended to read as follows:

"Column I	Column II	Column III	Column IV	Column V
Type of program	No dependents	One dependent	Two dependents	More than two dependents
				The amount in column IV, plus the following for each dependent in excess of two:
Institutional:				
Full time	$165	$197	$222	$13
Three-quarter time	121	147	170	9
Half time	78	96	109	7
Cooperative	133	159	184	9.";

(c) by deleting in section 1682(b) "$130" and inserting in lieu thereof "$165";

(d) by deleting in section 1682(c)(2) "$130" and inserting in lieu thereof "$165";

(e) the table contained in section 1682(d)(2) is amended to read as follows:

"Column I	Column II	Column III	Column IV	Column V
Basis	No dependents	One dependent	Two dependents	More than two dependents
				The amount in Column IV, plus the following for each dependent in exess of two:
Full time	$133	$159	$184	$9
Three-quarter time	96	116	134	6
Half-time	64	77	90	4.";

(f) the table contained in section 1683(b) is amended to read as follows:

"Periods of training	No dependents	One dependent	Two or more dependents
First 6 months	$102	$114	$127
Second 6 months	76	89	102
Third 6 months	51	64	76
Fourth and any succeeding 6 month periods	25	38	51."

SEC. 3. Section 1684(a) of title 38, United States Code, is amended as follows:

(a) by deleting in paragraph (2) immediately after the semicolon the word "and";

(b) by deleting the period at the end of paragraph (3) and inserting in lieu thereof "; and"; and

(c) by adding at the end thereof the following new paragraph:

"(4) an academic high school course requiring sixteen units for a full course shall be considered a full-time course when a minimum of four units per year is required. For the purpose of this paragraph, a unit is defined to be not less than one hundred and twenty-sixty-minute hours or their equivalent of study in any subject in one year."

SEC. 4. Chapter 35 of title 38, United States Code is amended as follows:

(a) by amending section 1732(a) to read as follows:

"(a) The educational assistance allowance on behalf of an eligible person who is pursuing a program of education consisting of institutional courses shall be computed at the rate of (1) $165 per month if pursued on a full-time basis, (2) $121 per month if pursued on a three-quarters time basis, and (3) $76 per month if pursued on a half-time basis."

(b) by deleting in section 1732(b) "$105" and inserting in lieu thereof "$133"; and

(c) by amending section 1742(a) to read as follows:

"(a) While the eligible person is enrolled in and pursuing a full-time course of special restorative training, the parent or guardian shall be entitled to receive on his behalf a special training allowance computed at the basic rate of $165 per month. If the charges for tuition and fees applicable to any such course are more than $50 per calendar month the basic monthly allowance may be increased by the amount that such charges exceed $50 a month, upon election by the parent or guardian of the eligible person to have such person's period of entitlement reduced by one day for each $5.30 that the special training allowance paid exceeds the basic monthly allowance."

SEC. 5. The amendments made by this Act shall take effect on the first day of the second calendar month which begins after the date of the enactment of this Act.

The SPEAKER pro tempore. Is a second demanded?

Mr. TEAGUE of California. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Texas is recognized for 20 minutes, and the gentleman from California will be recognized for 20 minutes.

GENERAL LEAVE TO EXTEND

Mr. TEAGUE of Texas. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill the House is now considering.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

(Mr. TEAGUE of Texas asked and was given permission to revise and extend his remarks and to include extraneous matter.)

Mr. TEAGUE of Texas. Mr. Speaker, this bill increases the rates of educational assistance allowance for veterans eligible under chapters 31, 34, and 35 of title 38, United States Code.

Chapter 31 applies to service-connected disabled veterans in the form of voca-

tional rehabilitation which was first provided in Public Law 16 of the 78th Congress, enacted in 1943, and which was the forerunner of the several GI bills of rights which have been enacted since that time.

Chapter 34 applies to the veterans of service date on or after January 1, 1955, and chapter 35 applies to the so-called war orphans, which provides educational assistance to children of all individuals who lost their lives from service-connected causes after the beginning of the Spanish-American War and through the present conflict, as well as the children of totally disabled veterans of that period and the wives of totally disabled veterans and widows of veterans who died of service-connected disabilities.

Since, for vocational rehabilitation education, the cost of tuition, fees, books, supplies, and equipment are paid by the VA, the rates shown for chapter 31 are in reality subsistence rates which have not been increased since 1965—Public Law 89-137. Therefore, the rates are increased by 15 percent because of the rise in cost of living. Chapters 34 and 35 are increased 27 percent to meet rising education costs.

The specific rates of increase are shown in the table which follows:

CHAPTER 31—SEC. 1504(b)—VOCATIONAL REHABILITATION

Col. I	Present law			H.R. 11959		
	Col. II	Col. III	Col. IV	Col. II	Col. III	Col. IV
Type of training	No dependents	1 dependent	2 or more dependents	No dependents	1 dependent	2 or more dependents
Institutional:						
Full-time	$110	$150	$175	$127	$173	$201
¾-time	80	110	130	92	127	150
½-time	55	75	85	63	86	98
Institutional on-farm apprentice or other on-job training: Full time	95	125	150	109	144	173

Note: Rate for each dependent in excess of 2: Present law, $5; H.R. 11959, $6.

CHAPTER 34—SEC. 1682(a)—INSTITUTIONAL AND COOPERATIVE TRAINING

Col. I	Present law				H.R. 11959			
	Col. II	Col. III	Col. IV	Col. V	Col. II	Col. III	Col. IV	Col. V
Type of program	No dependents	1 dependent	2 dependents	More than 2 dependents	No dependents	1 dependent	2 dependents	More than 2 dependents
				The amount in col. IV, plus the following for each dependent in excess of 2:				The amount in col. IV, plus the following for each dependent in excess of 2:
Institutional:								
Full time	$130	$155	$175	$10	$165	$197	$222	$13
¾ time	95	115	135	7	121	147	170	9
½ time	60	75	85	5	78	96	109	7
Cooperative	105	125	145	7	133	159	184	9

CHAPTER 34—SEC. 1682(d)(2)—FARM COOPERATIVE TRAINING

Col. I	Present law				H.R. 11959			
	Col. II	Col. III	Col. IV	Col. V	Col. II	Col. III	Col. IV	Col. V
Basis	No dependents	1 dependent	2 dependents	More than 2 dependents	No dependents	1 dependent	2 dependents	More than 2 dependents
				The amount in col. IV, plus the following for each dependent in excess of 2:				The amount in col. IV, plus the following for each dependent in excess of 2:
Full time	$105	$125	$145	$7	$133	$159	$184	$9
¾ time	75	90	105	5	96	116	134	6
½ time	50	60	70	3	64	77	90	4

CHAPTER 34—SEC. 1683(b)—APPRENTICESHIP OR OTHER ON-JOB TRAINING

Periods of training	Present law			H.R. 11959		
	No dependents	1 dependent	2 or more dependents	No dependents	1 dependent	2 or more dependents
1st 6 months	$80	$90	$100	$102	$114	$127
2d 6 months	60	70	80	76	89	102
3d 6 months	40	50	60	51	64	76
4th and any succeeding 6-month periods	20	30	40	25	38	51

CHAPTER 34—OTHER PROVISIONS

	Present law	H.R. 11959
Flight training—sec. 1677(b)	$130	$165
Active duty; less than ½-time training—sec. 1682(b)	130	165
Correspondence courses—sec. 1682(c)(2)	130	165

CHAPTER 35—OTHER PROVISIONS—SEC. 1732(a)—WAR ORPHANS, WIDOWS, AND WIVES EDUCATIONAL ASSISTANCE

Full time	$130	$165
¾-time	95	121
½-time	60	76
Institutional-business courses—sec. 1732(b)	105	133
Special restorative training—sec. 1742(a)	130	165

Section 3 of the bill would amend section 1684(a) of title 38 in order to define the measurement of an academic high school course. The full course requiring 16 units shall be considered a full-time course when a minimum of four units per year is required. The definition of a unit contained in the bill is identical to the definition of a Carnegie unit which is a standard of measurement for describing the secondary school subject matter pattern that comprises the entrance requirements of a college, defined originally by the Carnegie Foundation for the Advancement of Teaching: Assuming 16 units of work in a 4-year secondary school pattern, the Carnegie unit represents a year's study in any subject—not less than 120 sixty-minute hours of their equivalent: Thus secondary schools organized on any other than a 4-year basis can estimate their work in terms of the unit.

Increases provided in this legislation reflect the sizable increases in education costs which have occurred in recent months and are an attempt to steer a middle and reasonable course in relation to proposals contained in a study prepared in the executive branch in May which stated:

> Vietnam veterans receive a flat allowance of $130 a month while attending college. This would have to be raised to $158 a month to give the veteran the same amount relative to college costs as the Korean veteran received. It would have to be raised to $183 a month to restore the post-World War II equivalent. To restore the relation with average hourly earnings of a veteran after world War II would require a monthly benefit of $253.

Hearings were held on this and other pending proposals on June 25, 1969, at which time all the testimony received was favorable with the exception of that of the Veterans' Administration. The Administrator of Veterans' Affairs did not take a position in opposition to the bill, but after pointing out that the President had appointed a committee on the Vietnam veteran, stated:

> Mr. Chairman, as I emphasized before, this Administration is concerned about aiding returning servicemen in readjusting to civilian life and in seeing that all of those who wish to do so will have the opportunity of attending college. As I pointed out earlier, a major concern is the adequacy of the pres-

ent benefit rates, a matter which will receive priority in the study to be conducted by the President's Committee on the Vietnam Veteran. Accordingly, I urge that your committee defer consideration of these pending bills until the President's Committee has had an opportunity to make its study and submit its recommendations.

The first-year cost of the bill as amended by the committee is $206,500,000. The 5-year total is estimated at $1,130,200,000.

Mr. Speaker, I want to take this opportunity to express my appreciation to the Subcommittee on Education and Training, headed by the gentleman from California (Mr. BROWN), who is the cosponsor of the legislation which we are considering here today, for the prompt manner in which this subcommittee met its responsibilities in reporting this measure so vital to the thousands of our returning veterans. They have acted with dispatch and have given careful consideration to the various proposals which were before them.

The other members of the Subcommittee on Education and Training are: Messrs. THADDEUS J. DULSKI, WALTER S. BARING, W. J. BRYAN DORN, HENRY HELSTOSKI, ROMAN C. PUCINSKI, DON EDWARDS, EDWARD R. ROYBAL, Mrs. SHIRLEY CHISHOLM, Messrs. SEYMOUR HALPERN, JOHN J. DUNCAN, WILLIAM H. AYRES, WILLIAM LLOYD SCOTT, JOHN M. ZWACH, and ROBERT V. DENNEY.

Again, I wish to express my appreciation to the members of this subcommittee for a job well done.

Mr. Speaker, I have asked permission to insert pertinent tables bearing on the general subject matter which have been obtained from the Office of Education of the Department of Health, Education, and Welfare:

BASIC STUDENT CHARGES, HIGHER EDUCATION, 1966–67

These tables present data on tuition and required fees charged students in undergraduate degree credit programs of institutions of higher education and on charges to men and women for room and board. Variations are shown by institutional level, control, and by students' place of residence. A comparison of the 1966–67 charges is made with charges in 1961–62 or 1964–65.

In this analysis, the classification by level groups institutions into: (1) Universities—institutions which stress graduate instruction and research, confer advanced degrees, and have at least two professional schools that are not exclusively technological, (2) other 4-year institutions—includes liberal arts colleges, teachers colleges, technological schools, other professional schools, and (3) junior colleges and institutions with programs of at least 2 but less than 4 years' duration.

The classification by control groups institutions into the categories public and private.

Resident students.—Classifies students on the basis of whether or not their domiciles are in the State and/or district where the institution is located and is thus a legal resident of the institution's tax district for purposes of fee assessment.

The data on student charges were obtained primarily from respondents in the Office of Education's annual "Higher Education General Information Survey". Completed questionnaires were returned by about 75 percent of the institutions surveyed. Information on charges of nonresponding institutions were obtained from college catalogs. The averages shown are thus based on information about all institutions of higher education.

The averages shown are for academic years. Institutions were provided with factors with which charges for semesters, trimesters, and quarters were converted to annual rates. In the computation of these averages the data from each institution were weighted by the total degree-credit enrollment in the institution.

TABLE 1.—AVERAGE TUITION AND REQUIRED FEES CHARGED FULL-TIME UNDERGRADUATE RESIDENT STUDENTS, IN INSTITUTIONS OF HIGHER EDUCATION AND PERCENT CHANGE BETWEEN 1961–62 AND 1966–67, BY LEVEL AND CONTROL: AGGREGATE UNITED STATES

Academic year and percent increase	Level of institution and control					
	Universities		Other 4-year institutions		2-year institutions	
	Public	Private	Public	Private	Public	Private
1961–62	$265	$1,059	$182	$838	$88	$537
1966–67	$360	$1,456	$259	$1,162	$121	$845
Percent increase: 1961–62 to 1966–67	35.8	37.5	42.3	38.7	27.5	57.4

TABLE 2.—AVERAGE TUITION AND REQUIRED FEES CHARGED FULL-TIME UNDERGRADUATE STUDENTS IN PUBLICLY CONTROLLED INSTITUTIONS OF HIGHER EDUCATION AND PERCENT INCREASE BETWEEN 1964–65 AND 1966–67, BY LEVEL OF INSTITUTION AND RESIDENCE OF STUDENTS: AGGREGATE UNITED STATES

Academic year and percent increase	Level of institutions and residence of students					
	Universities		Other 4-year institutions		2-year institutions	
	Resident	Nonresident	Resident	Nonresident	Resident	Nonresident
1964–65	$298	$704	$224	$554	$99	$396
1966–67	360	808	259	570	121	446
Percent increase: 1964–65 to 1966–67	20.8	14.8	15.6	2.9	22.2	12.6

TABLE 3.—AVERAGE ROOM AND BOARD CHARGES TO FULL-TIME UNDERGRADUATE STUDENTS IN INSTITUTIONS OF HIGHER EDUCATION AND PERCENT INCREASE BETWEEN 1961–62 AND 1966–67, BY LEVEL AND CONTROL: AGGREGATE UNITED STATES

Academic year control and percent increase	Average room charge and level			Average board charge and level		
	Universities	Other 4-year institutions	2-year institutions	Universities	Other 4-year institutions	2-year institutions
1961–62:						
Public	$249	$197	$155	$433	$409	$356
Private	323	268	234	500	464	427
1966–67:						
Public	321	271	213	490	417	376
Private	452	355	347	548	490	487
Percent increase:						
Public	28.9	37.6	37.4	13.2	2.0	5.6
Private	39.9	32.5	48.3	9.6	5.6	14.1

TABLE 48.—ESTIMATED AVERAGE CHARGES (1967–68 DOLLARS) PER FULL-TIME UNDERGRADUATE RESIDENT DEGREE-CREDIT STUDENT IN INSTITUTIONS OF HIGHER EDUCATION, BY INSTITUTIONAL TYPE AND CONTROL: UNITED STATES, 1957–58 TO 1977–78

[Charges are for the academic year and in constant 1967–68 dollars]

Year and control	Total tuition, board, and room				Tuition and required fees				Board (7-day basis)				Dormitory rooms			
	All	University	Other 4-year	2-year	All	University	Other 4-year	2-year	All	University	Other 4-year	2-year	All	University	Other 4-year	2-year

[1] Estimated.

[2] Represents charges weighted by numbers of full-time degree-credit students, 1961–62 through 1964–65, and weighted by full-time resident students for 1966–67. These charges, shown in table 49 in current dollars, were converted to 1967–68 constant dollars by application of the Consumer Price Index. See constant dollar index, table L.

[3] Interpolated.

[4] The projection of basic student charges is based on the assumption that these charges will continue to increase through 1977–78 as they did during the base years of 1961–62 through 1964–65 and 1966–67, in constant dollars. Decreases in charges for board during the base period are not projected and are frozen at the 1967–68 level. The base year data for board charges, in current unadjusted dollars, did show an increase, but not enough to offset the application of the Consumer Price Index.

Note: Data are for 50 States and the District of Columbia for all years. For further methodo ogical details, see appendix table D.

Mr. Speaker, I include at this point, as a part of my remarks, a listing of Federal educational support programs to students:

FEDERAL EDUCATIONAL SUPPORT PROGRAMS TO STUDENTS

The question of the comparability of the numerous Federal Government educational support programs to that available under the current GI bill is not on- that can be simply answered. The purposes of the support programs vary, and the needs in areas of national interest may require incentives be offered to induce persons to train under Federal sponsorship to meet those needs.

According to a report by the Federal Interagency Committee on Education prepared in June 1968, the Federal Government, during the school year 1968–69, made provision for 43,000 predoctoral fellowships. There are few accurate figures on the extent of support under research and training grants because institutions are permitted discretion in the use of funds and the selection of recipients. The most common stipend paid to students awarded predoctoral fellowships and traineeships is $2,600 a year. (Some are computed on the basis of a calendar year and others on the basis of an academic year.) The most common institutional allowance is $2,500. Total benefits for the individual predoctoral fellowships is approximately $5,100 a year. Some advanced programs run as high as $13,000 or higher. These support programs for the graduate level student provide benefits in excess of that available under the GI bill.

MDTA (Manpower Development Training Act) programs are primarily directed to aid persons with limited financial resources and falling within the definition of a "disadvantaged" person. The training allowances for individuals pursuing institutional training is based on unemployment benefits paid by the respective States. A financial report by the Department of Labor covering the first three quarters of fiscal year 1969, shows that $185,727,471 were obligated for those three quarters to cover both training allowance and training costs for 93,207 approved institutional trainees. Thus, the program provides for an average benefit of $1,993 per year or $166 a month. This is in excess of benefits provided for nondisabled veterans under the GI bill.

The Job Corps is designed to provide assistance through residential training at job centers to young men and women aged 16 to 21 who are public school dropouts, individually poor, or living in a family whose head of household makes less than $3,000 a year.

Generally, a job corpsman receives an allowance of $30 per month plus an allotment to a close family member of $50 per month for a total of $80 a month. Room and board, plus work clothing, are furnished each enrollee at Government expense. According to OEO Report of June 1968, this expense amounts to $800 a year. This amount plus $960 (80 per month) totals $1,760 a year, or a rate of $146 a month, paid directly to or on behalf of the trainee. In addition to direct payments to and on behalf of each Job Corpsman, all training center operation costs are paid by the Federal Government. Direct costs plus training center operation costs average approximately $6,000 per Corpsman man-year.

OFFICE OF EDUCATION

Health professions scholarship

Basic Eligibility: Students with undergraduate degree in medical field.

Range of Benefits: Up to $2,500 per academic year.

Limitations: Students selected must be in exceptional financial need. Funds are granted to schools which in turn selects students.

Graduate fellowships

Basic Eligibility: Graduate students, preferably those interested in teaching in colleges and universities.

Range of Benefits; $2,000 to $2,400, plus $400 a year for each dependent; option to attend summer school, $400 plus $100 for dependents; $2,500 to institution per fellow.

Limitations: OE panel decides eligibility of institution and number of fellowships to be given the institution. (Note: Title IV: 12,000 plus fellowships in 1968–69.)

Prospective teacher fellowships

Basic Eligibility: Graduate students (experienced and prospective teachers in elementary and secondary schools, including postsecondary vocational schools).

Range of Benefits: $2,000 to $2,400 plus $400 dependency allowance.

Limitations: Institutions receiving grants select individuals for fellowships or stipends.

Federal fellowships

Basic Eligibility: Persons engaged in or preparing to undertake careers in elementary and secondary education.

Range of Benefits: $2,000 to $4,000 a year depending on teaching experience and number of dependents; $2,500 to institution.

Limitations: Must be full-time student; cannot be working except for approved part-time research or teaching.

National teaching fellowships (title III)

Basic Eligibility: Qualified graduate students and junior faculty members.

Range of Benefits: $6,500 plus $400 for each dependent.

Limitations: Must be selected to teach in the developing institution.

Nurses training

Basic Eligibility: Students in nursing schools (all types).

Range of Benefits: Loans up to $1,000 (up to 50% is forgiven for full-time employment as a nurse).

Health research fellowships

Basic Eligibility: Graduate students—postdoctoral study.

Range of Benefits: $2,400 to $2,800 plus $500 dependency allowance.

Limitations: Particularly selected to maintain an adequate supply of well-trained research scientists.

Insured student loans

Basic Eligibility: Students in institutions of higher education.

Range of Benefits: Undergraduates: Loan of not more than $1,500 a year; not to exceed $7,500.

Graduate students: Same as undergraduates (loans not to exceed $7,500 aggregate for both programs).

Limitations: Federal Government pays portion of interest only i. adjusted family income is less than $15,000 annually.

Educational opportunity grants

Basic Eligibility: Undergraduates accepted by or enrolled in institutions of higher education.

Range of Benefits: Grants of $200 to $1,000 a year. $1,000 after first year. (Federal matching grant will not exceed $1,000 (140,000 grants a year).)

Limitations:

1. Satisfactory progress.
2. Full-time student.
3. Grants not to exceed 4 academic years.
4. High school graduate in exceptional financial need.
5. One-half of financial aid must come from sources other than Federal Government.

Vocational student loans (guaranteed student loan program)

Basic Eligibility: Students accepted by or enrolled in an accredited business, trade or technical school.

Range of Benefits: Loans of not more than $1,500 a year. Unpaid principal not to exceed $7,500.

Limitations: Students receive interest subsidy from Federal Government only if adjusted family income is less than $15,000 annually.

Educational personnel development (title V–C)

Basic Eligibility: Education personnel now in place and new education personnel.

Range of Benefits: $2,000 per academic year plus $400 for each dependent; $2,500 to institution. For school personnel now in place $75 per week plus $15 per week for each dependent.

Limitations: Grants to institutions of higher education, education agencies, and State education agencies.

Teacher training—handicapped children

Basic Eligibility: Teachers engaged in and those preparing to engage in the education of handicapped children.

Range of Benefits:

Undergraduates: $300 per year; $800 Junior and Senior years.

Fellowships: Masters degree, $2,200 per year plus $600 for each dependent.

Post-masters degree: $3,200 per year plus $600 for each dependent. Tuition paid by Federal Government from the appropriation.

Limitations: Grants to State education agencies and to institutions of higher education. (1968–69 there are approximately 13,000 recipients.)

Teacher Corps

Basic Eligibility:

Teacher-interns: Bachelors degree or at least 2 years college and willingness to serve 2 years in the Corps.

Experienced teachers: Masters degree or equivalent and minimum of 5 years teaching experience.

Range of Benefits:

1. Teacher-interns: Receive $75 a week plus $15 a week for each dependent. Tuition paid by Federal Government.

2. Experienced teachers are paid usual salary which varies plus paid tuition by the Federal Government.

Limitations:

Grants to institutions are based on access to the local districts to be served.

To local districts in proportion of need and quality of the proposal.

Foreign language fellowships (title VI)

Basic Eligibility: Primarily for those who plan to teach foreign languages and area studies at the college level.

Range of Benefits:

1. Graduate fellows: $2,250 per year plus $600 for dependents (up to four); $450 per summer session (8 weeks).

2. Post-doctoral fellows: Receive stipend based on salary of the candidate.

Limitations: All recipients must have technical clearance by Office of Education.

College work study

Basic Eligibility: Students in postsecondary schools, junior colleges, area vocational schools, selected preparatory schools.

Range of Benefits: Federal grant (80–20) to educational institutions; average pay of 15 hours per week at school or related institution is approximately $500 per year. (About 375,000 participants in program in FY 1968.)

Limitations: Particularly students from low-income families.

ATOMIC ENERGY COMMISSION

AEC special fellowships in health physics

Basic Eligibility: Graduate students.

Range of Benefits: $2,400 to $2,800 per year; $2,500 to institution; maximum 36 months.

Limitations: Intention to remain in the nuclear field.

Laboratory graduate fellowships

Basic Eligibility: Graduate students working toward the M.S. or Ph. D. degree in some area of nuclear science and engineering.

Range of Benefits: $3,100 to $6,000 including dependency allowance and tuition.

Limitations: Scholastic record above average. Likelihood of remaining in the nuclear field.

Traineeships in nuclear science and engineering

Basic Eligibility: Graduate students in nuclear science and engineering.

Range of Benefits: $2,400 to $2,800 a year plus $500 per dependent; $2,500 to participating institution.

Limitations: Scholastic record above average. Likelihood of remaining in the nuclear field.

AEC postdoctoral fellowships

Basic Eligibility: Scientists and engineers with doctoral degree or equivalent.

Range of Benefits: $9,000 per year plus $1,000 travel.

Limitations: Prior acceptance by organization where tenure will be held. A plan for research relevant to interests of AEC.

AEC special fellowships in industrial medicine

Basic Eligibility: Physicians with M.D. degree and 1 year internship.

Range of Benefits: $7,500 to $9,000 including dependence allowance; $2,500 to institution.

Limitations: Acceptance of conditions of appointment.

NATIONAL SCIENCE FOUNDATION

Graduate fellowships

Basic Eligibility: Students who have been or will be admitted to graduate status by the institution selected.

Range of Benefits: $1,800 to $4,300 per 9- or 12-month period including dependency allowance; $2,500 to institution.

Limitations: Must have demonstrated special aptitude for advanced training in the sciences.

Graduate traineeships

Basic Eligibility: Student must be enrolled in a full-time program leading to an advanced degree in science.

Range of Benefits: $2,400 to $2,800 per basic 12-month period; dependency allowance may be provided; summer stipend ranges from $50 to $85 per week.

Limitations: Grants are made to universities that confer doctoral degrees to enable them to provide graduate traineeships.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

Predoctoral traineeships

Basic Eligibility: Qualified college graduates.

Range of Benefits: $2,400 to $3,400 including dependency allowance; $2,500 to institution. (In academic year 1967–68 approximately 3,400 participants in this program.)

Limitations: Intention to continue studies toward a doctorate in a space-related discipline.

HOUSING AND URBAN DEVELOPMENT

Urban studies fellowships

Basic Eligibility: Students enrolled for full-time study as candidates for masters or Ph. D. degree.

Range of Benefits: Up to $3,000 per year plus $500 for dependents up to 2; tuition paid directly to the institution.

Limitations: Programs of study oriented to public careers in urban development. Awards are made on recommendation of the Urban Studies Advisory Board.

DEPARTMENT OF INTERIOR (BUREAU OF INDIAN AFFAIRS)

Scholarship aid to Indian students enrolled in degree-granting accredited colleges and universities

Basic Eligibility: Must have one-quarter or more degree Indian, Eskimo, or Aleut blood and membership in a tribal group for which the Federal Government has trust responsibility. Also, financial need is a determining factor.

Range of Benefits: Direct financial aid to students averages about $800 per enrollee per year. Tuition and fees are paid by the Federal Government to institution. Specific costs of tuition, etc., not available due to varying tuition charges and needs of the individual.

Limitations: Scholarships are made primarily to youths residing on reservations or other Indian-owned tax-exempt lands. (1968–69 school year there were approximately 2,700 enrollees under this program.)

Education of Indian children in Federal schools

Basic Eligibility: Indian children who reside on or near reservation areas and do not have access to adequate public educational opportunities.

Range of Benefits: Federal Government pays all expenses necessary to operate school. (No direct monetary benefits to individuals.)

DEPARTMENT OF INTERIOR

Federal water pollution control fellowships

Basic Eligibility: Research fellowships are awarded on basis of technical review of competence of individuals.

Range of Benefits: Stipend of $6,400 per year.

Limitations: Independent research of water supply and water pollution control.

DEPARTMENT OF DEFENSE

Regular NROTC—Navy—Holloway plan—Army and Air Force have similar ROTC programs

Basic Eligibility: Active duty personnel interested in career naval service.

Range of Benefits: Individuals are paid $50 per month as a subsistence allowance; tuition and fees are paid to the institution.

Limitations: Must be candidate for an undergraduate degree. Service obligation 4 years after receipt of commission as a naval officer.

DEPARTMENT OF DEFENSE (ALL SERVICES)

Off-duty voluntary programs—Studies leading to bachelor and advanced degrees

Basic Eligibility: All active duty personnel except officers within 2 years of controlled separation.

Range of Benefits: Up to 75% of tuition and fees for off-duty at accredited schools. Coast Guard pays 100% of tuition not to exceed $200 (approx. 285,000 participants).

Limitations: 2-year obligation for officers; none for enlisted personnel.

AIR FORCE

Air Force airman and education commissioning program—the Army and Navy have similar programs titled "Army enlisted schooling" and "Navy enlisted scientific education."

Basic Eligibility: Career minded, active duty airmen with at least 1 year active duty and 30 semester hours of college credit.

Range of Benefits: Full pay and allowances plus tuition and related fees for maximum of 2 years residence study followed by officer training school (OTS).

Limitations: Serves 4 years after receipt of commission.

U.S. ARMED FORCES INSTITUTE—USAFI

Elementary school through college and graduate level

Basic Eligibility: All active duty service personnel.

Range of Benefits: Reduced fees for extension and correspondence courses.

CIVIL DEFENSE

Student development

Basic Eligibility: Graduate students who are interested in pursuing advanced studies in the field of protective engineering.

Range of Benefits: $2,200 for students; $2,800 for university per academic year.

Limitations: Awards on a merit basis; students must be civil defense oriented.

DEPARTMENT OF LABOR—MANPOWER ADMINISTRATION

MDTA institutional training

Basic Eligibility: For training allowance, the individual must be unemployed, head of a household or family, and with at least 1 year's previous experience in gainful employment, including time spent in military service. Emphasis is on the "disadvantaged" individual. For training only the individual must be unemployed or underemployed and available for any counseling required.

Range of Benefits: Institutional training allowance is based on the prevailing unemployment insurance in the applicable State (from $29 per week in Mississippi to $52 per week in California). Individuals are allowed $5 per week for each dependent up to a maximum of $30 per week. Federal Government pays generally 90% of training costs. The average benefit provided for institutional trainees, on a yearly basis, FY 1969 was $1,993 ($1,125 training allowance, $868, training costs) or $166 per month.

Limitations: Length of program ranges from 4 to 104 weeks with an average of 26 weeks. (Note: No statistics available on number of veterans. Department of Labor estimates approximately 18,000 veterans under age 35 of a total of about 140,000 trainees in FY 1969. Department of Labor statistics shows 93,207 approved institutional trainees, FY 1969 through March 31, 1969.)

MDTA on-the-job training

Basic Eligibility: Unemployed and underemployed (65% must be certified by the Employment Service as "disadvantaged").

Range of Benefits: No Federal funds are paid to trainees; employer's training costs are paid directly to the employer; employer pays trainee a salary.

Limitations: 65% must be "disadvantaged."

DEPARTMENT OF LABOR—JOB CORPS JURISDICTION TRANSFERRED FROM OEO TO MANPOWER ADMINISTRATION, JULY 1, 1969

Job Corps—Residential training

Basic Eligibility: Disadvantaged young men and women aged 16 to 21.

Range of Benefits: While in training at job center, corpsmen receive subsistence (room and board, clothing, etc.) amounting to approximately $800 a year, plus $30 a month and an allotment of $50 a month to a close family member. This totals $1,760 for a year or $146 a month. The average training period is 7 to 9 months.

Limitations: Youths aged 16–21 who are public school dropouts, individually poor, or living in a family whose head of household earns less than $3,000 a year. Maximum period of training 2 years.

VETERANS' ADMINISTRATION

Vocational rehabilitation

Basic Eligibility: Veterans with wartime or Korean conflict service compensable disability. Veterans of other service, a 30% or more service-connected disability or if less than 30% have pronounced employment handicap.

Range of Benefits: A subsistence of allowance varying from $55 to $175 per month based on half-tme or full-time training and dependency status. Tuition fees, books, and cost of supplies are also paid by the VA.

Limitations: Discharge or release from active service under honorable conditions; education must generally be completed in 9 years after discharge or release, with possible extension 13 years.

Readjustment training

Basic Eligibility: Veterans of service after Jan. 31, 1955, with more than 180 days of active service and members of the Armed Forces who have served at least 2 years on active duty.

Range of Benefits: Payments of $60 to $130 a month for one-half time or more plus an allowance for dependents. Veterans enrolled for less than one-half time and servicemen on active duty are paid at the rate of the school's tuition and fees or at the rate of $130 a month for full-time education whichever is less. Flight training payments are based on 90% of established charges. On-the-job training—from $80 for first 6 months plus dependency allowance to $20 for fourth 6 months plus dependency allowance. Farm cooperative training: $50 for one-half time to $105 for full-time plus dependency allowance. Established charges are paid for correspondence course lessons completed and serviced by school.

Limitations: Honorable service and completion of education within 8 years after last discharge or release from active service. Maximum entitlement is 36 months or an aggregate of 48 months when prior training under VA program.

War orphans training—including wives and widows

Basic Eligibility: Children generally between ages 18 and 26, and wives or widows of veterans who are permanently and totally disabled or died because of a service-connected disability.

Range of Benefits: Payments to students range from $60 a month for one-half time educational pursuit to $130 a month for full-time pursuit to a maximum of 36 months, or equivalent in part-time training.

Limitations: Generally a child's education must be completed between ages 18 and 26, but in no event earlier than 14 years nor later than 31 years of age. Wives or widows have 8 years.

Mr. TEAGUE of California. Mr. Speaker, I rise in support of H.R. 11959. This bill will grant a cost-of-living increase in educational allowance to veterans, widows, and orphans attending school under the several educational benefits programs administered by the Veterans' Administration.

The allowances authorized for service-connected disabled veterans pursuing education or training under the vocational rehabilitation program are increased by 15 percent. This allowance represents living expenses alone for the disabled veteran student while attending school. The Veterans' Administration pays the costs of tuition, fees, books, supplies, and equipment.

The allowances authorized for veterans attending school under the GI bill and for widows and orphans and wives of totally disabled veterans pursuing educational programs under the War Orphans Educational Assistance Act are meant for tuition and fees as well as living expenses. As a result, these allowances are increased by 27 percent under the bill.

Finally, Mr. Speaker, the bill revises the method of determining full-time attendance in high school courses. Under existing law, a veteran desiring to complete his high school education in one of the many adult education programs offered in communities throughout the Nation must enroll for a minimum of 12 clock hours per week to receive any allowance under the GI bill. This represents a difficult and unappealing schedule to the returning veteran who must work full time during the day.

Our experience indicates that many veterans who need a high school diploma are passing up the opportunity to return to school because of these stringent requirements. The bill before us today will permit a veteran to enroll in evening high school classes for two units of study or two subjects and receive the minimum half-time allowance.

Mr. Speaker, because of the continually spiraling cost of living and cost of education, the increased allowances authorized by this bill are necessary. I urge that it be passed.

(Mr. ADAIR (at the request of Mr. TEAGUE of California) was granted permission to extend his remarks at this point in the RECORD.)

Mr. ADAIR. Mr. Speaker, I rise in support of H.R. 11959. This bill, if enacted into law, will provide needed increases in educational allowances paid to persons pursuing programs of education or training under laws administrated by the Veterans' Administration.

Existing law permits unmarried veterans, widows, and children of service connected deceased veterans and wives of service-connected totally disabled veterans to receive an allowance of $130 monthly while pursuing a program of education or training on a full time basis. An increased allowance is payable to veterans with dependents while proportionate allowances are payable for veterans attending school on a part time basis. Under this bill, these allowances are increased by 27 percent. In the case of the $130 monthly allowance, the increase amounts to $35 monthly.

Additionally, the bill authorizes an increase in the subsistence payable to service connected disabled veterans pursuing programs of vocational rehabilitation. Under this program, the Veterans' Administration pays tuition and other fees directly to the educational institution while the unmarried veteran pursuing full time training receives $110 monthly. Under the bill, this allowance is increased to $127 monthly.

Mr. Speaker, the various educational programs administered by the Veterans' Administration since the termination of World War II have returned to the Federal Government more money in increased taxes from the recipients of these benefits than the programs have cost the Government. As a result of these educational programs, the veteran population is better educated, better able to command higher wages and better able to fill critical manpower needs in the sciences and industry than would otherwise be the case. I believe the current education programs will also pay for themselves. I urge the adoption of this bill.

Mr. ANNUNZIO. Mr. Speaker, many words have been spoken in this Chamber about support for our fighting men overseas, and such words have not fallen on deaf ears. The Congress has traditionally shown itself eager to provide American

soldiers with everything they need to fight a war, from medical supplies to materiel.

And Congress has not stopped there; it has also convincingly demonstrated a concern for supporting our soldiers when wars are over and they become civilians once again. Thus, in 1943, Congress enacted into law a program which provided allowances for vocational rehabilitation to veterans with service-connected disabilities.

Then, in 1944, the GI bill of rights was passed by the Congress without a single dissenting vote. This historic measure set up a program which, among other things, provided veterans with educational assistance for high school, college, or vocational training. Fifty percent of the returning World War II servicemen took advantage of that program.

Its unqualified success led to the enactment of the Korean conflict GI bill, in which educational assistance was also provided. Forty-two percent of the eligible Korean war veterans used the allowances and Congress subsequently wrote into law a cold war bill of rights for the GI, again providing education and training allowances.

Figures now show us that only 20 percent of the cold war veterans—those entering the Armed Forces after January 31, 1955—took advantage of the allowances, and only 21 percent of the Vietnam veterans thus far have done so. One reason for this distressing decrease in educational activity among our veterans is evident: The educational assistance allowances available to the veterans are not enough to meet their needs. The costs of education have risen so much in the last few years that the allowances provided by the veterans' programs bear little relation to them. Clearly, this is a situation that can, and should, be remedied.

I am pleased to note that the Committee on Veterans' Affairs has come up with just the remedy needed: H.R. 11959. Under the consistently able leadership of the distinguished gentleman from Texas, chairman OLIN E. TEAGUE, the committee has reported H.R. 11959, a bill to increase the rates of vocational rehabilitation, education assistance, and special training allowances paid to eligible veterans and certain dependents. Specifically, the subsistence rates for veterans in vocational rehabilitation training, which have not been increased since 1965, are raised 15 percent by the bill, because of the rise in the cost of living. The allowance rates for other on-the-job training—are increased 27 percent. Thus, a veteran with a wife and child who attends college full time would, under the provisions of H.R. 11959, receive $222 per month during the school year instead of the present inadequate $175.

I believe that if this bill is passed, the educational assistance program for veterans would become more meaningful and that we would immediately see an increased utilization of the program among our men who are returning from Vietnam. Congress has supported our soldiers in their task of fighting a difficult war in Vietnam. We must continue to support them once they cease to be active soldiers and begin the often difficult readjustment to civilian life. One of the most meaningful ways we in Congress can demonstrate both our gratitude for their past actions and our faith in their future endeavors would be to pass H.R. 11959.

Mr. EDMONDSON. Mr. Speaker, I rise in support of H.R. 11959, to increase the rates of vocational rehabilitation, educational assistance, and special training allowance paid to veterans.

The bill is urgently needed, in view of the rising cost of living and rising educational costs; and I am a sponsor of a bill which seeks the same basic objectives as those of H.R. 11959.

My own bill was introduced in response to reports from veterans seeking to take advantage of the GI bill in schools in Oklahoma, who advised of the great difficulty they were encountering under the present payment rates.

I urge the approval of H.R. 11959.

Mr. HALPERN. Mr. Speaker, I rise to support H.R. 11959, introduced by the gentleman from Texas, the respected, able and distinguished chairman of the Veterans' Affairs Committee on which I am privileged to serve.

Each month over 70,000 veterans are discharged from active service. These young Americans who have served their Nation so well in war can also serve their Nation as peacetime citizens. This bill will increase the allowance rates for vocational rehabilitation, special training and educational assistance paid to these veterans.

Many veterans have not completed their education, but unfortunately many of them are not taking advantage of opportunities available under the Cold War GI bill of 1966.

After World War II, 50 percent of the eligible veterans benefited from the available vocational and college training. Following the Korean conflict, over 42 percent of the veterans took advantage of educational and training programs. However, since January of 1966, only 21.4 percent of the discharged Vietnam veterans have utilized the available benefits.

One of the major reasons for this deplorable low rate of participation is that the rate of payment has not kept up with the rising cost of living and the fast increasing cost of education. The present pay schedule is far below those of World War II and the Korean war.

Since the current allowances are so inadequate, the veterans who seek an education are confronted with a great financial test. The average cost of tuition fees and room and board for a full-time resident student at a 4-year college or university has risen about 46 percent since October of 1967 when the last rise in educational allowances was implemented. The gap between the allowance afforded veterans pursuing vocational rehabilitation training and the present cost of such education is even greater. These rates were last changed in October of 1965.

The bill before us today would provide a giant step toward the alleviation of these inequities. It would add support to the bridge veterans must cross from military life to civilian life. H.R. 11959 would increase benefits available to disabled veterans for training by 15 percent. Benefits available for apprentice training, farm cooperative and college training would be raised by almost 27 percent. Educational benefits available to wives and children of totally disabled veterans or veterans who have died from service-connected causes would also be increased by almost 27 percent.

On June 5, President Nixon wisely stated:

> It is our hope that there will come a day when the benefits of peace will convince men and nation of the folly of war: until then, we must make certain that the benefits we offer reflects our pride in our veterans and our gratitude for their sacrifices.

All of us pray that the time will soon come when all the world will live in peace. But being cognizant of the realities of today, our duty is to express our pride and gratitude to our veterans by granting each of them a fair chance to better himself.

Mr. Speaker, I trust this bill will receive resounding approval today. That is the least we can do for our veterans and for ourselves.

Mr. MATSUNAGA. Mr. Speaker, I rise in support of H.R. 11959, a bill which would provide increased educational assistance to veterans under the Veterans' Administration education law.

We are not today delving into the merits of the various educational assistance programs administered by the VA; that question has already been favorably decided by past Congresses. What we are called upon to do by the legislation now before this body is to make proper adjustments in the allowances which are provided under the various ongoing VA educational programs. We can either accept or reject the increases which have been proposed by the distinguished gentleman from Texas (Mr. TEAGUE) and the able members of the Committee on Veterans' Affairs over which he presides.

Before we decide on which way our vote is to be cast, however, I strongly urge a close study of the proposed increases in benefits. H.R. 11959 would increase by only 15 percent the benefits currently available to disabled veterans for vocational training. In the case of a single veteran, with no dependents, who is pursuing full-time institutional training, the increase is all of $17. Instead of receiving $110, an amount that was set in 1965, he would get $127 per month in what has been termed a "subsistence allowance" because all of his other vocational rehabilitation expenses are paid by the VA. Disabled veterans with dependents would receive corresponding increases.

This bill would also increase by 27 percent the benefits which are currently available for institutional, farm cooperative, and apprentice training. Again, a single veteran, with no dependents, who is attending college and pursuing a full-time program, would receive $165 per month instead of the present $130. From this allowance he has to pay for his own tuition, books, and supplies, as well as for his room and board. In the face of today's rising tuition as well as rising cost of living, the undergraduate veteran can hardly be said to be going to school in lavish style on his VA allowance.

Similarly, the legislation under con-

sideration would also increase by 27 percent educational benefits which are available to wives and children of totally disabled veterans or veterans who died from service-connected causes.

Mr. Speaker, it is particularly noteworthy, in our consideration of H.R. 11959, that the bill was reported unanimously by the committee, and that it is not opposed by the administration.

This measure deserves our support, and I, therefore, urge a unanimous vote.

Mr. BOLAND. Mr. Speaker, I want to express my support for this legislation to increase the education allowances now granted to veterans and their dependents.

Clearly, Mr. Speaker, we in the Congress have a responsibility to help veterans in their efforts to readjust fruitfully to civilian life. The education assistance programs carried out under the Veterans' Administration—programs that offer financial aid to veterans ranging from severely disabled men struggling to regain their earning power through vocational rehabilitation, to men seeking a college degree after completing their service requirements, to men taking night courses or correspondence courses in attempts to get better jobs—play a major role in this readjustment. Yet the assistance allowances granted under present law are plainly too low. The cost of education is inching upward year by year, putting college and other forms of schooling out of the financial reach of many veterans. The bill now before us would help solve this problem by increasing allowances 15 to 27 percent.

The increases sought in this bill would affect three groups of veterans—disabled veterans receiving vocational rehabilitation assistance, nondisabled veterans of service date on or after January 1, 1955, the widows and children of veterans who lost their lives in the line of duty, and the wives and children of totally disabled veterans. The principal beneficiaries of the bill, therefore, would be Vietnam war veterans, disabled veterans, and their families, and the families of men who have sacrificed their lives for their country.

The need is to provide greater educational assistance to these groups is clear and indisputable.

I strongly urge the passage of this bill.

Mr. REID of New York. Mr. Speaker, I strongly support H.R. 11959, which would provide increased educational assistance under the Veterans' Administration education law.

The increases which are authorized in this legislation are long overdue and much needed as the cost of living continues to move upward. Under this act, the rates for vocational rehabilitation will be increased by 15 percent; rates for institutional and cooperative training, for farm cooperative training, for apprenticeship and other on-the-job training, and for assistance for orphans, widows, and wives will be increased by 27 percent.

In other words, under this new legislation, a veteran attending college on a full-time basis and not responsible for any dependents would receive $165 a month; with one dependent he would receive $197 per month; and with two or more dependents he would receive $222 per month.

Surely we as a nation must rise and give support to those men who have risked their lives for us.

Surely we must acknowledge our debt and try to repay those men who return from war only to find themselves the victims of inflation and ever-rising costs for tuition and other required fees of a college education.

And surely we must bear responsibility for those who have fallen, and care enough to provide for their widows and their now fatherless children, and take it upon ourselves to offer them a decent education.

Mr. Speaker, I am proud of these men and their families. The very least that we in Congress can do for them is to allot these funds for their education on a fair basis, consistent with costs today.

Mr. TEAGUE of California. Mr. Speaker, I have no further requests for time, unless the gentleman from Iowa (Mr. GROSS) would like some time. If so, I yield him the remainder of my time.

Mr. GROSS. Mr. Speaker, I wish to thank the gentleman. I yield back the time.

Mr. TEAGUE of California. Mr. Speaker, I have no further requests for time.

Mr. TEAGUE of Texas. Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion of the gentleman from Texas that the House suspend the rules and pass the bill H.R. 11959, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

A motion to reconsider was laid on the table.

PRESIDENT'S COUNCIL ON YOUTH OPPORTUNITIES

Mr. PERKINS. Mr. Speaker, I move to suspend the rules and pass the joint resolution (H.J. Res. 764) to authorize appropriations for expenses of the President's Council on Youth Opportunity.

The Clerk read as follows:

H.J. RES. 764

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby authorized to be appropriated such sums as may be necessary for the expenses of the President's Council on Youth Opportunity established by Executive Order Numbered 11330 of March 5, 1967.

The SPEAKER pro tempore. Is a second demanded?

Mr. AYRES. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Kentucky is recognized for 20 minutes, and the gentleman from Ohio will be recognized for 20 minutes.

Mr. PERKINS. Mr. Speaker, the resolution was reported out of the committee unanimously. As I understand it, the President is very much in favor of the resolution, even though the Council was formed by former President Johnson.

Enactment of the resolution is necessary in order to authorize appropriation for the President's Council, an estimated $357,000.

There is no objection on the part of any Member that I know about. The gentleman from Ohio (Mr. AYRES) is a cosponsor of the resolution.

Mr. HALL. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. Mr. Speaker, I yield to the gentleman from Missouri.

Mr. HALL. Mr. Speaker, I appreciate the gentleman yielding. I just wonder why it is necessary for a preformed Council on Youth, or another study commission on youth opportunity, or advisory group, or whatever one wishes to call it, to suddenly be funded by the Congress, when it was formed by a prior administration and evidently paid for out of the President's contingency fund at that time. Why could it not be continued that way, rather than getting this stamp of approval of the purse string controller, the elected Congress of the United States?

Mr. PERKINS. Mr. Speaker, if the gentleman will look at the bottom of the report, he will notice:

> This legislation has been recommended by the Bureau of the Budget and is necessary because of the provision of Public Law 90–479, which provides:
>
> No part of any appropriation contained in this or any other Act, shall be available to finance interdepartmental boards, commissions, councils, committees, or similar groups under Section 214 of the Independent Offices Appropriation Act, 1946 (31 U.S.C. 691) which do not have prior and specific congressional approval of such method of financial support.

So we are here authorizing the funds. The administration and the Budget Bureau have requested this action. I personally feel that the President's Council on Youth Opportunity can serve a very useful purpose.

Mr. HALL. Mr. Speaker, I appreciate the gentleman's further opinion.

I have a few more questions. I wonder just how much appropriation will be needed for this council, for example, in fiscal year 1970?

Mr. PERKINS. The 1970 request is $357,000. Members of the Cabinet compose the Council.

Mr. HALL. Mr. Speaker, this is another expenditure, however, that is not in the revised budget. Is that correct?

Mr. PERKINS. The $357,000 for fiscal 1970 is in the revised budget.

Mr. HALL. That is correct.

Would the distinguished chairman of the Education and Labor Committee agree with me that the bill as written is open ended and ad infinitum?

Mr. PERKINS. That is correct.

Mr. HALL. I thank the gentleman for his forthrightness. Is it not true that the Council work is duplicative of many youth programs being conducted by HEW and HUD, if not EDA, and certainly by the OEO?

Mr. PERKINS. The real purpose of the Council is to provide some coordination of youth programs, particularly summer job programs.

Mr. HALL. Mr. Speaker, that is a noteworthy objective. We seem to have a great many coordinating and advisory councils—more and more. Does the gentleman not honestly feel this money that is being authorized herewith—up to $357,000—could be better used if allocated under existing programs?

Mr. PERKINS. Mr. Speaker, we have always provided funds for the White House councils of this type. It has been a common practice. I cannot think of a better purpose than the purpose provided for in this joint resolution. When we have as many youth problems as we have across the Nation, we cannot forget about them, we cannot sweep them under the rug. We have to provide ways to handle them.

Mr. HALL. Mr. Speaker, I thank the gentleman for his opinion. I know he contributes much. I know he knows that no one believes it is a question of sweeping the youth problems under the rug, especially one who served youth so long.

I believe we are overlegislating on youth. I doubt if one can federally and collectively legislate in the heart of man, whether it is a youth or an adult.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. I yield to the gentleman from Iowa.

Mr. GROSS. I thank the gentleman for yielding.

How much has been appropriated for this President's Council? How much has been appropriated or spent in the last year or two?

Mr. PERKINS. We have spent some money.

Mr. GROSS. I beg the gentleman's pardon.

Mr. PERKINS. We have spent some money on the youth of this country. I believe that this will serve a useful purpose. In the budget for fiscal year 1970 they have made an estimate of $357,000.

Mr. GROSS. How much has been spent in the past?

Mr. PERKINS. We have spent millions of dollars in the past on youth.

Mr. GROSS. I am talking about this particular Council.

Mr. PERKINS. On this particular Council?

Mr. GROSS. That is right.

Mr. PERKINS. Several hundred thousand. I do not now have the precise figure but I will get it for the gentleman.

Mr. GROSS. Just a little piece of change, $200,000 "Something like that," says the gentleman. It really does not mean much? Is that the way it is figured?

What has been accomplished for the $200,000 that has been spent?

Mr. PERKINS. I believe a whole lot has been accomplished as far as doing something for the youth of this Nation is concerned. We have tried to concentrate and provide employment opportunities, training opportunities, and educational opportunities. That is the purpose of this legislation.

All the Members of the Cabinet, as members of this Council, I believe can contribute by coordinating the appropriate resources of their agencies on the problem. The administration wants it and believes it will be effective.

Mr. GROSS. It is all fine and good that the administration wants it, but the taxpayers also want some reform in spending. They are getting tired of paying increased taxes.

I do not care how much someone may attempt to minimize $200,000, it is still a lot of money in some places in this country.

Just give us an example of the coordination that has been bought with the expenditure of $200,000, or that it is proposed to buy with the expenditure of $350,000 or $375,000.

Mr. PERKINS. If the gentleman will read the report, on page 3, there are listed seven reasons why this legislation is necessary. This is simply a case where we cannot afford to abandon the Council, when we have all the problems with youth in this Nation we now have.

Mr. GROSS. If it is not accomplishing anything we can afford to disband it. I do not care whether it says youth, women, children, or what; if it is accomplishing nothing we can afford to abandon it here and now. I do not believe that this Council has accomplished anything, and the gentleman is not telling me it has accomplished anything, or that it proposes to.

Mr. PERKINS. I would hate to think that all of the various departments of this Government which are components of this Council have not accomplished anything. We have expended millions of dollars, trying to do something about the problems of a major area, the youth of this country. I believe we are making progress, and the Council should be entitled to continue to exist.

Mr. GROSS. What, by way of example, is this contributing to the progress?

Mr. PERKINS. The gentleman will notice the letter to the Speaker. He can read that letter. Then he will notice, on page 3 of the report, it is stated:

First, early and firm decisions by the Federal Government on the assistance it will make available to communities for summer youth programs.

There has been much coordination between the Government and private industry in the efforts to bring about employment for the youth of this Nation.

Mr. GROSS. Summer is about over, is it not?

Mr. PERKINS. Well, that is just one phase of the Council's work. We have to plan ahead for next summer, I will say to the gentleman. That is one of the problems of this Council. It is a year-round effort to provide opportunities for the youth.

Mr. AYRES. Mr. Speaker, I have no requests for time on this side. I support the legislation. I think the Members can inform themselves about this by reading the 10 points listed on pages 4 and 5 of this report. This organization has primarily been one which encourages and works in various fields within the areas that are now carrying out youth programs. They have been very significant in the field of working with our cities in their Boy Scout programs, encouraging more youths to participate in them.

Mr. EDMONDSON. Mr. Speaker, will the gentleman yield?

Mr. AYRES. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. I thank the gentleman for yielding.

I am interested in what he has said about the youth opportunities organization in the cities, because the city manager of my own hometown just left Washington about an hour ago after having been up here on other business and expressed himself very strongly as being in favor of the work being done in the youth opportunity program. He said it had done a very remarkable job in my own hometown in getting increased activity on the part of youths in constructive enterprises and activities. He thought it was a very, very fine thing and supported it.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. AYRES. I yield to the gentleman from Iowa.

Mr. GROSS. Does the gentleman have any examples of coordination in this field? We spent $200,000 or more here and we propose to spend another $350,000 here and so on and so on into the wild blue yonder. Does the gentleman have any examples of the coordination that has been attained?

Mr. AYRES. I will say to the gentlemen from Iowa that we do not have exhibits A, B, C, and D.

The SPEAKER pro tempore. Did the Chair correctly understand the gentleman from Ohio to say that he had no further requests for time?

Mr. AYRES. Other than what I consume myself.

Mr. Speaker, I yield back the balance of my time.

Mr. PERKINS. Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion of the gentleman from Kentucky that the House suspend the rules and pass the joint resolution, House Joint Resolution 764.

The question was taken.

Mr. HALL. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 396, nays 7, not voting 29, as follows:

Mr. Diggs with Mr. Lowenstein.
Mr. Fascell with Mr. Gray.
Mr. Corman with Mr. Rarick.
Mr. Tunney with Mr. Mikva.

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

NATIONAL CENTER ON EDUCATIONAL MEDIA AND MATERIALS FOR THE HANDICAPPED

Mr. PERKINS. Mr. Speaker, I move to suspend the rules and pass the bill (S. 1611) to amend Public Law 85–905 to provide for a National Center on Educational Media and Materials for the Handicapped, and for other purposes, as amended.

The Clerk read as follows:

S. 1611

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act of September 2, 1958 (Public Law 85–905) is amended—

(1) in section 3, by adding at the end thereof the following new subsection:

"(c)(1) The Secretary is authorized to enter into an agreement with an institution of higher education for the establishment and operation (including construction) of a National Center on Educational Media and Materials for the Handicapped, which will provide a comprehensive program of activities to facilitate the use of new educational technology in education programs for handicapped persons, including designing and developing, and adapting instructional material, and such other activities consistent with the purposes of this Act as the Secretary may prescribe in the agreement. Such agreement shall—

"(A) provide that Federal funds paid to the Center will be used solely for such purposes as are set forth in the agreement;

"(B) authorize the Center, subject to the Secretary's prior approval, to contract with public and private agencies and organizations for demonstration projects;

"(C) provide for an annual report on the activities of the Center which will be transmitted to the Congress;

"(D) provide that any laborer or mechanic employed by any contractor or subcontractor in performance of work on any construction aided by Federal funds under this subsection will be paid wages at rates not less than those prevailing on similar construction in the locality as determined by the Secretary of Labor in accordance with the Davis-Bacon Act (40 U.S.C. 276a—276a–5); and the Secretary of Labor shall have, with respect to the labor standards specified in this clause, the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 5 U.S.C. 133z–15) and section 2 of the Act of June 13, 1934 (40 U.S.C. 276c).

"(2) In considering proposals from institutions of higher education to enter into an agreement under this subsection, the Secretary shall give preference to institutions—

"(A) which have demonstrated the capabilities necessary for the development and evaluation of educational media for the handicapped; and

"(B) which can serve the educational technology needs of the Model High School for the Deaf (established under Public Law 89–694).

"(3) If within twenty years after the completion of any construction (except minor remodeling or alteration) for which such funds have been paid—

"(A) the facility ceases to be used for the purposes for which it was constructed or the agreement is terminated, unless the Secretary determines that there is good cause for releasing the institution from its obligation, or

"(B) the institution ceases to be the owner of the facility,

the United States shall be entitled to recover from the applicant or other owner of the facility an amount which bears to the then value of the facility the same ratio as the amount of such Federal funds bore to the cost of the facility financed with the aid of such funds. Such value shall be determined by agreement of the parties or by action brought in the United States district court for the district in which the facility is situated.";

(2) in section 2, by adding at the end thereof the following:

"(5) The term 'construction' means the construction and initial equipment of new buildings, including architect's fees, but excluding the acquisition of land."; and

(3) in section 4, by striking out "and" after "1969," and by striking out "1970" and all that follows and inserting in lieu thereof the following: "1970, $12,500,000 for the fiscal year ending June 30, 1971, $15,000,000 for the fiscal year ending June 30, 1972, and $20,000,000 for the fiscal year ending June 30, 1973, and for each succeeding fiscal year."

The SPEAKER pro tempore. Is a second demanded?

Mr. REID of New York. Mr. Speaker, I demand a second.

Mr. HALL. Mr. Speaker, a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state it.

Mr. HALL. Is the gentleman from New York demanding a second opposed to the bill?

Mr. REID of New York. Mr. Speaker, in response to the gentleman from Missouri, I am not opposed to the bill.

Mr. HALL. Mr. Speaker, I am opposed to the bill in its present form, and I demand a second.

The SPEAKER pro tempore. Without

objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Kentucky is recognized for 20 minutes.

Mr. PERKINS. Mr. Speaker, the bill (S. 1611) to amend Public Law 85-905 to provide for a National Center on Educational Media and Materials for the Handicapped, and for other purposes, is essential legislation and should be promptly enacted by the membership of this House. This legislation will greatly expand the scope of educational opportunities available to the handicapped children of this country. The action to be taken under authority of S. 1611 is long overdue. We were told at the hearings conducted this year that there are today handicapped children who are not in any educational program and many others who are in educational programs that do not meet their special needs. In fact, we were told that 60 percent of the 5½ million handicapped children in our Nation today do not receive adequate educational programs and that there is only one teacher or speech therapist for every three professionals needed.

Mr. Speaker, I cite these facts only to emphasize that a problem exists and that the need for action is now.

Projects developed under the leadership of the Captioned Films for the Deaf program and the Instructional Materials Centers programs in the Bureau of Education for the Handicapped have demonstrated that new and more efficient methods of instruction can be developed for handicapped children. These programs use the latest in technological advances to remediate the handicapping conditions of children and to increase the affectiveness of the learning process.

The time, Mr. Speaker, has come to consolidate the various efforts that we have been making over a period of years into a center, the proposed National Center on Educational Media and Materials for the Handicapped. This Center would provide a means for the development of a specialized curricula, media and methods to be used in the education of handicapped children. Second, it would adapt, develop, test and evaluate as well as advise instructional units.

Third, it would serve as a clearinghouse for all of the research that has been undertaken to benefit handicapped children.

Fourth, train people in the development of these materials.

Fifth, provide teachers from all over the country with a central point for obtaining information in order to increase their own resources and to assist in the distribution of a validated learning system.

This legislation, to me, is timely, in terms of the needs of our children, the development of the field of education of the handicapped children, and the technology of the learning sciences.

This legislation is timely in terms of the needs of our children, the development of the field of education of handicapped children, and the technology of the learning sciences.

As never before the American people are recognizing the importance of human resources. Most handicapped persons can become contributing members of our society if we will provide them educational opportunities. This is the time to act upon this legislation.

Handicapped persons have demonstrated over and over again their ability to profit from educational programs and to become excellent workers. Without an educational opportunity the handicapping condition may become completely disabling. In the most severe instances this will require total care over the individuals entire lifetime. If this does become the case the financial cost to society will be at least $180,000 for extra care. We know from Labor Department statistics that if we educate a handicapped person to the equivalant of an elementary school education he can be expected to earn approximately $225,000 in his lifetime. This does not reflect the benefits to the human being that result from the individual's independence nor the benefits that come to the family because this family member is able to work and be a part of the everyday world.

The testimony of many successful programs bears evidence that educators, government officials, businessmen, and legislators can work toward the development of human resources, now perceived to be essential to a living society. The National Center of Educational Media and Materials for the Handicapped sets forth a rationale for an effective linkage in a partnership among businessmen, civic leaders, educators, and administrators confronted with the challenge of training. It will bring together a backlog of experience, proven techniques, programs, and management assistance to accomplish defined training goals in the best possible way and at the same time at the best possible price.

The National Center will be able to provide public visibility for the unique learning problems of children who are handicapped. Since the center will be university based it will be able to call upon the entire resources of the university as well as the business and education community dollars spent on such a program at this time are an investment easily justified in hard economic terms. As I stated earlier, without such programs some handicapped persons will be institutionalized for life at an expense to the taxpayers of an estimated $180,000, or if this individual ends up on relief with a family of four, society can expect to pay $75,000 during his lifetime. This does not take into consideration the antisocial behavior that failure to establish programs for these people may breed.

The most valuable resource that America has is its human resources. The central objective of the center is to assure that the best possible means of approaching this problem are made available to all educational programs for the handicapped. It will be a vital nerve center for the already established network of instructional material centers and associated research activities in the area of systematic use of media and materials in the education of handicapped children. Concentrating dollars in this area will bring together all interested parts of the total community to assure that duplication does not take place. For example, ideas and programs developed by a number of agencies such as the Veterans' Administration, Social Rehabilitation Services, and the Public Health Services will be available to educators through this center as well as new breakthroughs developed from research in the field of education.

It is strikingly clear that the time is right for this center, and past development in education, technology, and in Government have created an atmosphere that demands the development of this center now.

It is a wise investment of scarce dollars at this time because concentration of dollars here may provide new ways to meet the personnel shortages in education of handicapped children, develop new ways to provide this education so that the few well trained and qualified professionals in this field can reach more children. Most important of course is that more handicapped children will gain a chance to grow up to participate in American society as a contributing member of that society rather than a burden to that society. I cannot urge you too strongly to support the legislation we consider today.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. Yes, I yield to the gentleman from Iowa.

Mr. GROSS. Where are the departmental reports concerning this bill?

Mr. PERKINS. Well, the reports that we have had consist of the testimony of departmental witnesses.

May I point out also that this is a Senate bill. The legislation was passed in the Senate. I will be perfectly frank with the distinguished gentleman from Iowa in saying that we do not have specific reports of support from the administration. However, I introduced some time ago H.R. 11785 and referred the bill to the select Subcommittee on Education of the distinguished gentleman from Indiana (Mr. BRADEMAS), who has conducted lengthy hearings and who has done a good job thereon.

Mr. GROSS. Mr. Speaker, if the gentleman will yield further, how many years ago was that that the gentleman introduced such a bill?

Mr. PERKINS. I introduced it this year in the House. We reported the Senate bill instead of the bill that I introduced.

Mr. GROSS. The gentleman does not disclaim this report, does he? This is your report?

Mr. PERKINS. This is our report.

Mr. GROSS. And there is not one scintilla of evidence of what any executive agency, including the Bureau of the Budget, thinks of this almost unlimited expenditure.

Mr. PERKINS. Let me first say that there is a most definite limit on expenditures in this bill. Then let me say to the gentleman from Iowa that the subcommittee thoroughly considered the bill, the full committee carefully considered the bill, and the Senate committee considered the bill and reported the bill, and it was passed in the Senate, and we re-

ported out the Senate bill. Our committee consideration this year included testimony of the head of the Bureau of Education for the Handicapped in the U.S. Office of Education.

So I do think, notwithstanding the Department reports of support are not present, the bill has been carefully considered, and everybody acknowledges that this center is badly needed.

Mr. Speaker I yield back the balance of my time.

The SPEAKER pro tempore. The gentleman from Kentucky has consumed 7 minutes.

Mr. HALL. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I want to say in the beginning that I have probably worked as much with the handicapped as anyone in this room. I feel a built-in humanitarian kindness for the handicapped. I am well aware that most of them have been examined, reexamined, surveyed, and resurveyed many, many times, but I am still in favor of the handicapped. I know that in these days they are considered "sacred cows."

Mr. Speaker, I do not believe that it is necessary that we even argue in connection with S. 1611, which is before us under a suspension of the rules today that there might need to be a national or Federal center for coordination of the work for the handicapped. Let us assume that we need that, to begin; that, as the gentleman from Iowa (Mr. GROSS) has pointed out, there are no departmental reports indicating past or present administrative support for this. This funding is not budgeted. This authorization is one of those that comes in to us so often, which we pass when we march on the floor by rote, because a nice fellow said it ought to be this way, or because it is a sacred cow, and no one wants to be against love, motherhood, or little children.

Then it comes back to haunt us in an appropriation bill such as we handled on last week, and went $2.3 billion over the funded appropriation for the prior fiscal year. These birds just come home to roost. I do not believe this ought to be considered under a suspension without the right of amendment, and I do not believe it ought to be considered by rote by people jumping over the stile and being counted, without having even read the bill.

This is an open-ended bill that goes on, ad infinitum, and if you do not believe it read the bottom of page 2 of the report which very frankly tells us so. It says that the bill would increase appropriations for the existing act from $10 million in fiscal year 1971 and each year thereafter to $12.5 million in 1971, $15 million in 1972, and $20 million in fiscal year 1973, and each succeeding fiscal year thereafter.

Now, if that is not open-ended, unlimited, and an ad infinitum authorization, then I do not know what is.

Now, then, to get more practical about the matter, let me ask the distinguished chairman who heads the Committee on Education and Labor if it is contemplated in this ad infinitum authorization of $20 million a year, that we will pay for the building out of that amount?

The gentleman very frankly said a while ago, and I appreciate his forthrightness, that he did not know how much the building would cost.

I want to tell the Members of the House that we are not even going to own the building in fee simple. It is going to be on the campus of some college yet to be selected. Whether we can expand that building, as the gentleman from Kentucky plans, based on the foundation we will originally lay down, whether we will be back for more authorization and appropriations with which to build the building, or whether we will indeed control it after it gets on this campus, is a series of questions to which this House of Representatives should properly address itself.

Mr. PERKINS. Mr. Speaker, will the gentleman yield?

Mr. HALL. I yield to the gentleman for a short answer to those multiple questions.

Mr. PERKINS. First, let me make it perfectly clear that we provide in the bill that the Secretary of Health, Education, and Welfare shall operate this Center—and it is true it is to be constructed after the Secretary enters into agreement with some institution that has demonsrated the necessary capabilities and knowing how to deal with handicapped children that he will contract with some institution.

Mr. HALL. Mr. Speaker, if I may interrupt the gentleman, I yield to the distinguished gentleman for an answer to my question. We can all read the bill and I think every one of us who is interested in this bill has read the bill and the report, as I have tried to indicate. It is true that the bill does provide that the Secretary will operate it and he would provide Federal funds to the center for the sole purpose set forth therein, and they will authorize the center subject to the Secretary's prior approval. He will provide an annual report to the Congress and he will provide for the Davis-Bacon Act and the Walsh-Healey Act—we never forget that one.

But be that as it may, would the gentleman tell us in as clear and as succinct a manner as he can, where it says that this is a closed-end fund or that he will not be back asking for more appropriations, or whether or not he will build this building or needed center out of the existing $20 million a year that goes on unlimited, or whether there will be a separate appropriation therefor.

Mr. PERKINS. Let me state to the distinguished gentleman, if he will turn to page 4, he will see that we are only authorizing funds through June 30, 1973, and for each succeeding fiscal year thereafter the sum of $20 million, if it is necessary, to complete the building.

It is contemplated that the funds authorized here commencing in the fiscal years 1971, 1972, and 1973 be used for the construction. It is very clear that we do not intend for any of these funds to be used for the acquisition of land because it is contemplated that the university that makes it available should make a site available free of charge to the Government.

Mr. HALL. What would be the reversionary clause to the Government, if it is on school property, in case we needed it to enlarge the building? Would the gentleman answer that? Will that be in the contract?

Mr. PERKINS. That will be in the contract. It will have to be in the contract in view of the language of this bill because if there is a disagreement, or I mean if something happens within the next 20 years, it would be a question of fact as to the value and it would have to go into the district court. That certainly would have to be a part of the contract.

Mr. HALL. I appreciate the gentleman's statement, but it is not so written in the bill. The bill is open ended and unlimited and goes on ad infinitum. Further, there are no departmental reports and I would point out in summary, simply in order that I may yield to others, that there is bad timing in this open door type of authorization. Again, I repeat, this kind of authorization which we pass so glibly comes back to haunt us when the appropriation therefor comes up.

Mr. Speaker, I reserve the balance of my time.

Mr. PERKINS. Mr. Speaker, I yield 6 minutes to the distinguished gentleman from Indiana (Mr. BRADEMAS), coauthor of the bill.

Mr. BRADEMAS. Mr. Speaker, I am pleased to rise in support of S. 1611, a bill to create a National Center for Educational Materials and Media for the Handicapped.

I am pleased to have been a sponsor of an identical bill, H.R. 11785, together with the distinguished chairman of our committee, the gentleman from Kentucky (Mr. PERKINS) and the distinguished ranking minority member, the gentleman from Ohio (Mr. AYRES) as well as the gentleman from Minnesota (Mr. QUIE), of the subcommittee of which I have the honor to be chairman and of which the ranking minority member is the gentleman from New York (Mr. REID), which committee heard a number of witnesses on this legislation.

I think all of us during the course of our hearings were struck by the enormity of the problems facing handicapped children in this country.

It is estimated that there are between 5 million and 7 million children possessing handicaps of such severity and seriousness that they require special education.

Witnesses from the Office of Education told our subcommittee that only a third of these children are presently receiving the kind of special education that their various maladies require.

The administration's experts, moreover, told us that so serious is the shortage of special educational personnel, such as teachers of the handicapped, that today is a need for some 325,000, but only 75,000 approximately are available. What this means is—and I make this point because I think it dramatizes the seriousness of the problem—that approximately 40 percent of these handicapped children—the deaf, the blind, the mentally retarded, others who cannot speak—are without the special educational services and treatment they require.

The bill before us seeks to move in the direction of remedying this deficiency by establishing, in connection with a university, particularly a university that has

shown itself to have great strength in the training of experts in the field of working with handicapped children, of a national center, a center which could be described in the language of Dr. James Gallagher, who is the Associate Commissioner of Education, in charge of the Bureau of the Handicapped, in testimony before our committee, in the following words, which are drawn from his statement in the hearings:

A National Center on Education and Materials, such as were suggested in H.R. 11785, would provide an environment where people with expertise and interest in educational technology for the handicapped might gather to provide a manpower pool and where additional individuals could be trained in the actual development of appropriate materials and media for handicapped children. Such a center could allow a comprehensive program of activities designed to facilitate the use of new educational technology.

I think we are impressed by the fact that during the last 5 years the Bureau of Education for the Handicapped has developed some 14 instructional material centers for the handicapped across the country. There are, in addition, some four regional media centers for the deaf. As an offshoot of this program 145 affiliate centers have been developed across the Nation.

So there is in effect a kind of network, and I am sure every Member of this House has talked with citizens in his own district who are deeply concerned about the problems of educating handicapped children, and who come to us and ask for our assistance. If we had in existence a national center of this kind, we would be able immensely to enhance the effectiveness of groups across the United States concerned with education of the handicapped.

Mr. Speaker, it was suggested that we had not heard from the executive branch of the Government on this bill. That is not completely accurate. The fact of the matter is that the administration expressed its views on this bill, through the person and testimony of the Associate Commissioner of the Office of Education, Dr. Gallagher, and that Dr. Gallagher in the hearings, as I have already indicated, spoke very highly of the kind of national center contemplated in S. 1611.

It ought to be added, in all candor, that Dr. Gallagher said he was unable to recommend approval of the bill. Here however, is what Dr. Gallagher, after having given us a marvelous statement about why such legislation was a superb idea, said, when I asked him about the bill:

In the meantime—

And this is what my friend from Iowa might well say—

we do have to face the realities of a stringent budget. Therefore, we are unable to recommend approval of H.R. 11785 at this time, although we support its obective of extending additional educational opportunities for handicapped children.

I said in response:

Thank you very much, Dr. Gallagher. As I understand your position, you think this is a great idea but not now.

Dr. Gallagher replied:

That about sums it up, Mr. Chairman.

Well, it does not seem to me, Mr. Speaker, that we in the House of Representatives ought to be bound in a situation where there is such obvious need for action indicated by that kind of response. Clearly, speaking as an expert, the witness from the Office of Education who appeared before us, from the administration strongly endorsed the concept of the National Center, though not perhaps this immediate bill.

I think the House of Representatives ought to go overwhelmingly on record for this bill, and I would hope there is not a single vote against a measure that can do more than any other measure I have seen in a long time to enhance the prospects of education desperately needed by millions—not thousands or hundreds of thousands, but by millions—of children in our country who are not blessed by the Almighty with the faculties of speech and hearing and sight that the rest of us enjoy.

Mr. Speaker, the bill authorizing the National Center on Educational Media, and materials for the handicapped should be passed.

Mr. HALL. Mr. Speaker, I yield 4 minutes to the gentleman from New York (Mr. REID).

(Mr. AYRES (at the request of Mr. REID of New York) was granted permission to extend his remarks at this point in the RECORD.)

Mr. AYRES. Mr. Speaker, my colleagues in the House are well aware of my concern for sound fiscal management and know that I would not advocate the expenditure of funds without justification. To me, Federal aid is like a powerful medicine and must be carefully applied, and if Federal support is poorly designed it can weaken rather than strengthen the persons it is attempting to assist. I am consponsoring this legislation today because I believe that it can cause the ferment which will produce and develop a better educational system for handicapped children without massive expenditure of funds.

I have read the testimony of Dr. Gallagher of the Bureau of Education for the Handicapped and the other distinguished witnesses in our hearings. I am convinced that the most economical way to bring educational technology to the 5½ million handicapped children is to support a National Center for Educational Media and Materials. I also believe that a system of carefully programing, research, training, demonstration, and service can be developed at such a center.

Of particular interest to me is the fact that this bill would provide for the dissemination of information concerning the latest developments and breakthroughs made in special educational techniques for the handicapped. All too often, information concerning some breakthrough by a brilliant researcher or teacher is not relayed across the country so that others may share in the benefits and fruits of this discovery. There is a great need to consolidate the resources which are available and to pool the existing knowledge so that the best minds now working in the field can be utilized in developing and producing training materials which can benefit literally thousands and even millions of handicapped children all over the Nation.

Mr. Speaker, the National Center on Educational Media and Materials for the Handicapped will make this aspiration a reality; and enactment of this legislation will demonstrate our belief that the handicapped should enjoy a measure of the resources of our great country.

The time has come to untie the hands of special education teachers who have been hampered by the lack of adequate resources and educational media for their handicapped students. The National Center will make possible the development and creation of teachers' resources by providing them with specially developed curricula media and other methods so that we can move toward our national goal of educational opportunity for every child, regardless of handicap.

Mr. Speaker, in wholeheartedly supporting this bill, I am reminded of the great English historian Arnold Toynbee's observation that the 20th century may well be remembered in the future as the age when mankind first began to accept the responsibility of providing adequate opportunities for all of its citizens. This bill exemplifies what I think led Mr. Toynbee to his observation.

(Mr. QUIE (at the request of Mr. REID of New York) was granted permission to extend his remarks at this point in the RECORD.)

Mr. QUIE. Mr. Speaker, the Federal legislative history on behalf of the handicapped is quite clear as to the point of origin for action. Regardless of administrations, it appears that it has fallen to the Congress to initiate, advocate, and develop legislation for this field. I can recall in 1966 that the Office of Education discontinued the Division of the Handicapped under the Elementary and Secondary Education Act and, only after pressure from the Congress, did they initiate a study to determine whether the needs of the handicapped were so unique that they required a separate bureau. The Office of Education's study never produced any concrete recommendations. Members of the House felt that the problems and needs of the handicapped were unique and required a separate focus and thrust, and through an extensive bipartisan study finally brought about action in the Congress which created the new Bureau of Education for the Handicapped. I can say without reservation that the contributions made by the Bureau in its two short years of life have been significant and have more than justified our decision to act. I give this to you as history to indicate why this bill is necessary.

Last year we received assurances that a new Bureau of Vocational Education would be established. It was because of this assurance that the Congress left the requirement out of the Vocational Education Amendments of 1968. I expect Commissioner Allen to upgrade vocational education, but if such action is not forthcoming, I am sure that the Congress will have to initiate some action of its own.

Today, once again, we have legislation before us which the administration indicates is necessary and valuable and

will eventually "come to the Congress to seek authority for." I feel that as in the past the handicapped are being shortchanged with a low priority status, and it is the Congress working its will through this bipartisan action which will make a national media center a reality. I am anxious to see this legislation passed now, begin planning in 1970 and not wait for the Department to consider the question in 1971, so that the progress which has been made under captioned film for the deaf and other related programs will continue to develop and grow.

It is my feeling that, for maximum efficiency in reaching those three out of every five handicapped children who are not being currently served by special educational programs, every effort be made to coordinate all of the scarce dollars that are going into developmental programs at Federal, State, and local levels. The investment by the State and local governments in special education is an impressive one. I understand that over $1 billion have been spent for education of handicapped children during the last fiscal year outside of the Federal Government. It is rather startling that even with this investment we have not been able to meet the needs of more than two out of every five handicapped children. Certainly these children and their families are entitled to equitable educational opportunities as are all American children. The support of this national center at this time seems to be a rather wise and prudent investment as well as a very modest effort on the part of the Congress.

This program would encourage the applications of automated instruction and self-instructional strategies and techniques where these appear to be the best choice for achieving learning objectives. The special center teacher can more efficiently concentrate on the critical function of individual diagnosis, prescriptive teaching and motivation thus expanding her talents to more children.

The proposed national center's activities are necessary and will expand the opportunities for helping to upgrade the educational services for all handicapped children. This legislation is urgently needed and I recommend all of my colleagues join in its support.

Mr. REID of New York. Mr. Speaker, there are just a few points I would like to make today. First, this bill was reported and acted on unanimously in the other body. It was reported unanimously from the subcommittee and by the full Committee on Education and Labor. It enjoys bipartisan support. Essentially, this bill deals with starting to meet a national problem affecting the blind, the deaf, the mentally retarded, the physically handicapped, the emotionally disturbed, those with learning disabilities—in a word, all the handicapped.

The gentleman from Missouri has quite correctly, in my judgment, said that this bill might have benefited from a rule. It comes to the floor under a different procedure. But I would suggest that the bill meets a very pressing national problem, and, to mention just one statistic, I would note that today only 40 percent of the Nation's more than 5 million handicapped children are receiving the appropriate special educational services which are necessary because of their handicapped condition, and only 75 percent of the 300,000 specialists needed are available to work with the handicapped.

I would point out also, as my colleague on the committee, the gentleman from Indiana (Mr. BRADEMAS), has pointed out, that Dr. James Gallagher, the Associate Commissioner of Education, while not supporting the bill essentially, as I understand it, for budgetary reasons, did state explicitly on behalf of the administration that they support the objective of extending additional opportunities for handicapped children. I think as the gentleman from Missouri has pointed out, there is no lack of unanimity on the broad purposes and on the need, indeed, for a national center.

I would like to point out, however, on behalf of the gentleman from Minnesota (Mr. QUIE) that he personally is not convinced that the legislative record should show that there is an absolute need for constructing of a national center. It is his feeling that a decision should not be made until all the facts are in on existing facilities available at institutions of higher education.

I would add for myself that the record seems to be clear that a special center is necessary and that it is probably a false economy not to build a center that can take care of the very special requirements needed in developing training aids for the handicapped children. The Bureau of Education for the Handicapped has already attempted to remodel existing facilities and have found the results to be generally unsatisfactory.

Production studios require sound treatment, extensive special lighting, and high ceiling spaces which are not available in most buldings. Even after such remodeling the technical results have often been of limited quality. It is generally considered false economy to seek savings in remodeling structures that were never designed to meet the special needs of this center.

I would urge the House to support this bill on the basis that the need is totally clear. Our handicapped children desperately need help.

We are providing assistance to many poverty stricken children throughout our country, and some who are in the greatest need of all, the handicapped, and some who have the highest motivation if they but be given an opportunity, have not had the kind of help I believe our country should and must provide.

Mr. Speaker, there is a great need to attain the goal of equal educational opportunity for all children—not excluding those who are handicapped.

Such a vital need can be filled by providing a means for the development of specialized curriculums, media, and methods to be used in the education of these handicapped children. The bill to establish a National Center on Education Media and Materials for Handicapped Children, which we are considering today, will provide this means.

We must close the gap between the numbers of children who need special education and those who are presently receiving it. There must be a constant and diligent check on the manifold problems facing the growing numbers of handicapped children in our Nation.

There has long been a need to create a National Center which could serve as a clearinghouse for educational media, materials, and curriculums. The development and increased use of education and media materials for handicapped children that will be provided for by the National Center will improve education for these children.

Since the passage of Public Law 88–164 in 1963, research has been conducted on the unique learning characteristics of the handicapped child; however, such information is of little value unless it can be translated into media and methods which classroom teachers in schools throughout the country can use to help handicapped children to learn more effectively. Steps have been taken by the Bureau of Education for the Handicapped to develop a national network of Instructional Materials and Media Centers to serve such a purpose.

Three major functions have guided the development of these centers: First, service; second, research and development; and third, stimulation of materials and media production.

The service function includes: First, the acquisition of commercial and teacher prepared instructional materials; second, the description, classification, and organization of these materials; and third, the dissemination of materials and information to educators.

The research and development function includes the evaluation of instructional materials and the development and production of new materials on a pilot basis for experimental trial or demonstration in order to establish their effectiveness.

The stimulation of production function includes: First, contacting the organizations which have production capacity—curriculum workshops or projects and commercial publishers—and encouraging them to produce materials which have been found to be effective in the research phase; and second, consulting with producers to assure that ideas which may have merit are given consideration.

Mr. Speaker, the existing 14 instructional Materials and Media Centers are providing direct service to local education agencies and their staffs are making a major contribution to the teachers in the classroom. It is at this level that we can begin to see the effects of our national efforts on the actual learning of children.

As presently constituted, the special education information network is composed of 14 instructional materials centers, four regional media centers, specifically concerned with captioned films and other materials for the deaf, the ERIC Clearinghouse on Exceptional Children, the American Printing House for the Blind, and approximately 145 affiliate centers, established through State departments of education, colleges and universities, and local communities. I am pleased to see that the Bureau of Education for the Handicapped of HEW has continued to devote its talents and resources to this program, and that steps are being taken to enhance the work of the entire network.

I would like to emphasize one vital component of this system; to answer specific questions of individuals, teachers, or groups throughout the country. It is through this function that one of the major needs of special education is being met. It is possible for the teacher, specialist, or administrator in special education to direct a question related to any aspect of special education to this nationwide network. Once the request is received it is matched against the stored data and any material relevant to the question is retrieved by the computer. This capability permits the individual to receive specific answers to specific questions within a very short period of time. The value of this service has only begun to be realized, but already answers are being provided for approximately 500 requests every month.

Ultimately the network hopes to develop a complete and comprehensive base of all information relevant to the education of handicapped children. It is anticipated that teachers, researchers, administrators, specialists and others working with handicapped children will be able to receive the information they need in a form that will enhance the efficiency with which they educate handicapped children. It is planned that these channels will be established at local, State, and regional levels, utilizing universities, IMC affiliate centers, and local school districts.

Mr. Speaker, it is anticipated that the National Center on Educational Media and Materials for the Handicapped will serve as a vital link in the total instructional materials and media network. As a national center it will provide public visibility for the unique learning problems of the handicapped. This should be most helpful in encouraging greater participation on the part of other Government agencies as well as private enterprise in meeting those problems. I also envision this Center exploring sophisticated systems of instructional technology as they apply to the particular learning needs of handicapped children. In this regard we note that the Center will be university affiliated and will thus have expertise from disciplines outside of the education field as an additional resource. Finally, it is my hope that the Center will become an active part of a larger distribution system that will take the findings of research, translate them into pedagogical approaches, develop the necessary media and systems, and most importantly, deliver them to the teacher and the child and help the teacher assess their effectiveness.

In 1967, I enthusiastically supported the legislation which expanded the captioned films for the deaf program into a broader program of educational media for the handicapped. The captioned films for the deaf program has been a model in that it unlocked new avenues of learning for the deaf. Similar work is needed for all of the handicapped. I am pleased that recent research has begun to demonstrate that new learning avenues can be opened for other handicapped children if the appropriate materials and methods are made available. Educators have found that through prescribed instructional programs the learning disabled child can be taught to read; with improved Braille systems the blind child can better communicate; and with more sophisticated curricula the mentally retarded can become productive members of society. I am pleased to note that this legislation extends the authority for the provisions on Educational Media for the Handicapped and that the proposed Materials Center will serve all of the handicapped in an equitable manner.

Mr. Speaker, I extend my strong support to S. 1611 and commend the chairman of the subcommittee, the gentleman from Indiana (Mr. BRADEMAS), for his leadership in improving the education of handicapped children. I ask all of my colleagues for their unanimous support.

Again, I thank my colleague from Missouri for yielding.

Mr. STEIGER of Wisconsin. Mr. Speaker, will the gentleman yield?

Mr. REID of New York. I yield to the gentleman from Wisconsin.

Mr. STEIGER of Wisconsin. Mr. Speaker, I appreciate the gentleman yielding.

Mr. Speaker, I rise in support of S. 1611. There is an unprecedented opportunity today for making a significant change in the education of handicapped children. During the past decade the Congress has developed a greater awareness of the untapped potential of handicapped persons. Our awareness has been most appropriately reflected in the Federal legislation we have passed. The job of providing for the needs of all of these children and their families, however, is far from complete. Many handicapped children are still not being afforded any educational opportunities. Investment of our scarce resources at this time is not charity; it is efficient management of human resources. Most handicapped individuals, if given an educational opportunity, will be productive, contributing members of society rather than a burden to it.

The National Media Center represents an opportunity to bridge a part of the gap in current services. It will bring the educator, the materials, industries and the Government together in a major effort to develop, test, evaluate and revise instructional materials. The National Center will innovate, validate, and distribute instructional materials through the existing nationwide informational media system.

The Center will maintain an information file on all research programs developed for the handicapped, not only those programs supported by the Office of Education, but those programs financed by the Veterans' Administration, Social and Rehabilitation Service, the National Science Foundation, National Aeronautics and Space Administration, and Department of Defense. It is my hope that all materials, strategy or equipment developed by any agency that operates within the concepts of public domain would be available to the Center for development and distribution to educational programs for the handicapped. The development of validated instructional materials made available on a wide scale distribution program would have the effect of increasing the efficiency of professionals in this field so that they may reach many of the children not now being served by special education programs today.

The bill directs that the university selected to house the National Center have a full range of disciplines available in its facility to serve as resources to the Center. Therefore, I feel that the National Center should be able to draw upon technological scientists, social scientists, behavioral scientists, biologists, physiologists, as well as special educators. I hope that the National Center will maintain a very close relationship with all model centers serving the handicapped as well as with the instructional-materials centers.

The National Center is to become an integral part of an existing network of media centers. I am proud that the State of Wisconsin has been a leader in the development of media material for the handicapped and, in fact, established one of the original two prototype models upon which the system is now based. To better understand the instructional media center network, I am inserting in the RECORD at this time two articles that were published in the Council for Exceptional Children's journal, Exceptional Children, of December 1968, written by leaders in this field from the University of Wisconsin:

AN OVERVIEW OF THE IMC NETWORK

(By James J. McCarthy)

The Instructional Materials Center Network for Handicapped Children and Youth (IMCNHCY) is a federation of regional Instructional Materials Centers (IMC's) whose primary client is the special educator and whose region of service is the continental United States, Hawaii, Alaska, Puerto Rico, and the Virgin Islands. Although there is a lag between the Network's accomplishments and aspirations, this gap is closing at a rapid rate as new service and research roles are being assimilated. The Network can be a boon to special educators who know how to use it and what it can do for them.

To many special educators hearing about it for the first time, the Network may seem to be a complicated monolith which is sprung suddenly full blown from the impersonal council of the omnipresent federal government and which really has little personal value for them. Nothing could be further from the truth.

The purpose of this article is to dispel this concept by providing an overview of the Network's development. It should be stated at the outset that the Network is designed to become a permanent organization locally controlled and locally funded. It is to serve and be guided by special educational personnel to help them better serve handicapped children. Network services are, or will be, available to every special educator in the United States.

HISTORICAL PERSPECTIVE

The Network consists of 14 Instructional Materials Centers (IMC's) and CEC-ERIC. Each regional Center is developing regional satellite centers, which may be stationary or mobile and have simple or elaborate service structures, depending on local needs, resources, and commitments. In some cases, Centers are hundreds of miles away from clients in their region and a satellite center is the only means of providing personalized service.

The IMCNHCY has a federal advisory board which is developing an information storage and retrieval system and a system of communication and coordination whereby all parts may be articulated. It is analagous to a corporation in which the stockholder is the special educator.

The beginnings of the Network were quite

unelaborate, although they did contain the seeds of the growing and evolving structure seen today. That a Network such as this could develop was, I feel, foreseen in the beginning. What was not foreseen was the spectacular and unprecedented growth of a new type of major and permanent element in special education which appears to be a uniquely American contribution.

In 1964, two prototype IMC's were funded by the US Office of Education under PL 88–164, Title III. President Kennedy's Task Force on Rehabilitation and Education had originally conceived the idea of Instructional Materials Centers in Special Education from its inspections of overseas nations. Traditionally, continental special educators have made more of their own instructional materials than have their American counterparts and many European special educators are actually certified to teach because, in part, of their skills in materials production. The mid-twentieth century attitude in the United States seemed to be that commercial America had the resources to design and produce instructional materials in special education and that this task, properly executed, required expertise and resources (e.g., advanced psychology and learning courses, statistics and experimental design, and production facilities) not available to teachers. Moreover the teacher was considered a practitioner, not producer; his or her time was to be actively spent in the teaching role. The teacher was seen as analogous to the physician who uses surgical instruments and drugs, but doesn't usually design, create, or test these things.

Although the President's Task Force did not specify the nature of IMC's, the prevailing American attitudes in special education strongly suggested directions. The original IMC's would collect extant instructional materials in or related to special education; catalog, loan, store, and retrieve such materials; consult with teachers and student teachers; publish acquisition lists and informational pamphlets; hold inservice meetings; help others who wished to initiate their own Centers; and even attempt to produce an item or two. They promised attempts at materials evaluation and design.

Within 2 years, these prototype Centers had demonstrated that they could prepare themselves to provide needed services in special education. However, they had not convincingly demonstrated the ability to design, evaluate, or produce instructional materials. In addition, though various experiments had been tried (e.g., mail order materials borrowing), the prototype Centers' services were restricted to a relatively small geographical region. Certainly, for the Centers to be of value, services needed to be extended to wider areas. Thus, in 1966, 8 additional regional Centers were funded, bringing to 10 the number in existence at that time.

Although every regional Center will eventually be locally funded, the initial years were largely funded by federal dollars. The government's mounting investment resulted in considerable planning at the federal level which, in retrospect, can be viewed as the next developmental stage of the Network. In 1966, a meeting of Center directors was held in Madison, Wisconsin. At that time, an organization was formed (later called the IMCNHCY), and a chairman was elected. Simultaneously, an IMC Advisory Committee was formed with the US Office of Education.

At this time:

1. Definitive service regions for each Center were agreed upon in order to avoid overlap and to identify parts of the country yet unserved.

2. Each Center declared those areas of handicap for which it would process instructional materials (e.g., mental retardation, visual impairment, etc.) according to the competencies of its staff. This knowledge made it possible to refer client requests to appropriate Centers should the Center originally queried not stock the desired materials.

Through the establishment of more regional Centers, the number of special educators reached with services increased; however, this still represented a small percentage of the total. It was apparent that hundreds more of these Centers would be needed to cover the country adequately, and this was patently impossible. The solution came from the IMC Advisory Committee, which advised:

1. The regional Centers should assist in establishing satellite centers within their respective regions, adequate in size and scope to collectively service all clients in their regions. These centers would eventually be locally funded, locally controlled, responsive to local needs, and related to respective regional Centers. This last point is critical for it allowed great economies. It meant that expensive consultation, assistance with inservice training, search and retrieval of information on materials, and other services were freely available to each satellite center which could, therefore, retain a fairly small staff and a locally responsive collection of materials with the assurance of help from the regional Center when special needs arose.

2. Evidence of regional preplanning must be required of proposals for regional Centers from areas of the country not yet covered, so that parts of large states (or several small states) would agree upon how their entire region was to be served.

Thus, by 1968, 14 IMC's collectively service the entire country. About eighty satellite centers have been established and 300 to 400 professional staff persons are devoting all or a portion of their time to operating this system. A major problem has now become one of alerting special education personnel to the availability of these services.

THE FUTURE OF THE NETWORK

The Network is an evolving structure and can be responsive to emerging needs. Its directors and advisory board meet periodically to assess progress and plan the future. The present stress is upon:

1. The rapid development of satellite centers. When these are established, special educators can receive all their services in or through these local centers. These centers, in turn, can act as sensors to detect current needs and transmit them through the Network to the Bureau of Education for the Handicapped, US Office of Education. For purposes of training, materials evaluation, and activities yet unforeseen, the completed Network will provide a remarkable communication instrument with the individual special educator at one end, the federal government at the other, and all other levels of the profession plugged in somewhere between those two terminals.

2. Increased coordination among regional Centers. To sense the urgent need for precise intercenter coordination, one need only contemplate the value of (a) joint production of inservice training sessions, (b) uniform publications, (c) cooperative exchange of staff and materials among Centers, and (d) the need to speak as one with commercial producers, foreign nations, and others who are interested in the Network. Obviously, attempts at research and evaluation, materials design and evaluation, and data storage and retrieval are also enhanced through close intercenter coordination. Accordingly, this coordination is of great current importance. Steps to achieve it include the appointment of a Network coordinator and uniform procedures in reporting, data retrieval, and abstracting.

3. Stress on local funding. It is clear that as the Network grows, the federal government will find it increasingly difficult to support. No estimates of yearly costs are yet available for the Network operation, but an estimate of close to $5,000,000 of federal and local funds is not an unrealistic figure for present operational costs.

4. Initiation of materials design and evaluation procedures. In the last analysis, materials design and evaluation are the *raison d'être* of IMC's. They were designed for this purpose and are, accordingly, uniquely suited to it. Yet, to date, these processes have not developed apace with other Center activities. The scientific development of instructional materials and their objective evaluation present the most difficult and demanding challenge of all to the Network.

It is important to understand that the teacher is the primary client, that he or she can receive help by contacting her Center director, and that the range of service available is not highly restricted. Indeed, a client may ask for a type of assistance never contemplated and a Center may decide to incorporate such service into its routine. Thus, the Network needs the teachers' help to grow and diversify; teachers need the Network's help to serve handicapped students more adequately. And such help is literally theirs for the asking.

A REVIEW OF SERVICES OFFERED THROUGH THE IMC NETWORK

(By Leroy Aserlind)

(NOTE.—Leroy Aserlind is Director, Special Education Instructional Materials Center, University of Wisconsin, Madison.)

The unavailability of adequate instructional materials for use by the teacher in the special classroom was cited by the President's Panel on Mental Retardation as being a "major barrier" to education of the handicapped. Subsequent legislation, PL 88–164, was passed in 1963 which provided funds for an innovative approach to the problem.

Heretofore instructional materials centers had been from a more or less traditional mold—libraries of instructional materials available for loan to teachers. The special class teacher often had to rely primarily on her collection supplemented by that of a city, county, or district library. For the most part the materials that were more generally available to this teacher were those materials which had been developed for the child with no perceptual, learning, or behavioral handicaps. These materials often contained intrinsic elements incompatible with the learning characteristics of the handicapped child (Aserlind, 1968).

Under Title III, Section 302, of PL 88–164 two Centers were funded—one at the University of Wisconsin and one at the University of Southern California. One of their express purposes was to enlarge the concept of a Special Education Instructional Materials Center (SEIMC). The SEIMC's were initially seen as being in a position to offer a number of services beyond that of housing a basic collection of materials. By 1964 both Centers were in their first stages of operation. From these early operational experiences several general goals of Special Education Instructional Materials Centers were proposed, most of which were service oriented. These were:

"First, a center must have an operational radius. If only local clients are served, many teachers in small towns and rural areas will be deprived of services. . . .

"Second, a center should be in a position to remark to clients on the effectiveness and characteristics of materials. . . .

"Third, such centers must offer workshops, conferences, and ultimately, as accumulated information increases, credit courses. . . .

"Fourth, such a center should have a consultative staff. This would include a field man who could guarantee a constant and vital rapport within the center's operational radius, including consultation with field clients. . . .

"Fifth, such a center should issue, at regular intervals, a publication or newsletter containing at least two things: an acquisition list and an evaluation section. . . .

"Sixth, the center should have, ideally, a search and retrieval system so that among increasing masses of materials, certain items can be identified and located. . . .

"Seventh, and the final basic characteristic

of such an ideal center, the center's staff should have the motivation and ability to engage in design and arrange for the production of educational materials" [McCarthy, 1966, pp. 27–28].

On such a basis the two initial Centers predicated much of their development activity over the first years. By 1965 it became evident that these Centers were able to provide needed services to special education personnel within a relatively circumscribed area. Because of their apparent success and the approval of an ad hoc advisory committee on instructional materials centers, the U.S. Office of Education drew up a plan for expanding the program (Olshin, 1967). The expansion program called for establishing a number of regional Centers in the United States; these Centers then were formed into the Instructional Materials Center Network for Handicapped Children and Youth, funded through the demonstration phase primarily by the United States Office of Education.

Each basically operates as an independent Center, offering direct services to special educators and to the satellite centers being established in its region. Each of the independent Centers, however, coordinates its activities with those of the other Centers and the Network in general. Vital to this coordination is a continuing communication maintained through reports and meetings.

As previously stated, the principal goals of these Centers are largely service oriented at the present time. A number of the services were originally envisaged as having an empirically demonstrated need. Others have been developed through continual field operation and evaluation; still some services were designed to meet new needs which have been created by the existence of the Centers themselves. The present article deals only with the general services offered within the Network Centers and will not discuss the more unique, specific aspects of individual Center servicing, which are discussed in the articles by Rotberg and Ensminger elsewhere in this issue.

LENDING

Almost without exception, the service of lending is seen as the most important function of a Center in its early stages, since it is of the most immediate benefit to special class teachers and answers one of the persisting needs in special class. All of the Centers, with the exception of the Reference Center at the American Printing House for the Blind, maintain an acquisition, cataloging, and shelving operation for the purpose of providing a lending service. The general policy of the Centers is to lend books and manipulative material for a short term period. IMC's do not supply materials for total school year classroom use, but give the teacher the opportunity to use materials in practice and to make judgments in terms of future purchase. Exception to the short term use of single copy material is found in the fact that several of the Centers supply classroom materials for the blind (Illinois, Michigan, and American Printing House). The loan periods for materials in the Centers generally range from 2 weeks to a month with both renewal and recall privileges available.

A variation of the lending services, necessitated by the size of the regions, is mail order lending, which Centers now provide. Some, such as the Kentucky Center, allow a longer lending period for mail order loans. Similar special arrangements are made by Centers servicing an extraordinarily wide geographic area—for example, the Oregon Center of over 840,000 square miles.

The lending service is important because it entails a direct and vital contact between the Center and the teacher in the field and, conversely, between the teacher and the Center.

SEARCH AND RETRIEVAL

Search and retrieval will undoubtedly gain in importance. Two factors leading to this are the increasing number of materials, methods, and pertinent research studies and an increasing attention to the concept of diagnostic, precision, or prescriptive teaching. From this will emerge materials and references with a high degree of specificity to individually diagnosed learning problems and with an attendant academic prescription.

At the present time the principal purposes of search and retrieval are to supply teachers, administrators, or classroom researchers with lists of shelved or cataloged materials relevant to a particular need or problem. This type of service is still in its relative infancy. Three Centers—California, Texas, and Michigan—have independently developed computer programs and compatible cataloging systems which are specially designed to perform a search and retrieval operation. These systems have a number of possibilities. Some requests received by the computerized centers require searches and retrievals by author, title, grade level, subject matter, activity level, etc., and numerous combinations thereof. Traditionally, teachers browse through the shelves or look through the card catalogs. Computers now print "browser's catalogs," making available to the Center user discrete listings directly applicable to his immediate interests.

Other Centers such as Wisconsin maintain a search and retrieval system based on IBM machines such as the keypunch, sorter, and printer. At present a number of the Centers are relying on manual searches, but it seems likely from existing trends that all Centers will eventually have a direct tie to a computer center with a cataloged program which will be developed within the Network. CEC–ERIC is presently compiling a library of computer retrievable abstracts provided by the regional centers. In the near future, printouts of these abstracts will be available to special education practitioners.

RESEARCH DESIGN

This is an available but little used service offered by a number of Centers to special education teachers and administrators. One of the purposes of this type of service is based on the fact that the special education classroom and teacher are potential sources of a great amount of practical, *in situ* information. The "teacher as a researcher" is one of the concepts accepted by the Network. To encourage the teacher to enter into some type of research activity or commitment, Centers will offer consulting services to the classroom practitioner on basic elements of experimental design, measurements, statistics, and evaluation of results. As more satellite centers are developed through the regions it may be anticipated that the regional Centers will be devoting more energies to the development of the special classroom as a prime research site.

MATERIAL DEVELOPMENT AND DESIGN

The original purpose of this category of service was to help and encourage the special class teacher to design and develop materials for her own special situation. Also, it was felt that the Centers would be in excellent position to enter into experimental creation of special education instructional materials which, if successful, would become public domain. Again, attention to other immediate problems and to copyright problems has precluded a great deal of activity in this service area. Perhaps some of the existing materials developed by Centers may well be considered as unique projects, although falling under the aegis of particular services (see Ensminger article in this issue).

As originally premised, the Centers were to offer this service to help make up for the lack of special materials developed by commercial producers. Present indications are that within a comparatively short time more commercial prdoucers will begin to market materials developed expressly for use in special classrooms.

EVALUATION

All Centers in the Network accept evaluation of instructional materials as one of its services to special educators. Several of the earlier established centers—Wisconsin, California, Colorado, and Michigan—have done preliminary work on establishing an effective evaluation model. A Network committee is currently functioning toward this end. Independent efforts of several Centers have suggested approaches to the critical but difficult evaluative process. To date most efforts, such as those at Oregon, involve the use of teacher evaluation groups which use and discuss materials to arrive at a consensus regarding the effectiveness of the materials. California also is concerned with developing methods of utilizing teachers' judgments and ratings and validating these procedures against the more typical pattern of professional evaluation by supervisory or curriculum specialists staff.

It is evident from initial approaches that the use of practicing teachers in field evaluation of materials will be increasing in all regions of the United States.

MOBILE VANS

Both empirical and research evidence suggests that use of lending facilities of an IMC decreases in direct proportion to the distance away from the Center. Means of nullifying this distance effect which have proven to be effective are increased field consultant activity and the use of mobile vans.

The Colorado Center pioneered in the mobile van concept. The vans bring materials directly to schools and teachers in outlying, and in many instances, remote locations. The teacher is offered the opportunity to see, discuss, and select materials that may be of immediate interest or need. Other Centers are adapting the mobile van idea to private or state automobiles or other means of first hand dissemination. Wisconsin, while not using the mobile materials van as a direct service, is supporting the use of these vehicles in subregions served by satellite centers.

CONSULTATION

Consultation services offered through the Centers can take many forms ranging from consultation and participation in full year training programs under ESEA Title I (such as the California Center), to on the spot document specialists to consult with users who come to a Center (such as Kentucky). Presently most of the consultation services offered through all the Centers in the Network consist of direct consultation with state and local administrative personnel on programing and consultation with teachers on the selection of methods and materials for use in the special class. Increasingly, the consultation expertise efforts of the Centers have been instrumental in developing state plans for the establishment of satellite centers (New York, New England) and for consultative help in the preparation of satellite center grants (Texas, Kansas, Oregon, Wisconsin, etc.).

Eventually a point will be reached at which a number of the direct services in a region can be taken care of by proximally located satellite centers. The areas of programmatic, research, educational, and developmental consultation will fall increasingly upon the specially prepared personnel at the regional Centers.

MATERIALS DEMONSTRATION AND DISPLAY

A significant portion of the direct services offered by all Centers in the Network relates to material demonstration and display. Each Center perceives this as an important service and develops its programs accordingly. Through direct display a larger number of teachers are acquainted with the purposes of a Center as well as with a particular Center's acquisitions. Demonstrations are most often conducted either by Center field and specialist personnel or by master special education teachers enlisted for that purpose. Records kept at Wisconsin indicated a rise in usage of lending services from a subregion following a materials demonstration or display program in that area.

Oregon, Kentucky, New York, New England, and California Centers have prepared, or are in the process of preparing, videotapes or other audiovisual presentations of materials demonstrations and displays. This is expected to further enhance the distribution of these services which is limited by the number of materials available for display and the amount of professional time for preparation and demonstration. Particularly effective videotapes will be reproduced and made available to all Network Centers for distribution throughout their regions.

CONFERENCES, INSTITUTES, AND INSERVICE PROGRAMS

All Centers are involved in an active program of offering conferences, special institutes, and inservice programs. Many inservice programs are related to preparation and use of materials, as well as to learning theory, reinforcement, research findings, etc. Most of the programs are developed in cooperation with school administrators, supervisors, and universities. An increasing number of administrators are allowing and suggesting that a portion of the school allotted inservice training time be spent at one of the Centers working with its staff on some previously determined topic or area of study.

Institutes and conferences, along with lending, display, and demonstration activities, are another means of offering services to current and potential users of the IMC's. Examples of recently offered programs are: Education Rhythmics and Motor Development for Exceptional Children (Oregon), Materials for Teaching Children With Learning Disabilities (Kentucky), Materials Used in Self Directive Study (New York), Teaching Mathematics to the Exceptional Child (Wisconsin), and Institute for Special Education Administrative Personnel California). These topics represent only a portion of the offerings made through the Centers as, for instance, Florida, Kansas, and Texas each conducted approximately 25 of these special programs.

In addition, all Centers have supplied speakers for a significant number of programs sponsored by other professional, public, and private agencies on local, regional, and national levels.

CURRICULUM AND CREDIT COURSES

A number of the Centers associated with colleges or universities are in the process of developing on-campus and extension courses relating more directly to instructional materials for the handicapped children than do many existing courses today. The centers realize that service should be offered to students in preparation for careers in special education. It is anticipated that within 2 years the majority of the university affiliated Centers will be offering credit courses based extensively on knowledge gained through research and through Network accumulated findings on selection, utilization, and valuation of these special materials.

PUBLICATIONS

All Centers have developed or are in the process of developing some type of publication for the teacher readership within their particular region. Two examples are *The Winnower* (Wisconsin) and *The Torch* (Oregon). These publications contain articles on issues in the field of special education, informative and educative articles, and discussions of materials. *The Winnower* maintains an acquisition list for the purpose of bringing the readers up to date on the latest holdings in the Center.

An essentially similar function but somewhat different format is seen in the *UKR-SEIMC Quarterly* (Kentucky), *IMSCE Communicator* (California), and *IMCing in New York* (New York). In two of the older Centers (Wisconsin and California), circulation runs approximately 3,500 and 8,500, respectively. The advent of a national publication (see article by Blackhurst in this issue) will preclude and eventually replace extensive publication services on the part of the Centers; however, all of these Centers will continue to offer a newsletter service containing primarily regional information.

ABSTRACTING

As mentioned earlier under search and retrieval, one of the functions of CEC–ERIC will be to maintain a constantly updated file of pertinent abstracts. These files will be accessible to the practitioner in special education. The Centers will supply abstracts and evaluations to the central file using a Network thesaurus as the basis for selection of key descriptor terms.

OBTAINING SERVICES

In order to make use of the IMC Network, it is important that special educators contact the Center servicing their region (see Table 1). If that Center is not yet operational or does not have the desired material or service, the request will be referred to another Center known to be able to answer the request.

It is important that requests be as specific as possible; for example, asking for "materials for teaching arithmetic to the retarded" will probably be met with a request for further details. Asking for "samples of workbooks for teaching arithmetic to the intermediate level educable retarded" will more likely bring the desired material or service.

As this article has described, the IMC Network provides numerous services to special educators. The Centers lend out materials; supply listings of materials by area, level, and subject, etc.; send out field consultants and mobile vans to local areas; set up courses; provide consultative assistance for instructional materials use, evaluation, research, programing, and development; send out newsletters informing of available services and acquisitions; and set up inservice training programs and workshops.

Kansas: Dr. Eugene Ensminger, Director, Special Education Instructional Materials Center, University of Kansas, 1115 Louisiana, Lawrence, Kansas 66044, 913/864–4158; Iowa, Kansas, Missouri, Nebraska, North Dakota, South Dakota; Emotionally Disturbed, Learning Disabilities, Orthopedically Handicapped, Mentally Retarded.

Kentucky: Dr. A. Edward Blackhurst, Director, University of Kentucky Regional, Special Education Instructional Materials Center, 641 South Limestone Street, Lexington, Kentucky 40506, 606/258–9000, ext. 2764; Kentucky, North Carolina, Tennessee, West Virginia; All areas of exceptionality.

Massachusetts: Dr. Harold Ruvin, Director, New England Materials—Instruction Center, Boston University, 704 Commonwealth Avenue, Boston, Massachusetts 02215, 617/353–3266; Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont; Mentally Retarded, Physically Handicapped, Emotionally Disturbed, Speech and Hearing, Learning Disabilities.

Michigan: Mrs. Lou Alonso, Director, USOE/MSU Instructional Materials Center for Handicapped Children and Youth, 343-B Erickson Hall, Michigan State University, East Lansing, Michigan 48823, 517/353–7810; Indiana, Michigan, Ohio; All areas of exceptionality.

New York: Mr. Raphael Simches, Director, New York SEIMC, Mr. Maurice D. Olsen, Coordinator, Special Education Instructional Materials Center, New York State Department of Education, 800 North Pearl Street, Albany, New York 12204, 518/474–3995 (Simches), 518/474–7690 (Olsen); Central New York State: All areas of exceptionality. Mrs. Elizabeth L. Ayre, Regional Coordinator, Special Education Instructional Materials Center, State University College at Buffalo, 1300 Elmwood Avenue, Buffalo, New York 14222, 716/862–5506, 5507; Western New York Region; Mentally Retarded, Physically Handicapped, Emotionally Disturbed, Speech and Hearing. Dr. Gloria F. Wolinsky, Director, Regional Special Education Instructional Materials Center, Hunter College, Box 563x, 695 Park Avenue, New York, New York 10021, 212/360–2304; Eastern New York Region; All areas of exceptionality.

Oregon: Dr. Wayne Lance, Director, Northwest Regional Special Education Instructional Materials Center, University of Oregon, 1612 Columbia Street, Eugene, Oregon 97403, 503/342–1411, ext. 2021; Alaska, Hawaii, Idaho, Oregon, Washington; All areas of exceptionality.

Texas: Dr. Claude Marks, Director, Special Education Instructional Materials Center, University of Texas, 304 West 15th Street, Austin, Texas 78701, 512/471–3145, 5722; Arkansas, Louisiana, Oklahoma, Texas; All areas of exceptionality.

Washington, D.C.: Dr. Raymond Cottrell, Director, Mid-Atlantic Region Special Education Instructional Materials Center, George Washington University, 820 20th Street, N.W., Washington, D.C. 20006, 202/676–7200; Delaware, District of Columbia, Maryland, New Jersey, Pennsylvania, Virginia; Mentally Retarded, Crippled and Health Impaired, Emotionally Disturbed, Speech Impaired.

Wisconsin: Dr. LeRoy Aserlind, Director, Special Education Instructional Materials

Center, Chairman Elect, IMCNHCY, University of Wisconsin, 415 West Gilman Street, Madison, Wisconsin 53706, 608/262-4910; Minnesota, Wisconsin; Physically Handicapped, Mentally Retarded, Emotionally Disturbed, Speech Impaired.

Coordinator: Dr. Don Erickson, Coordinator, Instructional Materials Center Network for Handicapped Children and Youth, 1507 M Street, N.W., Room 207, Washington, D.C. 20005, 202/223-9400, ext. 601.

USOE: Dr. George Olshir Chief, Research Laboratories and Demonstration Branch, Division of Research, Bureau of Education for the Handicapped, U.S. Office of Education, ROB—7th and D Streets, S.W., Room 2010, Washington, D.C. 20202, 202/962-6370; Mr. Mel Appell, Research Coordinator, Research Laboratories and Demonstration Branch, Division of Research, Bureau of Education for the Handicapped, U.S. Office of Education, ROB—7th and D Streets, S.W., Washington, D.C., 20202, 202/962-7693.

Mr. PERKINS. Mr. Speaker, I yield a couple of minutes to the distinguished gentlewoman from New York (Mrs. CHISHOLM).

Mrs. CHISHOLM. Mr. Speaker, I rise in support of S. 1611.

Many Members have been speaking on the basis of statistics, on the basis of materials they have read, or on the basis of testimony at the hearings. I speak to you on the basis of experience as an educator in this field.

I believe it is very, very important that we support this measure, because we are discovering all kinds of new educational techniques to help the children of this Nation. We certainly need a central place for the dissemination and distribution of this material.

One gets a little concerned when one hears people say, "Everybody is coming up with his own special interest, with his own special bill; the chickens are going to come home to roost. This is going to happen. That is going to happen."

I have seen in this Chamber that we have done so many things, where we invest thousands of dollars in materials which become obsolescent in terms of what has happened in our country. When we think of the most valuable resource of the Nation, it is our children. Then we start talking loudly about how we love them.

I urge support of this measure. It is vitally needed. Once we support the measure there will be hope for the hopeless among the children in this Nation.

Mr. PERKINS. Mr. Speaker, I yield a couple of minutes to the gentleman from Illinois (Mr. PUCINSKI).

Mr. PUCINSKI. Mr. Speaker, our subcommittee held extensive hearings on this subject.

We find that in this country we have some 55 million children attending public schools and 7 million attending parochial schools, for a total school population of some 62 million.

Tragically, 12.5 million have visual impairments, 10 million hearing impediments and 5.4 million suffer some form of emotional disturbance, and are in need of some form of supplemental education. Many of these children suffer multiple handicaps. Of the 5,400,000 who suffer emotional handicaps, 3.2 million also have speech impediments and 2.7 million are mentally retarded.

Most communities are unable to fill the need for special education simply because education for the handicapped is the most expensive kind of education.

There are many companies and many ideas and many programs being offered to local communities to deal with this problem. Local communities do not have facilities for testing these concepts. The value of this Center is that it would help the local communities save a great deal of money.

I am sure when we consider the billions of dollars we have spent in local communities to deal with handicapped children, we can see the savings which can be effected by a Center that will intelligently create new concepts, test them, and pass them on to local communities after they have been proven to be of value.

This whole concept actually will save money for many communities in this country. I believe we will find that whatever money is spent on this bill will come back many fold.

The question is one to which we have to address ourselves. If we do not deal with the problem of the handicapped youngsters the cost of education will continue to grow. Many youngsters drop out of school simply because no adequate facilities are available to deal with their own special peculiar problems.

For this reason I believe this is forward moving legislation which can be of substantial help in the field of educating the handicapped of America. I urge adoption of this legislation.

Mr. PERKINS. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from New Jersey (Mr. DANIELS).

Mr. DANIELS of New Jersey. Mr. Speaker, I rise in support of S. 1611, a bill to create a National Center on Educational Media and Materials for the Handicapped. It was my pleasure to serve several years as chairman of the Select Subcommittee on Education which considered the problems of the education of handicapped children. In addition, the subcommittee had an opportunity to view the problems of the handicapped adult population through the vocational rehabilitation program. Based on this broad experience I am pleased to see the subcommittee, under the able leadership of the gentleman from Indiana (Mr. BRADEMAS), bring before the Congress legislation of the important nature of S. 1611.

During the years of hearing testimony on the problems of the handicapped and particularly during the hearings of the Handicapped Children's Early Education Assistance Act, it became evident that the Federal Government would have to play a key role if we are to guarantee that every handicapped child receives the education he needs. It is not a simple matter to educate a handicapped child. It requires the support of many persons with special training as well as modification of the environment, materials, and media to complete the education process. It is estimated that such a program costs two to three times the amount needed to educate a normal child. While this figure may sound high, it does not in any manner compare to the cost of institutionalization which on the average may cost as much as $200,000 per person.

Congress began a commitment to handicapped children when it passed in 1958 Public Law 85-926 for training teachers. This commitment has continued and can now be found in numerous special education and general education laws of the past decade. It is my belief that this commitment is more than tokenism. It has represented the realization on the part of the Congress that the problems of the handicapped are more than local in nature. If a child does not receive an education, it affects the welfare of the Nation as a whole, and there are many times when the needs of the handicapped are greater than the ability of State and local governments to meet such needs. We recognized this as early as 1864 when the Federal Government assumed responsibility for a college for the deaf. We have done this with the establishment of a model high school for the deaf and certainly last year with the passage of the Handicapped Children's Early Education Assistance Act.

Mr. Speaker, it is my belief that the National Center on Educational Media and Material for the Handicapped is a continuation of our commitment to the handicapped children of this Nation. I was most impressed with the comments of Mr. William C. Geer, executive secretary of the Council for Exceptional Children, an organization representing persons involved in the education of handicapped children, when he emphasized the necessity for Congress to continue its commitment for even though we are in a period of fiscal austerity we must continue to be willing to place our priorities on human needs. What more valid human need can we address ourselves to than the need to unlock avenues to learning that will enable a child who is handicapped to become a contributing member of our society.

The legislation we are considering today would greatly expand the scope of educational opportunities available to our handicapped children—and it is long overdue. These children are not now receiving the full benefits of advances in educational technology—and they are the same children who, if given the exposure, will gain the most.

The proposed National Center on Educational Media and Materials for Handicapped Children would provide a means for the development of specialized curricula, media and methods to be used in the education of handicapped children. At the Center, people will be trained in the development of these materials. It will also serve as a clearinghouse for all of the research that has been undertaken to benefit handicapped children. Teachers all over the country will be able to obtain information from the Center in order to increase their own resources.

The Center will offer our deaf, blind, mentally retarded, emotionally disturbed, or otherwise handicapped children an additional means of fulfilling their capabilities. As such, the passage by the

House of S. 1611 is an integral part of the attempt to provide the handicapped with an education at least equal to that of other children.

Mr. HALL. Mr. Speaker, I yield 2 minutes to the gentleman from Iowa (Mr. GROSS).

Mr. GROSS. Mr. Speaker, earlier in the discussion of this bill I asked the chairman of the Committee on Education and Labor, the gentleman from Kentucky (Mr. PERKINS), where I could find the reports accompanying this bill. The gentleman from Kentucky (Mr. PERKINS) admitted there were no reports. Later the gentleman from Indiana (Mr. BRADEMAS) said it is not accurate to say that the reports are not available.

Mr. BRADEMAS. Mr. Speaker, will the gentleman yield at that point?

Mr. GROSS. I yield.

Mr. BRADEMAS. The gentleman from Indiana did not say that. The gentleman from Indiana said that it is not accurate to say that the position of the administration was not known, and the gentleman from Indiana cited both the report at page 6 and also quoted from the statement of Dr. Gallagher in the hearings.

Mr. GROSS. There is not a single communication in this report from any department of the Government relative to the Executive's position on this legislation, and the gentleman knows it.

Mr. BRADEMAS. Who said that? The committee never said that there was.

Mr. GROSS. That is what the gentleman from Indiana was trying to say.

Mr. BRADEMAS. No. The gentleman from Indiana knows what he is trying to say.

Mr. GROSS. Mr. Speaker, I refuse to yield.

Mr. BRADEMAS. And he prefers that he say it rather than that the gentleman from Iowa say it.

Mr. GROSS. Mr. Speaker, I do not yield further.

Let the RECORD show that there are no reports available from any department or agency of the Government, including the Bureau of the Budget, with respect to this legislation. I say that irrespective of what the gentleman from Indiana (Mr. BRADEMAS) may say to the contrary.

Mrs. MINK. Mr. Speaker, I rise in support of S. 1611, a bill to amend Public Law 85-905 to provide for a National Center on Educational Media and Materials for the Handicapped. One of the greatest tragedies of our time is the neglect of our handicapped children. Thousands of these children, who need so much care and special attention, are being deprived of these necessities during the current drive for economy in Government. There is probably no crueler aspect of the budgetary situation than this.

The interim emergency report prepared by the National Advisory Committee on Handicapped Children has documented the fact that less than 40 percent of the handicapped children in this country are now receiving special education services. Aid to the States under title VI-A of the Elementary and Secondary Education Act, to provide services for these children, at only $29.25 million, is far short of even the inadequate $206 million that has been authorized for fiscal year 1970.

Noting that the proposed appropriation for this year will be even less in relation to the increased number of handicapped children, the report declared:

> It is reasonable to assume that more than 50 percent of handicapped youngsters can have their condition substantially improved, sometimes even cured, if they can get help and attention early enough. The proposed low level of flooding would deny to many of them, their opportunity to live as near normal lives as do the rest of us.

I am in favor of funding to at least the full authorized amount, but the legislation we are considering today is designed to provide some relief until such time as adequate State aid funds can be found.

S. 1611 establishes a National Center on Educational Media and Materials for the Handicapped.

Mr. Speaker, admittedly S. 1611 does not go to this serious problem of education funds for our handicapped children. But it does seek to resolve one of the most serious needs in this area.

This bill will provide an intensified search for new and improved teaching methods and seek to counteract the critical personnel shortage through improved technology. The personnel shortage, already a critical factor in the lack of aid for handicapped children, is scheduled to grow even more serious in the new school year as universities reduce their present level of training of teachers for the handicapped. Improved teaching and technology, such as that to be provided under this bill, will help fill the gap.

It has been estimated that more than 300,000 teachers, speech pathologists, audiologists, and other specialists are needed to work in this field. Only 75,000 to 80,000 such specialists are now available, however, which is a major reason for the fact that some 3½ million of the Nation's 5½ million children needing special educational services are struggling along without them.

S. 1611, which has already passed the Senate, would seek to close the gap by finding new ways for giving handicapped children the specialized educational experiences that they require.

To be located at a site chosen by the Secretary of Health, Education, and Welfare, the proposed Center would bring together in a central spot all of our efforts to develop improved educational media and materials that are so vitally needed.

While it must be recognized that such materials and techniques can never replace teachers, I feel that a Center can fill a highly useful role in enabling the few teachers we do have to do a better job and hopefully reach more handicapped students.

The Center is viewed as not only a source of production of materials such as films, but also as a disseminator of the useful work done by others in this area.

It would have an important function of coordination and study of existing programs in the field of media for the education of handicapped children. It has been called a capstone to the many Federal and private efforts now underway or proposed to help meet our unmet responsibilities to these youngsters.

We cannot allow to exist the present intolerable situation in which thousands of parents take their handicapped children to schools seeking special assistance, only to be turned away for lack of teachers and teaching materials. This is the need to be served by S. 1611, and I urge its passage.

A merging of the best brain power in the areas of instructional technology and media with the persons who are experts in educating handicapped children will hopefully be the basis of a breakthrough in the extension of services to more children, and the improvement of education for handicapped children generally.

I commend our subcommittee chairman, Mr. JOHN BRADEMAS, the distinguished gentleman from Indiana, for reporting this bill. As a member of that subcommmittee, I join him today and my other colleagues in urging the passage of this bill.

Mr. STOKES. Mr. Speaker, the House is today presented with the opportunity to further advance the cause of an education for all Americans, whatever their disabilities. This effort, now over a decade old, is one of which we can all be justifiably proud, for it inherently recognizes that all of our children are of great potential worth to the Nation, and that all must be properly trained if we are to realize the full measure of our mutual aspirations. We all know of the extraordinary talents often possessed by the handicapped, and it is a credit to this body that it has done so much to insure that these abilities are fully developed.

But this bill should be praised for even more than the fine humanitarian act that it is. For today, and to my knowledge for the first time, the House will enact a law which calls upon the vast resources of this country's technology to assist in solving a pressing sociological problem. Many of the Members of this body, including myself, have asked, in fact have pleaded, that this be done at various times during this session. Thus, I believe that now that we are taking this important step, it should be both realized and applauded. All of us who are deeply interested in curing the urgent domestic ills this Nation is currently plagued with will therefore salute this accomplishment, and anxiously await increased usage of our bountiful technological skills in attacking other human problems.

Mr. BENNETT. Mr. Speaker, I am pleased to support the legislation before the House today to provide for a National Center on Educational Media and Materials for the Handicapped. I have an identical bill, H.R. 11685, and testified before the House Education and Labor Committee on the bill. I congratulate the chairman and committee for bringing it before the House.

As a handicapped person myself, I have had a long-time interest in Federal legislation to assist the handicapped of the Nation. I have sponsored and supported bills in this field for two decades in the Congress. Last year, a bill introduced by the late Senator from Alaska, E. L. Bartlett and myself, was enacted into law,

and it provides that public buildings shall be constructed to be accessible to handicapped persons. I believe this is one of the most far-reaching laws on the books to help the handicapped.

The legislation we are considering today, including my bill, H.R. 11685, is another significant step in helping the 22 million Americans who are handicapped.

The legislation would establish a National Center on Educational Media and Materials for the Handicapped, which would provide a comprehensive program of activities to facilitate the use of new educational technology in education programs for handicapped persons. The program would include designing, developing, and adapting institutional materials for aid to the handicapped.

The Center would coordinate, produce, and assemble educational films, talking books, and other materials to communicate handicapped teaching methods to teachers and other persons in the field of working with the handicapped.

Mr. Speaker, this legislation has already passed the Senate, and I believe it is a measure which will help create a better environment to help handicapped persons lead normal lives. That is all a handicapped person desires. The Congress can legislate properly to provide an atmosphere in which the handicapped can achieve a useful and productive life. This bill does that and I urge that it be approved.

Mr. PERKINS. Mr. Speaker, I have no further requests for time.

Mr. HALL. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I want to repeat again that it has been clearly established that this is a Senate bill which in fact is engrafted onto an original bill of the 85th Congress having to do with materials for hearing, and expanding it to a bill of the 89th Congress which did in fact establish the National Center for Educational Media and Materials for the Handicapped. Why it is being handled in exactly this manner is difficult to determine.

Second, insofar as the "chickens coming home to roost" is concerned, one needs not to act upon or debate that point in view of the experience we had here this last weekend. But I do think as I said in the beginning, that perhaps there is need for coordination of effort. I know this Nation is bankrupt now, and due to actions such as these over and above budgeted funds and income, we will surely continue to be.

Mr. Speaker, insofar as being able to go on indefinitely and spend more and more of our income, the time has already approached in the bankruptcy of this Nation.

Personally, I do not subscribe to the fact that it need be Federal and agree with the gentleman from Minnesota (Mr. QUIE) that in this instance there needs to be no Federal Center. For years a good job has been done for these beloved children at the State and municipal levels and at the hands of the tender, loving care of their home facilities, teachers, and their own families.

Furthermore, the report itself says, Mr. Speaker, that at the present time it would be impossible to train a sufficient body of teachers even if the funds were available, since we do not have a sufficient body of trained personnel to train teachers for the handicapped. In other words, we are short of trainers.

This is like the question of paying support, transportation, stipends and tuition for training people in the Teachers Corps, or Appalachia, or even the Ozark Commission to reconstitute people to become employables before asking them if they want to be employed, or will relocate to job-available areas.

I say finally, Mr. Speaker, that this is a poorly timed bill. It is the opening of the door, it is an ad infinitum appropriation and just as surely as the sun rises in the east and goes down in the west, we will be back here for more money for the construction of this Center, and it cannot even be reclaimed once it is built on Government-owned land.

Mr. Speaker, I believe that action on this bill should be deferred.

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield?

Mr. HALL. I yield to the gentleman from Illinois.

Mr. PUCINSKI. I thank the gentleman for yielding. I think the gentleman is correct when he recites the history of this legislation. It started out in the 85th Congress as an effort to establish a center for hearing research. But what really happened is that as we went along we saw the huge problems of the handicapped.

Mr. HALL. Well, now, Mr. Speaker, if I may interpose with the gentleman after having yielded to him and without being rude, I heard with great interest his statement that we have 62 million schoolchildren and that some one-half of thm are handicapped in some manner or another. I heard the same statement last week. Does the gentleman really believe in his heart that this is true, based upon the results of his own investigations or any other information which has come into his hands? Can the gentleman show me any three children of any family where even one of that number is handicapped either in his home, in his school, or any school which the gentleman has visited? I do not believe there are 25 million, let alone one-half of the 63 million of the schoolchildren in this Nation who are handicapped and deserving or need such a overlapping, duplicative, and additive funds which would have to be appropriated on and on, as a result of a program such as this?

Mr. PUCINSKI. Mr. Speaker, if the gentleman will yield further, I would like the gentleman to look at the evidence which was presented before my subcommittee which is most voluminous on this subject. I am not surprised that the gentleman is shocked. I was shocked. I was shocked even more as to the number of youngsters in this country with multiple handicaps, youngsters who live in the various communities of our Nation but who cannot easily be discovered. The gentleman will recall that just last week we talked about youngsters with a learning disability, such as for instance for some strange reason they read backwards. This is, of course, a form of strephosymbolia.

Mr. HALL. Mr. Speaker, I know all about strephosymbolia. I have diagnosed cases of strephosymbolia which covers the reading-backward readers, the mirror readers, and the rest of them.

However, would the gentleman from Illinois at least admit to me that a child might be a little hard of hearing and have a strephosymbolia syndrome, or blindness, or a learning difficulty, and so forth, that has affected one out of three schoolchildren who suffer with this type of a handicap or a similar type? Is he counting children or handicaps?

Mr. PUCINSKI. Mr. Speaker, if the gentleman will yield further, I think the gentleman has raised a very perfectly fair question and I would like to answer it in this manner: Many of these children have multiple handicaps. A youngster might have a hearing disability or an eyesight disability or an emotional disability. The gentleman from Missouri, as a distinguished physician, knows better than I do the number of children who go through school where their handicap is never discovered and we fail to understand why the child cannot make normal progress in his schoolwork.

Mr. HALL. The gentleman from Illinois knows that there is only a fraction of 1 percent of those who are so handicapped that are not discovered.

Mr. PUCINSKI. I would like to tell the gentleman that the problem is not as serve as we believe it is, but the testimony before our subcommittee showed the enormous need for the relief of this problem.

Mr. HALL. Mr. Speaker, I reserve the balance of my time.

The SPEAKER pro tempore (Mr. PRICE of Illinois). The question is on the motion of the gentleman from Kentucky (Mr. PERKINS) that the House suspend the rules and pass the bill S. 1611, as amended.

The question was taken.

Mr. HALL. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 365, nays 22, not voting 45, as follows:

[Roll No. 139]

Daddario	Leggett	Whalley
Dawson	Lennon	Whitten
Diggs	Lipscomb	Wilson, Charles H.
Edwards, Calif.	Mailliard	
Fallon	Martin	
Fascell	Mikva	

So (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The Clerk announced the following pairs:

Mr. Boggs with Mr. Arends.
Mr. Celler with Mr. Lipscomb.
Mr. Barrett with Mr. King.
Mr. Garmatz with Mr. Ashbrook.
Mr. Fallon with Mr. Mailliard.
Mr. Kirwan with Mr. Berry.
Mr. Lennon with Mr. Martin.
Mr. Carey with Mr. Gubser.
Mr. Brown of California with Mr. Halpern.
Mr. Teague of Texas with Mr. Saylor.
Mr. Charles H. Wilson with Mr. Taft.
Mr. Baring with Mr. Utt.
Mr. Whitten with Mr. Whalley.
Mr. Leggett with Mr. Dawson.
Mr. Daddario with Mr. Corman.
Mr. Edwards of California with Mr. Nix.
Mr. Tunney with Mr. Diggs.
Mr. Hull with Mr. Karth.
Mr. Stuckey with Mr. Joelson.
Mr. Ichord with Mr. Rarick.
Mr. Fascell with Mr. Mills.
Mr. Hawkins with Mr. Mikva.

Messrs. KEITH, BRAY, and DEVINE changed their votes from "nay" to "yea."

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. BRADEMAS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the bill just passed.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Indiana?

There was no objection.

PERSONAL EXPLANATION

Mr. LOWENSTEIN. Mr. Speaker, during the vote which was taken on House Joint Resolution 764, I was attending to official business in another part of the Capitol. Had I been present I would have voted "yea."

BIG TIME SPENDERS

(Mr. BURKE of Florida asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BURKE of Florida. Mr. Speaker, the arguments on how much to spend for this, and how much for that still goes on in the Congress. The big spenders continue to think up new schemes and ways on how to spend more of your money and mine.

Their speeches on the U.S. House and Senate floors wax with words of righteousness and humanitarianism. To them, nothing is too good for the next fellow as long as it is your money that is being spent and not theirs.

The fact that we are carrying on a war in Vietnam, whether we like it or not, is of little consequence to those, who for the sake of buying votes with the people's own money, continually give or promise to this group or that.

When they finish the package, many of the people back home are so completely fooled that almost any Congressman finds himself in a position where he almost dare not vote against the final package lest it appear that he is against motherhood and in favor of sin.

How often have I heard some Congressmen state that they wish they could vote as "statesmen" but cannot for fear of being criticized by, or losing the favor of, the voters later.

Almost any omnibus bill, a package bill, carries with it a handout of some sort for most all.

Even with all the talk about tax reform, I hear very little from the "big spenders" in Government suggesting their support for cuts in Government spending. And so the understructure of our Government; namely, Government bureaucracies, get bigger and bigger.

Nevertheless, I am indeed happy to see some activity in the House Ways and Means Committee in perhaps bringing to the Congress a tax reform bill.

It is strange though that this tax reform is only now being worked on for we realize it is something that has been needed for years. Certainly one cannot deny that such action is long overdue, and even if it took the election of a Republican President for the Democrats in Congress to recognize the need for tax reform, then I say good.

Some of the items that have demanded treatment for a long time are obvious to all taxpayers, but why have not they been obvious to those in Congress, who are responsible for making the changes?

These include the requirement that all citizens capable of paying taxes should share some of the responsibility of paying for the operation of their Government; and no one capable of paying taxes should escape paying such at the expense of another; and that the average individual taxpayer should not have to shoulder the responsibility of paying more than his share while some of the more wealthy or tax knowledgeable corporations or foundations escape through unfair tax exemptions or loopholes.

I, for one, strongly advocate that these loopholes be closed tight and that a truly good tax reform bill be voted out of the House Ways and Means Committee. If this can be done, then I am hopeful that

somehow the increase thus derived will be used to give relief to the ordinary workingman and woman whose only income generally comes from wages earned by simple, hard work.

During the last session of Congress and again in this session, I introduced a bill, H.R. 8842, which would raise the personal exemption of each member of the family to $1,200 per year, or at least $1,000 and I am hopeful this will be incorporated into the tax reform bill.

While it is true that an increase in exemption allowed each individual would require substantial revenues from other sources to make up the difference, nevertheless it would seem to me that a sizable increase would result from a truly equitable tax reform bill.

In addition, it is time that the Congress does some serious thinking about effecting some honest tax cuts. In fact it is just about time that the American taxpayer insists on his, instead of wanting a piece of the "big American giveaway pie" before it has even been taken from the oven.

I am afraid until then, the average American wage earner and taxpayer will get more talk than he will get tax relief.

I am equally sure, however, that with a conscientious effort by the Congress to pass a truly meaningful tax reform bill, and by cutting back on all unnecessary Government spending, the taxpayer will then get a break and our Nation can pull itself free from the disruptive economical shackles placed on it by the bureaucratic planners.

ECONOMIC OPPORTUNITY FOR ALL AMERICANS

(Mr. MOORHEAD asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. MOORHEAD. Mr. Speaker, today I am introducing four bills which I feel are vital if we ever are to make good on our promises to create economic opportunity for all Americans.

These four measures are aimed at overturning some obstacles which have kept thousands of minority contractors from participating in America's multibillion dollar construction industry.

Through accident or design, a series of impediments, involving credit, opportunity for jobs, and inability to secure construction performance bonds, has barred hundreds of competent black contractors from sharing in the billions of dollars spent for construction by both the private sector and the Government.

I would not say that racial prejudice is the sole factor for the obstacles that these small companies meet, but it is an element that exists beneath what surety companies and banks believe are very legitimate reasons for not granting these individuals performance bonds and loans.

There are some 8,000 minority contractors. The economic and psychological lifts that the entrance of these groups into the mainstream construction industry would give to the Mexican American and black communities is incalculable.

The bills that I am introducing represent a concerted effort to eradicate bonding problems for minority contractors.

Three of these bills have already been introduced in the other House by the distinguished junior Senator from Indiana (Mr. BAYH).

And I certainly agree with Senator BAYH when he states:

> The gigantic task of meeting the present and future construction needs of our Nation demand that we maximize our construction capabilities. This cannot be accomplished unless our technological and manpower resources are utilized to the fullest measure.

To support the existence of the problem at which these bills are aimed, I offer the report of the National Business League which stated:

> Only one-third of all Negro contractors was successful in securing performance bonds at any time and all of these had experienced "undue difficulty" in securing them. Seventy percent reported that they had lost contracts because of inability to secure bonding.

Please be assured that I am not asking that a performance bond be given every contractor who happens to be black or Mexican. But I do ask that we wipe away, through regulation, the hodge-podge of tradition, prejudice, and redtape which keeps saying that "only a white man can handle the complex problems encountered in the construction industry."

The three bills which Senator BAYH put in and which I am introducing on this side will accomplish the following:

The first bill would increase the participation of small business concerns in the construction industry by, first, providing for a Federal guarantee of certain construction bonds; second, authorizing the acceptance of certifications of competency in lieu of bonding in connection with certain Federal projects; and third, establishing a national construction task force staffed to provide technical instruction and counseling with respect to the managing, financing, and operation of small construction concerns.

The second bill would amend section 3 of the Housing and Urban Development Act of 1968, entitled Jobs in Housing; Employment Opportunities for Lower Income Persons in Connection With Assisted Projects.

In the opinions of Senator BAYH and myself, the provisions and spirit of section 3 should be extended to include federally assisted programs of urban planning, development, redevelopment, or renewal; public or community facilities; and new community development. State and local planning agencies engaged in federally assisted projects spend millions of dollars annually to purchase the skills of firms offering urban planning and consultation services. This extension would greatly broaden the scope of employment and business opportunity for lower income persons and aspiring minority entrepreneurs.

The third bill would amend the Miller Act of 1935, which now requires that all Federal contracts for construction in excess of $2,000 must be bonded, to increase the exemption from $2,000 to $20,000. This would reduce the constraint of Federal bonding requirements which are presently an important additional factor in any comprehensive consideration of the bonding problems of minority contractors.

On Wednesday, July 2, when I rose before this House and said, "The black contractor faces all of the obstacles to success that his white contemporary encounters, plus a few more," I was referring to the knotty problem of bonding and credit.

It is the bonding hassle at which I have aimed my bill, and the fourth of the measures I am introducing today.

Specifically, I call for the "Small Business Administration to guarantee any bid, payment, or performance bond under an agreement entered into by a small business concern which is a construction contractor or subcontractor."

Let me assert once again that my brace of bills is not designed to certify as contractors, those who merely own a truck and shovel.

They will help develop the skills of this latter group, but more importantly my bill would allow the qualified contractor, whose only drawback is prejudice, to compete equally on the market for those jobs which he can perform as well as anybody else.

OVERALL, AND DETAILED FIGURES IN CONNECTION WITH THE BILL PROVIDING APPROPRIATIONS FOR THE DEPARTMENTS OF LABOR, AND HEALTH, EDUCATION, AND WELFARE

(Mr. FLOOD asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous matter.)

Mr. FLOOD. Mr. Speaker, during the 3 days that the Labor, and Health, Education, and Welfare bill was before the House there were no changes from the committee's recommendations in the Department of Labor and the related agencies. However, there were numerous changes made in appropriation items in the HEW title of the bill and some of them made adjustments in the earmarking for activities within appropriations. I think it would be very helpful to Members to have available a detailed table we have which shows the amount of each appropriation item in the HEW part of the bill, broken down by activity, and also showing the comparable 1969 appropriation, the 1970 budget request, and the amount in the bill as reported by the Committee on Appropriations.

We have also received numerous requests for overall figures in connection with the bill, and have prepared three short tables that will give Members this information.

Mr. Speaker, the tables to which I have just referred are as follows:

SUMMARY OF LABOR-HEW APPROPRIATIONS FOR 1969 AND 1970

[In millions of dollars]

	1969 enacted	1970		
		Budget estimate	As reported by committee	As passed the House
Department of Labor	771.6	1,002.3	976.9	976.9
Department of Health, Education, and Welfare	16,509.4	15,414.5	15,595.7	16,518.3
Related agencies	75.0	78.4	78.4	78.4
Total	17,356.0	16,495.2	16,651.0	17,573.6

The table above reflects the amounts actually carried in the appropriation act for 1969 and in the bill for 1970. To arrive at a more valid comparison between the appropriations for the 2 years the figures should be adjusted for the advance appropriation for 1970 of $1,010,814,300 for assistance to educationally deprived children under title I of the Elementary and Secondary Education Act which was included in the 1969 appropriation act. The special appropriation of $90,965,000 for school assistance in federally affected areas for 1968, which was also included in the 1969 appropriation act, should also be deducted for comparability. These adjustments are made in the tables which follow:

SUMMARY OF LABOR-HEW APPROPRIATIONS FOR 1969 AND 1970, ADJUSTED FOR COMPARABILITY

[In millions of dollars]

	1969 enacted	1970		
		Budget estimate	As reported by Committee	As passed the House
Department of Labor	771.6	1,002.3	976.9	976.9
Department of Health, Education, and Welfare	15,407.7	16,425.3	16,606.5	17,529.1
Related agencies	75.0	78.4	78.4	78.4
Total	16,254.3	17,506.0	17,661.8	18,584.4

HEW APPROPRIATIONS FOR 1969 AND 1970, BY CONSTITUENT AGENCY

Agency	1969 comparable	1970 revised budget	House committee recommendation	House floor action
Consumer Protection and Environmental Health Service	$227,064,000	$229,477,000	$227,177,000	$227,177,000
Health Services and Mental Health Administration	1,077,261,000	1,030,441,000	1,103,449,000	1,103,449,000
National Institutes of Health	1,394,549,500	1,448,610,000	1,449,651,000	1,449,651,000
Scientific activities overseas	15,000,000	3,455,000	3,455,000	3,455,000
Subtotal, health and medical	2,713,874,500	2,711,983	2,783,732,000	2,783,732,000
Office of Education	3,617,400,000	3,180,278,000	[1] 3,303,697,000	[1] 4,222,889,000
Social and Rehabilitation Service	7,306,052,000	8,420,603,000	8,407,383,000	8,410,754,000
Social Security Administration	1,690,772,000	2,014,864,000	2,014,564,000	2,014,564,000
Special institutions	36,146,000	62,409,000	62,409,000	62,409,000
Departmental management	35,898,000	35,160,000	34,734,000	34,734,000
Adjustment for many relatively small transfers to appropriations outside Labor-HEW bill	7,515,000			
Total, Department of Health, Education, and Welfare	15,407,657,500	16,425,297,000	16,606,519,000	17,529,082,000

[1] Includes $1,010,814,300 advance funding for 1970 appropriated in the 1969 appropriation act.

DETAILED BREAKDOWN OF HEW APPROPRIATIONS FOR 1969 AND 1970

CONSUMER PROTECTION AND ENVIRONMENTAL HEALTH SERVICE

Appropriation and activity	1969 comparable	1970 revised budget	House committee recommendation	House floor action
Food and drug control:				
1. Medical evaluation	$18,774,000	$19,674,000	$19,674,000	$19,674,000
2. Scientific research and evaluation	16,378,000	16,583,000	16,583,000	16,583,000
3. Education and voluntary compliance	1,275,000	1,296,000	1,296,000	1,296,000
4. Regulatory compliance	29,205,000	29,647,000	29,647,000	29,647,000
5. Program management	4,812,000	4,807,000	4,807,000	4,807,000
Total	70,444,000	72,007,000	72,007,000	72,007,000
Air pollution control:				
1. Abatement and control	32,567,000	35,531,000	35,531,000	35,531,000
2. Research, development, and demonstration	47,614,000	52,328,000	50,328,000	50,328,000
3. Manpower training	5,279,000	5,405,000	5,405,000	5,405,000
4. Program management	2,500,000	2,536,000	2,536,000	2,536,000
Total	87,960,000	95,800,000	93,800,000	93,800,000
Environmental control:				
1. Solid waste management	16,113,000	14,872,000	14,872,000	14,872,000
2. Occupational health	7,466,000	7,774,000	7,774,000	7,774,000
3. Radiological health	16,183,000	16,527,000	16,527,000	16,527,000
4. Community environmental management:				
(a) Aedes aegypti eradication	6,446,000	440,000	440,000	440,000
(b) Other community sanitation	11,359,000	9,872,000	9,872,000	9,872,000
Subtotal, environmental management	17,805,000	10,312,000	10,312,000	10,312,000
5. Water hygiene	2,184,000	2,593,000	2,593,000	2,593,000
6. Program management	3,080,000	3,130,000	3,130,000	3,130,000
Total	62,831,000	55,208,000	55,208,000	55,208,000
Buildings and facilities		300,000		
Salaries and expenses, Office of the Administrator	5,829,000	6,162,000	6,162,000	6,162,000
Total, Consumer Protection and Environmental Health Service	227,064,000	229,477,000	227,177,000	227,177,000

HEALTH SERVICES AND MENTAL HEALTH ADMINISTRATION

Appropriation and activity	1969 comparable	1970 revised budget	House committee recommendation	House floor action
Mental health:				
1. Support and conduct of research:				
(a) Grants:				
(1) Research	$81,159,000	$82,273,000	$82,273,000	$82,273,000
(2) Hospital improvement	10,610,000	8,000,000	8,000,000	8,000,000
(3) Early child care demonstrations		1,000,000		
Subtotal, grants	91,769,000	91,273,000	90,273,000	90,273,000
(b) Direct operations:				
(1) Intramural research	17,959,000	18,125,000	18,125,000	18,125,000
(2) Planning, development, and administration	5,070,000	7,006,000	6,404,000	6,404,000
Subtotal, direct operations	23,029,000	25,131,000	24,529,000	24,529,000
Subtotal, research	114,798,000	116,404,000	114,802,000	114,802,000
2. Manpower development:				
(a) Grants:				
(1) Training	109,046,000	107,500,000	107,500,000	107,500,000
(2) Fellowships	10,641,000	10,866,000	10,866,000	10,866,000
Subtotal, grants	119,687,000	118,366,000	118,366,000	118,366,000
(b) Direct operations	4,530,000	4,583,000	4,583,000	4,583,000
Subtotal, manpower	124,217,000	122,949,000	122,949,000	122,949,000
3. Support of institutions and resources:				
(a) Grants:				
(1) Construction of community mental health centers	15,000,000	92,200,000	29,200,000	29,200,000
(2) Staffing of community mental health centers	49,699,000	51,300,000	51,300,000	51,300,000
(3) Narcotic addiction and alcoholism community assistance	8,000,000	8,000,000	12,000,000	12,000,000
Subtotal, grants	72,699,000	88,500,000	92,500,000	92,500,000
(b) Direct operations	2,364,000	2,379,000	2,379,000	2,379,000
Subtotal, institutions and resources	75,063,000	90,879,000	94,879,000	94,879,000
4. Service activities:				
(a) Narcotic addiction and drug abuse treatment and research	14,288,000	17,456,000	17,456,000	17,456,000
(b) Regional and field activities	2,346,000	2,346,000	2,346,000	2,346,000
(c) Scientific communication and public education	2,588,000	2,749,000	2,749,000	2,749,000
Subtotal, service activities	19,222,000	22,551,000	22,551,000	22,551,000
5. Program direction and management services	4,871,000	5,121,000	5,121,000	5,121,000
Total, mental health	338,171,000	357,904,000	360,302,000	360,302,000
St. Elizabeths Hospital	13,380,000	10,405,000	10,405,000	10,405,000
Health services research and development	41,907,000	44,975,000	44,975,000	44,975,000
Comprehensive health planning and services:				
1. Partnership for health grants:				
(a) Planning	18,500,000	20,000,000	20,000,000	20,000,000
(b) Formula	66,032,000	90,000,000	90,000,000	90,000,000
(c) Project	86,600,000	80,000,000	80,000,000	80,000,000
Subtotal, grants	171,132,000	190,000,000	190,000,000	190,000,000
2. Migrant health	8,100,000	15,000,000	8,110,000	8,110,000
3. Standard setting and resource development	5,998,000	6,849,000	6,849,000	6,849,000
4. Program management	1,879,000	2,184,000	2,184,000	2,184,000
Total	187,109,000	214,033,000	207,143,000	207,143,000
(Trust fund transfer)	(4,320,000)	(4,320,000)	(4,320,000)	(4,320,000)
Regional medical programs:				
1. Operational and planning grants	56,200,000	73,500,000	50,000,000	50,000,000
2. Chronic disease control programs	25,082,000	24,771,000	24,271,000	24,271,000
3. Program management	1,851,000	1,729,000	1,729,000	1,729,000
Total	83,133,000	100,000,000	76,000,000	76,000,000
Communicable diseases	39,084,000	38,638,000	38,638,000	38,638,000
Hospital construction:				
1. Construction	254,487,000	150,000,000	254,400,000	254,400,000
2. Operations and technical services	3,802,000	3,923,000	3,923,000	3,923,000
Total	258,289,000	153,923,000	258,323,000	258,323,000
District of Columbia medical facilities	15,000,000	15,000,000

[1] Included in 2d Supplemental Appropriation Act, 1969.
[2] Includes $1,010,814,300 advance appropriation for 1970 appropriated in the 1969 appropriation act.
[3] Bloc amount for activities 4, 5, 6, and 7.
[4] Up to 1 percent of work-study funds can be used for cooperative education.
[5] Floor debate indicated that approximately $5,000,000 was to be added to preschool and school programs; however, the earmarked amount for this activity was not changed.
[6] Trust funds.

NASHVILLE'S METRO POLICE—THE GOOD GUYS—A MODEL IN COMMUNITY RELATIONS

(Mr. FULTON of Tennessee asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. FULTON of Tennessee. Mr. Speaker, a group of officers with the Nashville Metropolitan Police force have reversed the order of "Support Your Local Police," and are carrying out an impressive "Support Your Community" campaign.

Members of the metropolitan police department's community relations section are scoring successes in building confidence, respect, and understanding toward law officers among the children and their parents who are residents in the population-concentrated sections of Nashville. Major credit for the success of the program belongs to five officers, Sergeants William D. Bodenhamer and Sam Peach, along with Officers Bob Kirchner, Isaac Burford, and Billy Reece, and their work should be given full recognition.

This is the same police department which suffered unfavorable publicity on June 3, 1969, when unfounded and untrue, references were made before the Subcommittee on Criminal Laws and Procedures of the Senate Judiciary Committee by Assistant Attorney General Will Wilson. These charges, implying corruption within the Nashville Police Department, have been retracted by the Assistant Attorney General.

On different nights of the week, through the summer months, these officers, along with other members of the community relations section, pull up in a police station wagon, set up a record player, and youngsters in the neighborhood bring over their own records for an instant block party. At dusk, these officers set up a movie screen, thread their projector, and show a different full-length movie each week.

Youngsters, who once may have run at the sight of an officer, now know these men by name and have become good friends. The officers have an opportunity to talk with the young people and their parents, and these talks do not include the usual lectures on juvenile delinquency or discussion on life in housing projects. They are just friendly talks which have created real understanding between people.

This highly successful program was organized by Sergeant Bodenhamer, who recalled from his own childhood that the city is especially hard on children in the summertime.

Sergeant Bodenhamer, a 13-year veteran with the police force, said the purpose of the program was not only to provide entertainment for the children and their parents, but to give the officers an opportunity to get to know the kids, and let them know that the police are their friends.

The efforts of the metropolitan police department's community relations section could well serve as a model for other cities, and I urge my fellow Members of the Congress to read in full the report of this exceptional program as written by Frances Meeker, a reporter for the Nashville Banner.

THE "GOOD GUYS" COOL A SWELTERING SUMMER WITH FUN—POLICE PROVIDE ENTERTAINMENT FOR HEAVILY POPULATED AREAS

(By Frances Meeker)

The little girl carried her baby brother on her hip as she came across the grassy field to join the other children clustered around the blue Metro police station wagon. Other children were rolling up on bicycles and tricycles. Something big was going on.

As the sun dropped behind the distant skyline, bringing relief from the intense summer heat, children and teenagers came from the nearby apartments of the James A. Cayce Homes with quilts and bedspreads which they spread on the thick grass. Excitement was in the air.

A little later the adults—young, middle-aged and elderly arrived with lawn chairs and soft drinks. Here was relief and relaxation after the day's work was over.

THE "GOOD GUYS"

And if you asked any of these people who the "good guys" around town are this summer, they would tell you its the Metro Police Department, and especially Sgt. William D. Bodenhamer, Sgt. Sam Peach and Officers Bob Kirchner, Isaac Burford and Billy Reece.

These policemen, through the department's Community Relations Section, are providing entertainment on hot summer nights for the children—and their parents—of the population-concentrated sections of the city.

Following the same weekly schedule, the officers are visiting the Sam Levy Homes on Monday; Edgehill Park, Tuesday; Hadley Park Wednesday; Cayce Homes, Thursday; and Sudekurn Homes, Friday. They play records, talk with the people and show a different full-length movie each week.

As soon as the policemen arrive, the children are there with their own records which they give to Sgt. Bodenhamer to play on the record-player in the station wagon. Then the small children gather close to the loudspeakers, even though the music can be heard several blocks away, and the larger ones dance and skip on the grass.

Prior to the movie at the Cayce Homes Thursday night, the officers were kept busy handcuffing small boys and girls together.

"I'm next, Mr. Bodenhamer! Handcuff me!" two boys shouted, seconds later the two lucky youngsters strutted off, hands manacled together.

A little girl kept watching the large movie screen that had been set up before dark. "I'll bet they'll have something good up there," she commented.

Mrs. Pauline Freeman, who lives in the Cayce Homes and is a playground worker at the Martha O'Bryan Community Center in the homes, brought her four children.

"This is the best thing that ever happened for us," she said.

Mrs. Freeman said when the children in the Cayce Homes first heard of the summer program, they thought there was "a catch to it."

"They thought the policemen would lecture on juvenile delinquency or discuss life in the housing projects," she said.

Then after they found out it was "all fun," they were afraid the policemen wouldn't come back, she said.

Mrs. Freeman said many of the children were seeing movies for the first time in their lives, and many families were going to the movies together for the first time.

The summer program was the brainchild of Sgt. Bodenhamer, who said he remembers from his own childhood in Nashville that it can be hard to be a child in the city especially in the summertime.

"I remember how I enjoyed the free park movies they had back then. I used to fight to be the one to help set up the screen," said Bodenhamer, who grew up during the 1930's and 40's.

"We also want to get to know the kids and let them know we are their friends," said the 13-year veteran of the police force.

And that's fine with the kids.

"That's Mr. Bodenhamer; I know him," one small Cayce Home resident informed his companion as the big police sergeant set up the movie equipment under the watchful eyes of children.

GEORGIA-PACIFIC CORP. DONATES REDWOOD STAND TO NATURE CONSERVANCY

(Mr. DON H. CLAUSEN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DON H. CLAUSEN. Mr. Speaker, on Wednesday, July 30, the Georgia-Pacific Corp. donated a $6 million prime stand of redwood timber to the Nature Conservancy as a dramatic demonstration of that company's continued cooperation with the American conservation movement. The grove was then turned over to the State of California by the Nature Conservancy, thereby enhancing and improving the State park system.

Knowing of my colleagues' intense interest in the conservation of our great natural resources, I felt that they would be interested in the release put out by the Nature Conservancy detailing the donation, which I would like to make a part of the RECORD, along with my congratulations to the Georgia-Pacific Corp., the Nature Conservancy, the Save-the-Redwoods League, and the State of California, who made this tremendous gesture a reality.

This demonstration of corporate concern for conservation and environmental matters is deserving of our highest commendations and expressions of appreciation. This beautiful redwood grove, in addition to providing the people of California with another redwood conservation "gem," will serve as a symbol of conservation awareness by the Georgia-Pacific Corp. All Americans will be eternally grateful.

GEORGIA-PACIFIC DONATES $6 MILLION PRIME REDWOOD STAND TO THE NATURE CONSERVANCY

WASHINGTON, D.C.—The Nature Conservancy, of Washington, D.C., announced today the donation by Georgia Pacific Corporation, one of the nation's largest forest products companies, of a $6-million stand of prime redwood located on the Van Duzen River in Northern California.

The gift, which the Conservancy termed one of the largest in the history of the American conservation movement, embraces two redwood groves totaling 390 acres situated 12 miles southeast of Fortuna, California.

A brief, noontime ceremony was held Wednesday, July 30, at the site, attended by Georgia Pacific, The Nature Conservancy, Save-the-Redwoods League, and state park officials. Robert B. Pamplin, Portland, Oregon, chairman and president of Georgia Pacific, gave the deed to the property to Thomas W. Richards, of Washington, D.C., president of The Nature Conservancy, who symbolically handed it to William Penn Mott, chief of the California State Park System, which will administer the park.

Richards, as president of The Nature Con-

servancy, a national, non-profit organization formed to acquire and protect outstanding natural areas, praised the company saying, "This public-spirited gift is a tribute to the conservation awareness of Georgia Pacific officials. This marks a significant breakthrough for the conservation movement. This gift represents what may be the largest ever made by an American business firm for conservation purposes. Georgia Pacific, with the contribution, sets an example for America's resource-based industries. We are grateful to them and hope that other industries will follow their lead."

Included in the gift are some 206 acres of old growth redwood, classified triple O, which signifies the oldest and best timber. Many of the trees are between 400 and 800 years old and a number are 15 or more feet in diameter. The volume of timber in the stand runs between 300,000 and 400,000 board feet per acre; the total amount of top grade redwood is enough to build houses for over a million people. The remaining land includes young growth redwoods and river bar and meadowlands.

Pamplin remarked, in making the gift, that "We have always recognized the need for recreational use of forest lands. We maintain several dozen beautiful parks in our western timber ownership for the use of the public." Earlier he noted that the company strongly believes "in the multiple use of timber and timber lands. We believe this renewable resource can—and must—serve many masters."

Also present at the ceremony was Dr. Ralph W. Chaney, president of the Save-the-Redwoods League, the organization which has pioneered the conservation of California's redwood groves. Chaney expressed delight with the gift, noting that the "countless people who seek the tranquil beauty of the redwood region will be able to enjoy this park year after year."

The gift tract includes two groves and a connecting strip of land. The groves will be named after Pamplin and Owen R. Cheatham, founder of Georgia Pacific. The land has been held for park use since the turn of the century, first by the Hammond Lumber Company, and for the past 14 years by their successors, the Georgia Pacific Corporation. In the westernmost grove, there is an open recreational area and a swimming hole.

Administration of the new park will be from the nearby Grizzly Creek Redwood State Park.

MFN FOR RUMANIA

(Mr. FINDLEY asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. FINDLEY. Mr. Speaker, today I am introducing legislation which will give the President the authority, when certain conditions are met, to grant most-favored-nation tariff treatment to the country of Rumania. Joining me as cosponsors of the bill are two of my distinguished colleagues, the gentleman from Kansas (Mr. MIZE), who is chairman of the Republican task force on east-west trade, and my colleague on the Foreign Affairs Committee from Massachusetts (Mr. MORSE).

This is an especially propitious moment for a congressional initiative in our foreign policy toward Eastern Europe. Following immediately after President Nixon's return from his successful trip to Rumania, and his warm greeting by its people, this bill provides for congressional recognition of the independent, nationalistic attitude which makes Rumania unique among the Warsaw Pact nations.

There are many reasons why Rumania should be chosen for this special tariff treatment, none the least of which is the demonstrated desire for friendship exemplified by the welcome it accorded to President Nixon. Referring to the President's visit, President Ceausescu states:

> There are no direct disputes between Rumania and the United States, and we wish to develop relations of collaboration in the economic, technical, scientific, and other fields with the United States, (and) with the American people.

This statement typifies the "Rumania first" attitude Ceausescu has taken, irrespective of whether a particular policy may dovetail with that of the Soviet Union.

In 1962, when Russia proposed to fully integrate the economies of the Eastern European countries with her own and introduce areawide economic planning, Rumania steadfastly refused to participate. The Russian masterplan called for Rumania to produce raw materials, mineral and agricultural products, rather than an industrial complex including an immense iron and steel mill which Rumania favored. This act of opposition, more than any other, helped preserve the economic and territorial integrity of all the East European nations.

When Russia led the other Warsaw Pact nations in an invasion of Czechoslovakia in August of 1968, Rumania bitterly condemned it as "a great mistake and a grave danger to peace in Europe." Further, Ceausescu warned the Soviets that "they would encounter armed resistance if they tried to invade Rumania."

Although Rumania unfortunately has not permitted the development of personal and economic freedom among its people, nevertheless it is this same principle of freedom which it holds to be inviolate as between nations. Ceausescu has stated:

> We base our foreign policy on the principle of equality of rights, noninterference in the internal affairs of others, respect for sovereignty and national independence, and the right of the peoples to decide their own fate without outside interference.

This principle has led Rumania to establish and maintain relations with West Germany and Israel, oppose the Soviet version of the Nuclear Nonproliferation Treaty, walk out of the Budapest Conference of Communist bloc countries in August of 1968, and often vote in opposition to the position of the Soviet Union in the United Nations General Assembly.

Rumania's independence in the determination of its own foreign policy should be encouraged by the United States. For it is this independence and the consequent lack of solidarity in the Communist bloc, which permit the United States to lead from a position of strength when dealing with the Soviet Union.

Congress can encourage that independence in the Rumanians by authorizing the President to grant them most-favored nation tariff treatment. Increased trade which would result from such action would also aid our commercial interests.

MFN would make Rumania less economically dependent upon the U.S.S.R. than it is today. Last year, although Rumania had the lowest percentage of trade with Russia of any East European country, it nevertheless amounted to a whopping 30 percent of her total exports. The economic leverage which this gives to the Soviet Union cannot help but spill over into the political realm. In fact, there can never be political independence for a country until there is economic independence. By helping to provide that economic independence, the United States can at the same time help to provide the foundation for political independence which is so much in our own national interest.

MFN for Rumania would also be in our own commercial interest. If trade restrictions were the common policy of all of the western nations in their dealings with Communist countries, they might have a potent economic and political impact. However, of all of our European allies, we are the only ones who do not presently grant MFN to Rumania. We therefore impose no serious problem to Rumania by this attitude but hurt only our own interests.

To be sure the Rumanians are indeed desirous of gaining MFN tariff treatment and the increased trade which they hope it will make possible. However, one of the chief reasons they desire this is so that they will be able to earn more American dollars with which to buy more and better American goods and technology. The advantages this holds for U.S. businessmen are obvious.

Upon his return from Rumania, President Nixon told the throng of people gathered at Andrews Air Force Base:

> Deep differences in political philosophy cannot permanently divide the peoples of the world.

What is most important for the United States is that those differences in political philosophy should not be used like a vise to crush the independent, nationalistic course which the Rumanians have chosen for themselves. This will not occur so long as America recognizes that independence and actively encourages it. President Nixon has taken a major step in this direction through his trip to Rumania. The Congress should act now to encourage this independence and strengthen the bond of friendship which presently exists between our two countries by granting authority to the President to negotiate most-favored-nation tariff treatment with the Rumanians.

The text of the aforementioned bill follows:

H.R. 13305

A bill to promote the foreign policy and security of the United States by providing authority to negotiate a commercial agreement with Rumania, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Rumanian Trade Relations Act of 1969".

STATEMENT OF PURPOSES

SEC. 2. The purposes of this Act are—

(a) to use peaceful trade and related contacts with Rumania as a means of advancing

the long-range interest of the United States in peace and freedom;

(b) to promote constructive relations with Rumania, to contribute to international stability, and to provide a framework helpful to private United States firms conducting business relations with state trading agencies in Rumania by instituting regular government-to-government negotiations concerning commercial and other matters of mutual interest; and

(c) to increase peaceful trade and related contacts between the United States and Rumania, and to expand markets for products of the United States in that country.

AUTHORITY TO ENTER INTO COMMERCIAL AGREEMENTS

SEC. 3. The President may make a commercial agreement with Rumania providing most-favored-nation treatment to one or more of the products of that country whenever he determines that such agreement—

(a) will promote the purposes of this Act,

(b) is in the national interest, and

(c) will result in benefits to the United States equivalent to those provided by the agreement to the other party and further determines that the government of such country is a member of the General Agreement on Tariffs and Trade.

BENEFITS TO BE PROVIDED BY COMMERCIAL AGREEMENTS

SEC. 4. The benefits to the United States to be obtained in or in conjunction with a commercial agreement made under this Act may be of the following kind, but need not be restricted thereto:

(a) satisfactory arrangements for the protection of industrial rights and processes;

(b) satisfactory arrangements for the settlement of commercial differences and disputes;

(c) arrangements for establishment or expansion of United States trade and tourist promotion offices, for facilitation of such efforts as the trade promotion activities of United States commercial officers, participation in trade fairs and exhibits, the sending of trade missions, and for facilitation of entry and travel of commercial representatives as necessary;

(d) most-favored-nation treatment with respect to duties or other restrictions on the imports of the products of the United States, and other arrangements that may secure market access and assure fair treatment for products of the United States; or

(e) satisfactory arrangements covering other matters affecting relations between the United States and Rumania concerned, such as the settlement of financial and property claims.

PROVISIONS TO BE INCLUDED IN COMMERCIAL AGREEMENTS

SEC. 5. A commercial agreement made under this Act shall—

(a) be limited to an initial period specified in the agreement which shall be no more than three years from the time the agreement becomes effective;

(b) be subject to suspension or termination in whole or in part at any time upon reasonable notice;

(c) provide for consultations at regular intervals for the purpose of reviewing the operation of the agreement and relevant aspects of relations between the United States and Rumania; and

(d) be renewable for additional periods, each not to exceed three years.

EXTENSION OF BENEFITS OF MOST-FAVORED-NATION TREATMENT

SEC. 6. (a) In order to carry out a commercial agreement made under this Act and notwithstanding the provisions of any other law, the President may by proclamation extend most-favored-nation treatment to one or more of the products of Rumania entering into such commercial agreement: *Provided*, That the application of most-favored-nation treatment shall be limited to the period of effectiveness of such commercial agreement.

(b) The President may at any time suspend or terminate in whole or in part any proclamation issued under subsection (a). The President shall suspend or terminate such proclamation whenever he determines that—

(1) the other party to a commercial agreement made under this Act is no longer fulfilling its obligations under the agreement; or

(2) the suspension or termination of the agreement is in the national interest.

ADVICE FROM GOVERNMENT AGENCIES AND OTHER SOURCES

SEC. 7. Before making a commercial agreement under this Act, the President shall seek information and advice with respect to such agreement from the interested departments and agencies of the United States Government, from interested private persons, and from such other sources as he may deem appropriate.

TRANSMISSION OF REPORTS TO CONGRESS

SEC. 8. The President shall submit to the Congress an annual report on the commercial agreements program instituted under this Act. Such report shall include information regarding negotiations, benefits obtained as a result of commercial agreements, the texts of any such agreements, and other information relating to the program.

RELATION TO OTHER LAWS

SEC. 9. (a) Nothing in this Act shall be deemed to modify or amend the Export Control Act of 1949 (50 U.S.C. App. 2021 et seq.) or the Mutual Defense Assistance Control Act of 1951 (22 U.S.C. 1611 et seq.).

(b) Any commercial agreement made under this Act shall be deemed a trade agreement for the purposes of title III of the Trade Expansion Act of 1962 (19 U.S.C. 1901 et seq.).

(c) The portion of general headnote 3(e) to the Tariff Schedules of the United States that precedes the list of countries and areas (77A Stat. 11; 70 Stat. 1022) is amended to read as follows:

"(e) Products of Communist Countries. Notwithstanding any of the foregoing provisions of this headnote, the rates of duty shown in column numbered 2 shall apply to products, whether imported directly or indirectly, of the countries and areas that have been specified in section 401 of the Tariff Classification Act of 1962, in sections 231 and 257(e)(2) of the Trade Expansion Act of 1962, or in actions taken by the President thereunder and as to which there is not in effect a proclamation under section 6(a) of the Rumanian Trade Relations Act of 1969. These countries and areas are:"

CRAMER WATER POLLUTION CONTROL FINANCING BILL PUSHED

(Mr. CRAMER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CRAMER. Mr. Speaker, I wanted to speak on the subject of adequate funds for water pollution control, sewage treatment plant construction.

Last year this body and the other body passed a bill providing an alternative means of financing water pollution control with Government guarantee of the Federal share for local water pollution control bond issues, and it passed unanimously in the House and the other body. Unfortunately, it got tangled up in other matters and the total bill was not passed.

I have reintroduced, along with many of my colleagues, a bill this year to accomplish a similar objective, to take up the slack in the difference between the $1 billion authorized for fiscal year 1970 and the $1.25 billion for fiscal year 1971 and the amount of the appropriation which was recommended both by the Johnson and Nixon administrations at $214 million for 1970, or about one-fifth of the amount of money authorized.

Whatever is appropriated, there is going to be a difference between appropriations and authorizations. I think this supplemental financing provision should become law. I introduced it earlier on request of the Nixon administration as H.R. 12913 and I will reintroduce it with an addition that a 5-percent bonus allocation should go to the States that have laws to put up 25 percent of the cost of sewage treatment plants because so many Members have asked me to add this provision. If we are going to meet the problem of dirty water and dirty rivers and clean up our streams, we have to have adequate financing. This is the way to accomplish it without busting the budget and without substantially increasing the appropriations. I hope this, when introduced tomorrow becomes law, as it needs to, this year.

A copy of the bill as amended follows:

H.R. 12913

A bill to amend the Federal Water Pollution Control Act, as amended, to provide adequate financial assistance and to increase the allotment to certain States of construction grant funds.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Water Quality Financial Assistance Act of 1969".

SEC. 2. Section 8 of the Federal Water Pollution Control Act, as amended (33 U.S.C. 466e), is amended—

(1) by redesignating subsections (f) and (g) as (g) and (h); and

(2) by inserting a new subsection after subsection (e) to read as follows:

"(f)(1) For the purpose of this subsection, the term 'contracting party' means a State, municipality, or intermunicipal or interstate agency.

"(2) For the purpose of providing an additional method of financing treatment works under this Act, the Secretary, within limits to be established in appropriation Acts for the fiscal years 1970 and 1971, may enter into contracts in any such fiscal year in which the amount appropriated for grants under subsection (b) exceeds $100,000,000, such limit shall not exceed for the fiscal year 1970, the difference between $1,000,000,000 and the amount appropriated for such fiscal year for grants under subsection (b), and shall not exceed for fiscal year 1971 an amount equal to three times the amount appropriated for such fiscal year for grants under subsection (b). The total of the principal sum available for contracts under this subsection for fiscal year 1971 and the amount actually appropriated for grants under subsection (b) of this section for fiscal year 1971 shall not exceed the amount authorized to be appropriated for grants under such subsection (b) for such fiscal year. Such contracts may be entered into with any contracting party to make payments over a period of not to exceed thirty years from the date of the contract to cover the Federal share of construction costs of treatment works that meet the applicable requirements of subsection (b) of this section and the first sentence subsection (c) of this section, except that not to exceed 25 per centum of the sum allocated pursuant to paragraph (3) of this subsection to a State for fiscal years 1970 and 1971 for

such contracts under this subsection may be used to provide reimbursement for treatment works eligible for reimbursement payments under the sixth and seventh sentences of subsection (c) of this section.

"(3) Sums available for contracts under this subsection for each fiscal year beginning after June 30, 1969, shall be allotted by the Secretary in accordance with the ratio that the population of each State bears to the population of all the States. Sums allotted under this paragraph to a State which are not obligated within six months following the end of the fiscal year for which they were allotted shall not be reallotted and shall lapse, except that sums allotted to a State in fiscal year 1970 shall be available for obligation therein for eighteen months from the effective date of this subsection.

"(4) The Federal share for treatment works with respect to which a contract is entered into under paragraph (2) of this subsection shall be the same percentage as would be the case for such works under subsections (b) and (g) of this section.

"(5) Each contract shall include such reasonable terms and conditions as the Secretary deems appropriate."

SEC. 3. Section 8(d) of the Federal Water Pollution Control Act, as amended, is amended to read as follows:

"(d) For the purpose of making grants under this section, there is authorized to be appropriated $700,000,000 for the fiscal year ending June 30, 1969; $1,000,000,000 for the fiscal year ending June 30, 1970; and $1,250,000,000 for the fiscal year ending June 30, 1971; and in addition, there is authorized to be appropriated such sums as may be necessary to make payments on contracts entered into under subsection (f) of this section. At least 50 per centum of the first $100,000,000 appropriated for grants each fiscal year beginning on or after July 1, 1965, shall be used for grants for the construction of treatment works servicing municipalities of one hundred and twenty-five thousand population or under. Sums appropriated to carry out this section shall remain available until expended.

SEC. 4. Section 8 of the Federal Water Pollution Control Act, as amended (33 U.S.C. 466e), is amended—

(1) by inserting after the word "grant" to clauses (1), (3), (4), and (5) of subsection (b) the words "or contract"; and after the word "grantee" in clause (3) of subsection (b) the words "or contractee";

(2) by inserting after the words "Federal grants" in the first line of subsection (b), the words "and contracts";

(3) by inserting after the word "appropriated" wherever it appears in the second and third sentences of subsection (c) the words "for grants under subsection (b) of this section";

(4) by inserting a comma after the words "subsection (b) of this section" in the first sentence of redesignated subsection (g) and the following: "or the amount contracted for under subsection (f) of this section," and by striking out in such sentence "the amount of such grant" and inserting in lieu thereof "such amount"; and

(5) by inserting after "grants" in redesignated subsection (h) the following: "or contracts".

SEC. 5. Subsection (c) of section 8 of the Federal Water Pollution Control Act (33 U.S.C. 466c) is amended by inserting immediately after the third sentence thereof the following: "The allotment of each State eligible to receive Federal grants from such allotment of 50 per centum or more of project costs shall be increased by an additional 5 per centum, except that (A) such increase shall not reduce the allotment of any other State and (B) such 5 per centum increase shall not be obligated by any such State until an appropriation is made under authority of the next sentence specifically for such purpose. There is authorized to be appropriated, in addition to amounts otherwise authorized to be appropriated to carry out this Act, such sums as may be necessary to carry out the preceding sentence."

SEC. 6. The amendment made by section 5 of this Act shall take effect with respect to the allotments made under section 8(c) of the Federal Water Pollution Control Act for fiscal years ending on and after June 30, 1970.

PROBLEMS OF TRANSPORTATION

The SPEAKER pro tempore (Mr. PRICE of Illinois). Under a previous order of the House the gentleman from Connecticut (Mr. WEICKER) is recognized for 60 minutes.

(Mr. WEICKER asked and was given permission to revise and extend his remarks and to include extraneous matter.)

Mr. WEICKER. Mr. Speaker, I am reintroducing today, in conjunction with my colleagues, the gentleman from New York (Mr. ROBISON), the gentleman from Illinois (Mr. ANDERSON), the gentleman from California (Mr. REES), the gentleman from Alaska (Mr. POLLOCK), the gentleman from Massachusetts (Mr. DONOHUE), the gentleman from Connecticut (Mr. MESKILL), the gentleman from Florida (Mr. FREY), the gentleman from New York (Mr. HASTINGS), the gentleman from Pennsylvania (Mr. MCDADE), the gentleman from New York (Mr. BUTTON), a bill entitled the "Federal Transportation Act."

Mr. Speaker, I would like to make reference, if I may at this point, to some comments which I made back on June 24. At that time I stated that one of our great national strengths is the unbounded enthusiasm which we as a nation generate for a particular project at a particular moment in time and that the American people have at one time or another exploded enthusiastically for short periods of time for a particular mode of transportation.

Mr. Speaker, this morning in the mail I received a letter from the Connecticut Transportation Authority which I would like to read into the RECORD and have it made a part of the RECORD. The letter reads as follows:

STATE OF CONNECTICUT, CONNECTICUT TRANSPORTATION AUTHORITY,
Hartford, Conn., July 31, 1969.

Hon. LOWELL P. WEICKER, JR.,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN WEICKER: The enclosed telegram was sent to Senator John Sparkman, Chairman of the Senate Committee on Banking and Currency, to express support for bills calling for establishment of a Mass Transportation Trust Fund. These bills are being heard by the Senate Subcommittee on Housing and Urban Affairs.

To meet our transportation problems, Connecticut and our nation must do more than build complex super highway systems and larger airports. We must make mass transportation facilities more attractive to relieve highway congestion and air pollution. We must encourage people to use trains rather than automobiles. We must modernize our most dependable and most efficient form of transportation—our railroads!

Federal funds of only $150 million per year have been available for mass transportation, in contrast to the sum of almost $10 billion per year in Federal funds that we are spending to build more highways.

I would appreciate your continued support for preservation and improvement of essential rail services by your endorsement and support of legislation to establish a Mass Transportation Trust Fund.

Sincerely,

FRANK M. REINHOLD,
Chairman.

I think this is an opportune time to set that letter against the comments made on June 24 because certainly mass transportation, particularly rail transportation, is of key importance to my particular Congressional District of Connecticut. And yet, quite frankly, if we explore—and this very well might be the year or the years for mass transportation by rail—if we explore or concentrate entirely on this one area, then the very problems that have come to pass due to the emphasizing of one area of transport, such as highways, canals, airport expansion, et cetera, over another will come to pass again and are the very problems which the transportation trust fund seeks to avoid.

I see through my section of the country, and indeed throughout all areas of the United States, airports that are totally tied up, rail systems that have been allowed to disintegrate, bus systems that are no more in the cities and highways that are just one long parking lot. In fact, it can be said that although there may be 1,000 transportation happenings in the United States, there is no transportation system.

It is not easy, certainly, for any one of us to stand up in the face of the interests that represent the component parts of transportation. Maybe that is why it is fitting that I should stand in front of the House this evening and not be pumping for a mass transportation trust fund, and for an emphasis on rail transportation, but rather to emphasize the need for coordination and for one transportation trust fund.

On paper, at least, there may be an alternative to new airports for New York. Air traffic in and out of New York between Washington or Boston accounts for 350 of the 1,600 or so commercial flights a day. These flights carry 14,000 people—all of whom could be moved in 45 trains the size of the Penn Central's new Metroliner. The trains, which are held to an 80-mile-an-hour average by grade crossings and by the fact that they must share the track with slower equipment, are capable of speeds up to 164 miles an hour. Even at the present slower speeds, they are making the trip between downtown Washington and downtown New York in just 30 minutes to an hour longer than it takes to fly.

In theory, you could take enough pressure off the New York airports by increasing train travel so that New York would not need even one more jetport—or wouldn't need it right now.

In my own State of Connecticut we have an airport, Bradley Field. The No. 1 runway at Bradley Field is the second largest runway in the entire eastern United States, exceeded only by Kennedy, and yet the use of Bradley Field is minimal. The people of Connecticut flood into New York and utilize LaGuardia, John F. Kennedy, and Newark airports. They would use Bradley Field if it were tied into a high-speed

rail system from the lower part of the State into that particular air terminal.

I would ask a question here. I have read much in the local newspapers in Washington, D.C. of a proposed subway system, and I ask whether or not plans are being made to link that subway system into the airports of the Washington area? Not just a subway to service the downtown areas, but rather to serve the airports and thus eliminate the tremendous traffic problems which are generated on the arteries leading from the cities to the air terminals.

Sometime take a drive down from Boston to Washington and see the airports that are only partially utilized at New Bedford, Providence, Bradley, Friendship, and Dulles. Is there really a need for additional airports or is it a need for coordination and utilization of what exists?

I suspect that the chances of this bill passing are mighty small. Yet, if it serves one purpose, which is to get this issue out into the open, where it can be discussed by those who have a knowledge of transportation, then I think it will serve this country's transportation problem rather well.

Mr. Speaker, in the days ahead and the years ahead when there is going to be a doubling of the population and a doubling of the facilities to serve that population, how is it going to be handled? Are we going to put forth the billions of dollars necessary and make the dollars conform to the present system? Because, if we do that, we will be throwing our money away.

Or are we going to reject the system as it has developed and as the special interests have protected it, and start on a new tack?

I do not speak against the highway trust fund—I do not speak against the concept of an airport trust fund—or a mass transit rail trust fund. But no one of these modes of transportation can serve the Nation by itself. In fact, what will happen to a highway trust fund and to an airport trust fund and to a rail trust fund is eventually that the American public will lose its interest in one mode of transportation and then it will be years, just as it has been for the railroads before, the public will pay proper attention to that particular mode of transportation. It goes through a dry spell and the Nation's transportation suffers accordingly.

I speak then today not against any one mode of transportation but in fact for all of our modes of transportation, with the hope that this Congress does not paint itself into a corner. I think the facts speak for themselves. The facts, when it comes to transportation as they apply to the citizens of this country are all too clear—you cannot move. I think the job lies in our hands and with the reasoning of coordination we can do that job well.

Mr. MESKILL. Mr. Speaker, will the gentleman yield?

Mr. WEICKER. I yield to my colleague from Connecticut.

Mr. MESKILL. Mr. Speaker, I want to commend and to congratulate the gentleman for his fresh approach to this problem. It is a very serious problem.

I want to associate myself with the remarks the gentleman has made and to say I am very happy to join with him as a cosponsor of this legislation. I think his remarks have been to the point and I certainly want to commend him for his activity in this area which is very important and probably more visible to him and his area than it is perhaps in mine or any other area in the State of Connecticut. The gentleman's district is certainly so close to New York and so deeply involved in the commuter problem that I can assure the gentleman that this problem does branch out through the rest of the State and the rest of the country.

I think the recommendations which are included in the legislation which he initiated and which I was happy to join with him as a cosponsor are certainly excellent.

Mr. WEICKER. I thank the gentleman for his gracious comments.

Mr. ANDERSON of Illinois. Mr. Speaker, will the gentleman yield?

Mr. WEICKER. I yield to the gentleman from Illinois, a coauthor of this bill.

Mr. ANDERSON of Illinois. Mr. Speaker, I would like to join my colleague in commending the gentleman now in the well for the industry and initiative that he has displayed in introducing this legislation in which I was pleased to join as a coauthor.

It is true, as has just been pointed out, that he represents one of the most densely populated areas, I am sure, in the whole of the United States, and yet the coming transportation crisis—indeed, the crisis that is already upon us—is one that I think, as the gentleman has pointed out, affects not only a section or an area of our country, but the whole future of our economy depends on the degree of mobility which we are able to maintain, and to the extent that we have a transportation crisis in Connecticut, or in the Northeastern part of the United States, we have a crisis affecting the whole of the United States.

So again I think the gentleman has performed a very useful service in drawing up this bill, in introducing it, and providing a focus for our discussion of this very important problem.

Mr. WEICKER. I thank the gentleman from Illinois for his comments and assistance.

GENERAL LEAVE

Mr. WEICKER. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks and to include extraneous matter on the subject of my special order.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

SPECIAL SUBCOMMITTEE ON REORGANIZATION

The SPEAKER pro tempore. Under previous order of the House, the gentleman from California (Mr. SISK), is recognized for 60 minutes.

Mr. SISK. Mr. Speaker, some 3 months ago the distinguished chairman of the Committee on Rules appointed a Special Subcommittee on Reorganization and honored me with its chairmanship. I have asked for this time so that I might present to the House a progress report on the subcommittee's work to date.

You will recall that Congress established a Joint Committee on the Organization of the Congress early in 1965. After extensive hearings, that joint committee offered some 120 recommendations for congressional reorganization and reform in such widely diverse areas as our committee system, fiscal controls, staffing, research services, ethics, housekeeping, and the Lobbying Act. In 1967, the Senate considered a bill based upon many of those recommendations. The bill was amended and then passed by a 75-to-9 vote, but the House did not act.

It became evident during the first few months of this year that there is considerable sentiment for congressional reorganization in the 91st Congress. Thus far this session almost 200 Members of the House have introduced or cosponsored more than a dozen omnibus legislative reorganization bills, most of them similar in many respects to the Senate-passed bill of the 90th Congress. All these measures have been referred to the Committee on Rules which, in turn, has assigned them to the special subcommittee for study and a report.

Mr. Speaker, I am aware that doubts have been voiced about the intentions of our subcommittee. Let me say in the clearest and most unequivocal language at my command that insofar as I have anything to do with it this subcommittee will report a bill, that the bill will contain the substance of many provisions in the measures referred to us, and that it will offer in addition other significant and meaningful improvements in congressional organization, procedures, and resources. Furthermore, I intend to urge the Committee on Rules to bring that bill to the floor of the House early in the next session of the 91st Congress. Other members of the subcommittee may speak for themselves, but I have seen no evidence that any of my colleagues differ with these views.

Some Members evidently believe we are taking an inordinately long time to report a measure to the House, and see this as evidence of our alleged reluctance to support congressional modernization and reform. I repeat, it is the subcommittee's intention to bring a bill to the floor, but let me add that it is also our intention to bring out a carefully drafted bill whose provisions and their implications have been thoroughly explored. Congress will have to live with those provisions for a long time. Their consequences may have a profound effect upon the future of democratic government in this country. Surely under those circumstances we want to understand exactly what we are doing. Surely we want to assess as accurately as we can the impact of our committee operations, on each Member, and on our relationships with the executive branch.

Careful assessment of so complex and intricate a bill is not the work of a day, a week, or a month. I myself did not at first fully appreciate just how complex and intricate a subject it is, the Senate bill's 134 pages bristle with 78 sections, almost every one of which contains at least one, and often several substantive provisions. Other bills introduced this

year have added many additional and provocative proposals to be considered. I assume this House expects us to give thorough study to everyone's suggestions. And that is exactly what we are doing.

Our special subcommittee was established April 22. Its members, which include in addition to myself, the distinguished and able gentlemen from Missouri (Mr. BOLLING), from Texas (Mr. YOUNG), from California (Mr. SMITH), and from Ohio (Mr. LATTA) have thus far attended seven long and arduous meetings to hammer out concrete proposals and language. Our deliberations have been aided by expert staff borrowed from the Office of the Legislative Counsel and from the Legislative Reference Service who supplement the regular staff of the Committee on Rules. In addition, we have on one occasion brought in other highly qualified staff to assist us with a particular problem, and we may do so again as the situation warrants.

Our procedure is simple. Section by section, we compare similar provisions in all the bills before us, study their intent, examine the differences in substance and language, and arrive at tentative decisions. In some areas, those decisions have come easily. For example, we have almost nothing about committee jurisdictions because most of the bills introduced this year omitted those controversial provisions adopted by the Senate. Similarly, most House bills deleted the Senate's language calling for daily summaries of testimony before committees.

Other areas, however, pose many knotty and time-consuming problems.

We have discovered, for example, that some of the provisions in title I dealing with committee procedures would be more simply and effectively implemented by directly amending the Rules of the House. We are therefore altering the structure of the bill to accomplish that purpose. We have also discovered that some of these same provisions, while easily applicable to the Senate, do not take into account all the special circumstances of the House of Representatives. Because of those circumstances, the way in which some provisions are worded would not accomplish the intended result. We are therefore revising the language wherever necessary so that the original intent will be more effectively realized. Let me interpolate here that for the most part we intend to retain for the Senate the procedures and language that body approved in the 1967 bill.

We have arrived at tentative decisions on most of the provisions thus far examined. On others we have not yet resolved all the problems they entail. Televising committee hearings is one of these. I expect and hope that the hearings we intend to hold later this year will help us explore and solve most of these problems.

We also expect to hear testimony in those hearings about some of the areas in which, some of us believe, the bills do not go far enough. The subcommittee is of the opinion, for example, that none of the bills really comes to grips with the full implications of the planning-programing-budgeting system. Nor do they deal adequately with the evolution of a rational computer policy for Congress.

Some of us question whether the presence of so-called review specialists in each committee will appreciably improve congressional oversight capabilities. We think other approaches might be far more effective. Moreover, it may be that the bills do not provide sufficient resources to assist Congress in program analysis. And we have begun to consider the idea of changing the fiscal year to make it coincide with the calendar year so as to bring more rationality to our fiscal procedures.

Beyond this, the subcommittee has decided to deal, in a limited way, with many rules of the House not now mentioned in any of the bills before us. Our intent is to eliminate obsolete language and provisions, to clarify ambiguities where that seems practicable, and to add a few new and, in our view, useful procedures.

Mr. Speaker, we hope that all of these will be fully explored at our hearings. As of this moment, my expectation is that those hearings could begin about the middle of October. Precisely when they begin will depend upon the magnitude of the problems we meet as we continue our examination of the bills.

The subcommittee has thus far completed its preliminary consideration of title I and about half of title II. In the first title we have already agreed to tentative language concerning the circumstances under which committees may or shall meet, internal committee procedures, the filing and availability of committee reports, committee funding, and conference reports. In title II, which deals with the most vital subject of congressional fiscal control, the subcommittee has tentatively agreed to a variety of provisions aimed at giving Congress more detailed and more useful budgetary and fiscal data, as well as more assistance in analyzing that data.

If all goes well, we should finish our first run-through of the bill early in October. At that time we hope to publish a committee print embodying our recommendations which will be available to all Members for the consideration before the hearings begin.

Mr. Speaker, what we are trying to do essentially is to put together the best provisions in all of the bills submitted to us and to do so with care and judgment. To expect that everyone will agree with every word in so large and complicated an omnibus bill is to expect what never was and never will be. But I am convinced this subcommittee's recommendations will make real and realistic contributions to the modernization of Congress toward the end that this great institution may become an even more effective voice of the people.

Mr. Speaker, this is a brief summary of the work which the committee has been engaged in now during the past number of weeks. I have attempted to outline as briefly as possible our proposed schedule.

I might just add to what I have said the fact that we have projected some nine to 10 additional meetings in executive session, where we are attempting to complete our work of comparison and to pull together what we believe to be equitable language, and then prepare our committee print, which, as I indicated before, will be distributed to all Members prior to the start of the hearings.

So in projecting our thoughts ahead, and in view of the congressional recess which will occur in the latter part of August, we feel about the middle of October is the earliest possible time we could expect those hearings to start.

With that I am glad to yield to my colleague, the gentleman from California (Mr. SMITH), who, I might say, is an outstanding and excellent member, and is making a great contribution to our work on the committee.

Mr. SMITH of California. Mr. Speaker, I thank the gentleman for his statement and I thank the gentleman for yielding.

Actually, last year when we had these bills I had no idea that this problem would take as much time and would be as difficult as it has been, for one little sentence after another sometimes becomes difficult for us to decide which to proceed with.

I associate myself with the remarks of the gentleman. I appreciate his taking the time to bring this to the attention of the House.

I am certain that all other members of the subcommittee will cooperate and work in every way to bring about what the gentleman has stated in his statement today.

If we only have the time, and if our patience holds out on some of these problems, I believe we will bring out a bill for the consideration of the House, and I am sure will bring it out under an open rule, so that the House can have it worded in any way it wants.

I assure the gentlemen that I will do the very best I can, along with the other members, to work out a workable bill.

Mr. SISK. I thank my colleague from California. As I say, he is doing an excellent job. As he says, of course, sometimes it tries one's patience.

Mr. HALL. Mr. Speaker, will the gentleman yield?

Mr. SISK. I am glad to yield to the gentleman from Missouri.

Mr. HALL. I appreciate the gentleman's yielding.

I want to commend both the gentlemen from California.

Mr. Speaker, I commend the gentleman from California not only for the excellent job he has performed as chairman of the Committee on Rules Subcommittee on Congressional Reorganization; but also for initiating this special order. I look forward to the hearings and final production. I say this as the senior Republican in the House, that served on the Joint Committee on the Organization of the Congress. This committee worked hard for more than 17 long months before presenting its final recommendations. We had stacks and reams of testimony from all who would be heard. The other body worked its will on this far-reaching legislation in the early part of the 90th Congress by a 75-to-9 vote. The bill did not fare that successfully in the House, and thus it died at the adjournment of the 90th Congress. In retrospect, as in 1946 which was the last time the Congress worked its will on updating and reorganization, it probably should have been left on the Speaker's desk, and not referred in order that we could have had a "package" bill on which to work our will. But, this is water under the bridge, and I know of all the dedicated work of

the gentleman in the well, Mr. H. ALLEN SMITH, and my colleague from Missouri, Mr. RICHARD BOLLING.

Early in January, Mr. Speaker, I introduced H.R. 2185 which is the Joint Committee on Congressional Reorganization version that passed the other body in March of 1967. It still most nearly represents the findings of the joint committee. Even though I do not agree with all the provisions of the bill, it has been my long hope and prayer that a reorganization bill be brought to the floor, so that the will of the House could be satisfied. Pride of authorship means nothing to me, as long as a bill is reported. I believe this applies to our colleague Mr. SMITH of California, and most who have researched so long and well.

Mr. Speaker, I will not take this body's valuable time to delve into the various provisions of our reorganization bill, or that of others. I believe they are well known as per the statement of the gentleman from California (Mr. SISK). However, I do wish to say that if Congress is to regain its status and power as a coequal branch of Government, we must modernize and become efficient. Ponder the effect alone of modern electronically controlled quorum and rollcalls. Such results can be achieved through any of the several reorganization bills now pending. I feel confident that the Subcommittee of the Rules Committee will report a bill during this session of Congress, and that passage will quickly follow. We owe nothing less to the American people, whom we are privileged to represent in this Congress—still the greatest legislative body on earth and based on the most substantial and best proved principles of history.

Mr. SISK. I thank the distinguished gentleman from Missouri.

I would like to say here—and I want to emphasize this—that nothing I have said and certainly nothing that has occurred in the committee is to detract from the great work done by the joint committee. Let me say, having reviewed the hearings and having read much of the material developed there, I think that the joint committee did a great amount of work. Again I say that I admire their patience, because they did work on this for a long, long time. Nothing we are doing today or nothing we have said is intended in any way to detract from the hard work and in many cases, I think, the very excellent work that they did. Unfortunately, of course, when the bill came back to the House, as I mentioned, my good friend from Missouri recognizes that the Committee on Rules will have to take the burden on that because of the fact that that is where it landed and that is where it died, in a sense. I am sure, though, that the gentleman is aware of the fact that we, of course, tried to cooperate with all Members of the House. We ran into, let us say, a lot of static from Members all over the place. Again I say this was because of the enormity of attempting to pull together so many things. Everyone found something that he did not like particularly. However, I want to make it clear that our work is in no sense intended to suggest that we are going at this more intelligently than the joint committee. We are attempting to start again from where you left off, to some extent, and put together a variety of ideas that developed out of that work.

Mr. HALL. Mr. Speaker, will the gentleman yield further?

Mr. SISK. I am glad to yield to the gentleman.

Mr. HALL. I certainly did not assume or mean to imply by my remarks that I felt the erstwhile action of the Committee on Rules was in any way a reflection on the joint committee or the Joint Commission which did work hard and labor long on this subject.

We did have patience, in order to assure that everyone had "due process." I want to assure the chairman of the committee that all of those hearings and all of our deliberations, prudent as they may or may not have been, are available to the subcommittee and are at their beck and call. We certainly want to commend the committee on their action. Personally I do not believe that the Committee on Rules should protest too much about bearing any brunt. We all know how it came to be referred there. Everybody on the Joint Commission who heard, I believe, over 179 Congressmen—to say nothing of the outsiders, political science students, government and other organizations—testify on this bill, had their pet fears and pet problems. We know that the pressure brought to bear on the Committee on Rules from the outside was great, especially from the lobby group, yet the greatest of all lobbyists, the executive branch goes unscathed. I hope that I have made clear another way it could have been handled by the leadership which was not to have referred it at all, but to have left it on the Speaker's desk where it could have been pulled, as it was in 1946, at any time that the leadership was ready for programing for the House to work its will after some of these other waxings and wanings and vicissitudes had been ironed out, as they were indeed and as the committee is doing now. There is nothing but commendation for the hard work that has been done of comparison, of taking the best parts of different bills under different titles that the Committee on Rules and their different members have done in getting any kind of a "package" out on the floor, so that we in this body can work our will. I hope it will not be too tightly tied down by an adverse rule, when the bill does come here.

I thank the gentleman for all he has done on this.

Mr. SISK. I thank the gentleman very much.

Mr. CLEVELAND. Mr. Speaker, will the gentleman yield?

Mr. SISK. I am glad to yield to the gentleman from New Hampshire.

Mr. CLEVELAND. I appreciate the gentleman yielding to me.

I concur generally with the sentiments expressed by the gentleman from Missouri, having served with him on the joint committee, not for the full term. I assumed a position on that committee when the gentleman from Michigan, Mr. GRIFFIN, went to the U.S. Senate. Much of what has been said here tonight reflects my own observations, having served on the joint committee. We recognize that if you are undertaking to rewrite the bill or the bills that have been submitted, and it is going to take a good deal of time.

As the gentleman from California (Mr. SMITH) said, he hopes everyone will be patient. Patience is sometimes a virtue, but it can wear thin.

I am pleased to hear of your timetable. I would like to address a few questions to that.

It is my understanding that sometime during the August recess or shortly after the recess you are going to have something in the nature of a committee print which will then be the subject matter of the hearings which you plan to schedule in October of this year.

Did I understand the gentleman correctly on that point?

Mr. SISK. That is correct. As soon as we have completed this comparison of the various proposals, and as I am sure the gentleman is well aware, we have prepared special sheets comparing all of the similar bills and the provisions thereof—as soon as that work has been completed it will be published in a committee print and made available to all the Members. At this point in time, the best we can calculate it is that it will be about the 15th of October.

Mr. CLEVELAND. Mr. Speaker, if the gentleman will yield further, I hope you will devise a method of approach whereby you do not plow the same ground that was plowed by the joint committee. We had hearings on top of hearings that lasted for almost 2 years and innumerable Members of Congress and other people interested in this general area appeared and testified.

I think it would be unfortunate if all those witnesses came back and retestified, that would back you up into a position which would delay bringing the bill to the floor to perhaps January or February or later. You might find yourself confronted with hearings that go on and on. You would be right back where we were last year.

Mr. SISK. I appreciate the gentleman's comment on that problem. We certainly do not wish to plow the same ground which the joint committee plowed. We may be optimistic, but we believe we will be able to confine these hearings. Frankly, what we are hoping for is no more than 4 or 5 weeks of hearings at the moment. We propose to do that by using a rifle instead of a shotgun to a certain extent in order to pinpoint specific areas. However, there are specific areas in which we may find ourselves in the position of making no hard and fast decision. I have reference to the opening of the committees to radio and television broadcasting and even the question of opening the Chamber of the House to possible television under a certain set of circumstances.

There are a variety of problems that we expect to outline and specify in those areas and we have been gathering a great deal of material upon which we have worked. For example, in title I we would not expect to hold hearings on the provisions of that title because we expect to bring this bill to the floor of the House with an open rule and give the Members an opportunity to work their will.

Once we put out the committee print, I do not feel we can deny any Member of Congress a right to come in and testify. But I would hope—and I shall appreciate any comment from my good friend, the gentleman from California (Mr. SMITH), on this—that we will be able to hold these hearings to certainly 4 or 5 weeks, or 6 weeks at the most. I say this because we do not feel we can go through the long, drawnout hearings that the joint committee did. In other words, we shall try to use a rifle in pinpointing certain areas and hold hearings on those areas and then button it up and bring it to the floor of the House.

Mr. CLEVELAND. Mr. Speaker, if the gentleman will yield further, I certainly hope you will be successful in that approach. I say this because I am sure the gentleman can see the trap into which you might get if you do open it up. I think most Members consider themselves expert at least in a part of the general area of congressional reform.

We, at one time in the joint committee, actually designated by title or by some other description more than 150 proposals that had been made by various Members and various members of faculties that are interested in Government as well as political scientists. If you undertook to have general hearings on the whole subject of congressional reform, unless you devise some method of limiting the appearances and confine witnesses to either written statements or very sharply delineated statements, you will find your hearings will consume more time than you think. Just as you have said and as the gentleman from California (Mr. SMITH) has said, it takes time and patience to draft this type of legislation. It is painstaking work.

Mr. SISK. I appreciate that.

If I could just make one comment there: Generally it has been our opinion—and I appreciate that the gentleman from California (Mr. SMITH) is on his feet now, and can comment on this—but we will attempt to actually contain these hearings primarily to Members of the Congress. You folks heard testimony from representatives in the universities, and in the field of education, and from a variety of other fields, people who had made special studies, and so on, and certainly it is not the intention, as I understand it, to go back over that record. Primarily we want to limit it very tightly to people in the Congress, and of course we want to be fair and democratic about it also, but we want to limit it basically to the Congress.

There is one subject on lobbying, and that is one on which we might hear from outside witnesses. But generally I think the idea is to hold the hearings primarily for the benefit of the Members.

Mr. SMITH of California. Mr. Speaker, if the gentleman will yield at that point, I want to say that in all honesty if I thought I had to look forward to the extensive hearings such as have been mentioned, with this very fine committee, that I would resign from the committee effective immediately.

We have taken these bills, S. 355, my bill and other bills, and we have gone through these things so that, insofar as title I is concerned, I believe that we are probably ready to submit a summary now of our language for all of these questions with two exceptions. One is television. We have gone around and around on that subject. I have been on one side, and then I have been on the other side, and now I am in the middle. As to what to do about television, I am sure that we will have hearings on that. And then on specialists, we have gone back and forth, and we have not come to a conclusion. I think we should have hearings on that.

Also title II, I think, in the first paragraph where we have not decided on the program planning budget system, the computer, and so on, and thus we are going to have to have some discussions on that, and hearings.

But we are not going to go over, at least, so far as I am concerned, the work that you gentlemen did. We have had the opportunity of reviewing your report, and we have analyzed it and have gone through the testimony on every single section, and we do this as we go through it, and I can assure the gentleman that we will continue to do so.

Mr. SISK. Mr. Speaker, I join my colleague from California (Mr. SMITH), 100 percent on his statement.

As the gentleman knows all of us have other committee work, and work to do, as well as constituents to represent, and hopefully we are representing them.

But we will at least try to be fair and democratic, and at the same time attempt to limit the hearings.

Mr. CLEVELAND. Mr. Speaker, if the gentleman will yield further, I wonder if it might not be wise if you have in fact just about completed title I, not to wait until you have completed all the titles. You could submit that print now to the Members.

I wonder if it might not be helpful to the Members, as well as yourselves, if you could complete title I, or a title at a time. If title I is almost ready to go, then possibly you might let that go now and let us have a peek at it.

Mr. SISK. Let me say this to the gentleman: My mind is completely open, and I would say that I will take that thought back to the committee, and we will certainly discuss it. I think the gentleman might have the germ of a good idea.

However, the gentleman must remember that I am only one of five members on the committee.

Mr. CLEVELAND. We understand that. But my interest in this matter, as a member of the joint committee—or a former member of the joint committee—and as the gentleman knows there are task forces on both sides of the aisle that are deeply interested in this, and want to be helpful. I think if you could let us take a look at what you have done as you go along that we might be helpful to you. Frankly this is what some of us want to do. I feel like the gentleman from Missouri, I am not annoyed that you have found the Joint Reorganization Act of 1967 wanting. As a matter of fact, we admitted that was only the first step, and that it was lacking in many respects, and we are delighted that you people have examined it and are taking another look at it. These things can always be improved by the full use of the expertise that exists on both sides of the aisle and by those who are particularly interested in this area.

So the quicker you let us look at what you have accomplished, I think the better off we all will be.

Mr. SISK. I will take that thought back and discuss it with the committee.

Mr. REES. Mr. Speaker, will the gentleman yield?

Mr. SISK. I yield to the gentleman.

Mr. REES. Mr. Speaker, I commend my colleague, the gentleman from California, for the work he is doing.

I have discussed this bill with the gentleman during the past few weeks. I think perhaps the subcommittee might well go beyond the scope of the bill which was introduced by both sides several months ago.

I would like to make one request. One of the difficulties in dealing with congressional reform is that you find you are amending various titles of the Federal code and you are also amending the rules of the House.

I was wondering if it might be possible when you do come up for your committee print, if you could use the Ramseyer rule whereby you would separate, for example, that part of the title which can be taken care of by simple amendments to the rules of the House from that part of the title which needs statutory enactment. In doing this, if the complete section that is being amended could be printed so that we could find out exactly what the change of the language is.

I think it is a very difficult point as one of the authors of the reform bill in trying to find exactly what was in the present law and what was in the bill we are dealing with. I found several instances where I think there was just pure repetition. I think you find this going through title I.

I know that this would be a great deal of help to us in trying to put this overall problem into context because we do think, even though it is a fine bill, that both sides have put in, it is a very confusing bill in certain instances because of this.

Mr. SISK. Let me say, I am sure the committee is aware of the problems, and is trying to clarify that, and certainly make obvious what we are trying to do.

I think with reference to the use of the Ramseyer rule and the use of language so that it is easily understandable, that is exactly what we are seeking to do.

We do have some very able and some very capable people working with us. We have an able staff, of course, and the gentleman from Mississippi (Mr. COLMER) of the Committee on Rules has been kind enough to lend us pretty well the staff of the Committee on Rules and they have been doing a great job. Then we have from the legislative counsel as well as the legislative reference service some very good people. We are doing our best to try to clarify thse provisions. I am sure they will do a good rewrite on it.

Mr. REES. Mr. Speaker, if the gentleman will yield further, I wonder, would you say there might be a possibility if we are in session in December, a bill might conceivably come to the floor of the House? Or if it did not, then might it

well be our first order of business when we come back in January?

Mr. SISK. I would say to the best of my knowledge what the gentleman has brought up on that subject and his predictions could come true because none of us have any idea how long we are going to be around here. I think we are only projecting our thinking on the basis of what we might expect. We may even have to be here after Thanksgiving. But I do not wish to project into the future. It may be that we will be here until Christmastime. If that be true, of course, this would make it subject to change. We might have a bill here in December, if the House is still in session and we might have time to debate it in December rather than, let us say, January or February. That is entirely possible because we are simply trying to project to you information we feel you are interested in on this projected schedule, and it is purely again subject to change.

Mr. REES. Then the gentleman's thinking was that there would be an open rule on the bill when it came out? Then would it be one bill or would it be a package of separate bills, each dealing with a separate title? Or, also say, a House resolution dealing only with the rules of the House?

Mr. SISK. That matter is under discussion at the present time.

I will be glad to yield to my good friend, the gentleman from California (Mr. SMITH), if the gentleman wants to make any comment on that and if at any time the gentleman from California wants to join in this discussion, I hope he will.

My understanding is that we are considering that. We have to bring this bill or bills to the floor in, let us say, the most clear way and the most understandable way so that Members know exactly what they are doing.

So far as a hard decision goes, it is not my understanding that the committee has made such a hard decision as yet.

Does my colleague, the gentleman from California (Mr. SMITH), want to comment further on that?

Mr. SMITH of California. I think the gentleman's answer which he gave to our colleague, the gentleman from California, is just a little bit premature.

Tentatively, I think we hope to bring one bill to the floor which contains the whole section under an open rule so that we may have gone that far through title I, part 1, and halfway through part 2, until the rest of them are finished. To answer this question, you had better have another few weeks I think.

Mr. REES. I should like to ask one last question and that is in respect to title II. There is some confusion because we go from a 1-year budget into a semiprograming budget of 5 years. We have discussed, at times informally, the possibility of creating a legislative budget bureau or a congressional budget bureau that could act as our overseer on the budget, such as we have in the State of California, so that all Members could have a specific report, let us say, several months after the President's budget comes out, so that we would have our own viewpoint to look at. Right now the only thing we have available is the budget from the executive branch. Is the committee discussing this possibility of a legislative budget bureau?

Mr. SISK. The committee is very deeply involved right now in this very specific subject. I see my good friend from California smiling. We are, in fact, involved in that question. If I am not mistaken, we spent all the time at our last meeting practically bogged down on a variety of approaches on this very subject.

On this business of the budget, I point out that we have with us this evening, and I appreciate his being present, our distinguished chairman of the Committee on Rules. Many years ago, before many of us were in the House, he was interested in a different approach to the legislative budget. He coauthored, along with the distinguished Senator from Arkansas, I believe, some proposals for a Joint Committee on the Budget. We are digging into those right now. We have not made a firm decision, but this is a very vital and important area if we are going to be in a position to make the information available to Members and we will have to work to make it as knowledgeable as possible.

Mr. REES. I thank the gentleman from California and commend the Rules Committee for the work they are doing. I join my colleagues on the other side. Those of us not on the Rules Committee have been willing and able to offer any expertise we may have acquired in the last 2 or 3 years in working at congressional reform.

Mr. SISK. Let me thank the gentleman. He has made a great contribution, he and those who joined with him, on one of the bills we are now considering.

Mr. CONABLE. Mr. Speaker, will the gentleman yield?

Mr. SISK. I yield to the gentleman from New York.

Mr. CONABLE. I have only a brief comment to make. I think we are all grateful for this special order and the work that the Rules Committee is doing. However, unlike the gentleman from New Hampshire, I would say I consider not patience, but impatience, a virtue on this particular subject, because it is a subject that has dragged on for a long time. I realize the Rules Committee has been particularly active lately, and I do not wish to carp about what should have happened last year or the year before. I think there is very good reason for haste at this point, since we are already more than halfway through the first session of the 91st Congress.

I notice that this particular subject tends to get bogged down in politics, particularly when a congressional election is imminent. It seems to me this is an important enough subject so we ought to try to decide it at a time when a congressional election is not imminent, and try to keep this from becoming the political issue it inevitably becomes if nothing has been done.

I am well aware it has been said frequently there is no constituency for congressional reorganization. We thought there was not a very great constituency for tax reform either, and yet the time came when the pressure built up in this country to the point where the Ways and Means Committee had to move with some alacrity and under great pressure to bring out a tax reform bill. That bill is coming to the House under a closed rule and, therefore, required much greater care than might be necessary for a measure, like congressional reorganization, coming to the floor of the House under an open rule.

I trust that every effort will be made to face up to the issue of congressional reorganization this year, if possible, and I am particularly pleased to have heard the remarks of the gentleman from California (Mr. SMITH) about his views of how extensive the hearings would have to be. There is an impatient constituency here in the House for congressional reorganization, and there is ample evidence of this on the record. Nobody enjoys impatience: it exacerbates our dispositions and makes it difficult to be objective and constructive. We would like to have something to sink our teeth into. I have great confidence the Rules Committee is serious in its intentions, but many younger Congressmen are impatient. I do not think that impatience is necessarily a bad thing under the circumstances.

Mr. SISK. Mr. Speaker, I appreciate the statement of my colleague. Let me again assure him this is not a job any of us particularly relished in the beginning. There is a great deal of sincerity on the part of the Rules Committee to try to do a job. We are trying to do our very best. I can understand our colleague being concerned.

Since our committee was set up, I think we have missed only three or four meetings and these were because of impossible situations. We would like to get through with it. I would like to finish it next week. Yet, we recognize if we are going to have to come to the floor and defend what we have done and be knowledgeable enough to talk about it on the floor and give reasons for our action, it just requires some time. I would hope we could finish it this year.

Mr. McCLORY. Mr. Speaker, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Illinois.

Mr. McCLORY. Mr. Speaker, I commend the gentleman from California and the members of his subcommittee on their initiative and diligence in reviewing this whole subject of congressional reorganization. I am very encouraged by the report which we have received here this evening.

As I understand it from the statement of the gentleman, the congressional reorganization bill passed by the other body is being used as a sort of pattern, and the main parts of that bill are being considered actively by the members of the subcommittee. Am I correct?

Mr. SISK. The gentleman is correct. Wherever possible we are using identical language in particular sections of that bill, and particularly in those portions contained in that bill concerning the other body, because again, as we get into the actions passed on by the other body, we are going to leave up to them such additions as they are willing to add, but we are dealing exclusively with the problems in the House of Representatives, and leaving up to them, once we get a bill over to them, the job of adding to it

like arrangements that will fit their own problems, because as much as some of us might like to do something about particular rules in the other body—which I will not mention—we are going to leave that up to them.

Mr. McCLORY. I understand that, and that might apply also to such things as televising House sessions and House committee meetings, a subject in which I have been very interested, as well as the subject of a greatly expanded automated data processing capability (ADP) for the Congress.

To encourage diligence in the productive work of the subcommittee, I might point out that there are other measures pending with respect to the subject of the use of additional ADP support for the Congress, which it seems to me can be completely answered only through the adoption of the reorganization bill. In other words, there is a measure pending at the present time, I think before the Rules Committee, emanating from the Committee on Government Operations dealing with automatic data processing and another bill is pending before the Committee on House Administration. It seems to me then that this subject when recommended by the special subcommittee and acted upon by the House will resolve this issue, which is one we have to resolve promptly in order to improve our own capacity to perform our legislative work.

I am grateful, Mr. Speaker, for the special order the gentleman is taking and for the encouraging report he and other members of the subcommittee have contributed here.

Mr. SISK. Mr. Speaker, I thank my colleague, the gentleman from Illinois.

Mr. COUGHLIN. Mr. Speaker, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Pennsylvania.

Mr. COUGHLIN. Mr. Speaker, I, too, express pleasure at the action being taken by the subcommitee and for this special order.

Certainly we are living in a time when people are questioning the credibility of their institutions and their ability to change themselves. I think recently we have shown, under the leadership of the chairman of the Ways and Means Committee, that Congress itself can take the reins and bring forth a tax reform bill. I certainly hope we can do the same with the congressional reform bill, based on the joint study and effort that is being done.

Under pressure we have shown we can act and bring forth a bill.

I would like specifically to ask if this bill will also deal with the action in the Chamber itself, and electronic voting specifically, and whether or not the committee is dealing with that.

At the present time, of course, as the gentleman knows, there is another committee of the House—in this case the Committee on House Administration—which is dealing specifically with the problem of some type of electronic voting, some type of automatic voting, some type of fast read-out to avoid the mistakes in rollcalls and a variety of things.

To the extent that would involve a change in arrangements in a change in procedures and would require an amendment to our rules, or require, let us say, the creation of an oversight committee for something of this kind, then to that extent the Committee on Rules will take that under consideration. At the present time they are doing the basic research. It is my understanding we are interested enough in what they are doing to try to keep up with it. They are making progress. They are viewing a number of programs. They are approaching the problem in a number of different ways. I would hope something could be done. This is an area which desperately needs renovation.

Perhaps someone who is on the staff of the Committee on Rules could work with that committee, so that the recommendations could be tied together, again to move as promptly as possible.

Mr. SISK. I appreciate the gentleman's comment. I agree this is an area we certainly hope we can improve. We want to come up with some answers on this quickly.

Mr. CLEVELAND. Mr. Speaker, will the gentleman yield?

Mr. SISK. I yield to the gentleman from New Hampshire.

Mr. CLEVELAND. I appreciate the gentleman's yielding a second time.

There is one aspect of timing in regard to this problem which I believe should be explored a little bit during this special order.

The gentleman from New York (Mr. CONABLE) referred to the fact that there are some Members, and particularly the younger Members of the body, who are impatient about this matter. We also have our public image to be concerned about. There is a clear need for us to reform our procedures, and to do so with reasonable dispatch.

On the timing, I believe the time schedule the gentleman has suggested is certainly reasonable enough. I wonder if he has taken into account the fact that after the Senate passed the Legislative Reorganization Act, after 3 weeks of debate, in March of 1967, then it came over here and it was assigned to the Committee on Rules, and there it sat for about a year and a half, and it died there.

Has the gentleman given any thought to what is going to happen if this bill passes the House and goes to the Senate? They need sit on it for less than a year under the time schedule mentioned. Has there been any liaison with the Senate to see if they will forgive us for our trespasses, if they were indeed trespasses, and not repeat the dire deed which was done to their bill?

Has the gentleman given any thought to that? Are negotiations underway with that august body?

Mr. SISK. I would not say we have ignored it. I will have to admit that as far as any direct liaison with the other body on this matter is concerned we are not maintaining any particular liaison on it.

I recognize this as a problem. I recognize it as a hurdle. I recognize that they may say, "Well, we sent you a bill a year or two ago and you let it die."

Of course, if they want to react that way I am not sure there is anything we could do about that.

Frankly, I recognize the problem the gentleman is talking about. As I said earlier, if we could move this faster and if we could get this bill through this fall the gentleman from California would be most happy to be relieved of what frankly is quite an obligation and responsibility at the present time. I am sure my colleague from California agrees with me.

Again, we are trying to do a good job. Perhaps we are being too finicky about what we come out with. We have tried to project a reasonable schedule.

Frankly, I would think we would be overly optimistic and giving an unfair picture, at least at the present time, if we told the Members it would get to them sooner. I do recognize some problems.

The very discussion we have had today has raised points in my own mind we might want to consider further. It may be appropriate before too long we might want to make contact with the other body and to discuss some possibilities.

Mr. MacGREGOR. Mr. Speaker, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Minnesota.

Mr. MacGREGOR. I am delighted the distinguished gentleman from California has taken this time to apprise us of the work of the special subcommittee of the Committee on Rules of the House. I would add my voice to those raised earlier in this special order taken by the gentleman from California, to surely urge his subcommittee to proceed with all deliberate speed on this matter.

I am sure the gentleman will. He can be assured of the support of a great many Members of this body, both Republicans and Democrats, for his efforts up to the point where a bill is brought out and surely for enthusiastic support for any comprehensive measure coming from his committee when it is brought to this House for debate. I trust that the gentleman will proceed knowing that he has the very strong and enthusiastic backing of a large number of people in a bipartisan sense who are interested very deeply in this question of congressional reorganization and reform.

Mr. SISK. Thank you. I very much appreciate the comments of the gentleman from Minnesota. I might add there that we are certainly considering this on a bipartisan basis. I might say—and I believe my good friend from California (Mr. SMITH) will agree with this—that there are no partisan politics entering into our discussions. We are not just accepting something by unanimous agreement but are working it out. I am hopeful, and I personally feel that we will bring a bill out in which there is no partisan politics entering into it, as far as our subcommittee is concerned.

I will be glad to yield to my good friend from California (Mr. SMITH) if he wishes to make any further comment along that line.

If there is nothing else, Mr. Speaker, and no questions by anyone, I will yield back the balance of my time.

Mr. SCHWENGEL. Mr. Speaker, I would like to take this opportunity to express my sincere thanks to the gentleman from California (Mr. SISK) on

the outstanding work he is doing on behalf of congressional reform. This is an area in which I have had a deep and abiding interest since I first came to the Congress to represent the First District of Iowa. The concept of congressional reform has in the past had considerable verbal support, but no concrete efforts were to be seen. In this respect, the gentleman's report today, is very encouraging, and, I commend him.

It was somewhat disappointing to learn that the committee does not plan to bring out their bill until early in the next session. I would hope the gentleman will give serious consideration to the suggestion of the gentleman from New Hampshire (Mr. CLEVELAND), that we deal with reform title by title in order to speed up action on this problem. The world in which we live moves too fast, and its problems are too complex for the rickety congressional machinery which we now have.

Mr. STEIGER of Wisconsin. Mr. Speaker, I want to commend the distinguished gentleman from California (Mr. SISK) and the members of the special subcommittee of the Committee on Rules for their report to the House on congressional reform.

The gentleman from California has given the House a clean picture of the intensive work underway in the subcommittee. The commitment expressed during the discussion to bring a bill to the Committee on Rules which contains substantive reforming and to further urge the Committee on Rules to bring a bill to the floor under an open rule is one I applaud.

The 91st Congress should not adjourn without action by the House on the matter of congressional reform. The past 4 years have seen much time, money, and energy expended on behalf of legislation to bring about much needed meaningful reform. I am encouraged by the sincere and dedicated efforts of the subcommittee, and I look forward to reviewing the recommendations as presented, to the hearings, and to House action early next session.

The need for reform remains a priority subject as far as I am concerned, and I await the opportunity to work with the many members who have labored so hard on this whole matter.

I appreciate the report of the gentleman from California (Mr. SISK) and his expressed desire to make a realistic contribution to modernizing the Congress so that it can serve more effectively as the representative of the people of this country.

Mr. BUSH. Mr. Speaker, I want to commend my colleague, the gentleman from California, the Honorable B. F. SISK, for taking the time today to explain to us the progress of the legislative reorganization bills in the Rules Committee. I am pleased by his indications as to what the finial legislation will look like and hope that the timetable will be kept.

Mr. RIEGLE. Mr. Speaker, I want to thank my colleague, the gentleman from California, for his frank progress report on the legislative reorganization bill now being considered by the House Rules Subcommittee on Reorganization. I appreciate that committee's public commitment to report out a bill which, as a minimum, will be no weaker than either the bill passed in the Senate during the 90th Congress or the almost identical bill now awaiting Senate floor action. I am also pleased to learn that we have been promised an open rule for consideration of this bill on the House floor.

As one of the original cosponsors of the Legislative Reorganization Act in the 90th Congress, I am encouraged by all these revelations of positive committee work on this urgently needed piece of legislation. No longer can we afford to be called an "obsolete, inefficient, rubberstamp Congress." Before we can effectively upgrade, change, and streamline the Federal programs we create, we first need to modernize the system which enables us to make these decisions.

We raise our voices in anger over excessive, wasteful, Government spending—yet we do not have adequate staff personnel or information resources to maintain a fiscal check on the executive branch. We talk about honesty, openness, and information disclosure—yet we continue to have closed committee sessions and unrecorded crucial votes. Each member has to make critical, daily decisions on legislation that will affect millions of Americans—yet we have not modernized our data systems to provide us with current, analytical information.

Mr. Speaker, I maintain that now is the time to act on legislative reorganization.

The gentleman from California (Mr. SISK) has stated that he expects his committee to report this bill early in the next session. If that is the earliest possible date, I would ask that the committee consider reporting this bill by title so that we can put into law these various changes as soon as possible.

I want to again thank my colleague for talking with us on the floor today, and urge his committee to meet, or beat, the timetable they have put before us today.

GENERAL LEAVE TO EXTEND

Mr. SISK. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the subject of my special order today.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

FREEZE ON BOLLING-ANACOSTIA LAND HALTS DISTRICT OF COLUMBIA HOUSING PLAN

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 20 minutes.

Mr. REUSS. Mr. Speaker, I have just received a letter signed by Mayor-Commissioner Walter Washington and District of Columbia Council Chairman Gilbert Hahn, Jr., expressing their support for an amendment I intend to offer to the military construction authorization bill when it comes to the floor tomorrow. My amendment would delete an amendment added by the Armed Services Committee which would prohibit the Secretary of Defense from declaring any part of the land in the Bolling-Anacostia military complex excess to military needs before December 31, 1975. Present law prohibits such a declaration before December 31, 1970, and my amendment would allow the prohibition to expire at that time.

In their letter, Mayor Washington and Chairman Hahn emphasize that—

> Were it possible to make use of the 416-acre Bolling Field-Anacostia complex in accordance with the excellent plan that has been developed by the National Capital Planning Commission, the dwellings which could be made available for an estimated 20,000 people would go far to relieve the very great pressure in the District for better housing.

The Department of Defense has tentative plans for use of the land at Bolling-Anacostia. These plans are discussed at pages 1264 to 1266 of the military construction authorization hearings in the course of testimony on June 19, 1969, by Assistant Secretary of Defense for Installations and Logistics Barry J. Shillito and Deputy Assistant Secretary Edward J. Sheridan.

I include the letter of Mayor Washington and Chairman Hahn in the RECORD at this point, along with the discussion of Bolling-Anacostia which appears in the military construction hearings:

GOVERNMENT OF THE DISTRICT OF COLUMBIA,
Washington, D.C., August 4, 1969.

The Honorable HENRY S. REUSS,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. REUSS: We in the District Government welcome the effort to have deleted from the Military Construction Authorization Bill for Fiscal Year 1970 the provision which would extend until December 31, 1975 the requirement of present law that the Bolling Field-Anacostia complex be retained in the military inventory.

As you so fully appreciate, the District of Columbia urgently needs space for housing its people, all too many of whom are forced to give in substandard dwellings because nothing better can be made available to them. Were it possible to make use of the 416-acre Bolling Field-Anacostia complex in accordance with the excellent plan that has been developed by the National Capital Planning Commission, the dwellings which could be made available for an estimated 20,000 people would go far to relieve the very great pressure in the District for better housing. And the use of the area for such a purpose would have another beneficial effect. As part of the "new town" envisaged by the plan, stores and shops would be provided to meet the needs of the inhabitants, and this in turn would provide additional employment and revenue. In short, the removal of the present limitation on the use of the Bolling Field-Anacostia complex would operate to change it from a relatively sterile, unproductive area to one which provides better housing for thousands of District residents, more employment, more schools, more recreational facilities, and, as a welcome incident, more revenue, both by reason of the land's being restored to the tax rolls, and by reason of the sales and income taxes which would result from the operation of the stores and shops.

We in the District Government see, and have always seen, a great many advantages to the District and its people were it possible to make use of the Bolling Field-Anacostia complex in accordance with the NCPC plan. We can only express the heartfelt hope, therefore, that you will be successful in your effort to amend the military Authorization Construction Bill so as to delete therefrom

a provision which has the effect of preventing the use of this property in a way that would be of immense benefit to the citizens of the District of Columbia.

Sincerely yours,

WALTER E. WASHINGTON,
Commissioner.
GILBERT HAHN, Jr.,
Chairman, District of Columbia Council.

Mr. HALL. Mr. Chairman, I know that you will get to the question on page 14 where they are talking about involuntary loss by encroachment of the question of the Anacostia-Bolling Air Field complex and its use of general aviation, instead of some other purposes, that they put a lot of fill dirt in there for, and obstruct what runways we had out there, especially in view of the encroachment coming from the air as well as by land and by sea.

The CHAIRMAN. Why don't we talk about that now? What kind of plans have you got over there?

Secretary SHILLITO. We have several plans afoot, Mr. Chairman, on this. We are attempting to synchronize now the Navy planning and the Air Force planning that went on.

We are bringing these things together into a total Defense plan. We have had some constraints placed on us recently by the Bureau of the Budget. Do you want to elaborate on this, Mr. Sheridan?

Mr. SHERIDAN. Yes, sir. As the chairman knows, there are 920 acres there in the Bolling-Anacostia site, and we originally proposed to access 420 acres.

The CHAIRMAN. You can get that out of your system.

Mr. SHERIDAN. The committee took care of that.

The CHAIRMAN. Go ahead.

Mr. SHERIDAN. Now we have looked into the situation at Bolling and Anacostia since, and we have come to the conclusion that the planning on keeping the Air Force on the old Bolling tract is too tight and inefficient and they need additional land.

We are investigating with the Navy, what the Navy use of the Anacostia portion would be, other than the Presidential helicopters. The permanent building that is over there is the Navy photographic building.

The CHAIRMAN. Haven't you decided to use some of Anacostia for general aviation?

Mr. SHERIDAN. No, sir; that decision hasn't been made yet.

Secretary SHILLITO. It is being looked at very seriously, though. It is proposed on a temporary basis.

The CHAIRMAN. That was our agreement, that it would be looked at on a temporary basis.

Secretary SHILLITO. Yes, sir.

Mr. SHERIDAN. The FAA has to take the first step on that.

Secretary SHILLITO. This discussion has been going on with the FAA.

Mr. HALL. It is a matter of record, Mr. Chairman, at one time, since I brought this subject up the FAA was in agreement with transferring general aviation over there, and removing 27 percent of the traffic at the National Airport. Somebody at a higher level than the FAA or the DOD put the kibosh on it because they had other plans out there.

Mr. SHERIDAN. That is correct.

Mr. HALL. We might as well get this out and talk about it here.

The CHAIRMAN. When was all this done?

Mr. SHERIDAN. That was done by the Bureau of the Budget.

The CHAIRMAN. When?

Mr. SHERIDAN. Three years ago.

The CHAIRMAN. I am talking about this Bureau of the Budget.

Mr. SHERIDAN. This is what we are conducting in the study right now.

The CHAIRMAN. What has this Bureau of the Budget done? Have they dipped into it again?

Mr. SHERIDAN. No. We notified the Bureau that present planning has reached the stage in connection with the use of Bolling and Anacostia where we feel that we need more than what has previously been decided by the previous Bureau, and this Bureau is looking into it too. There have been no commitments made.

The CHAIRMAN. The committee is not going to interpose any objection to your using these two complexes for the military.

Mr. SHERIDAN. We understand that completely, sir.

The CHAIRMAN. But we are not going to have it for any social concoctions of some idiots around Washington here who want to take this property from the military.

Mr. SHERIDAN. We know the position of the committee very clearly.

The CHAIRMAN. They want to try out these experiments. But this land is valuable.

Mr. SHERIDAN. Yes; it is very valuable.

The CHAIRMAN. It is owned by the military, so let's use it, Mr. Secretary.

Secretary SHILLITO. We agree with you, Mr. Chairman.

The CHAIRMAN. Dr. Hall is trying to get over to you, the committee has asked you all to get up a master plan.

Mr. SHERIDAN. We are working on that.

The CHAIRMAN. Get that plan to us, and see if we can't help you.

Mr. SHERIDAN. Yes.

The CHAIRMAN. You take this project that General Carroll wanted. Why can't we put something along the line of DIA over there?

Mr. SHERIDAN. The DIA building is a high-rise building and the north end of the Bollings-Anacostia site is poorly adaptable to a building of this kind, because of the soil condition. That DIA building now is going up to $28 million, and if placed over at the north end of Anacostia might go up $8 or $10 million more. It is a cost problem.

The CHAIRMAN. You can't build a two-story house without putting pilings under it in some parts of the city.

Mr. SHERIDAN. Yes, sir; that is right.

The CHAIRMAN. You put pilings under all big buildings when you get down close to the water.

Mr. SHERIDAN. That is right.

LEGISLATION TO REQUIRE A HEALTH WARNING ON ALL ADVERTISING FOR GASOLINE CONTAINING LEAD

The SPEAKER pro tempore. Under previous order of the House, the gentleman from New York (Mr. FARBSTEIN) is recognized for 20 minutes.

Mr. FARBSTEIN. Mr. Speaker, I have today introduced H.R. 13281, legislation to require a health warning on all advertising for gasoline containing lead.

The amount of lead in the air over New York City has almost tripled in the 45 years since tetraethyl lead was introduced as a motor fuel additive. Similar trends have been noted in other cities and in increasing atmospheric lead contamination even in such remote locations as Greenland and Antarctica.

Lead has so contaminated the oceans, surface waters, air, and food that man today bears a body burden of lead far above the natural level of intake. The average lead concentration in the bodies of Americans today is many times the level found even a few years ago.

There is absolutely no doubt that automobiles in general and the lead gas-using internal combustion engine in particular is the No. 1 villain. According to the Public Health Service, the automobile is the single largest contributor to the lead in our atmosphere. Forty-five percent of all lead in gasoline by weight ends up in the atmosphere.

The Air Pollution Control Administration forecasts the continued upward surge in the lead content of our air at an annual rate of approximately 4½ percent. In terms of the next 4 years, this means 38 million more pounds of lead pollution.

Lead pollution level from automobiles, 1968–72, Air Pollution Control Administration—Total emissions nationwide

[In millions of pounds per year]

1968	199
1969	208
1970	217
1971	227
1972	237

The effects of lead poisoning have been well known for many years. Lead poisoning can attack the central nervous system, peripheral nerves, smooth muscles, and reproductive organs, as well as cause blood disorders, coronary and chronic kidney disease, and lung damage. This is amply demonstrated by the fact that Tetraethyl Lead Corp., major producer of lead in the United States, has almost been forced to go out of business several times as a result of successful lawsuits by former employees whose health was permanently impaired through exposure to lead. Yet the danger from lead for a majority of the population comes not from individual contacts, but from cumulative exposures to lead; for lead particles build up in the body.

Despite this, there are currently no State or Federal air quality standards for lead in the United States although the Air Pollution Control Administration last week ordered oil companies to provide it with data on additives in fuel. The Soviet Union is already regulating the lead content of gasoline, and the panel on electrically powered vehicles recommended in 1967 that standards for the lead content in gasoline be immediately established. A scientific task force on environmental problems in Sweden has recommended the total banning of lead additives from gasoline.

I cannot stand by and watch the long-term harmful effects of lead pollution remain masked only to be detected too late to prevent serious damage. We may already be perilously close to the threshold of lead toxicity as a result of environmental exposure.

The legislation I am today introducing would require all advertising for gasoline containing lead to contain the warning:

This gasoline contains lead. Lead fumes are poisonous. Prolonged exposure can be fatal.

The bill would also require the prominent posting of the same health warning near gasoline pumps in service stations.

This proposal is the second in a three-bill package relating to the effect of automobiles and air pollution. On Thursday I introduced legislation that would ban the manufacture or sale of automobiles powered by internal combustion engines after January 1, 1978. The final bill, which I intend to introduce on Tuesday, will call for a tax incentive to oil com-

panies which eliminate lead from gasoline.

The text of the bill follows:

H.R. 13281

A bill to require advertising for gasoline that contains lead to contain a statement that the gasoline contains lead and that inhaling its fumes can be fatal and to require that such statement be prominently displayed where such gasoline is sold

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it shall be an unfair or deceptive act or practice within the meaning of section 5 of the Federal Trade Commission Act to fail to display, clearly and prominently, (1) in all advertising of gasoline that contains lead, and (2) at all places where such gasoline is sold the following statement: "This gasoline contains lead. Lead fumes are poisonous. Prolonged exposure can be fatal." The statement required to be displayed prominently at the places where such gasoline is sold shall be composed of letters four inches high and one-half inch thick.

SEC. 2. (a) This Act shall be enforced by the Federal Trade Commission under rules, regulations, and procedures provided for pursuant to the Federal Trade Commission Act.

(b) The Federal Trade Commission is authorized and directed to prevent any person from violating the provisions of this Act in the same manner, by the same means, and with the same jurisdiction, powers, and duties as though all applicable terms and provisions of the Federal Trade Commission Act were incorporated into and made a part of this Act; and any person violating the provisions of this Act shall be subject to the penalties and entitled to the privileges and immunities provided in the Federal Trade Commission Act as though the applicable terms and provisions of the Federal Trade Commission Act were incorporated into and made a part of this Act.

SEC. 3. The first section of this Act shall take effect ninety days after the date of the enactment of this Act.

SEA-LEVEL PANAMA CANAL: POTENTIAL BIOLOGICAL CATASTROPHE

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 15 minutes.

Mr. FLOOD. Mr. Speaker, in the course of a prolonged study of the interoceanic canal problem, one soon becomes accustomed to new aspects. The latest one concerns the danger of a large scale extinction of marine life as a result of providing a salt water channel between the Atlantic and Pacific Oceans in the proposed, so-called, Panama Sea Level Canal Project.

In an illuminating article in the January 1969, issue of BioScience, the official publication of the American Institute of Biological Science of 3900 Wisconsin Avenue NW., Washington, D.C. 20016, Dr. John C. Briggs, distinguished professor and chairman of the department of zoology, University of South Florida, describes the dangers of the proposed sea level construction project at Panama.

Dr. Briggs concludes that 6,000 species of the western Atlantic would migrate westward into the eastern Pacific, and that 4,000 species of the eastern Pacific would navigate into the western Atlantic.

Predicting a biological catastrophe that is bound to have international repercussions, he asks why should a sea level canal be undertaken at all, and calls for retention of a fresh water barrier between the Atlantic and Pacific Oceans. Such barrier, Mr. Speaker, would be retained in the construction contemplated in the current bills in the House and Senate for the modernization of the Panama Canal (S. 2228, H.R. 3792, and H.R. 4031). It would not be retained in any sea level project.

In the April 1969 issue of BioScience were published a reply by Col. John P. Sheffy to the Briggs' article and the counter reply by Dr. Briggs, in which the latter calls upon the biologists of the Nation who wish to support the fresh water barrier concept to make known their views to the Members of the Congress.

The article by Dr. Briggs is another strong reason against the proposed sea level undertaking at Panama, the volume of which reasons is already overwhelming. Because of its fundamental importance, I quote the indicated Briggs article and the exchange of letters relative thereto as parts of my remarks and commend them for reading by all Members of the Congress and others concerned with the Isthmian canal question.

THE SEA-LEVEL PANAMA CANAL: POTENTIAL BIOLOGICAL CATASTROPHE

(By John C. Briggs)

(NOTE.—The author is Professor and Chairman of the Department of Zoology, University of South Florida, Tampa, Florida 33620. This research was supported by National Science Foundation Grant GB–4330. Helpful suggestions were received from J. L. Simon, H. H. DeWitt, and T. L. Hopkins.)

While the possibility of a sea-level canal somewhere in the vicinity of the Isthmus of Panama has been discussed for many years, its feasibility as an engineering project has become enhanced as the result of recent experimental work with nuclear devices that can be used for excavation. It appears now that the undertaking of this project will be strongly supported as soon as the current economic crisis in the United States is over. Until recently, the only facet of the plan that had drawn the attention of many biologists was the possibility of radiation damage. However, Rubinoff (1968) finally pointed out that there would be other important biological effects and gave examples of disastrous invasions that have occurred in other places as the results of human interference.

THE NEW WORLD LAND BARRIER

The New World Land Barrier, with the Isthmus of Panama forming its narrowest part, is a complete block to the movement of tropical marine species between the Western Atlantic and Eastern Pacific. This state of affairs has existed since about the latest Pliocene or earliest Pleistocene (Simpson, 1965; Patterson and Pascual, 1963) so that, at the species level, the two faunas are well separated. It has been estimated that about 1000 distinct species of shore fishes now exist on both sides of Central America but, aside from some 16 circumtropical species, only about 12 can be considered identical (Briggs, 1967).

This land barrier is also effective for marine invertebrates. Haig (1956, 1960) studied the crab family Porcellanidae in both the Western Atlantic and Eastern Pacific and found that only about 7% of the species were common to the two areas; de Laubenfels (1936) found a similar distribution in about 11% of the sponges he studied; and Ekman (1953), about 2.5% for the echinoderms. It seems, therefore, that only a very small proportion of the species in the major groups of marine animals are found on both sides of the Isthmus of Panama. The present Panama Canal has not notably altered this relationship since, for most of its length, it is a freshwater passage forming an effective barrier for all but a few euryhaline species.

With regard to the tropical waters on each side of the isthmus, there is no reason to suspect that each area is not supporting its optimum number of species. Studies of terrestrial biotas have indicated that most continental habitats are ecologically saturated (Elton, 1958; Pianka, 1966) and that islands demonstrate an orderly relationship between the area and species diversity (MacArthur and Wilson, 1967). Assuming the niches of the two marine areas are filled, achieving maximum species diversity, invasion by additional species could alter the faunal composition but should not permanently increase the number of species.

REGIONAL RELATIONSHIP

The tropical shelf fauna of the world may be divided into four, distinct zoogeographic regions: the Indo-West Pacific, the Eastern Pacific, the Western Atlantic, and the Eastern Atlantic. While the Indo-West Pacific undoubtedly serves as the primary evolutionary and distributional center (Briggs, 1966), the Western Atlantic Region may be said to rank second in importance. Its geographic area is larger (Fig. 1), its habitat diversity greater, and its fauna considerably richer than for each of the remaining two regions. Since the Western Atlantic species are the products of a richer and therefore more stable ecosystem, we may expect that they would prove to be competitively superior to those species that are endemic to the Eastern Pacific or Eastern Atlantic.

An examination of the faunal relationships between the Western Atlantic and the Eastern Atlantic does provide good circumstantial evidence that species from the former are competitively dominant. An impressive number have managed to traverse the open waters of the central Atlantic (The Mid-Atlantic Barrier) and to establish themselves on the eastern side. For example, in the shore fishes there are about 118 trans-Atlantic species but only about 24 of them have apparently come from the Indo-West Pacific via the Cape of Good Hope. The rest have probably evolved in the Western Atlantic and have successfully performed an eastward colonization journey across the ocean. None of the trans-Atlantic species belong to genera that are typically Eastern Atlantic. Recent works on West African invertebrate groups tend to show that an appreciable percentage of the species is trans-Atlantic (Briggs, 1967). It seems likely that the great majority of these species also represents successful migration from the Western Atlantic.

EFFECT OF THE SUEZ CANAL

The Suez Canal is a sea-level passage that has been open since 1869, but its biological effects are not entirely comparable to those that would occur as the result of a sea-level Panama Canal for two reasons: first, the Suez Canal connects two areas that are separated by a temperature barrier, the Red Sea being tropical while the Mediterranean is warm-temperate; second, the Bitter Lakes which form part of the Suez passageway have a high salinity (about 45 0/00) which prevents migration by many species.

Despite the above difficulties, the limited migratory movements that have taken place through the Suez Canal do provide some significant information. At least 24 species of Red Sea fishes have invaded the Mediterranean (Ben-Tuvia, 1966), 16 species of decapod crustaceans (Holthuis and Gottlieb, 1958), and several members of other groups such as the tunicates (Pérès, 1958) mollusks (Engle and van Eeken, 1962), and stomato-

pod crustaceans (Ingle, 1963). So there is ample evidence of intrusions into the eastern Mediterranean, but there are no reliable data that indicate any successful reciprocal migration. Furthermore, there are some indications that the invaders from the Red Sea (a part of the vast Indo-West Pacific Region) are replacing rather than coexisting with certain native species. George (1966) observed that, along the Lebanese coast, the immigrant fishes *Sphyraena chrysotaenia, Upeneus moluccensis,* and *Siganus rivulatus* may be replacing, respectively, the endemic *Sphyraena sphyraena, Mullus barbatus,* and *Sarpa salpa.*

AN ANCIENT EVENT

It is now well established that in the past one or more seaways extended across Central America or nothern South America for a considerable period of time, probably throughout the greater part of the Tertiary. While these oceanic connections assured the initial development of an essentially common marine fauna in the New World tropics, they operated as an important barrier for terrestrial animals. Later, perhaps about three million years ago, tectonic forces gradually produced an uplift that re-established the land connection between the two continents.

The effects of the new intercontinental connection must have been rapid and dramatic. The fossil record of this event is fragmentary but considerably better for the mammals than for the other terrestrial groups. Simpson (1965) presented an interesting and well-documented history of the Latin American mammal fauna. His findings relevant to the re-establishment of the Isthmus may be summarized as follows: (a) the full surge of intermigration took place in Pleistocene times with representatives of 15 families of North American mammals spreading into South America and seven families spreading in the reverse direction; (b) the immediate effect was to produce in both continents, but particularly in South America, a greatly enriched fauna; (c) the main migrants to the south were deer, camels, peccaries, tapirs, horses, mastodons, cats, weasels. raccoons, bears, dogs, mice, squirrels, rabbits, and shrews; (d) in South America, the effect was catastrophic and resulted in the extinction of the unique notougulates, litopterns, and marsupial carnivores; the native rodents and edentates were greatly reduced; and (e) now, South America has returned to about the same basic richness of fauna as before the invasion.

Comparatively, the invasion of Central and North America by South American mammals was not nearly so successful. The three migrants that have managed to survive north of Mexico—an opossum, an armadillo, and a porcupine—apparently occupy unique niches. Simpson (1965) noted that when ecological vicars met, one or the other generally became extinct. The dominant species that invaded South America were the evolutionary products of the "World Continent" including both North America and the Old World (the Siberian Land Bridge was frequently available).

CUTTING THE ISTHMUS BARRIER

How effectively would a sea-level ship canal breach the New World Land Barrier? The engineering problems have been worked out using scale models. Although the mean sea-level is 0.77 feet higher on the Pacific side, it would have little effect compared to the effect of the difference in tidal amplitude. The tidal range on the Pacific side is often as great as 20 feet while it is usually less than a foot on the opposite side. For an open canal, it has been calculated that the tidal currents would attain a velocity of up to 4.5 knots and would change direction every 6 hours (Meyers and Schultz, 1949). Tide locks would probably be employed to regulate the currents but it seems apparent that the vast amount of fluctuation and mixing would provide ample opportunity for most of the marine animals (as adults or as young stages) to migrate in either direction.

NUMBER OF AFFECTED SPECIES

Data on the number of marine invertebrate species that inhabit the major parts of the New World tropics are not available. The total fauna is so rich and so many groups are so poorly known that it almost defies analysis. Voss and Voss (1555) reported 133 species of macro-invertebrates from the shallow waters of Soldier's Key, a little island (100 by 200 yards) in Biscayne Bay, Florida. The tiny metazoans comprising the meiofauna of the sediments were not sampled. Work in other areas has shown that the numbers of individuals per square meter in the meiofauna are about 100 times that of the macrofauna (Sanders, 1960). Although a complete tally of species has apparently never been made, there are indications from partial identifications (Weiser, 1960) that the number of species in the meiofauna is at least four or five times greater. For Soldier's Key, if we assume that the meiofauna is only four times richer in species, we would have a total of 655 benthic invertebrates.

Ichthyologists who have collected among the Florida Keys would probably agree that the shallow waters of Soldier's Key could be expected to yield close to 50 species of fishes. This provides an admittedly rough but useful ratio of 1:13 between the numbers of fish and invertebrate species for a small tropical locality. Although the fish fauna of the western Caribbean is not yet well known, the number of shore species can be approximated at about 600; this is probably a low estimate since we know that more than 600 exist in Florida waters (Briggs, 1958). Using the 1:13 ratio, the number of marine invertebrate species for the western Caribbean can be estimated at about 7800. Adding the fish species gives a total of about 8400 marine animal species.

The tropical Eastern Pacific possesses a less diversified fauna than the Western Atlantic. The Gulf of Panama and its adjacent waters is probably inhabited by a shore fish fauna of some 400 species. Using the 1:13 ratio gives an estimate of about 5200 species for the invertebrates and a total of about 5600 marine animal species. The great majority of tropical, shallow-water animals are very prolific and possess highly effective means of dispersal. It has been estimated that 80–85% of all tropical, benthic invertebrate species possess planktotrophic pelagic larvae (Thorson, 1966). Since the fishes are relatively mobile, it seems apparent that the great majority of the animal species under discussion would be capable of eventually migrating through a saltwater canal.

Assuming that 80% of the species on each side of the isthmus would succeed in moving through the canal, 6720 species would migrate westward and 4480 eastward. However, since we are dealing with only rough approximations, it would be more appropriate to simply estimate that we would probably witness the invasion of the Eastern Pacific by more than 6000 species and the invasion of the Western Atlantic by more than 4000 species.

PREDICTION

A logical prediction can be made most easily if the pertinent information given above is summarized as follows:

(1) The great majority of the species on either side of the Isthmus are distinct, at the species level, from those of the opposite side.

(2) The habitats on each side of the Isthmus are probably ecologically saturated so that maximum species diversity has been achieved

(3) The Western Atlantic Region includes a much larger area, exhibits more habitat diversity, and possesses a richer fauna than the Eastern Pacific or Eastern Atlantic Regions.

(4) Western Atlantic species are apparently competitively dominant to those of the Eastern Atlantic—a smaller region but comparable in size and habitat diversity to the Eastern Pacific.

(5) At least some of the dominant species that have invaded the Mediterranean via the Suez Canal seem to be replacing the native species.

(6) When the land bridge to South America was re-established, the invasion of North American mammals enriched the total fauna. However, this effect was temporary since so many native South American mammals became extinct that the number of species soon returned to about its original level.

(7) A sea-level canal would provide ample opportunity for marine animals to migrate in either direction. This would probably result in the Eastern Pacific being invaded by over 6000 species and the Western Atlantic being invaded by over 4000 species.

For the tropical Eastern Pacific it is predicted that its fauna would be temporarily enriched but that the resulting competition would soon bring about a widespread extinction among the native species. The elimination of species would continue until the total number in the area returned to about its original level. *The fact that a large scale extinction would take place seems inescapable.* It would be difficult, and perhaps irrelevant, to attempt a close estimate of the number of Eastern Pacific species that would be lost. The irrevocable extinction of as few as 1000 species is about as appalling as the prospect of losing 5000 or more.

There is little doubt that the tropical Western Atlantic fauna would suffer far less. With the exception of a few species that may be ecologically distinct, the level of competition would probably be such that the invaders would not be able to establish permanent colonies. Some dominant, Indo-West Pacific species have been able to cross the East Pacific Barrier and establish themselves in the Eastern Pacific (Briggs, 1961). It is likely that a few of these forms would eventually find their way through a sea-level canal. In such cases, the equivalent Western Atlantic species would probably be eliminated.

Man has undertaken major engineering projects for most of his civilized history and the construction of such necessary facilities as canals, dams, and harbors will continue and expand as the human population grows larger. In this case, however, man would remove a major zoogeographic barrier that has stood for about three million years. The disturbance to the local environment would not be nearly as important as the migration into the Eastern Pacific of a multitude of species that would evidently be superior competitors. So, instead of having only local populations affected, the very existence of a large number of wide-ranging species is threatened. This poses a conservation problem of an entirely new order of magnitude.

Rubinoff (1968) assumed that a sea-level canal would be constructed and looked upon its advent as an opportunity to conduct the greatest biological experiment in man's history. As I have stated elsewhere (Briggs, 1968), this approach is unfortunate, for it tends to divert attention from a vital conservation issue. The important question is: Should the sea-level canal project be undertaken at all? What is the value of a unique species—of thousands of unique species? Currently, many countries are expending considerable effort and funds in order to save a relatively few endangered species. The public should be aware that international negotiations now being carried on from a purely economic viewpoint are likely to have such serious biological consequences. Does our generation have a responsibility to posterity in this matter?

A biological catastrophe of this scope is bound to have international repercussions. The tropical waters of the Eastern Pacific extend from the Gulf of Guayaquil to the Gulf of California. Included are the coasts of Ecuador, Colombia, Panama, Costa Rica, Nicaragua, Honduras, El Salvador, Guatemala, and Mexico. While the prospect of such an enormous loss of unique species is something that the entire world should be aware of, these countries are the ones that will be directly affected since their shore faunas will probably be radically changed.

ALTERNATIVE

Assuming that a better canal would provide economic benefits, I suggest either an improvement of the existing structure or the construction of a new overland canal that would still contain freshwater for most of its route. There seems to be no reason why we cannot have a canal that could accommodate ships of any size yet still maintain the freshwater barrier that is so important. One could conceive of other alternatives such as a sea-level canal provided with some means of killing the migrating animals—possibly by heating the water or adding lethal chemicals. However, such expedients would be both risky and distasteful.

UNNECESSARY ALARM

Professor John C. Briggs' article (*BioScience*, January 1969, p. 44) points out some valid and important considerations in the coming decision on whether to build an isthmian sea-level canal. However, I hope you will bring to your readers' attention some factors that would tend to mitigate some of the alarms Briggs has cited.

Our engineers calculate that there will be no net flow from the Atlantic to the Pacific through a sea-level canal. The approximately one foot higher mean sea-level of the Pacific will make the net flow from the Pacific to the Atlantic. Briggs' article indicates that biota carried in this direction pose the lesser threat in comparison with movements in the opposite direction. It appears that only the creatures that can swim against the current will be able to make the transit from the Atlantic to the Pacific.

Briggs makes no mention of the transfer of marine life through the existing lock canal. In its 54 years of operation there have been and continue to be extensive transfers by three distinct means. First, swimming and drifting biota that thrive in both salt and fresh water readily pass through the locks and inevitably make their way across Gatun and Miraflores Lakes to the opposite oceans. Some have been specifically identified as having followed this path. Second, barnacles and similar clinging organisms pass in both directions every day on the hulls of ships. Third, and perhaps most important to the question of the biological impact of linking the oceans, is the daily transfer of fairly large amounts of salt water in ships' ballast tanks. This has gone on for more than a half century. Lightly loaded or empty ships approaching the canal are frequently required to take on ballast water before entering the locks. This is to deepen their drafts to make them easier to handle while in restricted canal channels. As a usual practice on leaving the canal a few hours later at the opposite ocean, this ballast water is discharged to lighten the ships to save fuel on the remainder of the trip. Thus, all the small swimming and drifting marine life that would be found in these thousands of samples of sea water taken year in and year out since 1914, have made the trip across the isthmus in salt water in both directions. While a sea-level, salt-water channel between the oceans would vastly augment the movements of marine creatures between the oceans, the new avenue would appear to offer previously denied passage for only that portion of ocean life that could not transit by one or more of the three existing means.

Some segments of the total spectra of biota in the two oceans have surely crossed the isthmus to the opposite ocean during the past half century and continue to do so daily. It follows that a large portion of the small swimming, drifting, and clinging creatures on both sides of the isthmus have long been exposed to inoculations of the same category from the opposite ocean. To date, no discernible effects have resulted. It seems reasonable to conclude that a sea-level canal would create little or no new threat to the lower links of the ocean food chain. New exposures would be limited to the larger swimming and drifting biota. Thus the area of danger of harmful biological changes when the oceans are joined is much less broad than it first appears.

Under a contract with the Canal Study Commission the Battelle Memorial Institute is conducting an extensive evaluation of the potential biological impacts of a sea-level canal. It is acknowledged that in the time available this study cannot reach final conclusions, but it can narrow the area of doubt. The Commission has arranged with the National Academy of Sciences to develop a program of bioenvironmental studies for the Commission to recommend in its report to the President, should construction of a sea-level canal be recommended. Such a canal would require 12 to 15 years to construct, and hence ample time for biological research would be available.

JOHN P. SHEFFEY,
Atlantic-Pacific Interoceanic Canal Study Commission, Washington, D.C.

BRIGGS' REPLY

Since John P. Sheffey kindly sent me a copy of his February 6th letter to you, I have the opportunity to respond to his comments. If you decide to publish his letter, I would appreciate it if you would also consider the following:

Mr. John P. Sheffey's main concern was that I made no mention of the transfer of marine life that takes place through the existing canal. Although many organisms have undoubtedly been transported by clinging to the hulls of ships or by living in the salt-water of ship's ballast tanks, the important point is that such transfers have not generally resulted in successful colonizations. For this reason, marine biologists have not been particularly interested in evaluating them.

It would be a tragic error for us to conclude that, because the present canal has not served as a successful migratory route, there is no danger of a new sea-level canal doing so. How can there be any doubt that an open canal, providing a continuous salt-water passage between the oceans, would present a far better opportunity for successful migration? Many Red Sea animals have succeeded in passing through the Suez Canal to colonize the Mediterranean despite having to overcome formidable temperature and salinity barriers. Since a sea-level Panama canal would contain no such barriers, one can only expect that a huge number of successful migrations would take place.

Considering that the mean sea-level of the Pacific side is 0.77 feet higher than the Atlantic, a very small net flow toward the Atlantic would take place. However, the gradient would be so slight—about 0.2 inches per mile—that it would have little effect compared to the difference in tidal amplitude. The tidal currents would cause so much fluctuation and mixing that it seems reasonable to conclude that most marine animals would have ample opportunity to migrate in

either direction. We must also bear in mind that many planktonic as well as large organisms have sufficient swimming ability to counteract the effect of a slow net flow in one direction. Finally, we should recognize that many of the benthic invertebrate species will be able to colonize the sides and bottom of the canal itself and, by this method, could slowly extend their populations from one ocean to the other.

I believe that the only dependable means by which large scale migrations and subsequent biological disaster in the tropical Eastern Pacific can be prevented is by the inclusion of an extensive freshwater barrier. The Atlantic-Pacific Interoceanic Canal Study Commission, with Mr. Sheffey as its Executive Director, has the responsibility of determining the feasibility of a new canal. It will make its final report to President Nixon in December, 1970. Biologists who wish to lend their support to the freshwater barrier concept should make their views known to the Commission and to their Congressmen.

JOHN C. BRIGGS,
University of South Florida, Tampa.

THE RFC MODEL SHOULD BE USED IN TODAY'S ECONOMY

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, earlier today, in a 1-minute speech I announced plans to introduce legislation to reestablish a Federal credit institution modeled after the successful Reconstruction Finance Corporation—RFC. Another homeowners loan corporation should also be considered.

Mr. Speaker, the tremendous work of this agency between 1932 and 1954 is a matter of public record. It financed thousands of public facilities and helped provide badly needed funds for small businessmen throughout the Nation.

This same type of credit—based on reasonable interest rates and terms—is badly needed today.

Mr. Speaker, a look at the history and the operations of the Reconstruction Finance Corporation shows how it could work in today's economy to provide credit for worthy projects, particularly for schools, parks, water and sewage facilities, and like public undertakings.

SCOPE OF OPERATIONS

The Reconstruction Finance Corporation was a public lending agency with unlimited authority to borrow funds from the U.S. Treasury. In addition to its loan authority, it subscribed for, purchased, and traded in the securities of private business enterprises; State and local government agencies, and other agencies of the Federal Government; and, through its subsidiaries, purchased and sold mortagages on both residential and income-producing properties. Until 1947, it used its retained earnings to extend various authorized programs, often utilizing income from one program to expand operations in another, at the discretion of its management. Thus, despite reductions in its original capital of $500 million, RFC disbursed more than $40 billion in direct loans during its life of succession and was conditionally committed to disburse many billions more under guarantees of loans and investments made by private financial institutions.

Its authority to borrow from the Treasury defined RFC as unique among Government agencies and made it more flexible than agencies operating under traditional Government appropriation procedures. Recognizing this flexibility, Congress frequently authorized advances and allocations of RFC funds to other Government agencies, subsequently reimbursing the Corporation with appropriated funds or by authorizing cancellation of the notes issued by RFC to the Secretary of the Treasury to obtain the funds. On one occasion, in 1941 when the public debt was approaching its limit, RFC ceased borrowing from the Treasury and issued its notes to the public. Part of these funds were then used to buy the stock of the Federal home loan banks from the Secretary of the Treasury as a means of providing the Treasury with additional funds. Other operations for the Federal Government include RFC's services as fiscal agent for the Defense Production Administration and its services as a liquidating agent for discontinued Government agencies and programs.

Beginning in 1940, RFC organized a group of subsidiaries to handle national defense and war programs. These subsidiaries developed sources for, manufactured, procured, stockpiled, and sold a long list of strategic materials and commodities; built and operated industrial facilities for war production; collected and salvaged scrap materials; conducted preclusive buying operations abroad, designed to handicap enemy powers; made subsidy payments to domestic producers and transporters of essential materials, both to encourage production and to help control prices; provided insurance against loss due to enemy action; and, for a short period after the war, undertook to dispose of surplus war property.

These programs were of types totally unrelated to RFC's normal financial activities and, while financed by the parent corporation with funds obtained from the Treasury, are not included in the $40 billion tabulation of RFC's disbursements since, as in the case of RFC's allocations to other Government agencies and to States for relief, Congress canceled the notes issued by RFC to the Secretary of the Treasury to obtain the funds so used.

Within the scope of RFC's "normal" lending operations, however, there was a requirement that there be a reasonable assurance of repayment. Some programs are not recorded as generally solvent. For instance, more than one-fourth of all amounts disbursed on loans to mining enterprises were charged off as losses. However, much of the expense incurred in administering small loans was absorbed in income from large loans and investments, and records show that, taken as a whole, interest income and other revenues exceeded losses and expenses.

The value of RFC's role in the economy has been questioned by those who argue that, after 1940, it ceased to be a countercyclical device, its operations being permitted to expand during a period of inflation. Nevertheless, RFC provided innovations in lending operations and filled notable gaps in the existing credit structure. For instance, RFC may be said to have effected a permanent extension in the term of business loans. Traditionally, commercial banks had limited such loans to a maturity of 1 year or less. By contrast, nearly 70 percent of the total disbursed by RFC for direct business loans from 1934 to 1951 had a maturity of 5 years and over. When RFC business loans declined as a result of its World War II activities, commercial banks took up the slack and, for the first time, began to engage actively in the extension of term credits. Similarly, with the dissolution of the corporation, other programs and types of lending operations were taken over by other financial institutions, both public and private. RFC as a concept, however, has not been replaced. No single type of financial institution, private or public, possesses either the flexibility or scope of operations exhibited by RFC in its lending programs.

BACKGROUND

Patterned on the War Finance Corporation, whose activities during World War I provided a precedent for Government assistance to private enterprise, the Reconstruction Finance Corporation was organized and began operations on February 22, 1932, a month after approval of the enacting legislation. Its primary purpose was to extend aid to agriculture, industry, and commerce through the medium of direct loans to banks, trust companies, and other financial institutions. Loans to smaller institutions were emphasized. The initial legislation also provided for assistance to railroads in the process of construction and to receivers of railroads.

Originally, RFC had a life of succession of 10 years, with the initial lending authority limited to a 2-year period. The remaining 8-year period was envisioned as necessary for any continuation of the initial programs. The various emergency programs enacted in 1933, however, made use of RFC as a funding agency and, in June 1934, an amendment to the original act permitted the Corporation to extend aid to small business firms. RFC was authorized to make loans directly or in cooperation with other lending institutions to solvent firms unable to obtain credit through normal channels. While the authorization of a maximum maturity of 5 years, an aggregate amount of loans outstanding of $500 million, and an aggregate amount to one borrower of $500,000 were reasonably liberal provisions, the limitation with respect to collateral hampered the volume of applications. The original language of this provision was interpreted to mean that the security offered must be equal to the principal of the loan. When extended in 1935, the business loan provisions of the act were liberalized to provide that loans be secured so as "reasonably to assure repayment." In addition, the maximum maturity of loans was extended to 10 years and the limitation of $500,000 to any one borrower was removed.

In subsequent years, RFC's lending authority was extended and broadened to include authority to purchase the capital stock of banks, insurance companies, agricultural credit corporations, and national mortgage associations. Authority was also given to make loans to agricultural improvement districts, disaster victims, public school authorities, and to assist in financing the construction of public works. In 1938 the business loan provisions were broadened to permit the Corporation to purchase the securities and obligations of any business enterprise, and thus to provide both credit and capital when either or both were not available from private sources. In addition, the limitation on maturities of loans was removed altogether and authority given to set maturities by administrative decision.

In 1940, RFC was given new responsibilities in connection with the national defense program and, subsequently, with wartime programs. For the most part, these programs were conducted by RFC subsidiaries. Nevertheless, relatively little lending was done under the regular programs.

RFC's life of succession had been extended in 1940 to January 22, 1947. It was subsequently reextended several times until, in 1948, it was extended to June 30, 1956. In 1947 and 1948, RFC was given a new charter under which its wartime powers were repealed and some of its functions curtailed. On the principle that the emergency had passed and that RFC must not compete with private sources of credit, RFC was required to have tangible evidence that a borrower could not obtain credit elsewhere. In addition, the capital stock of the Corporation held by the Treasury was reduced to $100,000, and its borrowing authority was limited to $2 billion outstanding on loans, investments, purchases, and commitments made after June 30, 1947. While this limitation on loans outstanding was subsequently increased—up to $3.75 billion in April 1950, primarily as a result of the increased mortgage activity of the Federal National Mortgage Association, an RFC subsidiary—other limitations were imposed by Congress as to the amount of loans outstanding for specific programs. Further, it was stipulated that loans should serve the public interest, and that activities should be curtailed in times of inflation. Subsequent amendments in 1950, 1951, and 1952 added special lending powers with respect to defense production and gave priority to defense loans.

On July 30, 1953, the RFC Liquidation Act was approved as part of the legislation which authorized creation of the Small Business Administration, and the Corporation's lending powers were terminated effective on September 28, 1953. Under the provisions of this legislation, RFC continued as an independent agency until June 30, 1954. Thereafter for further liquidation, the Secretary of the Treasury succeeded to and exercised all powers, duties, and authority previously lodged in the Administrator of the Corporation. On June 30, 1957, the Reconstruction Finance Corporation was abolished as provided by Reorganization Plan No. 1 of 1957.

RFC FINANCING—CAPITAL STOCK

The original Reconstruction Finance Corporation Act provided for capital stock in the amount of $500 million. Subscription was made and paid for by the Secretary of the Treasury. Under amendments to the act approved June 25, 1940, $175 million of the capital stock of the Corporation was retired in conjunction with provisions for RFC to issue its notes to the public. At the time, the public debt was approaching its limit and these amendments served to ease the strain on the Treasury of RFC's enlarged responsibilities under the National Defense Act. An additional $225 million was retired under the provisions of the amendment approved May 25, 1948 in conjunction with curtailments of RFC's lending functions. The remaining $100 million of capital stock was outstanding until abolition of the Corporation on June 30, 1957.

LIMITATIONS ON OUTSTANDING OBLIGATIONS

Under the original act, RFC's outstanding obligations were not to exceed three times the amount of its capital stock, or $1.5 billion. This authority was enlarged in 1932 and 1934 to a total of $3.75 billion, and various amendments after 1940 increased the total authority to issue obligations to $14,089,528,165 as of June 30, 1947. An additional borrowing authority for specific purposes—primarily for loans and advances to, and purchases of the securities of other Government agencies—was utilized to the extent of $4,977,500,000 as of June 30, 1947.

Effective July 1, 1947, most of RFC's wartime functions were terminated and its borrowing authority limited to $2 billion outstanding on loans, investments, purchases, and commitments made after June 30, 1947. This limitation was subsequently increased—to $2.5 billion in July 1949, to $3.5 billion in October 1949, and to $3.75 billion in April 1950—primarily as the result of the increased activity of RFC's mortgage subsidiary, the Federal National Mortgage Association.

Within this general authority of $3.75 billion, there were the following limitations imposed by Congress:

For construction by public agencies	$200,000,000
For catastrophes	40,000,000
For the capital of insurance companies	15,000,000
For civil defense loans	250,000,000

In addition to the above, RFC was authorized to utilize $50 million of its funds for assistance to prefabricated housing under the Housing Act of 1948. Other special programs after June 1947, included $2.176 billion, borrowed from the Treasury and disbursed to provide temporary financing for foreign aid programs, these advances being repaid out of subsequent appropriations.

Under Reorganization Plan No. 22 of 1950, the Federal National Mortgage Association was transferred from RFC to the Housing and Home Finance Agency, and RFC's lending authority was reduced by $2.75 billion, this amount being transferred to the Housing and Home Finance Agency. At that time, the remainder of RFC's housing authority under the 1948 act and its prefabricated housing program were also transferred to the Housing and Home Finance Agency. As a result, RFC's lending authority was reduced to $993 million outstanding on loans, investments, and commitments made after June 30, 1947, and remained at this figure until liquidation of the Corporation.

BORROWINGS OF RFC

The following breakdown of RFC's borrowings covers the entire period of its life of succession:

Notes issued to the Secretary of the Treasury	$51,346,850,497
Notes issued to the public	3,072,634,547
Total	54,419,485,044

NOTES ISSUED TO THE TREASURY

The initial issue of notes to the Secretary of the Treasury matured in 6 months and bore 3½ percent interest. Subsequent issues prior to 1947 were negotiated between RFC and the Treasury as to maturity and interest. The maximum maturity during this period was 3½ years and rates ranged from ⅛ to 3½ percent. The average annual rate on RFC's notes steadily declined from the 3½ percent maximum in 1932 to 1.072 in 1939. Thereafter, with the exception of two specific Government programs, the notes bore 1 percent interest. In 1947, Congress enacted an amendment requiring that interest on notes issued by RFC to the Secretary of the Treasury be set in relation to current average rates on Government bonds. Subsequent rates on notes ranged from 1⅞ to 2⅛ percent, the large majority being at the lower figure.

NOTES ISSUED TO THE PUBLIC

In relation to the provisions of the Emergency Act of 1933 devaluating the dollar, the first notes issued by RFC to the public were given in payment for gold. Between October 1933 and January 1934, the Corporation issued a total of $134,482,713 to acquire 695,027 ounces of domestic, and 3,418,993 ounces of foreign gold. The notes were turned over to the Treasury for cash and retired at maturity on February 1, 1934. RFC took a discount of $81,763 in exchanging its notes for gold.

Other notes issued to the public under the provisions of the 1940 amendments previously noted were taken primarily by banks and other financial institutions from which RFC had purchased preferred stock, debentures, or capital notes. In some cases, the notes were retired by crediting the amount against the principal of the loan made by RFC to the institution. Interest rates on these issues ranged from ⅞ to 3 percent.

RETAINED EARNINGS

Prior to 1948 there were no statutory provisions which required RFC to relinquish earnings. Such earnings were used by the Corporation to finance its operations, and, frequently, income from one program was used to fund other programs. For instance, funds obtained from the liquidation of the Smaller War Plants Corporation, an independent agency,

were utilized by RFC to expand operations under its general lending authority.

Under the 1947 amendments, RFC was required to pay as a dividend to the Treasury any amount earned in excess of $250 million and a reasonable reserve for losses. The effect, in line with other provisions of the amendments, was to curtail RFC's lending authority. In December 1948, RFC paid the Treasury a dividend of $307,391,555, based on its accumulated net income of $557,391,555 for the year ending June 30, 1948. From 1949 to 1954, the Corporation paid a total of $82,946,891 to the Treasury as dividends on earnings in excess of $250 million per annum. After 1954, liquidation of the Corporation was underway and all excess cash was turned over to the Treasury. Accumulated net earnings for the years 1955, 1956, and 1957 totaled $223,154,595.

RFC LENDING FUNCTIONS

RFC authorized a total of $46,468,722,698 for allocations, loans, and other investments during the period from February 2, 1932, to September 28, 1953, excluding loans, advances, purchases, and contract authorizations authorized by subsidiaries of RFC and financed with funds secured from the parent organization. Actual disbursements during this period amounted to $40,555,894,138, with recoveries of amounts disbursed in the form of repayments, notes canceled, and foreclosures totaling $39,881,414,031.

Of the total of over $46 billion authorized by RFC, $7,235,248,449 was authorized for loans and allocations to other Government agencies under congressional directives, and $692,299,251 was authorized for purchases of securities from the Federal Emergency Administrator of Public Works, subsequently entitled the Public Works Administrator. The remaining $38,541,174,998 was authorized for loans and investments at the discretion of RFC's management. The composition of the latter type of authorization and disbursement is as follows:

	Amount authorized	Disbursements to Sept. 28, 1953
Loans to and investments in financial institutions	$4,815,324,697	$3,906,201,681
Loans to business enterprises	5,153,294,815	2,637,329,690
Loans to agricultural financing institutions	2,454,133,430	1,452,502,107
Loans to railroads	1,059,867,787	938,440,875
Loans to and investments in public agencies	1,024,203,892	793,600,115
Investments in RFC mortgage loan subsidiaries	1,831,551,598	1,778,093,357
Loans to foreign governments	495,000,000	460,000,000
Investments in Government agencies	391,991,000	391,933,000
Other loans and investments	97,507,778	77,098,982
Investments in RFC's wartime subsidiaries	21,218,300,001	20,877,617,233
Total	38,541,174,998	33,312,817,040

A breakdown by periods indicates that, during the first 3 years of operations, RFC loans and investments were concentrated in the area of providing assistance to financial institutions, railroads, and agencies providing financial assistance to agriculture. After 1935, aid to financial institutions diminished and loans and investments to business enterprises and public agencies, as well as mortgage loans, assumed greater importance. Between 1940 and 1945 more than 80 percent of all amounts authorized by RFC were to its wartime subsidiaries, with loans to business enterprises making up the bulk of the remainder. After the war, RFC's lending and investment activity was largely concentrated in the fields of business loans and residential mortgages, with loans to business enterprises reaching a peak in 1949 and mortgage activity at its highest level during 1949 and 1950. A breakdown of individual lending programs follows:

LOANS TO AND INVESTMENTS IN FINANCIAL INSTITUTIONS

While RFC's lending operations expanded greatly during the more than 20 years of its life of succession, loans to financial institutions under the provisions of the initial RFC Act represents the single largest category of loans disbursed under RFC's normal lending authority. The extent of financial assistance provided by RFC to the various types of financial institutions is shown in the following table:

	Authorized	Disbursed
Banks and trust companies	$3,981,365,688	$3,265,450,731
Mortgage loan companies	494,636,731	354,149,576
Building and loan associations	178,989,560	140,158,068
Insurance companies	159,689,750	145,843,210
Credit unions	642,968	600,096
Total	4,815,324,697	3,906,201,681

More than three-fourths of the total disbursed for these loans was paid out in the first 2½ years of the Corporation's existence. Nevertheless, when the Corporation began liquidation in 1953, there was still $44.6 million outstanding in these loans and investments, loans in only two categories—to building and loan associations and to credit unions—having been repaid in full.

As noted, the authority for loans to credit unions was little used, only 10 loans to seven credit unions having been disbursed. The bulk of RFC's authority for loans to financial institutions was used to provide assistance to banks and trust companies. A summary, according to the nature of these loans, is as follows:

LOANS TO BANKS AND TRUST COMPANIES UNDER SEC. 5 OF THE RFC ACT, AS AMENDED

	Number of authorizations	Number of institutions	Amount authorized
Loans to open banks	10,592	4,922	$1,335,047,661
National	2,224	813	360,439,541
State	8,368	4,109	974,608,120
Loans to closed banks, to aid in reorganization or liquidation	4,817	2,421	$1,181,774,129
Conservators, national and District of Columbia	197	181	129,813,204
Conservators, State	38	19	33,030,264
Receivers national and District of Columbia	2,915	955	537,738,731
Receivers, State	1,631	1,233	464,603,947
Liquidating agents-national	9	9	10,028,664
Liquidating agents-State	27	24	6,559,319
	15,409	7,343	2,516,821,790

As the summary indicates, RFC gave preference to the smaller State banks which were still open. However, in handling assistance to closed banks, applications of conservators, receivers, and liquidating agents of national banks were treated on a par with those of State banks. Of the total disbursed, $21,447,380 was charged off, all but $1,262,600 of it being in connection with losses on loans to State banks.

BUSINESS LOANS

Loans and investments in business enterprises constitute one of RFC's most significant lending programs, both in terms of the volume of loans and continuity of operations. Initiated in 1934, the program was subsequently enlarged and liberalized to permit RFC to make loans to, and purchase the obligations of any business enterprise, with both maturities and amounts to any one borrower being determined at the discretion of its management. While commercial loans to business enterprises were necessarily curtailed during the period from 1940 to 1945, the program was expanded after the war, nearly three-quarters of the loans, by both number and amount, being disbursed after February 1945, and almost half of the total disbursed after June 1948.

RFC's business loans were of three types; direct loans, immediate participation loans, and deferred participation loans. Direct loans were authorized, disbursed, and serviced by RFC. Immediate participation loans were authorized in cooperation with a participating financial institution. Part of a loan was disbursed by RFC and the balance by the participating institutions. In some cases, RFC disbursed the entire amount and immediately sold part of it to the participating institution, or alternatively RFC purchased a part of the loan at the time of disbursement by the participating institution. Servicing of loans was provided by either party as agreed on. Deferred participation loans were serviced by the financial institution with an

agreement under which RFC would purchase a stated portion of the outstanding loan on request.

Prior to 1947, RFC's business loan statistics treated participation loans—both immediate and deferred—in a manner different from that of subsequent periods. During the earlier period, sales of participations were treated as direct loans and purchases of participations grouped with deferred participations. After July 1, 1947, both types of immediate participations were grouped in a single class, with direct loans and deferred participations each making up separate categories. In a limited number of cases, loans made to business enterprises took the form of purchases of capital stock and other obligations issued by concerns and were treated as direct loans for statistical purposes. With these qualifications as to type of loan, the following summary indicates the numbers and amounts of RFC's business loans in the various categories:

	Number	Authorized	Disbursed
Loans under authorities other than national defense	52,932	$3,300,846,049	$1,718,642,480
Direct loans and sales of participations (through June 30, 1947)	14,041	797,072,135	554,508,269
Deferred participations and purchases of participations (through June 30, 1947)	16,355	684,167,370	33,078,651
Mining loans (through June 30, 1947)	352	20,659,800	10,118,109
Loans to the fishing industry (through June 30, 1947)	27	809,700	719,675
Direct loans (July 1, 1947 to Sept. 28, 1953)	11,333	1,142,836,250	819,545,185
Immediate participation loans (July 1, 1947 to Sept. 28, 1953)	1,047	216,512,534	152,891,528
Deferred participation loans (July 1, 1947 to Sept. 28, 1953)	5,595	265,771,750	48,386,291
Direct mortgage loans classified as business loans	4,182	173,016,510	99,394,772
Loans under national defense authorities (June 25, 1940 to June 30, 1947)	10,585	$1,852,448,766	$918,687,210
Direct loans and sales of participations	4,391	1,261,473,769	839,059,796
Deferred participations and purchases of participations	2,326	382,071,384	17,422,595
Security purchases for automobile financing	153	132,143,106	
Loans and purchases of rationed articles and commodities	3,673	75,652,157	62,158,719
Contract settlement loans	6	1,108,350	46,100
Total	63,517	5,153,294,815	2,637,329,690

SPECIAL BUSINESS LOAN PROGRAMS

VETERANS LOANS

Under section 5(d) of the Servicemen's Readjustment Act, RFC authorized 3,525 direct loans to veterans up to June 30, 1947, and disbursed $8,692,829 with the guarantee of the Veterans' Administration. The Corporation also authorized 170 direct loans to veterans which were not guaranteed by VA, disbursements amounting to $918,689.

THE BLANKET PARTICIPATION AGREEMENTS PROGRAM

The BPA was a 2-year program to aid reconversion under which RFC agreed to take up to 75 percent in deferred participation in loans made to business enterprises. Unlke other participation agreements authorized by RFC, the Corporation relied entirely on the banks' opinion of a borrowers' credit standing. A limitation of $350,000 was placed on the aggregate amount outstanding to one borrower. Bank disbursements on BPA loans totaled almost $500 million and RFC's agreed participation was $360 million, or over 70 percent. However, requests by banks for RFC to take up its share of loans aggregated only about $30 million, with $4 million charged off as uncollectible. About 2,400 banks or 21 percent of the Nation's total—made loans under the BPA program.

SMALL LOAN PARTICIPATION PROGRAM

The SLP program was, in a sense, a continuation of the BPA program which it succeeded. It was, however, limited to participation in loans of $100,000 or less and RFC was required to approve each request individually. A total of 6,328 loans in an aggregate amount of $151,323,284 were authorized, and a total of $12,617,807 disbursed by RFC.

INDUSTRIAL CLASSIFICATION OF BUSINESS LOANS

The preponderance of RFC loans to business enterprises were made to manufacturing concerns. A breakdown by periods indicates that, prior to December 31, 1941, RFC authorized a total of $347,492,046 to 4,347 concerns engaged in manufacturing, and a total of $135,928,680 to 3,777 concerns which were engaged in nonmanufacturing enterprises. From June 25, 1940, to June 30, 1945, most of the business loans authorized by RFC were to assist in financing the acquisition of plant facilities. During this period, the majority of funds went to manufacturers of basic materials and military equipment, with manufacturers of products—such as textiles, food, lumber, machine tools, machinery, and so forth—receiving allocations of only $155,936,998 of the $1,402,961,584 authorized. Between January 1, 1950, and February 28, 1953, RFC authorized a total of 3,542 loans in the amount of $361,955 to nonmanufacturing industries; and a total of 3,606 loans in the amount of $630,175 to manufacturing industries.

SIZE OF BUSINESS LOAN AUTHORIZATION

The following table indicates the distribution of the number and amount of business loans authorized by RFC, by size and type of loan:

	Direct loans and immediate participations		Deferred participations	
	Number	Amount	Number	Amount
$5,000 or less	11,028	$29,630,483	2,198	$5,363,664
$5,001 to $10,000	5,789	45,279,454	3,326	19,266,651
$10,001 to $25,000	7,424	130,617,683	6,459	82,799,687
$25,001 to $50,000	4,743	181,802,146	5,010	136,839,622
$50,001 to $100,000	3,613	282,915,218	3,911	222,392,609
$100,001 to $200,000	1,396	210,934,136	1,333	145,407,043
$200,001 to $500,000	1,127	$358,287,319	1,056	$235,936,746
$500,001 to $1,000,000	370	270,189,762	171	91,505,773
Over $1,000,000	362	2,070,424,287	159	348,828,028
Total	35,852	3,579,980,488	23,623	1,288,339,823

LOANS TO AGRICULTURAL FINANCING INSTITUTIONS

Under the original RFC Act, the Corporation was authorized to make loans to various types of institutions engaged in providing credit for agricultural purposes. To a great extent, the loans made by RFC under this authority were to Government or quasi-Government institutions but differed from the loans and allocations made to other Government agencies in that RFC could prescribe the terms and conditions of the loan and that loans were required to be "fully and adequately secured." Subsequently, RFC was authorized to make loans to help finance the sale of agricultural surpluses abroad, to finance the carrying and marketing of commodities and livestock, and to make loans to the Secretary of Agriculture for the purpose of acquiring cotton. The loans authorized by RFC to agricultural financing institutions under the various authorities are summarized as follows:

	Authorized	Disbursed
Under sec. 5, RFC Act:		
Federal land banks	$399,636,000	$387,236,000
Joint-stock land banks	33,055,359	26,194,970
Federal intermediate credit banks	9,250,000	9,250,000
Regional agricultural credit corporations	178,840,453	173,243,641
Other agricultural credit corporations	6,120,867	5,643,618
Livestock credit corporations	14,511,328	12,971,599
Under Emergency Relief and Construction Act, 1932:		
Commodity Credit Corporation	$1,604,712,665	$767,716,962
To finance agricultural commodities	86,061,513	19,644,492
To finance exports of agricultural surplus	98,445,245	47,300,825
Under the Agricultural Adjustment Act, 1933: Secretary of Agriculture	23,500,000	3,300,000
Total	2,434,133,430	1,452,502,107

RFC MORTGAGE SUBSIDIARIES

While the original RFC Act authorized the Corporation to make loans to mortgage loan companies, it did not provide authority to subscribe to the capital stock of such companies. The act of January 31, 1935, added a new section 5c to the RFC Act which authorized such subscriptions in order to assist in the reestablishment of a normal mortgage market. "Although the power to do so was implied rather than specific," as the final report of the Corporation comments—page 93—RFC used the authority to create two subsidiaries to deal in real estate mortgages, the RFC Mortgage Co. and the Federal National Mortgage Association, and disbursed a total of $1,705,001,899 to these subsidiaries.

THE RFC MORTGAGE CO.

Incorporated in March 1935 under the laws of the State of Maryland, the RFC Mortgage Co. was, however, a division of RFC with three officials of the Corporation serving as incorporators, its capital stock purchased by RFC, and the administration of its affairs conducted through the same organization and offices as those of the parent corporation. Under provisions of the act of June 30, 1947, the assets and liabilities of the company were transferred to RFC and the RFC Mortgage Co., was subsequently dissolved. From 1935 to 1947, RFC provided the company with funds amounting to $334,910,020, $25 million through subscriptions for capital stock and the balance through loans. At the time of the company's merger with RFC, the Corporations investment was $80,352,871, including the $25 million subscribed for capital stock.

A summary of the RFC Mortgage Co.'s lending and purchasing activities is provided by the following table:

	Authorized		Disbursed to June 30, 1947	
	Number	Amount	Number	Amount
Large-scale housing projects—FHA insured	46	$38,098,000	19	$7,466,833
Other FHA-insured mortgages	74,108	293,989,550	63,402	244,764,820
Mortgages insured by VA	25,102	148,537,930	11,367	67,681,262
Direct loans on income-producing properties	4,182	$173,016,510	2,820	$99,394,772
Purchases of property	15	7,259,591	15	3,228,815
Total	103,525	660,901,581	77,623	422,536,502

The company acted to provide a secondary market for VA-insured mortgages from August 7, 1946, to June 30, 1947. In July 1948 the authority for RFC to purchase VA-insured mortgages was reactivated by legislation and the function undertaken by the Federal National Mortgage Association. FNMA also undertook to administer the remaining obligations of the RFC Mortgage Co. in the Corporation's portfolio when RFC was liquidated in 1954.

THE FEDERAL NATIONAL MORTGAGE ASSOCIATION

The FNMA was chartered by the Federal Housing Administrator, as authorized by title III of the National Housing Act, on February 10, 1938. RFC subscribed for and paid in $10 million for the capital stock of the Association, and also paid in $1 million to surplus. In 1948, FNMA's capital stock was increased by $10 million, also paid in by RFC. Staffed by RFC personnel and operating through the Corporation's field offices, FNMA functioned as a division of RFC until September 7, 1950 when, under Reorganization Plan No. 22 of that year, it was transferred to the Housing and Home Finance Agency. Prior to transfer, RFC had made loans to FNMA totaling $1,349,091,869, of which $1,007,226,308 was outstanding at the time of transfer, in addition to the $21 million in capital stock and paid in surplus which RFC had provided. Repayment for RFC's investment was provided from funds borrowed by FNMA from the Secretary of the Treasury.

During the period in which FNMA was a subsidiary of RFC, it authorized the purchase of 414,449 mortgages as follows:

	Total	VA mortgages	FHA mortgages
Authorized	$3,084,211,324	$1,891,014,451	$1,193,196,873
Canceled	345,497,165	101,549,900	243,947,265
Disbursed	1,851,042,483	1,096,881,372	754,161,111
Repayments and sales	709,178,636	172,259,012	536,919,624
Other reductions	$12,172,121	$1,282,302	$10,889,819
Transferred to HHFA:			
Commitments	887,671,676	692,583,179	195,088,497
Mortgages	1,129,691,726	923,340,058	206,351,668

RAILROAD LOANS AND INVESTMENTS

The original RFC Act authorized loans to railroads for temporary financing, to railroads in the process of construction, and to receivers of railroads where funds could not otherwise be obtained at reasonable rates. All loans required the approval of the Interstate Commerce Commission, maturities were limited to 3 years, and the act stipulated that loans be adequately secured. The maximum maturity of such loans was extended to 5 years in 1934 and, in 1935, the loan authority was extended and RFC was authorized to purchase the obligations of railroads engaged in interstate commerce with the approval of the Interstate Commerce Commission. The limitation on aggregate funds outstanding of $350 million was increased to $500 million in June 1940. In 1947 and 1948 RFC's authority to provide financial assistance to railroads was further extended but few loans were made under the extension.

Under the original limitations, RFC authorized 139 loans to 70 borrowers and disbursed $450,941,524. After 1935, under its new authority, RFC made 248 loans to 98 railroad companies in the amount of $1,059,867,787. In addition to these loans, the Emergency Appropriation Act of 1934 authorized RFC to purchase railroad obligations from the Federal Emergency Administrator of Public Works—subsequently, Public Works Administrator—in order to provide the PWA with funds to make additional loans. This authority existed up to 1947 but was not exercised after 1941. Prior to 1941, RFC authorized the purchase of 54 issues of railroad securities and disbursed $199,290,500 to PWA. The premium of $6,889,202 which was collected was not considered to be income by RFC and was credited to PWA.

LOANS TO PUBLIC AGENCIES

In September 1932, an amendment to the original act authorized RFC to purchase the securities of, or make loans to States and Territories and their political subdivisions; municipalities; public corporations, boards, and commissions; drainage, levee and irrigation districts; and public municipal instrumentalities formed in more than one State. RFC's activities in this area are summarized as follows:

	Authorized	Disbursed
Self-liquidating projects, under the Emergency Relief and Construction Act of 1932	$398,873,884	$339,533,641
Drainage, levee, and irrigation districts under the Emergency Farm Mortgage Act of 1933	150,127,449	101,787,683
Public bodies under sec. 5(d) of the RFC Act	$475,202,559	[1] $385,262,291
Securities of public agencies purchased from FERA and PWA	493,854,288	452,181,084
Total	1,518,085,180	1,278,764,699

[1] Includes $32,983,500 disbursed on outstanding commitments subsequent to Sept. 28, 1953; does not include disbursements for advances related to care and preservation of collateral.

RFC loans for self-liquidating projects—those whose construction costs would be returned in time by means of tolls, fees, rents, and other charges exclusive of taxation—were not limited as to maturity and funds could be used to

finance public projects authorized by Federal, State, or municipal law. In addition, loans could be made to private corporations formed solely for the purpose of providing low-cost housing and reconstruction in slum areas where such projects were regulated by State or municipal law; to private corporations engaged in constructing or improving bridges, tunnels, and other facilities devoted to public use; and to private corporations to aid in financing projects for the protection and development of forests and other renewable natural resources. Mostly, however, the self-liquidating projects financed by RFC were entirely public in nature. More than three-fourths of the total authorized was disbursed in the State of California, representing an investment by RFC in $208 million in bonds issued by the Metropolitan Water District of Southern California and $70 million advanced for the San Francisco-Oakland Bay Bridge.

While the original authority for loans to drainage, levee, and irrigation districts was limited to refinancing completed projects, RFC's authority was broadened in 1936 to include loans for the acquisition or construction of such projects. Maturities of up to 40 years were permitted but loans were required to be "fully and adequately secured" and RFC was required to appraise each project to determine that it would prove economically sound. A total of 1,318 loans were authorized in 671 districts primarily concentrated in Southern and Western States. Activity in this field was highest between 1933 and 1937, but continued at a lower rate into 1947.

RFC's original authority to make loans to, and purchase the securities of all types of public agencies and bodies was transferred to the Federal Emergency Administrator of Public Works in 1933, in conjunction with the authorization for RFC to purchase securities from FERA. RFC's authority in this field was, however, subsequently reactivated in 1938 and retained throughout the life of the Corporation. There was no statutory limitation as to maturity, but loans were required to be of such sound value or so secured as to reasonably assure retirement or repayment. Assistance was given broadly among the States but there were certain concentrations in dollar amounts for large projects. Among these were the $136 million authorized for the State of Arkansas Highway Department; the $37 million for the Pennsylvania Turnpike Commission; $20 million for the city of Philadelphia Gas System; $28,885,000 for the city of Cleveland Transit Authority; and $22,450,000 for the hydroelectric project of Public Utility District No. 1 of Pend Oreille County, Wash.

FINANCING OTHER GOVERNMENT AGENCIES

Aside from loans to agricultural financing institutions and in addition to loans and allocations to other Government agencies at the specific direction of Congress, there were several instances in which RFC funds were used to finance Government agencies within the discretion of the executive branch.

The Export-Import Banks was one such instance, with RFC providing the original capital and subscribing to the initial issue of preferred stock. In all, RFC disbursed a total of $201,500,000 to the Export-Import Banks, consisting of $176,500,000 in subscriptions for preferred stock and $25 million in loans.

The Defense Homes Corp. was also financed by RFC under Executive order. RFC lent a total of $65,692,000 to DHC, of which $40,870,411 was outstanding when DHC was dissolved in 1949 and its assets transferred to RFC for liquidation. With the dissolution of RFC these assets, reduced to $27,307,358, were transferred to FNMA.

The original RFC Act had authorized the Corporation to assist in financing the Federal home loan banks by providing up to $125 million out of its capital to enable the Secretary of the Treasury to subscribe the stock of the banks, and $124,741,000 had been disbursed for this purpose. Subsequently, in 1941, when the public debt was approaching its limit, RFC ceased borrowing from the Treasury and issued its notes to the public, and with part of these funds bought the stock of the Federal home loan banks from the Secretary of the Treasury as a means of providing the Treasury with additional funds. RFC continued to hold this stock until 1947 when a portion of RFC's notes payable to the Secretary of the Treasury, equal to the amount of the stock involved was cancelled and the stock of the banks returned to the Treasury.

LOANS TO FOREIGN GOVERNMENTS

Several specific authorizations for loans to foreign governments were enacted, beginning with the Emergency Relief and Construction Act of 1932 which authorized loans to finance sales of agricultural surpluses in foreign markets. Under this authorization, a loan of $17,105,386 was disbursed to the Republic of China in 1933. In 1941, RFC was authorized to make loans for the purpose of achieving the maximum dollar exchange value in the United States for the securities or property of any foreign government, and $390 million was disbursed to Great Britain in the only instance in which this authority was used. In 1946 RFC was authorized to lend up to $75 million to the Philippine Republic after consultation with the National Advisory Council on International Monetary and Financial Problems, and $70 million was disbursed under this authorization.

DISASTER LOANS

RFC was first authorized to make disaster loans in March 1933 and its authority to make such loans—amended and broadened in 1934, 1937 and 1945—remained continuous until 1953 when, under the RFC Liquidation Act, its authority in this area was transferred to the Small Business Administration. The following table summarizes the activities of RFC and its affiliate, Disaster Loan Corporation, in this area according to legislative authority:

	Authorized		
	Number	Amount	Disbursed
Act of Mar. 23, 1933, as amended	13	$10,450,232	$8,529,108
Act of Apr. 13, 1934, as amended	705	5,734,289	3,473,947
Act of Feb. 11, 1937, as amended (DLC)	24,088	37,361,660	31,354,550
Act of June 30, 1945, as amended	5,579	$35,439,075	$25,468,048
Total	30,385	88,985,256	68,825,653

CIVIL DEFENSE LOANS

The Federal Civil Defense Act of 1950 authorized the RFC to make loans for civil defense purposes financed by borrowings from the Treasury. Seven loans were authorized in the amount of $5,568,000, all for assistance in financing the construction of hospitals. In 1953 the program was transferred to the Secretary of the Treasury.

MINOR LENDING FUNCTIONS

LOANS FOR PAYMENT OF TEACHERS' SALARIES

For a period of 7 months in 1934, RFC was authorized to make loans to public school districts for teachers' salaries due prior to June 1, 1934. The authority was used only once. A loan of $22,300,000 was disbursed to the Chicago Board of Education, all of which was repaid in 1934.

LOANS TO REFINANCE PUBLIC SCHOOL DISTRICT OPERATIONS

In 1935, RFC was authorized to make loans to tax-supported public school districts to reduce or refinance outstanding indebtedness incurred for construction, operation, and maintenance of public school facilities. The act required that such loans be allocated equitably among the States and that maturities be limited to 33 years. Under this authority, RFC authorized 35 loans to 31 school districts. Disbursements in the amount of $957,175 were made in only two States, Arkansas and Texas, and were repaid in full.

LOANS TO PROCESSORS OR DISTRIBUTORS SUBJECT TO PROCESSING TAXES

The provisions of the Agricultural Adjustment Act of 1933, which provided for the payment of taxes by processors or distributors of various agricultural products, also provided that processors or distributors subject to the taxes were eligible for loans from RFC in order to avoid the imposition of "any immediate undue financial burden." Only seven such loans were authorized and $14,718 disbursed, all of which was repaid.

LOANS TO STATE FUNDS FOR SECURING REPAYMENT OF DEPOSITS OF PUBLIC MONEY

In 1933, RFC was authorized to make adequately secured loans to States creating funds to insure repayment of deposits of public moneys. The only authorizations were for loans to the Board of Deposits of Wisconsin. All of the $13,064,631 disbursed was repaid.

FINANCING RFC'S WARTIME SUBSIDIARIES

Beginning in 1940, RFC's responsibilities were greatly enlarged by the

creation of eight subsidiaries to aid the Government in its national defense program. Through these subsidiaries, the Corporation was authorized to engage in financing plant conversion and construction, to acquire and construct and to own and operate war plant facilities, to make subsidy payments, to deal in and to stockpile strategic and critical materials, to administer the war damage insurance program, and to conduct a great variety of other activities unrelated to its normal lending operations. For the duration of the war, these operations overshadowed RFC's other functions, as much as 80 percent of its activity being related to the war effort.

Under the provisions of the act of June 30, 1945, RFC's wartime subsidiaries were merged with the parent organization. RFC received the assets of these corporations, but the original investments of $7.6 billion were charged off and the Act of June 30, 1948 canceled the Corporation's notes payable to the Secretary of the Treasury in an amount equal to the unrecovered costs of its national defense, war, and reconversion activities. Three of the production programs which had been undertaken by RFC subsidiaries were, however, continued on an active basis after the war: The program for the production and sales of synthetic rubber undertaken by the Rubber Reserve Corp., the program for the production and sale of tin undertaken by the Metals Reserve Corp., and the program for the production and sale of abaca fiber undertaken by the Defense Supplies Corp.

The operations of RFC's wartime subsidiaries were conducted in conjunction with programs of other Government agencies administering national defense and wartime functions. They were, however, financed through the purchase of capital stock and loans by the parent corporation. While RFC was repaid for advances with funds provided by the operations of its subsidiaries, more than one-third of the amounts advanced were recovered by cancellation of RFC's notes payable to the Secretary of the Treasury.

U.S. ATTORNEY MORGENTHAU—A GREAT AMERICAN

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, every once in awhile Members of Congress have the fortunate opportunity to deal with public officials whose intelligence, ability, and efficient dedication to their assigned tasks clearly distinguishes them from all others. This kind of public servant is rarely accorded appropriate recognition in this age of sensational news stories of ineptitude, conflict of interest, and downright dishonesty of public officials.

Today, I pay tribute to a man whom I consider to be one of the most outstanding men in Government with whom I have dealt during my 40 years in the Congress, Mr. Robert Morgenthau, U.S. attorney for the southern district of New York.

There is no need to recount here his achievements in law enforcement since he took office in 1961. His uncompromising and unrelenting prosecution of organized crime which is corrupting the very vitals of our society, his insistence on the highest standards of ethical conduct by public officials and employees, and the efficiently and inspired zeal of the office which he heads—the single most important law-enforcement office in the United States—have been well recognized and reported.

Although I had known him for a number of years, my first official contact came about as a result of the House Banking and Currency Committee's inquiry into the legal and economic impact of foreign banking procedures on the United States. His testimony was so impressive and his answers to the members' questions so direct and informative, that the continuation of this inquiry and legislative proposals limiting the illegal use of foreign bank facilities has a high priority status before our committee. I have included a copy of his statement at the end of these remarks.

It was my privilege to have worked with his illustrious father during the crisis-filled days when he was Secretary of the Treasury. I must say that Robert Morgenthau has carried forward and significantly added to the great contribution to this country by his family.

In recent months, since the change of administrations, there have been innumerable stories of pressures brought on Mr. Morgenthau for his resignation. We all know that political patronage has in the past extended to the office of U.S. attorney. This is unfortunate since these offices should be above the clear of political considerations. The confidence of the people would be far better served if the Federal prosecutors were selected on their ability to enforce the laws of the United States to the fullest extent without regard to any particular political aspect whatsoever.

President Nixon and the Attorney General now have a golden opportunity to once and for all sever the mark of political patronage from law enforcement. Through one simple act they can set a precedent which will serve as notice to all administrations to come that U.S. attorneys will be selected in accordance with a single standard—their ability to perform. They can do this through the magnificently simple act of announcing their intent to retain and support Robert Morgenthau in office.

At this point in the RECORD I insert a number of news stories and feature magazine articles about the illustrious career of this man:

STATEMENT OF ROBERT MORGENTHAU, U.S. ATTORNEY, BEFORE THE COMMITTEE ON BANKING AND CURRENCY, DECEMBER 9, 1968

Mr. MORGENTHAU. Thank you, Mr. Chairman. Mr. Chairman and members of the committee, I greatly appreciate being invited to appear before your committee.

Secret-numbered foreign bank accounts have become an ever increasingly widespread and versatile tool for the evasion of our laws and regulations and for the commission of crimes by American citizens and for hiding the fruits of crimes already committed.

There was a time when the secret-numbered Swiss account, for example, was an instrument used only by relatively sophisticated financiers. That is no longer true today.

The jet age has taken millions of Americans to Europe for summer vacations. It has brought many of them to the doorsteps of the Swiss banks where a very large number have found that secret foreign banks are available readily to them for lucrative criminal purposes. Operating in the other direction, the jet age also brought to the United States numerous representatives of foreign banks. While many of these do only proper and legitimate banking business, there are others who come here to seek new accounts and service old ones which are maintained for criminal purposes alone. One "finder" for a Swiss bank went so far as to open accounts at the bank for many of his friends with an initial "Christmas present" deposit of $50. The friends learned of the existence of their new accounts only on receiving the bank's Christmas card.

Foreign banks protected by secrecy laws now number among their American customers not only sophisticated international financial operators, but hoodlums from the world of organized crime, stock market swindlers and manipulators, corporate officers making illegal profits from their inside information, businessmen who hide profits from the tax authorities, and enormous numbers of stock market investors who through foreign banks evade income taxes on their trading profits. The latter group of ostensibly irreproachable citizens of the business community who have adopted foreign banks in preference to income taxes is now very large and represents a loss of tax revenues in the many millions of dollars.

For several years my office has investigated and studied numerous available sources of information. We have learned much about illegal uses of foreign banks by Americans. We have returned numerous indictments, and as the wealth of information we have accumulated is further increased and analyzed we expect that the number of criminal prosecutions will be accelerated. Even in the cases where we can successfully prosecute, it is necessary to spend thousands of manhours in piecing together complex and seemingly unrelated transactions in order to obtain indirectly information that banks will not directly furnish us. But naturally, we have receive virtually no cooperation from the foreign banks which hold the evidence of crime. Often we have had very complete information on criminal activity, but have been unable to prosecute because the foreign bankers would not furnish witnesses competent to introduce their banking documents into evidence. As a result it should be obvious that the increasing number of successfully prosecuted criminal cases represents only a small fraction of the crimes committed by Americans through secret foreign accounts.

Practically every Swiss bank, in addition to its deposit and credit banking activities also deals in securities for its customers. For dealing in American securities, these banks often maintain omnibus accounts at American brokerage houses. Through its account at the broker, a bank can trade the securities of all its customers without differentiation. So far as appears on domestic records, all the trades are made for the benefit of the foreign bank. No domestic record shows the identity of the principal for whom the bank acts or even distinguishes between trades for one principal and another. All activity is lumped together under the name of the foreign bank.

I would like to give you a few examples now, particularly of cases which are already closed. One which is a matter of public record is the *Gulf Coast Leaseholds* case, *United States* v. *Kelly*, 349 F. 2d 720 (2d Cir. 1965), certiorari denied, 384 U.S. 947 (1966).

There, no less than four "Liechtenstein trusts" holding Swiss bank accounts, operating under secrecy laws, were used by Ameri-

can promoters in a scheme to sell 750,000 shares of unregistered over-the-counter stock to the American public at prices that were manipulated to over $16 a share. After the promoters had banked their money, the stock dropped to under a dollar. Each of the trusts used in the *Gulf Coast* case was American-owned, but had as the titular head a Swiss lawyer. The trusts were organized to maintain accounts in a Swiss bank for their American principals. Thus, the promoters of the stock fraud had a double line of defense: The Swiss secrecy laws prevented disclosure of the fact that the bank accounts which were receiving money from the sale of the stock were owned by the trusts; and the secrecy laws also prevented disclosure of the fact that the real principals of the trusts were Americans.

The trusts were used as follows: One of the American promoters, a person with a criminal record, who had been enjoined from trading stock in his own name, purchased in the name of his Liechtenstein trust 750,000 shares of worthless stock from an American company at a nominal price. At the time, the trust had assets of $20.80. The trust then proceeded to sell the shares through American brokerage firms, which transmitted the proceeds of the sale to Swiss banks at which the trust had accounts. All told, on this investment more than $4 million was realized by the American promoter, through his trust, on his investment of $20.80. Part of the proceeds of the sale of the stock were passed from this trust to another trust, operating under Swiss secrecy laws, which served as the pocketbook for an investment advisory firm which plugged the stock in its market letter. The transfers between conspirators were accomplished by payments from one account at a Swiss bank to another, thus insuring maximum secrecy.

But the wall of secrecy which had been built around these operations collapsed. One of the defendants pleaded guilty and testified in detail as to how he had organized two trusts in order to get the benefit of the Swiss secrecy laws, and how he had assisted two of the other conspirators in forming a trust of their own to receive payoffs for their role in the fraud. The Swiss lawyer who was the titular head of two of the trusts gave testimony at trial, after being offered safe passage into the country. As a result, all of the defendants who had hidden behind the Swiss secrecy laws were convicted.

I might add, the trial of that case took 9 months, the second longest trial, I think, in the history of the Federal courts.

But success at piercing the Swiss secrecy laws is the exception, not the rule. The *Gulf Coast Leaseholds* case, illustrates the difficulties we are up against. Thus, before the indictment, the Swiss lawyer who ran two of the trusts, filed affidavits with governmental authorities conducting the investigation, stating that these trusts were not owned or controlled by Americans, even though he knew that these affidavits were false. When cross-examined about the affidavits at trial, he took the position that his duty to his American clients obligated him to make these false statements. As a result, the promoters of the stock fraud, during the period of the SEC's initial investigation, were able to use the Swiss secrecy laws as a shield behind which thy could operate anonymously. By the time the secrecy had been dispelled, the public had been bilked of millions of dollars.

In other similar instances we have formed well-founded suspicions that foreign banks or trusts were used not only to defraud and to unload illegally unregistered control stock, but also to manipulate and artificially support the market. Generally, such activity cannot be proven without the cooperation and testimony either of one of the insiders to the conspiracy or of the foreign bank which handled the order. Swiss banks have been used frequently to enable insiders to make illegal profits. We recently were able to prosecute successfully one such violator for the unreported sale of over a quarter of a million dollars in his company's securities, a company of which he was director and treasurer; $500,000 of such securities had been held for him in the account of a Swiss bank at various New York banks. While they were held in this fashion, there was no evidence available in this country linking the insider to his securities. The transactions could eventually be traced to him only because he caused the securities to be transferred to another U.S. bank to serve as collateral for a loan he obtained at the second bank. Nonetheless, because of the shield of Swiss bank secrecy, many details concerning the transactions were not and probably will never be known.

We have reason to believe that foreign banks have been used extensively by citizens to violate the margin requirements which the Federal Reserve Board imposes on security trading. Regulation T requires a customer purchasing securities through a U.S. broker to put up in cash a very substantial portion of the purchase price—in recent years the requirement has generally fluctuated between 70 and 90 percent. A foreign bank maintaining a special omnibus account at an American broker may furnish to only 20–30-percent margin. However, such a foreign bank must file a statement describing itself as a broker-dealer under U.S. law and promising to comply with regulation T by requiring its customers to put up whatever percentage of the purchase price regulation T requires. However, we know that in many cases Swiss banks have failed to require their customers to comply in this way.

In one such instance our office recently filed a criminal complaint against the Arzi Bank, of Zurich, Switzerland, and one of its directors, Joseph Pfeffer. The complaint alleges that Pfeffer solicited American accounts for the Arzi Bank which purchased securities for its new customers requiring them to put up as little as 10 percent when regulation T, which the bank was sworn to observe, was requiring between 70- and 80-percent margin.

Another Swiss bank with an omnibus account at a New York brokerage firm, permitted an investor to trade on borrowed money far outside the margin requirements; at one point this single customer was using $14 million to trade certain issues causing violent market fluctuations.

The ways in which foreign secret bank accounts are used to avoid income taxes are almost as numerous as the ways of earning money.

Persons who earn money abroad have the easiest and safest access to foreign banks as tax fraud havens. If the American businessman receives his earnings from a foreign source, he can deposit portions of it in a foreign bank and declare on his domestic income tax as much or as little of his true revenues as he choses. There is small likelihood of detection if he keeps double books carefully. Businessmen who make purchases abroad for resale here frequently keep phony double books fraudulently inflating the foreign purchase price so as to decrease the apparent domestic profit. The seller kicks back the difference to the buyer's foreign account.

Salesmen earning commissions from U.S. manufacturers for sales overseas have sometimes worked out a slightly more complicated device, as exemplified in a recent indictment which our office obtained. These salesmen set up a dummy Liechtenstein trust with a Swiss Bank account. A Liechtenstein lawyer who serves as the chief executive of hundreds of such business trusts became the ostensible head of of the foreign entity. The salesmen advised the U.S. manufacturers, and these include some leading American manufacturers, that most of the selling work would be done for them in the future by the Liechtenstein company and directed that the major portion of the sales commissions earned should be sent to Liechtenstein rather than to the U.S. salesmen. This money was deposited by the Liechtenstein lawyer in the Swiss bank. In this manner, the U.S. taxpayers fradulently evaded their income taxes on over $3 million unreported income in just 3 years.

Of course, every kind of profit from trading in securities or commodities can be earned free of tax if the account through which the trading is conducted is in foreign bank protected by secrecy laws.

Numerous U.S. investors have undertaken to avoid taxes by making their trading profits through Swiss bank accounts. The investor need only open an account in Switzerland and cable or mail trading instructions. The bank maintains huge accounts with U.S. brokers and executes its orders each day through these brokers on the appropriate U.S. stock exchange. The U.S. broker has no indication of the identity of the Swiss bank's client.

This system is ideal for the investor seeking long-term growth, since the loss of a day in cabling his order to Switzerland and back to New York will not be of great significance to him.

Many New York brokers deal in such large volumes for Swiss banks that they either maintain open telex lines or talk on the telephone several times a day. It has therefore been arranged for the trader to deal with a broker—sometimes using a code name—and give his order to buy or sell X security. The broker arranges to receive immediately such an order from the Swiss bank and executes the order as if he had reecived it from Switzerland for an unknown customer of the Swiss bank. The broker's only written confirmation will go to Switzerland, but he can advise the trader by phone of the completed transaction. To facilitate such trading, the Swiss bank can maintain the trader's account as a subaccount at the broker rather than as part of its general account. Thus, the broker might have one account labeled bank X, and others labeled Bank X, subaccount 1, 2, 3, etc. He would still receive the ostensible orders covering these subaccounts from Switzerland and would have no records identifying the true owner of the account.

Where the tax evading trader is the U.S. broker himself, the evasion is even easier. An indictment now pending trial in my office charges two floor brokers of the American Stock Exchange with having evaded taxes on earnings of over $1 million in 1957–60 by trading in New York for their own undisclosed account at the Swiss Credit Bank which was maintained in the name of a dummy.

Finally, many U.S. citizens operating cash businesses or businesses in which large amounts of cash are used can very easily hide a portion of their earnings in their foreign account with little possibility of detection. It is not difficult to get the money out of the country. When the amounts are sufficiently large, the Swiss banks have provided couriers who transport the cash itself. That is a service which has been used extensively by professional gamblers. Nor is it necessary for the courier to carry the money all the way to Switzerland. It is easier to take the money to Nassau, a half hour from Florida, where the Swiss banks have correspondent banks whose accounts are also protected by the secrecy laws. From there it is transferred to Switzerland.

It is not even necessary to go to so much trouble. Most of the large banks in major U.S. cities maintain a cable transfer service. A stranger can walk in off the streets to most of the major New York banks and present

large amounts of cash for cable transfer to the credit of a Swiss bank for credit for a stated account number or just for the general account of the Swiss bank. While the New York bank will generally ask his identity to fill out a currency report, a false name will not be checked, and we have checked literally dozens of these currency reports involving many millions of dollars, and have found in almost every case that a false name was used.

Ingenious ways have also been developed to permit the tax evader to have the use and enjoyment of the money he has concealed in a foreign bank, and Mr. Vinson has already discussed that and I won't go into any further details.

In some instances tax evaders will repatriate their secret foreign money by using it to buy their own local assets. In one investigated case, a real estate owner sold a valuable piece of property for nearly $1 million to a Swiss trust which was the customer of a Swiss bank. The Swiss trust was, of course, his own. He thus received the use of a million dollars which otherwise he would have had to leave in hiding. Thereafter the real property was managed for him—in secret—by the Swiss bank and he gained further advantage of avoiding income taxes on the revenue produced by the real estate.

Foreign banks have been used by Americans to conceal many different kinds of violations of law. One case presented by my office involved a major U.S. manufacturer and exporter which diverted substantial foreign aid funds to a foreign purchaser to buy its products to pay secret kickbacks to the purchasing agent. The kickbacks were deposited in a numbered account in a bank in Geneva.

In another case, which is now pending in the U.S. District Court for the Southern District of New York, involving sale of transformers under AID financing at $50, when the catalog price was $25, documents have been uncovered indicating that the same type of abuse through Swiss banks is going on right now. A document obtained in this case from an exporting agent states that there was "payment and commissions * * * through the Swiss Credit Bank in New York and Geneva."

Swiss banks have also been used as a haven for stolen securities, including securities issued by the U.S. Treasury Department. An indictment filed in our court involved the theft of $75,000 of Treasury bills from a securities firm in New York, of which $50,000 subsequently appeared in the offices of a Swiss bank. Two defendants were convicted for the interstate and foreign transportation of these stolen Treasury bills. The Swiss bank, however, declined to send a witness to testify concerning these stolen securities at its office.

Our investigation has also disclosed that some foreign banks have played an integral and not always passive part in even the most flagrant frauds upon American citizens and corporations. For example, a recent indictment returned in the southern district of New York involves a Swiss bank, owned primarily by Americans, and an attempt to defraud one of our Nation's largest banks of nearly $12 million. According to the indictment in that case, an employee of the U.S. bank was induced to send a forged and fraudulent cable to a correspondent of the U.S. bank in Geneva, directing it to transfer $11,870,924 of the U.S. bank's funds to the other Swiss bank where a courier was waiting to pick up the funds. Luckily, an employee of the correspondent bank grew suspicious because of a technical irregularity in the cable and thwarted the scheme by asking the U.S. bank for a confirmation.

Another example of the type of fraudulent transaction that certain unscrupulous foreign banks have made available to their American customers is a device referred to as the three-cornered window-dressing loan, involving a foreign bank, an affiliated "dummy" corporation usually located in the Caribbean area and an American borrower seeking fraudulently to "beef up" his balance sheet. I won't go into details of several of these transactions since the Chairman has already referred to them. I will say, though, that we discovered one such fraudulent transaction made by an American corporation at a time when it was in serious financial trouble. It was able to obtain new credit partially upon the basis of such a "beefed up" balance sheet. Shortly thereafter, however, it went bankrupt, and I might add that in that case the certified public accountants for the company sent a wire to the Panamanian bank in which the funds were on deposit to ask if these funds were free and clear, and the Panamanian bank sent back word that these funds were free and clear when in fact they were blocked and could not be removed from the bank. This publicly held corporation went bankrupt, but because of the applicable secrecy law, the fraud was not uncovered until after the statute of limitations had run.

Finally, we have found Swiss bank accounts used by diamond smugglers, loan sharks, policy operators and gambling casino operators to conceal illegal income and evade taxes. The problems which the use of foreign secret bank accounts creates for our national economy and for the enforcement of our laws is obviously vast.

In testifying today I have directed my remarks to law-enforcement problems created by the use of Swiss and other foreign banks. I do not intend to reflect adversely on the integrity of the vast majority of Swiss banks and bankers. Nor do I overlook the key role played by Swiss banks in the international money system. I believe, however, that there need be no conflict between the important role played by Swiss banks in international finance and the proper enforcement of the laws of the United States.

I therefore believe that the undertaking of this committee, with its vast experience and wisdom in matters of banking and currency, to investigate thoroughly this most troublesome area will be of great value to the Nation.

Chairman PATMAN. Thank you very much, Mr. Morgenthau.

Our next witness is Mr. Irving M. Pollack, Director of the Division of Trading and Markets of the Securities and Exchange Commission, accompanied by Mr. Mahlon Frankhauser of the SEC.

[From Business Week, Aug. 2, 1969]

WALL STREET'S CRIME-BUSTER WON'T BUDGE—U.S. ATTORNEY ROBERT M. MORGENTHAU, A CRUSADER AGAINST WALL STREET MISDOINGS, IS FIGHTING TO STAY IN OFFICE

Robert M. Morgenthau is a man of slight build whose baggy trousers make him look even smaller, and at times a bit clownish. But as U.S. Attorney for the Southern District of New York, his power is immense, and he has used it—as has no one in the post before him—to crack down on all sorts of misdoings on Wall Street as well as on other types of white-collar crime, such as income tax evasion, and on the Mafia.

For more than eight years he has been driven by a crusader philosophy, aiming to make the law more "even-handed." He says: "Slum kids have to feel something is being done about big business crime."

But Morgenthau is threatened. Unwilling to resign as most U.S. Attorneys do when the reins shift hands in Washington, Morgenthau, a Democrat, says he wants to complete his term, which ends in June, 1971. But New York Senators Jacob Javits and Charles E. Goodell, both Republicans, have proposed a replacement. And last month the Justice Dept. established a special investigation unit on organized crime for the Manhattan and Bronx sectors of Morgenthau's bailiwick. The move has been interpreted by many as a maneuver to undercut his power.

All this comes despite last year's judgment by a Republican Congressional task force that Morgenthau should be retained.

If he can't hold out until his term expires, Morgenthau would like at least to stick around until he can dig deeper into investigations he has just started on consumer fraud and the use of secret Swiss bank accounts. "I'm not staying because I like the job, but because there are important things to be finished," he said, tightening his eyes and pursing his lips so that his 50-year-old face looks aged.

PARTIAL VACUUM?

If Morgenthau is forced out, there are some who feel a new watchdog might patrol Wall Street less zealously. With the U.S. Attorney's office so swamped with work, it would be easy to shift priorities. Partisans of this view also point to President Nixon's letter to Wall Street leaders last fall promising to ease up on heavy-handed regulation.

Virtually all the major criminal cases evolving out of the Street have stemmed from Southern District indictments under Morgenthau. He wasted no time to start his probes into Wall Street after his appointment by John Kennedy in 1961. "This was one of the areas I felt had been neglected. I probably have spent more of my personal time on it."

Morgenthau established a special securities fraud unit that soon began obtaining indictments. He now has 10 of his 73 assistants working in the securities area, five full time. They work along with 20-odd SEC investigators. In its first four years, the unit got six times as many indictments as the U.S. Attorney's office had between 1945 and 1960. To date, Morgenthau figures that individuals have been indicted in at least 80 different securities cases handled by his office.

POWER CENTER

The securities cases are tedious and among the most complex to try. They also pit Morgenthau's men against the top corporate lawyers in the country. About half of the indictments are prompted by SEC, the rest by special investigations of the attorney's office. Ordinarily, government agencies refer civil cases they want prosecuted to the Justice Dept., and most U.S. Attorneys have their hands full enough with the referrals.

Morgenthau's Southern District is unique, though. It has always been the most independent of the 93 U.S. Attorney's offices and the most powerful. "Bob has made the Southern District even more powerful and independent," says Peter Morrison, the first head of the securities fraud unit and now a partner of Segal & Morrison law firm. Usually, for instance, Washington handles the big cases for regional offices. The Southern District handles its own.

SHOWCASE

Morgenthau's supporters, in fact, contend that the prominence that Morgenthau's investigations draw is one reason that the Nixon Administration would like a Republican in his job.

Morgenthau, however, sees his job as nonpartisan. His indictments indicate this. The list includes Raymond C. Deering, the treasurer of the Democratic State Committee; Louis Wolfson, a heavy Democratic contributor; Carmine DeSapio; and James Marcus, water commissioner for the Lindsay Administration. Indeed, in his unsuccessful bid for the New York governorship in 1962, he reportedly lacked support from many Democratic districts because of his nonpartisanship. "Many of the wards just sat on their hands because Bob had refused to give old-

fashioned favors," says a former assistant attorney under Morganthau.

Says Morgenthau: "We don't have many rules around here. But one of them is, if there is any pressure to delay or kill an investigation, expedite it!" He does just that. Says Frank Tuerkheimer, current securities fraud unit head; "He's completely impervious to pressure—the worst thing someone can do for a client.

NEW AREAS

A more common complaint about Morgenthau is that he tests law in the criminal courts before it can be tested in the civil courts, where penalties are either fines or injunctions, and no jail sentences are involved. Indeed, Morgenthau's willingness to try untested principles and perhaps set precedents is one of his most controversial characteristics. "He's going into areas no one ever dreamed would be the subject of criminal action," says one lawyer. Morgenthau responds that in most such cases he is only bringing the first criminal action in an area already tested in civil law.

The case of Lybrand, Ross Bros. & Montgomery (box) was one that shocked many, particularly the accounting societies, which howled bitterly. The defense maintained that the accountants adhered to standard accounting practices in not disclosing the use made of a loan by a client company, Continental Vending Corp., to an affiliate. In the case, the prosecution charged—and the defense even agreed—that the bulk of a $3.5-million loan to an affiliate, Valley Commercial Corp., ended up in the hands of Harold Roth, Continental president.

If the appeals courts sustain Morgenthau, it will make accountants criminally liable for certifying a misleading statement.

STREET SUPPORT

Most of Wall Street is behind Morgenthau's drive to keep the industry clean. Still, there are those who agree with the brokerage house partner who criticizes Morgenthau's zeal in test cases: "He is too excessively dogmatic without any strong rational reason behind his thinking."

Morgenthau, who doesn't claim many friends on Wall Street anyway, preferring to keep "an arm's length relationship," has caused a former chairman of the New York Stock Exchange to be indicted for income tax evasion.

Currently, Morgenthau is moving into untried waters with his Swiss bank account investigations which took a new turn this week with the indictment of Alfred M. Lerner, president of First Hanover Corp., for allegedly using Swiss bank accounts to cover up his holdings in several new issues his firm underwrote. Lerner describes the indictment as a "test case."

[From the New York Times, Dec. 20, 1967]

EXPERT ON THE MAFIA: ROBERT MORRIS MORGENTHAU

During Robert M. Morgenthau's unsuccessful campaign for Governor in 1962, he made an appearance at a small gathering in a lower Manhattan tavern. In keeping with Mr. Morgenthau's rather restrained temperament, it was a quiet affair at which he spent most of the time talking in subdued tones with small clusters of guests. At one point, a reporter walked in, got a drink and looked around the room, which still had about as much razzle-dazzle political atmosphere as a college faculty tea, even though the candidate had been there for half an hour.

"When is Morgenthau going to get here?" the reporter asked.

Flamboyance, presence, dynamism—these, as the story suggests, are not the strong suits of the man who Monday announced one of the most spectacular indictments in recent New York City history, that of James L. Marcus, the former Commissioner of Water Supply, Gas and Electricity, who has been a friend and confidant of Mayor Lindsay.

NEVER PROSECUTES CASES

Associates call him "an unspectacular man" "a quiet person" and a man "who leads a quiet life." They point out that although he has held the post of United States Attorney for the Southern District of New York for six years, he has never prosecuted one of his cases in a courtroom. But they are quick to add that he is a first rate administrator, industrious and persistent with a talent for getting along well with almost everyone.

"He's a man of few words," a fellow lawyer once said, "He'll give you a one-sentence answer where another would use three, but it will be complete."

One of Mr. Morgenthau's major current interests is the Mafia and organized crime, and he prides himself on having amassed what many consider to be more knowledge about the organized underworld than anyone in the metropolitan area.

To reinforce this knowledge, Mr. Morgenthau holds what his staff calls "sunrise seminars" about once a month. These are meetings—usually held at 8 A.M. or 8:30 A.M., before the normal day's work begins—at which Mr. Morgenthau and members of his staff exchange information about the progress of current investigations into Mafia activities.

Robert Morris Morgenthau was born in New York on July 31, 1919. His father, Henry Morgenthau, Jr. had been Secretary of the Treasury under President Franklin D. Roosevelt, and his paternal grandfather, Henry Morgenthau, Sr., had been Ambassador to Turkey in the Administration of Woodrow Wilson.

Shortly after his graduation from Amherst College in 1941, Mr. Morgenthau entered the Navy.

Mr. Morgenthau was discharged from the Navy, after 54 months of service—46 of them on active sea duty—as a lieutenant commander with two Bronze Stars earned for actions in the Mediterranean and Pacific. He then went to the Yale Law School, from which he was graduated in 1948. After being admitted to the New York bar, Mr. Morgenthau joined the law firm of Patterson, Belknap & Webb. He remained with the firm until 1961, when he resigned to become United States Attorney for the Southern District of New York.

The next year he left to run as the Democratic candidate for Governor. Shortly after losing that election to Nelson A. Rockefeller, Mr. Morgenthau was reappointed by President Kennedy to the United States Attorney's office and he has remained there since, where he has made himself an expert on the Mafia.

Mr. Morgenthau, a tall, thin man whose bespectacled face seems to bespeak shyness, lives with his wife, the former Martha Pattridge, whom he married in December 1943, in a nine-room house overlooking the Hudson River in Riverdale, the Bronx. He and his wife have five children—four daughters and a son.

A relaxed man who works in shirtsleeves and sometimes takes off his shoes in his Foley Square office, Mr. Morgenthau puzzles associates by his apparent lack of determination to move from the United States Attorney's office to something bigger, such as a major judgeship.

"I have no definite political objectives," he once told an interviewer. "I'm sort of a fatalist. I figure you do the best job you can where you are and see what happens from there."

[From the New York Times, Mar. 21, 1969]

BANKS' HELP CITED BY U.S. ATTORNEY—FOREIGN ACCOUNTS INVOLVED IN STOCK-FRAUD CHARGES

(By Edward Ranzal)

Foreign banks have become "more cooperative generally"—though problems persist—during investigations of the use of secret foreign accounts to cover stock frauds in this country, United States Attorney Robert M. Morgenthau said yesterday.

He made the observation in connection with the indictment of six individuals and a Liechtenstein organization on charges of conspiring to sell unregistered securities on the American Stock Exchange through the use of secret accounts in Swiss and German banks.

Mr. Morgenthau said the investigation leading to the indictment had taken two years. Although there was a degree of cooperation from the foreign banks, he added, there still were "substantial problems."

In a 66-count indictment returned by a Federal grand jury here, the defendants also were accused of a worldwide effort to raise the price of VTR, Inc., by "touting" the stock in Europe and the Far East.

DEFENDANTS LISTED

The defendants are Alfred D. Laurence, Miami Beach; Joseph J. Lann, White Plains; Harold N. Leitman, Scarsdale; Medwin Benjamin, North Miami; Marvin Hayutin, 340 West 57th Street; Milton Rubin, Jacksonville, Fla.; and the Liechtenstein concern, Bartex.

The indictment charged that the conspiracy started in January, 1964, and ended six months later, during which VTR stock on the American exchange rose from $5 to $8 a share, and 85,000 unregistered shares were sold.

Mr. Morgenthau said that, during the six-month period, Mr. Leitman was president and chairman of VTR and a partner of the Leitman Company, a family partnership.

Mr. Lann, he continued, was president and chairman of Joseph J. Lann Securities, Inc., a broker-dealer; Mr. Laurence was a finder and promoter in the securities business.

Mr. Rubin was described as Mr. Leitman's brother-in-law; Mr. Benjamin was said to have touted and sold the unregistered shares and Hayutin, who is appealing a stock fraud conviction, allegedly established the Liechtenstein organization.

85,000 SHARES

At the time VTR was controlled by Mr. Leitman and Mr. Rubin, who arranged with Mr. Lann to sell 85,000 VTR shares in the name of Mr. Rubin and a nominee of Mr. Leitman, the indictment charged. Mr. Lann then allegedly asked Mr. Laurence to create a demand for VTR stock on the American exchange.

Meanwhile, an account was opened for Bartex at a German bank, to which the shares would be transferred from a Swiss bank, Mr. Morgenthau said.

Mr. Laurence then began a worldwide sales tour in which he allegedly gave "inside" information that major contracts and mergers with VTR were imminent, and that the stock would "triple" in six months. The indictment charged that this information was false.

Within six months, Assistant United States Attorney John H. Doyle 3d said, the 85,000 share were sold at a profit.

VTR, which, at one time, manufactured tires, was delisted several years ago and reorganized privately. In 1968, a new management took over VTR and elected a new board of directors as well as a new operating management, it was announced by Fredric H. Gould, president of VTR.

[From the Wall Street Journal, Apr. 23, 1969]

CRACKDOWN OF CONCEALMENT: MORE INDICTMENTS LOOM IN U.S. ASSAULT ON ILLICIT USES OF SWISS BANK ACCOUNTS

(By Richard E. Rustin)

NEW YORK.—More Federal grand jury indictments may be headed up soon in the crackdown by the U.S. attorney's office here on American individuals and brokerage firms that allegedly use numbered Swiss bank accounts to hide stock-market profits and evade margin requirements and income taxes.

Sources familiar with the crackdown indicate the likelihood of at least three separate indictments soon charging New York brokerage houses with arranging improper loans for their customers through the camouflage of Swiss accounts.

Moreover, an additional packet of indictments may be aimed at U.S. corporate executives who allegedly have used numbered accounts to deal in the securities of their own companies, in apparent violation of Federal laws regulating transacations by "insiders."

At least one of those cases also involves a brokerage firm that, it's said, may be charged with having illegally purchased for its own account a block of a "hot" new issue that the firm helped underwrite.

A STRING OF INDICTMENTS

The Government crackdown, under U.S. Attorney Robert M. Morgenthau began to gather steam last winter. It already has produced a string of indictments against a number of U.S. businessmen, plus a guilty plea from a Zurich bank charged with violating U.S. margin, or stock credit regulations.

Government attorneys concede that a major stumbling block in their investigations has been Swiss law, which forbids disclosure of the identity of a holder of a numbered account. The law provides for jail terms for bankers revealing names of account holders, except under court order in criminal cases brought in Switzerland.

But, Mr. Morgenthau says, Federal investigators are dredging up an increasing lode of possibly incriminating data on this side of the Atlantic. He continues:

"We've been piecing things together here from the records of brokerage firms and American banks that are correspondents of some Swiss banks. It's a very slow and tedious business but we're beginning to put two and two together.

"Our office has been putting a lot of time into these cases. Essentially, it's our view that the public's confidence in law enforcement can be seriously undermined if a small segment of the population can evade taxes and violate other laws in this way."

POSSIBLE VIOLATIONS

There isn't any law barring a U.S. citizen from having a numbered bank account in Switzerland, or in any other locality offering such a service. However, an American could run afoul of various U.S. regulations if he used the account as a shield to hide stock-market or business profit, or to cover up stock transactions that he should have reported to U.S. authorities, such as the Securities and Exchange Commission.

Moreover, U.S. brokerage firms could be held accountable if they help their U.S. customers buy stocks through Swiss banks on easier credit terms than are allowable to investors here.

It's understood that the vanguard of the coming round of indictments will concentrate on such alleged violations by brokerage houses. Although Federal attorneys currently won't discuss those cases, Mr. Morgenthau laid some of the groundwork last December in testimony before the House Banking and Currency Committee. At the time, he said:

"We have reason to believe that foreign banks have been used extensively by (U.S.) citizens to violate the margin requirements which the Federal Reserve Board imposes on security trading."

The board's Regulation T currently requires that an individual customer qualified to hold a margin account put up 80% of a stock's purchase price. However, a foreign bank with a special omnibus account at a U.S. brokerage house need make a down payment of only between 20% and 30%, provided that the bank files a statement pledging it will require its own clients to obey Regulation T.

Under an omnibus account, all orders are placed in the name of the bank, although the bank, of course, acts on behalf of its customers.

Apparently, there is evidence that some New York Brokerage houses are accepting orders on 20% or 30% margin directly from American investors, and then are covering their tracks by arranging with a Swiss bank to "enter" the order later from overseas.

Such a broker would violate Federal law because he would be filing a false report with the Government. In other words, he would be telling the Government that he executed a transaction for a foreign customer—in this case, a Swiss bank—while he really was executing it for an American.

TESTIMONY BEFORE HOUSE PANEL

"Many New York brokers deal in such large volume for Swiss banks that they either maintain open Telex lines or talk on the telephone (with them) several times a day," Mr. Morgenthau asserted before the House panel last year. "It has therefore been arranged for the trader to deal with a broker who corresponds with his Swiss bank. The trader can call the broker—sometimes using a code name—and give his order to buy or sell 'X' security."

"The broker sees to it that he receives immediately such an order from the Swiss bank and executes the order as if he had received it from Switzerland for an unknown customer of the Swiss bank. The broker's only written confirmation will go to Switzerland, but he can advise the trader by phone of the completed transaction."

Such an arrangement, Mr. Morgenthau noted, would be particularly advantageous "to the short-term tape watcher whose profits depend on immediate executions." And, of course, any profits would be shielded from the eyes of U.S. tax examiners.

There also apparently are indications that some U.S. investors with accounts at Swiss banks will soon be indicted for alleged evasion of the interest equalization tax. The 11¼% tax is levied on Americans who buy foreign securities from foreigners. Fashioned as a weapon in the battle to better the U.S. balance-of-payments picture, the tax is designed to discourage the outflow of dollars from this country.

However, some Americans, seeing a lucrative foreign issue, apparently have been circumventing the tax by entering orders through their Swiss banks. On the surface, the transaction would appear to be initiated by a foreigner, not by an American.

BUYING A "HOT" ISSUE

Sources also say there may be at least one American brokerage house that will be implicated in an asserted scheme to illegally buy a "hot" domestic new issue for its own account. Under this scheme, the brokerage house which was an underwriter of the issue, allegedly "sold" a block of the stock to a Swiss bank as part of the initial distribution. In reality, it's suggested, the Swiss bank bought the stock for the brokerage house.

Several new issues have been in sharp demand lately because of their tendency to increase rapidly in value shortly after they are offered to the public. It's not uncommon for such an issue to double in price on the day it's publicly offered.

An underwriter making such a purchase would violate Federal securities law because the law requires that the underwriter disclose precisely how much of a new issue it's buying for its own account.

Moreover, there apparently is evidence that corporate "insiders"—officers, directors and persons owning 10% or more of a company's voting securities—also may have used similar methods to buy shares of their own companies' "hot" new issues. Depending on the circumstances, such persons could be accused of stock fraud, filing false registration and trading statements with the SEC and violation of an SEC rule requiring an insider to turn over to his company any short-term profits made from his dealings in his company's stock. Short-term profits are those made during a six-month period or less.

Likewise, some corporate executives may soon be indicted for allegedly purchasing through Swiss accounts securities of their own companies that are supposed to be offered exclusively to foreigners.

Many corporations, seeking additional sources of capital recently have been offering debenture issues overseas. Generally, those issues are particularly lucrative, because many of them can be converted into a company's common shares.

There are some observers who view the current campaign as an attempted valedictory by Mr. Morgenthau to his long tenure as U.S. Attorney for the Southern District of New York. Although Mr. Morgenthau, a Democrat, still has two years to serve in his current term, observers predict he would defer to President Nixon if Mr. Nixon wishes to place a Republican in the key post.

ACTION OF SWISS BANKS

The Swiss Bankers Association late last year cautioned its member banks to observe extreme circumspection in dealing with foreigners, especially Americans, lest "misunderstandings" damage the banks' reputations. The group issued certain guidelines, explaining that there had been "baseless" criticism of the banks, particularly in "misinformed" and "slanted" newspaper stories.

On the other hand, one financial community source recalls a conversation with an officer of a large Swiss bank. According to the source, the banker "was rather sarcastic about American brokers." He adds:

"The banker said the smartest broker was the one who set himself up in a certain Swiss border city where he had privacy, sunshine and the benefit of all the smugglers' business. He said that in Switzerland, to do business you have to be next to the frontiers, as all clients are smugglers in one way or another."

[From the New York Times, Feb. 2, 1969]

U.S. ATTORNEY FOR "NEW YORK SOUTH"

(By Victor S. Navasky)

Given the national obsession with "law and order" it is surprising that more attention has not been paid to the men who define the law and enforce it, the nation's prosecutors. President-elect Richard M. Nixon has promised to get rid of our first civil-libertarian Attorney General, but he has yet to tell us what a good prosecutor ought to do, what qualities he should possess, what cases he should bring. This is a significant omission since, in addition to the Attorney General, Mr. Nixon will also appoint 93 United States Attorneys, whose mandate goes all the way back to the Judiciary Act of 1789, some 80 years before there even was a Department of Justice.

Traditionally, the job of U.S. Attorney is considered a patronage plum, a jumping-off point for a political career, basic training for a judicial appointment. But, as S. M. Hobbs wrote in The Alabama Law Review 20 years ago, the job is more thar that: "It is scarcely

an exaggeration to say that in his untrammeled discretion in deciding when and whether to file an information or press for an indictment, when and whether to enter a nolle prosequi or to 'bargain' with an accused—or more broadly when and whether to prosecute—[the prosecutor] has 'the scope for tyranny of a Venetian doge.' "

Of today's 93 U.S. Attorneyships, none is more powerful, more atonomous, more respected or more coveted than the job of U.S. Attorney for the Southern District of New York. This is partly because of the size of the office (he has 73 Assistant U.S. Attorneys working for him as compared with one for the U.S. Attorney from Wyoming), partly because of case load (he handles about 10 per cent of all the criminal cases in the Federal courts), partly because of the independent tradition of "New York South," and partly because of the high-principled, belligerent incumbent, Robert M. Morgenthau, originally appointed from the Bronx by J.F.K. in 1961 over the late Congressman Charlie Buckley's initial objections (he relented when the Kennedy threatened to bring in William Gaud, now A.I.D. administrator, from Connecticut), reappointed in 1963 after his unsuccessful race for Governor, and reappointed again by L.B.J. in 1967, despite the widely rumored desire of the President to replace him with Ed Weisl Jr., an Assistant Attorney General who also happened to be the son of the President's old friend and Democratic National Committeeman from New York, Edwin L. Weisl. In 1965, when Attorney General Ramsey Clark asked for evaluations of U.S. Attorneys as part of a talent search, he recalls, "Bob Morgenthau was at or right near the top of everybody's list."

Unlike members of the Cabinet, U.S. Attorneys do not, explicity serve at the President's pleasure. Normally this is irrelevant since a U.S. Attorney's four-year term is concurrent with that of the President who appointed him. But because of Morgenthau's gubernatorial adventure and consequent off-year appointments, the charter which hangs on the wall of his spacious office on the fourth floor of the U.S. Court House in Foley Square states in no uncertain terms that, having been confirmed by the Senate, his term of office runs till June 1971. When I asked if he had resignation plans, he said, "My current thinking is that if they didn't want me I probably wouldn't stay and I might not stay anyway, but I'm kind of a believer in not crossing bridges till you have to. What I'm concerned about now is that there are a lot of important cases and investigations pending."

The high probability is that Nixon will want to get his own man in the job. The outside possibility is that, consistent with Nixon's unity theme and the nonpartisan nature of Morgenthau's tenure, he will retain Democrat Morgenthau on a trial basis. The far-out possibility is that Morgenthau will refuse to step down, at least until he has cleaned up a number of big cases. They include the recent widely publicized indictment of the financier-lawyer Roy Cohn on 10 counts, the crackdown on American investors using secret Swiss bank accounts and cases expected momentarily to break in organized crime.

What would happen in the unlikely event of a showdown between Morganthau and Mr. Nixon is uncertain. The law reads: "Each United States Attorney is subject to removal by the President." When an Eisenhower appointee, Eliot L. Richardson, then U.S. Attorney and now Attorney General of Massachusetts, declined to resign after Kennedy's election, the Justice Department dug up a Supreme Court precedent which convinced Richardson that the President has the right to appoint his own man. Some jurists, however, believe that under case law the President can fire a U.S. Attorney only for cause.

It should not be forgotten that when L.B.J. became President, Morgenthau was one of the few U.S. Attorneys who did not turn in his resignation. And Attorney General Clark recalls what happened when he telephoned Morganthau to sound him out on a Federal judgeship: "He told me he felt a deep obligation to his office and his people and he was in the middle of so many things so important to him that he didn't think he would want to be considered for the bench at that time."

The only time Morgenthau ever indicated a willingness to give up the job was when he did—to run for Governor against Rockefeller in 1962. He lost. Since few observers ever gave Morgenthau a chance, I asked why he ran in the first place. "You mean why was I such a damn fool?" he said. "I knew it was a long shot but I thought, 'How often in a lifetime do you—does anybody—get that kind of opportunity?' So I thought it was worth trying. I didn't count on the complete disarray of the Democratic party, the divisive fight we had in Syracuse, and I didn't count on the Cuban missile crisis. People just weren't listening to anything else. But I thought the weaknesses in Rockefeller's record ought to be brought to public attention and they'd be good issues to campaign on."

Regardless of how long he stays on the job, it is worth taking a look at Morgenthau's stewardship of New York South, for at a time when the Supreme Court is under attack as soft on defendants, and the law-enforcement establishment is under attack (less visibly, to be sure) as insufficiently sensitive to individual rights and liberties, here is a man who has managed to retain his image as a liberal without undermining his reputation as a prosecutor. Indeed, despite the air of absent-minded, preoccupied academic which hovers around his 49-year-old grayish hair, prominent nose and pursed lips (which often seem to be fighting off an incipient smile), the recurring adjective in descriptions by friend and foe alike is "tough."

An official from Justice recalls, "When I first met him I remember thinking, 'My God, we've made a mistake. How is this Casper Milquetoast going to withstand the pressure?' Then we had lunch, and I watched him destroy the carefully laid plans of an Assistant Attorney General who came down from Washington fully expecting to assume control over a category of cases that are handled from Washington everywhere but in New York South. He left with empty hands and I knew we had nothing to fear."

"Bob wouldn't hesitate to send his own mother up the river," says one of his admirers from the Kennedy Administration, "that is, if he thought she was guilty. Of course, he would disqualify himself as an 'interested party,' but he'd see that the processes of justice were carried through."

Shortly after he assumed office, Morgenthau was visited by a Congressman who announced "urgent" business. He had, he said, a "constituent" who was charged with violating the Trading with the Enemy Act (he had been importing hog bristles from Communist China), and would the new U.S. Attorney "kick it around" for a few months? "I'm not asking that he be let off, or anything like that, just that you kick it around for a while." The new U.S. Attorney kicked it around for about as long as it took the Congressman to get out the door, called Silvio Mollo (the career attorney he eventually promoted to Chief Assistant, normally a post reserved for party patronage), and three days later they brought an indictment. "You could at least have postponed it for 30 days so I could earn my fee," the Congressman fumed over the telephone. Looking back, Morgenthau thinks it was fortunate that this incident happened early: "Word gets around on what you can get away with."

"Bob has an instinctive hatred for the fixers, the wheeler-dealers, the promoters, the men with connections," recalls a friend and former Assistant U.S. Attorney. Indeed, this is one of the qualities which informs his liberalism, and complements his idea that the best way a prosecutor can reinforce respect for law among the poor is by keeping close tabs on the rich.

Morgenthau's liberal reputation comes not from any ultra-humanitarianism (although he seems the essence of decency, is an active president of the Police Athletic League, serves as an adviser to the New York School of Social Work, etc.), nor from any overt evidence that once he leaves office he will become a card-carrying member of the American Civil Liberties Union. To the contrary, the so-called hot issues of criminal law—confessions, right to counsel, search and seizure—are things with which he has not really concerned himself. "Frankly," he says, "they pose more problems for local law-enforcement agencies than for us."

In fact, he flunks almost all the standard libertarian litmus tests. Legalized wiretapping? "There are two things to be said about wiretapping," he replies. "One, it is some invasion of privacy. There is no doubt about that. But everything government does in a civilized society, from your birth certificate through the Wasserman test and the driver's license, involves some invasion of privacy, so it's a question of degree whether this is a greater invasion than society wants to tolerate. The other proposition is that it's certainly some help to law-enforcement people. You have to weigh these values—as to whether you want to help law enforcement or protect individual rights."

Sympathetic treatment of draft resisters? "When a kid in New York South refuses induction, they arrest him on the spot," says Henry di Suvero of the National Emergency Civil Liberties Committee. "At the request of the U.S. Attorney's office there's high bail set, so in reality a kid is given the choice—the Army or jail. In the Eastern District they proceed by indictment, which means that you don't go to jail—there is time between the act and the arrest, and then the court automatically assigns counsel."

When I asked Morgenthau about this practice he said he was not aware of it, but would investigate. And after he had talked with those responsible, this is what he told me: "This policy is consistent with the general principle that when you have a clear-cut crime—say an agent sees a truck about to be hijacked—you arrest on the spot. This is a case of a clear-cut crime in your presence. If a truck has already been hijacked, then you indict before a grand jury. On the draft card burning business, we don't arrest because it's not clear-cut. Is it his draft card? Is he draftable? Etc. But when a man doesn't take that step forward, he has committed a crime. Actually, something like 80 per cent end up reporting and the complaint is dismissed. It's good from the draftee's standpoint because if a man is indicted he has a criminal record and that's serious; but it's bad from the protest organization's standpoint."

Censorship? His office devotes hundreds of valuable man-hours to protecting the citizens of the judicial district from imported art movies like "I am Curious—Yellow." (The Appeals Court has reversed a finding of obscenity stating that "under standards established by the Supreme Court the showing of the picture cannot be prohibited.")

Sensitivity to free-speech problems? Helen Buttenwieser, Morgenthau's cousin, recalls that when she posted bail for convicted Soviet spy Robert Soblen (none of New York's bail bondsmen would accept the collateral his family had raised), "Bob's office tried to prevent me from putting up the $100,000 bail and the excuse they used was foolish. They suggested that my money came from Communist sources. Bob knew very well I had the money to put up. Actually, I put up $30,000, another individual put up $30,000 and Sob-

len's family and friends put up $40,000. Anyway, at the hearing Vince Broderick, Bob's chief assistant, asked questions like: Had I represented Alger Hiss? Did I belong to the National Lawyers' Guild? As the Court pointed out, these questions were irrelevant. I never talked to Bob about it because I thought it would embarrass him. But now when I see Vince Broderick I say, "Why the hell didn't you win?'" (Soblen jumped bail and Mrs. Buttenwieser forfeited her money.)

On matters of concern to civil libertarians, then, Morgenthau seems an essentially conventional prosecutor, not initiating but tolerating occasional prosecutorial excess. After the latest Cohn case broke and Cohn charged Morgenthau with abuse of process, I asked Prof. Norman Dorsen, of the N.Y.U. Law School and vice chairman of the board of directors of the American Civil Liberties Union, whether he thought Cohn's charges were credible, and he replied: "While I have not studied them in detail, it is interesting to note that a grand jury composed of his fellow citizens indicted him. And Morgenthau generally represents the finest kind of prosecutor—sensitive to individual liberties and fair procedures as well as the responsibility of his office to secure conviction."

Morgenthau's unique contribution has been to go beyond those Siamese-twin enemies of all enlightened law enforcement—organized crime and labor racketeering—and engage in an almost quixotic crusade against the white-collar untouchables, the Wall Street wheelers and dealers, the corporate criminals. Traditionally, the U.S. Attorney takes cases as they are referred to him by Government agencies which are in effect his clients. Under this system, it is the clients—the Federal Bureau of Investigation, the Secret Service, the Postal Inspection Service, the Narcotics Bureau, the Immigration and Naturalization Service, the Selective Service—which make policy. "The referring agencies can make you or break you," says an Assistant U.S. Attorney, "because most of the big cases have concurrent jurisdiction. So if they don't like you, they'll give it to another office." But in the area of corporate crime, Morgenthau has reversed the conventional flow of business and has initiated cases rather than merely received them.

His quaint notion is that since the underprivileged tend to regard law as an enemy, going after the men at the top is a useful way to demonstrate that law can be an ally. "I feel," he says, "that the people who hold positions of power or trust and violate them are probably a more serious danger to a democratic society than organized crime or crime in the streets. I also think that the ability or inability of government to deal with this kind of crime has a substantial bearing on how the public, particularly the underprivileged public, regards law enforcement. If he knows that the big man in the community is in the policy racket, drives a Cadillac and pays off the cops, then a man is justified in concluding that law enforcement is only for suckers."

Among the institutions he has taken on in his almost naive determination to demonstrate that nobody, no matter how well connected, rich or powerful, is above the law, are the president of the New York Stock Exchange (for alleged tax fraud); the Internal Revenue Service (for bribery and corruption; more than 170 employes were indicted); financier Louis Wolfson, a major Democratic campaign contributor ("You can't believe how many phone calls we had trying to pull us off," said an Assistant U.S. Attorney); the Post Office the No. 2 man in the New York region was convicted of perjury), and the top officers of Local 32–E, the 10,000-man union which controls all of the building superintendents in the Bronx, and which was notorious for its terrorist tactics and its close ties to Buckley's Bronx Democratic machine. (After the indictment, union officials, who had always booked two or three tables at the county dinner told Buckley: "No more tables. If you can't control your own U.S. Attorney, why should we take tables?")

For knowingly certifying a fraudulent balance sheet he indicted the top officers of Lybrand, Ross Bros. & Montgomery, one of the eight largest accounting firms in the country. He made headlines when he indicted and convicted the high-flying Water Commissioner of the Lindsay Administration, James L. Marcus, despite the fact that District Attorney Frank S. Hogan, who was onto the case earlier, had not yet found enough evidence to prosecute. ("It takes guts to go after a Marcus," observes one member of the office. "Now everybody knows he's guilty. But then he was a pillar of the community. If one witness reneges, the whole case caves in and the Establishment has tagged you as an irresponsible headline hunter.")

This list seems endless, including the executive vice president of Manufacturers Hanover Trust, the treasurer of the Democratic State Committee, and, of course, most recently, Roy Cohn, who once served as an Assistant U.S. Attorney in New York South, prosecuting Julius and Ethel Rosenberg for passing atomic secrets to the Russians. Cohn is the kind of man who, it is said, receives a box of cigars each Christmas from J. Edgar Hoover, was thrown a 45th birthday party by Terence J. Cooke, now Archbishop of New York, enjoys financial relationships with Senator Everett Dirksen's administrative assistant and Senator Edward Long's son-in-law, pals around with the heir to the Newhouse newspaper chain, and generally mingles with the high and the mighty. The powerful chairman of the Senate Judiciary Committee, Senator James Eastland, is a Cohn partisan.

When Morgenthau several years ago unsuccessfully brought charges against Cohn (who has been in and out of court ever since, most recently on charges of mail and wire fraud, false filing with the S.E.C. and conspiring to pay a state court official $75,000). Cohn told the press that Morgenthau was retaliating against him for his role in embarrassing Morgenthau's father, Henry Morgenthau Jr., F.D.R.'s Secretary of the Treasury. He said, "When I was first in the Justice Department and then chief counsel to the Senate subcommittee, it was my duty to investigate Soviet infiltration in the Treasury Department. It dealt with the delivery of United States occupation currency plates given to Russia at the direction of Mr. Morgenthau Sr. [sic] on the advice of Harry Dexter White.

"I have no personal malice toward Morgenthau Sr.," Mr. Cohn continued. "I never met him. But Morgenthau Jr. has harbored a feeling about this. I say somebody up there just doesn't like me."

A few weeks ago, on the occasion of his latest indictment, he repeated these charges of vendetta and supplemented them with a bill of particulars in which he alleged that Morgenthau had spent more than $1-million in taxpayers' money, interrogated more than 700 Cohn friends, enemies and employes, and issued more than 1,000 subpoenas requiring production of books and records.

Because Morgenthau has cases pending against Cohn, he is reluctant to respond to Cohn's charges of abuse of process other than to state that, "based on the information brought to our attention, we would have been derelict in our duty if we hadn't conducted the investigation of the Fifth Avenue Coach Lines, Inc., that led to the present indictment." He adds that bringing someone before a grand jury is not an abuse of process. "If we had misused the grand jury, we knew perfectly well he could have come in to quash the subpoena," says Morgenthau.

To the charge that he is out to get Cohn, he says: "I am not out to get anybody." He points out that Cohn was still in law school when Harry Dexter White died after testifying before Congress, and says: "My father was never called before the McCarthy subcommittee, was never interrogated by them, and if he was investigated by Roy Cohn, he never knew anything about it and, until Cohn's statements, neither did I. I might add I never felt it was necessary to vindicate my father's reputation." In any event, he goes on to note: "A man is not immune from prosecution merely because a United States Attorney happens not to like him."

In a way, the Cohn case raises again the old legal-ethics sticker: Is there anything wrong with prosecuting known public enemies on minor charges, going after an Al Capone for income-tax evasion? Morgenthau's answer is clear, although he insists it has nothing to do with the Government's prosecution of Cohn. "There's nothing wrong with making cases against people in positions of responsibility, people in the public eye.

"You have to be selective. We don't have enough personnel to investigate and bring cases against everybody who violates the law. When your criminal intelligence tells you that a man is a public menace you have an obligation to investigate him.

"Everyone knew Capone was a bootlegger and a major criminal, and so I see nothing wrong in prosecuting him.

"That doesn't mean bringing him up on charges of jaywalking and, of course, it doesn't give you the right to railroad anybody. And bear in mind: Under Federal practice, every safeguard is afforded a defendant, whether the prosecutor wants to put him away or not."

A man who has known Morgenthau for 10 years says: "The Harry Dexter White thing has nothing to do with Bob's prosecution of Cohn. To him Cohn is a hot-shot, *nouveau riche* parvenu. If anything, that has more to do with it.

"I never understood him until I read Felix Frankfurter's reminiscences about Bob's grandfather, who was Wilson's Ambassador to Turkey. He had a plan to win the First World War by detaching Turkey from Germany and Austria. Nothing was going to stop him. Bob has some of the same stubbornness. He doesn't look at a case like a normal prosecutor: "How will it look in court? What are our realistic chances of winning?" He's like a client in the sense that these fellows are crooks and he knows it and everybody knows it and he's not going to let them get away with it. Also, the fact that he's not a trial lawyer [he has not tried a single case as U.S. Attorney] makes him more rigid in terms of dealings with defense counsel. He tends to go by the book." Another associate observes: "Only a man with the security of his family background could operate the way he does."

Without generalizing from family background, it makes sense that, having watched his father (a gentleman farmer who published an agricultural paper before he became Secretary of the Treasury) move among the financial titans of the world, he would not find the specter of great wealth intimidating. And surely his exposure to the German-Jewish "Our Crowd" milieu cannot be entirely irrelevant, despite his marriage to a Midwesterner reared as a Unitarian, the former Martha Pattriden. The Morgenthaus bring up their four daughters (one a retarded child, is at the Lochland School in Geneva, N.Y.) and 11-year-old son, Robert P., as Jews and, when he was a student at Yale Law, his classmate, now Yale Law dean, Louis Pollak, remembers: "Bob and his friend Mitch Cooper 'infiltrated'—that's the only word for it—Corby Court [an exclusive eating club]. Not that they could have cared less about getting in for reasons of status. But once in, they changed it"—which is Dean Pollak's genteel way of saying they quietly but actively re-

cruited other Jewish students and once and for all ended the gentiles only policy.

But it would be a mistake to equate the atmosphere evoked in Stephen Birmingham's best seller with Robert Morgenthau's world outlook. A better indication of his life style is provided by Steuart Pittman, a Morgenthau contemporary who was a fellow resident of Peter Cooper Village when they were both young attorneys in New York. Like so many other friends, Mr. Pittman, now a Washington lawyer, remarks on the contrast between Morgenthau's proper exterior and the free spirit it masks. He recalls late one night "walking along the tops of cars with Bob on lower Broadway, while our wives kept up on the sidewalk. Also, I have a vague recollection that he was the guy he used to roller-skate to work with. It took 46 minutes to fight the subway. This solution to the transportation problem was awkward only because of the reaction in the elevator at 15 Broad Street, where they had never seen two properly attired lawyers with roller skates slung over their backs, so as not to scratch the attaché cases."

Quasi-aristocratic family background may help account for Morgenthau's intolerance of fat cats and corporate arrivistes, but the equally distinguished background of his judicial district, New York South, helps account for his ability to do anything about it. Only an office with a tradition of independence from Washington would permit the freedom of maneuver Morgenthau's efforts require. According to a recent Yale doctoral dissertation by James Eisenstein, the over-all trend for U.S. Attorneys is "the progressive loss of autonomy to the Attorney General and the Department of Justice." New York South is the exception.

Its tradition of independence, while not unbroken, extends back at least to 1906, when a young Harvard lawyer who was earning $1,000 a year with a private firm was offered a chance to make $250 less. He later recalled: "I had a call from the U.S. Attorney's office that the U.S. Attorney wanted to see me. I use these words because that's what I was going to see—the U.S. Attorney. He had no name for me." The young man was Felix Frankfurter (he took the job), and the U.S. Attorney was Henry L. Stimson, who went on to become Secretary of State.

Stimson's contribution to the autonomy of the office was reflected in his reply to President Theodore Roosevelt's aide, who came to visit him to urge speedy indictment of a financial speculator whom the press was blaming for the bank panic of 1907. When asked how long it would be before the man went to trial, he replied (according to Frankfurter's "Reminiscences"): "I don't know how long that would take. I have no idea. . . . When the evidence is all in, if it warrants my so advising the grand jury, I shall advise them to find an indictment. Now that'll take I don't know how long. You tell the President that is the way I shall proceed and if that seems too dilatory to him and he wants some other action, then of course it's in his power to remove me and get some other United States Attorney."

The tradition did not establish itself without trouble. One old-timer recalls: "When Judge J. Edward Lumbard became U.S. Attorney [1953,] the office was filled with political hacks, and so he announced: 'Gentlemen, to the victors belong the spoils.' and proceeded to can everybody but [one man]."

By the time Morgenthau arrived he found the caliber so high that he fired nobody, urged the best to stay on and further depoliticized the office (and antagonized some local clubhouses) by hiring without regard to party, which may help account for the *esprit*—rare in Government circles—which characterizes the office. For four recent openings there were 17 applicants, all of whom had clerked for Federal judges. Two of those hired had clerked for U.S. Supreme Court Justices. "They come for the public service," says Morgenthau, "for the experience and for the tremendous responsibility." "It looks better on a résumé to have worked in New York Southern than any other prosecutor's office in the country," says an assistant. Morgenthau is proud that he has lengthened the average assistant's stay from two and a half years to four years, and that he has raised the level of prior experience: Except for summer internes, he no longer hires men directly after law school.

Not that an office staffed with elite-on-the-make is an unmixed blessing. As an attorney with a civil-liberties organization observes: "In Morgenthau's office they wear their self-righteousness on their sleeves. We get along better with the Eastern District. Morgenthau's guys are arrogant. They're from the top of the class, with Wall Street ahead or behind. They think of themselves as high-caliber types, and that means they quickly develop disdain for criminal lawyers. It shows."

Part of Morgenthau's ability to attract top talent is the implicit promise that his men will be able to try big cases—cases which in other jurisdictions are handled in Washington. Last February, when Henry Peterson of the Justice Department's Organized Crime Section announced the formation of a special unit to crack down on Mafia infiltration of legitimate businesses, he said it would commence operations in New Jersey, Philadelphia, Miami and Boston. Asked about New York, he replied that Morgenthau already had a 10-member staff working on organized crime. It was this Special Prosecutions Unit, in fact, which uncovered (and convicted) Joseph Valachi. At last count, Morgenthau's office had convicted 52 members of the Luchese, Genevese, Bambino, Bonanno and Profaci families, and eight others were pending trial.

"It was through our interest in organized crime and Tony Corallo (of the Luchese family) that we stumbled onto the Marcus case," says Morgenthau of his office's most famous conviction—which has literally involved him in collision with the office of District Attorney Hogan, a confrontation which could have considerable impact on the F.B.I.'s entire informant system, not to mention the two prosecutors' offices.

In brief, Morgenthau indicated and convicted Marcus on evidence provided by one Herbert Itkin, a self-confessed F.B.I. informant. But Itkin is what might be characterized as a "method informant"—i.e., he participated in some of the transactions about which he informed. As a result, District Attorney Hogan's office is ready to prosecute Itkin.

If Itkin was telling the truth, he could probably make more cases for the Government (the number has been estimated as high as 50 to 100) against people as influential as Carmine DeSapio, the former Tammany Hall leader, whom he accused on the witness stand of bribing Marcus on behalf of Consolidated Edison. So, though nobody likes to talk about it, Morgenthau's office is opposed to Hogan's trying Itkin, whose price for making more cases is presumably immunity from prosecution. The F.B.I. is also opposed to prosecuting Itkin—since if it can't guarantee informants immunity (not to mention anonymity), why should any insider agree to inform?

Hogan's critics charge, among other things, that, by prosecuting Itkin, he would be spared the unpleasantness of prosecuting DeSapio, who engineered Hogan's 1958 senatorial nomination. But Hogan's supporters claim he has an obligation to try Itkin since he has evidence against him. If the F.B.I. informant system suffers along the way, so be it. In fact, they argue against the whole concept of an intelligence-gathering network which by implication involves the subsidy of criminal informants. They add that Morgenthau should have turned over the headline-making case to the D.A.

Morgenthau's people, in turn, point out that more than half the cases they bring involve concurrent jurisdiction with the D.A.'s office; that, especially in bribery cases, "you can't usually get the family doctor or the local clergyman as a witness—you have to deal with some pretty shady characters," and that, given the choice between prosecuting a valued informant or a highly visible public figure who may have abused the public trust, the ends of law enforcement are better served by undertaking the latter. As Morgenthau puts it, "These (bribery) cases have a real impact on what goes on in the ghetto."

Try to get Morgenthau to talk of future plans, and he will talk excitedly about his latest batch of cases, which the day I happened by, involved the work of the newly established Consumer Fraud Unit. He told me how they have made history by indicting process servers for discarding summonses instead of serving them, a practice known as "sewer service." "The victims," he says, "are most often Negroes and Puerto Ricans who have their wages garnisheed or their escrow deposits removed because they failed to show up in court to answer summonses which they have never received. It's been going on for years and nobody has ever done anything about it before." As he talks quietly but passionately on the injustice of the situation, one notices on the top of his 2-inch in-box pile an announcement of the New York State Association of Process Serving Agencies, Inc. It reads:

"For years our association has been crying wolf! The wolf is now inside the house!

"We are facing the worse crisis our industry has even experienced! Five men have already been indicted [sic] by a Federal grand jury and the continuing investigation may very well bring forth many more. . . ."

Richard Nixon and his new Attorney General may be forgiven if they are right now selecting Morgenthau's replacement. That's what elections are all about. But it is ironic that, if Mr. Nixon does the expected and puts his own man into New York South, the three happiest men in town could easily turn out to be three lifelong Democrats—Roy Cohn, who charges vendetta Louis Wolfson, whose counsel visited Washington unsuccessfully charging abuse of prosecutor's discretion, and Carmine DeSapio, who has not been indicted, but who cannot have heard Itkin's testimony in the Marcus case with equanimity.

ROBERT M. MORGENTHAU: THE QUIET MAN WHO MOLESTS THE MAFIA

(By Edward O'Neill)

He wears an illustrious name; seven short years ago he was the Democratic candidate for Governor of New York State; he is the nation's leading Federal prosecutor and racket-buster whose office has sent more than 100 leading mobsters to prison; the Mafia fears him with a passion. And, paradoxically, he can walk anywhere in New York City and not be recognized by his fellow New Yorkers.

He is Robert Morris Morgenthau, a tall, thin, scholarly-looking man who unobtrusively serves as the United States Attorney for the Southern District of New York, the nation's most important district law office.

This district is the pressure cooker. Here is where the action is. Here is an area that encompasses the richest, most populous, most complex and challenging chunks of real estate in the country. It includes all the gold of Wall Street, the skyscrapers of Manhat-

tan, the riches of suburbia, the United Nations—a vast vortex where millions of people move about each day.

It is the giant magnet that attracts wealth, wields power, position and prestige, has served as a breeding ground for colorful Alfred E. Smith, flamboyant Thomas E. Dewey, history-making Franklin D. Roosevelt, glamorous Nelson A. Rockefeller, charismatic John V. Lindsay.

Set against this backdrop, Robert Morgenthau is an enigma. He moves about quietly, plays everything in low key, forsakes the limelight and moves with deadly efficiency. And yet, this shy man and his 73-man office have for the past eight years scourged the Mafia, decimated its ranks, sent it reeling in disorganized retreat and shipped its leaders off to jail with startling success.

More than 100 kingpins of organized crime have been convicted by Morgenthau for a variety of crimes including such mob-size gambits as narcotics pushing, bail jumping, theft, extortion, conspiracy to obtain kickbacks for union welfare funds, interstate gambling, bribery, stock fraud, counterfeiting.

Ironically, this is more than triple the number of successful prosecutions that enabled the country's most memorable crimebuster, Thomas E. Dewey, to zoom to the political top.

Unless unforeseeable lightning strikes, Bob Morgenthau himself would agree that—tripled prosecuting success not withstanding—a Tom Dewey-like political future is just about out of reach. "A Dewey I'm not," he'll concede with a ready smile whose warmth catches a visitor by surprise. "I go by the theory that if I run this office well and get results, the future—political or otherwise—will take care of itself."

How well he runs his office can be attested to by the reputation he's established with law enforcement officials everywhere who rate him tops.

One high New York police official tells us: "Don't let Bob's quiet manner fool you. When he gets onto a case, he won't let go. He himself is a tremendous lawyer and he's assembled a staff of young assistants who know what to do and how to do it. And, most important, they get complete backing from their boss."

Usually laconic F.B.I. men who work with the "New York South" U.S. Attorney's office are also hairtrigger quick to heap praise on Morgenthau. As one told us: "He's great. We love to work with him . . . Bob's compiled just about the highest conviction rate in the country. When his boys come into court, the cases are well prepared and airtight. He's also one of the top authorities on organized crime in the country."

The records, as dispassionate as their maker, verify this judgment. Here's a partial compilation of successes against the underworld:

Morgenthau's office has sent away 40 members of the Mafia "family" once headed by the late, notorious Vito Genovese, including superboss Sam Accardi who received a 15-year sentence for narcotics and bail jumping. Torn apart and squabbling among themselves, the "family's" survivors harbor a flattering hate for Morgenthau.

Well down on the list of Genovese-mob convictions is perhaps one of the most famous or infamous, depending on what side you're on—names in organized crime, Joseph Valachi, who was sent away for 15 years on a narcotics conviction in 1962. This is the same Valachi who, convinced that Genovese had ordered his death in prison, became Big Crime's greatest informer of all time. His revelations shocked the country and still serve as springboards for obtaining other mob convictions. It was from Valachi that a stunned nation learned about the existence of the Mafia's private name, the Cosa Nostra.

Morgenthau's office uses the Cosa Nostra's own family identification system. Every "family" is identified by name with a complete listing of underbosses (Caporegimes) and rank-and-file hit men and gangsters (Buttons). In this way—and these lists are kept up to date—the office keeps a close surveillance on the mobs and remains an ever-threatening nemesis.

Other "families" have been hit by Morgenthau's troops. The Gambinos lost 18 Buttons, the Lucheses 21, including Consiglieri Vincent Rao (5 years, perjury) and Caporegimes John Ormento (40 years, narcotics), Tony Corallo (2 years, obstruction of justice, and 3 years, conspiracy) and Johnny Dio (5 years, bankruptcy fraud). The Bonnanos count five among the missing, the Profaci-Magliocco-Colombo combine five, the Maggadinos three, and the Patriarcas two. And, as Morgenthau grimly points out, "We're far from finished with these guys."

The continuing battle with Big Crime provides the sensationalism, but the U.S. Attorney for the Southern District of New York has a myriad of other responsibilities.

Since Morgenthau took over in 1961, on appointment by then-President John F. Kennedy, the office case load has set a record every year. Over the past year, Morgenthau & Co. handled more than 1,000 criminal cases and 1,200 civil matters.

Office jurisdiction extends over two counties of New York City (New York and the Bronx) and nine contiguous upstate counties (Westchester, Ulster, Sullivan, Rockland, Putnam, Orange, Greene, Dutchess and Columbia). Morgenthau and his staff process trials involving billions of dollars annually. One single matter now pending, for instance, involves a contest over a corporation tax refund amounting to $127 million. The Southern District is the largest of the 93 in the nation; it is also most powerful, enjoys more autonomy, handles more than 10 per cent of all the criminal cases heard in Federal courts and has the largest staff—73 assistants, as compared to one Western state which has only one.

Unlike some of his predecessors and contemporaries, Morgenthau—"a tremendous lawyer," his aides assert—does not himself try cases, even those sure-fire ones great for publicity.

He explains it this way: "No man can run an office this size and handle trials himself. It just can't be done. The publicity would be nice, I guess, but I wouldn't be able to get the job done.

"This way, I can stay on top of all the cases. I confer with the men handling the individual matters, get their reports, make my suggestions and everybody is a hell of a lot better off."

This penchant of Morgenthau's for letting his staff operate professionally has had a signal effect on the quality of the men he's been able to attract into government legal service.

They're young, aggressive and confident. And they know Morgenthau's policy gives them a chance to make a name for themselves—an important consideration to an ambitious lawyer with an eye on the future.

A visit to Morgenthau's oval office in the U.S. Court House Building on New York's Foley Square gives the viewer a quick insight into the powerful but quiet, low-key climate that prevails.

Morgenthau, in shirt-sleeves, sits behind his big desk. The walls reflect the man and his life—two warmly inscribed pictures of the late Senator Robert F. Kennedy, two others of the late President Kennedy, one of them a shot taken in Buffalo of JFK and himself (then a candidate for Governor) together.

There are also pictures of his father, Henry Morgenthau Jr. (President Roosevelt's Secretary of the Treasury), Roosevelt, former President Johnson, ex-Secretary of War Robert Patterson (Morgenthau practiced law and became a partner in his law firm), ex-Attorney General Ramsey Clark and a framed picture of his own swearing-in as U.S. Attorney.

Bob, a Democratic holdover in the Nixon administration, smiles at the recollection of a recent visit by a Department of Justice boss, a Republican from Texas.

Bob: "When he saw all these Democratic pictures, he looked puzzled. I could almost hear him saying to himself, 'What-in-hell is *this* guy doing here?' "

On another wall there are pictures of the three destroyers that Morgenthau served on during World War II. He'll talk warmly about two of them, the *U.S.S. Landsdale* and the *U.S.S. Bauer*. The *Landsdale* was sunk from under him in the Mediterranean when a German JU–88 plane slipped a torpedo into its side; the *Bauer* was hit by a Japanese Kamikaze plane off Okinawa but managed to make port with an unexploded 500-pound bomb in its bow. Bob came out of the war a Lt. Commander with two Bronze Stars.

On an average day, Morgenthau will see a continuing line of from one to six assistants who are working on various cases. The conversation is usually short, restrained, professional and warm, reflecting close personal rapport between the U.S. Attorney and his staff.

His comments: "How's it going? . . . Did you try? . . . Why not go after it this way? . . . No, don't leave anyone out. Get 'em all! . . . Where's that brief?"

Periodically, Morgenthau and the entire staff hold a general meeting, a combination work session and coffee klatsch scheduled in the morning before the start of business.

"It helps give all of us a look at the big picture," he smiles.

To the utter disgust of New York City's clubhouse politicians, Morgenthau runs his office on a strictly nonpolitical basis. His men, he explains, are hired on their ability and keep their jobs by demonstrated performance.

His hatred for would-be fixers is almost legendary. The mere fact that an unwary congressman or senator might blunder into his office with a request is all Bob needs to order his men to redouble their efforts on the case at hand.

"That doesn't happen much any more," he notes. "I guess they all got the message."

This, coupled by his refusal to recognize anyone as a sacred cow, or be awed by a would-be target's high station in life, has built an aura of tough, single-minded, stubborn independence around Morgenthau. Love him, or hate him, there's no question about the fact that all respect him.

His determined efforts to firmly establish his office's reputation for incorruptibility have paid off.

Morgenthau has grabbed the Chairman of the Board of the New York Stock Exchange (for alleged tax refund), indicted over 100 employees of the Internal Revenue Service and an equal number of lawyers and accountants, won convictions on financier Louis Wolfson (a major campaign contributor to the Democratic Party), a top Post Office official, key labor leaders, the Treasurer of the New York State Democratic Party and New York City Water Commissioner James Marcus for taking kickbacks on a reservoir-cleaning contract.

He's stung former Tammany Hall boss Carmine De Sapio with a series of investigations, publicly gone after nearby Wall Street titans in the course of probing the growing infiltration of that bastion of finance by mobsters and sent three foreign ambassadors

away for long prison terms for their part in smuggling drugs into this country under the protection of their diplomatic immunity. Arrest of the diplomats, by the way, was the key move in the destruction of what had been a $200-million international drug ring and resulted in the jailing of a dozen top U.S. gangsters.

His dogged pursuit of famed attorney Roy Cohn (three indictments over a period of years on charges of bribery, extortion, violations of S.E.C. regulations, blackmail) catapulted Morgenthau himself into headlines recently. In a smashing attack, Cohn charged Morgenthau with staging "a personal vendetta" and "harassment," assertedly because Cohn had once investigated Morgenthau's father.

Cohn claims that his probe at that time concerned charges of Soviet infiltration into the Treasury Department when the elder Morgenthau was Treasury Secretary and the delivery of U.S. occupancy currency plates to Russia. When Cohn aired his charges in court, the Morgenthau reaction was typical. He fought down the urge to personally make a rebuttal. Instead, one of his aides handled the defense and came in with a documented answer so lengthy that the brief weighed one-and-a-quarter pounds. The Cohn trial is scheduled for the fall.

Morgenthau, refusing to discuss the case, did manage to get off this beauty: "A man is not immune from prosecution merely because a U.S. Attorney happens not to like him." He also says: "If Cohn investigated my father, he never knew it and neither did I."

Oddly enough, the three generations of Morgenthaus who have made so many contributions of significance to the country all had their lives changed due to their friendships with U.S. Presidents.

Bob's grandfather, Henry Morgenthau Sr., a wealthy lawyer and real-estate investor, was both friend and confidant of President Woodrow Wilson, who appointed him Ambassador to Turkey. His dad, Henry Morgenthau Jr., imbued with the family's love of the soil, bought several farms in Dutchess County, near Hyde Park, where he met a neighbor named Franklin D. Roosevelt. He also bought and published *The American Agriculturist*, a national farm journal.

The two men, registered Democrats in a sea of Republicanism, became close friends. As Governor of New York, Roosevelt appointed the father of the State Agriculture Commission. As President, Roosevelt brought Morgenthau to Washington, first as Governor of the Farm Credit Administration, then as Under Secretary of the Treasury under William H. Woodin. When Woodin left, Morgenthau moved up to Secretary.

Bob, who never mingled in the Washington scene, nevertheless met a young man in Hyannisport, Mass., in 1937 when he was 16. That young man was John F. Kennedy. As Bob recalls, "Jack was a couple years older than I, but we sailed in the same races and on one or two occasions I was invited to the Kennedy home to watch movies. I don't remember Bobby, who was much younger. I do remember Joe and the girls. Teddy, of course, was a baby."

Bob notes, "Jack and I weren't bosom buddy friends, but we did meet occasionally in later years."

When Kennedy made his 1960 bid for President, Morgenthau went to Washington to enlist in the campaign. He became Chairman of the Bronx Citizens Committee for JFK and worked for Jack's nomination at the Democratic convention in Los Angeles.

After the election, the President offered Morgenthau the U.S. Attorney job over the stringent objections of the late Congressman Charles Buckley, crusty Bronx leader at the time. Buckley wanted a tried and true organization man and blocked the appointment of Morgenthau until Kennedy threatened to give the post to a Connecticut Democrat. At that, with a few subsiding bristles, Buckley relented and O.K.'d Morgenthau.

The next year, Bob resigned from the office to run for Governor against the redoubtable incumbent Republican, Nelson A. Rockefeller. He won the nomination—with the Kennedys running the interference—but lost the election. His shyness, apparent uneasiness in front of campaign crowds and politically-too-quiet demeanor were insurmountable drawbacks.

Shortly after the election, Bob received a phone call from Kennedy. "Wanna go back as U.S. Attorney?" the President asked. Bob said "Yes"—eagerly. He was formally reappointed three weeks later.

As a recent visitor to Morgenthau's office pointed out, "If every voter had a chance to meet him in private and see his warmth and good humor firsthand, he'd have been elected easily. He just never let the people of New York discover that he was a hell of a guy."

At 49, Morgenthau still maintains the same outward public appearance—quietly shy, dignified, thin-lipped and bespectacled. After prep school, Bob graduated from Amherst with an A.B. degree in 1941. Following a 54-month stint in the Navy (46 of those months in combat), he went to Yale Law School and graduated in 1948 after a two-year cram course.

He married Martha Pattridge—a Midwesterner—in 1943. The couple reside in a rambling 11-room house in the pleasantly wooded Riverdale section of the Bronx with four of their five children:

Joan (Jenny), 24, is now studying for her master's degree at the Columbia School of Urban Planning; Anne, 22, is a senior at Radcliffe; Bobby, 12, is a sixth grader at Fieldston School and Barbara, 6, is also a Fieldston student.

Another child, Eleanor, 17, is retarded. She has resided for a number of years at the Lockland School, Geneva, N.Y.

Morgenthau, despite his full working day, has surrounded himself with other interests. He is President of the Police Athletic League, is active as a trustee or member of various Jewish organizations, including the Federation of Jewish Philanthropies of New York, the United Jewish Appeal and the Y.M.-Y.W.H.A. and pursues a lively interest in his profession as a member of all Bar associations.

The law, in fact, is his passion. He is an active and hard-working member of an advisory committee to reform Federal criminal laws. After a year and a half's work, the committee's final report will be ready soon. Among other things, that report is expected to bring about the first major recodification of Federal laws in several decades.

What about the future? Morgenthau's term runs until June 1971 but President Nixon may yet seek to replace him with a Republican. His reasons for not ushering himself out of office with a resignation are interesting:

"I do not plan to publicly concede that the office of U.S. Attorney is a political office. That demeans all of us; besides, we have many important cases coming up and I'd like to see them through.

"Besides, I don't like the idea of being a resigned officeholder hanging around and waiting for somebody to drop the other shoe. It undercuts the man, saps his authority and invites wrongdoers to delay things in hopes of getting a softer successor to deal with."

Morgenthau's solid background as a practicing lawyer—a fact that has bolstered his insistence on independence—gives reasonable assurance that he'll be able to make a substantial living. The fact that he needs that living surprises everyone, since anyone with the name Morgenthau is presumed to be a person of great wealth.

To the brash question, "Are you a millionaire?" Bob quickly replies, "No." Then he explains:

"When my father became Secretary of the Treasury, he took a post that traditionally has gone to men of immense wealth. Hence, the general belief that I have immense wealth. Oh, I won't starve (again, that unexpectedly quick and warm smile), but the financial tycoon idea just isn't so—in my case."

There remains one incontrovertible truth. Robert Morris Morgenthau is, for the moment, the U.S. Attorney for the Southern District of New York—and several hundred gangsters, in and out of prison, fervently wish he weren't.

BANK RATES NOT THE BORROWER'S BEST FRIEND

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, the American people have been the victims of a financial hypnosis which has led them to believe that in borrowing money or financing a purchase, they will be charged a lower interest rate by those institutions which advertise "bank rates." The talk of bank rates as being lower than other rates is a myth that should be exploded.

Perhaps one of the most interesting examples of how the term "bank rates" is used to entice borrowers is contained in a letter sent by the treasurer of the Roanoke General Electric Employees Federal Credit Union to Mr. Eugene Farley, managing director of the Virginia Credit Union League. The letter follows:

ROANOKE GENERAL ELECTRIC
EMPLOYEES FEDERAL CREDIT UNION,
Salem, Va., May 7, 1969.

Mr. EUGENE H. FARLEY, Jr.,
Managing Director, Virginia Credit Union League, Lynchburg, Va.

DEAR GENE: A credit union member was just in my office with this story. I had little to offer him but sympathy, but perhaps his story will stress the importance of better education for our members.

In January of this year, he purchased a new car from a local *reputable new car dealer*. He was told when he purchased the car that he would *have to finance the car through the dealer* or he could not buy it at the price offered. He had wanted to finance it through the credit union.

The dealer took the financing contract and then placed the contract at one of our *local banks*. The contract reads like this:

Amount financed	$2,452.40
Interest—36 months	497.29
Life insurance	91.23
Total	3,040.92

Payments are $84.47 per month for 36 months. The loan was made on January 14, 1969 and the first payment was due February 28, 1969. Along about the middle of February our member decided he would borrow the money from the credit union and pay off the bank. He went to the bank on February 20, 1969 (37 days after the date of the loan) and was told that the pay off would be $2,671.38—that's *$218.98 more than he borrowed*. Of course, he didn't pay it off.

He has since made three payments on the loan amounting to a total of $253.41. He went to the bank today to find out how much the

pay off would be. They told him the pay off as of today was $2,497.81—*still more than he borrowed.*

Gene, that's *bank financing* that we hear so much about. Sort of makes you glad to be a credit union member, doesn't it?

Sincerely,

C. W. LAWRENCE,
Treasurer/Manager.

After obtaining a copy of the letter, I did some checking with credit unions and found that if the gentleman who had financed his car with the bank had, instead, financed the automobile with his credit union, he would not have been charged $218.98 for the use of the money for 37 days but instead he would have only been charged $37.52. Thus, the bank charged 589 percent more for the loan than the credit union would have charged.

It is no wonder, Mr. Speaker, that more than 20 million Americans are members of credit unions. These people know that they just cannot afford "bank rates."

HIGHWAY SAFETY: COMMENTARY NO. 12

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, recently, an article appeared in the Daily Eagle published in Claremont, N.H., concerning the use of computers to make highways safer for motorists. As this article points out, the Bureau of Public Roads has undertaken a test program to determine the effectiveness of using computers to signal cars when it is safe to pass another vehicle.

An innovation such as this, if proven effective, might be a life saver, especially in the less populated, mountainous areas of the country where curves and hills are prevalent. I wish to commend the Bureau for its initiative in trying to find ways to achieve highway safety.

The article follows:

HIGHWAY SAFETY A LA COMPUTER

Is it safe to pass the car ahead of you when you can't see what's coming?

Ask a computer.

This can't be done—at least not quite yet. But soon there'll be a 15-mile stretch of experimental highway equipped with sensors and computers designed to promote greater safety for motorists.

This may sound like a vision of the far future—but it isn't.

Work is due to start within a month on a $1.5 million federal project, pioneered by the Bureau of Public Roads. By 1971 this project will have equipped a stretch of two-lane highway with an electronic system to aid motorists in passing.

Site of the project is U.S. Route 2, near Newport, Maine, somewhere between Bangor and Skowhegan, we're told. Here an installation of sophisticated equipment will advise a motorist of the time available to pass whenever his view of the highway ahead is obstructed by a slow-moving vehicle.

Signals may be observed either on car receivers or on roadside displays at selected points along the computerized route.

This isn't, as we understand, a full-scale computer takeover. The driver, guided by advice from the electronic system, still can make his own decision and act upon it.

But there's only a short step between this and the complete computerized control of traffic predicted by far-out forecasters of tomorrow's electronic world.

How soon?

Goodness knows.

INFANT MORTALITY AND THE ABM—A CORRELATION

(Mrs. MINK asked and was given permission to extend her remarks at this point in the RECORD, and to include extraneous matter.)

Mrs. MINK. Mr. Speaker, all of us who are concerned with the ABM, MIRV, and other dangerous escalations of the arms race are opposing these weapons because they could lead to the ultimate destruction of the human race.

Evidence has been gathered indicating that the testing of nuclear weaponry is already having an effect on unborn infants, in some cases killing fetal humans before they are born. A correlation between nuclear weapons tests and rising infant and fetal mortality is reported in an article by Prof. Ernest J. Sternglass in the April 1969 issue of the Bulletin of Atomic Scientists.

Prof. Ernest J. Sternglass is a member of the department of radiation physics at the University of Pittsburgh. In the forthcoming September issue of Esquire, Professor Sternglass expands on his scholarly treatment of this alarming subject in an article titled "The Death of All Children." This article discusses the direct threat of massive, if not total, infant mortality that threatens our very existence.

As a mother and as a human being I strongly protest a national policy which could lead to the extermination of the human race. Professor Sternglass writes:

In view of new evidence on the totally unexpected action of strontium 90 on human reproductive cells, it is apparent that Congress has not yet considered what may well be the most important factor affecting its decision to proceed or not to proceed with the first steps toward the ABM shield. The fact is this: a full-scale ABM system, protecting the United States against a Soviet first strike, could, if successful, cause the extinction of the human race. (Indeed, the scientific evidence indicates that already at least one of three children, who died before their first birthdays in America in the 1960s, may have died as a result of peacetime nuclear testing.)

Because of the importance of Dr. Sternglass' article in relation to our debate on the ABM and my colleagues' interest in preserving human life, I include both articles at this point in the RECORD.

[From the Bulletin of the Atomic Scientists, April 1969]

INFANT MORTALITY AND NUCLEAR TESTS

(By Ernest J. Sternglass)

(NOTE.—Can infant and fetal mortality in the United States be correlated with nuclear weapons tests? Professor Sternglass offers data for a close correlation between a leveling off in the decline of the fetal and infant mortality rates in the high rainfall areas in 1951–52 and the onset of the Nevada nuclear weapons tests in the atmosphere. A similar correlation exists for the onset of hydrogen bomb tests in the Pacific in 1954, according to the data. Professor Sternglass is a member of the Department of Radiology and Division of Radiation Health, University of Pittsburgh.)

Mounting evidence that there exists no threshold below which radiation is incapable of producing somatic and genetic effects in man suggests that especially for the sensitive embryo, fetus and infant, even relatively low-level doses from peacetime fallout may lead to detectable increases in death rates when data on very large population groups are examined.

That such effects on the developing human embryo may in fact be observable was initially suggested by the data on fetal death rates in the Albany-Troy, N.Y. area following the rain-out of radioactive debris from a 43-kiloton test in Nevada in April 1953. Examination of these data shows that the decline of the fetal death rate changed to a much lower slope, within a period of a year or two. It remained at this lower value until 1966 even though the measured external gamma radiation dose to the population was only 0.1 rad over a period of some ten weeks following the rain-out from the passing radioactive dust-cloud. Since this incident was also followed by an increase in childhood leukemia beginning some five years later accompanied by a shift in age distribution towards older age at death known to be characteristic of radiogenic cases, the data appeared to be suggestive of a possible causal connection between the rate of change of the fetal death rate and the arrival of the fallout.

It was therefore of interest to see whether changes in fetal death rate appeared not only in the Albany-Troy area but also in New York State as a whole, and whether subsequent tests are also reflected in changes of the fetal mortality.

In New York State as a whole, the fetal death rate began to deviate from the 1935–50 rate of decline in 1951, the year that atmospheric weapons tests began at the Nevada test-site. The rate of decline slowed from the 1935–50 value, after which the death rate started to change sharply, leveling off at about 23 per 1,000 live births between 1957 and 1963. In 1964, it increased sharply to 27.3 per 1,000 live births, declining somewhat in 1965 and 1966.

In contrast to this anamalous behavior, the fetal death rata for California, which received less fallout from the Nevada test, maintained its steady decline, although a decrease in the rate of decline became evident beginning within two to three years after the onset of hydrogen bomb tests in the Pacific in 1954.

CHARTING THE CONNECTION

In order to see whether the sharp rise in the fetal death rate in New York State might be connected with the accumulated fallout from weapons testing, the excess of the fetal mortality over the value expected if the 1935–50 rate of decline had persisted was plotted against the cumulative Strontium-90 deposited in the New York area.

It is seen that except for the first few years of testing in Nevada when short-lived isotopes rather than the long-lived Strontium-90 were dominant, the fetal death rate follows the same general pattern as the accumulated Strontium-90 on the ground. The two curves show the same decrease in rate of climb coincident with the temporary stoppage of nuclear testing in 1958 to 1961, and the sharp rise beginning with the large USSR test series in 1961. Two years after the test-ban in 1963, both the fetal deathrate and the radioactivity in the environment once again began to decline.

A similar pattern in the registered fetal death rate or rate of still-births exists in the data for the United States as a whole for all periods of gestation up to nine months. Again, there is a steady rate of decline, which levels off in 1951–52, coincident with the on-

set of nuclear weapons testing at the Nevada test-site in 1951.

The first actual rise in the fetal death rate occurred in 1954, when the first large hydrogen weapons were tested in the Pacific. A second rise took place in 1961, at the same time as the onset of large megaton weapons by the USSR in that year.

In order to see whether the pattern of infant mortality rates for infants up to one year of age in the United States also shows such as association with nuclear weapons testing, the infant mortality rates for various states, differing in precipitation and therefore fallout accumulation, were also investigated. The results were examined for typical large "wet" metropolitan states known to have received substantial amounts of fallout together with rural southern states that also have heavy rainfalls and lie to the east of the New Mexico and Nevada test-sites, as well as "dry" rural states in the West, largely free from New Mexico and Nevada fallout due to the low rainfall and the direction of the prevailing westerly winds at high altitudes.

The expected synchronous onset of change occurred in infant mortality rates for all four Northern metropolitan "wet" states in 1951, the same year that atmosphere tests in Nevada were begun.

The rural "wet" states of the Southeast show a generally similar pattern, but with indications of a leveling trend setting in somewhat earlier, or within one to two years after the first relatively "dirty" surface A-test in New Mexico in 1945. This detonation was followed by a series of five relatively "dirty" surface tests in the Pacific in 1946 and 1948, all of which occurred in the southern latitudes (11° N). As a result, the narrow belt of tropospheric radioactivity, typically 30° wide, reached primarily the southern part of the United States (25–35° N), where it came down in rough proportion to the annual rainfall.

CONDITION IN WEST

As expected, the "dry" rural states of the West, especially New Mexico which lies to the south of Nevada, do not show this leveling of the mortality rates either after the first tests in 1945–48 or in 1951. Instead, the rates continue to decline steadily and only when the stratospheric debris from the large hydrogen weapons tests begins to be introduced into the atmosphere does one see a leveling-off, beginning first in the mountain states of Idaho and Colorado in 1954, and later in Wyoming and New Mexico in 1958.

The data on infant mortality for the United States as a whole (plotted in Fig. 3) show a pattern similar to that for fetal mortality, with a strong leveling trend evident by the early 50's, after a steady decline that had persisted since the beginning of the century. That no "natural lower limit" had been reached in the attainable rate is proven by the fact that within two years following the test-ban of 1963, the infant mortality rate resumed its decline at a rate approaching that prevailing prior to the onset of large-scale atmospheric testing.

The nonexistence of a natural plateau of 20 to 25 per 1,000 live births is further substantiated by the fact that in six European countries with advanced medical care comparable to that in the United States, the infant mortality continued downward so that the rates in all these countries fell below that of the United States by 1964, despite a leveling trend in these countries that began in the late 50's with the onset of large hydrogen weapons testing by the United States, the United Kingdom and the U.S.S.R.

The lowest value, that for Sweden, reached 14.2 by 1964, when the U.S. rate was still 24.8 per 1,000 live births. Such a rate represents an excess of 75 per cent relative to that for Sweden, and an excess of 60 per cent relative to the expected U.S. rate of 15.5 had the infant mortality continued to decline at the 1935 to 1950 rate of decrease when the decline closely paralleled that for Sweden.

High radiation sensitivity of the fetus and infant have been determined both from animal studies and the effect of X-rays in man. This sensitivity results from the rapid cell division and organ formation characteristic of the early phases of development. It is therefore to be expected that the first serious effects of fallout would appear in the fetus and young infant, for which existing measurements show very much higher organ and skeletal doses than for the adult.

GENETIC DAMAGE

It has also been observed (in a study by K. G. Luning and his coworkers in Sweden, published in 1963) that Strontium-90, aside from concentrating in the bone, also appears to produce genetic damage, which expresses itself in excess fetal deaths when injected into the male parent animal prior to reproduction. Furthermore, the doubling dose for chromosomal damage to human cells may be as low as 1 rad (as recently discussed by J. V. Neel). This is consistent with recent evidence for an increase in childhood leukemia many years after the irradiation of either parent at diagnostic X-ray levels (observed in a study carried out by S. Graham and his coinvestigators at Roswell Park Memorial Institute). These findings suggest that both excess fetal and infant deaths are primarily due to chromosomal damage produced just prior to conception or in the earliest phases of development. No other explanation of the decrease in the rate of decline for infant mortality in the United States, as compared to other countries of equally low mortality rates, has so far been found.

Public health organizations have made a world-wide effort to understand the origin of this disturbing trend that has by now started to affect the entire world. As it was put in a recent book devoted to this problem by S. Shapiro, E. R. Schlesinger and R. E. L. Nesbit, Jr.: "Why is it that during the 1950's and early 1960's, years of great economic advancement and expanding allocation of economic resources to medical care, the infant mortality rate decreased only moderately? Contrasting economic and medical care advances in this period with what happened to the infant mortality rate poses a difficult paradox."

There is accordingly strong evidence in the correlation of excesses in the infant and fetal death rate with nuclear testing. The human ova, sperm and fetus may be considerably more sensitive to internal radiation from certain radioisotopes than had been expected on the basis of animal experiments or observations on children irradiated in the course of diagnostic X-ray examinations of the mother prior to or during pregnancy. The estimated number of excess infant deaths since 1951 reached a total of 375,000 by 1966 in the United States alone and has continued at a rate close to 34,000 per year—this despite a gradual decline of the death rate beginning with the test ban in 1963. The serious dimensions of the worldwide infant mortality problem are thus apparent, suggesting the need for a major, international effort to test in detail the various consequences implied by the hypothesis that nuclear fallout may have played a significant role in this and other important changes in mortality trends all over the globe.

In view of the evidence of an association between nuclear testing and the increase of fetal and infant mortality in the United States, an association which appears to be of a direct causal nature, the need to end all further atmosphere weapons testing and to halt all shallow underground cratering tests that permit escape of radioactive material into the environment is of paramount urgency.

Since significant changes in the rates of fetal and infant mortality seem to have been produced as the result of tests in 1945–54 involving only a handful of kiliton weapons now classified as "tactical" in size, the full dimensions of the threat to the biological survival of mankind posed by a possible nuclear war become apparent.

[From Esquire magazine, September 1969]

THE DEATH OF ALL CHILDREN—A FOOTNOTE TO THE ABM CONTROVERSY

(By Ernest J. Sternglass, professor of radiation physics, University of Pittsburgh)

Hopefully it is not too late to ask the members of Congress in their deliberations over the Administration's proposed Anti-Ballistic Missile system to pause and reflect on the nature and urgency of the matter they have been debating.

In view of new evidence on the totally unexpected action of strontium 90 on human reproductive cells, it is apparent that Congress has not yet considered what may well be the most important factor affecting its decision to proceed or not to proceed with the first steps toward the A.B.M. shield. The fact is this: a full-scale A.B.M. system, protecting the United States against a Soviet first strike, could, if successful, cause the extinction of the human race. (Indeed, the scientific evidence indicates that *already* at least one of three children, who died before their first birthdays in America in the 1960's, may have died as a result of peacetime nuclear testing.) Such is the conclusion indicated by new information on the unanticipated genetic effect on strontium 90, presented at a recent meeting of the Health Physics Society.

Proponents of the A.B.M. system argue that it is necessary to prevent the destruction of our deterent forces by a massive first strike of Russian SS–9 missiles carrying thousands of multiple warheads. But the threat of such an attack loses all credibility against our present knowledge that the vast amounts of long-lived strontium 90 necessarily released into the world's rapidly circulating atmosphere could lead to the death of all Russian infants born in the next generation, thus ending the existence of the Russian people, together with that of all mankind.

The unanticipated genetic effect of strontium 90 has become evident from an increase in the incidence of infant mortality along the path of the fallout cloud from the first atomic test in New Mexico in 1945, and from a detailed correlation of state-by-state infant mortality excesses with yearly changes of strontium 90 levels in milk.

The computer-calculated change in infant mortality was found to have reached close to one excess death in the U.S. per one hundred live births due to the release of only 200 megatons of fission energy by 1963. This indicates that a release of some 20,000 megatons anywhere in the world, needed in offensive warheads for an effective first strike or in the thousands of defensive A.B.M. warheads required to insure interception, could lead to essentially no infants surviving to produce another generation.

The specter of fallout has of course loomed before in the national anxiety over nuclear explosions. But the result of these studies comprises the first documented, long-range analysis showing direct quantitative correlations between strontium 90 and infant mortality. (They will be published later this year as recorded in the Proceedings of the 9th annual Hanford Biology Symposium.)

The physicists who exploded the first atomic

bomb at Alamogordo had expected radioactive materials of some kind and assumed that they would fall to earth downwind as far as fifty miles away. Accordingly, the test site had been located in an isolated area of southern New Mexico. When a subsequent series of tests was held in 1951, six years later, the scientists moved to the isolation of desert country in southern Nevada. By now, however, and without the knowledge of the scientific community, the death rate of children *in states* downwind from Alamogordo had begun to rise.

The infant mortality rates in the United States have been carefully collected for many years. From 1935 to 1950, the rate shows a steady decline, and mathematical models allow the rate to be extended to show, on the basis of previous experience, what the infant mortality rate for any time, consistent with the immediate past, ought to be. But while elsewhere (with one exception) in the U.S. the rate continued downward as expected; in the states downwind of Alamogordo it did not. There was no change in the infant death rate in 1946—the year after the Trinity test—but by 1950 the rate in Texas, Arkansas, Louisiana, Mississippi, Alabama, Georgia, and both Carolinas deviated upward from the normal expectancy. Increases in excess infant mortality of some twenty to thirty percent occurred some thousand to fifteen hundred miles away in Arkansas, Louisiana, and Alabama, where mortality rates were between 3 and 4.5 per hundred live births. Thus, as observed by our research group at the University of Pittsburgh, the Alamogordo blast appears to have been followed by the death, before reaching age one, of roughly one of one hundred children in the area downwind. No detectable increase in mortality rates relative to the computer-determined 1940–45 base line was observed in Florida, south of the path of the fallout cloud, or in the states to the north; and the mortality excesses became progressively less severe with increasing distance eastward, in a manner now understood to be characteristic of the activity along the path of a fallout cloud. Though the increase in infant mortality in the states was taking place during the years 1946–1950, it does not appear to have been associated with the Alamogordo fallout before our studies beginning in October, 1968.

Meanwhile, the study of radiation effects proceeded elsewhere in the scientific community. It became known in the early 1950's that radioactive strontium was concentrated in cow's milk and transmitted, along with the calcium to which it bears a close chemical resemblance, to the rapidly growing bones of the fetus and the subsequent infant. Still, the radiation from strontium 90, though long-lasting, was relatively small in degree; and it was a matter of record, from studies of young women employed in painting luminous watch dials, that very large amounts of radiation over long periods of time are required to produce bone cancer or leukemia in adults. Besides, the survivors of Hiroshima and Nagasaki and their offspring were carefully observed, without discovering any very serious long-term effects of radiation. A small number of leukemia cases turned up, and a very few detectable abnormalities among their children, but compared with the rest of Japan the difference was slight. The measurable effects of fallout, at the time, did not seem so ominous after all. So atmospheric nuclear weapons testing proceeded in Nevada until 1958, and continued in the Pacific until 1963 under the pressure of the Cold War. No obvious or clear-cut incidents of serious harm to anyone were reported outside the immediate area of testing.

Still, there was concern among radiobiologists and geneticists over the possibility of radiation effects on the highly sensitive human reproductive cells, rapidly dividing and developing to form the human embroyo during the first few weeks and months of gestation. Evidence from animal experiments, as well as from the observation of pregnant women who had been exposed to X-rays, suggested that ova and embryo might be from twenty to fifty times more sensitive to the development of leukemia than the mature adult. If so, the potential danger of even relatively small amounts of radiation would be greatly magnified.

The evidence implicating X-rays in childhood leukemia had been discovered—quite unexpectedly—by Dr. Alice Stewart of Oxford University, in the course of a survey designed to uncover the causes of a disturbing rise in childhood leukemia among the children of England and Wales during the 1950's. Her study, published in 1958, showed that mothers who had received a series of three to five abdominal X-rays in the course of a pelvic examination gave birth to children who were almost twice as likely to die of leukemia or other cancers than the children of mothers who had not been X-rayed during pregnancy. Subsequent studies showed that only about six percent of all childhood leukemia is related to X-rays, but Dr. Stewart's research remains significant, since before then no serious effects of ordinary diagnostic X-rays had ever been demonstrated, especially since a single abdominal X-ray gives the fetus a radiation dose not much larger than what each of us receives in the course of some three to five years from cosmic rays and the natural radiation in the rocks around us.

It is true that leukemia and childhood cancer are relatively rare. Only about one child in one thousand is affected. Nevertheless, since leukemia and other cancers are the second greatest cause of death among children between five and fourteen (ranking only after accidents), Dr. Stewart's findings were regarded by physicians as startling, and efforts were made to check them. Perhaps the most definitive such examination was done by Dr. Brian MacMahon at the Harvard School of Public Health. Using a study population of close to 800,000 children born in large New England hospitals, where careful records of X-rays given to mothers were available, Dr. MacMahon confirmed Dr. Stewart's findings. He observed only about a forty percent increase in the cancer rate among exposed children, probably because of improvements in X-ray technology that allowed lower exposures.

Meanwhile, in April, 1953, a sizable amount of nuclear debris from a test explosion in Nevada was wafted downwind some two thousand miles to the east and, thirty-six hours later, deposited by a rainstorm over the Albany-Troy region of New York State. Dr. Ralph Lapp, one of the first scientists to be concerned with the hazards of peacetime nuclear testing, drew attention to this heavy local fallout. Subsequent examination of the childhood leukemia pattern in this area showed that leukemia doubled over a period of some eight years after the fallout—and then decreased. Here, for the first time, was a documented case in which fallout appeared to produce serious effects at a rate consistent with what was expected from the study of children exposed to prenatal X-rays.

Further examination of the leukemia rate for the entire State of New York revealed a pattern of increase and decrease following the sequence of individual test series in Nevada between 1951 and 1958, with a characteristic time delay of about five years after each detonation. The rise and fall were particularly marked in the age group from five to fourteen years, the group most indicative of radiation-produced cases.

More disturbing yet, the evidence showed that the arrival of the fallout was followed by a halt in the normal decline of the rate of stillbirths. For the previous fifteen years, from 1935 to 1950, the stillbirth rate had shown a regular and progressive decline. Within a year after testing began in Nevada in 1951, the rate began to deviate upward. Between 1957 and 1963 the fetal death rate, instead of steadily declining as it had from 1935 to 1950, leveled off completely at around twenty-three per thousand live births. In 1964, the fetal death rate rose to 27.3 per thousand, the first such leap since records had been kept in New York State. In 1965 and 1966, it declined slightly, as a gradual reduction of fallout in milk and food took place throughout the U.S. In contrast to New York, the fetal death rate for California—upwind of the Nevada test site, and therefore not affected by it—continued its steady decline, in line with the 1935–1950 figures from which New York so sharply deviated. Still, the rate of decrease began to slow down in California also—two to three years after the onset of hydrogen bomb tests in the Pacific in 1954.

The implications of the fetal death rate could be considered much more serious for society than the incidence of childhood leukemia, since there are more than ten times as many fetal deaths reported than cases of childhood leukemia. Moreover, for every fetal death reported, an estimated five or six are not reported, yielding perhaps fifty or sixty fetal deaths for each case of leukemia. Consequently, the search for further evidence continued. More fallout seemed to be followed by more fetal deaths, but no precise statistical correlation had been drawn. Since the amount of strontium 90 deposited in the soil is easily measurable, the cumulative deposit of strontium 90 was plotted against the *excess* of fetal mortality over what the mortality *should* have been if the 1935–1950 decline had persisted. The finding: except for the first few years of testing in Nevada, when short-lived isotopes rather than the long-lived strontium 90 were dominant, the fetal death rate in New York followed the same general pattern as the accumulated strontium 90 on the ground. Both curves showed the same decrease in rate of climb coincident with the temporary halt of nuclear testing from 1958 to 1961; both show a sharp rise beginning with the large Soviet test series in 1961. Two years after the test ban in 1963, both the fetal death rate and the radioactivity in the environment once again began to decline.

A similar pattern in the fetal death rate exists in the data for the United States as a while for all periods of gestation up to nine months. Again, there is a steady rate of decline until the Fifties, a leveling off in 1951–52, and an actual rise in 1954, corresponding to the onset of the Pacfic H-bomb tests; and a second rise in 1961, corresponding to the Soviet test series.

But perhaps the most disturbing evidence of all indicates that the rates of infant mortality in the United States and all over the world seem to have been affected by nuclear testing. The infant mortality rate is far more accurately known than the fetal death rate, since the death of a baby, unlike a miscarriage or an abortion, rarely escapes notice in the advanced countries. Like fetal deaths, infant mortality had shown a steady decline in the period 1935–1950; but beginning with the Nevada tests in 1951 and continuing until just after the test ban in 1963, the rate suddenly leveled off in the U.S. This leveling off did not occur in such other advanced countries as Sweden, Holland and Norway, or in Southern Hemisphere countries like Chile and New Zealand, until late in the 1950's when hydrogen-bomb tests in the South Pacific and Siberia began to produce worldwide fallout on a much increased scale. Only after the major portion of the most violently radioactive material from the 1961–62 tests had disappeared did U.S. infant

mortality begin to decline again in 1965, at a rate close to the previous 1935–1950 decline.

The most serious effects appeared in the age group from one month to one year. Here, the rate of deaths per one thousand live births should have been, according to the 1935-1950 figures, about 2.7. Instead, the observed number was 5.4 per thousand, twice what it should have been and twice what it actually was in Sweden, where the rate had steadily declined to 2.6 per thousand.

Not only was there a drastic change in overall infant mortality for the U.S. as compared to the rest of the advanced countries, but there were also disturbing patterns of change within the U.S. For example, the infant mortality rate started to level off sharply in the Eastern, Midwestern and Southern states within two years after the onset of atomic testing in Nevada in 1951, while it continued steadily downward in the dry Western states. But this is exactly the known pattern of accumulated radioactive strontium on the ground and in the diet, since strontium is most heavily deposited in states of high annual rainfall, especially in those to the east of Nevada.

Serious difficulties remained, however, in establishing a causal connection between nuclear testing and these drastic changes in fetal and infant mortality. First, why should fallout, and in particular strontium 90, cause fetal and infant deaths, since it goes to the bones and should therefore cause, if anything, bone cancer and leukemia many years later? Second, there was no observed direct quantitative relation between different levels of strontium 90 in the body and mortality rates at any given age. Therefore it was difficult to see how the very small amounts of radiation resulting from peacetime testing could possibly have been the cause of the deviations in fetal death and infant mortality, especially since no significant genetic effects had been observed among the children of the Hiroshima and Nagasaki survivors.

The causation puzzle now appears to be solved. In 1963, K. G. Luning and his coworkers in Sweden published their discovery that small amounts of strontium 90, injected into male mice three or four weeks prior to mating, produced an increase in fetal deaths among their offspring. No such increase appeared when corresponding amounts of chemically different radioactive cesium 137 were injected. More recently, evidence presented at an International Symposium on the Radiation Biology of the Fetal and Juvenile Mammal in May, 1969, has demonstrated severe chromosome damage, fetal deaths and congenital malformations in the offspring of female mice injected with strontium 90 before and during pregnancy. Similar effects have now been observed for very small quantities of tritium, produced by both A-bombs and relatively "clean" hydrogen weapons.

In the light of these studies, the absence of genetic effects in Hiroshima is understandable. In Hiroshima and Nagasaki, the bombs were detonated, not on the ground as in New Mexico, but at such an altitude that there was essentially no fallout in these two cities proper. The radiation exposure there resulted almost exclusively from the brief flash of X-rays, neutrons and gamma rays at the instant of explosion. Consequently no special effects related to strontium 90 appeared in the children of the survivors; but the rate of cancer deaths among children up to fourteen years in Japan as a whole jumped by more than two hundred percent between 1949 and 1951, four to six years after the bombs, when the fallout had had a chance to produce its effects throughout the southern parts of Japan—exactly the same delay observed after the fallout from Nevada arrived in Albany-Troy.

But the problem remains of demonstrating a direct connection between the levels of strontium 90 in human fetuses and infants, on the one hand, and observed changes in fetal and infant mortality, on the other. Such a direct connection seems to emerge from the so-called "baby-tooth survey" carried out by the Dental School of Washington University in St. Louis, supported by the U.S. Public Health Service and directed by Dr. H. L. Rosenthal. Using the data from tooth-buds and mandibular bones of aborted fetuses and from baby teeth collected in the greater St. Louis area, Dr. Rosenthal's study showed that the concentration of strontium 90 in the teeth followed closely the measured concentrations in bone and milk. Measurement of the strontium 90 content of milk anywhere in the world permits a calculation of the concentration in the bones of infants and fetuses developing in the same areas. We have found a direct correlation between the yearly changes of strontium 90 contained in the teeth (and therefore the bones and bodies) of the developing human fetus and infant, and the changing excess mortality rates, going up and down together as atmospheric tests began in 1951 and stopped in 1963.

From our examinations of the infant mortality changes from a computer-fitted base line for 1935–1950, for various states in which the Public Health Service reported monthly values of the strontium 90 concentrations in the milk since 1957, there emerges a close correspondence between average strontium 90 levels and infant mortality changes. Wherever the strontium 90 rose to high values over a four-year period, as in Georgia, a large, parallel, year-by-year rise in infant mortality also took place; while in areas where there was little strontium 90 in the milk, as in Texas, the infant mortality remained at a correspondingly lower value. Other states such as Illinois, Missouri, New York, and Utah also show a rise, peaking in the same 1962–1965 period at levels between these extreme cases, each according to their local annual rainfall and strontium 90 concentrations in their milk.

For the United States as a whole, we found a detailed correspondence between and among: 1) the excess infant mortality relative to the 1935–1950 base line; 2) the total strontium 90 produced by nuclear weapons; 3) the strontium 90 thus produced actually reaching the ground; and 4) the four-year average concentration in U.S. milk from 1955, the year after the first large H-bomb tests; and 1965, the year when strontium 90 concentrations began to level off and started to decline once again.

At the peak of this excess infant mortality, it was the District of Columbia that showed the largest excess in 1966—157 percent, compared with an average excess of 72 percent for the U.S. as a whole. The low value was found in dry New Mexico, minus-eleven percent—actually below the 1935–50 base line.

To appreciate the magnitude of these effects, it must be recognized that in the 1950's about 2.5 to 3.0 infants out of every hundred born in the U.S. died before reaching the age of one year. The average excess infant mortality, therefore, represents close to one child out of one hundred born, or one of every 2.5 to 3.0 that died during the first year of life.

Since about four million children were born annually during this period, close to 40,000 infants one year old or less died in excess of normal expectations each year, totaling some 375,000 by the mid-Sixties and continuing at about 34,000 per year since the end of atmospheric testing by the U.S. and the U.S.S.R.

It is no wonder, then, that infant mortality has been a major concern of our Public Health Service since this trend was first pointed out in 1960 by Dr. M. Moriyama of the National Center for Health Statistics.

However, as Dr. Moriyama and his associates observed during an international conference devoted entirely to infant mortality in 1965, none of the factors so far considered—medical care, population movement, new drugs, pesticides, smoking or epidemics of infectious disease—suffices to explain the observed facts.

That the recent excesses in infant mortality cannot readily be explained by medical and socioeconomic factors normally influencing mortality trends may be seen from an examination of the death rate in the various states following the Alamogordo blast. At the University of Pittsburgh, we have plotted the percentile infant mortality excesses of decrements relative to the computer-determined 1940–1945 base line for the first and fifth years after Alamogordo. In 1946, one year after the detonation, there was no sign of any excess infant mortality in the states downwind from New Mexico; but by 1950 a clear change toward excess infant mortality appeared in the states over which the fallout cloud had drifted, and only in those states. Furthermore, the excess mortalities are seen to be distributed in such a pattern as might be expected from nuclear fallout originating in New Mexico, since the effects are lowest in the dry area of western Texas, and largest in the areas of heavy rainfall first encountered by the cloud, namely Arkansas, Louisiana, Mississippi and Alabama, declining steadily thereafter toward the Atlantic.

The only other area that showed a clear excess infant mortality greater than ten percent as compared to the 1940–1945 period was found to be North Dakota. There, subsequent measurements of strontium 90 in the milk, carried out by the Health and Safety Laboratories of the Atomic Energy Commission, revealed the highest concentrations anywhere in the U.S. for which data is available prior to 1960. The causes of this "hot spot" are not yet fully understood, but they are quite possibly connected with known accidental discharges of radioactivity from the Hanford plant of the Manhattan Project, directly to the west, in the early years of its operation, where the fissionable plutonium for most of the nuclear weapons was produced beginning in 1944.

Since no excess infant mortality was registered along the path of the New Mexico fallout cloud in the first year after the detonation, the deaths occurring downwind in later years could not have resulted from the direct effects of external radiation from fallout on the developing embryo. It becomes clear then that we are dealing with an effect on the reproductive cells of the parents, or a so-called genetic effect.

The evidence available so far therefore suggests that radioactive strontium appears to be a far more serious hazard to man through its long-lasting action on the genetic material of the mammalian cell than had been expected on the basis of its well-known tendency to be incorporated into bone. The resultant effect appears to express itself most noticeably in excess fetal and infant mortality rates among the children born two or more years after a nuclear explosion. Presumably such factors as lowered birth weight and reduced ability to resist ordinary infectious diseases are involved, accounting for the greatest increase in infant mortality in the U.S. as compared to the advanced countries of Western Europe since the early 1950's. Children who receive adequate medical care are more likely to survive these factors than those who do not.

What does all this imply for the debate over the deployment of new nuclear weapons systems, such as the A.B.M. or the M.I.R.V. (Multiple Independent Reentry Vehicle), carrying many nuclear warheads in a single missile? To appreciate the probable genetic effects of a large nuclear war, we can consider first the effect of small tactical-size nuclear weapons comparable to the 20 kiloton bombs detonated over Hiroshima,

Nagasaki, and in the desert of Alamogordo. Since increases of some 20 to 30 percent excess infant mortality were observed from a thousand to fifteen hundred miles downwind in Arkansas, Alabama and Louisiana, where mortality rates were between 3 and 4.5 per hundred live births, the detonation of a single, small tactical-size nuclear weapon on the ground in the western United States appears to have led to one out of one hundred children born subsequently dying before reaching the age of one year. Therefore, the detonation of a hundred or so weapons of this size, amounting to the equivalent of only two megatons in the form of small warheads, would be expected to lead to essentially *no* children surviving to maturity in the states directly downwind.

But according to former Defense Secretary Clark Clifford, speaking at a N.A.T.O. conference in the Fall of 1968, we have close to eight thousand tactical nuclear weapons in the kiloton range ready to be released in order to protect our European allies from a ground attack by Russia. Thus, we would probably achieve the protection of Western Europe at the cost of the biological end of these nations through the death of the children of the survivors, together with the likely death of most children subsequently born to the people of Eastern Europe, Russia and China as the radioactive clouds drift eastward around the world until they reach the United States. Thus, the use of the biologically most destructive small nuclear weapons in tactical warfare now appears to be at least as self-defeating as the release of large quantities of nerve gas, killing indiscriminately soldiers and civilians, friends and enemies alike.

But, what about the use of large megaton warheads in a massive first strike or in A.B.M. missiles detonated high up in the stratosphere or outer space, as proposed for the Spartan missile that is to provide us with an impenetrable shield against a first strike attack by large Chinese or Russian missiles in the 1970's?

According to the figures on infant mortality in the United States, based on the testing of large hydrogen weapons in the Pacific and Siberia, both in the atmosphere and outer space, close to one out of every one hundred children born are likely to have died as the result of only about 200 megatons worth of fission products into the world's atmosphere, under conditions which were especially designed to minimize the possible effects on health.

According to the testimony of Defense Secretary Melvin Laird in the Spring of 1969, the U.S.S.R. will have the capability of launching some 500 SS–9 missiles, each capable of carrying 25 megatons worth of bombs in the form of many multiple warheads, or a total of some 1500 to 2500 warheads. Together with comparable numbers launched by smaller missiles, the total megatonnage would therefore be of the order of 10 to 20,000 megatons needed in a first strike that attempts to destroy most of our thousands of missiles and bombers at the same time.

Thus, the threat of a first strike by Russia loses all credibility since, in order to have any chance at all of preventing devastating retaliation, it would necessarily have to release so much radioactivity into the circulating atmosphere that it would lead to the death of most Russian infants born in the next generation, ending the existence of the Russian people together with that of all mankind.

Since it takes at least three to five Anti-Ballistic Missiles launched to insure a high probability of interception, the U.S. must be prepared to launch some 5000 to 15000 A.B.M.'s in order to provide a meaningful "shield" against such a massive attack.

We know that each Spartan missile must contain a warhead of at least 2 megatons to produce a sufficiently intense X-ray pulse to achieve interception, so that the use of this system to protect our own missiles and cities would require the detonation of some 10,000 to 30,000 megatons into the stratosphere, not counting any radioactivity from the Russian warheads, from our own counterstrike, or from the Russian A.B.M. missiles.

Thus, even if anti-missile systems were to work with ideal perfection on both sides, preserving every home, every school, and every factory from destruction, the release of long-lived radioactive materials would produce more than a hundred times as much radioactive poison as during all the year of peacetime testing. Based on the excess mortality observed during the period of testing, this would most likely be sufficient to insure that few if any children anywhere in the world would grow to maturity to give rise to another generation.

Nor will it make much difference how high above the atmosphere the bombs are detonated, because the strontium 90 takes twenty-eight years to decay to half of its initial activity, long enough for most of it to return to earth well before another generation of children is born. And even if a perfectly "clean" weapon containing no fissionable material at all could ever be developed, the carbon 14 it produces would get into the genetic material controlling the life processes of all living cells, and it takes 5770 years before half of its radioactivity is exhausted.

The implications of the warning mankind has received from the death of its infants during nuclear testing are therefore clear:

Nuclear war, with or without anti-missiles or elaborate shelters, is no longer "thinkable" due to a fatal flaw in the assumptions of all our military war-gamers, namely the unexpectedly severe biological sensitivity of the mammalian reproductive system to genetically important by-products of nuclear weapons, which must now be regarded not merely as vastly destructive explosive and incendiary devices, but as the most powerful biological poison weapons that man has yet invented.

NUCLEAR MISSILE TESTS IN MICRONESIA MUST BE CANCELED TO SAVE LIVES

(Mrs. MINK asked and was given permission to extend her remarks at this point in the RECORD, and to include extraneous matter.)

Mrs. MINK. Mr. Speaker, all of the people of the Pacific who live under the American flag make up my larger unofficial constituency. To these people who have no voice in the governance of their lives I believe all of us owe a special responsibility. Regrettably in our busy lives we do not have the time to devote to these voiceless, powerless, subjugated peoples living on the remote coral atolls of the Pacific. Not because of anything they did, not because of anything they did against us, but only because they happen to have been colonized by Japan, these innocent bystanders continue to be exploited and ignored by our Government. I cannot believe it is because this is the deliberate policy of our Government. I console myself that a great democracy like ours would not consciously contravene our basic tenet of freedom and self-government. It must be because we fail to take the time to understand their plight.

The plea of the people of the midcorridor islands who were removed by our Government in order to allow us use of these islands for testing of missiles has been falling on deaf ears. Now when we are again contemplating further tests of our missile weaponry in these islands, I would hope that we can devote some of our time and attention to their ever-increasing frustration. I submit for your attention my most recent communication from the people of the midcorridor islands of the Trust Territory of the Pacific which cries out for our concern:

MEMORANDUM

APRIL 21, 1969.

To: Army commanding officer, Kwajlein Missile Range, through High Commissioner, Trust Territory of the Pacific Islands.

From: Congressman Ataji Balos.

Subject: Six hundred sixty-nine Mid-Corridor people are awaiting 60 days decision from the Army and the Trust Territory Government.

The official record of the Ebeye Municipal Government shows that there are 1470 Mid-Corridor people who own legal land rights in the Mid-Corridor islands. Only one hundred ninety eight (198) are receiving compensation from the Trust Territory Government. Three hundred forty two (342) are employed by Global, Trust Territory, and private companies. Six hundred sixty nine (669) Mid-Corridor people are requesting the Army and the Trust Territory Government to please allow them to return to their islands in the Corridor because they have no ways of making income on Ebeye. The other two hundred sixty one (261) Mid-Corridor people have no jobs and have no ways of making income either, but they have not as yet made their decision to go back to their islands. They are continuing to live parasitically with their relatives and their friends.

Some employees have signed to return their families to their islands in the Corridor due to the fact that they cannot support them. The amount of the income they're receiving is inadequate to challenge the high standard of living on Ebeye.

The 669 Mid-Corridor people are mainly consisting of old people who cannot do any kind of work physically, students who have no jobs yet because they're still attending school, and of course the young children who are still legally under age of employment. Those are the ones who have experienced the long suffering on Ebeye. Those are the ones who would like to request the Army and the Trust Territory Government to please allow them to return to their islands because of the hardship they are encountering throughout these years. Frankly our Marshallese custom helps them to survive. They depend on their relatives and their friends for food, clothing, and other needs. Obviously, if their relatives and friends would stop from supporting them, then they would be no different from a "war prisoner" who wears a torn piece of cloth and dies gradually from starvation. To my knowledge, United States Government is very generous. It won't even allow its "people" to suffer this way especially in time of peace.

The leaders of each family of the 669 Mid-Corridor people have signed to return to their islands in the area in which the Army have designated as a restricted and a dangerous area on account of Missile Operation conducting on Kwajalein. To tell the truth, this is not a political move, nor is it a "campaigning promise." Let's face the truth and not argue and blame each other on this request of the Mid-Corridor people to return to their islands. This is exactly why they are asking the Army and the Trust Territory Government to please allow them to return to their islands. They would like to go back to their islands to settle and to live a free and a

peaceful life without bothering the Army and the Trust Territory Government.

I attached herewith a copy of the proposals by the Mid-Corridor people. They should like to urge the Army and the Trust Territory Government to take action on their made proposals within sixty (60) days after the date of submitting them. Their position is clearly stated that they are willing to cooperate, but they can't continue to live the long suffering life on Ebeye. Here again they would like to inform the Army and the Trust Territory Government that they will be returning to their islands, either with or without permission, after the sixty (60) days of submitting their requests and awaiting for the decision.

MEMORANDUM

CONGRESS OF MICRONESIA,
Capitol Hill,
Saipan, Mariana Islands, July 9, 1969.

To Army Commanding Officer, Kwajalein Missile Range Thru High Commissioner, Trust Territory of the Pacific Islands.

From Congressman Ataji Balos.

Subject Request of the new High Commissioner of the Trust Territory, Mr. Johnston, asking the Mid-Corridor people to give him a chance to work on their problem.

The Mid-Corridor people are once again patiently waiting and continuing their suffering in response to the request of the new High Commissioner, Mr. Johnston, asking them to give him a chance to work on their problem. The thirty one (31) Mid-Corridor people who had tried to return to their island did so not because they were unwilling to cooperate, but because they can't continue to live and suffer on Ebeye.

The Army and the Trust Territory took quick action to bring back the thirty one people to Ebeye after six days of being on their Islands. The Army now is supplying the 31 people with nothing else but food until September 1, when the Army and the Trust Territory plan to open a re-negotiation with the Marshallese leaders of Kwajalein and the Mid-Corridor people.

If it weren't for the request of the new High Commissioner, all the Mid-Corridor people who have experienced the long suffering and grievances would have returned to their islands as they promised to do after the original sixty (60) days awaiting for the decision from the Army and the Trust Territory Government. High Commissioner Johnston took action in time just before the sixty days were over. This indicates that Mr. Johnston is very much aware and concerned about the long suffering of the neglected Mid-Corridor people. He shows his interest in helping the Mid-Corridor people by asking them to give him at least a chance to see what he can do to help them with their problems. This is reasonable enough to stop the Mid-Corridor people temporarily from returning to their islands. They are willing to cooperate with the new High Commissioner, and continue to live a suffering life on Ebeye for another sixty (60) days. However, if there is no result within sixty (60) days of the date this memorandum is issued, here again, the Mid-Corridor people would like to inform the Army and Trust Territory Government that they will return to their islands, either with or without permission.

REQUESTS PROPOSED BY THE MID-CORRIDOR PEOPLE TO BE PRESENTED TO THE ARMY AND THE TRUST TERRITORY GOVERNMENT TO BE ANSWERED WITHIN 60 DAYS AFTER THE SUBMITTING DATE, APRIL 21, 1969

1. Request the Army and the Trust Territory Government to provide transportation and return the Mid-Corridor People to their islands.

2. Request the Army and the Trust Territory Government to provide housing and sheltering on each of the 14 islands in which the Mid-Corridor people will return to settle.

3. Request the Army and the Trust Territory Government to rehabilitate the 14 islands.

4. Request the Army and the Trust Territory Government to help support the Mid-Corridor people for food and other needed supplies until the islands will be recovered from the last typhoon damage, if the people will return to their islands in the near future.

Iroij Lojelan Kabua, Iroij Albert Loeak, Magistrate Jalli Bolkein, Alee Jeadrik, Councilman; Tojiro Lamae, Councilman; Andrijel Job, Municipal Police; Handel Dribo, Leader of the People; Elly Malolo, Leader of the People; Congressman Ataji T. Balos; Pijja Matanto, Leader of the People; Atidrik Maie, Leader of the People; Clemant Korok, Leader of the People; Nuke Bilele, Leader of the People, Abija Ajman, Leader of the People; Laibon Jojo, Leader of the People; Aronean Mawilon, Leader of the People.

SAIL-IN AGAINST U.S. ARMY IN MICRONESIA

CONGRESS OF MICRONESIA,
HOUSE OF REPRESENTATIVES,
Saipan, Mariana Islands, July 19, 1996.

Relocated inhabitants of Micronesia threatens the cancellation of U.S. Army missile test operations at the Kwajalein Missile Range, in Micronesia.

The problem is between the U.S. Army at Kwajalein, a sophisticated missile base in the Marshall Islands, and about 1470 Marshallese Micronesians. The trouble has been brewing since 1964 but finally this year it burst into the open in a form of two ultimatums from these Marshallese to the U.S. Army.

Recently, the Army received the second ultimatum from the displaced populations of the "Mid-Corridor" islands around Kwajalein that if it (Army) does not within 60 days resolve their long-standing problems arising from their forced relocations in 1964, they would stage another sail-in to repossess their islands from the U.S. Army.

Ataji Balos, a Micronesian Congressman and representative of these unfortunate people, issued the second ultimatum in a memorandum dated July 9, 1969. The memo was sent to the Army Commanding Officer, Kwajalein Missile Range, through the High Commissioner of the U.S. Trust Territory.

The first ultimatum was issued on April 21, 1969. Congressman Balos advised the U.S. Army at Kwajalein and the civilian representative of the U.S. Government in Micronesia to help facilitate the return of his constituents, otherwise they would return on their own to their islands.

The Army and the Trust Territory Government (U.S. Representative in Micronesia) thought that they were bluffing and ignored their warning.

Thirty-one of the 669 who had vowed to defy any Army orders by returning, packed up and sailed to their islands. The sail-in forced a reported cancellation of two missile test operations causing an estimated loss of $2 million.

The High Commissioner, chief U.S. Representative, managed to have the 31 Mid-Corridor islanders returned to Ebeye by asking them to give him a chance to work out some solution to their problems.

(Ebeye is an unsightly labor camp off Kwajalein base, where some 4,000 Micronesians, including 1470 Mid-Corridor islanders, are housed.)

"The Mid-Corridor people are once again patiently waiting and continuing their suffering in response to the request of the new High Commissioner, Mr. (Edward) Johnston, asking them to give him a chance to work on their problems," the memorandum began.

"This (Mr. Johnston's willingness) is reasonable enough to stop the Mid-Corridor people temporarily from returning to their islands," the memo said. "They are willing to cooperate with the new High Commissioner and to continue to live a suffering life on Ebeye for another 60 days.

"However, if there is no result within 60 days of the date this memorandum is issued, here again, the Mid-Corridor people would like to inform the Army and the (U.S.) Trust Territory Government that they will return to their islands, either with or without permission."

Copies of the memo were sent to the U.N., U.S. Congressmen, the U.S. President, and major U.S. newspapers.

The inhabitants of the Mid-Corridor islands in the Kwajalein Atoll were removed in 1964 from their islands when the U.S. Military intensified its missile test operations in the skies over the atoll. The Kwajalein Missile Range, located on a legally dubious 99 yr. lease from Marshallese Micronesians, is one of the most sophisticated U.S. military air facilities and most vital to the development of its offense and defense capabilities.

There is a growing (U.S.) congressional interest in the possibility of a "Kwajalein compromise" for the ABM dispute in the U.S. Senate. Recently, Sen. Stuart Symington, D-Mo., visited Kwajalein to investigate the feasibility of using the island as an alternative to the two sites, one in North Dakota and another in Montana, recommended by the Nixon Administration for the initial ABM deployment.

Spartan and ABM missiles have been tested at Kwajalein for some time. ABM missiles which are fired from the Vandenburg Air Base in California have been tested-intercepted over the Kwajalein skies.

The Mid-Corridor people have exhausted all legal and proper means in their efforts to resolve their problems.

They have petitioned the U.S. Army, the U.S. Trust Territory Government, and the Congress of Micronesia, but still to no avail.

"We realize our obligation under the Trusteeship Charter to play our part in the maintenance of international peace and security," the Mid-Corridor islanders eloquently petitioned the Congress of Micronesia. "The value of testing missiles to the maintenance of peace and security is, however, in our humble opinion, a questionable matter. We believe in peace and love, not in the display of power to destroy mankind.

"If maintaining peace means killing and destruction of the fruits of man's effort to build himself a better world, we desire no part of it."

The 31-year old Congressman and his constituents are armed by two resolutions from the Congress of Micronesia, the territory-wide legislative body.

The first resolution adopted by the Congress last year request the High Commissioner (U.S. Representative in Micronesia) to provide for the return of the "Mid-Corridor" people to their home islands or to renegotiate the Timeless Agreement between the Army and the people.

The Agreement provides a maximum of $40 per month to 194 among a total of 1470 inhabitants. Moreover, descendents of the 194 are not entitled to the $40 after the death of the head of the family.

The U.S. Government in Micronesia and the U.S. Army failed to respond to the resolution and the Micronesian Congress again adopted the second resolution supporting the return of the "Mid-Corridor" people and authorizing a member of the Congress to accompany them.

"We have been taken advantage of and our rightful grievances have been ignored for a long time," the quiet, soft-spoken leader of the people said.

"I have told my people that we must stand up for our rights," freshman Congressman Balos continued. "I will go to jail with them, even die with them, if I have to."

Congressman Balos is one of the 33 members of the Congress of Micronesia, which convened on July 14, 1969 for its Second Regular Session, Third Congress. The Congress was established in 1965. It is divided into houses, the Senate with 12 members and the House of Representatives with 21 members.

Right after World War II Micronesia with its 100,000 people spread over an area of 3,000,000 sq. miles was established as a United Nations Trust Territory under the U.S. Administration.

A PETITION FROM THE PEOPLE OF THE MID-CORRIDOR ISLANDS, KWAJALEIN ATOLL, MARSHALL ISLANDS

A petition introduced in the Senate on August 3, 1968 by Senator Amata Kabua and in the House of Representatives on August 2, 1968 by Representative Atlan Anien, both of the Marshall Islands District, on behalf of the people of the Mid-Corridor Islands to be considered with House Joint Resolution 45

We, the people of the Mid-Corridor, Kwajalein Atoll, hereby submit this petition to the Congress of Micronesia, and humbly solicit the aid of its honorable members in righting the grave injustice done us by the U.S. Government, its Army, and the Trust Territory Administration. We have long been the victims of military arrogation, but the awesome realities of opposing one of the greatest powers in the world have restrained us from asserting ourselves and further exposing our population to more harassment and oppression. We now find ourselves in a dilemma we know not how to resolve. We, however, recognize the power of unity and are confident that a unified Micronesia, rallying for the cause of justice and humanity, will expedite a fair settlement and restore the peace and tranquility once ours. We come to you for your counsel and your support in this our endeavor to regain those privileges which we consider an integral part of our substantive rights.

Our removal from the islands of the Mid-Corridor for the purpose of testing those dreadful weapons of war was reluctantly agreed upon by us in the full realization of the government's power to condemn our land. We concurred with the safety purposes of the relocation, but it was our understanding that fair compensation for use of the land would be affected and that undue hardship would constitute adequate cause to reopen negotiations. As much as we respect the value of such negotiations, we feel that perhaps a complete re-examination of the initial agreement is due.

We realize our obligation under the Trusteeship Charter to play our part in the maintenance of international peace and security is, however, in our humble opinion, a questionable matter. We believe in peace and love, not in the display of power to destroy mankind. If maintaining peace means killing and destruction of the fruits of man's effort to build himself a better world, we desire no part of it.

In spite of the provisions of the agreement we signed with the Administration and the U.S. Army, which called for maximum effort to avoid undue hardships for the displaced population, we have not known peace since our relocation. To this day, we still protest the number of persons declared eligible by the Trust Territory Government to receive compensation for loss of the Mid-Corridor lands. The stipulation that to be eligible one must have been residing on the islands in question and deriving a livelihood from them, shows an utter lack of understanding as to the way we live. Marshallese people are as much at home in the sea as they are on land. Deriving livelihood from the land does not necessitate actual residence thereon. It was for this reason that our forefathers built canoes. Living on Ebeye and making occasional food gathering trips to remote islands in the lagoon was common practice before the relocation. Ebeye offers a hospital, schools, and modern conveniences that help to cushion the harshness of living in a subsistence economy. We feel that denying compensation to those people not residing in the Mid-Corridor Area on the assumption that they were not utilizing the resources of these islands is a serious oversight on the part of the Administration. Of the more than 1,400 people that own land in the Mid-Corridor, only 192 have been declared eligible for compensation. Needless to say, we see no justice in this decision.

Residing on Ebeye on $40 might impress those who have not visited this island. Salaries of the Kwajalein Test Site have risen to a staggering $1.60 minimum per hour in the last few years. Cost of living in Ebeye has reached a point where $40 does not go very far. Electric bills and house rentals exceed this amount each month and already some of us have been threatened with eviction for not keeping up payment on electricity and rental.

The Administration does not seem to recognize the normal growth of our population. Anyone born since the relocation is not considered eligible for compensation. When a former Mid-Corridor resident dies, his compensation ceases. Our population increases, the payments decrease, and more and more we see ourselves as parasites, wholly dependent on our friends and relatives whom we once considered our equal. We are the remnants of once a proud people contented with being independent of anyone's handouts. We now feel utterly vanquished.

One hundred and ninety-two people receive $40 a month each. The rest of us have been cursed with $1.86 a year. If that is all our land is worth to the American people then it is true that this world has lost all its sense of love and human respect. We do not believe such is the case.

Agreements between the Administration and the people have long been a source of controversy. They are almost always hastily drawn and signed without full explanation of their intricate provisions. We have, in numerous occasions, been coerced into signing pacts all on account of our blind trust in the Authorities allegedly here to protect us. There was a time when we would have considered ourselves fortunate to be under the protection of the U.S. Army. Today, we realize that it was just an illusion. We have known nothing but pain and suffering, physical and emotional, since we placed our lives at the discretion of the U.S. Army. We will not tolerate such atrocities.

We fully recognize the fact that this imbalance of the normal legal order of society cannot long endure without serious if not disastrous consequences. We do not wish to jeopardize our safety by returning to the Mid-Corridor and exposing ourselves to the fragments of American missiles. On the other hand, we cannot bear to live our lives in exile on an island where needs are great but means minimal.

We shall endeavor to keep within the limits of law and abide by any just decision deemed so by our leaders and you the leaders of Micronesia. In the event, however, that no speedy settlement is effected and we return to our land in protest, we beg you to look upon our action, not with anger and resentment, but with compassion and sympathy. Micronesia is composed of the people and the land and we must not tolerate its indiscriminate confiscation. If the Army can treat us in any manner it pleases, it just might someday extend this practice to the rest of the Territory. We have an excellent opportunity to prove to the Army, the United States, and to the rest of the world, that we are also human beings, conscious of our rights, and willing to defend them.

We now dedicate this petition to the ancestors of the people of Micronesia, who fought the awesome forces of nature, resisted the threatening powers of intervention, and endured all, that we may today stand and proudly call ourselves Micronesians. We look to you, leaders of Micronesia, for support and guidance in our time of need.

Senator Kabua informed the Senators that the petition bore signatures of more than a thousand Marshallese people.

HOUSE JOINT RESOLUTION 17

A House joint resolution expressing support of the peoples of the Mid-Corridor of the Kwajalein Atoll in their efforts to return to their islands and resolving that a representative of the Congress of Micronesia be appointed to accompany these people in their attempt to return to their islands

Whereas, the people of the Mid-Corridor of Kwajalein Atoll have been attempting to regain possession of their islands which were taken from them by the Army and the Trust Territory Administration; and

Whereas. they have been frustrated in all such attempts and appeals to the proper officials; and

Whereas, a resolution adopted on their behalf was responded to by Secretary of the Interior Udall in a callous manner which indicates America's lack of concern for the welfare of the people of Micronesia; and

Whereas, the people of the Mid-Corridor believe that their conscience and dignity leave no alternative but to return to their islands by direct means; now, therefore,

Be it resolved by the House of Representatives of the Third Congress of Micronesia, First Regular Session, 1969, the Senate concurring, that the Congress of Micronesia supports the grievances of the people of the Mid-Corridor and supports their efforts to return to their islands; and

Be it further resolved that the Speaker of the House of Representatives of the Congress of Micronesia be and is hereby authorized to appoint a representative of the Congress of Micronesia to accompany the people of the Mid-Corridor islands in their attempt to return to their islands and to report to the Congress of Micronesia on the success of that attempt; and

Be it further resolved that certified copies of this Joint Resolution be transmitted to the Magistrate of Ebeye Municipality, to the President of the Trusteeship Council of the United Nations, to the President of the United States, to Representative Patsy Mink of Hawaii, to the U.S. Army Administration on Kwajalein, to the High Commissioner and to Iroij Lejolan Kabua, Iroij Kabua Kabua, Iroij Albert Loeak, and Leroij Neimedo.

Adopted January 27, 1969.

HOUSE JOINT RESOLUTION 35

A House joint resolution requesting the High Commissioner to provide for the return of the people of the Mid-Corridor in Kwajalein Atoll to their home islands, or for the renegotiation of the Trust Territory Government agreement with the Nike-X Project Office to provide for the welfare of such persons

Whereas, the people of the Mid-Corridor islands in Kwajalein were moved from their home islands in 1964 under agreement with the Trust Territory Government in order that their islands might become part of the Kwajalein Test Site facilities of the United States Army; and

Whereas, in such agreement the Trust Territory Government agree to provide housing and related facilities, food, and other necessities of life to the people of the Mid-Corridor; and

Whereas, since their removal from the Mid-Corridor to the island of Ebeye, such people have known undue hardship and difficulty, as evidenced by the following:

(a) The Trust Territory Government makes payment of $40.00 per month for the subsistence of certain persons, who number only 194 out of a total of 1486 persons from the Mid-Corridor, leaving the others to provide for themselves;

(b) The sum of $40.00 per month is in practice generally given to older persons in the population, yet there is no provision that once such person dies, his survivors shall receive such sum, thereby leaving widows and children without means of subsistence;

(c) The sum of $40.00 per month is completely inadequate on the island of Ebeye where such persons are living, due to the applicability of the United States minimum wage laws on such island and the resulting high cost of living;

(d) Although housing and related facilities are provided to such persons, charge is made for the use of such facilities, with the result that monthly charges for rent, electricity and water service often exhaust the entire $40.00 subsistence allowance, leaving such persons with no means for obtaining other necessities of life;

(e) Such persons have not been allowed, as required by the agreement, to return periodically to their islands and thus obtain food to supplement their already inadequate subsistence allowances, leaving such products as bananas, breadfruits, coconuts, and pandanus to rot without being harvested while persons from the Mid-Corridor are going hungry on Ebeye; and

Whereas, the Trust Territory, under its agreement with the Nike-X Project Office, Army Material Command, dated December 11, 1964, "reserves the right to re-open negotiations on the amount and nature of subsistence payments to residents if, in the sole judgment of Trust Territory, adjustment of subsistence is necessary to prevent undue hardship to the relocated residents"; now, therefore,

Be it resolved by the House of Representatives of the Congress of Micronesia, Fourth Regular Session, 1968, the Senate concurring, that the High Commissioner be and hereby is respectfully requested and urged to provide for the return of the people of the Mid-Corridor islands in Kwajalein Atoll to their home islands, or for the renegotiation of the Trust Territory Government agreement with the Nike-X Project Office to provide for the welfare of such persons; and

Be it further resolved that a certified copy of this Joint Resolution be transmitted to the High Commissioner of the Trust Territory.

Adopted August 3, 1968.

CENTRALIZED CATALOGING PROGRAM

(Mr. SCHWENGEL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SCHWENGEL. Mr. Speaker, when the bill to appropriate money for education was before the House, I supported the amendment to raise the appropriation on page 30 from $5,000,000 to $7,356,000.

This amendment relates to the centralized cataloging program which is administered by the Library of Congress. One of the major problems that has beset research libraries during the last century has been the cataloging of foreign-language material that they acquire. The Library of Congress had been cataloging English-language material and providing the information to libraries through the means of selling printed catalog cards. But the Library was not cataloging foreign-language material—at least not promptly enough to meet the research libraries needs. As a result, libraries were spending countless unnecessary dollars duplicating the cataloging of foreign-language books. Naturally, some libraries did not have persons with linguistic competence to catalog books that were needed by faculty and students and, as a result, the books that libraries acquired were not being made available to the library's clients.

When the Higher Education Act was before the Congress, the Association of Research Libraries, with the concurrence of the Librarian of Congress, presented an amendment that would give the Librarian of Congress authority to acquire all materials of value to research published throughout the world, catalog the material promptly, and distribute the cataloging information to the libraries throughout the country. This in effect would provide that the cataloging of foreign language material be done once and not be duplicated by libraries throughout the country. Librarians will tell you that it costs much more to catalog a book than to purchase it.

This program is a money-saving one and is essential if libraries are to provide the information needed by their clientele.

Research librarians have described this program in glowing terms and have pointed out that this Federal aid to education program has been one of the most important passed by the Congress. Dr. William Locke of the Massachusetts Institute of Technology has said:

The shared cataloging and foreign acquisitions program of the Library of Congress is the most important new venture on the national and international scene since the Second World War.

Dr. Jerrold Orne of the University of North Carolina Library has said:

I know of no other program in the Office of Education where so important and widespread a need is satisfied with the modest sum of money assigned for the purpose.

In my own State of Iowa, Dr. Leslie Dunlap, historian and librarian, has personally expressed to me the countless dollars that are being saved by the educational community because of this program. It is certainly a small way to provide such great assistance to the educational community. Each of us knows that it is essential to have an informed citizenry if we are to continue to be a nation of great achievements.

The measure that is before us today to provide funds for education is, I believe, one of the most important bills that comes before this House each year. I recognize fully the serious fiscal situation, but I feel we would be penny-wise and pound foolish to short-shrift education and I remind this body that Mr. Lincoln in his first public speech, speaking to the people of Sangamo County, Ill., on March 9, 1832, said on the subject of education:

I can only say that I view it as the most important subject which we as a people can be engaged in.

ARMS FOR OTHER COUNTRIES

(Mr. SCHWENGEL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SCHWENGEL. Mr. Speaker, I have, as many Americans, become increasingly concerned with our Government's program to furnish arms for other countries. While I recognize that in certain circumstances it could be in our national interest to furnish arms for a country who has stability and needs to protect its own freedoms and its own sanctity, but when we furnish arms for a nation that seeks only the perpetration of its hierarchy without a genuine concern for the welfare of its people, it is highly questionable we aid and abet the causes of peace with more modern implements of war. The real tragedy comes from having these same implements of war issued, given, or sold to a nation and then have them end up in the hands of opponents in the area, often in the hands of guerrillas. When this happens, it seems like we are involved in a program that leads to confusion and diffusion rather than solution.

It was an American who said on the eve of a crisis period, "Let us have faith that right makes right and in that faith, let us endeavor to do our duty as God gives us to see that duty." If we would accept this admonition by Lincoln and recognize also the importance of the 72 words he spoke in the last paragraph of his second inaugural where he said:

With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the nation's wounds; to care for him who shall have borne the battle, and for his widow, and his orphan—to do all which may achieve and cherish, a just and lasting peace, among ourselves, and with all nations.

An admirer of his and a foreigner, spoke to the Congress of the United States in 1949 and pointed out that we were the torchbearers of freedom and admonished that—

If a generation must pay tribute and in doing so catch some of the fire that burned in the hearts of those who were the torchbearers of freedom not only for this country, but for the world. For those who are truly great have a message that cannot be confined in any particular country, but is for all the world.

These are admonitions and policies that need pondering on and a response to on our part.

So, Mr. Speaker, it would be my hope that my Government through its leaders and through Congress and through its citizens that must support all of our goals that we soon will find the message of our good will as people, and all the people of the world the message of the great documents of our country like the Declaration of Independence, the great court decision that established authority of government on one hand and the laws of our country on the other will serve us and the world well if we promote them.

Mr. Speaker, I call on all of us to ponder on these things as we consider solutions to plaguing problems all over the world.

Mr. Speaker, the reason I have taken the floor to speak as I have was inspired by the article called to my attention. It was published in the Argentine Weekly in Buenos Aires on June 12, 1969, showing what has become of our program to give arms, missiles of war without message of experience, of wisdom, and of admonition and without guarantees that these will not be used in a manner not intended by our Government.

The confirming evidences to this article is found in another article published in the Morning News of Friday, June 6, 1969. As I put these in the RECORD, I invite our Government leaders, especially, to ponder on the implications of our present program and to the thoughts I have revealed in the introduction of the insertion:

[From the Argentine Weekly, Buenos Aires, June 12, 1969]

GUERRILLAS

According to confidential reports originating from the U.S. Secret Service, Pakistan may have been involved in a vast plan for helping the Arab guerrillas, concretely the Al-Fatah. The operation of supplying arms to the Palestinians might have started after the fall of President Ayub Khan. Representatives of the Pakistani Armed Forces are probably involved in costly operations with arms traffickers from the U.S. itself and West Germany. According to the same sources, payments are being made in the now-convulsed Malaysia, in the extreme South-East of Asia. Pakistanis may have by now placed an order for 19,850 automatic shooters whose action begins from 10 minutes to 30 hours (as the case may be) after being put into operation. It was further gathered that officials of Pakistani Air Force are now in Jordan and Saudi Arabia, training their colleagues in these countries.

[From the Morning News, June 6, 1969]

YAHYA ASSURES AL-FATAH OF FULL SUPPORT: HISHAM

RAWALPINDI, June 5.—Mr. Abu Hisham, the visiting leader of the Palestinian freedom-fighters' organization, Al-Fatah, said here this afternoon that President Yahya Khan had assured him of Pakistan's full cooperation and support for "our cause."

Addressing a Press conference, he said his meeting with the President earlier in the day had been "very successful and encouraging."

The Al-Fatah leader said "some demands" had been made to the Pakistan Government and discussions on them would be pursued by the organization's representative in Pakistan. He would not divulge the nature of the demands.

He said the Pakistan Government had agreed to the appointment of Mr. Khalid Mohammad Al-Sheikh, a young Arab accompanying him, as Al-Fatah's official representative in Pakistan. He would set up an office at Karachi very soon.

Mr. Hisham said that he was inspired "by the meetings he had with Pakistanis during his three-week tour of this country. The feelings and sympathies expressed by the people of Pakistan would surely strengthen the faith of the Palestinian freedom-fighters in continuing their struggle for the liberation of their homeland.

He expressed his confidence that with the support of the freedom-loving people of the world, the people of Palestine would defeat Imperialism and Zionism.

He thanked the people, the Government and the press of Pakistan for "their sympathy and support to the people of Palestine, and hoped that they would continue to "stand by and support our cause."

Asked about the kind of assistance Al-Fatah would expect from Pakistan, he said: "We are waging a war—a long war—and every kind of assistance is needed."

Asked about the prospects of the current Four-Power talks on the Middle East crisis, the Al-Fatah leader said that Palestinian people's movement had withstood "tactics to suppress our revolution" and that they would continue their struggle till final victory.

Asked about the possibility of a political settlement, he said his people very much wanted peace based on justice, but they could not accept a peace involving surrender.

In reply to another question, he said his organisation had offices in all Arab countries, Malaysia and now in Pakistan, and it had underground offices in America and European countries.

Asked whether Al-Fatah had any office in China, he said that "our relations" with that country were so good and her support so unreserved that there was no need of having an office there.

Questioned about the lesson learnt by his people during their struggle, he said it was that the masses, however small, could defeat any power with determination and faith and through sacrifices. They further learnt that they could achieve power by the use of the gun.

OFFICE IN KARACHI

The newly-appointed Al-Fatah representative in Pakistan, Mr. Khalid Mohammad Al-Sheikh, who was also present at the Press conference, said that the movement's office would start functioning in Karachi as soon as he reached there. All assistance could be sent to the office.

In reply to a question, he said that Pakistani volunteers wishing to fight alongside their Palestinian brethren could write to this office. They will have to fill up a form and they would be taken whenever their services were required.

The address of the Al-Fatah office would be: Post Box No. 7177, Saddar, Karachi, or 805-C, Block 2, PECHS, Karachi.

MEETS ASGHAR

Mr. Abu Hisham met Air Marshal Asghar Khan, the Convener of the Justice Party, here this morning and talked with him for about 45 minutes.

Mr. Hisham, according to Justice Party sources, explained to the Air Marshal the activities of Al-Fatah.

The Air Marshal, these sources said, assured the Al-Fatah leader all possible support from himself and his party, and said that he would be ready to visit any place to give any advice or help to the Palestinian freedom-fighters.

Mr. Hisham thanked the Justice Party Chief for the assurance of cooperation and support.—APP.

QUEST FOR PEACE IN THE SPIRIT OF APOLLO

(Mr. TALCOTT asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. TALCOTT. Mr. Speaker, President Nixon's recent around-the-world visit was by all measurements quite successful. As one American, I am glad for this success; I am grateful for his effort in seeking worldwide peace; I am encouraged by the response of the people of other countries as well as the leaders of these countries.

I am tired and disgusted with the continual suggestion by some commentators and so-called reporters to the effect that "it seems incongruous that President Nixon would be so warmly received by the people of Communist Nations when he gained his early fame as an exposer of the Communist conspiracy in this country and the successful conviction of Communist assister Alger Hiss and his coconspirators." These commentators and reporters miss the essential point, they attempt to misdirect our memories, to mislead those in this country who are too young to remember, and to minimize or spoil the enormous contribution President Nixon is making to better understanding among men and to world peace.

"Walk together, talk together" is a meaningful slogan well known among many young people of the United States and many other countries. These young people and others will know that our President's worldwide trip has been helpful to us and to the objective of world understanding and peace.

President Nixon's successful exposure of the Communist conspiracy in our country was directed at the Communist philosophy and leadership—not at the people still in bondage in Communist countries. No leader of any other country could disguise the obvious genuine and enthusiastic good will of the people of Rumania for President and Mrs. Nixon.

This trip has been a useful step toward understanding and peace among people—all peoples of our little planet.

People understand the important distinctions which President Nixon is making. Politicians and commentators who chaff at the extraordinary success of the President and Mrs. Nixon's around-the-world visit cannot spoil a genuine feeling of mutual good will between the citizens of Nations.

With more of the Nixon people-to-people diplomacy, I believe the leaders of the Nations may soon come around to the obvious desires of their citizens.

Although these personal visits are risky, strenuous, and demanding, their extraordinary success requires their continuance. I congratulate the President and Mrs. Nixon.

WE MUST EXTEND THE TEMPORARY BAN ON DDT

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. PODELL. Mr. Speaker, on Friday, August 8, the Department of Agriculture's 30-day ban on DDT will expire. I do not believe that it would be in the long-term interests of the people of the United States to allow that lapse to become permanent. It is imperative in the face of mounting supporting evidence that this ban be extended indefinitely by the Department of Agriculture.

In the past few weeks, evidence has accumulated that reinforces the suspicions already widely held regarding DDT's danger to man, animal life, and our total environment.

We already knew that certain forms of bird and fish life were being harmed or threatened with extinction because of DDT's long-term toxicity in the environment. After 10 years, it still retains a 50-percent potency. This has been the main reason for the drastic inroads made into eagle and peregrine falcon populations.

The coho salmon incident aroused the most widespread fears, although evidence is accumulating indicating that the situation exists in parallel or similar forms in many other freshwater lakes in the Nation. Most recently, evidence has been offered of DDT residues in lake trout in some of the most heavily fished lakes of upstate New York. Other evidence piles up with apprehensive regularity, including DDT residues in tobacco used in cigarettes, and a soon-to-be-released study showing it causes tumors in mice.

International concern is mounting, as other nations realize the menace this pesticide confronts all mankind with. Sweden, Denmark, and Hungary have banned its use entirely. Great Britain and the Soviet Union are studying possible moves to limit its use within their respective boundaries.

At home, Arizona and Michigan have already banned it, and a move to do the same in California has failed by the narrowest of margins. Major local jurisdictions have joined in the campaign. The Parks Department of the city of New York has ended its use.

Every citizen of the Nation must understand what ecology means to them. We simply cannot abuse the environment any further, for its damage is our personal eventual damage. The Department of Agriculture must extend the ban indefinitely.

FREEDOM TO POLLUTE UNHINDERED

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. PODELL. Mr. Speaker, the entire Nation was distastefully shocked by the Santa Barbara oil spill. Federally owned offshore lands on our Continental Shelf are known to be rich in oil. This is true of our gulf and west coasts, and indications point to a similar possibility off the east coast. Leases to drill for oil are therefore highly valuable. The Santa Barbara Channel area was long known to be rich in such undeveloped resources. When the Federal Government offered these leases for bids, oil companies paid out over $600 million for rights to drill there. Soon, rigs dotted the channel, which was also known to contain many geological faults. Earthquakes were also common there.

Poor supervision and shortsighted exploitation eventually confronted the Nation with the worst case of offshore oil pollution in our history, comparable to the *Torrey Canyon* tanker disaster off the British coast. Loud public outcries ensued. Tighter drilling restrictions were imposed. Even now, pollution of the Santa Barbara Channel continues at a decreased but definite rate. Yet it seems that the oil industry has learned nothing.

Now this industry has evinced strong opposition to the Government's plan to hold public hearings before it offers more offshore oil drilling leases. The industry even challenges the Secretary of the Interior's authority to order full evaluations of the potential effect of the leasing program on any total environment affected by such drilling. His efforts to protect our national environment from such pollution is challenged by the industry. These views have been officially filed by the oil companies with the Bureau of Land Management, which supervise the entire leasing program.

One of the major points raised by the public throughout the Santa Barbara spill was that it was not consulted or allowed to present views when these leases were given out by Government to industry.

The industry expresses its view that allowing the public to voice any protests or offer opposing views at public hearings would delay the leasing process and inhibit exploration activities. In other words, the public's right to be consulted on basic environmental consequences should be abrogated to allow the oil industry to continue with a program which has already resulted in major offshore oil pollution. This is the position of an industry which already enjoys unprecedented tax privileges at expense of the American public.

Evidence in California is unassailable. What will eventually be discovered regarding disruption of the food chain by the oil spill we can only guess at. It is only commonsense to tighten leasing restrictions and allow the public access to hearings where national wealth and resources are being allocated. Further, these drilling operations will definitely affect the public for years to come, as continuing consequences in California amply illustrate. How, then, can the oil industry blatantly come forward and demand exclusion of the public in such a case?

Mr. Speaker, pollution of any kind affects every American directly. Days of untrammeled industry exploitation which disregards long-term public interest must come to an abrupt end. If the oil industry triumphs in this case, our entire environment will remain open to further catastrophes similar to what transpired in California. We possess a finite amount of clean air, water, and land. Our resources are limited, as well. Progress and industrial exploitation by all means. But the public interest and an end to pollution by unthinking exploitation must become paramount.

GOLD HOLDINGS

(Mr. PASSMAN asked and was given permission to extend his remarks at this point in the RECORD and to include a table.)

Mr. PASSMAN. Mr. Speaker, I insert the following table addressed to "whom it may concern":

JULY 1, 1969

	Date	Amount
Gold holdings, United States.	Dec. 31, 1950	$22,879,000,000
Do	Dec. 31, 1968	10,367,000,000
Gold loss by United States.	1950 through 1968	12,512,000,000
Gold holdings, other countries of the world.	Dec. 31, 1968	28,028,000,000
Do	Dec. 31, 1950	10,935,000,000
Gold increase, other countries of the world.	1950 through 1968	17,093,000,000

SHORT-TERM DOLLAR CLAIMS

Against United States	Dec. 31, 1968	$35,665,000,000
Do	Dec. 31, 1950	8,645,000,000
Increase against United States.	1950 through 1968	27,020,000,000

U.S. BALANCE OF PAYMENTS

	Amount
Net deficit:	
1950	−$1,912,000,000
1951	−578,000,000
1952	−1,100,000,000
1953	−2,100,000,000
1954	−1,500,000,000
1955	−1,100,000,000
1956	−1,000,000,000
Net surplus:	
1957	+500,000,000
Net deficit:	
1958	−3,400,000,000
1959	−3,700,000,000
1960	−3,800,000,000
1961	−2,400,000,000
1962	−2,200,000,000
1963	−2,660,000,000
1964	−3,006,000,000
1965	−1,306,000,000
1966	−2,077,000,000
1967	−3,650,000,000
Net Surplus:	
1968	+93,000,000
Net U.S. balance-of-payments deficit	−36,896,000,000

GROSS PUBLIC DEBTS

	Date	Amount
Public debt, United States	Dec. 31, 1968	$361,242,183,000
Public debt, all other nations of the world.	do	304,160,241,000
Difference (estimate) [1]		57,081,942,000

Note: The above are verified statistics covering (1) gold holdings, (2) short-term dollar claims against United States, (3) U.S. balance-of-payments position (19 years), (4) public debt of the United States, (5) public debt of all other nations of the world, and (6) amount by which our public debt exceeds combined public debt of all other nations of the world. It is not necessary for me to comment further. The statistics tell the full story.—Otto E. Passman, Chairman, Foreign Operations Subcommittee on Appropriations.

[1] Public debt, United States exceeds combined public debt of all other nations of the world.

ASTRONAUTS SHOULD TOUR THIS HEMISPHERE FIRST

(Mr. FINDLEY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FINDLEY. Mr. Speaker, In the next few weeks the brave American explorers, the Apollo 11 astronauts, will be accorded richly deserved tributes of affection and esteem in public appearances here at home, and consideration doubtless soon will be given to requests for goodwill appearances abroad.

I have written to Secretary of State Rogers to encourage him to schedule such foreign appearances as soon and extensively as possible, and in the scheduling to give first priority to requests from nations in the Western Hemisphere.

The success of our astronauts represented more than a great American achievement. In the words of President Nixon:

> Those three brave men are not just Americans. They represented all of mankind.

People everywhere, of every nation, rejoiced and took pride in each successful episode of the voyage. Through the medium of television, each experienced vicariously the thrill of Neil Armstrong's first steps on the moon.

Across the world, the enormity of the accomplishment has created a reservoir of good will toward the American people. Nowhere was it more evident than in this hemisphere. Argentinians left their jobs to watch the astronauts land, proud of the fact that these were representatives from the Western Hemisphere. In Caracas, Venezuela, church bells rang when the lunar spaceship Eagle touched down and the following day was declared a holiday. The Venezuelans now want to make our Apollo 11 astronauts honorary citizens. Similarly, in Canada all public attention was focused on this achievement, as the Toronto Telegram headlined "One Giant Leap for Mankind."

It would be especially fitting and proper for the astronauts to begin their world tour by visiting first the nations on this side of the earth. This would serve to enlarge and deepen a community spirit encompassing the hemisphere and to provide as well a needed reinforcement of good will both south and north of our borders.

To the south, priority attention from our astronauts would heighten the prestige of the United States as could no amount of foreign aid dollars and help erase the memory of the disappointments and disagreeable events of recent years.

To the north, it would bring reassurance of the importance we attach to the friendship of our sometimes-neglected NATO ally, Canada.

Foreign tours of our astronauts will begin somewhere, and I can think of no better place to start than among our good neighbors, north and south.

ON $20,000 FARM PAYMENT LIMIT

(Mr. FINDLEY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FINDLEY. Mr. Speaker, I have discovered a colossal error in the research on which Agriculture Secretary Hardin based his criticism of the amendment which limits to $20,000 annually payments under farm programs to individual farmers.

In testimony to the Senate on June 4, Secretary Hardin argued that the amendment, accepted by the House, would actually lead to a $160 million increase in cotton program costs because it would automatically activate a snapback clause which in turn would replace the present direct-payments program with one consisting of Government loans, purchases, and sales.

Opponents of the payment limitation relied heavily on Secretary Hardin's forecast. In fact, it was crucial in the Senate action which deleted the limitation from the House-passed appropriation.

I was astonished to learn of the cost estimate made by Mr. Hardin, and requested from the Department of Agriculture the documents which would show in detail the assumptions and computations involved in the forecast. These were furnished to my by Mr. Kenneth E. Frick, Administrator of ASCS. I have examined them carefully.

Several of the assumptions set forth in the document are open to question. In fact, in my opinion, they are unjustified.

But the most glaring error is a misrepresentation of an expenditure. Counted entirely as cost rather than investment in inventory is $432 million. This would be expended for cotton by the Commodity Credit Corporation, later to be resold. Only the portion which reasonably can be expected to be inventory loss should be counted as cost. That would be the difference between market value and acquisition price, and in this case a reasonable cost figure would be $98 million—not $432 million.

Treating inventory investment as pure cost is gross misrepresentation. This was, I am sure, inadvertence on the part of the Secretary, and I am confident that he will act promptly to correct the record.

Correction is very important, because the issue over the $20,000 limitation still has not been resolved. The House accepted the amendment by an overwhelming record vote. The Senate rejected it by a substantial margin. House conferees have not yet been named.

I firmly believe many of the Representatives and Senators who opposed the payment limitation amendment based their opposition primarily on the erroneous warning by Secretary Hardin that it would lead to higher, not lower program costs.

Accepting as valid every single assumption made by Secretary Hardin in his analysis—except the one which treats as pure cost the investment in cotton inventory—program costs would actually go down under the operation of the snapback clause. Moreover, income to cotton farmers would be significantly increased.

Following is the text of my letter to Secretary Hardin:

Hon. CLIFFORD M. HARDIN,
Secretary of Agriculture.

DEAR MR. SECRETARY: In your statement to the Senate Appropriations Agriculture Subcommittee on June 4 in opposition to the $20,000 limitation on individual payments to farmers, you stated that the provisions of the snapback clause of the present cotton program would increase the "cost" to the government by $160 million if they became operative for the 1970 crop.

The use of the word "cost" was unfortunate, because it left the erroneous impression that the expenditure would be entirely nonrecoverable.

Actually, a careful examination of the computations and assumptions your staff used in analyzing the effect of the snapback clause leads inevitably to the conclusion that it would reduce program costs to the government and at the same time increase income to producers. Accepting as valid all the assumptions your staff made, the snapback clause would give cotton farmers in 1970 a $350 million boost in income, compared with last year. Program cost, $879 million compared with $975 million, would be down $96 million.

In Table 5 appended to your statement, you showed a net change of $432 million in stocks at loan rate. This item can hardly be termed cost in the usual sense, unless the words cost and investment are used interchangeably. Using the last 3-year average market price for cotton, 24 cents, we could assume the government in time would recover about $120 for each bale that went into the increased carryover. This would mean a projected net loss in this increased carryover of $98 million, not the $432 million gross outlay you listed.

Under the snapback clause, the major expense items based on the assumptions you used would be $156 million for diversion payments, $595 million for losses on sales and $98 million predictable loss on increased carryover—making a total of $879 million. This is $117 million less than the $966 million in payments forecast under the present program for the 1970 crop.

Accordingly, I feel that you may wish to correct your statement as to 'cost' under the snapback clause.

By your own figures, cost under snapback will actually be less, not more. Your figures show cotton producers getting $60 million more from the 1970 crop under snapback than the present program (farm value of production plus payments), and $350 million more than in 1968. This makes the argument against snapback difficult to comprehend.

Moreover, several assumptions made in producing the estimates are open to question. Understandably they are designed to make snapback look unattractive. Reasonable modifications in the assumptions would reduce sharply the cost estimates under snapback.

For example:

In light of the import controls on raw cotton, it can reasonably be anticipated that the higher support price under the operation of the snapback clause would result in a market price higher than 24 cents.

If the market price should rise to 26 cents, for example, the net loss on the increased carryover would drop by $27 million. Each one-cent increase in market price would reduce carryover losses by $13.5 million. Corresponding cost reduction would also of course occur on CCC sales.

In your forecast you assume a yield of 550 pounds per acre. With the 1968 yield at 515, and 1969 forecast at 520, a yield of 530 would surely be more reasonable than 550. Yield has never reached 550 pounds average. A diversion payment rate higher than the 10 cents you specified could be expected to take additional acres out of production. In 1968 the program secured a diversion of 3.2 million acres for payment. Acceptance of your figure of only 2.4 million would therefore seem debatable at best.

These variable factors, together with the recoverable character of the item you described erroneously to be cost, lead me to conclude that net program cost under the snapback clause for the 1970 crop would actually be substantially less than the cost you project under the present direct-payment program. At the same time farmer income would go up.

If, as I have suggested, you administer the snapback clause under the option of simultaneous purchase and sale—a procedure which the Comptroller General has described as a payment program and therefore, in my view, subject to the $20,000 individual limitation—even greater program-cost reductions would be realized.

I would appreciate a word of clarification for the benefit of those who may have been misled by your statement to the subcommittee.

Sincerely,

PAUL FINDLEY,
Member of Congress.

Following is the text of the transmittal letter from Mr. Frick, together with the worksheet and assumptions for snapback computations that he supplied to me:

U.S. DEPARTMENT OF AGRICULTURE,
AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE,
Washington, D.C., July 11, 1969.

Hon. PAUL FINDLEY,
House of Representatives.

DEAR MR. FINDLEY: Per your request I am enclosing detailed notes concerning the computations and assumptions we used in analyzing the effect of the implementation of a snap-back program for cotton.

Sincerely yours,

KENNETH E. FRICK,
Administrator.

WORK SHEET AND ASSUMPTIONS FOR SNAP-BACK COMPUTATIONS

1. Assume the Secretary would offer voluntary diversion at a payment rate of 10 cents per pound on up to 35 percent of the producer's allotment.

2. Planted plus diverted is estimated at 12.7 plus 2.4 equals 15.1 million acres; this compares with an adjusted allotment of 15.3 (16.2 minus .9). The incentives for either diversion or planting are so high that there would be very little "slippage."

3. Voluntary diversion payments would be subject to a limit of $20,000; therefore, we have assumed that only about half of the 5 million acres eligible for diversion would be diverted.

4. The difference between planted and harvested is estimated at only 600,000 due to the fact that under the snap-back, benefits accrue to farmers on actual production rather than projected production.

5. Average yield is estimated at 20 pounds higher due to the above reason and additional acres planted in skip-row patterns.

6. Ending stocks are estimated to be 1.5 million bales higher than under present program; CCC stocks, however, are estimated to be 2.1 million bales higher. This is due to the fact that with surpluses beginning to build up again the trade would carry less stock. This results in a nonrecurring CCC outlay of $96 million ($160 per bale times 600,000 bales).

7. Current parity for cotton is approximately 48 cents; the minimum support rate of 65 percent would indicate that the support price for average of the crop could not be less than 31.2 cents.

8. The expenditures of $432 million is merely the 2.7 increase in CCC stocks times $160 per bale.

9. Storage and handling costs are estimated up 50 percent in line with the increase in CCC stocks.

10. Producer payments are calculated as follows: 2.4 million acres diverted at projected yield of 520 pounds equal $125 million plus $31 million in small farm payments for a total of $156 million.

11. Total disappearance of 11.9 million bales at a CCC loss of $50 per bale accounts for the snap-back loss of $595.

TABLE 5.—UPLAND COTTON—ESTIMATES OF BASIC DATA FOR 1968 THROUGH 1970 CROPS (BASED ON PRESENT PROGRAM) AND 1970 UNDER THE SNAPBACK PROVISION

Item	1968 crop (1)	1969 crop (2)	1970 crop: Present program (3)	1970 crop: Snapback (4)
Acreage (thousands):				
Alloted	16.2	16.2	16.2	16.2

RAILROAD PASSENGER SERVICE IS VITAL

(Mr. WALDIE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WALDIE. Mr. Speaker, high-level passenger rail service as a part of our Nation's integrated transportation system is being threatened today by the increasing number of discontinuances of service being granted by the Interstate Commerce Commission. There is a real need, Mr. Speaker, to reevaluate the process whereby these discontinuances are being granted and to give considerable thought to Federal policies of assistance for railroads in order that needed passenger service can be maintained.

I have today, Mr. Speaker, introduced a bill which will do the above and I am hopeful that this measure will receive the deliberation and review it warrants.

A VIEW FROM DOWN UNDER

(Mr. WALDIE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WALDIE. Mr. Speaker, a good friend of mine and a former pastor in my district, the Reverend Mervyn M. Betts, is now performing his ministerial duties in New Zealand and recently wrote me of his own observations on the magnificent feat of our space program in landing the first men on the moon. Mr. Speaker, I should like to have Reverend Betts' comments inserted into the CONGRESSIONAL RECORD for the benefit of all the Members.

The letter follows:

JULY 21, 1969.

Mr. JEROME R. WALDIE,
U.S. Congressman,
Washington, D.C.

DEAR JERRY: My wife and I send to you from "Down Under" . . . "Under the Moon"! our deepest joy and congratulations to you as an American friend. The whole world must rejoice at this fantastic achievement. It reveals the great heart of man, steeped in courage . . . for the Peace of the world. "In quietness and confidence shall be (America's strength) your strength."

At this time we miss America terrifically, but rejoice with you and are one with you in spirit and today we truly say "God bless America." Hope we will meet again—Down Under or up top!

God bless you in your great work.

Sincerely,

MERVYN M. BETTS.

A PARENT'S LOOK AT THE "PEOPLE'S PARK ISSUE"

(Mr. WALDIE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WALDIE. Mr. Speaker, it has been some weeks since the tragic confrontation at Berkeley between students and police over the "people's park." A great amount of rhetoric has flowed since this incident and more is sure to come.

Mr. Speaker, Dr. Seymour M. Farber, dean of educational services at the University of California's San Francisco Medical Center, spoke at commencement exercises on June 6 at the Cambridge School of Weston. His address touches on this issue with insight, clarity, and compassion.

Mr. Speaker, I would like to include this speech in the CONGRESSIONAL RECORD and I sincerely hope that all the Mem-

bers will find the time to read this extraordinary "letter to a son":

COMMENCEMENT ADDRESS AT THE CAMBRIDGE SCHOOL OF WESTON, JUNE 6, 1969

(An open letter to my son, by Seymour M. Farber, M.D.)

DEAR ROY: I don't believe fathers have ever found it easy to communicate with their sons. But at a time when the world seems capable of burying its future through simple blindness—when ideologies and people clash with a violence and din that paralyzes reason—and when wars and the potentials for even greater destruction to the human spirit must intimidate all but fools—in this kind of scene, it's more difficult than ever for us just to talk quietly with one another.

And on top of that, we're all so busy. I'm a physician. And because I take that seriously, I feel an obligation to my patients that I can't explain any better than the oath I took more than 30 years ago. In my small way, I'm also trying to exercise the duties and responsibilities of a concerned citizen. It's also true that there are times when I am silent, when in my heart I know I should speak.

And you and your classmates are away from home. You've got books to read, and much more important, ideas to grapple with. You're under academic pressure to unravel the past for your instructors, and also, to make sense out of it for yourself today. You're meeting all kinds of different people, trying to understand them and to discover the real and potential boundaries of yourself.

The allowable and the desirable are in conflict within you. You're trying to find workable, and personally acceptable rules, to deal with an endless tug between "is" and "ought". You want your life to be personally satisfying to yourself and also to the people and ideals you cherish. Most of all, you want your life to make a difference.

All this, I know, is a very, very difficult job. Almost as difficult as a man trying to be a good father to his son or daughter.

And because of these pressures on both of us, I with my work in California, you at school a continent away, when will we find the time to talk?

And yet, I want to talk to you about Berkeley. About the terrible things that people have done to each other in Berkeley. I want to talk about these things to you, because the battered heads and the possibly shattered ideals of the people in Berkeley also matter to us. Roy, it's important to me to try to tell you what I, as a physician and a father, see in these events—to suggest a basis for beginning to work our way out of them toward something positive and good.

I suppose it would help to try to summarize the events up to this time—when there is a relative calm on the streets—as plans are being made for a Memorial Day march in Berkeley to People's Park.

No one can say what will happen when perhaps 30,000 people try to gather at the cyclone fence surrounding a once vacant lot of land. (When the marchers on the outside, and the national guard bivouacked on the inside, view each other through the fence.) The fence and People's Park are the symbols and the facts that make up the issue.

Four blocks from the Berkeley campus, just east of Telegraph Avenue, there is a 270 by 450 foot plot of land owned by the University of California. About a year ago, the buildings on this plot were torn down to make room for University development—a soccer field and dormitories. This development did not proceed, and the lot, uneven and littered with rubble and garbage, remained unused. This was the situation until about the middle of April, when the "street people" began what they called a "spontaneous development" of the land.

Hundreds of these people, later joined by students and "straights" laid down sod, planted trees and shrubs, installed playground equipment for children, and in short, made an open recreational space. The results of their work they called "People's Park."

During the three weeks that this activity continued, no serious attempt was made to interfere or to stop it. The park was policed by the "street people" and used by them and the residents of the area, who brought their children there to play. However, all this while, the University was in fact the undisputed legal owner of the land—and the University had not authorized its use.

The "street people", most of the students, and many of the faculty, now feel that the University had not seriously attempted to resolve the conflict. The University administration states that they tried to negotiate, but that the other side was unresponsive to their efforts. I am convinced that the University tried and tried again to negotiate with fairness and firmness.

This is the polarized background of the tragic events that began about 4 a.m. on *May 15th*. At that time, two or three hundred police arrived at the park to supervise workers who erected an 8-foot cyclone fence around the entire lot, on orders of University authorities. Later that day, during a noon rally on campus to protest the fence, several thousand demonstrators left the rally to take over the park. Many were extremely militant, and some threw dangerous missiles and angered the police. The police responded by an attack with gas, shotguns, and clubs. Later that day, after continuing street fighting and violence, the national guard was called.

On *May 16th and 17th* order was maintained by police from several surrounding cities, the Alameda County Sheriff's Department, and several thousand guardsmen patrolling the streets with rifles and fixed bayonets.

May 18th. It was reported that James Rector, a 25-year old nonstudent had been seriously wounded while observing the rioting from a rooftop. Many others had also been wounded by shotguns. Doctors in Berkeley stated that the wounded they were treating had been injured by large buckshot as well as small birdshot pellets.

May 19th. James Rector died of shock and hemorrhage due to multiple buckshot wounds which perforated the aorta. Another young man wounded during the rioting by buckshot had definitely lost the sight of one eye, with the prognosis for the other in doubt.

May 21st. Several hundred protestors led by faculty members attempted to hold a memorial march for Rector. They were turned back by police because of emergency regulations banning demonstrations. They became trapped in a campus plaza between police and guardsmen, where gas was sprayed on them from a helicopter. The heavy cloud of gas also affected uninvolved students leaving classes, faculty, campus employees, and was blown into the campus hospital, as well as adjoining parts of Berkeley.

May 22nd. The national guard confirmed earlier charges that more than tear gas had been sprayed in the plaza. In addition, physicians asserted that two more gasses had also been used in Berkeley: nausea gas, which can cause simultaneous, instant diarrhea and projectile vomiting, and also a form of blister gas.

May 23rd. Almost 300 people gathered in downtown Berkeley in violation of emergency regulations banning demonstrations. When they failed to disperse at police orders, they were arrested. In addition, over 200 others were rounded up and arrested from among passers-by, people on personal business, and customers in a bank and nearby stores. A mailman was arrested, as was a reporter for the San Francisco Chronicle.

May 24th. The nearly 500 people arrested the previous day had been taken to the county jail. Their experiences were disclosed by the arrested reporter and included: being forced to lie down on asphalt pavement while waiting to be booked; indiscriminate clubbings during the booking and subsequently, accompanied by further threats of violence, cursing and other forms of verbal abuse and insult; denial of medical aid to a man with a shotgun wound; a Viet Nam veteran was clubbed senseless.

May 25th. At an extraordinary open hearing, the Berkeley City Council heard expressions of widespread shock, terror, and abuse by large sections of the Berkeley community. In response to this, the Council requested that the Governor recall the national guard and rescind the state of emergency under which Berkeley was being governed. The governor felt it advisable to deny both requests.

On May 26th and 27th, the situation was relatively quiet except for sporadic small demonstrations at various locations. The national guard was pulled back to a central bivouac away from the city proper, but about 150 remained camped inside the fence surrounding the park. Small groups of demonstrators conversed with the guardsmen and playfully tried to water the trees and grass inside the park, most of which had by now been trampled and destroyed. Others taunted and attempted to incite the guardsmen.

And now, on *May 28th*, as this is being written, we wait for the Memorial Day march. Roy, it has been more difficult than I can say, to keep all these events clear and in perspective. There are things I know I've left out, and others have simply been forgotten and in a few weeks much of the above may have a different meaning as events have new light brought upon them. And, I've been selective, but I've tried to give a true and restrained picture. But what is that picture?

Many hundreds of people have been arrested. No one knows how many hundreds more have been clubbed, gassed, or shot. One student was bayonetted in the back, and scores of police have been injured, at least one stabbed in the chest. One man is dead. Another is blinded. Most dreadful of all, elementary school children have seen what has gone on. Their teachers have reported how frightened they are, how some of them vomitted from the gas, and how others have had nightmares in which roaring helicopters pursued them from overhead.

Literal shrieks of rage, as well as solemn speeches are heard in all quarters demanding—investigations, acceptance of responsibility, punishments, remedies, alternative choices, and God knows what else. Everyone deplores the situation. Everyone has a point of view, and many, like me, are torn by conflicting feelings.

I think you know my deep personal sympathy for the aspirations of most of the students. They and other young people, incomparably more than anyone else, have forced the world to remember that hypocrisy is morally reprehensible; and that coupled with entrenched self-delusion, it is unworkable. But I also have a loyalty to the University, which I have tried to serve for over 25 years, and which I believe we absolutely must protect, if threats to a free society are to be forestalled and defeated.

The dilemma, in one form or another, is faced by all of us. But during these past two weeks, it has finally begun to dawn on me that as a physician, of all people, I should understand some of the reasons behind our apparent inability to deal with the dilemma. Like everyone else, whether outraged radical or fulminating politician, it is impossible to put the pieces together properly, to think clearly and constructively—when we are under severe and prolonged stress.

I should know that when my body is subjected to sudden or prolonged stimulation—such as anger, fright, or injury—large amounts of adrenalin are released and pour throughout any system. As adrenalin passes

through my body it causes a wide variety of responses: the rate and strength of my heartbeat is increased; my spleen contracts vigorously, forcing blood reserves into general circulation; my blood sugar rises and my metabolic rate shoots up drastically; the bronchi dilate, easing the flow of air into the lungs; the pupils of the eyes dilate; and, I remain in this general, systemic state of excitation and stress until the whole process wears itself out, leaving me physically and mentally exhausted. If I'm not careful, if I don't take some active measures to control what I do and try to get back on an even keel, this whole process will be automatically reactivated by stimulation from the pituitary and the cycle of excitation and possibly irrational behavior will begin again, perhaps escalated to even greater heights of unbalance.

This physiological process doesn't have anything to do with the rightness or wrongness of moral stands we take. When we're under this kind of severe stress, it's practically impossible to be sure that the judgments we make are sound, constructive, and rational. And when we get so keyed up that we don't even realize what is happening to us, we are headed for trouble—ours, or someone else's or both.

The direct relevance of this became clear to me last Monday night, as I listened to a remarkable discussion over the radio. For over two hours, the Fence and People's Park were discussed around a table by four gravely concerned men—the Berkeley Chancellor and the Mayor, a representative of the "street people", and the student body president. As they spoke from their individual points of view, with each view containing merit and strength, I heard four men suffering the anguish of terrible pressure. In this state of individual stress and mutual conflict, otherwise capable minds became inflexible, evasive, demagogic, and enraged. How, under these conditions, could they do justice to themselves—and to the issue?

But Roy, I can't tell you how good it was to hear the student body president suggest a basis for resolving this growing tragedy. He repeated over and over again his compelling reasons for wanting the fence to come down—but non-violently. He urged that on the Memorial Day march, and thereafter, students, community and "street people" continue to press in every way possible for what they believed—but without violence. He was saying that the fence could come down from non-violent pressure and that with violence it would not. The wisdom I heard in his words didn't contain an immediate, specific solution to the problem. But it offered an approach.

But what about the fence? I know that with calmness, something good will happen. I hope the University, the City of Berkeley, and most important, the people, can unite in a consortium of honor to give the people a People's Park. But without violence—because the issue goes beyond this particular fence and this particular park. The great social forces that made the fence an issue, will create other issues, perhaps even more important than this one. Perhaps containing the ingredients for even greater provocation—and a still higher level of retaliation.

Under conditions such as these, where there is great individual and general stress, can we afford the luxury of hostile words and aggressive acts—at the expense of clear thinking? I think that losing our cool is much too high a price to pay. If there's anything I've learned from the horrifying events in Berkeley, it's this: When reason is enslaved by inflexibility and rage, everybody loses.

We can, and should press for our beliefs. We can and should, as you would say, rap with each other. But, we should protest any violations of law and human rights through constructive channels even, and especially, in the face of delays and frustrations. And to do this, in the face of frustration, we absolutely must keep our heads—we must not lose our cool under stress. That's the best way to help bring down the fences, literally, and all that they represent, symbolically. More important, that is the best way to raise practical monuments to human justice, to human need, and to legitimate human aspirations.

But to accomplish this in the world as it is, we have to communicate with each other before stressful situations escalate out of sight, before they polarize us into warring factions—when truth is the first casualty and when saving face is more important than solving problems.

Roy, I have to tell you and your classmates straight out that during the next four years of college, I doubt that conflicts all over this country will bring rapid, constructive changes. But the basis for progressive solutions is attainable if we open up genuine lines of communication between students and faculty, with administrators, with our legislators and the general public, and most of all, between parents and students.

I've sadly reflected that only a scattering of parents of students at Cal appeared in Berkeley during the crisis, when their sons and daughters were in danger. If students had been communicating with their parents continually over the past years, would this have been so? What if the 12,000 students on campus who voted for the People's Park had been in continuing dialogue with their parents. explaining their feelings and their reasons for these feelings; and what if 24,000 parents of these students had joined the issue by supporting their children before college administrators, legislatures, and law enforcement agencies—would there have been violence? And would we be closer to a practical solution?

I wish there were a nationwide course in communication at all levels of education and for all age groups. Communication was never more necessary between students and their parents, because Roy, we parents have much to learn from our kids. I've certainly learned from you, and if you continue to explain to me what you think, I hope I will be capable of learning more. But students and parents have to talk and to listen to each other, prior to the explosions of stress, which make dialogue and solutions impossible.

I urge you and your classmates to consider this. Only after parents and students have genuinely and openly exchanged views, can we effectively assist you, in representing those views where decisions are made.

Since this was written, we've had the Memorial Day march, and mercifully, it was peaceful and non-violent. I wonder how much more effective this demonstration might have been—whether it would even have been necessary—if there had been better communication, before stress and a fence divided the community.

This has been a long letter. Roy, we'll be in San Francisco tonight, and you're leaving for a job in Yosemite tomorrow noon. There isn't going to be much time for communication as we try to sort out all the stuff you've sent home. But we have the type of apartment overlooking San Francisco Bay that lends itself to all sorts of junk, and I know you have it, and also for sleeping bags on the floor, and despite being the Far West, we have bathrooms that work. So please be sure you invite your classmates to stop by for a night or longer, this year or next year or any year, and give us all an opportunity of beginning and continuing life-long friendships.

Roy, a few minutes ago, as we were coming into this hall, you said, "Dad, I've never heard you speak. I wish you well." Well, Roy, I too wish you well, and I wish all your classmates well in the coming years.

OPPOSITION TO EXTENSION OF SURTAX INTO 1970

(Mr. VANIK asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. VANIK. Mr. Speaker, tomorrow, the Rules Committee will consider H.R. 13270, the Tax Reform Act of 1969, which should be more properly called the Tax Reform Act of 1969 and the Surtax Extension Act of 1970. This bill provides some reform for certain groups and individuals—but it also provides a 5-percent surtax for the first 6 months of 1970 on all who pay taxes. The addition of the surtax provision constitutes a $3.5 billion downpayment for reform of little or no value for the average taxpayer. It is no bargain.

What we need here is truth in packaging. For the average taxpayer who does not own an oil well, it is a big fancy box with nothing inside.

It is incredible, for example, that tax rates should have been reduced from 70 percent to 65 percent for the wealthy, a 7-percent reduction, while a great body of other taxpayers are limited to a 1 point or 3-percent reduction in their tax rate. It is regrettable that the committee refused to provide tax relief by way of increased exemptions which is meaningful and clearly understood by every taxpayer. A taxpayer who supports dependents very often shoulders an obligation that would otherwise become a public obligation. The contribution which a taxpayer makes for the training and development of the young provides the future tax base which is required to provide strength and growth to the Nation. The failure to consider increased exemptions disregards a very critical need in the tax reform program which I hope can be corrected. It is also regrettable that exemptions were not extended to those who face the added burden of supporting the retarded and the handicapped. They are assuming a responsibility which deserves a wider base of support.

In the final moments of consideration of the tax reform bill last week, the Ways and Means Committee attached a provision to extend the surtax at 5 percent from January 1, 1970, through June 30, 1970. In view of the action of the Senate, concurred in by the administration, and approved by the House today to extend the surtax for 6 months to December 31, 1969, it is difficult to understand why the House should be compelled to vote further on the surtax matter. With no contest on the floor, a change of only 33 votes would have defeated the proposal to extend the 10-percent surtax to December 31, 1969.

I will go before the Rules Committee today and ask that the Rules Committee report out a modified rule which will permit the House to express its will on the extension of the surtax at 5 percent for the first 6 months of 1970. Since 170 Members of the House voted against the proposal to extend the surtax to December 31, 1969, it is reasonable to assume that an overwhelming majority of the Members of the House are unalterably opposed to extending the surtax beyond

December 31, 1969. We are certainly entitled to a vote on this issue.

I urge those who oppose the further extension of the surtax into 1970 to appear before the Rules Committee tomorrow, Tuesday, August 5, and support a modified open rule to permit a vote on the extension of the surtax.

GUN CONTROL NONSENSE

(Mr. RANDALL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RANDALL. Mr. Speaker, an editorial in the Washington Evening Star which appeared on last Wednesday, July 30, which emphasizes the word "nonsense," nevertheless contains some very clear and logical reasoning. This editorial displayed some extraordinary commonsense when it described as "wacky" the recommendation of the President's Violence Commission that all Americans should be required to surrender any handguns they own to the Government.

Step by step the editorial writer makes his case that even if our law-abiding citizens should surrender their handguns, the criminals are not going to give up theirs. He goes on to emphasize that such a recommendation simply means then that no homeowner will have a handgun in his own house to protect himself against an intruder.

With good sense, the editor comes back to the proposition that many of us in the Congress have long advocated and mandatory penalty for criminals who use guns in the commission of a felony. Certainly as to such criminals, a judge should be forbidden to suspend a sentence or let it run concurrently with the sentence for some other offense.

It is a privilege to associate myself with the words of the editorial writer who described the content of the report of the President's Violence Commission as "blithering nonsense" and to climax and to commend his description of these recommendations as a "soft-in-the-head" report.

The editorial is as follows:

MORE GUN CONTROL NONSENSE

As an introductory note to this editorial comment, an item in the crime news is worthy of attention. On Monday there were 22 armed robberies in Washington. This brought the July total as of that date to 450, compared to 332 armed robberies in all of July of 1968.

In the face of this a task force of the President's Violence Commission (appointed by President Johnson) comes forward with a wacky recommendation. Its proposal is, except in a very small number of cases, that all Americans should be required to surrender any hand guns they own to the government.

Here is the task force's reasoning: This is the only way in which the United States can break "the vicious circle of Americans arming to protect themselves from other armed Americans." Now what does this really come down to? Even the task force, we suppose, would concede that criminals are not going to surrender their hand guns. So what they are saying is that no homeowner, to cite one example, should be permitted to keep a hand gun in his own house to protect himself, his wife, and his children against the night when some armed criminal might break into his home. Their argument is that home owners "may" seriously overrate firearms as a method of self-defense against crime. The "loaded gun in the home creates more danger than security."

This strikes us as blithering nonsense. How many members of this task force have been awakened in the middle of the night by a scream for help by some member of his family? Probably not one. But thousands of Americans are exposed to this dreadful experience every year. And in such a situation what is an unarmed householder supposed to do against an armed intruder? Hide under his bed, and never mind what happens to his family?

The major thrust of this soft-in-the-head report is that the requirement to surrender your hand gun, of which there are an estimated 24 million in the country, would reduce crime. This is absurd, for the criminals are not going to surrender their guns. A better and much more realistic way to deal with this problem will be found in legislation now being considered in Congress.

The intent of this legislation is to provide tough, really tough, mandatory penalties for criminals who use guns in the commission of a felony, such as rape, robbery or burglary. For a first offense the penalty generally favored would be a mandatory jail sentence in a federal jurisdiction, which includes Washington, of from one to 10 years. A judge would be forbidden to suspend this sentence or to make it run concurrently with the sentence for the primary offense. In case of a second offense, much stiffer jail sentences are proposed, and they should be written into law.

A similar bill passed the House last year, but was watered down in the Senate before becoming law. The argument then was that mandatory sentences deprive judges of discretion in imposing penalties. And so they would. But in one week at the time the watered-down bill was passed 17 criminals in this city were found guilty of crimes in which guns were used. In six of these cases, more than one-third, the judge imposed suspended sentences, which means that no jail terms were served for using a gun.

So we say let's make the sentences mandatory. And let's not deprive the law-abiding citizen of hand guns in his own home while the criminal element will remain armed to the teeth.

CONGRESSMAN BIAGGI'S RESOLUTION

(Mr. LOWENSTEIN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. LOWENSTEIN. Mr. Speaker, Congressman MARIO BIAGGI has introduced a resolution calling for the creation of a select congressional committee to investigate problems of crime and violence at military installations.

The immediate incentive for this resolution is the appalling incident at Camp Lejeune in which one marine was killed and another's face was battered beyond recognition.

There are few men who bring as much distinction to Congress by their presence here as does Congressman BIAGGI. The word "hero" is applied loosely these days, so it seems almost an understatement to use it about this extraordinary man who was injured 21 times in the line of duty during his years of service as a policeman, and whose courage and dedication to the public good have been recognized by his inclusion in the National Policeman's Hall of Fame.

Many of us here are already indebted to Congressman BIAGGI for new insights, and for strengthening our faith in the possibility of the maintenance of high standards of public service for long periods of time and the face of great difficulties. He renders another service to the public by taking the leadership in this matter of crime and military justice. His resolution offers the opportunity to the Congress to fulfill a responsibility we have avoided for far too long a time—the responsibility for overseeing the way in which the Armed Forces are coping with problems of discipline, crime, violence, and justice.

We should undertake this investigation as soon as possible, and the military should welcome it. Servicemen of all races, of all ranks, as well as Americans committed to upholding the Constitution of this country, should insist that we stop abdicating this function that can be undertaken properly only by the Congress, in the wake of the burgeoning doubts about so many aspects of military justice and discipline.

There have been too many peculiar episodes, from the Presidio to Camp Lejeune, that have left the public troubled and mystified—trouble about conditions in stockades, about the fairness of military justice, about the protection of servicemen from violence, at least while they are on bases in this country. It would be in everybody's interest to have these problems investigated with energy and impartiality so what is cloudy can be cleared up, and what is wrong can be righted.

THE MATTER OF CONGRESSMAN REID'S VISA TO VISIT SOUTH AFRICA

(Mr. LOWENSTEIN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. LOWENSTEIN. Mr. Speaker, as you know, our distinguished colleague, Congressman REID of New York, has been invited by the National Union of South African Students to give what is called in South Africa the Affirmation Day speech. He has yet to receive, however, a visa from the South African Government. Today's Rand Daily Mail reports in a front page editorial that the South African Government is considering issuing a visa to Congressman REID—and to other Congressmen as well—on the precondition that they make no public statements while in South Africa.

The Rand Daily Mail notes that prominent South Africans who are highly critical of this country and of Great Britain have no difficulty obtaining visas to come and go at will, expressing their views when and where they feel so moved. South Africa, it notes, creates obstacles for foreign critics of South African race policies but gives every encouragement to "conservatively minded visitors, including Mosleyites, John Birchers, who are often offered time on the South African Broadcasting Corp. to

voice their opinions." Thus, concludes the Rand Daily Mail, the South African Government tries to manipulate the thinking of the South African people.

That may be a matter between the South African Government and its people, but there are many Members of this House who are concerned about the possibility of the South African Government refusing to permit Members of Congress to visit in South Africa, or imposing demeaning preconditions on Members of Congress as a price for admission. This kind of precondition seems especially inappropriate when an invitation to speak has been extended by the National Union of South African Students, a representative body of South African students and an organization that has gained worldwide stature and admiration for its courage, independence, and integrity.

I rise at this time simply to express the hope that the Government of South Africa will not commit yet another act that will gain it fresh opprobrium among free men everywhere. It is unthinkable that a member of the South African Parliament would be admitted to the United States but not allowed to speak. It is equally unthinkable that a U.S. Congressman should be told he can visit South Africa only under a muzzle. Such a decision by the South African Government would be an insult to Congress and to the United States, and would only serve to widen the gulf between South Africa and the rest of the world.

The Congress will soon be considering the question of the South African sugar quota and the matter of landing rights for South African Airways. Refusing Members of Congress the right to visit in South Africa, or offering them discriminatory visas for such visits, will not win friends for the South African Government in the Congress or in this country.

TRIP BY CONGRESSMAN REID OF NEW YORK TO SOUTH AFRICA

(Mr. MORSE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MORSE. Mr. Speaker, it is my understanding that the gentleman from New York (Mr. REID) has been invited to South Africa to address the Annual Day of Affirmation of Academic and Human Freedom ceremony of the National Union of South African Students.

It was disturbing to learn, however, that the South African Government has imposed certain conditions upon the granting of a visa to Congressman REID. One of these is that he make no speeches while in South Africa.

The Rand Daily Mail, one of Johannesburg's leading newspapers, published a front page editorial last week protesting this decision of the South African Government. It noted that the Government has encouraged visitors who agree with its race policies, even to the extent of giving them time to appear on the South African Broadcasting Co. In comparison, when the late Senator Robert F. Kennedy visited that country to make the same Affirmation Day address in 1966, his presence was barely mentioned on SABC.

I would hope that when the South African cabinet meets tomorrow it will reconsider its decision and grant Mr. REID a visa without conditions for this important occasion.

LEAVE OF ABSENCE

By unanimous consent leave of absence was granted to:

Mr. BARING (at the request of Mr. ALBERT), for today, on account of official business.

Mr. TAFT (at the request of Mr. GERALD R. FORD), for August 1 through 8, on account of personal reasons.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. MESKILL), to revise and extend their remarks and include extraneous matter.)

Mr. HALPERN, for 5 minutes, today.

Mr. WHALEN, for 30 minutes, on Tuesday, August 5.

(The following Members (at the request of Mr. ALEXANDER), to revise and extend their remarks and include extraneous matter:)

Mr. REUSS, for 20 minutes, today.

Mr. GONZALEZ, for 10 minutes, today.

Mr. FARBSTEIN, for 20 minutes, today.

Mr. FLOOD, for 15 minutes, today.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend his remarks was granted to:

Mr. BENNETT to revise and extend his remarks during debate on S. 1611.

Mr. POAGE.

Mr. MILLS to include a table with his statement on House Resolution 509.

Mr. MADDEN to revise and extend his remarks on House Resolution 509.

Mr. RANDALL in two instances and to include extraneous matter.

(The following Members (at the request of Mr. MESKILL) and to include extraneous matter:)

Mr. UTT in two instances.
Mr. PETTIS.
Mr. BURKE of Florida.
Mr. SCHWENGEL in two instances.
Mr. DON H. CLAUSEN.
Mr. HALPERN.
Mr. WYMAN in two instances.
Mr. WOLD.

ENROLLED BILL SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 9951. An act to provide for the collection of the Federal unemployment tax in quarterly installments during each taxable year; to make status of employer depend on employment during preceding as well as current taxable year; to exclude from the computation of the excess the balance in the employment security administration account as of the close of fiscal years 1970 through 1972; to raise the limitation on the amount authorized to be made available for expenditures out of the employment security administration account by the amounts so excluded; and for other purposes.

BILLS PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee did on the following days present to the President, for his approval, bills of the House of the following titles:

On August 1, 1969:

H.R. 13079. An act to continue for a temporary period the existing interest equalization tax.

On August 4, 1969:

H.R. 9951. An act to provide for the collection of the Federal unemployment tax in quarterly installments during each taxable year; to make status of employer depend on employment during preceding as well as current taxable years; to exclude from the computation of the excess the balance in the employment security administration account as of the close of fiscal years 1970 through 1972; to raise the limitation on the amount authorized to be made available for expenditures out of the employment security administration account by the amounts so excluded; and for other purposes.

ADJOURNMENT

Mr. ALEXANDER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; according-

ly (at 7 o'clock and 29 minutes p.m.), the House adjourned until tomorrow, Tuesday, August 5, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1017. A letter from the Secretary of the Air Force, transmitting the semiannual report on Air Force experimental, development, test, and research procurement action, for the period January 1 through June 30, 1969, pursuant to the provisions of 10 U.S.C. 2357; to the Committee on Armed Services.

1018. A letter from the Comptroller General of the United States, transmitting a report on the effectiveness and administration of the community action program in Lake County, Ind., under title II of the Economic Opportunity Act of 1964, as amended, Office of Economic Opportunity; to the Committee on Education and Labor.

1019. A letter from the Comptroller General of the United States, transmitting a report on the examination of the financial statements of the U.S. Government Printing Office, fiscal year 1968; to the Committee on Government Operations.

1020. A letter from the Comptroller General of the United States, transmitting a report on silver sales limited to small business concerns, Treasury Department; to the Committee on Government Operations.

1021. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting a report on the facts in each application for conditional entry of aliens into the United States under section 203(a)(7) of the Immigration and Nationality Act for the 6-month period ending June 30, 1969, pursuant to the provisions of section 203(f) of the act; to the Committee on the Judiciary.

1022. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders entered in the cases of certain aliens found admissible to the United States under the provisions of section 212(a)(28)(I)(ii) of the Immigration and Nationality Act; to the Committee on the Judiciary.

1023. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders suspending deportation, together with a list of the persons involved, pursuant to the provisions of section 244(a)(1) of the Immigration and Nationality Act, as amended; to the Committee on the Judiciary.

1024. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders suspending deportation, together with a list of the persons involved, pursuant to the provisions of section 244(a)(2) of the Immigration and Nationality Act, as amended; to the Committee on the Judiciary.

1025. A letter from the Chairman, U.S. Atomic Energy Commission, transmitting a draft of proposed legislation to retrocede to the State of New York exclusive jurisdiction held by the United States over part of the lands within the boundaries of the Brookhaven National Laboratory of the U.S. Atomic Energy Commission; to the Joint Committee on Atomic Energy.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, pursuant to the order of the House of July 31, 1969, the following bill was reported on August 2, 1969:

Mr. MILLS: Committee on Ways and Means. H.R. 13270.—A bill to reform the income tax laws (Rept. No. 91–413, pt. I). Referred to the Committee of the Whole House on the State of the Union.

[*Submitted Aug. 4, 1969*]

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. MILLS: Committee on Ways and Means. H.R. 13270. A bill to reform the income tax laws (Rept. No. 91–413, pt. II). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ADDABBO:

H.R. 13279. A bill to amend the Immigration and Nationality Act, and for other purposes; to the Committee on the Judiciary.

By Mrs. DWYER:

H.R. 13280. A bill to amend the Tariff Schedules of the United States with respect to the rate of duty on olives packed in certain airtight containers; to the Committee on Ways and Means.

By Mr. FARBSTEIN:

H.R. 13281. A bill to require advertising for gasoline that contains lead to contain a statement that the gasoline contains lead and that inhaling its fumes can be fatal and to require that such statement be prominently displayed where such gasoline is sold; to the Committee on Interstate and Foreign Commerce.

By Mr. FISH:

H.R. 13282. A bill to amend Public Law 87–849, approved October 23, 1962, to strengthen provisions relating to disqualification of former Federal officers and employees in matters connected with former duties and official responsibilities, and for other purposes; to the Committee on the Judiciary.

By Mr. WILLIAM D. FORD:

H.R. 13283. A bill to establish in the State of Michigan the Sleeping Bear Dunes National Lakeshore, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. WILLIAM D. FORD (for himself, Mr. NEDZI, Mr. BURTON of California, Mr. DENT, Mr. HAWKINS, Mr. MARTIN, and Mrs. MINK):

H.R. 13284. A bill to amend title 37, United States Code, to authorize travel, transportation, and education allowances to certain members of the uniformed services for dependents' schooling, and for other purposes; to the Committee on Armed Services.

By Mr. WILLIAM D. FORD (for himself), Mr. BURTON of California, Mr. DENT, Mr. HAWKINS, and Mrs. MINK):

H.R. 13285. A bill to amend the loan program in the National Defense Education Act of 1958 to extend the forgiveness for teaching benefit to teachers in American schools abroad supported by the United States; to the Committee on Education and Labor.

By Mr. GUDE:

H.R. 13286. A bill to establish a Commission on Government Procurement; to the Committee on Government Operations.

By Mr. KUYKENDALL:

H.R. 13287. A bill to name the bridge being constructed across the Mississippi River linking the States of Tennessee and Arkansas in honor of Dwight David Eisenhower, 34th President of the United States; to the Committee on Public Works.

By Mr. LUKENS:

H.R. 13288. A bill to provide salary adustments for employees in the postal field service; to the Committee on Post Office and Civil Service.

By Mr. McCLORY:

H.R. 13289. A bill to amend title 18 of the United States Code in order to provide that committing acts dangerous to persons on board trains shall be a criminal offense; to the Committee on the Judiciary.

H.R. 13290. A bill to authorize appropriations to be used for the elimination of certain rail-highway grade crossings in the State of Illinois; to the Committee on Public Works.

By Mr. MOORHEAD:

H.R. 13291. A bill to authorize the Small Business Administration to guarantee any bid, payment, or performance bond under an agreement entered into by a small business concern which is a construction contractor or subcontractor; to the Committee on Banking and Currency.

H.R. 13292. A bill to increase the participation of small business concerns in the construction industry by providing for a Federal guarantee of certain construction bonds and authorizing the acceptance of certifications of competency in lieu of bonding in connection with certain Federal projects, and for other purposes; to the Committee on Banking and Currency.

H.R. 13293. A bill to amend section 3 of the Housing and Urban Development Act of 1968; to the Committee on Banking and Currency.

H.R. 13294. A bill to amend the act of August 24, 1935 (commonly referred to as the "Miller Act"), to exempt construction contracts not exceeding $20,000 in amount from the bonding requirements of such act, and for other purposes; to the Committee on the Judiciary.

By Mr. PEPPER:

H.R. 13295. A bill to amend the Higher Education Facilities Act of 1963 to permit grants and loans under that act for automobiles parking facilities for students and personnel of institutions of higher education; to the Committee on Education and Labor.

H.R. 13296. A bill to amend title II of the Social Security Act to increase the amount of outside income which an individual whose spouse is disabled (if such spouse is also entitled to benefits) may earn without suffering deductions from benefits thereunder; to the Committee on Ways and Means.

H.R. 13297. A bill to amend title II of the Social Security Act so as to remove the limitation upon the amount of outside income which an individual may earn while receiving benefits thereunder; to the Committee on Ways and Means.

By Mr. ROYBAL:

H.R. 13298. A bill to amend the Public Health Service Act to direct the Secretary of Health, Education, and Welfare to make health information available to the public; to the Committee on Interstate and Foreign Commerce.

By Mr. WALDIE:

H.R. 13299. A bill to amend section 13a of the Interstate Commerce Act, relating to the discontinuance or change of certain operations or services of common carriers by rail, in order to require the Interstate Commerce Commission to give full consideration to all financial assistance available before permitting such discontinuance or change; to authorize a study of essential passenger service by the Secretary of Transportation; to review the discontinuance process; and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. STAGGERS:

H.R. 13300. A bill to amend the Railroad Retirement Act of 1937 and the Railroad Re-

tirement Tax Act to provide for the extension of supplemental annuities and the mandatory retirement of employees, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. TEAGUE of Texas (by request):

H.R. 13301. A bill to provide for the adjustment by the Administrator of Veterans' Affairs, of the legislative jurisdiction over lands belonging to the United States which are under his supervision and control; to the Committee on Veterans' Affairs.

By Mr. BOLLING:

H.R. 13302. A bill to amend the Internal Revenue Code of 1954 to provide for lower income tax rates for moderate- and middle-income individuals for taxable years beginning after 1970; to the Committee on Ways and Means.

By Mr. DELLENBACK:

H.R. 13303. A bill to amend the Military Selective Service Act of 1967 in order to provide for a more equitable system of selecting persons for induction into the Armed Forces under such act; to the Committee on Armed Services.

By Mr. ERLENBORN (for himself, Mr. PERKINS, Mr. AYRES, Mr. PUCINSKI, Mr. BELL of California, Mr. CAREY, Mr. ASHBROOK, Mr. MEEDS, Mr. QUIE, Mr. O'HARA, Mr. ESHLEMAN, Mr. HAWKINS, Mr. DENT, Mr. REID of New York, Mr. DANIELS of New Jersey, Mr. SCHERLE, Mr. POWELL, Mr. ESCH, Mr. COLLINS, Mr. BINGHAM, Mrs. GREEN of Oregon, and Mrs. MINK):

H.R. 13304. A bill to provide for educational assistance for gifted and talented children; to the Committee on Education and Labor.

By Mr. FINDLEY (for himself, Mr. MIZE, and Mr. MORSE):

H.R. 13305. A bill to promote the foreign policy and security of the United States by providing authority to negotiate a commercial agreement with Rumania, and for other purposes; to the Committee on Ways and Means.

By Mr. HAWKINS (for himself, Mr. STOKES, Mr. RUTH, Mr. CLAY, Mr. EILBERG, Mr. ADDABBO, Mr. CLANCY, Mr. ROONEY of New York, and Mr. GAYDOS):

H.R. 13306. A bill to provide for special programs for children with specific learning disabilities; to the Committee on Education and Labor.

By Mr. McMILLAN:

H.R. 13307. A bill to amend chapter 3 of title 16 of the District of Columbia Code to authorize the Domestic Relations Branch of the District of Columbia Court of General Sessions to remove a child from a proposed adoptive home if a petition for adoption is revoked, withdrawn, or denied, and for other purposes; to the Committee on the District of Columbia.

By Mr. MOSS:

H.R. 13308. A bill to establish a Federal Broker-Dealer Insurance Corporation; to the Committee on Interstate and Foreign Commerce.

By Mr. PUCINSKI:

H.R. 13309. A bill to provide more efficient and convenient passport services to citizens of the United States of America; to the Committee on Foreign Affairs.

By Mr. PUCINSKI (for himself, Mr. PERKINS, Mr. AYRES, Mrs. GREEN of Oregon, Mr. THOMPSON of New Jersey, Mr. QUIE, Mr. DENT, Mr. BELL of California, Mr. DANIELS of New Jersey, Mr. REID of New York, Mr. BRADEMAS, Mr. ERLENBORN, Mr. O'HARA, Mr. SCHERLE, Mr. CAREY, Mr. DELLENBACK, Mr. ESCH, Mr. HATHAWAY, Mr. ESHLEMAN, Mr. SCHEUER, Mr. STEIGER of Wisconsin, Mr. MEEDS, Mr. COLLINS, Mr. HANSEN of Idaho, and Mrs. MINK):

H.R. 13310. A bill to provide for special programs for children with specific learning disabilities; to the Committee on Education and Labor.

By Mr. WEICKER (for himself, Mr. ROBISON, Mr. ANDERSON of Illinois, Mr. REES, Mr. POLLOCK, Mr. DONOHUE, Mr. MESKILL, Mr. FREY, Mr. HASTINGS, Mr. McDADE, and Mr. BUTTON):

H.R. 13311. A bill to facilitate the movement of persons and goods in interstate commerce, and to aid in eliminating the burdens on interstate commerce which result from lack of adequately coordinated transportation facilities in many parts of the United States, through a comprehensive program of Federal assistance to States and localities to aid in the provision of such facilities; to the Committee on Ways and Means.

By Mr. WOLFF (for himself, Mr. EVANS of Colorado, and Mr. WHALLEY):

H.R. 13312. A bill to amend the Internal Revenue Code of 1954 to provide the same tax exemption for servicemen in and around Korea as is presently provided for those in Vietnam; to the Committee on Ways and Means.

By Mr. ZWACH:

H.R. 13313. A bill to deny an income tax deduction for a charitable contribution by a public official of his collection of letters and other papers, and to limit the tax benefits of other gifts to charity of certain property which has appreciated in value; to the Committee on Ways and Means.

By Mr. FREY (for himself, Mr. SIKES, Mr. BENNETT, Mr. HALEY, Mr. FASCELL, Mr. ROGERS of Florida, Mr. CRAMER, Mr. FUQUA, Mr. PEPPER, Mr. GIBBONS, Mr. BURKE of Florida, and Mr. CHAPPELL):

H.J. Res. 859. Joint resolution providing for the establishment of the Astronauts Memorial Commission to construct and erect with funds a memorial in the John F. Kennedy Space Center, Fla., or the immediate vicinity, to honor and commemorate the men who serve as astronauts in the U.S. space program; to the Committee on House Administration.

By Mr. FREY (for himself, Mr. MORTON, Mr. BELCHER, Mr. CARTER, Mr. KING, Mr. MYERS, Mr. FLYNT, Mr. FISHER, Mr. RUPPE, Mr. MESKILL, Mr. MATSUNAGA, Mr. LUJAN, Mr. JOHNSON of California, Mr. WOLD, Mr. McDONALD of Michigan, Mr. GROVER, Mr. BLACKBURN, Mr. THOMPSON of Georgia, Mr. McKNEALLY, Mr. BROYHILL of North Carolina, Mr. RODINO, Mr. WHALLEY, Mr. WYLIE, and Mr. WOLFF):

H.J. Res. 860. Joint resolution providing for the establishment of the Astronauts Memorial Commission to construct and erect with funds a memorial in the John F. Kennedy Space Center, Fla., or the immediate vicinity, to honor and commemorate the men who serve as astronauts in the U.S. space program; to the Committee on House Administration.

By Mr. FREY (for himself, Mr. KLEPPE, Mr. DENNIS, Mr. COLLINS, Mr. MONTGOMERY, Mr. FRELINGHUYSEN, Mr. COUGHLIN, Mr. HARVEY, Mr. STAFFORD, Mr. EDWARDS of Alabama, Mr. MICHEL, Mr. GERALD R. FORD, Mr. RIEGLE, Mr. BROWN of Ohio, Mr. RAILSBACK, Mr. BEALL of Maryland, Mr. WYATT, Mr. BIESTER, Mr. STEIGER of Wisconsin, Mr. BUCHANAN, Mr. DICKINSON, Mr. DERWINSKI, Mr. CASEY, Mr. HASTINGS, and Mr. HAMMERSCHMIDT):

H.J. Res. 861. Joint resolution providing for the establishment of the Astronauts Memorial Commission to construct and erect with funds a memorial in the John F. Kennedy Space Center, Fla., or the immediate vicinity, to honor and commemorate the men who serve as astronauts in the U.S. space program; to the Committee on House Administration.

By Mr. FREY (for himself, Mr. PICKLE, Mr. WHITEHURST, Mr. McCLOSKEY, Mr. FLOWERS, Mr. HOGAN, Mr. STEIGER of Arizona, Mr. POLLOCK, Mr. HANSEN of Idaho, Mr. McCLURE, Mr. ANDERSON of Illinois, Mr. GRIFFIN, Mr. MIZELL, Mr. RUTH, Mr. CAMP, Mr. SEBELIUS, Mr. FISH, Mr. DON H. CLAUSEN, Mr. CLARK, Mr. COLLIER, Mr. GIAIMO, Mr. KLUCZYNSKI, Mr. MURPHY of Illinois, Mr. WHITE, and Mr. WILLIAMS):

H.J. Res. 862. Joint resolution providing for the establishment of the Astronauts Memorial Commission to construct and erect with funds a memorial in the John F. Kennedy Space Center, Fla., or the immediate vicinity, to honor and commemorate the men who serve as astronauts in the U.S. space program; to the Committee on House Administration.

By Mr. VANDER JAGT:

H.J. Res. 863. Joint resolution to establish a Commission on Balanced Economic Development; to the Committee on Interstate and Foreign Commerce.

By Mr. BIAGGI (for himself, Mr. ANDREWS of Alabama, Mr. ANNUNZIO, Mr. BINGHAM, Mr. BUTTON, Mr. CLAY, Mr. COWGER, Mr. MANN, Mr. RARICK, Mr. POWELL, Mr. SCHERLE, Mr. ST GERMAIN, Mr. TALCOTT, and Mr. YATRON):

H. Res. 512. Resolution creating a select committee to conduct an investigation and study of all aspects of crime and disorder on U.S. military installations; to the Committee on Rules.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

248. By the SPEAKER: Memorial of the Legislature of the State of California, relative to payments to members of the Philippine Scouts; to the Committee on Armed Services.

249. Also, memorial of the Legislature of the State of California, relative to flood control projects; to the Committee on Public Works.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

200. By the SPEAKER: Petition of Rose Julius, Trenton, N.J., relative to redress of grievances; to the Committee on Banking and Currency.

201. Also, petition of Henry Stoner, York, Pa., relative to American policy in Asia; to the Committee on Foreign Affairs.

202. Also, petition of Allan Feinblum, New York, N.Y., relative to a system for polling voters on issues; to the Committee on Post Office and Civil Service.

203. Also petition of the Board of Chosen Freeholders, Union County, N.J., relative to extension of the Interstate Highway System; to the Committee on Public Works.

204. Also, petition of the Town Board, Orangetown, N.Y., relative to taxation of State and local government securities; to the Committee on Ways and Means.

EXTENSIONS OF REMARKS

SALUTE TO STEVE WITTMAN

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. STEIGER of Wisconsin. Mr. Speaker, S. J. Wittman is one of the authentic aviation leaders of our Nation. Steve has more hours in the air zooming around the pylon in air races than any other pilot in the world. Steve Wittman is an airport manager, flight instructor, test pilot, aeronautics designer and mechanic, holder of a number of patents on aviation devices, experimental aircraft builder, barnstormer, and aviation pioneer.

Steve Wittman retired last week after 45 years of flying, 43 years of air racing, and 38 years as the manager of the Oshkosh Airport. At age 65, Steve is building his seventh airplane. One of his most famous planes, "Buster," hangs in the Smithsonian Institution besides Charles Lindbergh's "Spirit of St. Louis." His first pilot's license was signed by Orville Wright.

Steve Wittman was honored last weekend by people from throughout the Nation when thousands turned out for "Wittman Weekend." The Winnebago County Airport, over which Steve Wittman presided for 38 years, will hereafter be known as Wittman Field. An appropriate tribute to a man who truly had a vision of the future.

I include in the RECORD at this point the following editorials:

[From the Fond du Lac (Wis.) Commonwealth Reporter, July 19, 1969]

SALUTE TO STEVE WITTMAN

One of Fond du Lac County's most famous native sons, Steve J. Wittman, will be honored at Oshkosh Friday, Saturday and Sunday, July 25–27, for his many contributions to aviation in the Fox River Valley, for his years as manager of the Winnebago County Airport, for his daring racing exploits in tiny, home-built aircraft and for bringing honor and fame to Oshkosh and to the State of Wisconsin.

During the celebration, the airport at Oshkosh which he managed for 38 years will be renamed S. J. Wittman Field in his honor. Saturday and Sunday Wittman's friends, the City of Oshkosh, Winnebago County and many organizations have planned one of the most outstanding air shows ever to be seen in this region. The show each day will run from noon to 4:30 p.m. and offer every type of skyway thrill from an opening "fly-by" of 40 war-bird aircraft to a flight by Wittman himself in his famed "Bonzo" to aerobatics and an air race.

There also will be parties, dinners and special honors for Steve.

But most important, many of his flying "cronies" from all over the world will be back to help honor him.

Wittman learned to fly at the old Fond du Lac Airport in 1924 and from 1925–27 he operated a small flying service here giving rides, flying at county fairs and doing general barnstorming. In addition, he was a test pilot for the Pheasant Aircraft Co. of Fond du Lac, a pioneer in the business.

In 1931 Wittman went to Oshkosh to take over the airport there and managed it until his retirement this spring.

S. J. Wittman was born in Byron April 5, 1904, and attended grade schools at Byron and Lomira. He was graduated from Fond du Lac High School. So, he has firm roots in Fond du Lac County and has many friends here. Certainly, many a local resident took to the air for the first time in an open cockpit, wooden "prop," strutted biplane with Steve Wittman at the controls.

Steve gained his national reputation piloting aircraft in races all around the country. But, he is an inventor, builder and designer as well. His great little racer, "Buster," is in the Smithsonian Institution in Washington, D.C., not far from Lindbergh's "Spirit of St. Louis."

The magazine, "Sport Aviation," in its July issue, carries a two-page "Salute to Steve Wittman" and calls him "one of America's great aviation personalities. Steve entered his first race in 1926. Not until he began to design and build his own racing aircraft did he really become established in the game. He participated every year in almost every pylon (tower) race and garnered more wins than perhaps any other race pilot. He never stopped scoring in races and his name has become synonymous with the sport," the article says.

The S. J. Wittman Airport Committee Inc. of Oshkosh has planned a tremendous three-day tribute which will be the highlight of Steve's life. They are calling it "Wittman Weekend" for Steve and Dorothy Wittman because the flyer holds a very special place in the hearts of residents of Winnebagoland.

Steve Wittman is the kind of man and the kind of flyer who deserves this type of tribute.

Fond du Lac joins with its neighboring city, all of the Fox River Valley and all of Wisconsin in saying, "Congratulations, Steve Wittman."

As an added testimonial, 100,000 persons are expected for the two days of the air show. It should be well worth seeing.

[From the Oshkosh (Wis.) Daily Northwestern, June 16, 1969]

HONOR TO CITIZEN

Seldom does a community have the opportunity—or take the opportunity—to honor one of its illustrious citizens during his lifetime.

But Oshkosh will not be remiss this summer, thanks to the hard work of a committee planning the "S. J. Wittman Airport Dedication."

The group unveiled some of its plans last week and the fact that stood out more than anything was that it will truly be a community-wide homage to Steve Wittman.

The committee is headed by Wesley Schneider and Leo Muza, and Richard C. Rutledge is in charge of the promotional end of the planning.

It is Rutledge who graphically presents the case for the opportunity Oshkosh and Winnebago County have in paying due honor to its own aviation pioneer.

The community, he feels, has not fully grasped the stature of Wittman in the aviation world. But it will know through the efforts of this committee between now and July 26–27 when the airport which Wittman nurtured from a pasture-type landing field to a jet-age airport is renamed in his honor.

Behind these prime movers, scores of community leaders are working on various facets of the two-day event, and every civic organization in the country will have a chance to take some part in the program.

Many of the committee members were active in the promotion of air shows here in the 1950's, and some, like Rutledge, are well remembered for the job they did in promoting the 1953 City of Oshkosh centennial celebration.

When they speak, then, of drawing 100,000 spectators to their show, or plan a banquet with an attendance limited to 1,000 persons, it seems to be no wishful thinking.

The renown of Wittman perhaps makes it easier to put on a show of the magnitude the committee envisions. His friends in aviation—who fully appreciate his contributions to their field—have been eager to take part.

Those who have ever gone to the Milwaukee air show may recall that some of the most interesting displays there have been the antique and home-crafted planes, an array of unusual and intriguing machines.

These are from members of the Experimental Aircraft Association. This year, most of the EAA members are forsaking the Milwaukee show (which occurs on the same weekend) to come to Oshkosh. Just one indication of the esteem aviation has for Wittman.

It is an esteem which Oshkosh shares, although not with the full knowledge which they have.

The Daily Northwestern is gratified that its editorial suggestion, when Wittman announced his intention to retire, that the airport be renamed in his honor is bearing such magnificent fruit and pledges to cooperate fully in making it a fitting tribute to the man who made aviation history in Oshkosh.

This community's opportunity to pay Wittman honor is a rare opportunity, a chance to thank him for the honor which, for nearly two score years he has brought to Oshkosh.

BUCKSKIN BILL

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, August 4, 1969

Mr. CHURCH. Mr. President, some 30 years ago a man by the name of Sylvan Hart gave up the comforts of civilization for the solitary life of a mountain man in Idaho's wilderness.

Buckskin Bill, as he is now known, has fashioned a remarkable life for himself in the mountains of our State. He makes his own clothes and his own shelter, grows his own food, and fashions his own dishes, tools, and even guns from the resources of his lonely retreat.

He is altogether a remarkable individual, a hearty adventurer, who has proved once again that man, alone in a vast primitive area, can survive—indeed thrive—on what nature provides.

Buckskin Bill is the subject of a new book entitled. "The Last of the Mountain Men," written by Harold Peterson. A review of the book was published in the Washington Post book supplement, Book World of August 3, 1969. I ask unanimous consent that it be printed in the Extensions of Remarks.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

BOOK REVIEW OF "THE LAST OF THE MOUNTAIN MEN," BY HAROLD PETERSON

(By Richard Rhodes)

(The tale of Buckskin Bill, and his 30 years deep in an Idaho forest, using the technology of long ago to recreate a kind of life America has forgotten.)

Sylvan Hart, of an Old American family, went off to a remote Idaho fastness three decades ago "with a few staples; an ax, a rifle, and a master's degree in engineering" and reconstituted himself as a mountain man. He makes his own deerskin clothes, his own buildings, his guns, his dishes, his tools. He grows his own food, hunts and skins and salts and renders his own meat, and creates his own entertainments—silversmithing, woodcarving, leatherwork. The nearest town is 150 wilderness miles away, and it's a small one. How Hart lives, the stories he tells, and other stories of Idaho mining days, are the subjects of Harold Peterson's book.

For what it reveals of Hart's way of life, *The Last of the Mountain Men* will do. But for its interpretation of the meaning of that life. Peterson's book does Sylvan Hart no service. Buckskin Bill, as Hart calls himself, is not the last of the mountain men, a romantic holdover from an idyllic past, but a thoroughly modern man who has deliberately recreated the style and substance of an earlier way of life: a conscious artist whose medium is the remembered past, particularly its arcane technology.

"Hardly anybody has a really complete set of blacksmith tools anymore," Hart says, "but I do: a hardy, a flatter, all of them." Hart not only make his own tools; he also forges, bores, rifles and tempers his own guns by hand, a feat that requires great skill and great physical strength. Yet his technology is selective: He wears store-bought horn-rimmed glasses, the same as you and me.

Buckskin Bill's door handles are of elk horn. The pink plaster of his adobe buildings is tinted with hematite. His shorts and his jerkin and his summer hats are made of bearskin he shot, skinned and tanned himself. His winter helmets he hammered from copper, and patterned after those the conquistadors wore. They are intended to deflect the rocks that sometimes fall from the cliffs above his homestead; he mined and smelted the copper himself. "Buckskin," says Peterson, "also had homemade bows, 'arrahs,' crossbows pack frames, intricate wicker fishing creels, fly rods, and highly-crafted snowshoes . . ." And a set of cherry-wood dishes he spent a winter carving, because the hint of cherry enhances the flavor of food; and bear grease for pastry and for tempering gun barrels without fracturing them—tastier than Crisco, firmer than water. And books, especially Russian literature; and "small, sweet strawberries obtainable in no city"; and a burdened Queen Anne cherry tree from which Hart and Peterson filled an entire farm wagon; a hammered copper samovar. And a relative who sends him *The Wall Street Journal*, which he ponders, shaking his head. And when he needs money, he pans a little gold.

What led Hart to reenter the wilderness of the American past? This question like so many others that might have given us the mountain man as a usable model, Peterson answers only superficially. The Harts, it seems, had a family tradition that the boys would spend a year alone in the woods upon reaching manhood, and Sylvan liked the woods so much he stayed there. But his self-conscious, self-parodying posture in the several photographs which accompany the text, the fact that he is a lifelong bachelor, the fact that his particular life in the woods is deliberately but selectively eighteenth-century suggest more complicated motives. Hart's creative obsession with tools deserves explanation, as does his choice, despite his friendliness to strangers, of a homestead accessible by land only across a pole bridge slung against the face of a sheer cliff.

Compare William Carlos Williams on the significance of Daniel Boone:

And if it seems always easier to romanticize a thing than to understand it, it is so because very often it is more convenient to do. Especially is this true when to romanticize a thing covers a significance which may be disturbing to a lying conscience. For Boone, at least, was not a romantic, losing himself in the "mystery" of the forest. He was a technical genius of the woods, enjoying, in that respect, the admiration of the most skilled native craftsmen, who remained actually in awe of his sheer abilities and accomplishments.

And Peterson romanticizes. His epilogue the moral of the tale as it were, begins: "As I read the last of Sylvan Hart's letter, sitting high above Manhattan, thoughts of the beauty and deep-rooted peace of the empty Idaho wildernesses . . ." and concludes that "When this true civilization comes (if it comes), an aristocracy of common men will discuss law and letters and arts and philosophy on shady village greens and in spacious wooden-grecian temples of houses and churches, schools and meeting halls." That vision, so patently synthetic, so like a Hollywood movie of the early 1940s, discolors Peterson's entire book.

The tragedy is that such romanticizing should be our first and perhaps only introduction to Sylvan Hart. Hart had the sense and even the genius to direct his work of reconstruction toward the disappearing but authentic culture of this country, which was rooted in the technology necessary to conquer an alien and hostile land. American technology remains America's finest creative gift to the world, but the culture that might have arisen from that technology foundered against the borrowed, secondary culture created by the wealth which technology made possible.

No one can say what that culture might have been, but the clean triumphant innocence of Shaker architecture, the sly, watchful, exuberant literature of Melville and Twain, the somber martial majesty of Lincoln's and Kennedy's funerals, suggest its direction. It would have had, as William Carlos Williams says, "relatedness," and tenacious bond to the local, and it might have been—might still be, for it is not entirely lost, despite its proverty of means—what Whitman called "a Great Average" rather than the work of a few gifted individuals. Meanwhile, throughout the nation, the cultural leadership produces eighteenth-century Italian operas.

New York is crowded, New York is a behavioral sink, Peterson laments, even though America did not invent cities, even though he has just returned from the thousands upon thousands of square miles of open land which still wait in the vast interior of the continent for habitation, and which technology today makes accessible to any who would take the trouble to learn the way in.

Hart has not reconstituted a little bit of Athens in Idaho; he has proved once again that one can live comfortably on American terms in the wild and peaceful interior of the American continent. His message is simple, yet it might be an old Egyptian secret that he alone has unearthed: that it is not necessary to live in cities, nor even in Peterson's idyllic small town. What the Shakers created out of their moil of religious and sexual fanaticism, what the South had despite the blot of slavery, what still exists, partly desiccated, in the central regions of America, is available today to any who want it and can meet its requirements of technical competence and personal integrity, as Sylvan Hart has done. And this Peterson failed to see, as America, to its intensifying agony, has failed to acknowledge.

THE LOG OF MAN'S JOURNEY TO THE MOON AND BACK

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. BRAY. Mr. Speaker, the following log of the flight of Apollo 11, from the National Observer of July 28, 1969, is the most gripping and dramatic account I have yet seen of that magnificent journey:

THE LOG OF MAN'S JOURNEY TO THE MOON AND BACK

An observer's log of the flight of Apollo 11, man's first landing on the moon. All times are Eastern Daylight; all miles are statute.

WEDNESDAY, JULY 16

9:32 a.m.: "Lift off. We have a lift off." The voice from Launch Control at Cape Kennedy heralds the beginning of Apollo 11's flight to the moon, 250,810 miles away at blast off. Orange-white flames and billows of smoke envelope the spotless white, 363-foot Saturn 5 and its precious astronaut payload: Neil Armstrong, a civilian, and Lieut. Col. Michael Collins and Col. Edwin "Buzz" Aldrin, Jr., both of the Air Force.

The Saturn 5's five F–1 first-stage engines, gulping 2,230 gallons of liquid oxygen and kerosene each second, lift the astronauts from Launch Pad 39A.

9:35 a.m.: speed, 6,198 m.p.h. The Saturn 5's first stage separates to tumble into the Atlantic Ocean. The second stage's five J–2 engines ignite.

9:41 a.m.: The second stage separates. Speed, 14,579 m.p.h. The third stage's single J–2 engine ignites.

9:43 a.m.: Apollo 11 enters a nearly circular orbit 118 miles above earth at 17,686 m.p.h.

12:16 p.m.: On the second orbit, over the Gilbert Islands in the Pacific Ocean, the third-stage rocket kicks to life again for 5 minutes, 47 seconds, driving the astronauts towards their rendezvous with the moon.

12:22 p.m.: The J–2 shuts off. Altitude, 204 miles. Speed, 24,256 m.p.h. "Hey, Houston, Apollo 11," says Neil Armstrong, the spaceship commander. "This Saturn gave us a magnificent ride."

2:12 p.m.: A three-second burn of the service module's single, 20,500-pound-thrust engine drives the Apollo crew a safe distance from the third stage. A ground signal sends the third stage rocketing off to eventually soar behind the moon and into solar orbit.

8:04 p.m.: Apollo 11 transmits an unscheduled, 16-minute color-television show from space.

11:57 p.m.: All three astronauts sleep. Apollo 11 is 77,992 miles from earth, traveling at 4,787 m.p.h.

THURSDAY, JULY 17

8:21 a.m.: The day begins without fanfare.

10:33 a.m.: Apollo 11 reaches its midway point, 120,002 miles from the earth and moon.

12:16 p.m.: A three-second rocket burst puts Apollo 11 on a course that will bring it within 69 miles of the moon.

6:23 p.m.: 143,980 miles above earth, Mike Collins works with Apollo 11's sextant. Capsule Communicator Charlie Duke asks if Colonel Collins can pick out Edwards Air Force Base in California.

"I can see a 104 [F–104] taxiing out on the runway."

"Man, that's super."

"The damn ——— almost always have a 104 taxiing out for a take-off," Colonel Collins says.

7:32 p.m.: The crew begins a 35-minute telecast from space, focusing first on earth. At one point, Mike Collins rotates the cam-

era, turning the earth upside down on the television screen.

"I'm making myself seasick," he jokes.

9:41 p.m.: Houston bids the crew good night.

10:53 p.m.: Apollo 11 is 147,802 miles from earth. Speed, 2,817 m.p.h.

FRIDAY, JULY 18

9:41 a.m.: Houston allows the astronauts an extra 69 minutes sleep before awakening them.

4:44 p.m.: Apollo 11, 201,250 miles out, begins a one-hour, 36-minute telecast. The camera follows Armstrong and Buzz Aldrin as they work in the lunar module. The color and the clarity of the pictures are superb.

11:11 p.m.: Apollo 11, traveling at 2,037 m.p.h., reaches the "lunar sphere of influence," 214,402 miles from earth. From this point on, the gravitational pull of the moon is greater than that of earth's and the space craft will pick up speed.

SATURDAY, JULY 19

8:32 a.m.: The crew awakes. Apollo 11 is 14,359 miles from the moon. Speed, 2,787 m.p.h.

10:47 a.m.: "The view of the moon that we've been having recently is really spectacular," Neil Armstrong reports. "It fills about three-quarters of the hatch window . . . It's a view worth the price of the trip."

1:12 p.m.: "Apollo 11 . . . All your systems are looking good going around the corner and we'll see you on the other side."

1:13 p.m.: Apollo 11, 355 miles above the surface, zooms behind the moon at 5,225 m.p.h. and out of contact with earth.

1:21 p.m.: The service module's engine fires for 6 minutes, 2 seconds, slowing Apollo 11 to 3,237 m.p.h. and putting it into an elliptical lunar orbit with a high point of 193.8 miles and a low point of 70.4 miles.

1:47 p.m.: The tracking station near Madrid reports telemetry signals as Apollo 11 swings from behind the moon. Minutes later Neil Armstrong reports: "We're getting this view of the landing approach . . . the pictures and maps brought back by Apollos 8 and 10 give us a very good preview of what to look at here. It looks very much like the pictures, but like the difference between watching a real football game and watching it on TV—no substitute for actually being here."

3:56 p.m.: Apollo 11 begins a 34-minute telecast of the lunar surface, tracing the path that the lunar module will follow on its way to the surface. The astronauts give a running commentary on the craters and hills they pass over.

5:43 p.m.: Again the service module's single engine fires, this time for 17 seconds. The burn puts Apollo 11 into an orbit 75.3 miles by 61.8 miles. Speed, 3,637 m.p.h.

11:04 p.m.: The astronauts continue preparing for the next day's descent.

SUNDAY, JULY 20

1:03 a.m.: The crewmen finally bed down.

7:07 a.m.: The day of man's first landing on the moon begins for the crew of Apollo 11 with a call from Houston. "Oh my, you guys wake up early," one astronaut says.

9:06 a.m.: Apollo 11 flies behind the moon, losing radio contact with Houston. During this period, Buzz Aldrin enters the lunar module, code name Eagle.

9:52 a.m.: Apollo 11 re-establishes radio contact. A short time later Neil Armstrong joins Colonel Aldrin in Eagle. Mike Collins remains in the command module, code name Columbia.

12:57 p.m.: Two minutes before Apollo 11 disappears behind the moon again, Houston radios: "We're go for undocking."

1:47 p.m.: One minute before swinging from behind the moon, Eagle and Columbia undock.

1:50 p.m.: "The Eagle has wings," Neil Armstrong radios, confirming the undocking.

2:11 p.m.: An eight-second burn of the service module's engine moves Columbia away from Eagle at 2 m.p.h.

3:08 p.m.: Behind the moon, Eagle's 9,800-pound thrust descent-stage engine fires for 29.8 seconds, dropping it into an orbit with a low point of 9.8 miles above the moon's surface.

3:46 p.m.: Columbia re-establishes contact with earth two minutes before Eagle. "How did it go?" Houston asks.

"Listen, baby, everything's going just swimmingly," Mike Collins replies. "Beautiful."

3:48 p.m.: Eagle re-establishes radio contact with Houston.

3:57 p.m.: Eagle is 12.3 miles above the moon.

4:00 p.m.: "Eagle, Houston. If you read, you're go for powered descent."

4:05 p.m.: 50,000 feet altitude, 260 miles from the landing site. Eagle's 9,870-pound-thrust engine begins firing to slow the craft and drop it to the lunar surface.

4:06 p.m.: "Everything looking good," Houston says.

4:07 p.m.: 47,000 feet.

4:08 p.m.: "Looking good to us," Houston says. "You're still looking good."

4:09 p.m.: "You are go to continue power descent," Houston says, 40,000 feet. "And the earth right out our front window," Eagle says.

4:10 p.m.: 33,500 feet.

4.11 p.m.: 27,000 feet. "Delta-H (change of altitude) looking good now," Eagle reports.

4:12 p.m.: 21,000 feet. Speed, 818 m.p.h.

4:13 p.m.: 13,500 feet. Speed, 518 m.p.h. 9,200 feet.

4:14 p.m.: 5,200 feet. 4,200 feet. "You're go for landing," Houston says. 2,000 feet. "We're go. Hang tight. We're go." 1,600 feet, 1,400 feet.

4:15 p.m.: 750 feet. Eagle is flying with its windows up, its crew looking into the blackness of space above. Their craft is tilted at a 35-degree angle to the lunar surface. 700 feet. The descent engine continues to burn. Speed, 14.3 m.p.h. 600 feet.

500 feet. Eagle is nearly perpendicular to the surface now and the crew can see the area ahead, 350 feet. Speed, 2.7 m.p.h. 330 feet. "We're pegged on horizontal velocity," Eagle says. Neil Armstrong spots a football-field-sized crater littered with boulders 10 and 15 feet in diameter where Eagle's computer-programmed landing approach is aiming the craft. He quickly switches to semiautomatic controls and instructs the computer to fly Eagle over the danger area.

4:16 p.m.: 220 feet. "Coming down nicely." 200 feet. 160 feet. 75 feet.

4:17 p.m.: 40 feet. Speed, 1.7 m.p.h. "Pick-up some dust." 30 feet. "Faint shadow." "Drifting to the right a little." 10 feet. One of the 68-inch-long sensors jutting down from three of Eagle's four landing pads touches the lunar surface. "Contact light." One second later, the descent engine is shut off.

Eagle settles to the moon in the Sea of Tranquility, coming to rest at a 4.5 degree angle four miles beyond its programed landing site, but still within its general target area.

"Houston, Tranquility Base here," Neil Armstrong reports. "The Eagle has landed." The flight surgeon in Apollo Control notes that Mr. Armstrong's heart reached 156 beats a minute during Eagle's landing.

4:29 p.m.: "Tranquility," the capsule communicator says, "be advised that there are a lot of smiling faces in this room and all over the world."

"There are two of them up here," Eagle replies.

"And don't forget one in the command module," Mike Collins calls from lunar orbit.

4:35 p.m.: "You might be interested to know that I don't think I noticed any difficulty at all in adapting to one-sixth G [gravity]," Neil Armstrong reports.

5:06 p.m.: Eagle's crew continues checking out the craft's equipment before eating and a brief rest.

7:13 p.m.: Apollo Control relays a message to the world from Buzz Aldrin: "I'd like to take this opportunity to ask every person listening in, whoever and wherever they may be, to pause for a moment and contemplate the event of the past few hours, and give thanks in his or her own way."

7:43 p.m.: The astronauts begin preparing for their moon walk, 4 hours and 22 minutes early. This is a time-consuming task in Eagle's cramped cabin. Their bulky equipment weighs 183 pounds. This includes water-cooled space suits, portable life-support systems that provide oxygen, an emergency 30-minute oxygen supply, and bubble helmets.

10:28 p.m.: The two astronauts switch to their portable life-support systems from Eagle's oxygen supply.

10:38 p.m.: "Everything is go here," Neil Armstrong reports. "We're just waiting for the cabin . . . to blow enough pressure to open the hatch."

10:39 p.m.: Eagle's hatch opens, looking west across a barren surface pitted by tiny craters and littered with small rocks, some perhaps billions of years old.

10:48 p.m.: Neil Armstrong begins positioning himself to move out backward through Eagle's hatch. "Relax a little bit," Buzz Aldrin suggests.

10:51 p.m.: "Okay, Houston, I'm on the porch." Mr. Armstrong pauses for a moment on the platform under Eagle's hatch before placing his lunar "overshoe" on the first step.

10:53 p.m.: Neil Armstrong pulls a lanyard that opens the storage area holding a black-and-white television camera.

10:54 p.m.: A giant screen in Apollo Control flickers and a picture appears upside down until engineers right it. Eagle's ladder is bathed in shadow. Beyond, harsh sunlight floods the surface in brilliant contrast. A foot appears. "Okay, Neil, we can see you coming down the ladder now," Houston says.

10:55 p.m.: "I'm at the foot of the ladder. The LM foot pads are only depressed in the surface about one or two inches, although the surface appears to be very, very fine grained. As you get close to it, it's almost like a powder."

10:56 p.m.: Neil Armstrong fulfills one of men's most ancient dreams. "That's one small step for man, one giant leap for mankind," he says as he steps onto the lunar surface.

10:57 p.m.: Mr. Armstrong marvels at the lunar soil. "The surface is fine and powdery. I can pick it up loosely with my toe. It does adhere in fine layers like powdered charcoal to the sole and sides of my boots. I only go in a small fraction of an inch."

11:02 p.m.: The flight surgeon monitoring the astronauts' heart beats and respiration reports they are doing well.

11:03 p.m.: Mr. Armstrong begins photographing the lunar surface.

11:05 p.m.: Mr. Armstrong begins scooping up the first sample of lunar soil.

11:07 p.m.: Mr. Armstrong finishes collecting two to four pounds and jabs the scoop handle six to eight inches in the surface. He seals the sample bag and puts it in a pocket on his leg.

11:12 p.m.: Buzz Aldrin exits from Eagle.

11:13 p.m.: "Now I want to back up and partially close the hatch, making sure not to lock it on my way out," Colonel Aldrin says.

"A good thought," Neil Armstrong agrees.

11:14 p.m.: Buzz Aldrin steps onto the moon.

11:18 p.m.: The astronauts inspect Eagle's descent stage and note that one of the landing probes is broken and bent upward.

11:24 p.m.: Neil Armstrong unveils the plaque attached to one of Eagle's landing legs and reads it. "Here men from the planet

earth first set foot upon the moon, July 1969 A.D. We came in peace for all mankind." The plaque, with the signatures of the Apollo 11 crewmen and President Nixon, will remain on the lunar surface.

11:27 p.m.: Mr. Armstrong moves the television camera about 30 feet away from Eagle.

11:31 p.m.: Mr. Armstrong pans the lunar landscape with the television camera.

11:35 p.m.: Buzz Aldrin unrolls the solar-wind experiment and jabs its pole into the surface. The experiment, which resembles a long sheet of aluminum foil, is designed to collect particles of the solar wind that bombards the moon. Scientists hope that the panel will collect one-billionth of an ounce of particles from the sun for them to study.

11:41 p.m.: The astronauts set up an American flag with a spring device that keeps it "waving" on the windless, airless moon.

11:42 p.m.: "I guess you're about the only person around that doesn't have TV coverage of the scene," Houston tells Columbia. "I don't mind a bit. How is the quality of the TV?" Reply: "Oh, it's beautiful, Mike. Really is."

11:46 p.m.: Buzz Aldrin attempts various ways of moving on the moon, including a series of kangaroo hops. "You do have to be rather careful to keep track of where your center of mass is. Sometimes it takes about two or three paces to make sure you've got your feet underneath.

11:48 p.m.: President Nixon, watching the moon walk at the White House with Frank Borman who orbited the moon on Apollo 8, talks directly to the astronauts. "Because of what you have done, the heavens have become part of man's world," Mr. Nixon says.

11:54 p.m.: Neil Armstrong begins collecting bulk samples of the lunar terrain.

11:55 p.m.: "The blue color of my boot has completely disappeared now in this—still don't know exactly what color to describe this other than ash-cocoa color," Buzz Aldrin says.

MONDAY, JULY 21

12:08: a.m.: Neil Armstrong finishes collecting about 50 pounds of lunar soil and rocks. These are stored in one of two aluminum rock boxes for return to earth.

12:18 a.m.: The astronauts are inspecting Eagle again.

12:27 a.m.: The crewmen remove the passive-seismometer and the laser-reflector experiments from a storage bin.

12:31 a.m.: Buzz Aldrin plods out of sight with the experiments, looking a little like a weary salesman toting two heavy sample cases.

12:35 a.m.: Colonel Aldrin reports difficulties leveling the passive-seismometers package about 50 or 60 feet from Eagle.

12:36 a.m.: Neil Armstrong reports the laser reflector set up. Scientists hope to use the device to measure the distance between the earth and moon to within six inches of accuracy and to study the theory that earth's continents are drifting apart.

12:44 a.m.: The two solar panels, which power the passive-seismometer experiment, are unfolded. Minutes later, equipment on earth begins recording the astronauts' foot falls detected by the four seismometers. These instruments are sensitive enough to record a meteoroid the size of a pea landing a half mile away. They will also record moonquakes, if they occur.

12:46 a.m.: Neil Armstrong begins collecting more lunar samples, penetrating up to three inches beneath the surface. Because time is running short, the samples cannot be photographed as he picks them up.

12:47 a.m.: Buzz Aldrin is taking the first of two core samples. He drives the tube into the surface to a depth of eight or nine inches with a hammer. "I hope you're watching how hard I have to hit this into the ground," he says. The seismometer records his pounding, indicating the moon is a good transmitter of shock waves.

12:52 a.m.: Colonel Aldrin takes down the solar-wind experiment. This and the two core tubes go in the rock box with the material Neil Armstrong is collecting.

12:54 a.m.: As the world watches, Mr. Armstrong picks up a moon stone to return to earth.

12:55 a.m.: "We're running a little low on time," Houston says.

"We want to keep a good margin in those portable life-support systems," Apollo Control notes.

12:57 a.m.: Colonel Aldrin climbs into Eagle.

1:03 a.m.: Mr. Armstrong sends the first box of rocks up to Colonel Aldrin by a strap and pulley. His heart beat peaks up 160.

1:07 a.m.: The second rock box goes up.

1:09 a.m.: Neil Armstrong enters Eagle and reports he collected about "20 pounds of carefully selected, if not documented, samples" in the second box.

1:11 a.m.: "Okay, the hatch is closed and latched," Buzz Aldrin reports. "And we're up by it, secure."

3:46 a.m.: After depressurizing Eagle for a second time, the crewmen throw out their portable life-support systems, a lithium hydroxide canister—used to filter their oxygen—and the arm-rests from inside Eagle.

3:57 a.m.: The astronauts turn off the TV camera.

4:25 a.m.: Houston bids Eagle good night.

9:32 a.m.: Houston wakes Mike Collins in Columbia. "We're going to keep you a little busy," the capsule communicator promises.

9:42 a.m.: "Not since Adam has any human known such solitude as Mike Collins is experiencing during the 47 minutes of each lunar revolution when he is behind the moon with no one to talk to except his tape recorder aboard Columbia," Apollo Control comments.

11:12 a.m.: Houston wakes Eagle's crew from a fitful sleep and asks how they slept in the cramped cabin, which has no beds. "Neil has rigged himself a really good hammock and he's been lying on the hatch and engine cover, and I curled up on the floor," Buzz Aldrin reports.

1:44 p.m.: Ten minutes to lift off. "Everything looks good," Houston says. Eagle's descent stage is to serve as launching platform for the ascent stage.

1:54 p.m.: Blast off. Eagle's 3,500-pound-thrust engine fires the top half of the lunar module straight up, leaving the descent stage as a permanent monument to man's first landing.

Eagle rises. 17.7 m.p.h. The astronauts call off their speed in feet per second. 24.5 m.p.h. Ten seconds after launch, the craft angles towards orbit. "Very smooth," Neil Armstrong says. "Very quiet ride. There's that crater down there."

1:55 p.m.: 2,600 feet. "Eagle," Houston says, "one minute and you're looking good." During the lift off, Neil Armstrong's heart rate reaches 90 and Buzz Aldrin's jumps to 120.

2:00 p.m.: One minute to go in the burn. Speed, 3,057 m.p.h.

2:01 p.m.: Eagle's engine shuts off as the craft reaches 3,775 m.p.h. and sails into a lunar orbit 54.3 miles by 10.5 miles.

2:05 p.m.: "Eagle is back in orbit and left Tranquillity Base, and leaving behind a replica from our Apollo 11 launch." Houston answers: "Roger, we copy. The whole world is proud of you." Replies Eagle: "We needed a lot of help."

4:20 p.m.: The seismometers left on the moon record a distant shock. Excited scientists speculate they have detected their first moonquake or a meteoroid slamming into the lunar surface.

5:35 p.m.: After a series of rendezvous maneuvers, Columbia docks with Eagle. "Okay, we're all yours," Buzz Aldrin tells Mike Collins as the two craft lock together after being apart 27 hours, 48 minutes.

7:13 p.m.: Neil Armstrong and Buzz Aldrin rejoin Mike Collins in the command module.

8:02 p.m.: A seven-second burn of the service module's small maneuvering rockets separates Apollo 11 from the unmanned lunar module at a relative speed of 1.4 m.p.h. "There she goes," Columbia says. "It was a good one." Eagle's ascent stage will remain to orbit the moon long after the astronauts return to earth.

TUESDAY, JULY 22

12:55 a.m.: Behind the moon as Apollo 11 begins its 31st revolution, Columbia is 22 miles ahead of Eagle and one mile below. The service module's 20,500-pound-thrust engine fires for 2 minutes, 28 seconds, driving Apollo 11 towards home at 5,904 m.p.h.

1:07 a.m.: Radio contact. "Time to open up the LRL doors (the lunar receiving laboratory where the crew will be quarantined)," Neil Armstrong says. "Roger," Houston replies. "We've got you coming home. It's well stocked."

2:16 a.m.: Apollo 11, 4,278 miles from the moon, its speed slowed to 3,658 m.p.h. by the moon's gravitational tug.

12:32 p.m.: The crew remains asleep after noon. Speed, 2,937 m.p.h.

1:11 p.m.: The astronauts are awake after 10 hours of rest.

1:39 p.m.: Apollo 11, 38,870 miles from the moon, reaches the point where earth's gravitational pull exceeds the moon's. The craft begins to accelerate.

4:02 p.m.: Apollo 11's maneuvering rockets fire 10.5 seconds to slow the craft 3.3 m.p.h. and aim it more accurately toward earth.

10:42 p.m.: 176,042 miles from earth. Speed, 2,982 m.p.h.

WEDNESDAY, JULY 23

12:26 p.m.: The Apollo 11 crew is stirring after a 10-hour rest period. They have a relatively easy schedule the day before reentry.

3:15 p.m.: 132,439 miles out. Speed, 3,854 m.p.h. Cabin temperature, 62 degrees Fahrenheit.

7:04 p.m.: Another telecast from space. The astronauts philosophize a bit about the meaning of their historic mission. Buzz Aldrin puts it best: "A verse from Psalms comes to mind to me: 'When I consider the heavens, the work of Thy fingers, the moon, and the stars which Thou hast ordained, what is man that Thou art mindful of him.'"

11:16 p.m.: Houston notifies Apollo 11 that bad weather is expected at the splashdown target. The craft will maneuver so it enters the atmosphere at a shallower angle. This will give more lift to Apollo 11 and drop it some 247 miles down range.

THURSDAY, JULY 24

7:42 a.m.: Re-entry day. The crew is still asleep. Apollo 11 is 42,499 miles out. Speed, 6,951 m.p.h.

11:22 a.m.: 13,182 miles. Speed, 11,810 m.p.h. and increasing rapidly.

12:20 p.m.: The command module separates from the service module.

12:22 p.m.: "You're looking mighty fine here," Houston says. "You're cleared for landing."

12:28 p.m.: "Guidance reports Apollo 11 is right down the middle of the corridor," Apollo Control advises.

12:35 p.m.: Apollo 11 strikes earth's upper atmosphere at 400,000 feet and 18 seconds later, the high heat of re-entry blacks out all radio contact with the crew. Speed, 24,707 m.p.h., 1,736 miles from splashdown in the Pacific Ocean 912 miles southwest of Hawaii. Earth's atmosphere is rapidly slowing Apollo 11's speed.

12:38 p.m.: One of the recovery aircraft

spots the fiery glow of Apollo 11's heat shield as it streaks through the early morning (6:38 a.m. local time) sky.

12:39 p.m.: Radio blackout ends.

12:44 p.m.: At 23,300 feet, two drouge parachutes pop out to slow Apollo 11.

12:45 p.m.: Apollo 11's three main parachutes open.

12:49 p.m.: Apollo 11 is at 1,500 feet, swinging gently beneath its bright orange-and-white canopies.

12:50 p.m.: "Splashdown," a rescue helicopter reports. "Apollo has splashdown." The space craft plunges into the Pacific nose first, 13 miles from the recovery ship U.S.S. Hornet. Man's first flight to walk upon the moon ends upside down.

A.M. & N. PROGRAM AIMS AT ELIMINATING HARD-CORE POVERTY

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, August 4, 1969

Mr. FULBRIGHT. Mr. President, Arkansas A.M. & N. College, in Pine Bluff, is currently conducting a program to provide training, and then employment, for unskilled and unemployed people from Lonoke, Desha, and Drew Counties in Arkansas. This program, funded by the Office of Economic Opportunity and administered by the Arkansas Farmers Union, has been very successful and recently was the subject of a fine article in the Pine Bluff Commercial by Miss Janey Joyce.

I ask unanimous consent that the article be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A.M. & N. PROGRAM AIMS AT ELIMINATING HARD-CORE POVERTY

(By Janey Joyce)

"Hard-core poverty."

This is a phrase used from time to time by sociologists and by government officials as they despair about the steadily rising costs of welfare and the high numbers of unemployed or underemployed people who are not sharing in the current prosperity in the United States.

Who are the "hard-core" poor?

They are the people who have been left behind in this fast-paced technical society. They vary from place to place.

In Southeast Arkansas they are most often displaced farm workers. They are the people who were tenant farmers, sharecroppers or field hands before the mechanical age reached agriculture.

They grew up expecting to chop cotton in the spring and to pick cotton in the fall. That's all they ever expected to need to know how to do.

Now, however, cotton is chopped with herbicides and it is picked by machines. The traditional agricultural jobs are no longer available.

But many of the people who used to do those jobs are still living in the tumbledown paintless shacks that dot the rural areas of Southeast Arkansas. They subsist on welfare and the proceeds from occasional unskilled jobs.

Their children have often grown up assuming that this was the only way of life available to them as well.

Two years ago the Arkansas Farmers Union in Little Rock began a program at Arkansas AM&N College in an attempt to provide training, and then employment, for unskilled and unemployed people living in Lonoke, Desha and Drew Counties.

The program was funded by a grant from the federal Office of Economic Opportunity with in-kind services and facilities provided by the college.

AM&N already had a long established complete vocational arts program which offered training in automobile body repairing and painting, automobile mechanics, brick masonry, carpentry, cosmetology, electronics, appliance repair, practical nursing, secretarial training, tailoring, welding and machine shop.

In addition to this, the training program established basic education courses so that illiterates could be taught to read and write and those who already knew how to read and write could improve their skills in these areas.

Transportation—via school buses—was provided so that the new trainees could get back and forth from their homes to the college.

And a stipend—ranging from $30 to $50 a week—was established so that trainees could afford to attend school.

Then came the first recruiting drive. Recruiters contacted churches, newspapers, city and county officials and went from door-to-door in some instances to find persons who were willing to become trainees in the program.

According to Clinton Hampton, assistant director of the program, recruiters were not deluged with applications from potential trainees at first.

In fact, Richard A. Maxwell, the program counselor, estimated that the majority of the first trainees came into the program because of the stipend.

They enrolled in the program, Maxwell said, but this didn't mean they had any confidence in it. The general attitude of the new trainee was, according to Maxwell: "Well it sounds good, but I have to see it first."

"So," he continued, "it was up to us to really motivate them—to really change their outlook on life. And this is the thing that I feel we have accomplished more than anything else. We have instilled confidence in themselves and in us."

Maxwell noted that the 10-month training program that the trainees went through was "almost like a cram course."

"What they learn here," he said, "the average person gets in 2½ years. And they come out with flying colors."

Maxwell said he was shocked to discover so many people with native ability and intelligence "just doing nothing."

John Kuykendall, placement director for the program, said that learning new skills solved only a part of the trainees' employment problems.

More difficult, he said, is the psychological transition from farm work—"where you could go to work anytime you felt like it and lay off when you felt like it and nobody said a thing"—to industrial work where you have to be on time and schedules have to be met.

Kuykendall is responsible for the final phase of the program—getting the trainees jobs and seeing that they stay with them.

Most of the employers that Kuykendall contacted were skeptical at first, he said. But most decided eventually to give the trainees a try. And, by and large, they have been satisfied with them as employees, he said.

The trainees were skeptical at first, too, Kuykendall said. Most couldn't believe that they could get a job with a company that wouldn't consider employing them before they went back to school.

A familiar refrain, according to Kuykendall, was: "I've been here before. I know I won't get a job here. They'll just send me to the employment office."

"So they were pretty impressed when 30 or 40 minutes later they had the job," he said.

"I have tried to explain," Kuykendall continued, "that companies are looking for trained people now. They aren't looking for people who just walk in off the street and say they can do this and do that without any experience or formal training."

Kuykendall spends a lot of time out in the field talking to potential employers and in keeping up with trainees who have already been placed on jobs, he said.

If he finds out that one of the former trainees has missed a day on the job, he contacts him to find out why. And he is always available to discuss any problems that might arise between employer and employee, he said.

Each trainee who has completed his training and gone on to productive employment is a success story.

Hampton, Kuykendall and Maxwell all have their favorite success stories.

During the routine testing done on all trainees during the 1967-68 training program, Maxwell discovered a 21-year-old woman who he felt definitely belonged in college.

That was Helen Williams of Tillar, who has just successfully completed her first year of college at AM&N.

Miss Williams had done farm labor—off and on—after her graduation from high school in 1965. And she was not too optimistic about the training program when she signed up for it.

"I expected to just end up with a certificate," she said in a recent interview.

She was surprised, she said, when Maxwell strongly urged her to enroll in college because she had never regarded herself particularly as college material.

But enroll in college she did—with the help of a National Student Defense loan, an economic opportunity grant and a summer job doing secretarial work—a skill learned in the training program.

This year Maxwell has recommended that two of the program's trainees go on to college next fall. They are Mrs. Mamie Charleston, 31, of McGehee, and Linda McKinney, 22, of Humnoke. Both just completed courses in secretarial training.

And both hope to attend AM&N next fall with the same sort of assistance that Miss Williams is getting.

Hampton's favorite story concerns a young man who had been a migrant agricultural worker—one who had never seen a brick laid in his life.

He spent four months in 1967 and 1968 in a class for brick masons. Then he was permitted to lay bricks on some faculty houses that were under construction.

According to Hampton, he quickly shaped up into a "cracker jack" brick mason. So he went to work for a private contractor. It didn't take him very long to notice that the contractor was making more money than he was. Hampton said, and so he soon went into business as a brick subcontractor.

Then he was drafted into the armed forces, Hampton said. But this did not end his brick-laying activities.

The last time the man was home on leave, Hampton said, he contracted for a job and then drafted four of this year's brick mason trainees to do some of the work.

As far as Hampton knows, the four new brick masons are still working.

Hampton, Kuykendall and Maxwell feel that the program has been a successful one during its two years of operation. But they are still not satisfied.

"You'd be surprised at the number of people who are still out there in those shacks," Kuykendall said.

THIS UPWARD BOUND PROGRAM AT CHAPEL HILL

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. POAGE. Mr. Speaker, I am just in receipt of a letter from a respected educator from my own district who has just returned from a so-called "Scientific Institute," conducted at the University of North Carolina under the auspices of the National Science Foundation.

I realize that both the scientific and the educational organizations have ways of retaliating against members who seek to give the public a picture of what is going on. I have, therefore, deliberately deleted my constituent's name and his address. I did this of my own volition and not at his request. He put his name on the copy which I received.

This House has just voted billions of dollars for education and I supported the appropriation. I know the need for education. I know the need for scientific advancement, but I cannot believe that it is necessary that we abandon all efforts at what we have historically considered common courtesy or ordinary decency. I am not sure that a little culture is not as important in human relations as is the scientific progress to which this institute was supposedly dedicated. The letter from my constituent is self-explanatory and is included herewith:

Hon. W. R. POAGE,
Representative, 11th Texas District, Washington, D.C.

DEAR REPRESENTATIVE POAGE: I realize you are busy and have little time for communication, but I feel that I need to inform you of a situation concerning a federally financed education program I observed this summer. I was a participant in a National Science Foundation Summer Institute at the University of North Carolina in Chapel Hill this summer. As a result of this, we were housed in a dormitory on the campus with a group of upward bound students.

I am a teacher and have completed nineteen years of teaching so I have had an opportunity to observe educational programs and judge their results before. I would like to make the following comments about the upward bound program at Chapel Hill.

First, if there was adult supervision, it was not evident. I was told that there were counselors but the adults I saw with the group more nearly fit my description of a pusher or hippy.

Second, as a result of the first statement, the dorm came to resemble a flop house, evidenced by the fact that they had to move furniture out of the lobby; floors were always littered with trash; walls of elevators were marked up and words usually found only on rest room walls were quite abundant.

Third, it became almost impossible to study in dorm any where except on upper floors. This did not change even after repeated complaints to dorm management.

Fourth, the language used by this group became such that very few people other than these students ever used the snack bar, T.V. room or other facilities in dorm.

Fifth, at least two meetings were held in the dorm with the speaker being a known militant from Durham, N.C. who had been very outspoken in the trouble at Greensboro and Chapel Hill in the spring of the year. After both of these meetings dorm windows and car windows were broken and things stolen from both rooms and cars according to the dorm management.

Sixth, on at least one occasion I observed a gun being passed from person to person in lobby of dorm.

In short, I feel that the program accomplished a very good job of training a group of campus rebels. I feel that if you could check, you will find many of your future trouble makers received their training in this and related programs. I resent any of my tax money being used in such a poorly supervised program and feel that something should be done from a federal level.

There are many other things I would like to tell you about this summer but I realize you are busy and it is difficult to write about all the things I observed. If I can provide additional information, please let me know.

Sincerely,

_____.

THE COMMUNIST GOVERNMENT IN CUBA

HON. EDWARD J. GURNEY

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, August 4, 1969

Mr. GURNEY. Mr. President, lately we have heard many urge us to look more favorably on the Communist government in Cuba. According to the Castro apologists, the Cuban social experiment is taking form, and the Cuban people are feeling the benefits of the first social revolution in Latin America. The facts as presented in the U.S. News & World Report of August 4 contradict this illusion of social advancement and put the Castro regime in proper context: the Cuban Communist social revolution is taking form, and it has turned out to be a colossal flop.

Fidel Castro is in trouble, and he is turning to his old friend, the Soviet Union, for help. Consequently, it would be in our best interests to stop the talk of loosening the Cuban embargo and showing sympathy for the Cuban dictator. Quite obviously, Cuba's Communist government is failing to meet the needs of the people, and repressive controls are being tightened. This does not sound to me like the work of a social revolution, and the U.S. Government should not be fooled into accepting this false picture. We should do everything in our power to help make the demise of Castro a reality.

To clear the air on the condition of Cuba's Government and to illustrate the need for a tightening of controls within the embargo area, I ask all Senators to consider carefully the article published in U.S. News & World Report. I ask unanimous consent that the article be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOR CASTRO: TIGHTER SOVIET TIES AS POPULARITY EBBS

Fidel Castro—who for a decade has promised the Cuban people a better life—is apparently in so much trouble economically that he is being forced to overhaul his own policies for now.

Along with this, the popularity of the Cuban dictator is at an all-time low, according to U.S. Government sources.

The Russians—whom Castro once courted, then quarreled with—provided one of the most recent signs that policy gears are being shifted in Havana.

On July 20, seven Soviet warships sailed into Havana harbor, cheered by thousands of Cubans brought out to greet the vessels. The week's visit coincided with July 26 celebrations of the sixteenth anniversary of Castro's first armed revolutionary attack.

Little more than a year ago, Havana and Moscow were locked in a bitter name-calling contest. And 18 months ago, Castro kicked out two Russian and three Soviet-bloc diplomats for plotting against him with old-line Cuban Reds.

NEED FOR AID

At this time, in Castro's view, Soviet-Cuban friendship seems the best policy, say the experts. Castro desperately needs continued Russian aid to keep the Cuban economy going.

Though Castro—once the idol of the Cuban people—is not held in such high esteem at the moment, observers point out that he remains in firm control.

Still, work slowdowns, anti-Castro wall signs and low-level sabotage are appearing more frequently.

These things, caused mostly by shortages of food and other items, have resulted in tightened police controls.

From refugees, diplomats, official Cuban statements and various other sources come reports of arrest and unorganized resistance. For example:

Veteran sugar-cane workers are said to be cutting only about 40 per cent of the amount of cane they once cut;

A student says anti-Castro signs appear almost nightly on the walls inside Havana University, with indications that many people are involved;

Theft, robbery, swindling and crimes against property are officially reported to be on the upswing. Many of these crimes are considered to be sabotage;

Houses are being robbed when women leave them to stand in food queues;

Troubles have increased at night, and citizen bicycle patrols are being used.

As further evidence of a revamped policy, diplomatic and other sources noted that—at least up to the time of the July 26 celebrations—Castro had not, for a year or more, called publicly for armed revolution in other Latin-American countries.

Some, including a Castro agent who defected, say the Russians demanded, in exchange for more aid, that Havana halt the campaign. The thinking is that Castro was hurting the Russians' efforts to penetrate the Hemisphere in the role of peace lovers seeking only trade and diplomatic relations.

Just how true this is, of course, is difficult to determine. However, Castro has now declared that there can be a real revolution in Latin America without violence. On July 14, he said the military junta in Peru may be conducting such a revolution.

TURNING POINT

One U.S. expert on Hemisphere affairs described this statement as a true "turning point" in Cuban policy. Basically this switch can be laid to two failures, in the view of several American authorities. These are the economic failure and the failure to export revolution. Says one source:

"Castro was shaken up more than most people realize by the failure of Ernesto ('Ché') Guevara in Bolivia. Personal ties aside, what hurt Castro was that the Guevara effort failed even though all the classic conditions for revolt—in the Castro ideology—were present in Bolivia. But it didn't work, and that shook up Castro."

Another, in commenting on the economic aspects, was careful to point out that, though unrest is widespread in Cuba, "as yet, resistance is passive, not active or organized."

MORE PLEDGES

Despite all the troubles, Castro is making new promises of plenty for the Cuban people.

Recently he pledged anew that 10 million tons of sugar would be produced in 1970, and said this would solve Cuba's economic problems. On July 14, he helped get the sugar harvest under way. This is called the 1970 harvest because the traditional starting date of January has gradually been pushed up by six months. More eggs, rice were also promised.

American experts are certain these promises cannot be fulfilled—just as Castro has failed to fulfill his "better life" pledges of the last 10 years.

And they say, with things getting worse, that another year of unkept pledges could spell real political trouble for Castro by next summer.

Those watching developments believe that latent resistance in Cuba could become active, organized opposition in the not-too-distant future.

COMMISSION ON BALANCED ECONOMIC DEVELOPMENT

HON. GUY VANDER JAGT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. VANDER JAGT. Mr. Speaker, I have today introduced a resolution providing for the establishment of a Commission on Balanced Economic Development. This measure is a companion proposal to House Joint Resolution 168, introduced earlier in this Congress by Congressman PHILIP E. RUPPE, of Michigan.

Congress daily is becoming more aware of the pressure which is being placed upon our earth resources by the expanding population of the United States. Illustrative of this concern is the series of hearings now being held by the Task Force on Earth Resources and Population of the Republican Research Committee, of which I am a member.

Unquestionably, the urbanization and suburbanization processes have created much strain upon our resources. It is not only appropriate but also very timely that we should undertake a comprehensive study of the means by which we might achieve a greater geographic balance in the ongoing economic development of the United States.

The Commission which we propose would be made up of 20 persons to be appointed by the President. Four of the members would come from cities of at least 1 million persons; four would come from cities having populations between 100,000 and a million; four would come from cities whose populations ranged between 10,000 and 100,000; four others would come from small towns and villages. No more than half of the persons from any one of these classes would be from the same political party. In addition to these members, four other persons would be appointed to the Commission without regard to political or geographic criteria, but upon the basis of their exceptional training, experience, and competence in the subject of the investigation.

The Commission would be charged with submitting a report to the President and the Congress within 2 years after its establishment. It is our hope that the information gained through this study will enable the United States to achieve a better geographic balance in its economic development, which is expected to proceed at a rapid pace over the next 30 years.

During the remainder of this century America will be experiencing a profound shaping of its pattern of population distribution. Already, people are speaking of huge, identifiable urban belts such as San-San—San Francisco-San Diego—Chi-Pitts—Chicago-Pittsburgh—and Bos-Wash—Boston-Washington. I believe that America will be a healthier place to live, work, and raise a family if other viable alternatives also exist for our people. Indicative of the opposition to an America totally dominated by such megalopolises is the current discussion of the potential development of new cities.

Perhaps the creation of new cities is part of the answer to our problem. Certainly, the strengthening of the economic life of many of our existing outlying communities is also vital. But clearly one of the important, indeed fundamental, objectives which we should endeavor to fulfill is the dispersion of our population in a manner which will enable us to efficiently utilize our earth resources in support of our human resources.

The formation of this study commission is one vital step toward the achievement of that element of a state of national health and well-being.

OUR NATIONAL SECURITY

HON. G. WILLIAM WHITEHURST

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. WHITEHURST. Mr. Speaker, early last month the Veterans of Foreign Wars held their 14-State Southern Conference in Norfolk, Va. Mr. Richard Homan, commander in chief of the VFW, made several splendid statements regarding our national security.

Believing as I do that his views deserve the attention of this House, I insert in the RECORD the comments of Mr. Homan as reported in the Norfolk Ledger-Star and Norfolk Virginian-Pilot:

VFW CHIEF'S VIEW: MILITARY-INDUSTRY COMPLEX PRAISED

NORFOLK.—The commander in chief of the Veterans of Foreign Wars brought to a close a weekend southern conference of the VFW with praise not only for the "military-industrial complex" but also the "military-educational complex."

Richard Homan told 800 delegates from 14 states that in praising the former he was not singling out any group, "for no such group exists."

"I am pointing to those on call 24 hours of each day around the globe, and to those in industry who are giving the best years of their natural life to build second-to-none defense forces," he said.

It was the builders of Polaris submarines and Minutemen missiles "who now believe they can build a Safeguard defense against missile attack and contribute still more to our security," he said.

"Both our military servants and our industrial leaders have been irresponsibly criticized for building weapons systems which have never been used," he said. "They have been criticized when the aim for building such weapons systems was to make them so awesome they would not be used."

As far as the "military-educational complex," was concerned, Homan said he could "think of no asset which contributes more to the national sinew."

In Tidewater, he said, tens of thousands of young men are taught specialized skills, self-discipline and the responsibility of citizenship.

"I say without hesitation that the military-educational complex represents one of America's valuable assets," he said. "The secondary benefits to our civic institutions and to our civilian economy are plain to see."

During the conference it was announced that Virginia was one of four Southern states to win "All-American" honors for its VFW posts' involvement with community programs and membership growths.

VFW HEAD SPEAKS OUT: HO'S MEDDLING IN UNITED STATES HIT

NORFOLK.—The commander in chief of the Veterans of Foreign Wars has accused Ho Chi Minh of "meddling and peddling" in this Nation's internal affairs.

At a press conference here Friday afternoon, Richard Homan said that the latest instance of this was his invitation to David Dellinger to represent the United States in the release of three prisoners of war now held in North Vietnam.

"Dellinger, at the time of Ho Chi Minh's cordial invitation, was under federal indictment stemming from the violent demonstrations at the Democratic National Convention in Chicago," he said.

"Presumably, Ho Chi Minh wanted to practice his own expertise in U.S. domestic affairs."

Homan said that "the U.S. State Department has regrettably recommended that Dellinger be free to travel abroad and to represent America's national interest in this matter."

Homan, in Norfolk to attend a 14-state southern conference of the VFW, also took a swing at South Dakota Sen. George McGovern who recently announced that he had held private discussion in Paris with the North Vietnamese.

"Senator McGovern was not elected to the U.S. Senate for that purpose," he said. "He does not share with the President of the United States the responsibility of dealing with hostile nations. The role of the U.S. Senate is clearly defined by our Constitution. It is to advise and consent to treaties and commitments made by the President."

Homan said that the visit by eight Russian naval vessels to Cuba should be looked on as "the beginning of a new expansionist phase in Soviet naval and maritime diplomacy and influence."

He said that the Russian Navy had progressed from "the basics" of a proponderantly underseas Navy to guided missile cruisers and might well be expected to continue into the field of attack aircraft carriers.

The VFW conference here is expected to draw between 500 and 600 members. A banquet and dance is planned for tonight.

NO RECIPROCATION: VFW LEADER CRITICAL OF TROOP WITHDRAWAL

NORFOLK.—The national leader of the Veterans of Foreign Wars said Friday that the United States should not have withdrawn any troops from Vietnam without reciprocal action on the part of the North Vietnamese.

Richard Homan, commander-in-chief of the VFW, said the United States has been limiting its operations in Vietnam, hoping the North Vietnamese would also limit their operations.

Homan cited the bombing pause in the spring of 1968 and the withdrawal of troops as examples of this country's operational cutback.

Homan, here for the 14-state Southern conference of the VFW which began Friday at the Golden Triangle, charged that idealists in the United States have supported the limitations on operations in Southeast Asia and thus assisted the North Vietnamese.

Homan refered to recent private contacts with the North Vietnamese negotiators in Paris. Homan charged that Sen. George S. McGovern, D-S.D. should not have undertaken a private mission to Paris for discussion with hostile agents.

"McGovern was not elected to the U.S. Senate for that purpose. The role of the U.S. Senate is clearly defined by our Constitution," said Homan.

Homan said that idealists of this type are dupes of the Communists because they undermine America's position.

"If the North Vietnamese don't begin to negotiate, we should review our operations and consider those alternatives available to us," he said.

Homan said the options to the United States include blockading the North Vietnamese ports, removal of bombing limitations, and increased military activity within South Vietnam.

"The people of this country don't want to put up with political generals. The day-to-day operations in military areas should be left to the Pentagon.

"When we contribute to this, we contribute to prolonging the war," he said, referring to those who make private contacts with the North Vietnamese.

"These political generals have assumed responsibilities outside their elected authority," said the 46-year-old commander.

"As soon as limitations are placed on us, the North Vietnamese tell their people they are winning," said Homan, "and the people believe them."

Homan said the United States should remain in Southeast Asia to prevent the entire area from going Communist.

SENATOR GEORGE MURPHY MAKES SENSE

HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. DON H. CLAUSEN. Mr. Speaker, a much deserved tribute was recently paid to the distinguished senior Senator from California, my good friend and colleague, GEORGE MURPHY, by the editor of the Santa Rosa, Calif., Press Democrat.

Because of his distinguished service in the U.S. Senate and his valuable service to the people of the State of California, I am taking the privilege of including this tribute to a great human being and an outstanding legislator in the CONGRESSIONAL RECORD:

SENATOR MURPHY

Doing part of his homework in Sacramento the other day, U.S. Sen. George Murphy was asked for the umpteenth time if he was going to run for re-election next year. And for the umpteenth time, he said he most certainly was.

Why there should be any question about it is one of the irrationalities of politics. George Murphy has proved to be an energetic Senator, a highly capable one, and a compassionate lawmaker. On his record, he should be unbeatable, so some of the questions raised as to whether he will again be a candidate may spring from wishful thinking among those who might have a chance if only Sen. Murphy would be obliging enough to call it quits.

A successful operation to remove a throat cancer left him with a voice that is soft, or as the Senator puts it, "I can't shout as loud as I used to."

But when Mr. Murphy talks, his colleagues listen, and what he says makes sense. That, it seems to The Press Democrat, is a decided asset to California in a legislative chamber so endowed with members who are long on oratory and short on reason that it has for decades been known as "the cave of the winds."

A CEILING ON FEDERAL SPENDING

SPEECH OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1969

Mr. BOW. Mr. Speaker, the virtue of consistency has been sorely missing in the House of Representatives in the last few days and I fear we are creating some very difficult problems for ourselves and for the country.

Ten days ago the President signed into law a bill in which the Congress included a ceiling on Federal spending in the current fiscal year. That ceiling was set at $191.9 billion—$1 billion below the total recommended by the President in April.

During the last 3 days the House has voted to increase spending for the programs of the Labor Department and the Health, Education, and Welfare Department by $1.1 billion over the amount recommended by the President and $922,563,000 more than recommended by the Appropriations Committee.

It is appropriate and timely today to examine the implications of this action in the light of the budget limitaton.

The budget ceiling that Congress has imposed is flexible in two respects. First, we exempted increases of up to $2 billion above the April budget in certain programs for which spending is unpredictable. Second, we provided that the ceiling will be adjusted by the net increase or decrease voted by the Congress in the April budget estimates of the President.

Events since April make it virtually certain that outlays for interest and other hard to predict programs will be higher than was estimated in April, perhaps by the full $2 billion, thereby raising the statutory ceiling to $193.9 billion.

President Nixon, in his July 22 statement, made a strong commitment on the part of his administration to live within a ceiling of $192.9 billion. His message said, in part:

I know the Congress shares my determination to make the budget an effective instrument against the inflation that has wrought so much damage to the income and savings of millions of Americans. If the Congress did not share that commitment it would not have imposed this spending ceiling. However, this general expression of support for fiscal restraint must now be matched by specific acts of the Congress.

We should understand clearly what the President means. If the Congress increases one of the President's budget requests, whether it be in reclamation or hospital construction, agriculture, or education, then the President will act either to avoid use of those increases or to cut other budget items an equal amount. If we refuse to be responsible—if we refuse to make this choice—then the President will make it. And some of us may not like the results.

In his statement, the President said he would prefer that the Congress make these cuts. So would I. I had hoped that most of the House also would so prefer. If we wish to hold down spending, we must demonstrate this desire not only in voting for an overall spending ceiling but also in each specific budget action that comes before us.

No one can say that the House demonstrated that desire during the past 3 days. Instead, we demonstrated that while it is easy to vote for a general, overall reduction in spending, it is much more difficult to resist voting for increases in the face of blandishments from the supporters of individual programs.

We now have a heavy responsibility to find the means of reducing other appropriation items to compensate for the billion dollar increase in education.

This we must do if we are to demonstrate that we truly agree with the President's view that inflation must be restrained. We said we did when we voted for the ceiling as a major weapon against inflation. I hope we meant it.

We have a clear duty to apply restraint in our future appropriations activities. I hope the Appropriations Committee recognizes that obligation and will do its utmost. The general welfare requires that we have the support of the House. The extra billion voted for education will buy very little if we allow inflation to run rampant in our Nation.

STAND UP FOR ACADEMIC FREEDOM

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I wish to include an address entitled "Stand Up for Academic Freedom." This address was presented to the La Jolla Kiwanis Club of La Jolla, Calif., by Assemblyman John Stull who represents that portion of San Diego County in my congressional district. It is an outstanding address by one of the most outstanding legislators in the United States. I hope it will receive wide circulation. The address follows:

STAND UP FOR ACADEMIC FREEDOM

Sweeping up and down our broad land is a growing sense of dismay and unease. We are aware of this in every facet of our lives,

but nowhere is it more deeply felt than in regard to the campuses of our country. Tragically, that which once gave us confidence and hope is now a source of confusion and despair. "The black flag of anarchy" and "the red flag of revolution"have been raised on once peaceful quads. We see students with upraised fists clenched in a brutal alien salute and to our astonishment, we hear nineteen year olds announce grimly that they have reached the end of their patience with society. Here, in La Jolla, the enemy ensign has flown on the hill above, even as American men have been dying in a bitter war across the sea. And here, too, a notorious nihilist touts his discredited philosophical views. To the north, the mother campus of California's whole university system has recently been under a state of siege and the City of Berkeley continues to rock with repercussions. It is almost as though a huge question mark hovers over our country, and we ask ourselves, "Is what CAN'T happen here, happening?"

Our general feeling of unrest is compounded by the disturbing realization that many time-honored words and phrases no longer fit the situations to which they are applied. It is almost as though, sometime between the dark and the daylight, a number of important labels were switched and stuck indiscriminately onto whatever was at hand. Nowhere is this more apparent than as it concerns something called "academic freedom."

This once honored phrase—academic freedom—used to mean something, something specific. Now, tragically, it has come to be a sort of umbrella, which has been stretched to cover everything from an alleged "right to riot" to the ruthless use of the classroom for the most overt form of ideological brainwashing. This current concept of academic freedom has developed what can best be described as burgeoning intellectual ghettos. And, it is in these intellectual ghettos, where to the rythm of ritualistic incantations about academic freedom, its substance is being destroyed.

In my opinion, the grotesque current interpretations of this term with the inevitable consequences in action, is the greatest factor threatening our whole state system of higher education and menacing society itself. Ironically, of course, *true* academic freedom is an early casualty in such a state of affairs. Consequently, as we care about constructive values and the orderly continuation of higher education within this republic, we must probe for an accurate meaning of the term and, in the context of today's meeting, decide if, in fact, we should stand up for academic freedom.

Over two thousand years ago, the Greeks started a tradition of free inquiry in western civilization which has been continued intermittantly ever since. When the first universities, in the modern sense, were created in the Middle Ages, scholars of powerful intellect were produced, and these men were accorded a great deal more freedom for their pursuits than the generally erroneous picture of that time would suggest. Although history holds examples of scholars persecuted for belief or research, there is a thread of the continuty of academic freedom running through the past few hundred years. In its ideal conception, according to Richard M. Weaver (in his essay, "Academic Freedom: The Principle and The Problems") "academic freedom is a limited immunity accorded to those who have been considered worthy of guarding society's oracle." It is the prerogative of a special group. It is an earned prerogative. It does not apply to irresponsible spouters of opinion or to opinion at all but to demonstrable knowledge. Most certainly, it should not be used as a tool for the "democratizing" of universities by turning control of them over to students. "It is the freedom of scholars and researchers in institutions of higher learning to teach and to publish the results of their scholarship without interference from the institution itself or from outside interests," but the whole concept is based on a sense of responsibility. Academic freedom *cannot* be discussed ever without the word responsibility. It is inherent in the concept.

This idea is extended in a statement made by the President of the University of California, Robert G. Sproul, in 1934:

". . . the freedom of the university is the freedom of competent persons in the classroom. In order to protect this freedom, the university assumes the right to prevent exploitation of its prestige by unqualified persons or by those who would use it as a platform for propaganda. It therefore takes great care in the appointment of its teachers; it must take corresponding care with respect to others who wish to speak in its name."

And this brave statement continues:

". . . the University of California is the creature of the State and its loyalty to the State will never waiver. It will not aid nor will it condone action contrary to the laws of the State. Its high function—and its high privilege—the University will steadily continue to fulfill, serving the people by providing facilities for investigation and teaching free from domination by parties, sects, or selfish interests. The University expects the State, in return, and to its own great gain, to protect this indispensable freedom, a freedom like freedom of the press, that is the heritage and right of a free people."

This is what academic freedom should mean, but how has it been perverted? Let us count some of the ways.

Last May, the American Association of University Professors met in convention at Minneapolis. Eight hundred delegates representing about 90,000 members attended. What blows did this impressive assembly strike for freedom, academic or otherwise? Well, according to news reports, they denounced President Nixon for his get-tough position on college riots, and they indicated deep concern about United States Attorney General John Mitchell's announcement that "violence-prone militants" will be prosecuted to "the fullest extent" under provisions of the Civil Rights Act of 1964. That AAUP also resolved that both Nixon's and Mitchell's plans constituted a threat to what they conceive to be academic freedom.

But don't think all of their actions were critical. Not at all. They granted the Alexander Meiklejohn Award to President George W. Starcher of the University of North Dakota for insisting that Gus Hall, General Secretary of the U.S. Communist Party be allowed to address his student body; for resisting pressure to fire the student editor who wrote an editorial denouncing the university for accepting a gift to support prizes for essays on patriotism; and for Starcher's noble posture in a "dirty-word" controversy.

All this is a little hard to believe, isn't it? And, if it did not bode so ill for American higher education, it would be downright funny. But, of course, it is just the reverse of funny and is some indication of the depth and degree of our current academic dilemma. Certainly it underwrites the words of San Francisco State President S. I. Hayakawa who compared certain professors to the World War II defenses of Singapore—"all their guns point in the wrong direction."

Having set the stage at this high level, let's proceed to the recent People's Park confrontation at Berkeley. After a noon rally at Sproul Hall Plaza on May 15, 1969, and after a rousing speech by UC Berkeley Student Body President-Elect Daniel Siegel, a group of assorted students, street people, and you name it, marched off the campus into the city. Some of Siegel's ringing words bear repeating: ". . . people be careful. Don't let those pigs beat the s--- out of you, don't let yourselves get arrested on felonies. . . ." And, according to the *Los Angeles Times*, he ended with the shout, "Let's go down and take over the park!" The resultant bloodshed and disorder are well known.

How did the UC system academic community respond to these events?

The academic community responded with a blithe disregard of facts and almost total irresponsibility. Among other things, flags were brought to half-staff with the permission of some administrators on campuses throughout the system in honor of James Rector, who died as a result of injuries received in the melee; numerous classes were cancelled; and throughout the state, faculty and student groups were shrill in their condemnation of steps taken to quell the rioting. A large contingent even marched on Sacramento.

Then a group of alleged Berkeley faculty members and their sympathizers bought full-page ads in leading newspapers throughout the state and presented a completely distorted account of what had happened. In passing, it is interesting to note the ad contained some names, already familiar from Berkeley Free Speech and Vietnam Day Committee times.

To the best of my knowledge, only one faculty member on any UC campus has spoken out loud and clear, indicating that there is another point of view. Dr. Hardin B. Jones, Professor of Medical Physics and Physiology and Assistant Director of the Donner Laboratory at Berkeley, has virtually stood alone in condemning the excesses of some of his fellows, and, in attempting to refute the ad, Dr. Jones's words bear emphasis. Let me read them to you:

"The failure of a significant number of professors to be responsibly objective and honest about issues of this importance serves to condone and thus abet the prevalent resort to violence on the part of those college youths who look to them for guidance. Unless the public and its elected and appointed representatives understand the situation and act firmly to defend the public interest, there is real danger that we will go down the bloody path to revolution and tyranny. And unless the great majority of moderate, well-meaning but inert faculty members exert their power to discipline their revolutionary colleagues for their unprofessional acts, they will have to accept a large share of the ultimate blame."

I applaud Dr. Jones, but he is obviously a voice crying in the wilderness or, to be more accurate, the intellectual ghetto. It is sadly and abundantly clear that most of his colleagues belong to what the *San Francisco Examiner* has characterized as ". . . a fat cat faculty that with notable exceptions, has been more interested in its cozy prerogatives than in defending the integrity of the university."

Dr. Jones's call for honesty and objectivity among his fellows brings to mind a personal experience. I am Chairman of the Assembly Education Sub-Committee on Educational Environment, and Robert C. Donaldson, Chairman of the Academic Senate at Sacramento State College accepted our invitation to appear. In the course of reading a prepared statement on the campus situation, Donaldson said that "tragically, when such individuals [citizens from minority and economically disadvantaged groups] attempt to improve themselves and achieve gains, the state government, through legal repression and inadequate financial provisions withholds the means for these individuals to attain self-sufficiency."

I asked Donaldson if he could substantiate this blanket indictment of all of us in Sacramento. He *could* not. I asked him if he would like to delete the allegation from his statement. He *would* not. Whereupon, I asked him to step down as obviously, the testimony of an individual of such a temper of mind could contribute little. The incident does provide another example of lack of faculty integrity

and a gross inability to relate realistically to the problems facing us.

At the outset of my remarks, I stated that under the cloak of Academic Freedom, the classroom has been ruthlessly used for the most overt form of ideological brainwashing. It's a strong charge but easily proved. And I have a particularly flagrant example. A teacher of physics at Chico State College gave a final this year in which he converted Physics II questions into a propaganda form and loaded them with pyrotechnic emotional content. Let me read you how some of the questions begin:

"If one ounce of botulism toxin will exterminate 60 million people, how much total energy would be required to orbit a single bomb which could theoretically eliminate the human race, with a factor of 10 overkill . . . ?

"A helicopter is flying in a straight horizontal path, macing the people of Berkeley . . .

"A student absorbs inelastically 2 buckshot (not bird shot)" (This question goes on about the pool of blood in which he lies).

"Suppose the Navy is dropping untreated human feces in San Francisco Bay . . ."

Question 6 commences "An Air Force plane is so loaded with pacifying napalm . . ."

And so it goes. (Incidentally, I have had copies made of this test and some other things I've mentioned. When I'm through you're welcome to copies of them.) At any rate, my colleague Assemblyman Ray Johnson who serves the area where Chico State is located, informs me that a fact-finding committee of the Chico State Faculty Senate investigated this test and found it excellent in content although they did concede it might be a little politically biased. However, they recommended that no action be taken. Ray Johnson says that this teacher, under the protection of his tenured position is constantly participating in disturbances and abetting radical causes.

Another example of the flagrant misuse and corruption of the purposes of the classroom occurred recently at Los Angeles Valley College when a teacher named Mrs. Deena P. Metzger distributed to her class and discussed her incredibly vile and disgusting poem "Jehovah's Child." As far as I know, nothing has been done about this, either. The president is waiting for the Academic Senate to act.

For a final example of a perverted interpretation of what constitutes academic freedom, let's discuss briefly the recent hiring and granting of lifetime tenure at the University of California at Santa Barbara to Richard Flacks, sometime co-founder of the SDS and general all-time radical. Now, as you have probably heard, in response to cries of popular indignation, the explanation has provided that Flacks is no longer active in SDS leadership and one is invited to infer that his militant days are over. Somehow, it has all struck me as strangely reminiscent of the case of one Leon Wofsy, of the Berkeley Bacteriology Department, who, having given up his communist affiliations, amuses himself with such quaint pleasures as Free Speech movements and People's Parks.

At any rate, I've been attempting to find out if the new and the old Flacks differ. This has involved reading ("Ordeal by Flacks" is my private term) and lest I be accused of condemning Flacks out of the past, let's number and date my condemnation Volume 5, Number 2, April/May/June 1969 of the *Journal of Applied Behavioral Science*. In this publication, I found a 23-page Flacks article entitled "Protest or conform: Some Social Psychological Perspectives of Legitimacy." In this article, Flacks combines the lingo of social science with the jargon of New Left and, among other things, he speaks with considerable pleasure of the fact that there is some active disobedience in the armed forces and that, in his opinion, there have developed some cracks in what he calls "the institutional support of American national authority." The examples he cites are among university and church officials. He gives the opposite of draft resister as cheerful robot and the opposite of Black Panther as black bourgeois.

California's new lifetime tenured employee concludes with the words, "Yet the mergent characterological and cultural trends, and the revolutionary movements they have spawned, promise a new social system, in which militarism, racism, narrow nationalism, dignity, individual conscience and collective paritcipation become the primary basis for legitimate authority. This promise makes the risks worthwhile for many of us."

Shades of Marcuse! Shades of the Old Left! Shades of the New Left!

For putting the author of this in a university classroom the citizens of California will be paying $12,300, a year, starting July 1, 1969.

It is a disgrace. The University of California administration and the Board of Regents are derelict in their duty for underwriting this outrage. The after-the-fact rationalization of the UC hierarchy don't satisfy me. What this university needs is *not* Richard Flacks. Flacks is just another example of what one of my constituents calls "over paid under Americans" Any person who calls this country "imperialist" or any segment of the population, "bourgeois," or the members of our armed forces "cheerful robots" is certainly suspect. And if all this flack about academic rights has gotten a little old, it's only because my right as a citizen *not* to salary people who hate my type and my way of life has gotten plowed under in all the verbiage. I think the people of California are willing to support the University of California if it behaves itself, but I believe they've had it supporting ideological clowns in a left-of-center circus.

The examples I have given you, great and small, are compounded daily on every state university and college campus in California. Some campuses are better than others but on all, the dread syndrome is present. There can be no doubt whatsoever that many of those who should be keenest on preserving academic freedom are systematically undermining that sense of academic responsibility on which this freedom must inevitably rest. The public cannot trust the radical elements of the faculties to preserve the most modest civilized amenities, let alone to make any attempt to protect the society which has built the institutions in which they teach. The faculty-power complex is a law unto itself and an example of the many being controlled by the few.

The grab for faculty power began a long time ago, about the same time the effort was launched to convert higher learning into an instrument of crash social reconstruction. It is significant that the takeover continues to be heralded by such people as Professor John Kenneth Galbraith, who has said he has "no doubt that the modern (university) governing board has a certain ceremonial role. It can best be converted to an instrument of faculty administration by having faculties elect a suitable majority of members to it." So much for your Board of Regents! So much for your trustees! So much for the representatives of the people who foot the bill!

After watching the UCSD chancellor squirm through various crises, from his action in rehiring Marcuse to his inaction in student disorders, I am convinced that William McGill is a captive of his Faculty Senate and a creature of the faculty/power combine and it seems to me that the UCSD situation is typical of the entire system. I also believe that unless a concentrated effort is made to break this unhealthy type of faculty power, the whole back of California's higher education will be broken. It is bending dangerously already.

I am not going to apologize for this opinion as being that of a mere politician. For two and a half years, I have served on the Assembly Education Committee with six months of this time as Chairman of the Sub-Committee on Educational Environment. I have spent literally months in hearings and years in research. The evidence points inconvertibly in the direction I have indicated. However, I am not alone in my opinion.

Those voices from the campus itself which have been raised in defense of true academic freedom have emphasized these same sentiments. I read you the recent words of Dr. Hardin Jones. It is also the opinion of La Jolla's own courageous John Geddes, who has said the authorities on campus have presented almost solely a single point of view, brooking no opposition. Dr. Geddes concludes that "this is a fatal error. It can destroy the university." Dr. John Gilbaugh of San Jose State is another, who disregarding persecution and calumny, has issued a clarion call for faculty responsibility.

There are other encouraging signs.

An organization called University Centers for Rational Alternatives (UCRA) has been organized. The far from right-wing philosopher Sidney Hook of New York University is the national chairman and stated recently that this group of 1200 anti-extremist professors on 200 campuses have organized to fight campus chaos and "to defend academic freedom against extremism." Hook says, "The faculty has been responsible for permitting disruption and violence on campus because up until now they have refused to wield the power of discipline they possess." Professor Miro Todorovich, executive secretary of UCRA says, "We are a non-political organization, and our members cover the full spectrum from left to conservative. What unites us is our opposition to violence and desire to save the university." It is interesting to note here that in 1964, after the faculty at Berkeley refused to condemn the student seizure of Sproul Hall, Dr. Hook predicted American higher education would never be the same again.

Added to this are the prophetic words of Dr. Kramer Rohfleisch, a San Diego State history professor, who last November told the American Association of State Colleges and Universities that "the phrase 'All power to the Faculty' becomes a myth because power once grasped tends to destroy a faculty," and Dr. Rohfleisch warned that "faculty power" can destroy the historic teaching mission of colleges and universities.

There are other breaks in the walls of the intellectual ghettos, and I think there is cause for great hope. However, we have come to the point where reaction is not enough. The times demand action. As a legislator, I pledge to you that I will continue my efforts to "tell it like it is" and work towards those legislative goals which promise help for this deplorable state of affairs. This fall, my committee will hold extensive hearings, and I guarantee you that such items as lifetime tenure, hiring and firing, are high on the agenda for investigation. And I don't consider the interest of the legislature either political interference or punitive. Administrative and faculty irresponsibility have forced us into the picture.

To you as citizens, I offer the challenge of involving yourselves in this problem, and I ask your support. Understand the limits of what I can do and realize I'm trying within the system. Sometimes I think that if I get another letter that says "all it take is to throw the bad guys off the campus," I'll head for the moon myself. You here can help by backing those elected and appointed officials, whose efforts you approve, with understanding, and if solutions seem slow, remember Sacramento is full of people pulling

in other directions. You can keep your feelings known by letters to the Regents, the College Trustees, and administrators and through your support of emerging responsible campus groups and of such organizations as "Citizens to End Campus Anarchy" headquartered in La Jolla and chairmaned by Vice Admiral Albert Jarrell, and you can realize that every small step takes a Titanic effort. In the end, I think we can bring about a much more healthy climate on the campus. But this is not all that is needed.

Consequently, and in conclusion, I call upon these members of the faculty whose souls are not so calloused that they fail to see the problem. We are told repeatedly that fine people compose the great silent majority. While there is still time, these members of the faculties must wake up, put their own house in order, and take back control of their own destinies. The faculty/power combine must be broken. We have the physical capacity for a great modern system of higher education, but if its control is left in the spiritual backwaters where it exists now, we will enter upon another dark age of learning.

As citizens outside the University, we can and should stand up for true academic freedom. However, it can only be saved from within. The faculties which let this situation develop are the only ones who can change it. Let's pray they do!

"THE BRIDGE AT REMAGEN"

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. UTT. Mr. Speaker, the capture of the Remagen Bridge on the Rhine River in March of 1945, while it was still intact, was most instrumental in bringing World War II to an earlier close, and in saving the lives of many American soldiers. One of my colleagues, KEN HECHLER, was there at the time, and has written a book, entitled "The Bridge at Remagen," which now has been made into a movie. I have requested that anyone involved in the capture, crossing, and holding of this bridge, who now resides in the immediate area of my congressional district, contact me, and I am pleased and proud to present the names, here in the CONGRESSIONAL RECORD, of those who have responded to my request:

Arthur P. Bickford, 10762 Holly Drive, Garden Grove, Calif.

George Crocker, Post Office Box 616, Balboa, Calif.

James E. Cumstay, 903 West 17th Street, Space 64, Costa Mesa, Calif.

Sidney F. Dunn, colonel, U.S.A., retired, 4379 Highland Drive, Carlsbad, Calif.

William E. Elliott, 1005 Bonita Drive, Encinitas, Calif.

Walton T. Farrar, 900 Sandcastle Drive, Corona Del Mar, Calif.

William J. Fucik, 1503 Clay Street, Newport Beach.

John F. Pullo, Jr., 25172 Vespucci Road, Laguna Hills, Calif.

George O. Short, 32841 Coronation Drive, South Laguna, Calif.

Ralph Siegers, Post Office Box 429, Corona Del Mar, Calif.

Joseph P. Veach, 2773 Albatross Drive, Costa Mesa, Calif.

CHANGE OF COMMAND

HON. BILL NICHOLS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. NICHOLS. Mr. Speaker, a change of command occurred last week in the U.S. Air Force in the retirement of Gen. John P. McConnell and the promotion to Chief of Staff U.S. Air Force Gen. John D. Ryan. General Ryan was an outstanding member of the West Point football team in his college years and as he becomes the seventh commander of the U.S. Air Force his scoring know-how was perhaps never more needed. No man, at least not since Gen. Hoyt S. Vandenberg was Chief of Staff, has faced a tour as leader of the global USAF with more serious or complex problems to solve. On the gridiron, General Ryan won laurels for doing his best when under pressure. In this respect, he has not changed in the years since West Point.

I believe because of General Ryan's outstanding record in the military service to his country, the article which appeared in the Air Force Journal of August 1969 to be of special interest for insertion in the RECORD:

GEN. JOHN D. RYAN—NEW CHIEF OF STAFF TAKES OVER

(By Claude Witze)

Senior Editor, Air Force/Space Digest

"Ryan of Army" now is Chief of Staff, United States Air Force.

In 1938, according to *The Howitzer*, West Point's yearbook, Jack Ryan was known to football buffs as one of the outstanding players from the Military Academy on the bank of the Hudson River. The fans who remember those days say he was always ready in the clinch. He recovered the fumble that turned the score, caught the pass that set up a touchdown, or kicked the extra point that broke the tie. In the tough games, against Notre Dame and Navy, he was a sixty-minute man. At his best under pressure, he always played as part of the team, often for the duration.

Things have not changed. Gen. John D. Ryan, as the seventh USAF Chief of Staff, replacing Gen. John P. McConnell, is sure to find out what makes things run. A few years back, when he was Director of Materiel for the Strategic Air Command, he had a reputation for getting into the nitty-gritty details of the job. It was a trait that sticks with him. In those days, he would question the sergeant in charge of maintenance about how he did his job and would personally probe into the problems that beset the units in the field.

In the Head Shed, where he now sits, General Ryan says there is no substitute for performance, and he is determined to improve USAF management at all levels. That goes for the sergeant, every man below him, and every man above. At the top, General Ryan feels that today's atmosphere demands that USAF must justify each of its programs in greater detail than in the past. He is prepared to do this before Congress.

General Ryan was born in Cherokee, Iowa, on December 10, 1915. The son of E. T. Ryan and Mabel C. Ryan, he graduated from the local high school and spent two years at Cherokee Junior College before entering West Point, where he was a member of the class of 1938. He completed pilot training at Randolph and Kelly Fields in 1939, the year Hitler invaded Poland.

The first few years were spent as an instructor at Kelly, followed by a stint as Director of Training at Midland Army Air Field, Tex. Here General Ryan helped set up an advanced bombardier training school. Next, he was operations officer for the Second Air Force at Colorado Springs until his transfer to Italy in early 1944. There, he commanded the 2d Bombardment Group and then became operations officer for the 5th Bombardment Wing, Fifteenth Air Force. General Ryan flew fifty-eight missions in B–17 bombers and was awarded the Silver Star, Distinguished Flying Cross, Air Medal, and Purple Heart. He held the rank of colonel when the war was over, and is the first USAF Chief of Staff to become a general officer in his postwar career. He was given the temporary rank of brigadier general in 1952.

After the war, General Ryan advanced from a SAC wing, where he took part in the Bikini atomic weapons tests and later became a commander, to division commander, then SAC Director of Materiel, and to command of the Sixteenth and Second Air Forces. After a tour as Inspector General of the USAF, he returned to SAC as Vice Commander and replaced Gen. Thomas Power as SAC Commander in Chief in December 1964. From this post, he became Commander in Chief, Pacific Air Forces, and then USAF's Vice Chief of Staff, a job he has held since last August.

General Ryan is characteristically reticent about discussing his career and his outlook as he assumes the top command. Looking elsewhere, it is possible to find these illuminating observations:

A former SAC wing and division commander: "After his first visit to a wing, every commander in SAC would realize that General Ryan knew more about the details of our operations than we did ourselves. This had a salutary effect all down the line."

A materiel officer: "He's probably the best materiel man in the Air Force. His detailed knowledge of Air Force problems is astounding."

A PACAF officer: "When General Ryan came to PACAF after many years in SAC, some of us wondered. After sixty days on the job, no one questioned his knowledge of tactical air. Most of us began to learn from him."

A staff officer: "The most thorough and intellectually honest man I know. He simply doesn't understand—and won't tolerate—dishonesty, deception, or hedging. If you make a mistake, don't try to cover up or make excuses. That's not his way of doing business. Admit you goofed, learn from it, and don't repeat."

A former executive officer: "General Ryan absorbs and synthesizes information faster than anyone I've worked for before. He has both a passion for facts and respect for theory. He's decisive. You know where he stands and where you stand."

A long-time associate: "He has two lives—the Air Force and his family. He's completely devoted to both. He's mentally and physically tough, but in some ways almost a shy man. His factual bent and superb, self-discipline are tempered by an Irish wit, and the relaxed intensity of a fine athlete."

Probably the most important thing to say about General Ryan's family, on this occasion, is that he has two sons, John Dale, Jr., and Michael Edward, both in Air Force blue. They are twenty-nine and twenty-eight years old, respectively, and graduated together from the Air Force Academy in 1965. Their father, then a four-star general and Commander of SAC, attended the Colorado ceremonies but took no part in them. A SAC officer who was present reports that General Ryan, in mufti, sat with all the other proud fathers of Cadets and shared in the glory as they felt it.

The two sons, now captains, are F–4 pilots based at Holloman AFB, N.M. Both have served in Southeast Asia, flying their F–4 Phantoms from bases in Thailand. They have one sister, Patricia Jo Ryan. Their mother, the former Jo Carolyn Guidera of San Antonio, Tex., is active in distaff side activities in Washington's USAF colony.

General Ryan assumes command of USAF at a time when he faces more internal and external stresses than any Chief of Staff, at least since the time of the late Gen. Hoyt S. Vandenberg. Fully aware of the problems, the General expresses confidence that USAF will meet the challenge and continue its key role in maintaining the peace.

MORE GUN CONTROL NONSENSE

HON. JOHN WOLD

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. WOLD. Mr. Speaker, one of the most balanced and rational gun control editorials yet to appear in a major metropolitan daily was published in the July 30 Washington Evening Star.

Headlined "More Gun Control Nonsense," this editorial labeled "blithering nonsense" the recommendation of the President's Violence Commission—the Johnson Violence Commission—that all America should be required to surrender handguns they own to the Government.

At the same time the editorial correctly identified the most effective potential solution to the commission of crimes with guns:

The establishment of tough, really tough mandatory penalties for criminals who use guns in the commission of a felony such as rape, robbery or burglary.

I insert this editorial in the RECORD as a contribution to a more balanced dialog on gun control:

MORE GUN CONTROL NONSENSE

As an introductory note to this editorial comment, an item in the crime news is worthy of attention. On Monday there were 22 armed robberies in Washington. This brought the July total as of that date to 450, compared to 332 armed robberies in all of July of 1968.

In the face of this a task force of the President's Violence Commission (appointed by President Johnson) comes forward with a wacky recommendation. Its proposal is, except in a very small number of cases, that all Americans should be required to surrender any hand guns they own to the government.

Here is the task force's reasoning: This is the only way in which the United States can break "the vicious circle of Americans arming to protect themselves from other armed Americans." Now what does this really come down to? Even the task force, we suppose, would concede that criminals are not going to surrender their hand guns. So what they are saying is that no homeowner, to cite one example, should be permitted to keep a hand gun in his own house to protect himself, his wife, and his children against the night when some armed criminal might break into his home. Their argument is that home owners "may" seriously overrate firearms as a method of self-defense against crime. The "loaded gun in the home creates more danger than security."

This strikes us as blithering nonsense. How many members of this task force have been awakened in the middle of the night by a scream for help by some member of his family? Probably not one. But thousands of Americans are exposed to this dreadful experience every year. And in such a situation what is an unarmed householder supposed to do against an armed intruder?

The major thrust of this soft-in-the-head report is that the requirement to surrender your hand gun, of which there are an estimated 24 million in the country, would reduce crime. This is absurd, for the criminals are not going to surrender their guns. A better and much more realistic way to deal with this problem will be found in legislation now being considered in Congress.

The intent of this legislation is to provide tough, really tough, mandatory penalties for criminals who use guns in the commission of a felony, such as rape, robbery or burglary. For a first offense the penalty generally favored would be a mandatory jail sentence in Washington, of from one to 10 years. A judge would be forbidden to suspend this sentence or to make it run concurrently with the sentence for the primary offense. In case of a second offense, much stiffer jail sentences are proposed, and they should be written into law.

A similar bill passed the House last year, but was watered down in the Senate before becoming law. The argument then was that mandatory sentences deprive judges of discretion in imposing penalties. And so they would. But in one week at the time the watered-down bill was passed 17 criminals in this city were found guilty of crimes in which guns were used. In six of these cases, the judge imposed suspended sentences, which means that no jail terms were served for using a gun.

So we say let's make the sentences mandatory. And let's not deprive the law-abiding citizen of hand guns in his own home while the criminal element will remain armed to the teeth.

THE CHALLENGE OF CHANGE

HON. R. LAWRENCE COUGHLIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. COUGHLIN. Mr. Speaker, the task of bringing black Americans into the mainstream of American society is urgent. Especially in the urban areas, our black citizens must be given every opportunity to be encouraged and to be aided in their efforts to become full and equal partners in enjoying their rightful share of our growing economy.

Business, after too many years of passivity in its responsibilities to the black citizens of the communities they serve, has begun to respond with meaningful programs. In many cases, businesses are cooperating with Government agencies in programs that afford opportunity to black Americans for education and jobs.

I think this "challenge of change" is exemplified best by a speech given by a young banker on June 11, 1969. J. Lester Blocker is assistant vice president for public affairs of the First Pennsylvania Bank in Philadelphia, Pa. His speech was presented to the Bankers Conference on Urban Problems.

Although Mr. Blocker's talk was directed to the banking community, I believe the significance of his remarks should be recognized by all who are concerned with improving opportunity for black Americans and for improving the racial climate in our Nation today.

I insert in the CONGRESSIONAL RECORD Mr. Blocker's speech on "The Challenge of Change":

THE CHALLENGE OF CHANGE

It is certain that change must occur at a rate well above our current scale and that bankers across this nation must be an integral part of the change. I hope that each of you will return home with a new perspective . . . a new dimension of understanding of how your bank can "do its own thing" in urban involvement.

The Challenge of change must touch every facet of American life. We must change how we look at other people. We must change how we speak of other people. For years, the term *black* carried the most negative connotations. For us, black no longer means soiled, dirty, wicked, harmful, disgraceful, sad, dismal, sullen, without hope . . . and so forth, as found in Webster's *New World Dictionary*. We are developing positive images of black and such images are being developed by brown people as well. You have to learn to be sensitive about the words you use if you want to communicate with minority people. I believe we should discontinue the use of such terms as non-white. You know what I am talking about: non-white, non-being, non-entity—negative images. A large part of how a man—a people—sees himself is a reflection of the views of others. We must change the verbal expressions we use in referring to other people.

This change of verbal expressions is as much a part of the changes we need as anything I can think of. Until we eliminate the barriers to progress facing the minorities of this nation, the very existence of American Business is threatened by some people who would tear down our systems *just to do something*. If we eliminate the potential ally among the disadvantaged, the poor, the so-called hard-core unemployed, we can still save our nation. If we redefine what America is all about "and then begin to sell America to Americans," we can still save our nation. When over half of a sample survey of American college kids reject capitalism and Democracy, we are in deep trouble. Look at our college campuses today. Most of these kids appear to know little about what's right with America today. In his play *Winterset*, Maxwell Anderson said, "People damn what they don't understand;" so it appears to be with our way of life. We all know our way is not perfect, but look around the world for the perfect system. All Americans need to understand our system as we try to help it change. For those who would destroy our system we must show them as firmly as necessary that we will not see that happen! But we must change to meet the needs of all our people.

You know, as I think about it, we have a lot of work to do here at home. We've spent billions on Radio Free Europe. When did you last hear a little propaganda about patriotism in America! Surely, if we can get the people of this land to respond to some idiot riding around on a white horse in white armor gouging people with a staff . . . we can make America really mean something . . . anything for most Americans. We need to change our ways and then sell America to Americans.

Now . . . we have come to Chicago to exchange ideas, methods and approaches. I believe, in large part, we have made a beginning of the kind of exchange which is necessary if the pace is to be quickened—as surely it must. With all the programs and projects which you can devise or establish,

it will all be for naught, unless we do some things as individuals. Frequently, as I travel, I am asked by white Americans, "What Can I Do?" I want to suggest the following things as a beginning for white bankers:

WHAT WHITE BANKERS CAN DO

As responsible, aware, bankers, it is absolutely imperative that you be tuned in to "what's happening" today. First, you will have to realize that your role as a patron for black folks and other minorities is over. A patron is defined as "one who stands to another or others in relations analogous to those of a father." You must now assume the role of a partner, however uncomfortable it may be! The role of a partner assumes rights and responsibilities on both sides. I will not have you doing for me, not after you have done on me and to me for these many years. No, we will do together, for the salvation of our country! We need to redefine America and sell America to Americans.

As I said a minute ago, as I have moved about the country, it's amazing how many white people ask the same question, "What can I do to help?" Well, I am going to attempt to tell you a few things you can do right now:

1. Find a black or brown person whom you consider your equal—highly trained white people should be talking with (not to) highly trained black and brown people. Equals should talk with equals and listen to equals.

2. Use whatever influence you have within your corporate community to see that minority employees are not misused, put in insignificant "show jobs" only! The misuse of employed black men and women is a major cause of black anger and rage today. Tokenism as a beginning can be tolerated only where sincere efforts follow-up immediately to get significant employment changes implemented.

3. Try to relate to the educational crisis facing most black communities. Have company letters sent to black employees urging them to attend P.T.A. and other education related meetings. You should make sure that the education system is trying to relate to the kinds of educational requirements industry and business needs *today*. There are over 3,500,000 drop-outs in the 16–21 age bracket today and, at a time when education is, perhaps, the single most important asset a worker or job applicant can have.

4. Face up to white racism. Your companies have been hiring black "executives" for at least five years. Do you have any black or brown in a decision-making job? Not enough time, huh . . .? How many black and brown people are on the boards of directors of your companies—are members of your social and golf clubs? Well, you asked what could you do . . . now I'm trying to tell you. Has your church, civic group ever discussed the role of the black man in this society?

5. Recognize that the present economic circumstances offer *no* basis for equality:

"A G.N.P. of $890 billion of which black people contribute—at most $46 billion. A personal income of $675 billion of which black people receive—at best—$33 billion!! You don't respect an underproducer . . . and that's what most black people are in this society."

6. Recognize that the future of this nation and cities are inextricably tied together. Get your company involved in thinking about ways it can relate to the inner city, the ghetto areas of your city!

7. Don't be afraid of Black Power! For us, you and I, to ever to be equal, I must have a power base! You have a power base already. Equals can be partners, talking and working together.

8. Work through your church and fraternal organizations to help whites realize that *our futures* are all tied together. If the economic growth of this nation is important to you, it must also become important to black and brown people.

9. Read the history of slavery in America and understand that there *was* nothing good about it! When Frederick Douglass talked about being taken from his mother *before* he was yet 12 months of age, it was not with love that he spoke!!

10. And finally, try to look at life through the eyes of a black man. Brother Malcolm X once said "Look at yourself and decide what you would do if you was in the fix I'm in and then realize that I will do the same thing." That's about where I am!

WHAT BLACK BANKERS CAN DO

I think that black bankers have a few items on their agenda in the days and months ahead:

1. Learn as much as you can about banking. Spend your weekends reading AIB booklets on installment lending, even though you are a personnel man. Get some understanding of commercial lending, if only by reading.

2. Develop all your skills as a banker, so that your market value continues to increase.

3. Try to maintain your ties with the black community as you move up and on. We need positive images of black men and women for our children to see. Sacrifice at least one weekend per month in a direct involvement with "people on the corner."

4. Be sure to tell your senior management "like it is." For years, our fathers had to prostrate themselves for our survival. We will dishonor their names and their memories if we do not stand up for the truth and for justice in our time.

5. Try to encourage your white banker associates to read some black thoughts as part of their *continuing education*.

6. Don't be afraid for your job! If you are producing, "the man" cannot afford to fire you for standing for the truth. Get your own mind and heart in order. Recognize that it is just an accident of fortune that we are where we are today. When over half of the kids in *our* elementary classes have failed to achieve some modicum of success, our achievements must be somewhat accidental. Yes, we are good, but there were others who were good who couldn't hold on long enough.

7. Work hard to stabilize the community in which you live. Your skills are desperately needed in the community. Some people will not appreciate your value, but stay in the battle and win the full support of the community.

8. Recognize that being black will continue to be a disadvantage in your quest for promotion and career development. As I look around the banks in our nation, it is hard to find a black man in a major white bank with any decision-making capacity. But there is a brighter day ahead. Business in other fields is just as bad. Less than 1% of all business executives are black in 1969.

9. Use your experience and any resources available to you to help black people and brown people who want to establish banks. Use your evening hours to look at the interests of the community, if your day-to-day responsibilities prevent day involvement.

10. And finally, keep the faith. I believe that capitalism and democracy can accommodate all Americans who want to be a part of this society. We have the capacity and potential to truly be the greatest country in the world!

The late Langston Hughes wrote a poem entitled "Let America be America." All Americans should read this work some time soon. The hour is late. Black and white must move together . . . now. If we can feed half the world with food they claim they don't want from us, if we can send people to other worlds at a cost of billions of dollars, if we can spend over $50 billion for bombs and things, if we can spend $5 billion for payments to farmers for *not* planting, if we are concerned about saving our nation, we must leave Chicago with a new zeal to get our expertise and resources involved in solving our urban problems. Whether we have even five years is open to question. We must work together, what choice do we have. I might choose to not be together . . . but neither you nor I have a choice. We are both Americans. This is my country too!

Together . . . we can solve this thing. All of us must be willing to share our resources and experiences after we have returned home. You can call me at anytime, if you think I can be helpful. Thank you for coming and I hope that one day soon we can truly sing, arm-in-arm, "My Country 'Tis of Thee, Sweet Land of Liberty."

Keep the Faith!

STATEMENT BY CONGRESSWOMAN MARTHA W. GRIFFITHS

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mrs. GRIFFITHS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

STATEMENT CONCERNING GUIDELINES ON SEX DISCRIMINATION

This is my 15th year as Congresswoman from the 17th District of Michigan, in Detroit, representing over 415,000 constituents. For many years I have worked to eliminate the discrimination to which women are subjected. I was one of the principal supporters of the amendment to Title VII of the Civil Rights Act of 1964 to prohibit sex discrimination in employment. I was also one of those who repeatedly urged that the Executive Order which prohibits race discrimination in employment by Government contractors and subcontractors, and by Federally assisted construction contractors and subcontractors, should be broadened to also prohibit sex discrimination.

My views and attacks on sex discrimination, whether against women or against men, are well known and have been widely discussed amongst the voters of my District. The fact that I am for fair employment practices has never been a detriment to my career. Large numbers of men have fully supported my views, sometimes more vigorously even than women. Therefore, I speak today, not merely for myself, but to express the views and positions of my constituents, and, I am sure, the many millions of fair minded men and women throughout the country who deplore the continuing forms of sex discrimination which still besmirch the employment practices of our country.

We should set this hearing in its full context. There are nearly 30 million women in the labor force, constituting almost 2 of every 5 workers, and their number is rising steadily. Nine out of 10 women will work some time during their lives. Over 5 million families—one out of 9 households—are headed by women.

The plain and simple fact is that women are an integral part of the work force of this country. As workers, they want to have equal opportunity and a fair chance to do what they are capable of doing, to get fair compensation for their work, and to share in the promise of America. Women work because they need to eat—they need to live.

Unfortunately, women are still subject to many substantial discriminations in their employment and job opportunities in this country. Recent surveys by the Equal Employment Opportunity Commission and the Civil Service Commission clearly indicate

that most working women remain relegated to lower-level and clerical positions, and are largely excluded from policy-making, managerial and professional positions.

Their earnings are much less than those of men. In 1966, women workers 14 years of age and over, and employed full time year around, had median wages and salaries of $3,973, as compared to $6,848 for men. Negro women are at the bottom of the heap—their unemployment rates are higher than those of white men, white women, and Negro men, and their earnings are least of all. Nearly two-fifths of all families headed by women had family incomes of less than $3,000. Less than one percent of women workers earn $10,000 per year or more, whereas almost 20 times as many men workers have such annual earnings. And almost two-fifths of all women workers in 1967 were mothers of children under 18 years of age. Thus, an employer who refuses to employ these mothers, or employs them at levels below their abilities, frequently condemns to poverty or subsistence level not only these women but also their children.

The Guidelines on Sex Discrimination, on which these hearings are being held, will apply to the vast number of businesses and employers who partake of the Federal dollar. Hence, they can be of tremendous importance in eliminating many of the sex discriminations which impede the full utilization of women workers, and deny them fair compensation for their labor.

Equal job opportunity for women will also be good for business. Women are good and faithful workers. Studies by the Public Health Service for Fiscal Year 1967 show that both men and women lose about 5 days a year for disability—and that includes the time which women take for pregnancy and childbirth. Furthermore, statistics on labor turnover of men and women in the same occupations demonstrate that it is the job and the pay, not the sex, which determines the rate of turnover. Thus, when women have responsible and well-paying jobs, they, like men, do not abandon them because of family responsibilities.

Most of the objections raised by employers and employer associations against full equality of job opportunity for women are largely based on out-moded attitudes toward women which refuse to recognize the realities of 20th Century life and economics. They refuse to recognize that sex discrimination in employment, like discrimination based on race and national origin, is a serious national problem and represents a tragic waste to our national economy. They refuse to recognize that, like it or not, women are in the work force to stay, and therefore the American standard of fair play requires that they receive equality of opportunity and working conditions.

It is significant that in the statements which several large employers and associations of employers previously submitted on these Guidelines, many of them vigorously endorsed the principle of equality without regard to sex. It is sad, however, that several then proceeded to oppose every provision which would give meaning and life to the principle.

At the outset, I want to say that most of the provisions of the proposed Guidelines are excellent. They tackle the problems of sex discrimination in employment in a forthright manner. They seek equal opportunity for women in recruitment, in job advertisements, in work conditions, age requirements, wages and salaries, hours of employment, work facilities, seniority lists, training, retirement age, etc. I endorse these guidelines, subject to some amendments I shall propose to make them more effective. If these Guidelines are complied with, they will undoubtedly help to remove some of the pervasive sex discrimination patterns that have disfigured and undermined the nation's economy.

Particularly I endorse the fact that the proposed Guidelines incorporate and are based on the experience and rulings of the Equal Employment Opportunity Commission, as well as those of the Department of Labor, which have for over 4 years devoted intensive consideration to the problems of sex discrimination in employment. This is the way it ought to be. There should be maximum coordination and similarity of approach by the agencies of government in setting forth the employment policies and practices to be followed by business and industry.

The most important feature of the proposed Guidelines is the affirmative action program which is required under the Executive Order. Government contractors and subcontractors who want to receive public moneys can be required to follow the national policy of no sex discrimination. In this respect, the Guidelines will accomplish what the Equal Pay Act is too limited to do—what the E.E.O.C. now lacks power to do—and what the Attorney General fails to do.

Now I shall discuss the few amendments I propose in order to accomplish the purpose of the Executive Order and to make the Guidelines consistent with principles already enunciated by the E.E.O.C. and the courts under Title VII.

"JUSTIFIABLE OCCUPATIONAL QUALIFICATION" VERSUS "BONA FIDE OCCUPATIONAL QUALIFICATION" (BFOQ)

The proposed Guidelines state that employers may engage in discriminatory practices on the basis of "justifiable occupational qualifications." There is nothing in the Guidelines to indicate that this phrase is intended to cover anything different than the phrase "bona fide occupational qualification" (BFOQ) which is used in Title VII of the Civil Rights Act of 1964—in the Sex Discrimination Guidelines of the E.E.O.C.—in the Age Discrimination in Employment Act of 1967—and in many state anti-discrimination laws. The phrase "BFOQ" has come to have a well-understood meaning, and the use of a different phrase to express the same concept would simply create confusion and be detrimental to employers, employees, and the administrative agencies. I therefore urge that the phrase "justifiable occupational qualification" be changed to read "bona fide occupational qualification."

STATE "PROTECTIVE" LAWS

Several paragraphs of the proposed Guidelines refer to "valid state laws" which impose various types of restrictions on the employment of women—such as the hours they may work, the weights they may lift, and the jobs they may hold. These Guideline paragraphs then indicate that sex discrimination by employers in conformity with such state laws would be acceptable under the Guidelines.

It is a mistake for the Guidelines to say this. The recent court decisions in *Rosenfeld v. Southern Pacific Co.*, ———F. Supp. ———, and *Richards v. Griffith Rubber Mills*, ———F. Supp. ———, which invalidated similar state restrictive laws, demonstrate that many—indeed, I believe, virtually all—of the state restrictive laws are invalid because they conflict with Title VII, at least, and I also believe, because they are unconstitutionally invidious discriminations.

Certainly, I support laws to protect the worker from unhealthful or unsafe working conditions, to prevent unfair and inhumane treatment of workers, and to balance the odds between employers and workers, particularly the unorganized workers.

However, as I pointed out on the floor of the House of Representatives during the debate on Title VII of the Civil Rights Act of 1964, "most of the so-called protective legislation has really been to protect men's rights in better paying jobs" (CONGRESSIONAL RECORD, vol. 110, pt. 2, p. 2580). They do not really protect women, but only limit their opportunities for holding or being promoted in many types of jobs. For example, Utah has a law prohibiting women from lifting more than 15 pounds, and several states prohibit women from working more than 8 hours per day. It is ridiculous to allow employers to refuse to hire women for jobs which may involve exceeding these silly limits. The national economy and the working conditions of employees are no longer those of the 1890's. Today's women, with increased education and increased economic independence, are working, and are competently performing, in almost all kinds of jobs.

There is a vast amount of ignorance about this. For example, in February one employers' association filed a statement with your Office concerning these guidelines on Sex Discrimination, in which the association said that "the truck driver occupation has always been male dominated and the law should not upset such tradition by forcing an employer to hire qualified females." This archaic attitude simply disregards, or is unaware, that there are over 8,000 women in this country who are full-time working truck drivers.

In my judgment, every state law which impairs equal employment opportunity and compensation for any qualified woman is invalid. I recognize that it may take some time to obtain judicial rulings on the validity of every state law restricting the employment of women, and this is also recognized in subparagraph (4) of sec. 60–20.3(e). For this reason, you should delete the second sentence of paragraph (e), which appears to imply that state laws prohibiting women from working as barmaids, or more than certain hours, or lifting more than certain weights, are somehow valid. In addition, you should add a sentence to subparagraph (4) to state that sex discrimination issues involving the possibility of a conflict with a state restrictive law should be forwarded to your Washington headquarters. There you can resolve the particular issue in light of the specific facts, including the impairment of equal employment opportunity resulting from the state law, and also assemble the factual information you will need to develop the Federal position on the extent to which the requirement of nondiscrimination has displaced the various state restrictive laws.

SENIORITY LISTS

Subparagraph (6) of section 60–20.3(e) provides that seniority lists should not be based on sex. That is a good provision. However, it then goes on to endorse a triple line system developed in the meatpacking industry, which has "A" jobs (primarily of interest to males); "B" jobs (primarily of interest to females); and "C" jobs (those of interest to both males and females). Although subparagraph (6) states that both men and women should be allowed to try for jobs designated as primarily of interest to the other sex, the effect of this A–B–C system is to set up a system tainted with sex discrimination. Its legality is questionable, and it is difficult to administer. If special problems or marked unfairness would result from the merger of men's and women's seniority lists in a particular company, I suggest that the jobs should be categorized functionally, e.g., those involving "heavy," "moderate" and "light" lifting, with each category open to both men and women according to their desires and qualifications. The E.E.O.C. has recently approved this type of seniority system and I recommend that your Office follow it.

PENSION BENEFITS

Although the proposed Guidelines say there must be no sex discrimination in many

specified conditions of employment, including facilities, wages, seniority lines, training, mandatory and optional retirement ages, and other conditions, they do not refer to sex discrimination in a variety of other job-based benefits, such as hospital, accident, and life insurance, pension benefits, etc. I suppose that such omission is because the E.E.O.C. has not yet issued its guidelines on sex discrimination in insurance and pension benefits. Nevertheless, your guidelines should at least contain a statement that the prohibition of sex discrimination in conditions of employment also applies to insurance and pension benefits for employees. The precise details as to how that policy will apply to the various aspects of insurance and pension benefits can be outlined later. (At this point, I express the hope that the E.E.O.C., which has been considering this matter since its hearings of May 1967, will soon issue its guidelines on insurance and pension benefits.)

RETIREMENT AGES

Your proposed guidelines incorporate the EEOC's ruling that the law prohibits sex discrimination in both mandatory and optional retirement ages. I think this is right. It is in accord with the Social Security Act and the Civil Service Retirement Act, both of which specify mandatory and optional retirement ages which are the same for men and for women. However, last year, when various employers sought to rescind that ruling by a rider on the so-called "Christmas tree tax bill" (H.R. 2767, 90th Cong.), the EEOC's General Counsel tried to temper the opposition by proposing a 10-year phasing-out program permitting women within 10 years of retirement after October 13, 1968, to retire at the earlier optional retirement age available under existing pension plans. I think it is too long a period. However, if your office believes that the need for uniformity in EEOC and OFCC guidelines requires some phasing-out period, then I hope that both EEOC and OFCC will try, after these guidelines are adopted, to work out a compromise to permit earlier voluntary retirement by those women who could retire within, let's say, five years after October 13, 1968.

COMPLIANCE REVIEW REPORTS

The second sentence of Section 60–20.8, which deals with compliance review reports, states that the Compliance Officer shall not discuss with the employer any possible violations of Federal laws prohibiting sex discrimination. Perhaps the purpose here is to leave such violations to be handled by other agencies, such as the EEOC. However, a simple discussion with the employer might quickly eliminate a sex discrimination situation. Therefore, I suggest that the second sentence of this section be deleted.

I hope that you will resist the importunities of those who, while giving lip service to the principle of nondiscrimination, would undermine it by gutting the specifics of the guidelines. I hope you will also not be diverted by the straw-man arguments of industry representatives who are confusing sex discrimination with job qualifications or job requirements. For example, one airline filed a statement arguing it doesn't want to recruit women for jobs as pilots because most of its classes are "filled by pilots with many hours of jet flying experience." Since I fly almost every week between Washington and my district in Detroit, I want the best pilots to fly my plane. If a woman hasn't got the qualifications, including the "many hours of jet flying experience" mentioned by that airline, I don't want her to pilot my plane. But if she is qualified in every respect, I will feel just as safe in a plane piloted by a woman as in one piloted by an equally qualified man.

One employers association conjured up the fear that under the recruitment provision employers of architects will have to recruit them at women's colleges which have no architectural courses. That is ridiculous. Of course you don't recruit architects where there aren't any. Similarly, there is no merit in the objection that the provision concerning part-time work will require employers to redesign their work shifts and work hours. That provision merely asks employers to examine carefully their work needs, and suggests that such examination might enable them to more fully utilize the important labor source of part-time workers and thus increase both the employers' profits and the job opportunities of women who are more often in the part-time labor market than men. That guideline certainly doesn't compel the employer to adopt hours or practices contrary to his work needs and profit objectives.

The Federal Government has been woefully slow in ending sex discrimination in employment. Even though Title VII of the Civil Rights Act of 1964 clearly stated the nation's policy, it took another 3 years before Executive Order 11375 of October 1967 added the word "sex" to the Executive Orders which since 1941 have prohibited discrimination in employment by those who get the benefits of Federal Government contracts. Even then, its effective date was deferred for another year—to October 13, 1968. Since then, almost another year has elapsed, and we are only now having hearings on these sex discrimination guidelines.

How long—how long—must American women wait for fairness and justice to them as breadwinners? How long—how long—must business and industry, which are getting Federal money derived from taxes paid by women as well as men, be allowed to perpetuate discriminatory job practices that not only harm both women workers and the nation's economy, but also inevitably result in less efficient and more wasteful use of our national labor resources, and consequently higher costs to both industry and government?

These guidelines are long overdue. I urge that they be adopted promptly, with only such amendments as will strengthen—not weaken—their ability to accomplish the objective of full and equal job opportunity without regard to sex.

Thank you for listening to me.

MARTHA W. GRIFFITHS,
Member of Congress,
17th District of Michigan.

PROF. PAUL TAYLOR GIVES FOREWARNING TO THE VOTERS OF TEXAS

HON. BOB ECKHARDT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. ECKHARDT. Mr. Speaker, Prof. Paul S. Taylor of the University of California at Berkeley has published an article in the July 18, 1969, issue of the Texas Observer warning Texas voters of the consequences of passage of constitutional amendment proposal 2, providing for a massive State water project. I commend this article to the people of Texas and to anyone interested in large-scale State water projects:

VOTERS OF TEXAS: LOOK BEFORE YOU LEAP

(NOTE.—In a couple of weeks Texas will make a decision about water that California made several years ago. In 1960 Californians committed themselves in a public election to pay for a state water program, despite the availability of an interest-free federal water program. From California's experience, it is not too late for Texans to learn—much as a member of a family watches his brother make a mistake and learns.

(The Texas and California situations are strikingly similar in other respects. There is a surplus of water in East Texas and a shortage of it in West and South Texas. In California, there is an abundance of water in the north; in the south the state is a desert. The water plans in both states simply move the surplus water to the dry areas.

(California's politics, too, have become increasingly like the politics of Texas. In both states big business interests control the Legislature and the major cities and agribusiness is squeezing the smaller farmers off the land. The California water plan was conceived in the midst of a fight over the abolition of the federal law which limits the land that may be watered by federally funded projects to 160 acres per person, and the champions of the Texas water plan have declared this same purpose—the abolition of the water sharing law in the "state water program."

(The Californian who best understands this subject from the viewpoint of the public interest is undoubtedly Paul S. Taylor, professor emeritus of economics at the University of California at Berkeley. He was consultant to the office of the secretary of interior and the Bureau of Reclamation, successively, during the Democrats' period in Washington between 1943 and 1952. It was his knowledge which powered the battle in the U.S. Senate in 1959 by which Sens. Paul Douglas and Wayne Morse prevented the 160-acre law from being abandoned in the California water program. Professor Taylor has written many articles on the 160-acre law and the California water plan for law journals and scholarly periodicals and has testified at many congressional hearings on these subjects. He wrote the following explanation of the California water plan especially for The Texas Observer.)

BERKELEY, CALIF.—On August 5 Texas voters will decide at the polls whether to approve or disapprove a $3.5 billion state water project bond issue. Before marking their ballots it may be worth their while to examine California's nine-year experience with a similar state water project and bond issue. A water project can cost a lot of money and be a big undertaking for a state, even for states as wealthy as Texas and California. California's voters and taxpayers are finding out that the cost of their project is a whole lot more than they were led to expect when they gave it original approval.

Californians narrowly approved a $1.75 billion bond issue to finance a state water project in 1960. The public relations pill that helped it to go down was sugar-coated; everything was made to appear rosy. The argument for the bond issue placed in the hands of every voter assured blandly that "The program will not be a burden on the taxpayer; no new state taxes are involved; the bonds are repaid from the project revenues, through the sale of water and power. In other words, it will pay for itself." (The underscoring was in the voters' guide.) The taxpayer, it was made to appear, would feel nothing.

Although the project would take northern California water and deliver it to southern California, the argument for made it appear that both regions would gain, and neither would suffer. The south was assured that "The tap will be open, and no amount of political maneuvering can shut it off." The north was assured equally that "the water rights of northern California will remain securely protected." Everybody was assured that the state water project would "nourish tremendous industrial and farm and urban expansion which will develop an ever-growing source of employment and economic propserity." The climax of the argument for the bond issue was an alliterative

attraction—"water for people, for progress, for prosperity." Tucked in between arguments were threats that a "no" vote would "slow to a halt" the development of the San Joaquin Valley and "by 1965" begin the "return of [its] cultivated areas to wasteland"; and southern California development "must wholly cease"; northern California would lack "desperately needed flood control."

To be sure, there was also argument against the bond issue. Temperate and analytical in tone, it cautioned that the interest carrying charge on the $1.75 billion bond issue "could impair the credit of the entire state of California." It warned that the state project "fails to insure enough water for the north," that the funds provided might prove insufficient for acknowledged needs, and that "it might very well be less costly" to develop the state's waters in other ways. The 'other' ways were unspecified, but certainly did not exclude the precedent established by two huge federal reclamation projects—Colorado River and Central Valley—of which California already was the beneficiary. An evaluation of the state's water plans by Charles T. Main, Inc. contained the caution—phrased mildly—that "In deciding whether to undertake construction of this project, the state must be prepared to assume the risk that it might not be completely reimbursed during the bond repayment period, which runs to the year 2040." This caution reached the State Department of Water Resources barely five or six weeks prior to the balloting, and its message never really reached the voters.

The California Labor Federation and State Grange, among others, opposed the water project and bond issue, and their efforts held the majority needed for approval of the bond issue to a narrow margin. Perhaps the billboards saying simply that "California Needs Water," and the bare symbol of the drip from a household faucet sufficed to by-pass analysis and debate, and so to carry the day.

Now, nearly nine years later, the truth is emerging to public view. California has been unable to complete the marketing of the $1.75 billion water bond issue. There are no takers, notwithstanding that the full credit of the state stands behind it. On June 18, 1969, the *San Francisco Chronicle* reported under the headline "Bond Snag in Huge Water Project" that "Work on California's huge billion dollar water project may be abruptly halted in September because the state can't find a market for its voter-approved 5% bonds."

When the state water project was 'sold' to the voter in 1960, the interest charge on bonds was estimated at 4%. In June, 1969, State Sen. Gordon Cologne was seeking legal authorization to raise the interest rate on state general obligation bonds to 7%, and to issue "anticipatory notes" at 7% "to meet the immediate financial crisis of the north-south water project."

Awareness of the fiscal defects in the state water plan has been growing for some time. Under the title "There Goes Another $1 Billion, Calif. Water Project Costs Soar Beyond Original Estimate," the *Daily Commercial News* of San Francisco on July 17, 1968, exposed the fact that the original $1.75 billion figure was a very misleading measure of cost. Revenues from tidelands oil, some of these earmarked for building construction for higher education, have been diverted to feed the water project; the budgets of the state college system and the University of California have been sharply cut—the latter by $46 million in a single year; and the programs in mental health and medical care of the poor have been similarly reduced to speed construction of the water project. Proposals are being pressed currently to impose tuition charges upon students in the state university system to offset in part the legislative cuts favoring water development above education.

The validity of assurances given California voters in 1960 that northern water rights would be "securely protected" is now being challenged. The *Daily Commercial News* opened one of its 1968 series of articles on the water project with this assertion: "The blank check the voters handed the California water project by approving the $1.75 billion bond issue in 1960 to upset nature in northern California for the benefit of promoters in the Los Angeles area will go up at least another billion. Project officials have just figured that the cost of diverting water south now stands at $2.78 billion." Apparently to this day nobody has yet carried the news to Californians that in 1958 and 1959 three Califonia Senators and a governor promised Congress (yes, it's printed in the *Congressional Record*) that the people of California will pay $11 billion or more to build the state water project!

This project, says the *Commercial News*, is "not only out of money but it is out of water, the Contra Costa County water agency contends and others declare that contamination of San Francisco Bay and the Delta are certainties with northern California water being exported for the benefit of land developers and others in the Los Angeles area." The damage done to the environment by the state water project evidently is having enough political impact to worry those who may have overlooked this in their preoccupation with other aspects of the state water project. Under the title "The Water Raiders" the *San Francisco Chronicle* editorialized on June 12, 1969: "So the raiders from across the Tehachapi are moaning low about the 'increased influence of so-called environmentalists' in the area of 'water development.' "

Remember how back in 1960 an argument was made against the $1.75 billion bond issue, that "it might very well be less costly" to develop the state's waters in other ways? The argument was not spelled out to the voters, but clearly it was an understatement. One way less costly to Californians is development through federal reclamation. Federal reclamation brings heavy federal subsidies in the form of interest-free money on irrigation benefits. State projects must make up the difference on their own. This simple fact is a primary reason why the proposed California state water project remained in cold storage from the mid-forties until 1960. Cong. (later Sen.) Clair Engle made the point in 1952. The question of building a state project, he said, is "whether it is necessary or wise to cut ourselves completely off from desperately needed interest-free federal funds." The price of doing so would be "the sacrifice of" other state programs "such as schools and roads."

Naturally no attempt was made in the argument for the bonds in 1960 to convince California voters that it was well worth trimming education budgets to get a state project *without* interest-free money, in preference to a federal project *with* interest-free money. The point simply was buried in silence.

What reason, then, is there for a state rather than a federal water project? The main reason is swept under the rug. It is this: federal reclamation law controls monopoly and speculation by limiting water deliveries to 160 acres per individual private landowner. Associate Justice Tom Clark, speaking for the U.S. Supreme Court in 1958, stated the purpose of the 160-acre law clearly: "That benefits may be distributed in accordance with the greatest good to the greatest number of individuals. The limitation insures that this enormous expenditure will not go in disproportionate share to a few individuals with large landholdings. Moreover, it prevents the use of the federal reclamation service for speculative purposes." Large landholders wish to escape this limitation.

As far back as May 13, 1944, *Business Week* put its finger on the real reason why giant landowners ultimately might resort to the device of a state water project in California. "If the big landowners in the valley lose out in this . . . fight [to exempt Central Valley Project from the excess lands, or 160-acre provision]," it said, "they have several other proposals to accomplish their end. One of them . . . said to have originated among the big landowners of Fresno County, is for the state of California to take over the Central Valley Project, paying the entire bill. This . . . would side-step the 160-acre limitation."

The meaning of the Supreme Court's phrase "a few individuals with large landholdings," can be clothed with statistics. Government figures have shown 34 landholders owning three-quarters of a million acres in the southern and western San Joaquin Valley, lying largely in the path of the state water project. An estimate of the financial subsidy given to these landholders, along with the public water, can be placed at $1,000 an acre. Naturally a corporate landowner of 79,000 acres resists a ceiling on public subsidy of $160,000, and would prefer one of $79 million, or no ceiling at all. Besides, giant landholders want the incremental land values that the coming of water will add.

Secretary of the Interior Harold L. Ickes made this reason for a state water project crystal clear. "It is," he said, "the age-old battle over who is to cash in on the unearned increment in land values created by a public investment. . . . Their principal objective is to avoid . . . the long-established reclamation policy of the Congress which provides for the distribution of the benefits of great irrigation projects among the many and which prevents speculation in lands by the few."

Are the motives behind the Texas state water project and bond issue perhaps the same as those behind the California state water project?

DIRECT FLIGHTS FROM PHILADELPHIA MAKE TRAVEL TO VIRGIN ISLANDS EASIER AND FASTER

HON. JAMES A. BYRNE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. BYRNE of Pennsylvania. Mr. Speaker, I am delighted to learn that Pan American World Airways is continuing to expand on its great service to the city of Philadelphia by instituting new daily service from Philadelphia International Airport to San Juan, P.R. and St. Thomas and St. Croix, in the Virgin Islands.

Mr. Speaker, Harry Hoffman, the very capable travel editor of the Philadelphia Inquirer, recently wrote an article on his experiences connected with Pan American's inaugural from Philadelphia to the Virgin Islands and I include it at this point in the RECORD:

DIRECT FLIGHTS FROM PHILADELPHIA MAKE TRAVEL TO VIRGIN ISLANDS EASIER AND FASTER

(By Harry Hoffman)

There's good news for Delaware Valley travelers who contemplate a visit to the Virgin Islands. Pan American World Airways is making the going easier with its recently started direct flights to the islands. A jet leaves every morning at 9:30 a.m. from Philadelphia International Airport. Its route is Washington, San Juan, Puerto Rico, St. Thomas and St. Croix. You get to St. Thomas at 3:45 p.m., at St. Croix at 4:50.

We had the pleasure recently of making the inaugural flight aboard a Boeing 727

Clipper named—appropriately enough—First Edition. Aboard were a number of newspaper, radio, TV and magazine people. It took off from Philadelphia following a relatively short delay and after that it was a breeze.

The takeoff came almost on the 40th anniversary of the first scheduled flight to St. Thomas on Sept. 22, 1929. On that day a Pan Am S–28 amphibian Clipper circled over the island and landed in Charlotte Amalie harbor. At the controls was Charles A. Lindbergh, who two years before had thrilled the world by his "Lone Eagle" flight across the Atlantic from New York to Paris.

FIRST-RATE HOTELS

The Virgins have long been one of our favorite places, and this trip was even more pleasant than most. The weather was perfect, the water in the pools and beaches was just great, the food a few steps above passable and the rum drinks easy to take, especially a pina colada that was like mother's milk.

All the hotels we stayed at or visited were first rate and we can recommend them. They included the Virgin Isle Hilton, Caribbean Beach Hotel, Pineapple Beach Club and Bluebeard's Castle Hotel, on St. Thomas; Caneel Bay Plantation, on St. John, and Saint Croix-by-the-Sea, Estate Carlton and Hotel on the bay in Croix.

The most memorable dinner was at Bluebeard's Castle, where the dining room has a simply magnificent view of St. Thomas' waterfront and the food draws the same encomiums.

The best swimming was at Trunk Bay in St. John's. A beautiful, beautiful beach with the Caribbean Sea lapping in gently and the salt water so buoyant that you just float about in a state of ecstasy.

BUILDING PLANS

Almost as good was the sun and surf at Pineapple Beach, which is operated by Main Liners Mr. and Mrs. James Pepperdine. At present they are undergoing building pangs, with a number of condominiums being erected. Incidentally, all have been sold and were taken practically from the plans.

And let's not forget the 150-foot salt water pool at St. Croix-by-the-Sea. Super!

Our return flight (on a jet called Davy Crockett for some unfathomable reason) left St. Croix at 1:30 P.M. We disembarked at San Juan, had lunch and then piled on to Flight 215 at 5 P.M., arriving in Philadelphia about 8:30. You have to get off at San Juan in order to go through U.S. Customs.

BAN ON PESTICIDES URGED IN CONGRESS

HON. DAVID R. OBEY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. OBEY. Mr. Speaker, the long and growing line of victims of DDT and other pesticide poisoning is well known to conservationists, scientists, and concerned citizens who have been interested in the hazards of pesticides for many years. The robin, osprey, bald eagle, and Bermuda petrel are just a few such victims.

Scientific evidence that pesticides pose a definite danger to man has come more recently and reports are being read more frequently at medical and scientific conferences indicating for example, that pesticides can cause cancer in mice and mutations in man.

The latest evidence of this kind was presented to the Congress last week when Mr. Jerome Gordon, president of Delphic Systems and Research, told a Senate Subcommittee on Migratory Labor that pesticides were spreading death among migrant laborers and ought to be banned.

Since this matter is of such importance to the Congress and the American people, I include the following two articles on Mr. Gordon's remarks in the CONGRESSIONAL RECORD:

BAN ON PESTICIDES URGED IN CONGRESS—RESEARCHER SAYS CHEMICAL IS LINKED TO NERVE GAS

WASHINGTON, August 1.—A private New York researcher asked Congress today to ban pesticides that he said were chemically related to nerve gas and were spreading death and injury among farmer and suburban gardeners.

Jerome Gordon, president of Delphic Systems and Research, Inc., which has Government research contracts, identified the pesticides as organic phosphors, distributed under such trade names as Parathion, Methyl Parathion, Tepp and Malathion.

"Fifty million pounds of a pesticide originally developed in World War II as a German nerve gas are being spread unchecked on America's farms and gardens," Mr. Gordon told the Senate subcommittee on migratory labor.

"The result is that uncounted thousands of the nation's migrant farm workers, farmers and suburban homeowners have been fatally overcome or seriously disabled."

DESCRIBES GAS DERIVATIVES

The pesticides, he said, "are first cousins, chemically, to the nerve agents GB and VX involved in the current chemical and biological warfare controversy."

Mr. Gordon said the nerve gas derivatives, odorless and colorless, were so powerful that "a minute amount, less than .00424 of an ounce, swallowed by a human is fatal in less than five minutes." Even under ideal conditions, he said, cumulative exposure can result in disabling partial paralysis and mental debility.

He testified before the Senate subcommittee on migratory labor that migrant farm workers were the major victims of pesticide poisoning.

"These people are prey to the most unspeakable of occupational health hazards—death through nerve gas asphyxiation—and yet they are unprotected by safety legislation in all states save California," Mr. Gordon said.

EIGHT DEATHS LISTED

"They have no recourse to workmen's compensation medical and income benefits in almost two-thirds of the country. They can't even inspect public records in states where they exist, like California, to ascertain whether existing pesticide rules have been violated."

An Agriculture Department spokesman said its incomplete list of incidents involving organic phosphors showed 15 accidents and eight deaths in 1968 and 1969 because of misuse of Parathion and Methyl Parathion.

Officials said they knew of no documented deaths resulting from "normal" use of these pesticides on crops. Many reported accidents result from aerial drift of spray onto workers, one official said. And in most cases the effects of Parathion can be cured by prompt medical treatment, he said.

Besides a ban on organic phosphors, Mr. Gordon urged Federal subsidies for development of less toxic pesticides, workmen's compensation benefits for farm workers poisoned by pesticides and use of Defense Department research funds for defenses against chemical agents to develop protection for farmers.

Jerome Cohen, a lawyer for the United Farm Workers Organizing Committee, said that lacking Government action, farm workers would seek to outlaw use of toxic pesticides in their union contracts.

The union won pesticide restrictions in a contract with California wine grape growers, but negotiations with table grape growers broke down over the issue.

Dr. Samuel Simmons of the Food and Drug Administration's Produce Safety Office said his agency had documented reports of 150 to 200 deaths a year from pesticide poisoning. Injuries are 100 times as great, he said.

GROUP OF PESTICIDES CALLED PERIL TO HUMANS

A private New York researcher told a Senate subcommittee on migratory labor yesterday that pesticides originally developed as a German nerve gas in World War II are spreading death and injury among farm workers and suburban gardeners.

Jerome Gordon, president of Delphic Systems and Research, Inc., which has government research contracts, identified the pesticides as organic phosphors, distributed under such trade names as Parathion, Methyl Parathion, Tepp and Malathion.

The pesticides, he said, "are first cousins, chemically, to the nerve agents GB and VX involved in the current chemical and biological warfare controversy."

Gordon said that cumulative exposure can result in disabling partial paralysis and mental debility. Migrant farm workers, he said, are the major victims of pesticide poisoning.

But Charles C. Johnson Jr., administrator of the Consumer Protection and Environmental Health Service of the Department of Health, Education and Welfare, said studies indicate that in general workers using pesticides are exposed to relatively small fractions of what is considered toxic dosages.

Dr. Samuel Simmons of the Food and Drug Administration told the senators that 150 to 200 persons may be killed by pesticides each year and an estimated 100 times that number may be injured.

TRIBUTE TO SINFOROSO APARIS

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. LEGGETT. Mr. Speaker, I rise today to pay special tribute to Mr. Sinforoso Aparis of Vallejo, Calif., who, after 44 years of meritorious service to his community and Nation, will soon return to his native homeland with his wife to spend his remaining retirement years.

Mr. Aparis, with his wife Conchita Magracia-Aparis, immigrated to Vallejo from the Philippines in 1925. Enlisting in the U.S. Navy the same year, he served until 1946 when he retired as chief petty officer. Utilizing the provisions of the GI bill of rights, Mr. Aparis graduated from the University of San Carlos at Cebu, Philippines with a bachelor of science degree in education. After teaching high school for over a year in the Philippines, he returned to Vallejo where he was employed as a civilian at Travis Air Force Base until his retirement in 1967. All of Mr. and Mrs. Aparis' four children have served in the U.S. Armed Forces, including their daughter.

Mr. Aparis has been a well-known and highly respected activist in civic and veteran affairs. He has just completed a term as post commander of Manuel C. Quezon Post 603, American Legion. He is a past president of the Filipino Retired Armed Forces and of the Ormoc Fiesta Club of California for 4 years. He is an active member of the Fleet Reserve As-

sociation and the Veterans of Foreign Wars. As a member of the Knights of Columbus since 1941, he taught catechism for CCD at St. Vincent Church in Vallejo. Mr. Aparis was one of the organizers and the first membership director of the Filipino-American Political Association (FAPA).

The departure of the Aparises will be a loss to their many friends in California. I wish Mr. Aparis and his wife well and remind them of their promise to vacation periodically in Vallejo.

Mr. Speaker, I insert the attached excerpt from the Vallejo Times-Herald of July 23, 1969, concerning the Aparises in the CONGRESSIONAL RECORD at this point:

SINFOROSO APARIS AND WIFE TO RETURN TO PHILIPPINES

Sinforoso Aparis of 837 Fifth Street, who immigrated to Vallejo in 1925, and his wife, Conchita Magracia-Aparis, have announced plans to return to the Philippines in August—"where we will spend the rest of our retirement years in leisure."

Aparis, who is widely known in Vallejo civic and veterans affairs, is the immediate past commander of Manuel Quezon Post No. 603 of the American Legion.

He said his decision to return to his native land culminates many months of planning which includes a decision and that he and Mrs. Aparis will make future vacation trips to Vallejo. They plan to reside in the historic Mactan Hotel in Cebu City.

NAVY VETERAN

Aparis served in the U.S. Navy for 21 years, retiring in 1946. He returned to Cebu in 1947 to attend the University of San Carlos under the G.I. Bill of Rights. After obtaining a Bachelor of Science degree in education, he taught for a while at Western Leyte College. He returned here in the early 1950s and has been a resident of Vallejo since then.

All of Mr. and Mrs. Aparis' four children have served in the United States Armed Forces. Richard, the eldest son, is a U.S. Army veteran and now on the staff of Boeing Aircraft in Seattle, Edward, a former U.S. Army sergeant, works in Honolulu, Bert, a U.S. Air Force sergeant stationed at Clark Air Force Base in the Philippines, plans to return to Vallejo and reside in the family's Fifth Street home. Norma, the only daughter, also served in the U.S. Air Force. She now resides in Oklahoma.

EX-BARTENDER

Now 62, Aparis worked as bartender-manager of the old U.S. Naval Cafe on lower Georgia Street following his retirement from the Navy. There he had his first exposure to and knowledge of a Vallejoan's way of life and the growth of the local Filipino populace.

He later returned to U.S. Government service as a civilian employe at Travis Air Force Base, retiring from that work in 1967.

As commander of Quezon Post during this Golden Anniversary year of the American Legion, Aparis has participated in numerous civic activities and events—among them the planting of a memorial lemon eucalyptus tree which now towers above the Greater Vallejo Recreations District's administration building on Amador Street.

He recently completed a term as membership director of the Filipino-American Political Association (FAPA), which he helped organize more than a year ago to orient, stimulate and counsel Filipinos on public issues and community affairs.

HARD WORKER

A two-term president of the Filipino Community of Solano County, he led the group of Filipinos who negotiated the purchase of the organization's center at 820 Sonoma Blvd.

Later, with the help of Primitivo Mario, financial secretary, and a handful of others—including Mr. and Mrs. Julian Tobias, Luis Lopez, Librado Largo, Esther Banez, Ben Mariano and Mr. and Mrs. Eligio Aliga—Aparis was able to enlist communitywide support under the leadership of James Coakley, field representative of Rep. Robert L. Leggett, D–Vallejo.

This group completed a successful annual building fund drive and established a pattern for subsequent drives to keep the center open and solvent.

Aparis also served for four years, from 1965 through 1968 as president of the Ormoc City Club of California, which annually sponsors a fiesta reliving the ethnic culture of that Philippine city.

CHURCH WORKER

A member of the Knights of Columbus since 1948, he taught catechism at St. Vincent's Church for the Confraternity of Christian Doctrine. He also was vice president of the Filipino-American Catholic Club.

Other veterans organizations in which Aparis, along with his wife has been active are the Veterans of Foreign Wars, the Fleet Reserve Association and the Filipino Retired U.S. Armed Forces Association. He is a past president of the latter group.

Manuel L. Quezon Auxiliary Unit No. 603 will honor Mr. and Mrs. Aparis at a civic dinner Aug. 23. Details are to be announced later.

INAUGURAL ADDRESS GIVEN BY MISS ROANN COSTIN, PRESIDENT OF 1969 GIRLS' NATION

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. BRAY. Mr. Speaker, one of the most outstanding of all programs to teach American youth the meaning of their country and of their Government is found in the Girls' State program. Sponsored and directed by the American Legion Auxiliary, it is held annually in the Nation's Capital, and brings together 100 girls, two girls from each State.

Girls' Nation 1969 was held last week at American University. There were comments in some quarters, made by those who did not know any better, that those in attendance at Girls' Nation were not living up to the high standards that this project has always known.

To prove how wrong these charges were, and to make available to my colleagues one of the finest statements I have ever read on our country and what it means, I include the inaugural address given by the Girls' Nation president, Miss RoAnn Costin:

Many stories have been told of how Benjamin Franklin would always tip his hat when he would pass by a young person on the street. Puzzled by this a friend of Franklin's asked him why. His reply was: "In the youth of today I see the leaders of tomorrow and the fate of our nation. The success of our nation has not occurred by mere chance. It has been secured by a constant and enlightened effort, marked by many sacrifices, and extending over many generations. We cannot continue on a road of improvement unless we continue to learn from the past and look toward the future. It is necessary to keep the former experiences of our country both at home and abroad before us, if we are to have any true understanding of freedom.

If we wish to erect new structures, we must have a definite knowledge of the foundation. If we examine carefully what has been done, we can determine more accurately what we can do. Let us accept the challenge but at the same time let us not fear to challenge the accepted. Because of what America is, and what America has done, a firmer courage and a higher hope must inspire the hearts of our generation.

A love of liberty means the guarding of every resource that makes freedom possible. The task before us is not an easy one. It will be a long and arduous struggle before we reach a fulfillment of our beliefs. But let us start now. No nation, however old or great, escapes the tempest of change. Let us accept this challenge of change. But may the revolution of our generation yield to a true time of peace when man and nation shall share a life that honors the dignity of each and the brotherhood of all.

Earlier this week a young girl challenged America and asked "Are we free?" This is my answer: "This is my country, land that I love. I pledge thee my allegiance, America the bold. For this is my country, to have and to hold."

ADDRESS BY GEN. EARLE G. WHEELER

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. DERWINSKI. Mr. Speaker, on Saturday, July 26, the Polish American Congress held its 25th anniversary in conjunction with 2-day meeting of that nationwide organization here in Washington.

The main address at the banquet was delivered by Gen. Earle G. Wheeler, USA, Chairman of Joint Chiefs of Staff. The address was an eloquent historic commentary as related to the realities of today. I was pleased to note the overwhelming response to General Wheeler's address and insert it into the RECORD at this point:

ADDRESS BY GEN. EARLE G. WHEELER

My natural habitat, as I suspect you know, is the Pentagon Building across the Potomac River.

That building, and the challenges that face all who work there, add up to a stern taskmaster.

So, when I say to you—as I do now—that it is a pleasure for me to be here with you, I am also confessing to the shortlived happiness that comes to every Pentagon resident when the clear call of duty—plus good company and an excellent dinner—summon him elsewhere.

In 1976, we shall celebrate America's 200th "Birthday".

In 1966, members of this Congress, and Polish patriots around the world, observed the 1000th anniversary of the Polish State.

I believe that this long, and often bitterly difficult, Polish historical experience has given to Americans of Polish descent an understanding of events, particularly of events in Central Europe, which has not been fully grasped by many of our fellow Americans.

In saying this, I am not imprudent enough to attempt to lecture this audience on the history of Poland.

I shall, on the other hand, draw certain lessons from Poland's proud and difficult past—particularly from military operations during World War II—which, to me, clearly illuminate certain strategic dangers and op-

portunities confronting the United States today.

Before setting forth on this task, I must recall that moment in time when the intertwining of Polish and American fortunes was first impressed upon me.

Just over forty-one years ago, I entered the United States Military Academy at West Point, New York.

There is at West Point one particular view of the Hudson River—from what is called Trophy Point—which is close to the hearts of all West Pointers. From this vantage point, one can see the River as it turns northward towards Newburgh and Albany beyond. It was at this inspiring spot in July of 1928 that I saw, for the first time, the heroic statues of General Washington and his brilliant Polish Adjutant General Kosciuszko, together in peace over the long years, as they had served together from 1776 through the battle of Yorktown.

My earliest impression, then, of the Polish soldier was deeply favorable. The years since 1928—particularly the World War II years—have strengthened that first impression.

Certainly, in all three wars of this century, Americans of Polish descent have led the way in their bravery and devotion to duty. The roll call of your—and I am happy to add "our"—fighting men, and the honors they have earned, stand in the shadow of no group. I have found particularly inspiring the return to aerial combat in Korea of our top World War II ace, Colonel Francis Gabrewski. By becoming a double ace in Korea, Colonel Gabrewski became the top fighter pilot in American history.

But in a real sense, the important, and often somber, lessons for today's policy makers arise from Poland's national experience in the years before, during, and after the Second World War. Sometimes it seems to me that the only lesson we learn from history is that we don't learn from history.

Following the dismemberment of Czechoslovakia at Munich in 1938, Poland became the unmistakable target of Hitler's Germany. The Soviet Union's role was crucial. For months following Munich, Britain and France sought to draw Russia into a common front against any future Hitlerian design against the European order. Some progress seemed to be achieved when, on the 23d of August 1939, there burst upon the world the announcement of the Non-Aggression Pact between Hitler and Stalin.

Let no one ever forget that it was this cynical agreement—which the Western Democracies lacked the military capacity to challenge effectively—that set into irreversible motion forces which very soon culminated in World War II.

Poland, a nation then of 35,000,000, could have elected not to fight. There was, after all, the mechanized might of 80,000,000 Germans on the Western frontier, and the armed forces of Russia's 175,000,000 people coiled to the East.

But fight Poland did, and, in so doing, became the first country of World War II to stand up and fight to save herself from Hitler's tyranny.

You well know the story. For seventeen days Poland stood up to, and was even beginning to contain, Hitler's powerful thrusts.

On 17 September 1939, however, the full perfidy of the Hitler-Stalin Pact became clear for all to see. Twelve powerful Soviet columns entered Poland from the East. Valor was not enough. The Polish Armed Forces were caught in a gigantic pincer. The sad end soon came.

Now, surely, even the Poles would accept their fate, lay down their arms, and passively await eventual liberation.

It is to the eternal credit of Poles that you and your forebears did no such thing.

By an incredible pattern of unit and individual odysseys, Poles by the thousands took their stand with the Western Allies. Not all made the trip successfully—as the horror of Katyn Forest will always remind us—but soon we in the United States again saw the "White Eagle flying over proud Polish land, sea, and air formations.

Polish fighting men were there in the dark days—the invasion of Norway, the fall of France, the Battle of Britain, and Tobruk. They not only witnessed the turn of the tide; they helped in turning it.

Slowly, but inexorably, defeat turned into victory.

Under the overall command of General Sikorski, Lieutenant General Andres' Second Polish Corps took a central part in the bloody Italian battles of Cassino, Acona, and Bologna.

Other Polish formations battled in Normandy, Belgium, and with great distinction, at Arnheim.

Poised in the Polish homeland, were thousands of Polish patriots ready to join in the liberation of their country. I shall return to this part of your story in a few moments.

Certainly, for friend and foe alike, the record of the Polish Third and Fifth Divisions at Cassino in May of 1944 is, perhaps, the most enduring legacy of Polish wartime valor and combat success.

From 11 to 18 May 1944, these splendid units persisted in the attack and finally achieved a success that had eluded the brave men of all the other allied formations. Cassino, the symbol of an impregnable defense, fell to Polish arms.

One can read today, on the slopes of Point 593, just below "Phantom Ridge", the following poignant words on the Polish War Memorial:

> "We Polish Soldiers,
> For your freedom and ours,
> Have given our Souls to God,
> Our bodies to the Soil of Italy,
> And our hearts to Poland."

If the Battle of Cassino, now twenty-five years in the past, may be viewed as the undying wartime symbol of Polish arms abroad, the August 1944 Warsaw Uprising, from the same vantage point of time, can only be viewed as the timeless symbol of Communist perfidy and callousness.

For nearly five months, Marshal Rokossovsky, the Soviet Commander, resting within artillery range of Warsaw along the Vistula, refused to come to the aid of General Bor's partisans who initiated their brave 63-day struggle at Soviet instigation.

In a very real sense, the post-war Communist regime in Poland came to power over the bodies of 250,000 of their fellow countrymen permitted to be slain in furtherance of Soviet post-war goals.

Those who profess to see little difference between the Communists and free men might do well to contrast the fate of Warsaw in August 1944 with the liberation of Paris in the same month.

I shall not attempt to review for this Congress the events of the past twenty-five years in post-war Poland. You know the record well and follow with deep and compassionate concern the fortunes of the land of your forebears. I shared your sense of outrage at the massacre of the striking workers of Poznan in June 1956—perhaps the clearest guide to the indomitable spirit of Poland which persists despite the postures of the leadership.

As I remarked earlier, I have drawn certain lessons from Poland's proud and bitter past which illuminate some of the strategic dangers and opportunities confronting the United States today.

The first lesson is quite simple.

We must always focus upon Soviet capabilities and not upon the will-of-the-wisp of Soviet intentions.

No one will ever know at what point in time Stalin decided to invade Poland in September 1939—perhaps even Stalin didn't know his own intentions until the moment of perfidy was close at hand. In any event, as the world was soon to see, Stalin chose to exercise the brutal capability he did possess.

Those who choose to believe that this assessment is "ancient history," quite unrelated to today's more hopeful scene, need travel only as far as Prague for a vivid lesson on the brutal nature of Soviet "friendship" today.

The second lesson I draw is related to the first and focuses upon the danger we face.

There are some who have read, at least in part, President Eisenhower's "Farewell Address" of January 1961 in which our late President warned, among other perceptions, against what he termed "The Military-Industrial Complex."

As I have stated on an earlier public occasion, I have read President Eisenhower's January 1961 address in its entirety and I again suggest that, taken as a whole, the address was a wise, prudent, and balanced assessment of the dangers and opportunities confronting the American people at the close of General Eisenhower's eight years as our President. I would urge you all to read President Eisenhower's address if you have not done so.

I have also read, and call to your attention, a message to his fellow citizens delivered by this great American on 5 August 1968. In this short piece entitled, "Communist Danger—Lasting Solutions." President Eisenhower gave us the clearest possible warning of the nature of the opponent we face—a more recent reinforcement of the warning against Communism set forth in his 1961 address.

I now would like to recall pertinent sections from the 1968 message:

"Abroad, in every major sector, we confront a formidable foe—an expansionist tyranny which respects only toughness and strength and still displays little interest in travelling the pathways to peace, with honor and justice.

"Remember, it is not by a tyrant's words, but only by his deeds that we can know him.

"There is nothing particularly new in this. . . . But what is new is a growing disposition among some of us to ignore these aggressive moves, to discount the blatant threats, to seek, in effect, for surface accommodations rather than to insist upon mutual acceptance in practice or principle. This is wishful thinking at its worst.

"Of course, all of us yearn for universal peace with honor and tonight our prayers are both with our representatives in Paris and our brave men in Vietnam. But once we begin to compete over how best to contrive an American retreat in such a struggle—then we are heading for trouble. But I (President Eisenhower) must offer this thought:

"It is one thing to call for a peaceful settlement of this struggle. It is quite another to call for a retreat by America. The latter is the best way I know to stockpile tragedy for our children."

No one could possibly wish more for a durable peace in Vietnam than the person occupying my position.

Early Tuesday morning I returned from a trip to Vietnam which took me again from the DMZ to the Mekong Delta.

I was favorably impressed by the real desire of the Armed Forces of the Republic of Vietnam to extend their already wide share of the combat role to permit progressive American redeployments. In consonance with progress in the Paris talks and the level of battlefield violence, we may expect even more "Vietnamization" of the war. All see the need; all agree with it.

I will not, however, forecast when American redeployments can be substantially completed, nor will I forecast the size of any additional redeploying increments over either the short run or long term future.

It cannot be said too often that the land, sea, and air forces we have deployed to Viet-

nam are the best we have ever fielded. They deserve well of the Republic.

It has been said that the current generation of young Americans is the best generation we have ever produced. If this thought is true, in fact, I suggest that the "best" portion of our "best" generation is represented by the skilled, compassionate, young professionals who serve our country's interests in Vietnam. I am proud to serve in the Armed Forces with them.

As I said earlier, the proud and difficult history of the Polish nation has given to Polish-Americans a more informed view of the real nature of the dangers we face together than is given to others.

In this regard, I have heard, particularly over the past year or so, that our Armed Forces cost a lot of money. As a fellow taxpayer, I quickly agree. They most certainly do.

I need not remind this audience, however, that there are far higher costs we would inevitably have to bear if we choose to dismiss, by decree, the very real strategic threat which exists to our nation and its interests. Make no mistake about this point. While our military expenditures are large, they are brought about by very real forces and events beyond our borders. These dollar costs are not, as some would have our people believe, a form of national self-inflicted wound which causes our undeniably real domestic needs to be ignored in favor of a manipulated view of a non-existent threat to our safety and security.

I deeply appreciate, Mr. Mazewski, this opportunity to meet with the Polish-American Congress during its 25th Anniversary Year. Yours has been a voice of realism and responsibility for more than a quarter of a century. I congratulate you, and through you, the nearly ten million law-abiding Americans of Polish descent in our beloved land who stand up to their country's foes, pay their country's taxes, and offer massive dissent to those who would smother liberty in Poland and elsewhere in the world.

Thank you.

THE 350TH ANNIVERSARY OF THE FIRST GOVERNMENT IN AMERICA

HON. THOMAS N. DOWNING

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. DOWNING. Mr. Speaker, last Saturday at historic Jamestown, Va., the 350th anniversary of the first government in America was celebrated.

The Jamestown Foundation under the able chairmanship of the Honorable Lewis A. McMurran of Newport News, Va., sponsored the event which attracted a large crowd of distinguished notables including our Governor, Lieutenant Governor, speaker of the house of delegates, State senators, and members of the house of delegates. President Nixon, unable to attend, expressed his good wishes by letter.

Adding to the historic significance of this occasion was the guest speaker, the Right Honorable Horace King, M.P. and Speaker of the British House of Commons. Speaker King's Jamestown address will be long remembered by his distinguished audience. He spoke eloquent words of history laced with great wisdom and delightful British humor.

I believe his remarks will be interesting to my colleagues and I include them at this point in the CONGRESSIONAL RECORD:

DRAFT OF SPEECH OF RT. HON. HORACE KING, MEMBER OF PARLIAMENT, SPEAKER OF THE BRITISH HOUSE OF COMMONS AT JAMESTOWN, VA., AUGUST 2, 1969

It is indeed for me, both as myself and as Speaker of the British House of Commons, an historic and moving day today.

We are inclined in the prosperous and easy world in which we live, to take so much for granted. I flew here speedily and in comfort. The men and women to whom you owe everything faced a sea-voyage under conditions hard to be imagined. When they landed they faced an even greater unknown than the ocean. Before honouring those who survived, let us honour those who all perished . . . One such group vanished entirely but for a single word, Croatan, cut on a tree.

Then came the great and successful adventurers, who landed in Chesapeake Bay in 1607.

In August of that year one wrote in a letter home:

"The adventurers cannot yet be at peace with the natives but have fortified themselves and built a small town which they call Jamestown."

The going was grim. By 1610 only 50 survived out of 500 souls.

Newcomers found "famine in Jamestown." "Every living thing had been eaten and some had fed on snakes or adders." It is even reported that one man ate his dead wife.

These were terrible times . . . in the words of Tom Paine, "the times that try men's souls." Fortunately for history the great leader emerged . . . Captain John Smith.

Smith had to recreate morale, had to fight adversity, famine and disease, but also had to fight against enemies inside the infant colony and back in England. His was indeed a wonderful achievement, including as it did an almost miraculous escape from death at the hands of the Indians. But for his courage and skill—and his endeavours here and at home in England the infant colony at Jamestown might have not taken root.

He rightly boasted that he had given his own small fortune as well as his energies to Virginia and said (I quote):

"In neither of these two countries have I one foot of land nor the very house I builded nor the ground I digged with my own hands."

Wherever on this continent the English language is spoken, his deeds should be recounted and his memory hallowed.

At home Englishmen didn't care much for the infant colony. Indeed in 1614, when the Virginians sent over one of the Council, Dick Martin, himself a former Member of Parliament, to plead their cause before the House of Commons, he got into trouble for pleading too eloquently. And Mr. Speaker was instructed to reprimand him and he was told to sin no more . . . So, after the centuries, comes Mr. Speaker to make atonement to the descendants of Smith, Dick Martin and the rest of the early heroes.

Perhaps the blackest of many black early years was 1623, when a plague followed a massacre and some 300 were left out of 5000.

It is against that background that we turn to Jamestown 1619, July 30, 350 years ago.

The pioneers had brought with them from England—a love of God, a belief in education, and a passionate love of freedom. This latter they were to show through the years and with it enkindle the whole of young America with the ideals of democracy. They at once built a church. And almost at once they tried to set up schools. By 1618 a thousand acres were set aside for a University. And in 1635 one Benjamin Syms bequeathed in his will two acres of land, proceeds from the sale of milk and the increase of eight cows; for free education in Elizabeth City County.

And they built a Parliament House. At first they used the church. Each little group sent two burgesses, two congressmen. They sat in the choir of the Church. They elected a Speaker, the first in the New World, a Clerk, and a Sergeant at Arms, the first in the New World.

350 years later Mr. Speaker from the Old World, salutes on the very spot where they met, your historically illustrious forebears.

They taxed everybody over the age of 16 one pound of tobacco, and this was shared between Mr. Speaker and the other officers. Tobacco is now so expensive in Britain that I am almost tempted to exchange my salary for a few pounds of Virginia tobacco. This first Parliament received a petition for the setting up of a University and College.

They were as cruel as the times, and punished Thomas Garnett, a servant of Captain Powell, to stand four days in the pillory, with his ears nailed to the pillory, for abusing his master.

They met for five days and made immortal history. Soon they drew up what they called the Great Charter.

One of my colleagues in the British Parliament is the Rt. Hon. Duncan Sandys. His ancester, Sir Edwin Sandys, was also a Member of Parliament, and an outspoken Member in the reign of James I. He was largely responsible for the idea of a Parliament for Virginia. The colony had been tyrannically governed, and it was Sandys who on his appointment set up a committee to examine the best form of internal government—and the Jamestown House of Burgesses was the result. And so I bring you warm personal greetings from my friend Duncan Sandys, whose ancestry illustrates the blood bonds that tie together Britain and the Old Dominion.

It was Sir Edwin Sandys too, who suggested a missionary college at Henrico, in answer to the petition for a University.

The King didn't like Parliament, didn't like Virginia and didn't like Sandys. When the time for his re-election came, James forbade it, and said that the Virginia Company was a "seminary for a seditious parliament", that Sandys was his greatest enemy, and he said "Chose the devil if you will, but not Sir Edwin Sandys".

For his support of Virginia and of democracy at home Sandys was persecuted by the King and several times imprisoned.

His noble services to the Colony are some atonement for the less happy services of others.

I see from the records that soon a Parliament House—a House of Burgesses—was built. Then tragically, House after House, four in all, were burnt down . . . the last one about the time that Jamestown was abandoned for Williamsburg.

I refrain from recounting the whole of your political history—one of the great stories in the world's fight for political liberty. It had first to be won inside Virginia. It then had to be won, with the rest of the young American States, from Britain. I am not a little sentimental, and when years ago I first visited Virginia, and came to Jamestown, Williamsburg, Norfolk, and Portsmouth, the British Counsul at Norfolk took me to Yorktown—and we looked at each other with sadness and with resignation.

But I would remind you that in the Revolutionary War the House of Commons was largely on your side. I know that the great Dr. Johnson said, "I am willing to love all mankind—except an American". But great House of Commons Men, among them the mighty orator Burke, spoke as eloquently as did Patrick Henry on behalf of the liberties of the American people.

It is idle to speculate on what might have happened if George III, Shelley's "old, mad, blind, despised King" had not reigned when he did. We went our several ways—and it took a long time before we came back to each other.

But we have come back. The British-American friendship is real. It is based on common sacrifice in two World Wars. We share common cultural and political traditions. Shakespeare and Milton and Churchill are

yours—as Lincoln and Jefferson and Eisenhower are ours. The Bible belongs to both of us. We are all and each free to speak, free to choose governments—nationally and locally, federally, state-wise and county-wise. I have often said that in Britain we have a Prime Minister. We also have a Leader of the Opposition, and we pay him a salary for opposing the Government and for trying to destroy it by every means short of violence.

Freedom is the right of the other man to have an opinion that you do not like. This is our kind of world. We would not change it for any other.

When your Parliament was founded, British people were engaged in a century of struggle for freedom. The House of Commons had won some power, was losing it under King James I and had to regain and extend it by a Civil War. It was fortunate that some seeds of the idea of free men governing themselves had reached Virginia before that Civil War began. The same struggle had to be waged in your country and in mine.

My visit is a precious one. Mr. Speaker is 600 years old. When the Commons were first called over 700 years ago they had less power than even your first House of Burgesses. The King and the Barons were all powerful. The Commons hit upon three ideas with which they were to shape over the centuries—political democracy. For many years they met in secret—and once they had voted on a matter the decision became unanimous. And they said, Let us choose one of our number, surround him with all the power and dignity we can. Then when we have made a decision that the Great Ones will not like, Mr. Speaker in full Parliament, will declare it to the King and the Barons. They said, a King may punish some burgesses—he will never dare to touch Mr. Speaker, for Mr. Speaker is the whole House of Commons.

It was a wonderful theory. Nine Speakers were executed in the Middle Ages . . . a sobering thought for this one.

First Mr. Speaker was a tribune of the people. Then for many years he became a King's man, chosen by Parliament but really selected by the King's friends. Then he became a Government appointee—chosen by the Majority Party. Then, for at least the last hundred years, he has become truly a Parliament man as the first Speakers had been. He is chosen by the House itself, often, as I was, unanimously elected. He at once forswears for all time party politics . . . both in the House and in the country.

His powers are tremendous, but politically he has no power at all. Even his casting vote, when such a vote is necessary, is made according to precedent and not by a political decision.

And so, when I bring greetings to you today it is the whole of Parliament that is speaking to you—all the Members of all the Parties—Majority and Minority. And on their behalf I make some reaffirmations.

Freedom is precious. It had to be won by bitter struggle and by countless sacrifices. These are not just words. Every one of us has lost dear ones in the wars of this century.

One such sacrifice was made by a Virginian, the son of a dear friend of mine.

He wrote:

"I'm proud to serve my country. I am proud to wear on the right sleeve of my uniform the patch of an American unit. I'm proud to say that I've helped to defend the freedom that our fathers and forefathers fought and died for. I am proud to say that I was there. Maybe not where the heaviest fighting took place".

Some months later his father wrote:

"Jeff would have been 21 on January 30, at which time it will have been two months since his death. There is still an aching void in our hearts. I suspect it will be always there . . ."

He lies buried in Virginia.

Some time ago I made a State visit to Italy. And there near Anzio Beachhead, I had the sad but proud privilege of visiting the British War Graves Cemetery, and the American Cemetery nearby, both beautifully kept. And there I laid a wreath in honour of the men of your country and of mine who lie buried in Italy that you and I might be free today.

This is not mere sentiment. Freedom is not enough. It is what we do with it that matters.

We must use parliamentary democracy to create an efficient and a prosperous society. This means work—intelligent work. Harnessing the abilities of our youngsters and training scientists, engineers, craftsmen, and providing the host of skilled manpower to match the demands of a technological age. And this in a world where other systems of society—totalitarian in structure, challenge us in every field of human endeavour.

But we seek also to create a *good* society—one in which the strong help the weak, the middle-aged, the very old and the very young. And this again means education—teaching and inspiring our youngsters to give to society as well as to take from it.

I have often said that the Britain I know and love would collapse overnight if it were not for the hundreds and thousands of citizens who give to Britain as well as take from it. That is true of Virginia, of America, of any free country.

All this means finding out leaders of men in every field. Democracy will survive to some extent by the quality of the men and women whom it chooses to lead.

But it depends as much—perhaps in the long run, even more, on the quality of the average citizen. Lincoln said God must have loved the average man. He made so many of them.

When the great Churchill was 80 years old, we Members of Parliament gave him a portrait. The man who presented him with it said, "In the War, Churchill was the British Lion." In his reply Churchill said, "I was not the British Lion. The British people were the Lion. I just happened to be around to give the roar."

I bring you the warm and deep congratulations of the House of Commons on the high achievements of your astronauts, and on the historical event for which it is impossible to find adequate words—the landing on the Moon. We pay tribute, with you, to the courage of your young intrepid space explorers, whose courage matches that of the first settlers at Jamestown. But we also pay tribute to the huge and devoted body of men and women—scientists, mathematicians, precision engineers, whose combined efforts make your space-achievements possible. Those who came first to find Virginia had no such technical assistance.

Mr. Speaker then comes to this historic gathering bearing greetings from one Parliament to another. The founding fathers of the British House of Commons had no conception of the way in which parliamentary democracy would grow, not only in Britain, but throughout the English-speaking world. We have shaped our Parliaments differently. In Britain practically all power has passed to one House, the House of Commons, and the Administration is drawn from Parliament and sits in Parliament. Your own parliamentary structure has taken a different form.

Each country in the world, rightly, shapes its own political institutions. But yours and ours, and Canada and Australia and New Zealand . . . and indeed all countries of the free world, are based on truths which your Constitution holds to be "self-evident".

And deepest of those truths is the worth of the single human person.

Today seven hundred years of parliamentary democracy speaks to 350 years of parliamentary democracy. We have both come a long way. In these last years we have come that way together.

I congratulate you on all that has been achieved, and all that is yet to be.

And in my last words I remind myself, as I remind you, of some brave souls who met one day in a little wooden chapel, chose a Speaker and a Clerk and a Sergeant and set about making a free New World.

May we always remember how many paid so much in sacrifices of limb and life that we might inherit freedom and be worthy of it.

Perhaps I might recall some words spoken here in Virginia by one of the greatest of all Englishmen, Sir Winston Churchill. It was here that he said in 1946—

"In the last years of my life there is a message of which I conceive myself to be the bearer. It is a very simple message that can be understood by the people of both our countries. It is that we should stand together. We should stand together in malice to none in greed for nothing but in defence of those causes which we hold dear, not only for our own benefit but because we believe they mean the honour and the happiness of long generations of men."

"We ought, as I said to the Congress of the United States in a dark hour in 1941, to walk together in majesty and peace . . ."

2500 years ago Pericles, speaking of Greeks as brave as the first Virginians said:

"Heroes have the whole world as their tomb. These take as your model. For it is only the love of honor that never grows old".

SOME FIRST STEPS

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. ROBISON. Mr. Speaker, the Committee on Science and Astronautics has been holding some hearings into the problem of decentralized Federal planning and support activity in the field of teaching and research in science.

One of its recent witnesses was a distinguished constituent of mine, Dr. Franklin Long, of Cornell University. Dr. Long—whose name you may remember from earlier this year—is not only extremely competent in his chosen field, but is also a gracious and thoughtful man, upon whose advice I am often pleased to lean. He is also blessed with a high degree of commonsense, as is exhibited by his remarks to the committee in this instance, and I am pleased under permission granted to share those remarks now with my colleagues:

STATEMENT BY F. A. LONG, CORNELL UNIVERSITY, JULY 28, 1969

I am exceedingly grateful for the opportunity to appear before this committee and to discuss the kinds of centralization which may be desirable for federal consideration of programs of teaching and research in science. Before mentioning my general views, I should perhaps tell you enough of my background to let you appreciate from what standpoints I shall be concerned. A first point is that I am a professor of Chemistry. A second is that for several years I have been Vice President for Research and Advanced Studies at Cornell University, and from this vantage point, have been deeply interested in the broad problems which relate to teaching and research of science in universities. I have also been extensively involved with the affairs of a consortium of universities, the one which goes by the name of Associated Universities, Inc. and which operates the Brookhaven National Laboratory for the Atomic Energy Commission and the National Radio Astronomy Observatory for the National Science Foundation. As a consequence of this last I have been concerned with the role of as-

semblies of universities and with the ways in which they can work with the government in the management of large science facilities.

Let me now turn to the particular subject of this Committee's study and outline in a general way the positions which I hold. First, I believe that the federal government, does need additional centralized arrangements for handling its programs in basic and applied science and therefore commend the Committee's investigations in this area. I shall point to one or two specific areas where I think centralized efforts are needed. At the same time, I am doubtful whether it is yet time to take the full step of setting up either a Department of Science or a major National Institutes of Science. Instead I think the government should move toward greater centralization in this area but do it at a somewhat slower pace, learning as it goes. In supporting these positions, I will discuss a few topics in which there is great federal interest and give you my views and my feelings as to where a more centralized activity could usefully contribute.

1. PROBLEMS OF FEDERAL SUPPORT OF TEACHING AND RESEARCH OF SCIENCE IN THE UNIVERSITIES

It is well known that federal funds have assumed a major role in the support of teaching and research of the natural sciences in the colleges and universities of the United States. This support has principally come to the universities under the Robric Research although small amounts of funds have come for fellowships from the Office of Education. An important point is that this support has come from a number of federal agencies. Several of these, including DOD and HEW, have explicit missions; only the National Science Foundation and perhaps the Office of Education can be thought of as agencies which support the university programs for their own sake.

There is no question but that United States science has grown and flourished under this federal support. At the same time one must admit that there are some awkward aspects, aspects which will continue to concern such Congressional committees as this one. One problem is the occasional awkwardness that comes from having a large fraction of the university effort supported by mission-oriented agenices. There is the danger that the various mission-oriented agencies will not be willing to support all of the important fields of science and there is the danger of undue support of and emphasis on research as compared with teaching. Finally there is the danger of fluctuating support depending upon the needs of the federal agencies.

These comments should not, however, be taken to imply that universities do not want or should not accept research grants from mission-oriented agencies. On the contrary, support from such agencies as HEW, Interior, DOD and Agriculture has been of great consequence to universities and will surely remain so. The role of the university in the national planning and decision-making has been large in the past and I hope and believe it will continue to be so in the future. The problem then is not one of withdrawal but rather of program balance, of program continuity and of integration of the efforts of the various agencies.

A potentially important answer to many of these problems is increasingly to turn the support of university programs of research and teaching over to the National Science Foundation. It is of great significance to basic science that this Foundation has grown and flourished over the past decade. A large share of the credit for this growth must go to your committee and the scientists of the nation are grateful. Because of NSF's unique charge to support all of science, it is of the greatest importance that this agency continue to flourish and grow and I strongly hope that this will be a general federal policy. I have read Dr. Bridges' testimony of last week to this Committee and am glad to be able strongly to second his great emphasis on the special role of NSF.

However, it is hard to be optimistic that the federal situation will, in the near future, change so sharply that the majority of university support will come from NSF. Certainly many of the mission-oriented federal agencies will wish some fraction of their basic research to be done in universities, and I for one hope that this can continue even as NSF grows.

If pluralistic federal support of science in universities does continue, it seems to me that the need for improved coordination at the federal level can only increase. There already exist coordinating mechanisms for the activities of various federal science-oriented agencies, notably the Federal Council for Science and Technology. However, I am not persuaded that this committee has either the time or the capability to take on the large and continuing job of indepth coordination which I think is needed for support of science programs in the universities. One point is that the coordinating entity should assume responsibility for both the research and teaching aspects of federally supported programs. They should also consider the question of the necessary facilities and equipment. They should have responsibility to deal with such questions as commonality in contract writing, in reporting mechanisms, and patent policies, to name only a few items. Without being certain of what shape the coordinating activity might take, I hope this Committee continues to give this a priority in their consideration of centralized activities.

I should note that the National Science Foundation has formal responsibility for this kind of coordination. However this has not been effectively done in the past and I am presently doubtful whether it will be in the future. Hence my belief that some additional mechanism is probably needed.

2. THE PROBLEM OF A NATIONAL PROGRAM FOR BASIC AND APPLIED SCIENCE

The research in basic and applied science in the United States is performed by a very large number of institutions that can probably be thought of as falling within three major groups: private industry; the universities; the federal laboratories. Only by considering the activities of these three groups can one properly say that one is considering the national science program. My own belief is that in a very broad sense the ingredients of this national program should be a concern of the federal government.

Furthermore, I believe that if the federal government is to respond to this concern it will need a centralized activity which either does not now exist or exists in too limited a state to be useful. The essential problem is that of program balance and especially of response to new national needs. At any given time, the total national science effort is a mixture of programs, some of which historically relate to the older research institutions and others of which represent a developing response to new problems as they arise in industry or in government or as basic science brings them forth in its own way. Many of the new needs for applied science will arise from new awareness of socially related national problems, pollution and the like. Conceivably the federal government could adopt an almost entirely "stand-offish" attitude and permit the national science program simply to be that which developed by the multiple responses of all of the relevant research groups and agencies. However, even if attempted I doubt whether this would work with applied science. As technology is increasingly needed and applied in our civilization the pressures for new programs and for modifications of ongoing programs will continue to impact on the federal government. There will be vigorous proponents of expanded space exploration programs or of new programs in oceanography or of new studies of the environment. In one way or another the federal government will be forced to respond to these pressures. Even within the field of basic sciences some federal response will be needed, if for no other reason than that the available funds are limited so that the funding of any given expensive basic science effort will necessarily impact on others. Conceivably, the questions of program balance in basic science could be handled by the basic scientists themselves, but historically, this has not happened and there seems to be no reason to think it will. In applied science the combination of national needs and outside pressures will simply not permit any casual abdication of federal responsibility.

Some mechanisms for responding to this problem of program balance already exist. Hearings before Congressional committees respond to some degree. Considerations of the Bureau of the Budget constitute another kind of response. Finally, OST and PSAC both study this problem and make recommendations. The question is whether this set of responses is sufficient. In my judgment it is not. I am persuaded that a more professional, more continuing and more directly responsible analytical and planning procedure is needed. A possible mechanism is the establishment within the federal government of a Planning Bureau for Federal Science Programs, when the word science explicitly includes both basic and applied science. This new Bureau could be sufficiently well funded to permit extensive analysis of ongoing programs as well as of proposed new programs. It should probably be located within the Executive Branch of the government, but it should be charged to be responsive to requests from Congress. It is entirely possible that the correct home for such a group is within the National Science Foundation, but if so, it should be established in such a way so that it carries a separate budget item and is explicitly given a very large degree of autonomy and independence.

I am conscious that an organization of this type contains within it some potential dangers. Unimaginative analysis and planning could work to delay needed new programs and could work toward the preservation of obsolete ones. Pressures from important groups or agencies could distort the analyses. On the other hand these sorts of things need not happen and the potential for positive good is so great that I strongly feel that the overall result would be of immense benefit. It is even possible that the existence of a vigorous group within the government would catalyze the appearance of parallel groups outside the government which could do for this national program something of the same sort that the Brookings Institute has done in the analysis of the impact of federal programs on the national economy. This development would be wholly desirable.

3. PROBLEMS WITHIN THE DIRECT FEDERALLY MANAGED SCIENCE PROGRAMS

The Federal Government itself is a major producer of science. There now exist literally hundreds of in-house federally supported laboratories responsible to a large number of different federal agencies. If one adds to this group, as one should, the large Federal contract laboratories such as the AEC National Laboratories, the total activity is impressive indeed.

The need for such in-house laboratories is obvious enough. The technically oriented agencies require groups of scientists and engineers who can respond directly and rapidly to agency needs. Furthermore, the area of applied science and development particularly calls for strong in-house groups. One can argue that private industry could take over these applied research functions. In actual fact, the very management of industrial R&D contracts virtually requires that there be significant in-house capability within an agency. For these reasons and

many others we do have a very substantial federal in-house program of research in applied science.

These in-house laboratories which give strong support to the Federal Agencies also raise some serious problems. There is the problem of keeping these laboratories operating at a high-level efficiency, particularly in classified areas where interactions with outside professional groups are necessarily restricted. More often than not, these laboratories have neither the spur of profit-oriented effectiveness and relevance which goes with laboratories in private industry nor the almost automatic renewing effect which universities receive from the steady flow of new students. Furthermore the missions of the supporting agencies change considerably over time and requirements for new kinds of research build up. Hence the dangers of obsolescence and irrelevance are constantly with the federal laboratories. So also is the danger of undue overlap among the laboratories of the several supporting agencies. Finally there is a tendency, which clearly must be resisted, to establish a new Federal laboratory as a response to each new national need.

Here then is another area where a centralized federal activity can be of immense help. The essential tasks are coordination; integration; mission-analysis; forward planning. Two other tasks are important however. One is development of ways to enhance the interactions of federal laboratories with each other and with universities. A second is to encourage multiple agency use of ongoing laboratories. A fine example of the first is the JILA program whereby the National Bureau of Standards and the Physics Department of the University of Colorado have developed a collaborative, mutually beneficial program. In the second category the broadening of the programs of the Oak Ridge National Laboratory to extend beyond AEC tasks into such fields as desalination and civil defense is wholly admirable and points the way for other federal laboratories. A centralized activity could examine these and similar arrangements, report on their effectiveness and encourage comparable innovative programs in other federal laboratories.

4. MECHANISMS FOR CENTRALIZED FEDERAL CONSIDERATION OF SCIENCE PROGRAMS

As I complete my discussion of this broad topic I am conscious that I have been less than explicit in my considerations of specific organizational changes. This is primarily because the organizational aspects are not areas where I feel very knowledgeable. Furthermore, I am persuaded that there are a number of possible directions which if followed thoughtfully could lead to substantial improvement in the federal response. However, I would be remiss if I did not point out that the one *conceivable* possibility is an expansion and modification of the already existing Office of Science and Technology.

As it now operates OST has neither the size nor perhaps the structure to take on these added centralizing responsibilities. But supposing the following changes were made: (a) OST is permitted to grow in size: (b) provision is made for two or three presidentially appointed deputy directors; (c) arrangements are made for more formal OST participation in the preparation of budgets for science support; (d) provisions for closer and continuing liaison with Congress are established; (e) OST is formally charged by Congress to carry out a number of these federal analysis, planning and coordination functions. Then OST would be capable of making a most substantial contribution.

There is however a concerning aspect to this proposal, a concern which is of sufficient seriousness that, if it cannot be minimized in a modified scheme for OST, then perhaps the whole proposal may not be desirable. The danger is that OST, as currently operated, with a director who is also the President's chief science advisor, and at the same time, chairman of PSAC, is simply too much a direct branch to the White House and too little an independent federal agency for science. Hopefully the modifications which I have been proposing could decouple these affiliations to the point where OST could truly be thought of as an independent federal agency. If not, then there may be serious doubt as to whether this otherwise attractive possibility should be followed.

The committee's own proposed structure of a National Institute of Research and Advanced Studies certainly contains many of the ideas which I have been supporting. I would personally be reluctant to see the full proposal established immediately and full-blown, i.e., establishment of a body which promptly becomes the overseeing body to the National Science Foundation, takes on the operation of national laboratories, etc. On the other hand I can quite imagine that as a first step, a central planning and coordinating federal agency could be established promptly to undertake many of the tasks which the committee itself has discussed and which I have discussed today. It would be wholly appropriate if such a new federal agency were designed to fit comfortably into an ultimate, more ambitious structure such as the one the committee has been considering. Is perhaps one possibility to establish the office envisaged in the committee report of May 1969 entitled "Administrative Staff and planning Office" and modify it to be the first federal unit for overall consideration of these several problems? If this or some similar central body were established it would give the Federal Government the kind of planning and coordinating capability which I believe it needs. If, as time went on, this new arrangement pointed toward the need for a still more centralized effort, perhaps by way of a Department of Science or by way of a group of Science Institutes, the Congress could then take a next step with more confidence and less concern than if it tried to go the whole way now. But the fact remains that some first steps toward a more centralized federal responsibility should be made. In reopening this topic for further serious consideration this committee is doing a service both to the federal government and to the nation's science.

MINIMUM WAGE DOES NOT CURTAIL JOB OPPORTUNITIES FOR YOUNG PEOPLE AS CLAIMED BY THE NATIONAL FEDERATION OF INDEPENDENT BUSINESS, INC.

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. PUCINSKI. Mr. Speaker, a number of newspapers have printed editorials this spring regarding allegedly adverse effects of the minimum wage law on youth employment. Each of them has cited as their authority a news release issued by the National Federation of Independent Business, Inc., on April 29, 1969, reporting a survey of its membership. Mr. President, this survey is biased, contrary to fact, and misleading. In my opinion it is important that the true facts be known on a matter as significant as the effect of the minimum wage on unemployment. I, therefore, want to present the following analysis of this survey for the RECORD.

The conclusions of the NFIB are based upon insufficient statistical data and a series of conjectures and broad assumptions that are without any factual foundation. The NFIB, as a part of a continuous survey, mailed to a selected number of its members a questionnaire which included questions regarding the employment of teenagers in 1966 and at the present time. The findings, according to the federation's own data, are based on answers from 26,331 members, less than 10 percent of the total membership of the organization, who responded during the first quarter of 1969.

What are the characteristics of the members who have so far responded to the NFIB survey? Based on the responses to date—two out of every three businesses were primarily engaged in retail trade or were in a service industry. About seven out of 10 of the respondents had annual gross receipts of under $200,000 and only about one out of seven had receipts in excess of $500,000. Congress very carefully considered the small businessman in enacting the 1966 amendments to the Fair Labor Standards Act; and generally only those retail and service enterprises with sales of at least $500,000 annually—$250,000 as of February 1, 1969—were brought under the minimum wage. Therefore, most of the respondents are not even affected by the minimum wage law. Unemployment of youth in such establishments obviously cannot be attributed to the Federal minimum wage.

Even when all of the respondents are taken into account—both those covered and those not covered by the Federal minimum wage law—only 10,532 of the 26,331 respondents, or 40 percent, reported that they had employed teenagers during 1966—a period prior to the changes in the Federal statute. More than half of the 10,532—55 percent—reported no change in the number of teenagers employed in 1966 and in the first quarter of 1969. Of those who reported a decline in the number of teenagers employed, more than 60 percent attributed the decline to factors other than the minimum wage.

The federation's "survey" then proceeds to expand the loss of some 5,213 teenage jobs reported by those employers showing declines to an estimated loss of over 1 million teenage jobs.

In order to arrive at its projected figures, the federation assumed that the 26,331 members who have so far returned completed mailed questionnaires—less than 10 percent of its 264,942 members—were representative of its entire membership. A further assumption was that the membership is representative of the 5 million independent businesses in the United States. Both assumptions are highly questionable.

How do the federation's conclusions compare with the actual facts? The drastic decrease in teenage employment shown by the federation's projections is not supported by recent statistics on the employment of teenagers. During the period from March 1966 through March 1969, the latest date for which such information is available, the Bureau of Labor Statistics reports that the number of employed persons in the 16- to 19-year-age group increased by 538,000. During this same period, the unemployment rate for this age group did not rise as the NFIB news release implied, but

instead dropped from 12.9 to 12.7 percent. All of this occurred during a period when, as a result of the postwar "baby boom," the number of young people entering the labor force had been increasing very substantially.

The elimination of employment opportunities in the magnitude projected by the NFIB would have greatly increased the unemployment rate, since the projected number of lost jobs—over 1 million—is almost 40 percent higher than the total number of unemployed teenagers shown by the Bureau of Labor Statistics.

The Wall Street Journal criticized the survey techniques of the NFIB in an article on the "Growing Use of Polling To Buttress Ad Claims" published on September 25, 1967. The article deplores the growing use of rigged self-serving surveys for propaganda purposes. The article pointed out that organizations tend to attract members who are in some way different from nonmembers and that the NFIB membership is not a representative sample of the 5 million small businesses in the United States as the organization claims. The article explained how the outcome of a survey can be influenced markedly by such things as the way questions are phrased or by the population segments which are sampled. It might be noted that the NFIB, since its founding in 1943, has consistently lobbied against the passage of any minimum wage rise.

The questionnaire used by the NFIB asked the following questions relating to teenage employment:

Looking back to 1966, did you employ teenagers at that time?
No.
Yes—About how many?
How does your employment of teenagers today compare with 1966?
Same.
More—By how many?
Less—By how many?
(If less) Is this because of:
Lack of teenage job seekers.
A change in your business operations.
The Minimum Wage Law.
Other (please explain).

The introductory statement to the questionnaire was worded in such a manner that the results are bound to be biased. For example, the cover sheet states "Arm your federation with facts that are needed to battle for you at Washington and the State level." A partial listing of the federation's lobbying accomplishments made possible as a result of these special surveys is also included at the beginning of the questionnaire. It is clearly apparent to the respondent that the survey is designed to serve the vested interests of the members and that he should answer the questions with this thought in mind.

There is a great deal of concern in the country today about the problem of teenage unemployment. One of the questions that has been raised by Secretary of Labor Shultz, among others, concerns what effect the minimum wage has on youth unemployment. It seems quite obvious that the conclusions drawn by the National Federation of Independent Business, Inc., can only serve to obscure the facts. What is needed is an objective study of the subject—such as the one Secretary Shultz has recently directed the Bureau of Labor Statistics to undertake. Only the results of an impartial, statistically valid study will be useful in shaping public policy.

SLEEPING BEAR DUNES NATIONAL LAKESHORE

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. WILLIAM D. FORD. Mr. Speaker, with a sincere hope that timely action by Congress can preserve the unspoiled beauty of the Sleeping Bear Dunes in Michigan, I join again in sponsoring legislation to establish the Sleeping Bear Dunes National Lakeshore. Bills have been pending before Congress for 8 years to achieve this.

A recent article by Virginia Prentice, which appears in the June 1969 Sierra Club Bulletin details how each year that we delay lessens our chance to preserve this area in its natural state.

The article follows:

SLEEPING BEAR DUNES: A NATIONAL LAKESHORE FOR MICHIGAN

(By Virginia Prentice)

Sleeping Bear Dunes came to national attention a decade ago when the Department of the Interior made a survey of the Great Lakes shorelines. That survey termed the Sleeping Bear region, which stretches along the eastern shore of northern Lake Michigan, "one of the outstanding recreation and natural areas on the Great Lakes," and recommended that it be considered for inclusion in the National Park System. Since 1961 this recommendation has been under consideration, but the process of getting legislation through Congress has been painfully slow. These legislative delays have taken their toll in the Sleeping Bear Dunes area. And now time is running out.

What are the Sleeping Bear Dunes, and why are they worth the continued concerned of conservationists and the support of interested congressmen? The area is not isolated or especially extensive. Of the 61,000 acres in the proposed lakeshore, 19,000 are on North and South Manitou Islands. Inland from the shoreline, which lies where Lake Michigan begins to curve eastward to form the top of the Lower Peninsula of Michigan, average relief is 200 feet. (The highest elevation is just over 1,000 feet.) The Bear itself is a mound of sand that looks, when viewed from a distance, like the profile of a bear at rest. It is barely two acres in extent and the immediate dunes over which it reigns comprise only 3,000 acres. An additional 1,000 or 2,000 acres of exposed dunes can be found elsewhere in the area for a total of 4,000 to 5,000 acres. There are, then, 56,000 to 57,000 acres of "something else." The "something else" is as diverse as a chaotic glacial heritage could leave it.

Old beach ridges, remnants of a more extensive Lake Michigan, are gentle features that might go unnoticed but for the almost unnatural regularity with which they occur and support a cover of conifers. The swales between the ridges are moist, often boggy, and harbor plant communities that include the skunk cabbage, a number of delicate orchids and the insectivorous sundew and pitcher plant. These beach ridge-swale features are located in what were once large embayments of Lake Michigan or its predecessor. Low dunes have developed between the present shore and the ancient beach ridges and a veritable vegetation profile can be traced from the shore inland. Beachgrass and bunchgrass predominate near the shore; next inland are creeping juniper, bearberry, and wholly beachheather; then, in order, jack pine and health, jack pine with red pine, jack pine with eastern white pine; white pine and hemlock follow; eventually yellow birch and beech-maple forests cover the slopes of the moraines. Behind the old beach ridges remnants of the embayments are in the form of lakes; cedar and tamarack swamps and spruce and leatherleaf bogs have covered low-lying former embayments.

Shorelines between embayments are steep bluffs that rise to elevations of 200 to 400 feet above the lake. They are morainic hills that have been truncated by the erosive power of wind and waves. The face of each bluff is generally barren of vegetation or tinged with the light green of a sparse cover of beach-grass. Extending inland, the bluffs offer a variety of landscapes and ecosystems in accordance wtih their post-glacial genesis and present erosional condition. Sleeping Bear guards one such bluff and presides over the active dune field that has come to symbolize the region. The Bear is a perched dune—perched atop the moraines—and it is a migrating dune as well. As the sand moves on, excavated by the wind, a once buried "ghost" cedar forest is being exhumed. New dunes are constantly forming and may become temporarily stabilized. Grass will sprout, thrive, and hold the sand awhile; perhaps a cottonwood will take root, grow apace with sand accumulation and send up more shoots until an ethereal corpse is created.

Moraines, particularly interlobate moraines such as are found here, are humpy and bumpy with patternless ups and downs, sometimes minute, sometimes immense. They provide countless opportunities for unexpected vistas, surprise hidden ponds, and sudden changes in plant communities. Mixed hardwood forests have developed on those moraines not covered with dunes. Maples and beech predominate, but there are also oaks and other species; they all proclaim their vigor each fall in a most flamboyant panorama of color. In the spring, when sunlight reaches the forest floor unfiltered by a canopy of leaves, wild flowers bloom in profusion.

Thus, old beaches and new beaches, low dunes and perched dunes, moraines, ancient glacial waterways and embayments form the physical complex that is Sleeping Bear. It is a young landscape, geologically, and a fragile one, ecologically. Sterile sands, rugged hills, and poorly drained bottomlands have discouraged intensive agricultural development. Until recent years it has been treated rather gently by civilization. Today, however, the dunes already bear the scars of impending danger.

On Memorial Day 1968 the mouth of the Platte River, which traverses the southern section of the proposed Sleeping Bear Dunes National Lakeshore, was a lovely place to picnic. By Christmas a bulldozed boat-ramp and black-topped parking lot provided the backdrop for a partially completed concrete block motel, gas pumps, and hastily constructed docks. The beach area was littered with debris—the usual beer and motor-oil cans, styrofoam and foil, stray items of clothing, and partially decomposed fish—all left behind at the close of the Coho salmon season. A new and imposing chain link fence prohibited access to the beach.

On the Fourth of July 1968 a short trek from the end of a quiet country road across warm and fragrant puccoon-freckled dunes brought one unexpectedly to the mouth of Otter Creek. Its tranquility, and that of a pair of resident loons, was protected by an ever-shifting bar. By Columbus Day a bulldozer had leveled the dunes from the end of the road to the lake, forming a ramp for launching boats. Puccoons and loons had disappeared.

On Easter 1968 trillium and trout lily were bursting from beneath the last snows

of winter in the undisturbed woods at North Bar Lake. By Labor Day the woods had been sliced down the middle by a road forming the spine of a 41-lot subdivision. Today quality homes are going up on what was once a quality natural area.

Population pressures from the two poles of the developing Great Lakes megalopolis, Chicago and Detroit, are noticeable. Prime property all along Lake Michigan's shoreline has been acquired and developed by private interests. In the Sleeping Bear Dunes area alone real estate prices have skyrocketed in less than a year. More and more undeveloped areas have been surveyed for subdivisions and trailer parks. Construction crews and utility lines are moving in and will soon desecrate some of the choicest niches left in the Sleeping Bear region.

Prior to the 1957–58 Department of the Interior survey of the Great Lakes shorelines, Michigan had two state parks and considerable state forest acreage in the area. D. H. Day State Park, established in 1920 as the first park in the present system, consisted of 32 acres. The state has since added almost 2,000 acres to the park including the active dunes that encompass Sleeping Bear. Benzie State Park was established in the Platte embayment area in 1922. Neither park experienced heavy usage through the 1950's. and as late as 1965 all campsites were seldom occupied.

Thus, when legislation was first introduced in Congress by Senator Philip A. Hart in 1961, local residents (both permanent and seasonal) were reluctant to acknowledge the need for protection and organized planning at the federal level. They staunchly clung to the belief that a horde of city-bred transients would invade the area only if the Park Service lured them in with carousels and cotton candy. This attitude was exploited by opponents of the park; it has continued to be a major factor in the lack of local support for a national lakeshore.

Response to attempts by conservationists and legislators to protect the area has been alarmingly slow. But the Coho salmon may have accomplished what lakeshore status proponents have thus far failed to do. In 1965 Coho were planted in streams in the area on an experimental basis. On coming of age in 1967, the Coho returned to these streams to spawn. The size and quantity of these fish far exceeded the most optimistic predictions. Thus, with the salmon runs in 1967 and 1968 came an influx of sportsmen and tourists, the likes of which was previously unimaginable. Changes have been rapid and disruptive. Many different observers, particularly area residents, became concerned individuals overnight.

Bills have been introduced in both the House and Senate in each successive Congress since 1961. Following extensive hearings in 1963, Senator Hart's bill was passed by the Senate, but no action was taken by the House Interior and Insular Affairs Committee. The Senate again passed a Sleeping Bear bill in the 89th Congress, and this, in turn, was reported favorably by the House Interior and Insular Affairs Committee but was never brought to the floor by the Rules Committee. When the 90th Congress convened, Senator Hart again introduced a Sleeping Bear Dunes National Lakeshore bill, but the Senate elected to await passage of a bill by the House. Michigan Congressman James G. O'Hara, a member of the House Interior and Insular Affairs Committee, introduced a bill identical to Senator Hart's and to the one passed by the committee during the previous session. Following passage of the Land and Water Conservation Fund Amendments in 1968, prospects looked hopeful. House committee hearings were held in July and the committee appeared to be ready to move—then Congress adjourned. The Hart and O'Hara bills, S. 1023 and H.R. 11829 respectively, have been introduced unchanged in this the 91st Congress, again calling for a 61,000-acre lakeshore.

A third and perhaps more extensive bill is expected to be introduced in Congress soon by Michigan Representative Guy Vander Jagt. It is hoped that his bill will resolve some of the objections to earlier bills, among them being the loss of tax base for local units of government. In a position paper circulated last fall on Sleeping Bear, Mr. Vander Jagt suggested the state of Michigan accept fiscal responsibility for some of the tax loss. If such support appears feasible the lakeshore may gain additional support from local governments.

Another objection to earlier bills was the unpopular provision for protection of and payment for private property. The Hart and O'Hara bills contain (hopefully Mr. Vander Jagt's bill will, too) provisions for protection of present property owners within the lakeshore. Upon compliance with zoning standards specified in the bill, owners of improved property are guaranteed protection against condemnation. Thus, property owners are becoming less resistant to the bills as they comprehend their protective implications; the image of a honky-tonk, carnival-type development expected to accompany the arrival of the National Park Service is rapidly disappearing.

Attitudes and resistance to change are more difficult to alter than the provisions of a bill. A "Save Sleeping Bear Dunes Committee" was formed by citizens of Benzie and Leelenau counties early in 1968. After struggling along for many months, it is now receiving much support. Co-chaired by the Benzie County chairmen of the Democratic and Republican parties, this committee's increasing support is assumed to be indicative of changing local attitudes. On both state and federal level there is general agreement that something must be done to save the dunes, and that the "something" must involve federal funding. Lakeshore status is needed immediately so that zoning regulations can be implemented to place—at the very least—a moratorium on construction and development.

THE FARMER IN THE TILL

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. CONTE. Mr. Speaker, for the information of my colleagues who share my concern about the scandal of giant farm subsidy payments I am inserting in today's RECORD a copy of a recent excellent article, "The Farmer in the Till" by Dr. John A. Schnittker, in the August 1969 issue of the Atlantic.

The article was written before the failure of the other body to sustain my amendment placing a $20,000 limit on total farm payments to a single producer. I am sure those of my colleagues who supported that amendment join me in urging our conferees to insist on the House amendment.

But, whether or not we prevail on this issue this year, the Congress still must concern itself with long-term farm legislation. My colleagues will note that Dr. Schnittker recommends in this article a ceiling of $5,000 per crop, thus enabling savings of $500 million or more.

After consultations with Dr. Schnittker and other agricultural experts, this is the position I have taken in a recent statement to the House Agriculture Committee, a copy of which I inserted in the RECORD on July 21, 1969, at page 20190.

I urge all of my colleagues to consider this excellent article.

The article follows:

THE FARMER IN THE TILL

(By John A. Schnittker)

John F. Kennedy is reported to have remarked that he didn't want to hear about agriculture from anyone except John Kenneth Galbraith, and didn't want to hear about it from him either. As President, Lyndon Johnson nursed an incurable longing for the rustic pleasures of the LBJ Ranch, but he avoided farm-policy questions when he could. Public officials are alternately wary and weary of agricultural policy. There is ample reason for both attitudes. Farm voters are notoriously hard to please, and farm-policy debates are seldom stimulating. Yet the need for agricultural policy will not go away simply because frustrated politicians wish it. Advanced technology on the farm assures plenty of food for consumers. It also requires stable prices, and there are far too many farmers to arrange such a result without federal help.

Official lethargy on this score was shattered late in May this year when the House of Representatives, reacting against million-dollar payments to big farms, overwhelmingly approved a ceiling of $20,000 on direct subsidy payments to any farm. This revolt against the old order in farm policy was a replay of a surprising House action in 1968, an action later reversed by the Senate.

Congressional advocates of a farm-payment ceiling have some good things going for them. Farm-program costs, at $4 to $5 billion a year, are high and moving higher. In a careful survey made late in 1968, 85 percent of the farmers favored limiting farm benefits. City people are nearly unanimous in objecting to the big budget drain for farm programs when other priority needs beg for funds. Most important, advocates of farm-program reform in the House of Representatives and the Poor People's Lobby have skillfully contrasted giant federal payments to a few farms with the hand-to-mouth budget granted federal food programs by Southern-dominated Agriculture Committees in both houses of Congress, despite evidence of widespread malnutrition. Congressman Paul Findley (R., Ill.) has reported to the House that the cotton and wheat areas with the largest number of big farm payments were doing least about hunger and malnutrition. Finally, a study prepared last year at the request of President Johnson has destroyed the claim of the agricultural establishment in both political parties that surpluses and economic chaos would inevitably accompany a ceiling on farm benefits. Budget savings of $250 million per year are now anticipated by those who favor payment reform, and the savings could be doubled if the payment ceiling were set at $10,000 instead of the $20,000 that was proposed.

Those members of the Congress who opposed the ceiling on farm benefits claimed that such a plan could not be administered, that it was unworkable and unfair, and that it would not save money. Fortunately for the public, none of this is believed any more, at least not in the House of Representatives.

PARITY, PARITY, PARITY

It helps to know some of the words and symbols, if one is to understand the need for change in farm programs. Parity, price supports, and direct payments are the key words.

Parity has been the battle cry of farmers since the 1920s. Public discussion of farm policy, however, has been clouded by three parity doctrines. Parity in the abstract is hard to argue with; it is essentially a fairness doctrine. The effort to find out what is fair for farmers, however, has spawned two

competing statistical measures of farm parity.

Parity prices originated a generation ago out of what seemed to be a sensible notion: that farm-product prices should increase in step with the general price level; this would maintain the farmer's purchasing power. Conceived before the new technology revolutionized farming, the parity-price system has failed to account for recent rapid gains in productivity. If farmers were guaranteed 100 percent parity prices in 1969 (instead of the present 65 to 70 percent of parity), wheat, corn, and cotton prices would increase by about 50 percent. Crop surpluses would be inevitable, and the Agriculture Department budget would soon rival the Defense budget. Clearly, the parity-price doctrine is obsolete, although not quite dead.

Parity income is a more recent standard. Simply put, the parity-income doctrine says that a good farmer investing his capital in an operation large enough to employ him more or less fully should be able to earn as much farming as he would earn operating any other small business. A recent Department of Agriculture study showed that a half million of the biggest farmers producing two thirds of our farm products are meeting this standard, at least on the average if not on every farm every year. Net incomes on the largest farms, thanks partly to big payments, are generally far above parity; rapid land-price escalation as farms are enlarged is a clear sign of this. In contrast, the smallest and poorest two million farms could not earn parity incomes on the farm even if market prices were doubled or tripled.

PRICE SUPPORTS AND PAYMENTS

Farm prices left to themselves are notoriously unstable. Price support programs, begun in 1933, grew out of that fact and out of the general economic depression. The new programs were supposed to raise prices by reducing crop production and by removing surpluses from the market. But neither the farm programs nor pump-priming expenditures in the rest of the economy brought real recovery in the 1930s. World War II did that, pushing farm prices so high that price ceilings and consumer food subsidies were applied. After the war, the farm bloc in Congress succeeded for a time in maintaining the high wartime prices under peacetime conditions, even though agricultural prices around the world were declining as Europe recovered and began producing again. The results were predictable. By the late 1950s high market-price guarantees and half-hearted production control were creating huge surpluses. More than that, farmers were gearing their expectations to high prices and buying their land at inflated values. Thus they were generating their own cost increases to justify future demands for even higher prices. By 1960, every grain- and butter-storage structure in the United States was filled. The annual cost of simply owning and storing the $9 billion farm surplus reached $1 billion in 1961. "How to let go of the bear's tail" became the principal preoccupation of reform-minded farm officials and economists.

The answer was a system of direct payments to farmers in place of high price supports. In the early 1960s, payments became the key instrument of farm-policy reform, cushioning the impact of an abrupt shift from high to lower price guarantees for wheat and cotton, and providing farmers the cash incentives required to reduce acreages and limit farm output. Big farmers, who had profited handsomely from high market-price guarantees in the 1950s, became identified in the 1960s as the recipients of huge government checks. The stage was set for the present struggle to reduce the size of those checks.

Recent developments in farming have also helped to focus public attention on farm-program benefits. When farm programs were introduced in 1933, there were 7 million farms in the United States. A few were huge holdings, but most were small, one-family enterprises. Benefits were geared to production, and so farm aid was spread fairly evenly. By 1968, more than half of those farms had disappeared. Today there are 3 million farms, but 2 million of them are small, part-time, residential, or hobby farms. One million top farmers produce nearly all of the farm products marketed, and they get most of the money spent on farm programs. A new study just published by the Joint Economic Committee of Congress, for example, shows that the largest 5 percent of sugarcane and cotton growers get 63 and 41 percent respectively of all the direct benefits from those programs. The largest one percent of cotton growers in California and Mississippi get 25 percent of all the direct federal benefits in those states. Under such circumstances, public concern is certainly understandable.

Clearly, the large payments are not going to the traditional American farm, still typically a one-family enterprise. Instead, they help ensure financial security for such well-heeled enterprises as the J. G. Boswell Company of King's County, California, which collected direct farm payments of $3 million in 1968 and $4.1 million in 1967. The Boswell Company is a multimillion-dollar diversified cotton operation with good connections in Washington. Senators and congressmen are not excluded from farming, nor do they always disqualify themselves when the Congress votes on big farm payments. Family interests of Senator James Eastland of Mississippi (the Eastland Plantation, Inc., and H. C. Eastland) collected payments totaling $142,078 in 1968, down from $189,050 in 1967. In October, 1968, Senator Eastland voted against the payment ceiling which would have to cut the Eastland farm payments to $60,000, or $20,000 on each of three farms. Campbell Farming of Big Horn County, Montana, often cited as the model of a modern wheat-farming operation, got $162,897 in 1968. Garst Farms, run by Roswell Garst, the international seed-corn figure and one-time host in Iowa to Premier Khrushchev, got $70,923 in 1966, but only $45,212 in 1968.

Nearly two and a half million farmers get federal payments, but only 10,000 farmers get over $20,000 per year. Most of the big payments go to cotton farmers in California, Texas, Mississippi, Arkansas, and Arizona. When Congressman Findley placed the names of all recipients of $25,000 or more in the *Congressional Record* this year, the list from the five biggest cotton states filled twenty-one pages. Five leading grain states required only four pages. Concentration of federal payments in a few cotton states makes them really ripe for reform, although sugar and wool, with powerful political support, are also involved.

Late this spring, when the House of Representatives voted a $20,000 ceiling on farm payments, the Majority and Minority Leaders were opposed, as were most committee chairmen. Understandably, the bulk of the opposing votes were from Texas, California, Mississippi, Arkansas, Kansas—the states with the biggest payments. The Senate could vote a ceiling this summer, if urban senators and the leadership take the initiative. If the Senate fails, final action may have to wait until the farm program is reviewed in 1970.

The White House does not seem to have learned anything from President Johnson's 1968 experience in this matter. When the House voted a payment ceiling last year despite intense Administration opposition, President Johnson began to have second thoughts about supporting his own farm bill, which continued the increasingly vulnerable big payments in a year when most budgets were being cut. Official embarrassment mounted after the Poor People's March when the Administration's expected assault on hunger fell before the tax surcharge, the $6 billion budget retrenchment, and higher Vietnam spending. When the Senate-House conferees on the farm bill dropped the payment-limiting amendments, last year's official White House strategy was designed to get the conference report stalled or rejected, so that the entire farm issue would have to be reviewed in 1969. That failed in a parliamentary maneuver designed without the President's knowledge by the Administration's own lobbyists. After that, President Johnson reluctantly signed the farm bill and directed "the Department of Agriculture to study the effect of a payment limitation on programs which require voluntary diversion of productive land."

That study was conducted in the Department of Agriculture and became public after President Johnson left office. Its findings flatly contradicted the principal argument the Administration and farm congressmen had made in recent years: that payment limits would destroy the production-control programs and would lead to new farm surpluses. The study also documented the potential budget savings associated with a payment ceiling. All this, even the potential budget savings, seems to have been lost on the new Administration.

The advocates of unlimited payments are now left without any sensible arguments for their position. Previous opposition to the ceiling rested on the argument that big payments are needed *to prevent too much corn and wheat production*. This spurious claim had a limited validity in the 1961–1964 period of heavy surplus removal, but it has none in 1969 when grain surpluses are down. The Department of Agriculture simply did not know the distribution of payments by size of farm until around 1965. Acting on faulty information, Department officials took an early stand against a payment ceiling, and never found a way to change their position. Now we know that only 2 percent of all feed grains and 4 percent of all wheat would be affected by a $20,000 limit. Even a $5,000 ceiling would not materially affect the stability of the feed-grain economy.

Cotton is more concentrated; one third of the crop is grown on some 5000 big farms (out of more than half a million cotton farms) which would be affected by a $20,000 ceiling. Legislative leaders who had insisted that a payment ceiling would cause a grain *surplus*, now said it would cause a cotton *shortage*, an argument so symmetrical it seemed plausible. Senator Holland said last year that the prospect of lower payments made "it appear very unlikely that such producers could continue to supply the mills with low priced cotton. . . ." This is a proposition that ought to be tested: if American cotton growers cannot compete on even terms in world fiber markets without unconscionably high federal payments, it is not too early to discover it. Major changes in addition to a payment ceiling are required in the cotton program. The most important is to remove a provision of the 1965 act which ingeniously exempted cotton from any future payment ceiling. This must be repealed before the ceiling can be effective for the crop and the areas with most of the huge payments.

WHAT TO DO

No firm principles have emerged to direct the Congress toward a particular maximum level for farm payments. Budget savings are the best guide. By that test the $20,000 ceiling is too generous; the figure should be no higher than $5,000 per crop or $10,000 per farm, in order to save more money. Reduced payments will not undermine farm-price stability as long as top payments are not forced below those levels. Inevitably, the maximum payment level will be set somewhat arbitrarily: a $20,000 limit will save $200 to $300 million a year; a maximum of $5,000 per crop or $10,000 per farm would save $500 million or more. If farms are

allowed to split up to circumvent the new policy, however, some of these savings will be lost. This will bear watching; Congress should give the Department of Agriculture firm directions against farm splitting.

These reforms will not silence the sharpest critics of farm programs, who have never accepted the policy of limiting farm production to stabilize prices while anyone anywhere is hungry. So long as the agricultural economy remains inherently unstable, with too many producers to combine effectively to set their own prices the way industrial combines do, the opponents of any farm stabilization effort will probably be disappointed. We need a farm policy as well as a responsive fiscal policy and a compassionate food policy. But a sensible farm policy does not require giant payments.

Farm payments and food programs will inevitably be paired off in the coming debate, although ending big payments will not automatically ensure more food for the poor. The public can't help seeing tragic irony in Congress' tight-fisted approach to hunger, in contrast to its open-handed financing of farm programs. Budget pressures alone ought to encourage the Administration to sense its interest in this matter, if principle does not, although White House help may never materialize, given Mr. Nixon's dependence on the South. Political advantage seems assured for those members who help drive farm-payment reform through the Congress. Big payments lack any legitimacy in real program objectives. It is right, therefore, to end them. Only the most twisted sense of priorities will let us continue to pay millions every year to a few big farms while we procrastinate about ghetto reconstruction, postpone remedial education, close Job Corps Camps, and let poor people starve.

SERMON BY REV. R. W. JABLONOWSKI, JR.

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. TEAGUE of Texas. Mr. Speaker, I would like to include in the RECORD a semon delivered to the worshippers in St. Stephen Presbyterian Church, Fort Worth, Tex., June 29, 1969, by the minister, R. W. Jablonowski, Jr. The message in this sermon is for all Americans and I commend it to your reading:

The sermon follows:

THE SERMON

Fifth Sunday After Epiphany, 29 June 1969.

The Old Testament Lesson: Joshua 1:1–9.

The Epistle Lesson: I Thessalonians 5:12–24.

The Gospel Lesson: St. Matthew 7:21–23.

On this Friday, the Fourth of July, we will, as a nation, celebrate the one hundred ninety-third anniversary of our independence, as decalred by our forebears under conditions far less propitious than those which are ours in our own time. In the progress of the search for freedom, which is the inherent right of every human being who is a child of God—and all human beings are!—there have been many vicissitudes, there have been more disappointments than fulfillments, there have been far greater numbers of denials than those granting to mankind the potential of achieving its true destiny.

Denials of freedom to mankind have been the result of many things, but usually the abscence of freedom has been caused by the fact that folk really do not believe, essentially, in freedom. Too many people want to be, and to ramain, dependent. A great many folk are unwilling to assume the responsibility which is inherent in being a free person, *because a person who is free is responsible for what he is and what he does!* We are always willing to claim our privileges, but we are not always as willing to accept, much less understand, what our claims to privilege mean for us and for all others with whom we come in contact.

In the pericope in which we read the brief statement of Our Lord in *The Gospel* he is speaking to us of the consequences of our Christian freedom. We are able glibly to call upon the name of God whenever we wish buttressing for our opinions, or when we need strength in times of weakness or doubt, or when we desire the attainment of particular goal. But, in times of our prosperity, in our moments of withdrawal from reality, or when we are addicted stubbornly to the rightness of our own opinions, we resent the claims of God upon us as Christians. ". . . many will say to me, 'Lord, . . . did we not prophesy in your name . . ." (Yes, we do!) " . . . and do many mighty works in your name? . . ." (Yes, we even undertake these!) But do we really believe ourselves, as Christian men and women, to be wholly subject to the will of God? Of course, none of us is! *And do we even accept the principle of what it means to be subject to God's sovereignty?*

There are many folks, for example, who cry out for and state they believe wholeheartedly in the rule of justice, but how many of these persons are willing to accept equally the rule of mercy? Large numbers of our citizens speak out on behalf of and say that they believe whole-heartedly in the capitalistic system of economy as best for the human family, but how many of us really believe in the free operation of the market when it affects adversely our economic well-being?

You see, we cannot have it in part; we must either accept all of it or none of it. *Were God to deal with us as we deserve there would be none of us who survives, but he doesn't do this.* He does not treat us as we treat him. He does not seek vengeance and visit retribution upon us, as often we try to do in our dealings with other people. And this is why the judgment of God, ultimately, has to come upon those who will not accept the same principles as being applicable to their dealings with other humans which they accept so readily in God's dealings with them.

These eternal principles apply equally in our national life. The writer of the *Book of Joshua,* in attempting to offer a basis by which the nation of Israel could prosper, by which it could dwell securely within the borders of its land, by which it could expand and become a greater land, proposed that strength and courage are ingredients for the foundation of any successful commonwealth, and, secondly, that they should never become frightened or discouraged in their search for the principles of rectitude, *with the particular admonition to turn neither to the right nor the left* . . . . . in other words, to avoid extremes in any positions.

Now to conditions in our own country. Everybody has suddenly decided, citizen and politician, old and young, that this is a good time to jump on the bandwagon and be against the further dissemination of pornography. My, what a laudable spiritual end! Who in the world ever would be *publicly for* the dissemination of pornography? But what do the adults do in our society? They make a best-seller out of Jacqueline Susann's *The Love Machine,* which is more sheerly pornographic than any of the paperback books under the counters of any newsstand in this town. There is not one vestige of literary merit in anything Jacqueline Susann ever wrote, by her own admission. There is no validity in any adult having anything to say about distribution of pornography who has even read *The Love Machine.*

In the disturbances affecting our country, those on the 'left' now seek the realization of an anarchial situation in which it is supposed that every man "doing his own thing" at his own time "on his own turf" in his own way is a proper way for people to live. *No society can survive this.* Anarchy is intolerable in any situation of interpersonal relationships, no matter how large or how small. The ability of folk to dwell together is dependent always upon their willingness to recognize the rights of others, never seeking to gain an advantage at the expense of another's being deprived of such advantage. *Freedom never means license.* There is no way that any person may claim, etymologically or through any other structure, that the right to be free means the right to act as you please.

Equally detrimental to us are those who would deny the exercise of freedom to all, *and who propose in answer to the excesses of others suppression, repression, denial.* The difficulties arising from the anarchists in our midst are because those of us who do possess the power have been unwilling to extend *to all the citizens of this nation their just rights under law.*

So, this is the negative side. But Christians are not negative, free people are not negative, when they are true to themselves. The positive side is so much greater. Here is a nation, the most powerful, the greatest yet existing on this planet, a nation endowed with tremendous resources of people, in addition to its resources of the material. *And it is the resource of human personality which is our real wealth.* We possess people of competence in every field, people of vision who are able to lead those of us with lesser capacities into greater kinds of fulfillment. This nation which we love is not yet doomed. There is unlimited achievement awaiting us all, if only we believe the principles upon which our commonwealth was founded, and live in accord with these.

What we need is the reawakening within us of *true patriotism*—not the kind which merely drapes itself in the flag, and adds to it "God" and "Mother"—but the kind of patriotism which says that *every human being is deserving of what I have; he has the right to receive all the education his mind can absorb, he has the right to work where he pleases and live where he pleases, he has the right to participate fully in every political decision.* And along with these go the obligations which are commensurate with the claim of these privileges.

It was with these ethics, though often lacking unfairly in application to some, that this nation began its expansion and how it has prospered. It is the only way that it will from this day forward do the same. You see, we are the folk, we in this room, who bear the chief responsibility. We are better educated than the majority, we have a higher standard of living than the majority, we have a heritage of freedom for longer than the majority. *Therefore we have a greater obligation, not a lesser one. No one ever has lesser obligation when he has greater privilege. This is the confusion of people who do not understand the meaning of freedom.*

The Biblical writer sums it up succinctly when he says, *"From those to whom much has been given much is expected."*

DILUTING DEMOCRACY

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. BOLLING. Mr. Speaker, last week the Wall Street Journal clearly set down, in one of its editorials, the clear and present damage embedded in a bill sent to the Congress by the Nixon administration in an effort to improve law-enforcement

methods. The editorial quite properly concludes with a statement:

If fear of crime is justified, the tendency to let it dilute democracy should be resisted as strenuously as possible.

I submit the column for inclusion in the RECORD, as follows:

[From the Wall Street Journal, July 31, 1969]

DILUTING DEMOCRACY

Certain provisions of the Nixon Administration's bill to fight crime in the nation's capital, coming soon after the Justice Department's attempts to expand its wiretapping powers, suggest a disturbing conclusion: That the Administration considers the downgrading of traditions designed to protect individual rights a valid weapon against crime.

The most controversial aspect of the proposed new legislation calls for amending the 1966 Bail Reform Act to provide for "preventive detention" of suspects accused of certain violent noncapital crimes. A judge might refuse to release such suspects pending trial if in his opinion they would pose a danger to the community.

The Bail Reform Act, the first major bail reform legislation since 1789, established a couple of basic principles for Federal Courts. A suspect accused of a noncapital offense should be released pending trial, unless authorities believe he might attempt to flee, and his ability to pay a bond should not be a factor in his release. The intent of the act was to rectify the existing situation which often discriminated against indigent suspects who could not raise bail money. Judges were authorized to hold only suspects accused of capital offenses, or convicted suspects awaiting sentencing or appeal because of their potential danger to the community.

Two apparent conditions encourage the Justice Department to press for expanded judicial power to hold untried suspects for "preventive" reasons as well as to insure their trial appearance.

First, in the District of Columbia, where Federal courts deal with crimes handled by state and local courts elsewhere, crimes committed by some suspects released before trial are on the increase—narcotics addicts who turn to robbery to support their habits, for example.

Second, despite the Bail Reform Act, some judges continue to set high bonds for suspects they consider dangerous, even with little reason to believe they might flee to escape trial. The Justice Department thus contends the sanctioning of "preventive detention" might serve the dual purpose of reducing crime in the District and rationalizing the often arbitrary existing situation.

If expanding the preventive detention concept to some lesser crimes in the District of Columbia seems a small step, it involves a major principle. By requiring the judge to make what must amount to a pretrial ruling on a suspect's criminality, it violates the tradition that the accused must be considered innocent until proved guilty. The decision to violate it can only be uncomfortable for a judge conscious of democratic legal traditions. The fact that some judges routinely violate the tradition by setting unsanctioned high bail is hardly an argument for writing the violated tradition into law.

For if the strains created for the police and the courts by the increasing crime rate dramatize the need for more effective law enforcement, they also heighten the need for continued attention to traditions designed to protect individual rights. Overworked police and courts that result in unfair treatment of the guilty may result in unfair treatment of the innocent as well.

Thus a careful distinction should be made between measures to improve the structure and mechanics of the judicial process (also included in the Administration's Washington, D.C., proposals) and those which threaten long protected individual rights.

For the moment, crime may well be reduced more effectively by more policemen, better trained, paid and equipped, and by more courtrooms and judges to insure speedy trials and convictions of the guilty, than by giving the current number of police and judges new powers to violate individual rights to privacy and freedom.

The day may arrive when the threat of crime grows so serious as to require reduced protection of individual freedom for both the law abiding and the criminal, but conditions are not that bad now. As matters stand today, we would feel better if the Justice Department showed a greater sensitivity to the significance of plans to give judges and police questionable new powers. If fear of crime is justified, the tendency to let it dilute democracy should be resisted as strenuously as possible.

FLORIDA CONGRATULATES APOLLO ASTRONAUTS

HON. DON FUQUA

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. FUQUA. Mr. Speaker, Florida is justifiably proud that our great State is the launchsite for our space program and as such it was from our State that the first men to walk on the moon were launched.

Speaking for all Floridians, the Governor and State cabinet recently passed a resolution paying tribute to the three brave men who made this historic journey and to all those who have made this, the greatest scientific achievement in the history of man, a reality.

The resolution follows:

RESOLUTION

Whereas, Florida has been the "home base" of this nation's ambitious, historic spaceship launching program for many years; and

Whereas, these Florida shores at Cape Kennedy, originally known as the historic Cape Canaveral, continues to be the focal point for space shots of today as well as yesterday; and

Whereas, Cape Kennedy was the blast-off point for the most ambitious and most historic of all the space shots of all nations in the history of the earth; to wit, the flight of Apollo 11 to the surface of the moon, and

Whereas, three American heroes; Astronauts Neil A. Armstrong, Edwin E. Aldrin and Michael Collins, rocketed off from Florida shores in Apollo 11 into far space on this daring venture which put two of these Americans walking on the surface of the moon; and

Whereas, these United States spacemen now have returned safely to our earth after giving mankind an entire new planet for exploration, and new horizons to seek; and

Whereas, the success of this mission has paved the way for a second moon trip from Cape Kennedy this Fall; and

Whereas, Florida will continue to be the lift-off location for still more enterprising voyages into other areas of the Universe; and

Whereas, this achievement has resulted in a unanimous expression of pride and gratitude from the citizens of Florida;

Now, therefore, be it resolved, that the Governor and Cabinet of the State of Florida, speaking on behalf of the citizens of our State, do hereby express our warmest congratulations and our heartfelt thanks to the crew of the Apollo 11 and to the many hundreds and hundreds of workers and technicians daring venture which put two Americans walking on the surface of the moon; and

Whereas, these United States spacemen now have returned safely to our earth after giving mankind an entire new planet for exploration, and new horizons to seek; and

Whereas, the success of this mission has paved the way for a second moon trip from Cape Kennedy this Fall; and

Whereas, Florida will continue to be the lift-off location for still more enterprising voyages into other areas of the Universe; and

Whereas, this achievement has resulted in a unanimous expression of pride and gratitude from the citizens of Florida;

Now, therefore, be it resolved, that the Governor and Cabinet of the State of Florida, speaking on behalf of the citizens of our State, do hereby express our warmest congratulations and our heartfelt thanks to the crew of the Apollo 11 and to the many hundreds and hundreds of workers and technicians in Florida and elsewhere who have made this unparalleled accomplishment possible, and that we salute them individually and collectively.

Adopted this 29th day of July, 1969, at Tallahassee, Leon County, Florida.

CLAUDE R. KIRK, Jr.,
Governor.
TOM ADAMS,
Secretary of State.
FRED O. DICKINSON, Jr.,
Comptroller.
BROWARD WILLIAMS,
Treasurer.
FLOYD T. CHRISTIAN,
Commissioner of Education.
DOYLE CONNER,
Commissioner of Agriculture.
EARL FAIRCLOTH,
Attorney General.

IN HAILING HEROES DO NOT FORGET THE MEN WHO LAID THE PATTERN FOR SPACE SUCCESSES

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. DULSKI. Mr. Speaker, our triumphant feat of putting man on the moon a few days ago is one that staggers the imagination of all of us.

In so doing—and I am one of the proudest of our achievements— I believe it also is important to try if we can to put the pattern of development that led to Apollo 11 into proper perspective.

Where did the space race originate, who were the pioneers? There were many of course, indeed thousands who took part.

A recent article has recalled some of the early figures in the Nation's space effort. The July 28 article as follows is by Nat S. Finney, former Washington bureau chief for the Buffalo, N.Y., Evening News, who was closely associated with the scientific community during his years in Washington.

The article follows:

FORGOTTEN INDIVIDUALS MARK TRAIL TO MOON

(By Nat S. Finney)

WASHINGTON, July 28.—American industry and technology have beaten Russia to the moon but the feat has left the record of its accomplishment in tatters.

Who remembers now that the origin of space exploration was the International Geophysical Year, or that the conquest of space fell into the same time span as the mastery

of intercontinental ballistic missiles in a deadly race with Soviet Union?

Indeed, who remembers that staying ahead of the Russians was what kept Congress pouring on the money?

The bitterness of the internal struggles that marked the sometimes halting progress of the drive to "put a man on the moon" during the 1960s has melted away although some of the leaders who were hurt in those struggles are still around.

DR. GLENNAN ILL

For instance, Dr. T. Keith Glennan, first administrator of the National Aeronautics & Space Agency during the Eisenhower administration, is an ailing and almost forgotten man in the hour of triumph.

Yet it was he who approved the specifications and placed the order for the Saturn-5 booster that supplied the thrust to send Apollo-11 thundering to the moon. It was Dr. Glennan who drew up the initial cost computation. And Dr. Lloyd V. Berkner, the father of the International Geophysical Year, who pulled his heart out to get funding for project Vanguard, at the Martin Co. in Baltimore, is dead and apparently forgotten by reporters writing about the triumphs of his ideas.

And President Eisenhower, who sternly watched over the national security while others yakked about how the U.S. had been "sputnik-ed," is not mentioned except as an unperceptive obstructionist.

WEBB WENT AHEAD

There has been little appreciation of the role that Dr. Hugh Dryden, the grandfather of aeronautical research, played in the early days of NASA, when, at the insistence of the scientific community, he was teamed with Dr. Glennan. Dr. Dryden's great savvy about aeronautical research kept NASA out of trouble with visionary schemes.

Perhaps most poignantly, James E. Webb, the diligent and effective public administrator who served three Presidents and who boldly carried the Apollo project to success, is dismissed with a phrase.

This was the man who had the administrative guts to throw an inadequate computer system out of the NASA window and spend $2 billion on the systems that later worked so miraculously.

It was Jim Webb who stood up to Dr. Jerome Wiesner, chief science adviser to Presidents Kennedy and Johnson, and to Dr. Wherner Von Braun, head of the Marshall Space Flight Center, to back the idea of launching a moon-landing module from a space capsule orbiting the moon.

UNITED STATES CHOSE BETTER

There is the best of reasons to believe that the Soviets went off on the wrong track and tried directly for the moon with their latest Luna, only to crash in futility almost at the moment when the American way was proving out.

This concept of "how to do it" had come from a relatively minor space technologist and was initially scorned by the senior scientists of the project who carried their objections to President Kennedy.

The supreme irony of all this is that James Webb was in effect fired by President Johnson after three astronauts died in an Apollo capsule fire.

Now that the newest astronauts are safely back on earth the effort will be to derive "lessons" from their exploit. Will the small, still voices of those who have kept the true record in mind be heard in reading those lessons.?

As I said earlier there are thousands who could be mentioned, but two Buffalo names which might well have been included in Mr. Finney's excellent commentary are Dr. Walter D. Dornberger, a former associate of Dr. von Braun, and the late Dr. Clifford D. Furnas, one-time head of Cornell Aeronautical Laboratory, one-time Assistant Secretary of Defense for Research and Development, educator, and eminent scientist.

EDUCATIONAL TRAVEL ALLOWANCES FOR OVERSEAS MILITARY DEPENDENTS

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. WILLIAM D. FORD. Mr. Speaker, today I have reintroduced a bill which would authorize an educational travel allowance for dependents of military personnel serving outside of the United States. The bill would also authorize payment for room and board expenses at Department of Defense dormitory schools and one round trip a year for Department of Defense dependents to go to the United States to obtain an undergraduate college education.

This bill was introduced as H.R. 2082 in the 90th Congress and passed the House on June 29, 1967. It was not acted upon by the Senate. However, by amendment to appropriations before the Senate, provision was made for payment of dormitory costs.

It is my feeling that payment of dormitory costs, as well as transportation costs should be provided for by a specific law so that authorizations and appropriations for such costs can be dealt with in a routine fashion on a permanent basis.

Travel allowances are necessary when there is no suitable school where parents are stationed overseas and dependents must attend the nearest Department of Defense dormitory school. Payment of dormitory costs is necessary. The fortuitous circumstances of the location of a miltary man's assignment should not deny his children access to a free public education which is available to other military and civilian Government employee dependents stationed abroad. Travel allowances for one trip stateside to attend an undergraduate college is necessary. It is not fair to make access to a college education more difficult for dependents of military stationed overseas than it is for civilian Government personnel also stationed abroad.

Certainly it must be recognized that we are not now dealing fairly with the hundreds of military dependents who are attending the same schools as civilian Government employee dependents. Travel allowances are available to the civilian dependents while military must pay for the transportation of their dependents to and from school.

The Investigating Committee of the General Committee on Labor, chaired by Mr. DENT, while making on the spot investigations of overseas schools saw this problem first hand. The committee had repeated opportunity to see situations where Department of Defense dependents and civilian Government dependents were attending the same school. These children went to the same classes and often shared the same room. However, when it came time to return to their families the civilian Government employee's dependents boarded planes to make their way home while Department of Defense families were left to get their dependents home as best they could, often driving hundreds of miles to pick up their children at school. This situation is detailed in all the reports of the Investigating Committee.

This bill would remedy an inequity by extending the benefits now available to civilian Government employees to those who are serving their country in the armed services.

SERVICEMAN ASKS CIVILIANS FOR SUPPORT OF U.S. EFFORT

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. DULSKI. Mr. Speaker, each of us in Congress receives many letters from many sources with regard to the war in Vietnam.

There are complaints from those and their families who do not want to serve their country. There are complaints from those who claim the Government is not making an honest effort toward obtaining peace. There are seemingly endless gripes.

The other day I received a letter from a serviceman in Vietnam which gives a different view of the situation than we usually hear. He has been there only 7 months, but he has seen a lot in that short time.

His letter is so interesting that I am including with my remarks the full text word for word exactly as he sent it to me:

JULY 18, 1969.

DEAR CONGRESSMAN: You will have to excuse my means of addressing you but under the circumstances I can assure you I am doing my best.

The reason I am writing to you is not to complain about my situation or ridicule the people who seemed it adviseable to send me here. I just wanted to let you know my feelings about todays unrest amoung the youth of America conserning our commintment in Viet Nam.

As far as I am concerned all this dissent and unrest amoung the people of the U.S. is ill found and a little enlightenment for them would change their point of view.

I have been here for 7 mo now, by the way, I am in the infantry, and I have yet to see a civilian killed, or a village bombed or any other of the autrocities these people get word of. The military here goes to all ends to make sure no civilians get hurt. We don't bomb villages or ravage towns.

What we do do is send in PY 50 P teams and medical teams to help these people get back on their feet. They don't want war any more than we do. Nobody wants a war and after 30 some odd years of it, it can get very tireing.

I doubt that these demonstrators know what is really going on over here. If they want to be so opinionated then why don't they come over here and stay for a year? Maybe then they will begin to realize what we are trying to accomplish if we don't stop these people here then you and I both realize, I am sure, that we will eventualy wind up with Communist putting bobby-traps on our own front lawn.

I don't condone war. I hate it. It is ugly and dirty and the worst thing that man can get himself involved in. However, we have

been left no alternative but to do what has to be done.

Maybe someday men will be able to live in peace and harmony—maybe. If these people would show some support for us rather than abuse and ridicule it would help us alot. When a G I comes home from here he doesn't expect that, but a man who has fought for his country and gone through the trials and tribulations that we have deserves more than a protest against what he jepordized his life for. Would a welcome home and a job well done be too much for a country to extend to its protector?

I am not a big patriot. As a matter of fact I have a passionate dislike for the Army. However I am not so selfish as to burn my draft card and refuse to fight for what so many good men have died for. I am proud that I am serving here, helping to stop communism as best I can.

I will close now. I just wanted to drop you a line and give you my feelings, of which I am not alone with, so that you won't walk into a session thinking you are alone in your gruesome decisions of war.

Respectfully,

——— ———.

U.S. MERCHANT MARINE

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. FEIGHAN. Mr. Speaker, our merchant marine is known as our fourth line of defense, and it has performed exemplary service whenever there has been a call to arms. Unfortunately, this important element of our defenses has been allowed to deteriorate and dwindle while the Soviet Union is placing a high priority on the building of their merchant marine. Further details on this subject are to be found in the series of three articles now appearing in the Washington Evening Star, which I commend for reading by Members of Congress. Also, I wish to add that more than a year ago the Labor-Management Committee on Maritime Affairs stated:

There is no dispute that our Merchant Marine is woefully inadequate. We are now carrying—and this is a startling figure—under 8 percent of our foreign waterborne trade. The United States has dropped to 16th in the world's shipbuilding statistics. While the world fleet increased by 61 percent in the last 15 years, America's privately owned fleet has decreased by 24.5 percent.

This deplorable condition must be corrected immediately. We must revitalize the U.S. Merchant Marine. Our national security, as well as our pressing domestic problems, characterized by the balance of payments situation, cry for action now.

The Star article follows:

U.S. MERCHANT FLEET AT LOW EBB

(By Miriam Ottenberg)

The nation's once proud merchant marine has fallen on hard times.

Maritime experts agree that unless the Nixon administration establishes a broad ship replacement program, the United States will be down to about one-third of its present thousand-ship merchant fleet in a couple of years.

Many of the Liberty and Victory ships that slid down the ways in a fantastic show of wartime mass production are still around several wars later. Right now, in fact, World War II ships make up almost two-thirds of our merchant fleet.

How much longer can these ships last? Maritime Administrator Andrew E. Gibson warns: "We are three or four years away from disaster."

And Undersecretary of Commerce Rocco C. Siciliano told a convention of that AFL–CIO Seafarers' International Union here last week: "We feel that the merchant marine has to go back up. If the merchant marine goes down any further, it will go down the drain."

For years, congressional committees have been declaring that the nation is running out of time to save the merchant marine. And for years, Congress has voted more for the merchant marine than the administration has spent. More than $101 million appropriated to replace rust buckets is still unused.

Despite repeated bipartisan demands from Capitol Hill and repeated presidential promises, the past two administrations have failed to come up with any positive program to maintain the United States as a first-rate seafaring nation.

The last such program came in the Eisenhower administration, when a building program of some 30 ships a year was projected to overcome the block obsolescence of the World War II merchant ships. Currently, that program is some 100 ships behind schedule.

The lack of a long-range program brings other grief to a troubled industry. Uncertain of how much government support to expect, shipping interests tangle in abrasive argument and labor is reluctant to make concessions for fear there won't be enough jobs to go around.

Matching this thread of self-interest are the diverse concerns of various government agencies often operating at cross-purposes in maritime affairs.

For example, under the law, half of the government's "food-for-peace" and foreign aid cargo is supposed to be carried in American ships. But shipping industry officials claim it doesn't always work out that way. They say the Agriculture Department wants the cheap rates of foreign shipping and the State Department and the Agency for International Development want to score points with foreign governments by using their ships.

Recently, the General Accounting Office told the Agriculture Department it had found that ocean transportation costs amounting to over $416,000 were paid to foreign carriers when U.S. carriers were available at the same rate.

U.S. flag ships carry only 5.6 percent of this country's total foreign trade. In sharp contrast, Soviet ships carry 50 percent of the USSR's international seaborne trade and the Soviets expect to increase this to 75 percent by 1975.

Nowhere does the absence of a program show itself more forcibly than in actual shipbuilding. Shipyards kept alive only by naval ship orders have lacked the incentive to modernize and expand. Only in very recent years have they started to improve their facilities—prompted by the conviction that a positive merchant shipbuilding program must be forthcoming. Meanwhile, foreign shipyards are booming.

More than national pride is at stake. The Navy is now seriously concerned about future sealift of supplies to armed forces in Vietnam and around the world.

FACING FACTS

Here are some of the facts facing those dealing with the problem today:

The United States has to import 66 commodities classed as strategic and critical, but it has to rely on foreign flag ships to carry 95 percent of those imports. Warns Vice Admiral L. P. Rumage, commander of the Military Sea Transportation Service: "We are a nautical dependent in an era when we should be commercially and militarily standing on our own feet."

This increased dependence on foreign flag shipping is adding to our balance of payments deficit. A maritime industry study shows that if the percentage of U.S. trade carried in American ships from 1960 to 1967 had been as high as existed before World War II (30 to 35 percent), the country would have had a positive balance of some $5 billion instead of a $23.5 billion deficit.

SOVIET GROWTH ALARMING

To many, the most disturbing aspect of the American maritime decline is the growth of the Soviet fleet. In 1950, Russia was rated 21st among maritime nations, with only 432 major merchant vessels totaling 1.8 million deadweight tons. Today, the Russians have an estimated 1,442 ships with a total of 12 million tons and by next year they hope to have 2,600 ships.

The Soviet merchant fleet also has an age advantage. Four out of five Soviet merchant ships are less than 10 years old. Four out of five U.S. ships are 20 years old or older.

Admiral Thomas H. Moorer, chief of naval operations, believes that following the Suez Canal crisis, the USSR shifted its concept of maritime strategy from a defensive to an offensive, worldwide one.

"What they are doing," Moorer says, "is using their maritime power—merchant ships, oceanographic ships, their fishing fleet—as an instrument of foreign policy."

GOODWILL AMBASSADORS

Soviet merchant seamen are specially trained to stay out of trouble and avoid notoriety in liberty ports while extolling the Soviet way of life.

Legislators like Sen. Warren G. Magnuson, D-Wash., chairman of the Senate Commerce Committee, preach the importance of American seamen as goodwill ambassadors around the world and the vital role of American ships in bringing Western ideology to developing nations.

Georgetown University's Center for Strategic and International Studies, in a recent report on Soviet sea power, noted that "in the ports of developing countries, the ships can reinforce the Soviet claims to scientific and technological supremacy and enhance the appeal of the Soviet system as the route to national development."

Along with the Soviet economic penetration of new nations, Admiral Moorer cited the intelligence-gathering potential of Soviet trawlers—"a potential which Russia exploits in many ways, including surveillance of our missile range operations and our fleet operations."

Pointing out that more than 500 ships of the American merchant fleet currently are being used to carry supplies to Vietnam and other U.S. armed forces outposts and to transport food and other aid to hungry nations, the men responsible for maintaining our logistic lifelines pose these questions:

What would we do if another Vietnam-type conflict began now, requiring another 200 to 300 ships as well as additional sealift to bolster our flanks in Europe? What will we do five or 10 years from now when none of these ships will be around?

RESERVE FLEET AT 144

Much was once made of America's reserve fleet with a grand total of more than a thousand ships. Recently, Maritime Administrator Gibson told the House Merchant Marine Committee that "the only real reserve fleet we have now, in my judgment, are those ships which have been reconditioned for the Vietnam war and are in operating status."

That, he reported, amounts to 144 ships. The average cost of putting them in operating shape for Vietnam was $700,000.

Rep. William S. Mailliard, R-Calif., ranking minority member of the committee, commenting on an estimate of 1,165 in the reserve fleet, said, "we are constantly given these over-all figures of ships in the reserve fleet and I think it gives everyone a false sense of security to seriously consider that those ships have any real value as a reserve."

More than 15 million deadweight tons of American-owned ships flying the flags of Liberia, Panama or Honduras are classified as available to the United States in an emergency, but critics question the value of this setup.

CAN ALLIES HELP?

They contend that the concept that the United States has "effective control" over those ships is a "fallacy" because they are foreign ships in foreign waters manned by foreign seamen who owe no loyalty to the United States.

Another question: How much can this nation count on the ships of its allies in situations where there are major policy differences? There have been several instances where ships of a friendly nation refused to haul cargo to Vietnam. In other cases, the issue was avoided by a sounding before the ship was actually loaded. Commented Mailliard: "Vietnam has shown us that where allies are not in sympathy with what we're doing, we can't rely on them for sealift."

In the past three years there have been some 35 studies of merchant marine, its problems and its future. Typical of the conclusions was this one from the Senate Commerce Committee: "The clear lesson gleaned from our committee's study is beyond dispute: The U.S. merchant fleet is in a critical condition, its future is in doubt and remedial action of a major nature is essential if the United States is to remain a leading seafaring nation."

NIXON'S PROMISE

Less than two months after that report was printed last year, Richard M. Nixon promised a revitalized merchant marine if he became president.

"The maritime industry of the United States has been permitted to decline to a point at which the nation's defense and economic welfare are imperiled," he warned.

Rep. Edward A. Garmatz, D-Md., chairman of the House Merchant Marine Committee, is hopeful that the administration will soon come through with the program Congress has been awaiting. "There's no question about it" Garmatz says. "It's a different climate now. We didn't get through to the last administration."

Undersecretary Siciliano, in his speech last week, promised that the program probably would go to Congress within 60 days.

THE COAST GUARD—179 YEARS YOUNG

HON. ELIGIO de la GARZA

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. DE LA GARZA. Mr. Speaker, today marks the 179th anniversary of a proud service—the U.S. Coast Guard, an administration of the Department of Transportation.

This smallest member of our Armed Forces was founded on August 4, 1790, to suppress smuggling. Today the U.S. Coast Guard is represented around the world.

Coast Guard ships are plying the waters off Vietnam in Operation Market Time. Ice breakers explore the Arctic and Antarctic. In this regard the Cutter *Northwind* will arrive at Thule, Greenland, today after transmitting the famed Northwest Passage across the top of North America, preparatory to escorting supertanker *Manhattan* through these historic waters.

This service answers some 35,000 calls for assistance each year from mariners and boaters regardless of nationality. Last year the total value of ships and aircraft including cargo they saved was estimated at more than $3.5 billion—nearly six times the Coast Guard budget.

Coast Guardsmen also maintain some 45,000 marine aids to navigation and their merchant marine safety program is one of the reasons that the American Merchant Marine has the world's best safety record.

I am well aware of the Coast Guard's fine record in my own home State of Texas where they help thousands of people in trouble every year. Their Texas based rescue helicopters and ships have been a welcome sight to many Texans needing help. It is a pleasure to recognize these gallant men on the occasion of their 179th anniversary.

QUESTIONNAIRE RESULTS 1969

HON. JERRY L. PETTIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. PETTIS. Mr. Speaker, I have recently compiled the results of my 1969 congressional questionnaire, which was sent into every home in the 33d District of California.

I found the responses to the questions very interesting and most helpful to me. The results on the question regarding the Post Office was of special interest.

Because I think my colleagues, to, will find the results both interesting and helpful, with your permission, I hereby insert the compilation of responses in this CONGRESSIONAL RECORD:

[Answers in percent]

1. Do you support the proposal to convert the Post Office into a government-owned corporation as a self-supporting operation?

Yes	77
No	16
Undecided	7

2. Do you favor dismantling the Office of Economic Opportunity and transferring its functions to various departments?

Yes	70
No	16
Undecided	14

3. Do you favor the requirement Congress voted last year that all able-bodied persons over 16 years of age, receiving welfare under the Aid to Families with Dependent Children Program, must participate in a work-training program as a condition to receiving aid?

Yes	92
No	3
Undecided	5

4. Electoral College—Do you favor: a. Abolish it and elect the president by a direct popular vote?

Yes	69
No	10
Undecided	21

b. Apportion the electoral votes of each state on the basis of the candidates vote in that state?

Yes	18
No	24
Undecided	58

c. Award electoral votes by Congressional district?

Yes	10
No	27
Undecided	63

5. Do you favor an all volunteer Armed Force?

Yes	42
No	48
Undecided	10

6. Vietnam—Do you favor:

(*a*) Renewed bombing of North Vietnam if the Paris peace talks fail?

Yes	62
No	15
Undecided	23

(*b*) A gradual withdrawal of U.S. troops regardless of the outcome of the Paris negotiations?

Yes	33
No	34
Undecided	33

(*c*) A coalition government in Saigon, including the Viet Cong?

Yes	17
No	44
Undecided	39

(*d*) An agreement between the United States and Hanoi to withdraw all outside forces and leave the fighting to the South Vietnamese?

Yes	53
No	33
Undecided	14

(*e*) Continued military aid to the Vietnamese government?

Yes	44
No	20
Undecided	36

7. Do you favor legislation limiting the number and type of questions to be asked in taking the 1970 Census?

Yes	66
No	22
Undecided	12

8. Would you favor extending the 10% Surtax if a portion of it were returned to the state and local governments?

Yes	26
No	66
Undecided	8

VILLAGE OF CHATEAUGAY, N.Y., CELEBRATES ITS CENTENNIAL YEAR

HON. ROBERT C. McEWEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. McEWEN. Mr. Speaker, during the week of August 2 through 9, 1969, Chateaugay, N.Y., will observe its 100th year of being incorporated as a village. The week-long ceremonies will be capped by a colorful parade and appropriate ceremonies marking this significant occasion on August 9.

Chateaugay is a lovely village. Located in northern New York in the St. Lawrence Valley, at the foothills of the Adirondack Mountains just a short distance from Canada, it is surrounded by much natural beauty and unlimited recreational resources for those of all ages. It was incorporated as a village by a special act of incorporation passed by the New York State legislature on May 3, 1869.

It has been blessed with a hearty, devoted, and industrious population. Chateaugay is justifiably proud of its citizens and the contributions they have made to their community, State, and Nation.

The people of Chateaugay have always sought the best education they could afford for their children, beginning with the construction of the Chateaugay Academy, which opened in 1879 and climaxed by the opening of the new Chateaugay Central School building in 1954. They are proud of this well equipped, modern building which presents a complete curriculum taught by a faculty of dedicated men and women and served by an equally dedicated staff and board of education.

The young men of the village of Chateaugay have served their country in every war since the Spanish-American War up to and including the war in South Vietnam. Many of them gave their lives in these conflicts. Chateaugay shares this grief with many other small towns across the country whose sons have paid the supreme sacrifice.

The Chateaugay Record has been the newspaper of "record" since 1878. It is faithfully read by the natives of Chateaugay, many of whom no longer reside there, but who want to be kept informed of the happenings in their home town. This weekly has reported major events in the history of the village from the fire of 1893, which destroyed nearly all of the north side of Main Street, to the coverage of the ceremonies marking this 100th anniversary including the publishing of a special centennial issue.

Chateaugay's citizens have always been a religious people. The village is presently served by Methodist, Presbyterian, and Catholic Churches, all of which have devoted pastors and congregations. These various parishes were serving their followers even before Chateaugay was incorporated as a village.

I extend to the village fathers and all the people of Chateaugay my best wishes for a joyous happy birthday and my sincerest congratulations. I also join with these wonderful and friendly people in looking toward a prosperous future for this village which has had such a notable past.

THERE'S GOT TO BE MORE TO IT THAN THAT

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. TEAGUE of Texas. Mr. Speaker, the thoughtful editorial in the August 1969 issue of Pace magazine points to our national space program as being a new departure in the evolution of mankind. The profound thought in this editorial speaks for itself and I commend it to the reading of my colleagues and the general public:

THERE'S GOT TO BE MORE TO IT THAN THAT

The going question seems to be that it's fine for a couple of guys to go up and walk around on the moon for 45 minutes, but they're three guys up there and we're six billion minus three guys down here, and many of us are sick, starving, and killing each other, and with all that money it just doesn't make sense, does it?

Well, of course, there are all the spin-offs: some (not enough!) jobs in the ghetto, technology that will revolutionize areas of life right across the board, a communications network that will pull the world together like never before, electronically at least.

Yet, somehow, if it's really worth it, there's got to be more.

Back in the 1800s Darwin shook up people considerably when he said that MAN (pompous capitals) had really evolved from various lower forms of animal life. Freud kept things going by writing that most of us lived our lives according to inherited drives and instincts lurking in the depths of a subconscious we never knew existed. Then Einstein dealt the final blow and said that matter isn't really matter but a state of energy, and vice versa, and that the really important things in the universe can't be visualized or conceived by the human mind at all, except in mathematical symbols that most people can't understand.

When it comes to things like this, there just isn't a silent majority! Critics asked Darwin why he had no faith, Freud how something so patently obvious as another level of consciousness hadn't been discovered by Aristotle (obviously a superior mind), and Einstein why his non-matter Earth didn't swallow him up on the spot.

The reason for confusion was that when a man steps into another dimension he can't be expected to defend himself within the assumptions and regulations of the dimension he has just left. Each of these men in his own way rose a step higher in perspective and each was able to see more of the mysterious interplay between inertia and initiative in life.

Space, whether we like it or not, means the introduction of Man into a new dimension.

Up until this point in history we have always lived within a closed system, on a single planet. It has been a dimension of limitation: only so much room, so many resources, so much time. This limited dimension has been the basis of our political and economic systems, and more importantly of our thinking, the basic assumptions of our lives—even our belief in what was possible and what was not.

Space means the end of limitation. As we discover means of propelling ourselves close to the speed of light, old time-limitations will vanish. The development of a self-regenerative life-support system, a "little earth" good for generations, will mean we can go as far into the universe as we want to. Even simple things like mineral resource exploitation will no longer be confined to Earth.

For the first time, limitlessness is not confined hopelessly to imagination.

In the next few years we may witness the most fundamental recasting of our attitudes toward life in the entire history of our race. For many years we've had the adequate capability to conquer war, poverty, hunger, prejudice—what we seem to have lacked is the adequate will.

This will is the biggest spin-off of the space program—something which practical men have always called intangible but which is, in reality, the most tangible imperative of our time.

It's a new dimension: we see Earth as a tiny gravitational disturbance in a limitless expanse of nothing. The perspective gives a meaning and an urgency to fine words and noble sentiments that have lost significance in the pedestrian current of history. The reach into space is nothing less than a departure point in evolution from which for the first time we can look at all the stumblings of the past and say honestly, "We can begin again."

REPRESENTATIVE McCARTHY SPEAKS ON USE OF GAS

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. CONTE. Mr. Speaker, we have all read and heard a lot about gas warfare in the past few months. I think we all owe some thanks to my distinguished colleague, the gentleman from New York (Mr. McCARTHY), for bringing this most important matter into the public light.

I joined about 100 of my colleagues in H. Res. 444 which calls upon the President to resubmit the Geneva Protocol to the Senate for ratification. This action is, of course, very long overdue.

Many of the facts and figures that have been revealed from only this year about chemical and biological warfare are simply astounding. In a speech to the Medical Committee for Human Rights-Physicians for Social Responsibility, Representative RICHARD MCCARTHY outlined very well where we are and where we are going in terms of controlling the use of gas. These remarks were made on July 18 in Boston, Mass. Because of the significance of this subject, I include these remarks in the RECORD at this time:

REMARKS OF REPRESENTATIVE RICHARD D. MCCARTHY—BOSTON, MASS., JULY 18, 1969

When I began my review of our chemical and biological warfare policies and practices last February, I found that the United States has gradually been slipping away from its traditional policy of not using these abhorrent forms of warfare. Our policy was gradually being eroded with practices that were justified with what appeared to me to be legalistic arguments based on semantics.

Part of this change in United States policy had come because of pressures from the military who were faced with a most difficult war in Vietnam. Another part came because top Administration officials had not considered the policy governing this area of warfare important enough to receive attention at the White House level. And part of the change in policy resulted from a lack of information available to the public. There was—and still is—more secrecy surrounding our practices and policies in the CBW field than in almost any other area of defense. As a result, the change was taking place without any serious opposition from the American public. A few groups—notably in the scientific field—had warned of the dangers inherent in our practices in Vietnam. A few Administration officials were fighting to stem a tide which they could not control. But Congress and the American people were not concerned about this issue.

The traditional United States policy on chemical and biological warfare is perhaps best exemplified by President Roosevelt's statement that "Use of such weapons has been outlawed by the general opinion of civilized mankind. This country has not used them. I state categorically that we shall under no circumstances resort to the use of such weapons unless they are first used by our enemies". To appreciate the change that has taken place in that policy since the late 1950's, let me review a few of the practices that we have used, weapons that we have come close to using, and policies which some of our military are urging our Government to use.

We have used tear gas as an offensive weapon on a massive scale in Vietnam. It is used to drive the enemy from bunkers and

tunnels so that they can be shot. It is used to drive the enemy into the open so that artillery shells and bombs will wound and kill him. It is applied on a massive scale to the countryside to deny the enemy the use of trails and roads.

We have used defoliants and herbicides—chemical weapons that strip the leaves off trees and brush and kill food crops on a massive scale in Vietnam.

I have been told that at least once we came very close to using biological warfare weapons against Cuba. Apparently it was only a last minute reversal that prevented the United States from being the first to use this inhuman form of warfare in modern history. I believe that the facts in this case deserve to be explored fully by the White House during its current review of CBW policy and by appropriate committees of Congress so that this can never happen again.

There has been much pressure exerted by part of the military for a change in our policy that would permit the first-use of incapacitating chemical and biological weapons. Under this policy the U.S. would be the first to use weapons such as the incapacitating gas BZ which produces an effect on a man similar to that of LSD for twelve hours. It would also allow us to use so-called incapacitating biological weapons such as Venezuelan Equine Encephalomyletis or *staphylococcus enterotoxin* to make the population of a country sick for several days while we send in our troops. I should point out that most physicians do not believe that there is such a weapon. Any disease affects different people in different ways. What may be incapacitating for one will be fatal for another. And to continue the main point, there has even been pressure to adopt a policy that would allow the first-use of lethal gas in certain cases.

In my opinion the use of tear gas as an offensive weapon in Vietnam is a clear violation of the Geneva Protocol banning first-use of gas warfare—a treaty which we stated that we fully supported in principle in the UN in 1966. I also believe that use of defoliants and herbicides is a clear violation of the spirit of the Geneva Protocol even though these chemical weapons had not been invented at the time the Protocol was first adopted. And in my opinion the United States should abandon a policy that involves the use of biological weapons and should state unequivocally that we will not be the first to use chemical warfare.

My beliefs on chemical and biological warfare policy have led me to seek ratification of the Geneva Protocol, United States support of the proposal before the Eighteen Nation Disarmament Conference now meeting in Geneva that would ban the development, production or use of biological warfare weapons, and a review of our chemical and biological warfare at the White House level and by the Congress. With these objectives in mind, I urge President Nixon to resubmit the Geneva Protocol to the United States for ratification. I also urged President Nixon to support the proposal banning biological warfare before the Geneva Eighteen Nation Disarmament Conference. And I have contacted a number of colleagues in both the House of Representatives and the Senate to urge that they support a thorough Congressional review of our CBW policies and practices.

There has been some progress towards these objectives. The following events in Congress have both educated the public on some of the issues involved and show the concern of members of Congress over the policy gap.

The Senate Foreign Relations Committee held a hearing on chemical and biological warfare. One result of this hearing was Senator Fulbright's endorsement of my proposals that the Geneva Protocol be resubmitted to the Senate. He said that he hoped that the Treaty would be resubmitted and that if it was, comprehensive hearings would be held on the subject.

The House Foreign Affairs Committee and the Senate Commerce Committee held hearings on the Army's plans for moving by rail and dumping in the Atlantic large quantities of nerve gas. These hearings led to the recommendation by a Committee of the National Academy of Science that the gas be disposed of at the arsenals rather than moving it by rail to the sea.

The House Committee on Government Operations held hearings on open-air testing of chemical and biological warfare weapons. These hearings finally brought out the full story about the nerve gas incident at Skull Valley, Utah where 6,400 sheep were killed in a test accident.

Senator Tydings has announced that he will hold hearings on the safety of open testing of nerve gas, particularly at Edgewood Arsenal which is fairly close to major East Coast cities.

The Executive Branch has also taken several important steps towards a what I hope will be a more rational CBW policy.

On June 17, 1969 President Nixon announced that he had ordered a full-scale Executive Branch review of our chemical and biological warfare policies and practices. This is the first top-level review of this policy in quite a few years. At the same time he announced that he was considering the question of resubmission of the Geneva Protocol to the Senate for ratification.

The Department of Defense accepted the National Academy of Science Committee recommendations on the disposal of gas.

President Nixon has asked the U.S. delegation at the Eighteen Nation Disarmament Conference now meeting in Geneva to work with the other nations to seek effective ways to control chemical and biological warfare weapons.

President Nixon praised the report on chemical and biological warfare issued by United Nations Secretary General U Thant in early July.

These are all steps that offer the prospects for a reaffirmation of sound and rational CBW policy.

There are, however, continued pressures to change our traditional policy governing chemical and biological warfare. The evidence of this pressure can be found in a number of instances.

First, perhaps the most disturbing example of this pressure occurred on July 3, 1969, early this month. President Nixon issued a message to the Eighteen Nation Disarmament Committee from Key Biscayne, Florida. In that statement he said that, "The specter of chemical and biological warfare arouses horror and revulsion throughout the world." I read this statement in the newspaper and was particularly pleased that President Nixon had stated, as President Coolidge, Hoover, Roosevelt, and Eisenhower had before him, the abhorrence with which the American people regard chemical and biological warfare. On July 16, 1969 I called the White House Press Office in Washington to get a copy of the text of President Nixon's message. You can imagine my surprise when the text arrived the next day with these words—"the specter of chemical and biological warfare arouses horror and revulsion throughout the world"—crossed out in black ink. I subsequently obtained a copy of the original release from Key Biscayne in which this key sentence of President Nixon's message is *not* crossed out.

My question is, who changed President Nixon's message? Was it someone else in the White House? I have heard that the strong objections of a member of the Armed Forces in Secretary Laird's office led to the change. I wonder if President Nixon approved the change of his original message.

Second, another example of the pressure for the adoption of a new policy involving the use of chemical and biological warfare weapons involved in the UN report on CBW. The representative coming from the United States appointed by Secretary General U Thant was Dr. Ivan Bennett of New York University Medical Center. Dr. Bennett was assisted by representatives from the various Executive Departments in preparing the draft of his chapter of the report. The representatives of the Defense Department supplied him with a draft of the chapter that reflected their particular policies in the chemical and biological warfare field.

The draft, for example, used the definition, "incapacitating biological agent" a term that as I mentioned before, most medical men would not accept as a valid term. The draft also included toxins produced from biological agents under the definition of chemicals, presumably so that if biological warfare is banned, the ban will not apply to toxins. Fortunately, Dr. Bennett and the other members of the UN Committee conditioned or changed these approaches—although not as much as I would prefer—before it reported to U Thant.

Third, Another example is the pressure that is now being exerted by the military in the Executive Branch review of CBW to exclude incapacitating chemical and biological agents and even in some cases lethal gas from the Geneva Protocol or any other treaty that we might sign. I believe that every effort must be made to resist this pressure. I believe that tear gas clearly falls under the ban included in the Geneva Protocol. Secretary General U Thant's report emphasized this and he recommended that all nations clearly reaffirm this point.

Tear gas deserves special mention because it poses problems for the ratification of the Geneva Protocol. The United States has been using it on a wide-scale as an offensive weapon in Vietnam. In the minds of some, this might pose an obstacle to frank discussion of the issue in Congressional hearings. Others have confused the use of tear gas in civil disturbances with the use of tear gas in war. This is a confusion that those familiar with the Geneva Protocol do not share. When the Protocol was drafted, the words "use in war" were specifically included to insure that the Protocol did not interfere with the legitimate use of tear gas to handle riots and other disturbances. The use of tear gas by civil authorities involves many considerations, but these clearly do not involve the ban included in the Geneva Protocol and should not be used as an obstacle to ratification.

Use of tear gas in combat operations in Vietnam is in my mind a violation of the Geneva Protocol. The amount of tear gas in its more modern forms, CS–1 and CS–2, that we have procured for use in Southeast Asia, 9,871,000 pounds, is enough when used with a helicopter dispenser to cover 80,000 square miles, more than the 66,000 square mile area of South Vietnam. The total amount of tear gas procured for Southeast Asia use, 13,736,000 pounds through 1969, is more than half the amount of mustard gas used by both sides in World War I.

When the use of tear gas in Vietnam was first revealed in early 1965 it aroused considerable opposition. Secretary McNamara acknowledged that three types of gas, CN, CS and DM had been used. But the use was defended as being humanitarian only. Civilians and Vietcong in caves together were gassed rather than blown up to save the lives of the civilians. Civilians used as shields by Vietcong were also gassed to make it unnecessary to hurt the innocent. These were the humanitarian examples that were cited. Presidential Press Secretary George Reedy, when asked about this, said it "was not the sort of thing" which would come up for high level approval. He said this despite a national policy which says only the President can decide to use gas.

At the policy level, Secretary Rusk said, "We do not expect that gas will be used in ordinary military operations." "The anticipation is, of course, that these weapons be used only in those situations involving riot control or situations analogous to riot control." This was subsequently repeated with

US Ambassador to the UN Nabrit's statement in 1966 that, "It would be unreasonable to contend that any rule of international law prohibits the use in combat against an enemy, *for humanitarian purposes*, of agents that Governments around the world commonly use to control riots by their own people." (My emphasis added.)

There apparently was an order issued at the top level of Government against further use of gas in Vietnam following the incident in early 1965. But in the fall of 1965 we learned that a Marine Lt. Colonel had ordered the use of gas to drive civilians and Viet Cong from a cave. Perhaps because it was a humanitarian move, this incident did not arouse the same public reaction that had occurred in the spring. At about that time, apparently the White House issued orders to the Department of Defense stating that the tear gases CS and CN could be used in Vietnam. This order was apparently given verbally because a number of people who have tried to get a copy have been unable to do so. There also is some question as to what standards were issued by the Defense Department to the field commanders in Vietnam for the use of these tear gases. I have written to Secretary Laird today asking for the directions that were issued governing use of tear gas in Vietnam.

Between the incident involving use of tear gas on a humanitarian basis in the fall of 1695, the earlier defense of use of tear gas on humanitarian grounds, and subsequent reports of use of tear gas in Vietnam, we can see how use of chemical weapons can change. In February 1966, we learned that the tear gas CS was dropped over a large area in preparation for a B–52 raid. The Defense Department said the gas was used to drive the enemy out of their bunkers so that they could be killed in the bombing. In May 1968 we learned that several tons of CS were dropped on enemy positions before beginning an infantry assault. In September 1968 we learned that CS was routinely used to drive the enemy into the open before bombing and artillery attacks. The Army Digest in November 1968 stated that "Entrenched areas that have successfully resisted both aerial and artillery fire have been reduced in an hour or two by combining the use of CS with maneuver and firepower." This can hardly be described as a humanitarian use.

Tear gas has been improved by technology. It has been made moisture proof so that it works better in Vietnam. It has been reduced in particle size so that it is much more effective. A man is immediately forced to seek fresh air. These changes amount to almost a change in type. And tons of tear gas are dumped on the Vietnamese countryside where it remains effective for some time. Enemy troops walking along paths and trails crush tear gas granules with their feet and forced to seek fresh air.

The policy implications of this use of tear gas as an offensive weapon are crucial. In using tear gas in this way we chance the possibility that the enemy will use gas. For example, Newsweek reported in its July 7, 1969 edition that a cache of nerve gas had been found in Vietnam, apparently stored by the North Vietnamese. I was gravely concerned about this and asked the editor to find out more about it. In a wire from his correspondent in Vietnam, he learned that the Green Berets that had found the cache had mistaken old tear gas in new bottles for nerve gas. Fortunately there was no escalation. But the possibility always exists.

Any use of gas poses problems of escalation. And if we authorize use of tear gas as an exception, do we have to state the chemical formula and particle size and method of delivery to insure that it is not changed into an entirely different gas. If tear gas is used as an offensive weapon—to help kill—why shouldn't other gases be used.

I believe that tear gas should be banned, as it is in the Geneva Protocol in the opinion of many countries. If the Geneva Protocol is resubmitted to the United States Senate for ratification, I strongly urge that the United States *not* attempt to exclude tear gas from the coverage of the Protocol. I believe that this would weaken the only reasonably successful arms control agreement adopted by modern man. The present Administration under President Nixon has not considered this question in the past and hence is not bound by the policies of its predecessors. I hope that they will reaffirm our traditional policy of no first-use of gas or germ warfare. And that means gas of any type.

Should the Administration believe that it is necessary to ask for an exclusion of tear gas—a step that I personally think would be wrong—I would hope that the Administration would first agree to check with the other 62 signatory nations to determine whether they would accept this exclusion. If a majority of the nations objected to the exclusion, I would hope that the Administration would abondon its attempt to obtain an exclusion for any gas.

I have discussed the problems involving tear gas at some length because, along with herbicides and defoliants, I believe they pose the most difficult problems for those considering the question of ratification of the Geneva Protocol. There are of course other problems, the pressures from the proponents of gas and germ warfare to exclude incapacitating weapons from any ban, but I believe that no Administration would seriously consider adopting a policy involving their use.

Progress has been made this year toward the adoption of a sane and rational United States policy in the chemical and biological warfare area. Almost 100 Members of the House of Representatives have joined me in sponsoring a resolution urging President Nixon to resubmit the Geneva Protocol for ratification. We are in the process of evolving what I believe can be a forward step in man's quest for a halt to inhumanity. I hope that you will join me in working toward this objective.

FLORIDA ATLANTIC UNIVERSITY: ACHIEVEMENT THROUGH LOCAL EFFORT

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. ROGERS of Florida. Mr. Speaker, Florida Atlantic University, Boca Raton, Fla., began its first classes in September of 1964 and has, in the past 5 years, established an excellent rapport with the community and has demonstrated that it has the stamina and ability to achieve academic excellence and service to others through programs established within its curriculum.

One such program was begun in the College of Education of Florida Atlantic University in 1965, less than a year after the school began its classes, to train teachers to work with disadvantaged elementary and secondary students. That program was conducted without specific funding, but was effective because of the interest and dedication of the faculty in the college of education.

Mr. Speaker, I insert at this point in the RECORD, a summary of the local effort accomplished by Florida Atlantic University since 1965 in dealing with underprivileged and disadvantaged students:

LOCAL EFFORT BY FLORIDA ATLANTIC UNIVERSITY'S COLLEGE OF EDUCATION RELATED TO GRANT REQUESTS AND PROJECTS FUNDED FROM FEDERAL SOURCES

1. In the Summer of 1965 Florida Atlantic University's College of Education requested funds for an institute to train teachers to work with disadvantaged elementary and secondary students, especially those from migrant areas near FAU. The project was not funded. However, the professional staff felt that leadership was needed in this area and the College of Education proceeded on its own initiative to conduct such an institute on a limited basis. Three courses with methodology for the disadvantaged were added to the curriculum for this institute.

The institute was successful in training 15 graduate students who did work effectively with the disadvantaged in public school programs. The success of the courses insured their retention in the curriculum. It is interesting to note that during a period of considerable national criticism about work with disadvantaged, FAU has not received any negative comment about this aspect of this training program.

2. Partially as a result of the preceding institute and also because of the continuing interest of the faculty in the training of teachers who are prepared to meet the realities of life, FAU has maintained a continuous pattern of observation and teacher aide experience during the junior undergraduate year and the senior year prior to student teaching. A large percentage of students in these field experiences are assigned to public schools with a heavy percentage of disadvantaged children enrolled. Our experience at this level is probably the most extensive of any university in the Florida System. This program was established without outside funding. It stands in marked contrast to institutions that have received reasonably large grants and some national publicity for similar programs involving fewer students than those being trained to teach the disadvantaged at Florida Atlantic University.

3. During the Summer of 1967, Florida Atlantic University conducted a program for Training of Counselors To Serve Children of Migrant Farm Laborers Through the Use of TV Taping and Other Media, funded under Title I of the Higher Education Act. It set the pattern for use of "TV Micro-Teaching" which became a regular part of our teaching training curricula. Six TV trainers are now in use for the University as a result of this experience. This method was adapted for use in the next outlined project.

4. In the summer of 1968, Florida Atlantic University conducted the Media Institute for Guided Studies Teachers, funded by title VI, B, Higher Education Act of 1965. A report of that Guided Studies Media Institute, entitled Guided Studies Program Begun for Junior College Teachers, appeared in the February 1969 issue of Junior College Journal, published by the American Association of Junior Colleges.

5. A follow-up Media Institute was proposed under EPDA for the Summer of 1969 to be conducted by Florida Atlantic University. The program was not funded. However, because of the successful 1968 Institute it was decided to repeat the program on a limited basis. Consequently, FAU invited participants only from the southeastern junior colleges. Since no funds were available for support, *all staff volunteered to handle this project on an overload assignment in order to continue to test the program initiated in 1968.* At the time of this writing, the 1969 Institute is fully underway and we have more than a dozen participants who are primarily from our surrounding junior colleges. The best techniques, including TV productions, slides, tapes, etc., which were developed in the 1968 Institute are being used.

Results: As a result of the previous programs and this present Institute, Florida Atlantic University has made a significant contribution to the education of disadvantaged youth, both black and white, in the South Florida area through the training of junior college teachers whose skills and attitudes focus on such students. This has been achieved with minimal funding, careful local planning and hard work—no riots and no protest. With adequate funding the impact of our previous effort will be made greater and will lead to real breakthroughs in teaching disadvantaged youth in junior colleges.

6. Another project which is self-explanatory is a center being developed almost entirely at the grass roots for training of teachers to work with retarded children. Some outside funding would be money well spent on this project which stands again in contrast to the usual riot act.

HON. MARIO BIAGGI

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. RODINO. Mr. Speaker, one of our ablest and most dynamic colleagues is the new Representative of New York's 24th District, the Honorable MARIO BIAGGI. Coming from a long and distinguished career as one of New York's finest, MARIO has embarked on his congressional service with the same dedication and concern for his fellow man that made his prior record so noteworthy.

I am pleased to call to the attention of the House the following article which appeared in January in the New York Sunday News, and I know that MARIO BIAGGI will continue to merit the esteem and admiration of his constituents and his fellow Members.

The article follows:

[From the New York Sunday News, Jan. 19, 1969]

FORMER COP HERO PROMISES ACTION AS CONGRESSMAN FROM BRONX 24TH CONGRESSIONAL DISTRICT

(By Bert Shanas)

He shot a man dead who pulled an ice pick on him.

He was dragged 60 feet over hard pavement while trying to stop a runaway horse.

He chose to shoot it out with an ex-con who was holding a gun to his head.

But last week, retired hero cop Mario Biaggi, said his "stomach was doing flip-flops on the day he was sworn into Congress." Speaking in New York after his first week as Representative of the 24th CD in the Northeast Bronx, the 51-year-old Congressman vowed to be "as strong a fighter in Congress as I was as a policeman."

Biaggi, the first New York policeman ever to serve in Congress, said that as an ex-cop he would have a keen insight into the needs of the people, since he had spent so much time on the streets with them.

"I'm a fighting policeman and I'll always be a fighter—even in Congress," said the freshman politico. "I know seniority is important, but I'm not the type to remain quiet. If something needs saying, I'll say it. And I've discovered if you say something worth hearing, other Congressmen will listen."

After 23 years on the police force, the ex-lieutenant feels that he has "something to say."

Among his major concerns in the 91st Congress will be the city's law and order and welfare problems.

He said the 24th CD includes people from several socio-economic and philosophic levels. There will be minority and middle class groups, with a heavy sprinkling of small homeowners and businessmen among his constituents. Biaggi says the problems of his Bronx district are really the problems of the whole city: "To help the 24th is to help New York.

"More and more the people are coming to their congressmen with problems the city administration can't handle. So I find I'm really a spokesman for the city in Congress.

"Let's face it, the people made law and order an issue, I didn't. But I was talking law and order when it wasn't popular—25 years ago. And I know law and order in only one way, as a professional policeman. If you're right, you're right, and I don't care if you're white, pink or black."

He said Mayor Lindsay was the "architect of chaos in the streets," and that Lindsay "is ruining the police department because he won't leave it alone," to do the job it's supposed to do.

Biaggi admitted he had seen cases of police brutality. He said he realizes it exists, but it's better to remove the offenders, while supporting the police, than to knock down the whole police system.

As a Congressman, Biaggi said, he would be in a good position to support the police by trying to raise funds for more men, better equipment and a harder fight against narcotics, which are responsible for 50% of the city's crimes.

Charging the people of New York have been "hoodwinked" into thinking they are getting protection they're actually not getting, owing to shortages of men and equipment, Biaggi said he would use his new office to pressure "police administrators."

Biaggi walked away with the election last November, defeating his Republican and Liberal opponents for the $30,000 a year post by better than 2 to 1. Along the way he picked up the support of the Conservative Party. It was the first time Bronx Conservatives had ever backed a Democrat.

A key issue in his campaign was the welfare problem—principally because conservative homeowners in the 24th were beginning to complain about the welfare burden.

Now that the election's over, Biaggi has vowed to carry the fight into the House of Representatives.

"The purpose of Welfare is to help people in need, and I'm for that," said Biaggi. "But I won't tolerate frauds and undeserving people getting welfare."

While insisting he isn't married to any one answer at this time, he does suggest federal takeover as a possible solution. "The least we should have is more federal investigations and guidelines where federal money is involved," he says.

Among the other ideas on the welfare problem that will go to Washington with Biaggi are centers to watch children while mothers work. He would also deny welfare aid to anyone who can work but refuses to, regardless of the job.

Although his proposals sometimes sound hard to the more "liberal" politicians, Biaggi says he knows what it's like to be a member of a minority group, to be poor and even "to be bounced around by the police."

Born in Harlem and raised there during the Depression, he remembers being forced to "move on" by policemen just because he was standing around with a bunch of friends.

"Where was I supposed to go?" he now asks himself.

One of three sons of a marble setter who couldn't find work, Biaggi shined shoes after school, carried packages, or helped his mother clean offices for $8 a week.

After graduation from Haaren High School in Manhattan, he took a job as a Harlem letter carrier with the Post Office, but decided "there were things going on that I didn't know about, and the way to find out what they were was to become a cop."

In 1942 he took the police exam, placing 174th out of 20,000. That began a career that comes close to matching Dick Tracy's for color. Wounded 11 times in the course of duty, Biaggi holds 28 department awards and THE NEWS Hero of the month Award, and is the only cop in the state to be selected to the National Police Hall of Fame.

When he retired from the police force, Biaggi entered New York Law School. He became a lawyer without previous college training. The American Bar Association passed a special resolution, waiving the undergraduate requirement in his case.

Biaggi has only one regret about being a Congressman. He won't see his wife, Marie, and three children as often as he'd like. They're remaining at the family's Mosholu Parkway, apartment while he lives in Washington. (A fourth child is a nurse in Puerto Rico.)

But Biaggi gets home on weekends and other odd times. He can still be seen Saturday and Sunday morning, jogging or bicycling through the Mosholu area, trying to stay in shape.

"One real problem of being a Congressman is with all those meetings, you sit too much," he said.

In spite of his criticism of the present city administration, Biaggi maintains New York is still governable, but won't say if he thinks he's the man who can get the top job some day.

Running his fingers through his thick, black hair, Biaggi commented that "almost everyone in politics thinks of New York City."

POPULATION GROWTH AND ITS FUTURE SOCIAL CONSEQUENCES

HON. GEORGE BUSH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. BUSH. Mr. Speaker, the House Republican task force on earth resources and population, of which I am chairman, is continuing its efforts to learn what is going on in Government and private organization to combat our pressing population growth and its future social consequences, as well as the rapid utilization of our resources and our concern for an environment of quality.

I offer for the RECORD the highlights of our most recent hearings:

HEARING HIGHLIGHTS, THURSDAY, JULY 24, 1969—POPULATION REFERENCE BUREAU

Dr. William Moran, President, Population Reference Bureau. Members Present: Bush, Horton, McCloskey, Pollock, Smith, Taft, Wold. Staff From: Vander Jagt.

Dr. Moran, President of the Population Reference Bureau expressed considerable concern over projected resource consumption rates. In 1900 the United States used 40.9 billion gallons of water. In 1960 that amount had increased to 322 billion gallons of water annually. Furthermore, these growing consumption rates apply to almost all of our resources.

One of the major problems the United States has in resource management is atti-

tudinal. Dr. Moran feels that we have adopted a "frontiersman" attitude and seem to believe that there will always be new resources available. The fact is that we are already failing to replenish some of our most essential resources. For instance, in the Southwestern United States we are tapping fossil water, or water left from the last ice age.

In this country today we produce only 60% of the oxygen we consume. We have introduced into our atmosphere more carbon dioxide than our plants can absorb and convert to meet our oxygen requirements.

We have in the United States, 6% of the world's population, but we are presently using ¼ to ½ of the world's resources. If the world is to someday manage its resources better, the U.S. must assume an important leadership role.

Dr. Moran believes that our efforts should be spent convincing young couples that their family will be happier and that their children will have a better chance for an education if family planning is practiced. Finding a way to convince and motivate the general public should be our first priority.

The Population Reference Bureau concentrates a great deal of its resources in both Latin and South America. Dr. Moran explained that the influence Catholicism has over national family planning programs varies with each country. Nationalism in countries like Brazil also limits the extent to which family planning services may be introduced. Brazil allows only 15% of those women who are considered fertile to receive any family planning services or information.

HEARING HIGHLIGHTS, TUESDAY, JULY 29, 1969, FORD FOUNDATION

Mr. Oscar Harkavy, Program Officer in Charge.

Members Present: Bush, McCloskey, Mosher, Wold.

Staff From: Anderson, Taft, Vander Jagt.

Current research in reproductive biology has given us many new ideas as to how the fertility cycle can be controlled. Mr. Harkavy explained that if mankind hopes to some day control the world's population, we must continue to develop new methods of contraception and to extensively examine these new research areas. $30 million will be spent this year on specific contraceptive research. Mr. Harkavy stated that we should increase these efforts to a $150 million level of expenditure over the next several years.

The population explosion is commonly recognized as one of the most serious problems now facing the nation and the world. Mr. Harkavy suggested, therefore, that we more adequately fund population research. It seems inconsistent that cancer research funds total $250–275 million annually, more than 8 times the amount spent on reproductive biology research.

Mr. Harkavy explained that finding solutions to the population problem is a long-term project. Grants given on an annual basis allow only short-term research plans. If these grants were distributed over a period of there years, it would be possible to thoroughly staff the projects and to plan the necessary long-term research programs.

Mr. Harkavy stated that often U.S. motives are questioned when foreign countries receive AID funds for family planning. It does not seem to matter how humanitarian our own motives may be. Mr. Harkavy agreed with the Presidential statement emphasizing the importance of unilateral funding through the United Nations.

By the year 2000, experts have predicted that we will have a population of 7 billion. Even more astounding is the fact that by 2025 that figure will have doubled to 14 billion.

HEARING HIGHLIGHTS, THURSDAY, JULY 31, 1969, NATIONAL SCIENCE FOUNDATION

Dr. William D. McElroy, Director; Dr. Louis Levin, Executive Associate Director.

Members Present: Bush, Fulton, Horton, Mosher, Pettis, Pollock, Ruppe, Wold.

Staff From: McCloskey, Taft, Vander Jagt.

Dr. McElroy explained that in order to return an ecological system to its original condition, the ecologist must enlist the assistance of experts in almost every science. No mechanism presently exists to coordinate these individual efforts. The National Science Foundation is funding an ecological analysis project in Jamaica which involves a complete examination of the food chain in bays and estuaries. It is hoped that from this study scientists will learn more about how to manage estuary resources.

Scientists are now learning to use waste heat from energy plants to actually improve ecological systems. Organisms have a faster growth rate in warm weather, and if properly planned, an energy plant can actually speed the recovery process of a polluted area.

Dr. McElroy suggested that family planning projects rely more heavily upon paramedical personnel, particularly in foreign countries. In India an expenditure of $700 million to train midwives and to make family planning services available would result in the direct contact of 25 million Indian women. Dr. McElroy considers this personal contact during periods of pregnancy to be vastly more effective than national information programs.

One of the crises the world will face as a result of present population growth rate is that assuming the world population increases 2% annually, urban population will increase by 6% and ghetto population will increase by 12%.

Dr. McElroy acknowledged the national population problem but urged that we not forget our neighbors. In a country like Jamaica which is "heading for trouble" in terms of population and available living space, Dr. McElroy feels that a modest investment of $2 million would significantly affect the future of Jamaica.

GUARANTEED ANNUAL INCOME

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. RYAN. Mr. Speaker, in the 90th Congress, I introduced the first legislation to provide for a guaranteed annual income—the Income Maintenance Act. On the opening day of the 91st Congress, I again introduced it as H.R. 586.

The Income Maintenance Act is designed to replace the existing welfare system with a program of income maintenance. The concept of income maintenance, which has been extensively debated, in broad outline means providing to people who have no income a minimum level of assistance, and reducing that assistance as they increase their income. Under H.R. 586, assistance is reduced by 50 cents for every dollar the recipient earns.

The plan is thus aimed at closing the poverty gap in the most direct and efficient way—by providing benefits as a matter of right, payable upon simple application, similar to application for social security benefits. At the same time, recipients are provided with a financial incentive to seek employment.

Our Nation's finest economists, sociologists, and experts on public welfare have endorsed this concept. Well-informed public discussion of income maintenance is increasing, as the American people, rich and poor alike, seek alternatives to the present welfare system. A vital contribution to this discussion has been made by Paul A. Samuelson, of MIT, in his article, "Lifting the Curse of the Poor," which appeared in Think magazine, published by IBM. It provides an excellent summary of the concept of income maintenance and of several proposals to implement the concept.

I include the article at this point in the RECORD, and I urge my colleagues to give it their attention:

LIFTING THE CURSE OF THE POOR

Just prior to his assassination, President Kennedy received a memorandum from Robert J. Lampman who was on leave from the University of Wisconsin serving a tour of duty on the New Frontier. Dr. Lampman was well known among professional economists as one of the best-informed experts on problems connected with the distribution of wealth and income in the United States.

In his 1963 memorandum, he pointed out that our high employment and vigorous economic growth served to emphasize, by contrast, the problems of poverty in America. President Kennedy was much impressed by Lampman's sober recital: Human suffering in Appalachia and in city ghettos were mere dramatizations of the continuing inequalities of income distribution and economic opportunity reported by the Census and other objective surveys.

Although the American per capita national income far exceeds, in real terms, that reported by any other nation, it is still true that children and grownups go to bed hungry at night. If, in the words of Hobbes, American life cannot be called "nasty, brutish, and short," any insurance company actuary can testify that malnutrition still figures as an important factor in premature death; and although the U.S. standard of living tops the list of major industrial nations, students of vital statistics have long known that America does not rank even in the top 10 where low infant mortality is concerned.

One of the decisions made by President Kennedy before his Dallas trip was to launch the War on Poverty. One of the first successful programs of the new President, Lyndon B. Johnson, was to implement that commitment by recommending the creation of the Office of Economic Opportunity and the spending of billions of dollars by the Federal Government to fight poverty.

At about the same time, a number of economists began independently to explore quite a different approach—under the general name of "a Negative Income Tax." And as the years since 1964 revealed a number of difficulties with parts of the poverty program, additional support among economists has been recruited for the new approach. By the summer of 1968, what had begun as an academic possibility began to take on the dimensions of a feasible new social program.

BIPARTISAN SUPPORT

Specifically, late in May more than 1,200 economists from more than 150 colleges and universities signed a public petition calling upon the nation to take this next step forward on the agenda of progress. Considerable bipartisan support was developed: Republican Congressman Melvin Laird of Wisconsin has introduced such a bill; Democratic Congressman William Ryan of New York has introduced a similar bill. Most of the

leading candidates for the presidency have expressed favorable interest in income maintenance programs of this kind. Such business leaders as Joseph Wilson of Xerox and Arjay Miller of Ford endorsed this new approach at a conference called by Governor Rockefeller.

What exactly is the negative income tax?

Everyone understands the positive graduated income tax: when a family reports its income it must, according to a formula that depends on family size (exemptions), pay a positive tax geared to the level of its income. Those with very low income are not, under the present system, subject to tax. Indeed, their tax exemptions of $600 per person are completely wasted. Under the negative tax, no matter what your income is, it would be reported along with family size. If income is below some defined poverty line, instead of paying a positive tax a family automatically receives as a matter of right a nationally uniform income supplement. The size of this payment, and this is a crucial feature of the program, is geared to the level of family earnings in such a way as to give everyone a definite incentive to increase his private earnings.

Thus, in one of the possible variants of the plan, a family of four with no earnings at all might automatically receive from the government a $1,500 payment. If by its own initiative it raises its earnings from zero up to $1,000 instead of having all of that taken away from it, as under present welfare assistance or under proposals to guarantee everybody a $3,000 income whatever he does, the family would be permitted under the negative income tax to keep, say, 50 percent of its extra earnings. The other 50 percent goes to the government to reduce its supplementary payment by $500. The same would be true if it earned a second $1,000 of income: the formula is always arranged to provide an incentive for the poor to cure their own poverty.

ALL THE VIRTUES

If, perhaps, through successful manpower retaining programs, the family is able by its own efforts to move out of poverty completely, the negative income tax will change over smoothly into a positive income tax. It should be noted that the payments given here for a family of four would have to be raised in cases where the couple had more than two children; and for single-individual families the formula would show a lower schedule of payments. This demonstrates that the negative income tax has all the virtues of a children's allowance program, plus the virtue of recognizing that adults are not able, in many cases, to escape the blight of poverty.

I have given, purely as an example, one possible schedule of payments that could be feasible for a program beginning in the next year or two. Some experts would favor a more generous schedule. As in the case of Social Security. If the new program turned out to work well in practice, one could expect its scope and coverage to expand with the passing years.

How much would a modest initial program cost?

Could our Gross National Product and fiscal system stand this cost?

Professor Lampman has estimated the price tag such a program to be about $7½ billion gross. But he also estimates that it would save about $2½ billion on present welfare assistance. Hence, the net cost would be about $5 billion. With the Gross National Product currently running at an $850 billion annual rate and the consolidated federal budget running at $180 billion annual rate, an extra $5 billion for a new vital program is hardly beyond the fiscal capacity of an affluent society. Many experts would argue that we can already afford a program of this kind that costs several times as much, if we have the will to pay for it.

In this connection it is worth emphasizing that our international balance of payments deficit is one of the most important constraints upon our present-day economy. Any of the extra billions of dollars spent in our urban and rural areas for income maintenance go almost completely for home-produced products; and those are in marked contrast to an equivalent number of extra billion spent on Vietnam or other offshore security programs, and which do seriously impinge on our deteriorating trade deficit.

Let me now review the merits and demerits of this new program. First, the merits. The great advantage to this new plan is that it cuts through a mass of heterogeneous local and state administrative devices to strike at the heart of the problem on poverty. F. Scott Fitzgerald is supposed to have said to Ernest Hemingway, "Ernest, you know the rich are different from us." To which Hemingway replied, "Yes, they have more money than we do." The curse of the poor is literally their poverty. Give them more income, and not only they but their progeny as well can break through the vicious circle. In a society devoted to personal freedom and the dignity of the individual, much can be said for more income in the form of abstract purchasing power, without a demeaning ritual for the people getting it. We know from experience with the Internal Revenue Service and the Social Security System that such even-handed programs are comparatively easy to administer. (Needless to say, this does not rule out the provision of certain social services *in kind*—as, for example, subsidized public hospitals and clinics, or even family counseling by social service workers. Nor should we be so naive as to expect that there will be no wasteful and misguided expenditure of income supplements by some of the recipients.)

MORE THAN A HANDOUT

Second, in our cultural traditions income has tended to be associated with work and effort. We are all taught in school the words of Captain John Smith to the Virginia Colony, "He who does not work shall not eat." Still, 17th century mottoes will not dispose of 20th century problems. One of the beauties of the negative income tax is precisely that it combines humanity with incentives. It does not merely provide a handout to ameliorate poverty, but, in contrast to alternative programs soon to be discussed, it conduces toward the ending of that poverty. Just as people soon become accustomed to an existing tax schedule or to the dividends from inherited wealth, people in a mixed society will soon come to take for granted their rights in an established system of income supplements.

Third, the negative income tax dovetails well with complementary programs. It is not at all competitive with labor manpower programs designed to qualify the unemployed for the new kinds of jobs becoming available in our evolving society. It integrates beautifully with our old-age system of pensions provided by private and public agencies; a significant number of the poor people are elderly.

Now let us consider the demerits of the plan.

First, "negative income tax" is a very bad name. Obviously it has a negative ring. Perhaps a better name would be "Incentive Income Supplement" or "Incentive Payment Plan." They not only sound better, but are more accurate.

Second, there is definitely a problem of achieving consensus on any measure that gives people any kind of income they do not have to "work" for. In a recent Gallup poll, for example, a majority could not be mustered for a "guaranteed income" proposal. There was, however, more than a majority in favor of "guaranteed jobs for all." Not only do many in the affluent class resent the subsidization of idleness, but so also do many members of the lower middle class who have pulled themselves by painful effort out of poverty. If, therefore, it were really feasible to choose between (1) an effective government program that could provide useful employment and (2) a negative income tax payable to able-bodied persons, few would prefer the latter. However, I do not see this as a matter of mutually exclusive choice. There are grave doubts, upon which I cannot elaborate here, that the government can serve effectively as an employer of last resort. In any case, if these doubts were resolved, it would be quite possible to integrate a guaranteed-job program with a negative-tax program.

Third, the negative income tax would call for a monthly reckoning, since the poor would need monthly payments (in contrast and in addition to our system of quarterly or yearly tax collections).

Fourth, it would be somewhat complex to determine the amount of money for each family. And add to this the handling of modifications incurred by job loss or change, pay raises, more children being born.

Consider another problem that might not at first glance seem to be closely related to the negative income tax, namely government aids to agriculture. Our farm price-support programs are costly and yet too often they accomplish little toward their ultimate goal of succoring human need. According to a recent poll of economists, more than 95 percent disapprove of these programs. Marginal farm families—those whom our agricultural problems ostensibly were designed most to aid, but who in fact receive relatively little—would benefit enormously from the negative income tax system. If such a system were provided for them, many economists would, in good conscience, recommend that billions of dollars be lopped off existing agricultural aid programs.

WHAT POLITICAL THINKERS PROPOSE

To appraise the worth of the plan for incentive income supplements, let me compare it with some alternative proposals.

Michael Harrington and a considerable number of political thinkers have advocated an outright guaranteed minimum income for all. Thus, if the poverty line in 1968 is drawn at an income level of $3,000 for a family of four, they advocate guaranteeing that whole amount to every such family. In my judgment, such a program would be costly. Referring once again to Dr. Lampman's estimates, the net cost of an outright minimum income guarantee would probably run in the neighborhood of $28 billion. At least $10 billion of this would be required to fill the gap between what people now earn and the minimum. But that is not even half the story. An outright guarantee plan would have powerful adverse effects. Why? The majority of the families defined as poor are actually headed by wage earners, albeit their income levels are inadequate. An outright guarantee in effect places them in a marginal tax bracket of 100 percent. Why should a person earn extra income, or even his existing income, if every dollar he brings in automatically subtracts a dollar from his government supplement? Alleviating poverty by this plan has the unfortunate effect of perpetuating the evil.

This brings us to the present system of welfare assistance. Some proponents of the negative income tax favor this device as a complete substitute for existing relief measures. I do not go so far: for a long time to come we shall need such programs. But much of their cost could be reduced and, what is more important, much of their evil. In the words of Professor James Tobin of Yale, "The present welfare system is a disaster." It is uneven. New York pays five times as much to each poor family as Mis-

sissippi, and there is no comparable difference in the purchasing power of money. Too often, existing welfare programs humiliate those in need and kill off their incentives. When the breadwinner in a family accepts a temporary job involving a few hundred dollars, he runs the risk of jeopardizing his eligibility for relief and sacrificing financial aids running into thousands of dollars. In 28 of our states the regulations are so perverted as to give the husband a financial incentive to leave home—as the best financial boon he can bestow upon his family.

Some experts, as for example Daniel P. Moynihan, advocate a children's allowance program rather than incentive income maintenance programs. A Moynihan program that pays $8 to $12 per month per child to rich and poor alike can be very costly and yet makes scarcely a dent on poverty. Moreover, a negative income tax formula which includes family size as one of its variables is in the truest sense a family allowance system, even though not merely a children's allowance system. And it has the great advantage of not giving to the affluent what they do not need, and of not having to tax back from such affluent families what has been indiscriminately handed to them.

CARICATURES FROM THE THIRTIES

Finally, some social observers have discounted the merits of income maintenance plans, preferring rather to espouse programs that guarantee jobs for all. Full employment, I would agree, is indeed a basic social goal. And structural unemployment, particularly in connection with the woefully high rates prevailing among unskilled white and nonwhite youths is a problem that does demand vigorous federal action. However, I do not see why incentive income supplements should be regarded as competitive with Job Corps and other manpower programs. And I am not yet ready to throw in the sponge and despair that structural unemployment is an incurable American disease. I can understand and sympathize with the recommendation made by the 1966 U.S. Commission on Technology, Automation, and Economic Progress, which advocated that the Government become, if necessary, the employer of last resort. Yet it is not an easy task for any agency, public or private, to find useful work to be performed by that part of the labor force which has the least amount of skills and habits of work. A makework program, reminiscent of some of the caricatures of the WPA programs of the 1930s, could involve formidable problems of organization and morale. Yes, it is better for a man to earn an income at a useful task than to receive a handout. But assembling numbers of people to make them go through a ritual work they themselves can see to be a mockery of useful effort, could be worse for morale than an even-handed system of income supplements. Even if my apprehensions are unfounded, there is no necessity to regard the choice between the negative income tax and employment programs as an either/or choice among mutually incompatible alternatives.

I have tried to set forth the main outlines of an approach to poverty that is new to the American system. Since the approach is new, discussion should not freeze around one hard and fast detailed plan. (Actually, a well planned experiment is now being undertaken in New Jersey by the Institute for Research on Poverty, to test the empirical effects upon work incentives of various formula plans—with incentive factors varying between 30 and 70 percent.)

However, in my judgment, the time is ripe for national consideration of, and debate on what the economic historian of the future may perhaps record as one of the significant social inventions of the last third of the 20th century.

FUTURE AGRICULTURAL POLICY

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. TEAGUE of Texas. Mr. Speaker, the Secretary of Agriculture has been holding hearings over the country to obtain the viewpoint of agriculture interests and in this connection Mr. Peter E. Marble, a rancher from Nevada, who is a regional vice president of the American National Cattlemen's Association, made a presentation which I believe will be of general interest to the Members of the House. Mr. Marble has pointed out that 50 percent of U.S. agriculture income is derived through meat production. This important segment of agriculture is not subsidized. Cattlemen are receiving about the same for their products that they received 20 years ago, while consumer per capita income is up 150 percent since 1951. Mr. Marble warns of the disaster that will result if the administration embarks on a massive land retirement program and permits the retired cropland to be converted to beef production. The text of Mr. Marble's statement follows:

FUTURE AGRICULTURAL POLICY

Mr. Secretary, I appear before you in behalf of the beef cattle producer and feeder interests, organizations and industry of the far west. While I cannot, nor do I presume to, speak for every individual or each organization, I am sure the majority of livestock producers generally if not specifically agree with what I will have to say today. With respect to future agricultural policy of the United States, I wish to make it crystal clear that in general we actively and aggressively support a policy of free private enterprise in American agriculture. To be very clear about this we do not favor or believe in Federal regulatory, price supporting, production limiting programs.

Now to back up a moment, the Far West Beef Industry supports the policy statement presented by Bill House, ANCA President, presented to you in Lincoln on April 12. I do not wish to repeat him, but would underscore the following:

A. The beef industry-producing over 20% and the meat industry over 50% of the total U.S. Agricultural income represent by far the largest land users and producers on the American Scene.

B. The prosperity of U.S. animal-livestock agriculture is the key to total U.S. farm and crop prosperity.

C. Export of U.S. beef and all other agricultural commodities must be developed on a truly *reciprocal* basis with dumping or glutting restrictions in any market—foreign or domestic.

D. We are unalterably opposed to the government payment of any kind for grazing or production of beef. I refer especially here to the increasingly frequent suggestion of permitting grazing on retired or deferred acreages. Such would be simply another act of robbing Peter to pay Paul. This is not to say we oppose retirement of crop land per se although many of our livestock producers would argue strongly for the curtailment of subsidy to anyone at any time—and certainly the history of payment-retirement-production control is repeated failure. If land retirement is politically necessary then we *strongly, unequivocally* recommend that all payments, controls and obligations of the Federal Government cease when and if a land owner elects to use the land in any way for livestock.

Now for a minute let me recommend certain specific policy action.

1. The U.S.D.A. should assist in the developent of a quasi-government private beef industry board for the limited but specific purpose of developing export markets for U.S. beef and greater foreign consumption of beef—all beef—particularly U.S., but also foreign. Generally, the program should be financed and controlled by existing U.S. state and national beef promotion groups in proportion to their individual financial support with these funds being matched by the Federal Government—perhaps somewhat logically—out of collections levied against tariffs on imports.

2. The U.S.D.A. should select responsible, *full time* operator ranchers and farmers (producers) to meet and deliberate quietly and without publicity in the formulating of future Agricultural Policy. These men should be *representatives* of national commodity organizations in *proportion* to the gross dollar value of the major commodities to the U.S. total. Specifically those commodity groups such as livestock, tree and row crops, and the other free market, unsupported commodities, which represent the great majority of U.S. agricultural production, should have an appropriately weighted influence in the ultimate determination of "Production" Policy. It's time for the tail to cease wagging the dog. While there may well be merit and justification for field sampling of individual opinion as is being done today, the vast majority of Western agricultural producers of any commodity are very ably represented in person and in policy development through their existing grower organizations, such as the cattlemen's and feeder groups or Farm Bureau in the case of beef production.

3. A minute ago I referred to Agricultural "Production" Policy—My personal feeling is that the U.S.D.A. should in the future limit its activities to the maximum or optimum servicing of agricultural producers, processors and facilities, including inspection, research, standardization, etc. (regulations) for the benefit of consumers but as distinct from direct consumer servicing and welfare.

Specifically of late there has been much ado concerning U.S.D.A. hunger, malnutrition, poverty programing. In recent years there has been an increasing trend to encourage urban oriented programing through the extension service and the like. No doubt such programing will at least temporarily draw greater popular and political support to U.S.D.A. and farmers. Nevertheless, recognizing that the industry of agriculture is still the largest in the U.S. and promises forever to be vastly important as an economic if not political entity, it deserves undivided, undiluted attention. This is not to say the agriculturalist does not have great concern, great empathy, a great desire to eliminate the problems of human need and deprivation wherever it exists. It is to say that most deprivation and consumer-agricultural deficiencies in the U.S. relate principally to inadequacies in consumer job, education, earning and living deficiencies which as far as the Federal Government is concerned are already served or should be better served through other departments specifically created to represent these needs, i.e. H.E.W., Labor, etc.

4. Future policy with respect to usage of Federal lands for any purpose, but especially grazing, should forthrightly recognize continued multiple usage, development and sale when appropriate. The Federal Government should quit trying to make goats out of western users—whether they be skiers, grazers, sportsmen, or whoever—the government should stop trying to make the very last nickle off the Federal lands and instead

vigorously promote the kind of resource development—through private capital—that has occurred almost without exception wherever private agriculture is to be found throughout the U.S.

As is not so well known, about one half of the land area west of the Rockies continues in federal ownership. An equivalent of about a third on the continental U.S. belongs to the Federal Government. In the wake of disastrous slum, poverty and other dislocations emanating from fantastic population growth in the West, in the great eastern metropolitan centers, etc. better Federal land resource utilization is needed. For instance why not exchange through sale some of the relatively unproductive, recreationless western federal lands for areas closer and more useful to the large population centers of the east and elsewhere.

5. The U.S.D.A. should vigorously support the tax proposals of the National Livestock Tax Committee. Livestock operators are concerned about abuse and weakening of the industry by investors attracted solely by so-called tax advantages. It is for this reason the "Tax Committee" has proposed changes. On the other hand every evidence indicates that 1) agricultural investment for purposes of tax escapement is not only used most unsuccessfully but is insignificant in the aggregate and 2) motivated principally because of confiscatory unrealistic income tax rates affecting earners and investors outside of agriculture. Otherwise and generally there is no justification for not according agriculture the same tax treatment accorded others. The U.S.D.A. should speak up for and in behalf of the livestock industry in this matter.

6. In closing it is suggested that the most direct, responsible, correct solution to elimination of production control and payments programing is to buy these allotment, quota, payment, etc. entitlements back at full current market value and be done with it.

Next for the record—I should like to offer some background information on Livestock and Agricultural conditions generally—

FACTS BEARING ON BEEF AND MEAT PRODUCTION IN NEVADA, UTAH, ARIZONA, AND CALIFORNIA—1948–68 AND CONTINENTAL UNITED STATES

(A) Four state production of cattle and calves more than doubled, sheep and lamb production down 13% and swine production more than cut in half. For the 48 states, the production of cattle and calves has about doubled; the price of cattle has increased only 5% and calves 13%, which results in cash receipts only slightly more than doubled. The production of the other two species has been cut 20%. *The total red meat production* in the 48 states during 1948 to 1968 period has *increased 55%* with the *cash receipts* for the 20-year period up *65%*.

(B) Four state crop production of wheat, barley, grain sorghums and cotton has increased 75% with a 35% increase in value of production. For the 48 states, *production* of the above *supported commodities* is *up 47%*, while the *value* of production is down *18%*.

(C) Four state government subsidy payments (1967) equaled 3.3% of total farm marketing receipts. Forty-eight state payments equaled 6.3%.

(D) 1967 PRODUCTION VALUE

[Dollar amounts in millions]

	4-State		United States	
	Amount	Percent of total	Amount	Percent of total
All commodities	$4,654	100.0	$42,788	100
Livestock and products	1,978	42.5	24,405	57
Crops	2,676	57.5	18,383	43

[Dollar amounts in millions]

(E)	1947	1967
Realizing U.S. net income	$17,114	$14,241
Purchasing power of above income	$20,619	$12,603
Farm disposable income as percent of total	11.8	4
Personal disposable income of farm population	$22,257	$22,037
Per capita farm disposable income as percent of nonfarm disposable income (1955 48.2 percent)	61.1	73.2
Cash market value of livestock and products	$16,527	$24,405
Cash market value of cattle and calves	$4,967	$10,551
Cash market value of crops	$13,093	$18,383
Cash market value of feed crops	$2,265	$4,306
Cash market value of oil crops	$917	$2,773
Total U.S. farm production expense	$16,995	$34,525
Total U.S. gross farm income	$32,072	$46,385
Government payments by program:		
ACP	$277	$225
Great Plains		12
Soil Bank		29
Sugar Act	37	70
Wool		29
Feed grain		865
Wheat		731
Cotton		932
Subtotal		2,528
Crop land adjustment		85
Total	314	3,079

(F) The impact of the foregoing figures is this:

(1) All agriculture for the past 20 years has been under a terrific price squeeze. Livestock and other unsupported commodities have weathered this critical period in better shape than governmentally controlled, subsidized production of some crops.

(2) Beef producers, ranchers and feeders, and the *80 percent plus* of U.S. agricultural production that operates on the basis of *free-private* enterprise has in effect been *subsidizing* the American consumer by supplying an ever-increasing supply of improved products at less than cost. How has this happened? In the case of beef producers their production for 20 years has consistently out-run demand by just enough to keep a lid on prices. Beef production has increased at the rate of about 4% a year while the population was only growing at a 2% rate. At the beginning of the 50's every man, woman and child ate about 50 pounds of beef a year. Today consumption has doubled to over 100 pounds per capita. And with the production increase has come great, almost fantastic improvements in quality, grade, production and servicing. Fortunately, perhaps, the value of land and production facilities has more than doubled during this period, in sympathy with the unfortunate inflationary trend of the period. This has enabled free agriculture and beef producers particularly to borrow increasingly to finance the deficit in their operations, while barely maintaining a shrinking equity. It will take many years of higher prices in the beef industry to liquidate the accumulated debt and finance the type of efficient quality production demanded of current and future generations of American and foreign consumers.

Again for a moment let us look at some consumer—beef producer facts:

(1) Current retail beef prices about the same as in *1951*.

(2) Consumer-per capita-income is up over 150% since 1951.

(3) The consumer spends a third less of his pay check to buy twice as much higher quality beef as he did 20 years ago.

(4) It takes just half as long for a worker to earn a pound of beef as it did 20 years ago.

Now the foregoing is not offered with the hope of fooling anybody. Every family spends more total dollars on meat and beef than they did 20 years ago and naturally, a housewife should be concerned about prices of anything in her budget. More is spent on beef purchased today because Americans are vastly better off financially than they were. Many can afford to eat beef today that had to eat potatoes or grits 20 years ago. Beef is by its very nature as an animal product more expensive to produce than fish, cereals or chicken. It is the greater complexity and cost of production, even though beef is more healthful, nutritious and palatable (desirable) than any other food substance, that explains why most of the world's 3 billion people don't eat it.

Statistically, the *average family* is now eating about a pound and a half of beef a day and the bread winner seldom averages much less than $2 an hour. Millions of unionized trade workers earn from $5 to $10 an hour. Most of the meat out of a beef animal is merchandized as hamburger or lesser but nevertheless, very delicious and acceptable cuts at from $.60 to $.80 a pound. Is it unreasonable for a breadwinner to spend just a portion of an hour daily to acquire the most universally accepted quality food ever produced?

On the other side of the coin elements of the agricultural industry have increased their production of goods from 50% to 100% during the past 20 years and not only net less than they did twenty years ago but have lost about half the purchasing power of that reduced income. For 20 years per capita farmer income has run between 60% to 70% of that of his city counterpart and in some of those years it has dropped as low as 48%. Wages for farm workers are as inadequate as employer earnings. Even in 1969 cattle prices are still running 10% to 15% below parity, which indicates the continuing economic lag of the beef industry behind the more than 190 million U.S. citizens living and working off the farm.

Most important in considering future farm policy and especially beef agriculture is the very long time span of the production cycle (3 to 5 years) and period of inventory turnover. Price, production and profit circumstances for beef producers have been adverse for a long time. It will take many years of prosperity to repair the deprivations of this past 20 years.

The foregoing suggests to us in the beef industry that:

(A) All agricultural commodities should be produced on a free production—marketing basis.

(B) Withdrawal of the Federal Government from subsidization principally of feed grains, wheat and cotton should be done without impairment or risk to free agriculture.

(C) The U.S.D.A. should concentrate on strengthening the economic, social and productive circumstance of a free agriculture and let the multiplicity of other departments and agencies render the same service for a better society outside of agriculture.

(D) Curtailment of the 3½ billion spent for subsidies while an important concern should, however, be secondary to quickly adopting a program that will speedily put all producers and land on their own. As long as production subsidies are paid they should be offered without discrimination as to size, income, etc. and other criteria that can and will be so easily circumvented.

RANCHER—GOVERNMENT RELATIONS

Any discussion of future farm policy would be lacking without reference to both the credibility, producer, livestock expertise and liaison gaps that exist between the Ranch and the Potomac. The current administration campaigned on a platform that promised: (1) Reasonable safeguards against dumping of Foreign Agricultural Production; (2) Multiple use—including grazing—on Federal Lands within the spirit and obvious intention of the Taylor and other pertinent Acts,

and under economic terms; (3) A priority for private agriculture and an expectancy that Livestock Producers would be more directly represented within the U.S.D.A. and other such matters.

Ranchers are bi-partisan or perhaps even non-partisan in their attitude toward government. They are aware of the many political verities and practicalities that affect and surround our Government. We are not easily disheartened except by ineptness, inexperience and deception. We—no less than citizens generally—have experienced an alienation not only from the understanding of an urban dominated society but discouragingly and surprisingly enough from those in government whose original function was to represent and communicate the needs and circumstances of Agriculture.

Mr. Secretary, the fee increases recently applied by the Departments against Forest and Interior permittees is a rotten travesty on intellectual, economic and political honesty. It is also bad resource policy.

The failure of the U.S.D.A. to recognize and actively support the National Livestock Tax Committee recommendations with respect to desirable changes in our tax laws is disappointing.

The absence of support for our Industry's amendments to the Meat Import Act and advocacy of its generous principals to all foreign agricultural trade on a reciprocal basis is of continuing concern.

Ever-increasing appropriations and personnel allocated to recreation and urban oriented programming which has curtailed and reduced livestock industry and natural resource development is simply not reasonable or acceptable.

Ranchers, livestock operators and farmers who produce and operate without subsidy continue to find it simply incredible that instead of appointing, hirings, appropriating in proportion to each commodity's agricultural contribution, the tax eaters, the unsuccessful, the nonagriculturalist, the inexperienced, the loser gets first consideration.

Recently there has been much ado about the fat and chicken content of hot dogs. It's an agricultural issue typical of the obfuscation and disservice to both consumer and producer that lead to distrust in every quarter. (Other subjects in past periods handled to the confusion and possible detriment of both consumer and producer alike, have been hide exports, use of antibiotics and insecticides, user versus wilderness interests, etc. Of course the fat content of a meat product should be limited to the minimum consistent with production criteria. Of course packaged food products should be clearly and specifically labeled as to what they are.

And where has the U.S.D.A. been in the matter of restrictions on and disenfranchisement of some students from summertime farm employment—Why is it that exchange students and other young foreign nationals visiting the U.S. can't be hired on farms or ranches. When it's mid-winter and the cows haven't been fed or mid-summer and the hay not cut all for lack of help; when every personal and employment service effort has been made to locate help and when literally everyone—government and private—agree there is no qualified help available—Why—Why—Why—shouldn't a rancher—at least on some reasonable temporary basis—be allowed to recruit foreign nationals? Why doesn't the U.S.D.A. have the backbone—honesty and good judgment to help out in this increasingly critical situation.

Where has the U.S.D.A. been when various of the sensation-seeking media has grossly misrepresented the substandard working and wage conditions of a minority of farm workers as, or to be, the condition of all farm labor. Of course wages, earnings and investment return should be higher in agriculture. But the majority of workers live about as well as their employers. We eat in the same kitchen.

Why—in sounding out agriculture on future farm policy—haven't the national or regional commodity organizations (in proportion to their share of total production) been selected as the principal spokesman. Ranchers noting the invitation of selected individuals through or from the universities can only wonder whether this sampling is politics or business.—The invitation of over 20 men to present their recommendations on the future of their industry in eight minutes or less within a one-day hearing is something less than inspiring.—

Mr. Secretary: In closing, I should strongly underscore that, while this presentation is, in many respects critical of the past, the present, and this procedure of policy development, we do appreciate any opportunity affording an exchange of views. We respect our government, its procedures, and your office, though from time to time, we do not agree with governmental policy; and I should also like to add that among the deficiencies of the past, there have been many contributions and successful program developments from the department and especially dedicated service, ability, and interest among many who work for the U.S.D.A.

We appreciate and thank you for this invitation today.

A NEW COMMITMENT TO UNDERSTANDING THE ROCHESTER PLAN GROWS IN THE WAKE OF 1964 RIOT

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. HORTON. Mr. Speaker, 5 years ago, the city of Rochester, N.Y., found itself in the midst of one of the first riots which have since plagued many of our metropolitan areas.

That riot forced a lot of people to take a real look at what was happening around them. It made them take stock of the situation and with the tremendous resources available the people of Rochester started to solve the problem.

Today Rochester has taken the lead in job training, in minority businesses, in urban development and innovative school programs. I would like to share with my colleagues an article from U.S. News & World Report detailing what has been accomplished in Rochester. I am sure that all of you join with me in praising these efforts and offering encouragement for the future.

The article follows:

ANSWER TO RIOTS—THE ROCHESTER PLAN

ROCHESTER, N.Y.—When Negro rioting ripped this city in 1964, nearly everyone was surprised.

In that rioting, four persons were killed, 350 were injured. Stores were looted and burned. The National Guard had to be called in to restore order.

It was then that this city of 300,000 suddenly realized for the first time that it had racial problems—and it went to work on them.

Today, five years later, Rochester is hopeful that it is on the way to solving those racial problems—and finding the answer to riots.

The test here is widely regarded as crucial—for the entire nation.

"If Rochester cannot solve these problems, then no city can," says an official of Rochester's biggest business, the Eastman Kodak Company.

Progress is rated as remarkable when measured against that in many other riot-scarred cities.

Biracial work. Lines of communication between whites and blacks have been opened. Business leaders, city officials and representatives of the black community have worked together to create bold new programs. Some of these programs have been so successful that they were copied by the U.S. Government and by other cities.

With federal aid, much has been done to train and hire Negro workers and to open up new opportunities for blacks to own businesses. Housing and urban-renewal projects are under way. School innovations are being tried.

Nobody claims that Rochester is now a "model" city, or that new racial violence cannot break out. City officials are finding that jobs, while important, are not the complete answer. Housing and educational problems are proving even tougher to solve than the job problem. Some Negro discontent remains.

But there is quiet optimism that this city is on the right track and has the tools to finish the job.

Rochester has some advantages over many other cities. That is partly why the riot of July 24 and 25, 1964, was so unexpected.

Few jobless. The unemployment rate in Rochester has been consistently one of the lowest in the nation. The city has little heavy industry. Local firms turn out highly specialized products such as film, office equipment, instruments and optical goods.

Rochester's major employers are hometown industries with a long history of active participation in community affairs. People long have taken pride in solving their own problems and not turning to the State or Federal Government for help.

The Negro population in Rochester has been growing, but is still relatively small. It was during the 1950s that Negroes began arriving in large numbers. By 1960, the nonwhite population had reached 25,000. Most estimates put the present number of nonwhites at around 50,000—about one sixth of the city's total population.

In the last five years, Puerto Ricans have increased even faster than Negroes—from 2,000 to almost 10,000.

Race relations here were considered good—until the riot. But City Manager Seymour Scher admits "we had our heads in the sand in 1964."

Most of the Negroes who migrated to Rochester had come from the South—some to pick fruits and vegetables on nearby farms, some lured by word that, for Negroes, this was a good city, with well-paying jobs.

Problems of newcomers. Many arriving Negroes were disappointed. Few had the skill and education required for the jobs available in local industries. Housing, scarce and aging before the migration, deteriorated rapidly. Schools in Negro neighborhoods became overcrowded.

The result was what some people term an "instant ghetto"—which exploded.

The riot did not set off an immediate, massive program of change. There was a "cooling off" period when civic leaders were unable to find anybody to speak for the black community.

Change began in 1965, when the Council of Churches brought in Saul Alinsky, head of a Chicago-based group called the Industrial Areas Foundation. He organized "FIGHT"—"Freedom, Independence, God, Honor, Today."

FIGHT won broad support in the Negro community. Although militant and often abrasive, it also won somewhat grudging re-

spect and co-operation from white business and civic leaders.

Start of a drive. A major goal of FIGHT was more jobs for Negroes. A major target was Eastman Kodak, the city's biggest employer. The immediate result was a long and heated dispute. But in its wake, instead of lasting bitterness, came a host of new ideas for solving Rochester's problems.

One FIGHT demand was that Eastman hire 600 hard-core unemployed within 18 months—with FIGHT picking the new workers. Eastman proposed, instead, a community-wide quota of 1,500 hard-core jobs in 18 months, with participation by all Rochester's employers and agencies that deal with the poor.

After months of discussion, a new organization was set up, called "Rochester Jobs Incorporated."

This organization serves as a central clearinghouse for jobs for the hard-core unemployed. Companies list employment that they have available for inexperienced workers, and the list is distributed to all agencies that have contact with potential applicants.

In two years, more than 2,600 hard-core unemployed were hired. About 85 per cent of them started at rates of $2 or more an hour.

Says Ed Croft, director of Rochester Jobs Incorporated:

"We can offer a job to any male over 18 years of age who walks in here. If we do not have a job listed, we pick up the phone and develop one.

"Finding jobs for women is a little harder, since many cannot take shift work at odd hours or can work only part time."

The National Alliance of Businessmen picked up the idea of Rochester Jobs Incorporated and set up a nationwide program of providing jobs for the hardcore jobless—with individual firms being asked to pledge to hire a certain number.

But Rochester's Mr. Croft says:

"We are opposed to individual quotas for firms. We have community quotas and just ask each company to do what it can."

The biggest factor in the success of the Rochester plan is a revision of hiring standards by businessmen. Mr. Croft explains:

"Back in 1962, employers hired only high-school graduates. By 1965 they would accept applicants who had completed government training programs. Now, they no longer ask about an applicant's education."

Both of Rochester's major employers, Eastman and Xerox Corp., have nationally recognized systems to train hardcore workers.

Basic education. Xerox offers "step-up" training to those unable to pass the usual entry tests.

Training classes teach such things as writing, reading, safety, use of hand tools, personal budgeting, legal aid and income tax preparation.

Eastman's course goes back to 1963. It offers basic education as well as skills for production work, laboratory work and trades.

These programs stimulated the flow of job applications by Negroes.

Many who applied actually did not need the special training and were hired immediately for regular jobs. They had not applied previously because they believed they were not wanted.

Some idea of how the companies in Rochester are trying to hire Negroes is given by this statement from Xerox's vice president for manufacturing, Horace Becker:

"I put out an edict stating that in new employment we should shoot for 50 per cent black.

"Sure, this is reverse discrimination. But if we do not face up to this problem, the day could come when we have black guns on one side of the street and white guns on the other, and this would destroy America. I owe my children a better future than that.

"We have not achieved the 50 per cent level in new hiring. But we have pulled our percentage of black employees up to about 11 per cent of the total."

Another demand made by FIGHT was that Eastman build a plant in the Negro section of town that would be managed by blacks and would employ blacks.

New industries. Eastman already had several plants easily accessible to "ghetto" workers. So as a counterproposal it offered to set up four new industries to be owned and operated by Negroes and to supply products or services needed by Eastman.

The result was another new agency, "Rochester Business Opportunities Corporation" (RBOC), designed to mobilize community resources for setting up businesses owned and operated by blacks.

RBOC has been one of the most successful efforts in the nation to develop "black capitalism." In less than 18 months, 50 black businesses have been established in Rochester.

The RBOC board of directors includes 13 corporation presidents. It is often criticized by militant Negroes for having too many rich, white businessmen on its board—and not enough blacks. Its Negro director, Jim Blow, answers:

"The average guy on the street does not know enough about fund raising or how to start a new business."

More than financial help is provided to Negroes starting new businesses. They are taught practical aspects of running a business. A team of instructors is assigned to each new firm.

Many new firms are also helped by purchasing contracts with Rochester companies—arranged by RBOC. When the new firm is ready to branch out and seek customers, RBOC helps in that, too.

Among black-owned businesses that have been started here are a laundry and dry-cleaning firm, an employment agency, a trucking firm, a commercial-sign company and a camera-repair shop.

Help from Xerox. FIGHT's demand for locating a black-owned business in the Negro neighborhood became a reality with the help of Xerox. Officials of the two organizations set up a plant to produce metal stampings and low-voltage transformers.

The new firm, called the Fighton Corporation, is wholly owned by FIGHT, with Xerox agreeing to purchase $400,000 in equipment from it this year and $700,000 in 1970. Xerox also provides management aid.

Fighton is now almost in full operation, and will soon employ 100 workers. Eventually it plans to step out from under the Xerox purchasing umbrella and seek wider markets.

While experience with firms set up in "ghettos" elsewhere in the country has not been very encouraging, officials here think Fighton will be different because it is wholly black-owned and black-managed—not, as in many cases, a white-owned subsidiary.

It is considered important that Fighton succeed. Says FIGHT's newly elected president, Bernard Gifford:

"Many of our young people say it can't be done—that a corporation can't be both a social and an economic success. If we can make it work here, maybe we can change that thinking."

Added up, Rochester's efforts to find jobs for Negroes have been impressive.

Housing has turned out to be considerably harder to provide than jobs. Rochester has a severe shortage which affects the middle-income as well as the low-income families.

There appears to be no lack of effort for housing. Some 60 agencies are working on the problem. However, many lack both capital and know-how. There has been a lack of co-ordination and some political bickering over the roles of local and State agencies.

Part of the reason for the housing shortage, some officials say, is that for years Rochester avoided turning to the Federal Government for financial aid. From 1950 to 1962, almost no low-rent housing was built.

Now Rochester has a number of urban-renewal projects. But progress seems slow. Says City Manager Scher:

"We are faced with trying to telescope into 3 or 5 years things that needed to be done in 20 years. But every blighted area in this city is now under treatment of some kind."

Building: slow. The trouble is that results of these programs are not yet visible to Negroes. About 1,000 housing units for low-income families have been completed, but they are scattered widely over the city.

Only one of the urban-renewal projects has reached the rebuilding stage—and Negroes note that office buildings and a motel have been built, but no low-income housing.

Explanations about delays in getting federal approval fall on deaf ears in the black community. Says one Negro leader:

"The people in city hall seem to have their priorities mixed up. I do not believe what I read about plans to build low-income housing."

Officials hope that attitudes will change as projects take shape.

Private agencies are making a contribution to housing.

The Metropolitan Rochester Foundation has a membership of 20 to 25 major firms and builds homes for families of middle or low-middle incomes. It is trying, without much success, to get suburban areas to change zoning regulations to permit building of lower-priced homes.

FIGHT plans to enter the housing field with a 16-million-dollar project called "Fight Square," which will include commercial buildings as well as apartments and houses.

Another organization, "Better Rochester Living," was started by a young man on a shoestring. Buyers contribute labor as down payment on their homes.

There is still serious concern about Rochester's housing outlook. Schools are also a center of Negro discontent. The black community, led by FIGHT, has recently trained its guns on inner-city schools, charging failure to improve the quality of education they offer.

Integration has been pushed by the city's superintendent of schools, Herman Goldberg. Under an open-enrollment plan, schools in outlying sections of the city were opened to Negroes from the inner city. Even the suburbs are taking some black students.

In all, some 2,400 Negro youngsters are being bused to predominantly white schools.

This is one of the few cities which also use "reverse busing." Some 350 white students are bused to inner-city classes on a voluntary basis.

Superintendent Goldberg believes that school integration will help promote housing integration.

The busing issue. Some white people have opposed the busing. But the key problem now is that the black community is losing some of its interest in school integration.

Says FIGHT director Bernard Gifford:

"We can't get away from the fact that most black children will be educated in virtually all-black schools."

So he and some other Negro leaders here see busing as a side issue. They want better schools in Negro areas.

To beef up those schools, several programs are under way.

Rochester has been recruiting black teachers from the South. Two of the city's nine high schools will have black principals next year.

About a third of Rochester's Negro inmigrants have come from one area of central Florida—around Orlando and Sanford. So Superintendent Goldberg promoted a bi-State arrangement between New York and Florida to improve opportunities for Negroes in both areas. Teachers and ideas are exchanged. More kindergartens and vocational

training are being provided in the Sanford schools.

"We want people to come to Rochester," says Mr. Goldberg, "but we want them to come prepared."

There is also an idea that the migration of Negroes might be checked by improved opportunities in the South.

New ways to teach. Rochester is testing new methods of teaching. A special "World of Inquiry" school in an old factory building draws a cross section of pupils from all parts of the city. A "Downtown Satellite School," set up in a department store, permits shoppers to observe classes. One idea behind both schools is to show that integrated education can be excellent education.

Rochester has many special programs for youngsters during the summer months.

One, called T.O.P.—for "Teens on Patrol" has 100 teen-agers working with the police department. Other youngsters work with the fire department and the University of Rochester.

Some Rochester residents describe these programs as "riot prevention."

Many people here think this summer will be an important test. If Rochester can avoid major racial trouble, hopes will grow that this city may have found the answer to riots.

EXTENSION OF NDEA LOAN FORGIVENESS PROVISIONS TO TEACHERS IN OVERSEAS STATE DEPARTMENT OR AID-SUPPORTED SCHOOLS

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. WILLIAM D. FORD. Mr. Speaker, I have introduced today a bill to amend the loan program of the National Defense Education Act of 1958. This amendment would extend cancellation of such loans at the rate of 10 percent a year—up to a 50 percent cancellation—to teachers in American schools abroad that are supported by the State Department or AID. Such cancellation provisions now apply for loans made prior to July 1, 1970, to students who become teachers in nonprofit State elementary or secondary schools, institutions of higher education or overseas elementary and secondary schools of the Armed Forces of the United States.

Having served as a member of the investigating committee that looked into the educational opportunities for dependents of American personnel on overseas assignment, I had opportunity to observe the serious problems faced by the American parents, the teachers, and the overseas schools who are struggling to provide American children with decent educations.

The purpose of this bill is to encourage highly qualified American teachers to accept foreign teaching assignments. Students receiving NDEA loans are often the brightest and the best prepared teachers from among our recent graduates. A student who now graduates with NDEA loan repayments to make is reluctant to accept a foreign teaching assignment in an American or international school. To teach in such a school would, in effect, cost him 50 percent of his loan repayment—when compared to teaching in a stateside or Department of Defense school. Since the mission of all these schools is basically the same, this discrimination should not continue.

INAUGURATION OF PAN AMERICAN SERVICE FROM FRIENDSHIP TO THE VIRGIN ISLANDS

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. GARMATZ. Mr. Speaker, Friendship Airport grows with a new flight by a major airline almost every week and I am happy to report that the pioneer in international service from Friendship, Pan American World Airways, is continuing to give the Greater Baltimore area direct service with some of the most intriguing vacation spots in the Western Hemisphere.

Just recently Pan Am inaugurated service between Baltimore and St. Thomas and St. Croix in the Virgin Islands, service which will be daily in character and which will certainly be looked forward to with great anticipation by Baltimoreans next winter.

Mr. Speaker, aboard Pan American's inaugural flight was the excellent columnist for the Baltimore News American, Roy Gregory, and I include his story on his experiences on the flight in the RECORD:

WHAT GOES ON AROUND HERE

(By Roy Gregory)

JET SETTERS

I said it never could be done and now I've done it.

This little old country boy from southern Anne Arundel County is a bona-fide member of the jet set, that more than mythical group of the now generation which fly more miles for a cocktail than their grandparents would drive in a year for victuals.

I'll admit that I must be relegated to the role of an apprentice in the jet set union because I have only made what might be called a baptismal jaunt.

Fran and I were invited to participate in what the Pan American World Airlines called their inaugural flight to the Virgin Islands from these parts. At first glance, it seemed sort of foolish to fly nearly 2,000 miles for four days under the same sun that shines in Anne Arundel County.

However, upon reflection, why not? If President Nixon can shuttle back and forth from Florida, why can't the Gregory's get up and go him a few miles better at least for one weekend?

Pan Am really made the flying great and in less time than it takes to have a cocktail full course dinner and a digestive drink, we were ready to land at St. Thomas in the Virgin Islands.

REAL SWINGERS

A sort of reception committee from the Virgin Island Department of Commerce greeted us at the Harry S. Truman Airport there. We were zipped off to the Virgin Island Hilton Hotel, given time to change socks and then were launched on a two-day tour that seriously challenged our Anne Arundel County reputation for swinging.

Our training on Prim Rose Path, known to outsiders as Ritchie Highway, stood us in good stead and I managed to stay vertical throughout the entire torrid tour.

The hosts were anxious that we see all the fine spots on the St. Thomas scene and we did. Vacation paradise after paradise was peeled off in almost machine-gun like fashion.

We traveled up and down the mountain side and at one point became eligible for flight pay when we rode a tram more than 1,000 feet up the highest peak on the island. The people who run the tram have the right idea.

Upon reaching the top, one does not only have the chance to take in a 360 degree breath-taking view but there is a real live drink dispensing bar. Gives a guy a chance to renew his courage for the flight down because at that point you are up and what goes up, you know.

NO 'RUNDEL BERRIES

They have a magnificent custom on St. Thomas. Every hotel we visited has what they call their "speciality drink." Of course, rum is the most predominant ingredient and after due deliberation, a strawberry daiquiri was voted tops of the day.

Please don't request the recipe. All I know is that the bartender dazzled me with hand work but I do recollect that he used honest to goodness strawberries, not Anny Rundel berries, I suspect.

It didn't take very long for us to realize that there is a tremendous competition for the tourist dollar between the islands of St. Thomas and St. Croix. No knives or bats, just psychological warfare. Like the St. Thomas booster club member who described St. Croix as "a place for newlyweds and nearly deads."

At the end of two days on St. Thomas, Pan Am jetted us on a flight which took less time than it takes to get over the Bay Bridge when there is no traffic, to St. Croix.

We stayed at the most peaceful St. Croix By The Sea hotel which housed a few of the "nearly deads" but was predominantly occupied by the June brides and grooms. I could spot them because they held hands, even in the swimming pool.

DRY SPELL

St. Croix, perhaps because we weren't enringed by people from the Department of Commerce extolling its virtues, was by comparison to St. Thomas, relatively quiet. At one point we went more than 20 minutes without being offered a drink. I intend to go back to the islands some day so I'll be darned if I'll make a recommendation.

Let it suffice to say that both are beauty spots and in this jet age are closer, timewise than our own Atlantic Ocean.

It seemed hard to realize as the huge Pan Am fly bird touched down at Friendship in good old Anne Arundel County that we had been so far and done so much in so few days.

I would gladly give up my apprentice ranking and join the professional jet setters who think nothing of whisking to England just for a spot of tea. Wish we could afford to live like that.

We shall now put our nose to the grindstone, keep tossing pennies into the jar on the shelf and by next year we once again will venture to the Caribbean land to see what Columbus came onto in the early 1400's.

PATIENCE AND ASIAN POLICY

HON. RICHARD T. HANNA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. HANNA. Mr. Speaker, of all human virtue the most demanding is that of patience. When the exercise of such virtue requires persistence in the face of unpleasant and costly consequences, rationalizations for an alternative to pa-

tience come easy. That is not to say that such alternatives would be correct.

The harsh and unkindly light that comes from the 20–20 vision of hindsight can in any troublesome decision uncover judgments that are subject to serious question. Policies, the pursuit of which are obviously costly and the benefits of which are indirect are never popular and most readily scotched. Accepting all this and accepting equally the responsibilities that lie in the place in which we find ourselves and accepting also, the burdens the situation we helped create has developed, nothing serves more admirably the long term of history like the virtue of patience. However, this does not portend stagnation nor rule out improvement, rather it recalls the tempering admonitions of the credo: "Give me the strength and the courage to change the things which can be changed; the strength to endure those things which cannot be changed; and the wisdom to know the difference."

In recent years, there has been heard the voice of disillusion in some quarters of the United States on our Asian policy. This may be attributed to the unpopular results of the war in Vietnam. It seems to me, however, that the Vietnam policy does not symbolize Asian policy as a whole. Nevertheless, it may be necessary to review, at this moment, our past policy, to enable us to cope with possible future challenges by Communist power in this region.

Our Asian policy, I believe, has contributed a great deal to stabilizing this area; not to the extent we had hoped but enough so that we can say it has been successful.

Communists, including the Soviets, keep saying that their every move is for the sake of Communist ideology and will finally bring the utmost welfare for the people of the world. But the world today knows, and actions of both Russia and China demonstrate, what the real meaning is of the ideological dispute between Russia and China who appear headed for physical struggle on a large scale. The world today realizes that there is no "Communist ideology" but only "national interest." This interest to expanding influences over vulnerable countries, utilizing all ways and means available according to tactical requirements. Therefore, both coexistence by Russia or intransigency and belligerency by Red China are policies produced by each of these Communist regimes to face the world situation today according to calculated tactics. Neither has given up their goal of eventual domination of the world on their terms.

Fortunately, since the Khrushchev era, Russia has appeared to moderate its aggressive policy toward European countries as a result of our determined countermeasures through the cold war period. Russia has been forced to shift to a policy of coexistence. This has lightened the American burden in Europe to a great extent. However, we face in Asia a Communist China which reminds us of Soviet Russia in the past.

In fact, political unrest in Asia has its origin in aggressions or subversive activities launched by Communist elements fully backed by the Chinese Communist regime. The world has already witnessed China's aggressive expansionist policy as symbolized in the so-called people's liberation war and overt armed aggression, whenever possible, against its border countries, including Korea, Tibet, India, and Vietnam. Most of the countries in this area have suffered from intrigues of the Chinese Communist regime since its establishment. The abortive coup d'etat by Communists in Indonesia in 1965 was a remarkable example of this kind of intrigue by Red China.

Still we see no evidence that Red China will renounce its aggressiveness in the foreseeable future. In fact, it appears likely to intensify it. Many have predicted that after Vietnam, Communists will surely spread their destructive activities over such countries as Laos, Cambodia, or Thailand. Many have said that the Vietnam war is being fought not only for the Vietnamese people but for the other peoples in this region as well. Actually, our efforts in Vietnam are accepted by the Asians as a test of American determination to protect this area from Communist aggression in the future.

We should keep this area in favor of our side not simply because of the democratic idealism and moral obligation but also because of the economic potentials and relative demographic importance of this region, which is essential in maintaining the global balance of power and ultimately is connected to our national interest and security. It is obvious that if we appease communism in Vietnam our objective of containing Red China along its border will not work out as we projected. If this Communist giant is left unchecked, there will never be a stable and peaceful Asia and world. Communist aggression in Asia should be met and contained, and I think the United States has acted in time and is on the right road.

Look at such countries as South Korea, Japan, and the Philippines.

Nobody can think of postwar prosperity in Japan whose GNP last year reached over $140 billion, next only to the United States and Soviet Russia, without considering the American role in Japan's quick rehabilitation since the day of the Japanese surrender. Despite some difficulties in dealing with Japan at this particular moment, for example revision of the American-Japanese mutual treaty, reversion of Okinawa and import limitations on the part of the United States, we do not think Japan will separate from the free nations and go to the Communist side. The more prosperous Japan becomes the closer she will stay to the free side.

The Republic of Korea survived open Communist aggression with the aid of free nations, especially the United States. As we see today, her national potential has started to explode into energy. She has had a high degree of political stability as well as amazingly successful economic development. The GNP growth rate has gone from 4.2 percent in 1961 to 13.3 percent last year. This is one of the highest rates in the world. If we had failed in helping the Korean people in and after the Korean war, today we would not be able to have Korea as one of our most reliable allies, who is fighting with us in Vietnam to deter the Communist aggression. Yet, Korea is far from being self-sufficient and she still needs our aid and protection as long as there are indications of Communist aggression. Especially, recent increased challenges by North Korea along the armistice line and inside South Korea warn us of the graveness of the situation in the area. We cannot afford to let our efforts in the past and present be in vain as a result of our carelessness, because we know someday in the near future the diligent and energetic people of Korea will be able to enjoy a day when no help from abroad will be needed. Koreans are people who help themselves.

As to the Philippines, since they became independent both the American people and the Filipinos know that they have been the closest friends and allies of each other. As a matter of fact, the Philippines have enjoyed continued peace and tranquillity behind the protection of the United States. Recently, however, the Philippines have felt the pressure from mainland China by Communist-oriented Huks who have resumed their subversive activities, and also there are various agitations for the purpose of eliminating American military bases in the Philippines, mainly from a so-called awakened spirit of nationalism which has no alternatives to American protection except to leave the country to the mercy of the Communists. With their own armed forces alone, the defense of the Philippines is haplessly inadequate. Given this situation, I think it is unwise to withdraw or reduce our military presence from the Philippines. There must be some way to further strengthen mutual relationships without harming our defensive capability as it has been while accommodating the nationalistic sentiment which appears to be occupying a small portion of public opinion in that country. We all know that this also matches American interest in this area.

After all, the clear demonstration of U.S. power stabilized the situation in the entire region and prevented a Communist takeover of South Vietnam. U.S. objectives were not offensive from the beginning and its objectives have largely been achieved. Besides those countries mentioned above, without the U.S. show of determination of power, it is doubtful if Cambodia could maintain its long-professed neutrality and independence; if present quietness along the Indian and Burmese boundaries with Red China would remain; if the Communist insurgents in northern Thailand and Laos could be stopped; if political reorientation of Indonesia were possible.

We should keep constant inventory of the positive progress between the nations of free Asia as well as the benefits and stabilities within. The past 10 years have been rich in the birth and growth of intercountry, multinational institutions which would not exist today except for our policy and position in Asia. This progress is reflected in the loans and technical assistance that has been approved by the World Bank in 1968, which is shown as follows:

LOANS APPROVED DURING 1968

Borrower: Industrial Finance Corporation of Thailand. Project: Financing industrial enterprises. Amount, U.S. $: $5 million. Date approved: 23 Jan. Term: 12 years.

Borrower: Central Bank of Ceylon. Project: Modernization of tea factories. Amount, U.S. $: $2 million. Date approved: 2 July. Term: 15 years. Interest: 6⅞%.

Borrower: Republic of Korea. Project: Seoul-Inchon Expressway. Amount, U.S. $: $6.8 million. Date approved: 3 Sept. Term: 15 years. Interest 6⅞%.

Borrower: Malaysia. Project: Penang Water Supply. Amount U.S. $: $7.2 million. Date approved: 19 Sept. Term: 20 years. Interest 6⅞%.

Borrower: Republic of China. Project: Feasibility Study of North-South Freeway ‡. Amount, U.S. $: $0.4 million. Date approved: 19 Nov. Term: 10 years. Interest 6⅞%.

Borrower: Industrial Development Bank of Pakistan. Project: Financing small and medium-scale industries in private sector. Amount, U.S. $: $10 million. Date approved: 12 Dec. Term: 15 years.

Borrower: Chinese Petroleum Corporation. Project: Dimethyl terephthalate (DMT) manufacture. Amount, U.S. $: $10.2 million. Date approved: 19 Dec. Term: 12 years. Interest: 6⅞%.

TECHNICAL ASSISTANCE APPROACHED DURING 1968

PROJECT PREPARATION

Country: Republic of China. Project: Feasibility Study of North-South Freeway. Amount, US $: $100,000. Date approved: 19 Nov.

Country: Nepal. Project: Air Transport System Development. Amount, US $: $66,000. Date approved: 21 Nov.

Country: Philippines. Project: Fisheries Port Construction in Manila Bay. Amount, US $: $225,000. Date approved: 25 July.

ADVISORY AND OPERATIONAL

Country: Indonesia. Project: Advisors to Ministry of Agriculture Amount, US $: $170,000. Date approved: 30 July.

Country: Indonesia. Project: Rural Credit Survey. Amount, US $: $60,000. Date approved: 30 July.

Country: Republic of Korea. Project: Agriculture & Fishery Development Corporation*. Amount, US $: $66,000. Date approved: 6 Feb.

Country: Laos. Project: Integrated Agricultural Development Program for Vientiane Plain. Amount, US $: $221,000. Date approved: 15 Oct.

Country: Nepal. Project: Advisors to Agricultural Development Bank of Nepal. Amount, US $: $35,000. Date approved 3 Sept.

Country: Philippines. Project: Water Management. Amount, US $: $105,000. Date approved: 20 June.

Country: Republic of Viet-Nam. Project: Development Financing Institutions. Amount, US $: (a) Technical Assistance Mission, $19,000 (b) Assignment of Advisors, $70,000. Date approved: 2 July.

TEACHING THE "UNTEACHABLE" CHILD

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. PUCINSKI. Mr. Speaker, today more than 30 of my colleagues and I introduced legislation to provide assistance to children with specific learning disabilities. This legislation grew out of hearings conducted by the General Subcommittee on Education, which I serve as chairman. These hearings demonstrated beyond doubt the insistent need for special programs, teachers, training methods to assist the special needs of these learning disabled children.

The article I am including in the CONGRESSIONAL RECORD today describes some of the optimistic and highly effective work being done in the learning disabilities field by the Institute for Language Disorders at Northwestern University in Illinois. Programs such as those described below should be encouraged, fostered, and expanded to meet the needs of a growing segment of our school-age population with learning disabilities.

Mr. Speaker, the article by Bonnie Kohn Remsberg of the Institute of Language Disorders follows:

TEACHING THE "UNTEACHABLE" CHILD

(By Bonnie Kohn Remsberg)

As a baby, Keith began to talk early and his parents were delighted with their alert little boy. He spoke unusually well, looked forward to kindergarten, and related with enthusiasm to the other children.

Then tiny hints of trouble began to occur. He had difficulty mastering the reading readiness exercises in school. When the children were asked to pick out their name cards and pin them on, he never could identify his. He showed no signs of remembering the visual symbols that made up words he was expected to read. Perhaps, the teacher thought, he just isn't ready for reading.

In first grade, Keith continued to have trouble with the mysterious shapes that make up written language. In reading group, he memorized stories that other children read, and recited them. Whenever the teacher held up a flash card and asked him to read a word, he was stumped. Yet he continued to be outstanding at telling stories, reciting in class, and demonstrating his creative imagination. Clearly, he was a bright child, well-coordinated and personable, but something was definitely wrong.

The puzzled first grade teacher consulted the principal about Keith's erratic performance. Together they reviewed his early tests and history; his scores gave the picture of an intelligent child, who displayed no disturbance or behavior problems at home.

They decided to track down the mystery. Why couldn't Keith learn to read?

His parents were consulted and they took Keith to the family pediatrician. Thorough tests revealed no physical disability. His vision and hearing were normal. It was then that the doctor began to suspect the source of Keith's trouble. He consulted with school officials and together they made their recommendation.

With a phone call to the Institute for Language Disorders on Northwestern's Evanston campus, Keith and his family began a journey that would take him through more testing, diagnosis, and remediation until he learned to overcome his puzzling problem—a learning disability. A detailed teaching program would be custom-designed for his specific trouble in remembering visual symbols. He would slowly and patiently be taught letter sounds which he would later learn to blend into the words he found so elusive. He would attend private teaching sessions in rooms adjoining those where other children with similar problems would be receiving help tailored specifically for them. Eventually he would escape the repeated pattern of failure that plagues so many children with specific learning disabilities.

Northwestern University's Institute for Language Disorders, founded in 1955, has helped hundreds of children who, like Keith, suffer from "the invisible handicap." Called lazy, stubborn, or naughty and dismissed as unteachable, these children often go undiagnosed and are condemned to lives as garbled as their communication skills. But today, through the work at Northwestern and other institutions, and in schools, an increasing number of parents and educators are coming to understand these subtle but debilitating learning problems.

"The children with too many names," victims of this tragedy, have previously been lumped together and burdened with a welter of confusing terminology. They have been called dyslexic, aphasic, perceptually handicapped, interjacent children, reversal children, or simply educationally handicapped. Parent groups often refer to this youngster as "the other child."

Today these problems are grouped under the general heading "learning disabilities," because in all such cases some ability to learn is affected. An estimated 5 percent of the school population has some form of learning disability—some severe, some mild, but all justifying special care. Some authorities estimate that boys with the problem outnumber girls by 7 to 1.

The exact cause of a given learning disability cannot always be determined. Illnesses, infections, or injuries may in some way interfere with the normal supply of oxygen to the brain. In some cases the problems result from genetic or hereditary influences. Whatever the causes, however, treatment of learning disabilities has become an educational, rather than a medical, process.

Perhaps for this reason, recognition and understanding have been slow in coming. Other handicaps, more easily recognized and evaluated, have been treated for years, while the child with a specific learning disability went unrecognized or uneducated. Doris Johnson, director of teacher training at the Northwestern Institute, says, "Teachers not only did not know what caused these children's problems, they had no idea how to teach them. All they knew was that they weren't reached by the standard methods."

Every childhood learning disabilities expert receives letters from anguished parents. "Since he was about three, I have repeatedly said to myself, 'Something is wrong, what can I do to help this boy?' His I.Q. comes out very superior, his grades very inadequate, his reasoning, at times very unreasonable." . . . "My grandson is sent home an average of once a week because of behavior problems. He has a high I.Q. but a very short attention span." . . . "Our daughter caused so much disorder in a pre-kindergarten private school that we were asked to seek psychiatric help. We were of the opinion that she must be stupid, but to our amazement, she was found to have a 130 I.Q."

Miss Johnson explains, "It is very important to understand what these children are *not*. They are not retarded, they are of at least average intelligence, and many of them are quite bright. They are not basically emotionally disturbed, although they may develop tremendous frustrations. And, of course, they are not deaf, blind, or physically handicapped, the other categories for which we provide special education."

Children with learning disabilities exhibit a variety of symptoms. One is abnormal motor activity, in which the child fidgets excessively or is exceedingly slow in his movements. Another is poor coordination; buttoning clothes, riding a bicycle, or learning to write becomes unusually difficult. Frequently, such children are impulsive, stirred to action by minor stimuli, compelled to touch everything they can reach. They may be easily distracted and have a short attention span. Some children become fixed on an activity which they continue until made to stop.

Memory disorders are common. Some children can discriminate between "cat" and

"mat," but they cannot remember the words. Occasionally they remember words for purposes of recognition in reading, but they cannot remember the words for total recall. So they are unable to spell.

Most children seen at the Institute have difficulty learning a particular form of langauge and communication. For some the problems are spoken or oral, for others difficulties occur in reading, writing, or calculating. Still other children have trouble with nonverbal learning. They are unable to interpret the meanings of gestures, facial expressions, or vocal inflections. Often these youngsters are unable to go from place to place without getting lost.

Classroom teachers are anxious to learn how to help these children. To this end some are trained at their schools by experts in learning disabilities. Others go back to college for special courses.

"Of course, we do not expect the classroom teacher to do the entire job," says Miss Johnson. "Direct remediation is most often done by special teachers trained in learning disabilities. Northwestern prepares many such teachers each year, as do other colleges. However, the demand is greater than the supply, to classroom teachers should be aware of the problems presented by the learning disabled child."

Currently at Northwestern about sixty children, from three to eighteen, come twice each week to the Institute for diagnosis and remediation. "We avoid the words therapy and clinic here," Miss Johnson explains. "We are teachers. But for this type of teaching there is no single right method. Here, the method is determined by the child's specific disability."

Recently, a seventeen-year-old high school senior came to the Institute after being dismissed from a training program. His reading level tested at between first and second grades, but his teachers considered him proficient in class work requiring spoken language and had passed him through school on D minuses, "because they felt sorry for him."

"When he came to us," Miss Johnson says, "he was terribly discouraged and, of course, severely handicapped vocationally. Fortunately, he was also highly motivated." After evaluation and diagnostic teaching at the Institute, the boy made rapid progress. When dismissed he was reading between ninth and tenth grade level. Today he is a self-supporting member of the community.

A child coming to the Institute for his training session is greeted by his teacher, who leads him into a room planned free from distractions. There she engages him in activities designed to fit his particular needs. One child may listen to himself on a dual channel tape recorded and try to monitor his errors in oral language. Another manipulates letters made of felt so that he can rotate them to different positions. Another uses an abacus as a concrete means of learning some mathematical principle.

A child who came to the Institute at four, able only to gesture and babble for communication, was recently dismissed after three years of treatment. Today he is successfully attending school and has an above-average I.Q. This child reached the Institute when his mother, worried because her boy didn't talk, took him to her pediatrician. The doctor discovered many areas of the child's development within a normal range. At that point, he began to suspect learning disabilities and recommended the Institute.

"I couldn't begin to tell you what a blessing the Institute was to my son," says the mother. "What a tragedy for a bright child to live out an unrewarding life because no one finds out how to reach him and teach him."

Dr. Harold McGrady, associate professor of language pathology, who supervises diagnostic work at the Institute, feels, along with other members of the staff, that the role played by parents in a child's program for learning to adapt to his handicap is a vital one. "We try to help them to understand, and we give them suggestions for follow-through activities," he says, "but we don't expect them to be teachers. They have enough of a job being parents."

The Institute is a part of the Department of Communicative Disorders in the School of Speech. Students enrolled in language pathology, as well as other divisions of the department, may participate in the diagnostic and remediation activities of the Institute. In essence, the Institute prepares diagnosticians and teachers of children with learning disabilities.

"More and more school systems are planning for learning disabilities," Miss Johnson says. "Some have self-contained classrooms, some have resource rooms, some have itinerant programs in which specially trained teachers travel around to the children who need special attention. Awareness of this problem is increasing every day."

Increased awarness is partly due to research projects underway at Northwestern and other universities. The Institute's Learning Disabilities Project, a three-year investigation supported by the United States Public Health Service, is scheduled for completion at the end of this summer. During the project the Institute has studied several thousand school-age children from the suburban area north of Chicago to gather data on the incidence of learning disabilities. A statistical awareness of the depth of the problem, educators feel, is critical to a comprehensive program for evaluating and teaching. This work, it is hoped, will lead ultimately to an effective screening device for detecting affected children early enough to spare them the experience of unnecessary school failures.

Other studies currently being conducted by Institute graduate students include work in adjustment problems of MBD (minimial brain damage) children, memory studies, links between neurology and learning disorders, endocrinology and learning disorders, and auditory and visual processes in relation to reading disabilities.

Recent Northwestern graduates are helping to spread the word about the work being done on the Evanston campus to clinics, colleges, universities, and school systems. "Although as yet there is no undergraduate program, each year we graduate about twenty-five M.A.'s and Ph.D.'s qualified to recognize, evaluate, and teach MBD children," Miss Johnson says. "Right now our people are heading programs in Boston, San Francisco and numerous other places. The goal of our field is to have well-trained and alert people in positions to reach all the children in the country.

INDIANAPOLIS ACTS TO PREVENT URBAN DECAY BY USING PRIVATE ENTERPRISE

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1969

Mr. BRAY. Mr. Speaker, whole sections of our cities are threatened with decline and decay into urban slums. The problem is critical and a solution must be found quickly.

Responding to President Nixon's urging for mobilization of voluntary efforts in the cities, Indianapolis has responded with a program that may well turn out to be one of the best and most workable plans yet. No Federal money is involved.

The following story from the August 4, 1969, National Observer, by Lawrence Connor, tells how:

INDIANAPOLIS TRIES A NEW CONCEPT TO REVAMP AN OLD NEIGHBORHOOD

INDIANAPOLIS.—A 12-square-block area two miles north of downtown Indianapolis contains numerous large frame houses in which many of the city's leaders grew up 50 years ago. Today, the houses are sagging, many of the lawns are gone, and a whole new generation of residents, mostly Negroes, lives there. It is well on the way to becoming a typical urban slum.

But a private, nonprofit corporation hopes to reverse the slide with an unusual housing project. Indianapolis Neighborhood Homes, Inc., expects to spend $2,670,000 in providing a 300-unit housing project. Some of the old structures will be rehabilitated to provide 225 rental units, and 75 new units will be built for purchase.

If the project succeeds, it may become a prototype for other American cities. It is in line with President Nixon's call for voluntary efforts to save the nation's cities.

A few of the units have been completed. The schedule calls for 82 units to be finished by this December, 70 more by next July, and all of them by 1972. Monthly rental charges range from $96 for one-bedroom units to $118 for four bedrooms.

THE FUTURE NEIGHBORHOOD

The project is being carried out in one corner of a 4½ square-mile neighborhood designated as a Model Cities area. Eventually, the neighborhood will contain a small park, tot lots and promenade areas created by closing sections of little-traveled streets.

The concept for the program was developed by the Center for Independent Action, a nonprofit foundation based in Washington, D.C., after a study was made by the Indianapolis Chamber of Commerce, Swann and Weiskopf, Chicago architects, developed the neighborhood planning.

A Lilly Endowment, Inc., grant of $750,000 provided development funds and the equity for the financing. New York Life Insurance Co. has committed, or is considering, mortgage loans amounting to $431,000, enough to finance rehabilitation of 75 units. When the 300 units are completed, some $2,000,000 in mortgage loans are expected to have been made.

E. F. Walsh, executive vice president of the Center for Independent Action, says that "with the validity of the concept proven in Indianapolis, the CFIA objective is that 2,000 units of standard housing can be produced in five other urban centers in the country." Names of the other cities have not been announced.

NO FEDERAL AID

He said there is no Federal subsidy or other governmental assistance involved in the financing of the program. And he asserted private efforts can complete the work faster and cheaper.

To rehabilitate existing structures, the walls, floors, roofs, and supports are being renovated, and new heating, wiring, and plumbing are being installed, as are bathroom fixtures, kitchen cabinets, and appliances. Much of the work is being done by Negro craftsmen.

The Center for Independent Action has concentrated on Indianapolis in the past to test some of its voluntary, self-help programs, including the Voluntary Advisory Corps, in which local residents aid disadvantaged persons in finding jobs and keeping them. John Burkhart of Indianapolis, chairman of the board of College Life Insurance Co. of America, is president of the center.

When the housing project was announced last month, Mayor Richard G. Lugar stressed the private aspect of it. "I believe this is a classic demonstration," he said, "of what President Nixon urged in his inaugural address—the commitment of the private sector . . . in the solving of annoying problems which beset the nation's inner-city residents."
